In January and February 2022, four back-to-back cyclones battered Madagascar. Storms Ana, Batsirai, Dumako, and Emnati flattened coastal cities like Mananjary. They also reached further south and inland than previous cyclones, leaving ruined homes and crops in their wake. In the southern-central region of Fianarantsoa, flooding was the storms' worst impact, when extreme rainfall and unruly drainage inundated the region's fertile valleys. Drawing on ethnographic fieldwork in Fianarantsoa during and after the storms, this paper considers the sedimented effects of these floods: the tsangy, the sands and dirt carried by floods from hillsides to valley floors. Mimicking the fast-moving waters of the cyclone flood and the long, stilted attempts at recovery afterwards, I carry listeners through tsangy's displacements, effects, and potentials. I show how tsangy is feared for its ruinous burial of young rice, a staple food in the region – how it is collectively contended with as villagers shovel out their land and hopefully rescue their crops – and how it is ultimately transformed into sandbags that will hold down roofs when the next storm comes. As tsangy shifts from storm threat to storm savior, I consider how Malagasy communities live with cyclonic erosion by doubly recuperating the rice which floods bury and the tsangy which floods carry. I therefore reconfigure the cyclone flood from singular disaster to a more ambiguous deposit of both danger and security.

Making a Coast: Land Loss and the Geography of Crisis

In 2023, Louisiana's coastal planners released the fourth iteration of their master plan: a rolling fifty-year, \$50 billion proposal to slow the erosion and subsidence reshaping the Gulf Coast. But master plans are not simply the inevitable response of a technocratic state to environmental threat. Figuring land loss as a shared coastal crisis has required almost a century of disparate observations of eroding property lines, mobilization by communities and researchers, and the strategic maneuvers of oil and gas firms. This paper argues that these very processes of sensing, narrating, and defending against erosion have actively produced "the coast" as a coherent object, both of crisis and governance. As the coast takes shape, it crystallizes particular histories of the land while offering a container for imagining the future. I draw on fieldwork with coastal scientists and activists to trace the social and political forms that coalesce around both the loss of land and its apparent defense.

7153 Social Movements as Agents of Urban Change. Experiences from the Global South

Start Date: 11/21/2025 04:15 PM **through** 11/21/2025 05:45 PM

Venue: Sheraton **Room:** Napoleon BR D1 (3rd fl)

Type: Oral Presentation Session

Since Castells' conception of Urban Social Movements in the 1970s, Marxist scholars conceptualized urban environments as arenas of confrontation and struggle. They argued that meaningful and substantive change in urban life and policy could only emerge through conflict. Urban Social Movements act as a contentious and collective force that legitimizes and represents the needs for which citizens mobilize. Rather than being purely disruptive, conflict oftentimes becomes a proactive and generative process, fostering alliances and opening negotiation channels with state institutions through policymaking. Beyond critique and demands, civil society advances concrete alternatives for urban planning and change. Urban politics articulate citizens' interests and participation in decision-making through formal institutions, such as participatory mechanisms, partisanship, or electoral processes. Yet, they also encompass relationships and networks that extend across different groups and actors operating beyond formal entities or conventional political fields.

An example of how movements advance demands beyond the political sphere and formal processes is their engagement within the bureaucratic field. As Nicholls (2024) argues, this field is a crucial arena for urban struggles; the relationships between civil society and public administration play a key role in channeling demands by movements. Bradlow (2022) suggests that social mobilization can be translated into local policy under two conditions: "embeddedness" of local governments and civil society (e.g., social movements), and "cohesion" - the capacity of local governments to internally coordinate initiatives to drive policy change. Public servants' actions then function as ongoing mechanisms through which civil society strategically operates, enabling the shaping of policies and influencing structural dynamics.

In effect, urban social movements' successes result from continuous negotiations and struggles with local governments and institutions. It is through daily legal and symbolic practices that social organizations challenge the exclusionary rights associated with private and state-owned property, and assert inclusive rights for all. Although place-based initiatives remain small-scale alternatives, they play a crucial role in fostering participatory landscapes. They enable community-driven social services and care, rooted in local specificities while strengthening social networks and deepening bonds. Moreover, they serve as catalysts for systemic and structural change by enabling movements to challenge existing frameworks through direct action.

This panel explores the continuous negotiations of urban social movements with local governments and institutions and the repertoires of action that advanced their causes. For populations faced with dire poverty and lack of access to services and basic resources, urban social movements play a particularly important role in cities of the Global South.

Presentation(s): From Brothel to Community Center: Social Movements and the State in a Tolerance Zone in Bogotá

Why are some public policies successful and others are not? This apparently simple question is at the heart of our research project about the public Care Policy in Bogotá. Through multi-method interdisciplinary research, we identified the main actors behind the policy and established a timeline of how it came about. We found that social movements were key to its conception and fruition, particularly local feminist grassroots movements that continuously lobbied to be heard. In this presentation, we focus on the conversion of El Castillo, a former brothel in Bogotá's tolerance zone (where sex work and drug use are tolerated), into one of the Care Policy's community centers. Examining this transformation, we argue that El Castillo has become a sanctuary space for vulnerable populations due to community involvement in the process. The local population was vital in shaping the site's inclusive character and ensuring its continued functionality beyond state intervention—in interviews described as a "70% community – 30% state" relationship. Grassroots efforts have turned El Castillo into a dynamic arena where local collectives and residents negotiate their relationships and the meaning and future of the space. The case illustrates how grassroots movements engaged with the bureaucratic field to successfully negotiate the project. Safe and empowering urban spaces for marginalized communities are only possible through such sustained partnerships between civil society and the state.

Urban Operators: Gondola Lifts and Social Technicians at the City's Edge

During the past two decades, gondola lift systems have traveled from the ski resorts of the Alps to the urban peripheries of the Andes and beyond. From Medellín to Caracas and Bogotá to La Paz, aerial cable cars have emerged as new transit systems for the "informal city," and as key technologies of urban governance and aesthetic transformation in the city's margins. Consolidating previous frameworks of "slum upgrading," "urban acupuncture," and "social urbanism," cable car urbanism has aimed to harness histories of autoconstruction and community organizing to transform the city's periphery from the inside out. Through ethnographic research in Ciudad Bolívar in Bogotá, my paper explores the urban gondola lift and its associated spaces and amenities as ambivalent interfaces between state actors and social movements. I focus on the figure of the urban operator: the firm contracted by the city government to run and maintain Transmicable - the Ciudad Bolívar's cable car. In addition to technical matters related to the mechanical operation of

the infrastructure, the urban operator includes a "social management [gestión social]" team in charge of community outreach, social programs, and promoting the social appropriation of the cable car in local communities. I examine how urban operators' work as technicians of social life opens ambiguous political spaces and horizons for urban change in which both cooptation from above and mobilization from below are put into motion.

Urban Struggles and Food Security: The Case of Solidarity Kitchens in Belo Horizonte, Brazil

Solidarity kitchens have emerged in Brazil as a grassroots response to rising hunger and food insecurity, intensified by the COVID-19 pandemic and the dismantling of social policies. These initiatives, coordinated by several social movements, respond to deepening urban inequalities through collective food provision and political organization. Drawing on reflexive thematic analysis of interviews with activists, volunteers, and organizers, as well as participant observation in solidarity kitchens in Belo Horizonte, the research is grounded in collaborative knowledge production between academic and community-based researchers engaged in these practices. It explores how solidarity kitchens function as everyday arenas of political agency and social reproduction in peripheral urban areas. Recently, the process of institutionalization of these initiatives through the National Program of Solidarity Kitchen has introduced new dynamics in their relation with the state, prompting negotiations around bureaucracy, sanitary regulations, autonomy, legitimacy, and policy integration. This paper situates these processes within broader debates on urban social movements, and food sovereignty in the Global South. By tracing these shifts, the presentation highlights how solidarity kitchens illuminate broader processes of urban political transformation in the Global South.

Eating Politics: Reframing Urban Food Insecurity Through the Lens of Urban Social Movements in the Global South

This paper explores how urban food insecurity has become integral to the mobilization strategies of social movements in a major Brazilian metropolis. Employing participatory-action research with two significant social movements—the Landless Workers' Movement (MST) and the Movement for Struggle in Neighborhoods, Villages, and Favelas (MLB)—the study identifies food insecurity as a priority agenda amplified by the COVID-19 pandemic. Responding to a context of federal governmental neglect, these movements implemented both local and national initiatives, including food distribution networks, and the establishment of solidarity kitchens.

Utilizing the concept of framing as an analytical tool, the paper elucidates how the food issue has become central to the identity and practices of these movements. This analytical lens highlights how food security is being reframed not only as a political agenda but also through embodied, everyday practices of movement participants. Consequently, this study broadens the

understanding of urban activism by exploring how the boundaries and significance of food security are continuously being redefined.

This redefinition enriches a wider ecosystem of public experience—understood as the network of actors involved in the ongoing construction of food security as a pressing public concern—thereby challenging traditional state-centered approaches and suggesting alternative modes of governance within urban contexts.

Kiltra Resistance: Doing Autonomous Politics with Street Dogs in Post-uprising Chile

After the 2019 uprising in Chile, kiltros, rioting street dogs, created public controversies—vilified as sources of violence by some, while celebrated as rebels, saints and reincarnations of late protesters by others. Expanding from a focus on direct actions, symbols and headlines, the article targets the everyday life of kiltro resistance over the ethnographic case of an anarchist squat in Chile's capital, Los Pies. Unlike the kiltros from fast and effervescent riots, the kiltro resistance of squatting dogs and humans coalesces around fostering intimate and kin-like relationships of long-term alliance, horizontality and mutuality striving to reach beyond the master/owner subordinate framework. Attuning to each other as such, these squatters, we argue, form a more-than-human variation of an affinity group and recalibrate the focus of their struggle to a more doglike defence of the territory and home. In kiltro resistance, dogs emerge as compañerxs (comrades) rather than mere companions.

Reclaiming Public Land and Infrastructure: Social Movements as Drivers of Equitable and Sustainable Urban Change

Radical transitions toward equity require marginalized communities and social movements to directly lead dialog with local urban planners, policymakers, and other decision-makers. Based on three case studies from Bogotá, Belo Horizonte, and Belfast, we critically discuss strategies that social movements and community-based organizations have been using to implement urban changes addressing collective issues such as food insecurity, social housing needs, lack of social cohesion in post-conflict areas, and unfair gender-based care burden. While the described initiatives could be seen as "stable" as they are (or strive to be) written into urban policy, it is the everyday hard work of activists, street-level bureaucrats, academics, and other actors that make these cases of sustainable and equitable urban development resist many neoliberal processes simultaneously happening in the studied cities. The findings presented in this paper are part of an international research project, Change Stories. The project uses ethnographic methods of data collection in case study cities and the constant comparative method for comparisons of the cases. Based on specific spatial manifestations of these dynamic negotiations (El Castillo Care Block in

Bogotá, a production unit Vila Pinho in Belo Horizonte, and the community garden Grow in Belfast), we will discuss the important role of local communities and social movements in appropriating, enacting and sustaining public urban policies.

Presentation(s): Ghosts and the Carceral State in Western Ohio

Inspired by the conference theme, I explore ghosts that haunt the carceral landscapes of Western Ohio and those who are imprisoned there. The Dayton Correctional Institution (DCI), a women's prison in West Dayton, opened in the 1980s. Archival photos of the prison's construction show a panopticon tower from the old prison work house peeking at the scene from the background, from a site adjacent to the new facility. Images from inside the new DCI – after it was built but before people were brought there – are eerie in their emptiness, particularly from the vantage of 40 years later after countless people have suffered, survived, and struggled in those spaces. Additional photos from the archives offer glimpses into people's lives in the old work house from the 1920s-1970s: men playing cards, women doing laundry, a boxing ring with clothing draped over the ropes, an incarcerated couple getting married. The work house is one layer of the state's carceral past upon which the new carceral infrastructures are built. Throughlines of targeted state investments in toxic infrastructures – prisons and landfills – alongside broader disinvestment in human capital and community, connect the past to present.

Over the past eight years I have collaborated with a group of women sentenced to life in DCI. In their writing and our conversations, they describe the ways that they are haunted by their pasts, in all of their complexity. Their pasts are shaped by layered violences, from interpersonal to state-level organized abandonment. They also describe their ghost lives, the lives that could have been had they never been imprisoned, that exist like a shadow to the lives they are living. The ghost lives are happier and family-filled: their ghost selves are caring for sick relatives, making pancakes for grandchildren, snuggling kittens, wrapping birthday presents. One participant called the prison

"The Netherworld," suggesting that the people inside were spectral, haunting the land of the living from the carceral margins. In many ways, participants use the Netherworld, their ghost lives, and other spectral metaphors to express their sense of loss and dislocation, their profound grief, and other emotions for which we lack a common language since the experience of life sentencing is indeed uncommon. They also live inside the broader social, physical, and political-economic landscapes that redirect resources from possibilities of human flourishing to carceral buildup. They become part of a complex carceral story and lineage, yet they persevere, try to find hope, and reconstitute meaning amidst the wreckage.

Positively Haunting: Ritual, Signs, and Belief within a Spectral Science

The supernatural and the aristocratic share epistemological discursive space in the worlds of American ghost hunters. The contemporary search for empirical evidence of the afterlife is reflected in resurgent signs of Judeo-Christian identity in the social praxes of otherwise secular middle and working-class Americans. Filtered through the so-called "Death of God" and seeded by the paranormal works of William James and Carl Jung, latter-day ghost hunters are increasingly guided by a consecration of western science. Contemporary ghost hunting pulls its spiritual weight from the aesthetics of both faith and physics, and tech-minded wraith-hunters assemble scientific toolkits that do more than add a veneer of positivistic legitimacy, the tools themselves have become artifacts of ritual, hybridized with the legacies of occult practices such as mediumship and the intrinsic lay-channeling of affective registers that permeate purportedly haunted locations. With meaning cultivated in the dual invisibilities of electromagnetic fields and demons, informed by the rotating sign values of noises, goosebumps, and camera compression rates, contemporary ghost hunting has given the paranormally-attuned the ability to simultaneously anchor themselves to the legacy of Cartesian rationalism while surrendering themselves to the mysteries of an elusive supernatural Gnosis.

In this strange brew, once sacred liberal formations such as democracy and equality are conspicuously absent. The acceleration of identity-centered communication platforms including YouTube, has made the performative a crucial aspect of the hybrid rituals of the paranormal scene. Here, in the tumult of branding, hoaxing, and relentless self-promotion, humble subservience to the mystical and divine and any belief in the righteousness of the meek has been replaced by the aristocratic impulse of 21st Century American life, furnishing a latter-day feudal ethics validated at the fulcrum of science and religiosity. This flash presentation materializes from my ongoing ethnographic project in the world of American ghost hunters where the objects of their practice signify the scientific predilections of contemporary American spirituality among the working and middle classes.

The Ghosts of Supremacy: Conspiracy, Subjectivism, and the Metaphysics of Militias in North Central Florida

This flash presentation is based on my ethnographic fieldwork and explores how contemporary militia movements in North Central Florida, particularly groups affiliated with the alt-right "Patriot Movement," operate within a haunted ideological landscape. Though participants claim to have distanced themselves from explicit white supremacy, my research reveals that foundational narratives of racial paranoia, elitist betrayal, and apocalyptic struggle remain deeply embedded in their worldview. Drawing on fieldwork with local actors including members of the Proud Boys and an allied rural collective which identifies with the Three-Percenter Movement, I show how conspiracy theories serve not only as ideological glue but as theological doctrine: a metaphysical framework that codes resistance to liberal institutions as moral good. A frame which ultimately led, in part, to the storming of the Capitol on January 6th.

Participants view mainstream knowledge producers and taste-makers, like universities, media, and government agencies, as corrupted vessels of deception, leading them to embrace what Michael Barkun terms "stigmatized knowledge." This knowledge, often shared through memes, YouTube videos, or informal gatherings, circulates through affective and moral registers, producing what I argue is a subjectivist epistemology. Belief becomes a performance of patriotism, and personal truth is valorized over shared empiricism. "Doing your own research" leads you down an experiential subjectivist rabbit-hole.

Rather than simply reviving past supremacist movements, these actors construct a new metaphysical terrain, one in which belief in conspiracy, spiritual warfare, and self-reliance becomes a form of social and political identity. This terrain is compared to those described in Kathleen Belew's "Bring the War Home," which is rooted in post-Vietnam War survivalism and white separatism. This talk contends that the "ghosts" of white supremacy are not absent, but transformed and embedded in a politics of myth, martyrdom, and moral clarity that continues to animate the American alt-right.

Presentation(s): A Hui Community with Multi Faces: The Spatial Practice and Identity Reconstruction of a Hui Family in Quanzhou, China

The Ding clan of the Hui ethnicity in Chendai, Quanzhou, has undergone the evolution of China's ethnic policies over time. The experiences of "de-ethnicization" at the turn of the Yuan-Ming dynasties and "re-ethnicization" since 1978 have resulted in a flourishing clan culture and a weakened Islamic faith, leading to an atypical Hui identity and a renewed demand to remake a Hui community.

Over the past forty years, however, the Ding community has come to represent a model of ethnic development and cultural integration in Southeast China. With strong visual appeal, spatial expression has become central to the community's reconstruction efforts, revealing a complex interplay among ethnic, religious, and clan spaces.

Adopting the perspective of architectural anthropology and using methods such as fieldwork and case studies, this research explores the spatial structure of the Ding community and its corresponding identity framework, and reveals the mechanism and strategies of the Dings' identity reconstruction through spatial practice. The study highlights how ethnic groups in contemporary China, amid shifting incentives and constraints, strategically shape the multi faces of their communities as a pathway to survival and development.

The research finds that historical identities and their associated spaces haunt the contemporary Dings, bringing both confusion and opportunities. By utilizing and reproducing tangible spatial resources, the Dings have successfully accumulated and circulated economic, social, cultural, and symbolic capital.

The Dings have actively developed several ethnic spaces-such as Chendai Hui History Museum and Ding Family Tomb Complex-to meet national ethnic policy expectations that emphasize ethnic over religious identity. They have also made efforts to develop a religious space-Chendai Mosque-in response to the public's general perception of Hui communities. Meanwhile, they have discreetly supported the restoration and construction of numerous clan spaces, including local and out-of-town Ding ancestral temples, to preserve their clan traditions and local customs.

Thus, these spaces altogether created the community's spatial structure characterized by stark ethnic space, subdued religious space, and hidden clan space. The structure articulates three distinct spatial identity narratives: a visible ethnic identity marked by "patriotism and loyalty to the Party, respect for ancestors and harmony with neighbors, unity, ethnic self-reliance, openness, friendliness, and gratitude"; a muted religious identity centered on "Islamic revival"; and a hidden clan identity focused on "clan prosperity".

Based on this multi-faceted, well-organized, and highly adaptive identity structure, the Dings can strategically select and combine spatial elements and associated narratives to present desired images and identities in response to varying real-world demands, which contributes to their economic prowess and social standing.

Beauty, Corpse, and Skeleton: Objectified Body in Chinese Ghost Literature

This paper categorizes the female ghostly figures in Chinese ghost literature into three phases: beauty, corpse, and skeleton. The beauty represents temptation, hyper-femininity, a disguise of a bigger conspiracy. The corpse, according to its state of corruption, can both represent the fleeting nature of physical allure and the positive manifestation of moral standards. The skeleton represents the ultimate form of human mortality, materiality, and gender-neutrality. Through poems, novels, and play scripts such as *Dream of the Red Chamber*, *Journey to the West*, and *Strange Tales from a Chinese Studio*, this paper illustrates how these phases serve as symbols and imagery to drive narratives and articulate the objectification of women from life to death. In these literary works, women are recorded as aesthetical objects rather than as people. The love towards women in stories is not love for a person but a fetish for a beautiful object. Chinese aesthetics scholar Ye, S. (2018) suggests that the goddess of love and beauty is Yaoji but does not address her hidden identity as a female corpse. Yaoji was an ordinary virgin when she was alive but became a goddess with sexual power after death.

Drawing on the theory of feminist sociologist Gordon, A. F. (1997) in *Ghostly Matters: Haunting and the Sociological Imagination* about how ghosts disrupt time, presence, and social order, this paper situates the three phases of the female body as a haunting figure that both reveals and resists the patriarchal norms of its cultural context.

Haunted Without Grief: Memory, Silence, and the Afterlife of the Third Front Movement

This project examines how personal memories of suffering during China's Third Front Movement—a Cold War-era, state-led industrial campaign rooted in national defense—are absorbed into, rather than disrupt, the dominant nationalist narrative. Drawing from life histories and informal conversations with residents of Panzhihua, a key site of the Third Front Movement, the research explores how loss, displacement, environmental hardship, and emotional silence are often narrated without grief or critique. Instead of expressing trauma, participants frequently align with heroic state discourses, leaving unsettling events, such as suicide and illness, unmarked or normalized. The project engages hauntology as an analytical framework, but questions its applicability in contexts where "being haunted" fails to emerge. The research proposes the concept of "intimate knowledge" to access embodied, domestic, and affective traces of unacknowledged histories. By attending to the tensions between what is remembered, silenced, and officially celebrated, this ethnographic study aims to rethink the affective politics of historical memory in socialist and postsocialist China.

Presenter(s): Di Wang

Neither City nor Countryside: The Moral Life of Suburbanity in Post-Urbanization Xiama Village, China

Since the 1990s, China's urbanization has followed a distinctive pattern of spatial expansion, rapidly absorbing rural fringes and generating a landscape of "urban villages." These spaces, though surrounded by urban development, have preserved social structures and moral orders rooted in rural society, becoming critical sites of tension between rural and urban ethics. Corresponding to early redevelopment policies emphasizing market-led demolition, preliminary research also regarded urban villages as "socioeconomic sinkholes." Yet as governance practices institutionalized, scholars began to recognize their positive value, shifting the discourse from how to redevelop toward why and for whom, thereby opening space for reconsidering the resilience of rural moral systems within urban settings.

Following nationwide demolition campaigns, former villagers were rehoused into high-rise replacement communities. Despite their urban appearance and bureaucratic governance, these new communities remain ethically unintegrated. Many former villagers struggle with the transition to urban norms, resulting in a liminal condition—neither fully urban nor rural. This phenomenon has been described as the emergence of "suburban societies," characterized by suburbanity: a fractured moral condition shaped not by incomplete governance alone, but by local responses to institutional rupture. In the collapse of both state governance and communal authority, everyday life is sustained through symbolic improvisation and the mobilization of residual institutional forms. Concepts such as the "good life" and "fairness" are thus negotiated to produce an expedient way of life through kinship, land ethics, and generational memory instead of market and urbanization.

Rather than asking whether urban villages can be successfully urbanized, this paper investigates: how do village communities construct new moral orders and everyday practices in the face of failed urban absorption? And how are these ethical formations sustained through spatial practice and local moral evaluation, ultimately producing a durable yet non-typical outcome of urbanization—suburbanity? To address these questions, this paper draws on five months of ethnographic fieldwork conducted in Xiama Village, China. By analyzing materials including semi-structured interviews with former villagers and new residents, participant observation in community events and rituals, as well as historical documents and media reports related to the redevelopment, the paper captured, understood and demonstrated the process of moral emergence and the social consequences of failed urbanization integration.

Ritualizing the Ghost Boundary: The Naihe Bridge and Chinese Underworld Cosmology around Mount Tai

As the most prominent of China's Five Sacred Mountains, Mount Tai (泰山) has been ritually associated with the governance of the afterlife. Within the city where Mount Tai is located, there is also a river called Nai River (奈河): a toponym shared with the mythological river in Chinese

cosmography that demarcates the boundary between the realms of the living and the dead. In the city's sacred geography, this river similarly functions as a spatial divider: its eastern bank constitutes the domain of the living, while its western bank is ritually designated as the realm of ghosts, with Mount Tai itself representing the celestial sphere. Together, these elements form a tripartite sacred urban structure.

Drawing on local gazetteers and stele inscriptions, as well as ethnographic fieldwork conducted between 2022 and 2024, this study examines the historical process through which the spatial hierarchy of "human-ghost-divine" realms was ritually institutionalized, with particular attention to the role of the Naihe Bridge (奈何桥) in materializing this cosmological imagination.

Specifically, while the Nai River's symbolic association with the afterlife has deep historical roots—attested in early texts such as the Book of the Later Han (后汉书) and In Search of the Supernatural (搜神记), which describe Mount Tai's jurisdiction over life and death and the Nai River as a liminal passage for the deceased: the sacred boundaries of pre-Ming Tai'an remained fluid, with temples dedicated to both celestial and chthonic deities spatially intermingled. The construction of the Naihe Bridge during the Ming Dynasty marked a critical juncture in the formalization of this sacred topography. Far from serving merely as useful infrastructure, the bridge was ritually incorporated into Daoist bridge-crossing liturgies (渡桥科仪), wherein priests performed soul-guiding rites to ritually enact the deceased's traversal of the Nai River's mythic boundary.

This paper argues that the stabilization of sacred space hinges on the mutual reinforcement of material structures and ritual performance. The Bridge's ritual function operated on three levels: Physically, the act of bridge-crossing superimposed a processual dimension onto the Nai River's boundary, transforming it into an embodied sacred practice; Through this practice, traversing the bridge was semantically encoded as a "yin-yang transition" (阴阳过渡), rendering the abstract life-death dichotomy sensorially perceptible through corporeal movement; Furthermore, the bridge's construction facilitated the ritual integration of state-sanctioned sacrifices to the Emperor of East Peak (东岳大帝), the bureaucratic deity governing the underworld, thereby sacralizing Tai'an's spatial boundaries. Through the iterative performance of liturgy, the Nai River's erstwhile abstract symbolism was concretized into a legible spatial order, culminating in the crystallization of Tai'an's tripartite sacred structure.

Presenter(s): Ziqi Xuan

Sanctifying the Secular: Domestic Worship Spaces in Urban Chinese Christianity

In urban China, many unofficial Christian gatherings take place in rented apartments, office units, or members' homes. These spaces are not designed for worship, yet through subtle transformations—such as placing a cross on the wall, arranging chairs in a circle, or invoking sacred language—they become temporarily "sanctified." This flash presentation explores how believers engage in the ongoing negotiation of sacredness within secular environments, turning domestic or

commercial interiors into meaningful sites of spiritual encounter. Based on ethnographic fieldwork in a Chinese Christian community, I analyze how material arrangements, embodied rituals, and linguistic practices contribute to the construction of sacred space in contexts where official religious infrastructure is limited or unavailable. By tracing these everyday spatial transformations, I consider how faith is not only practiced but spatially imagined, contested, and made present.

Presenter(s): Phenix Lin

Specters of Control: Ghostly Governance and Its Consequences on China's Southwestern Border in the Post-Pandemic Era

This study is based on fieldwork conducted in 2023 in H County on the Sino-Vietnamese border, exploring China's post-pandemic shift towards "border closure" in the southwest and how the state uses the "manufacture of ghosts" to solidify its border governance. Under the guise of preventing the spread of COVID-19 from neighboring Southeast Asian countries, the Chinese government constructed a border wall in Yunnan in 2021. However, this wall is not simply an infrastructural project; it is imbued with political significance, symbolizing the presence of central state power and marking the shift in border governance before and after the pandemic. The term "pandemic" has even become a taboo among border residents, creating an invisible atmosphere of fear. This fear permeates their daily interactions and is continuously reproduced and internalized through institutional mechanisms such as community supervision and border propaganda. The state attempts to use this fear to create "ideological ghosts"-stigmatizing neighboring border residents (even though most of them share common roots with Chinese border residents), provoking nationalist sentiments, reshaping border residents' identities, and erasing the ethnic connections built on cross-border historical memories to push for the "normalization" of the border landscape as envisioned by the state.

At the same time, these ghosts, initially intended to stabilize and differentiate the geographical boundaries, gradually give rise to new ghosts, which exacerbate inequality, ethnic divisions, and rifts within China's border society, further fracturing an already complex border community. While the Chinese government has imposed strict border control measures, local elites, due to their close ties with government officials and their operation of "normalized" businesses, have seen no impact on their profits, even during the three years of complete border closure. In contrast, the markets that ordinary border residents relied on for cross-border trade have been encroached upon and even entirely replaced by local elites, further constricting their livelihoods. The divisions within border society have grown increasingly pronounced due to differences in social capital, and the invisible boundaries have further fragmented the already complex border society.

Despite facing extremely unfavorable policies, this study also acknowledges the efforts of ordinary border residents to navigate and resist the ghosts created by the government. They seek their own "weapons of the weak" from historical memories and experiences, constantly adjusting their strategies and practices. These dynamics not only reveal the "ghost" effects in China's border governance but also demonstrate the resilience and resistance of border residents under strong

state control, offering a more complex and multidimensional understanding of contemporary border governance.

Presenter(s): Gangcheng Xu

The Politics of the Face: Mixed-Race Aesthetics and the Haunting of Postcolonial Legacies in China

In contemporary China, the rise of "mixed-race beauty" in social media, beauty trends, and cosmetic surgery unveils a paradox: while nationalist rhetoric champions cultural self-sufficiency, beauty ideals remain deeply entangled with postcolonial aesthetic hierarchies. This hybridity is not merely an embrace of global beauty standards but a carefully curated vision that privileges Euro-Chinese features while systematically excluding African-Chinese, South Asian-Chinese, and other non-European mixed identities. Such selective hybridity reveals the racial hierarchies embedded in contemporary Chinese beauty culture.

This paper traces the spectral presence of colonial aesthetics in China's evolving beauty standards. While traits like light-colored irises, deep-set eyes, and sharp brows reflect an enduring admiration for Western ideals, others-such as light skin, double eyelids, and high nose bridges-are rooted in historical Chinese aesthetics. Through digital ethnography and interviews with beauty influencers and social media users, I examine how individuals interpret and embody "mixed-race beauty" in everyday beauty practices.

A striking pattern emerges: when asked about "mixed-race" appearances, respondents overwhelmingly associate the term with Euro-Asian heritage, rarely considering African-Asian, South Asian-Asian, or other non-European mixes. This selective vision of hybridity exposes an aesthetic logic that is as much about exclusion as it is about admiration. In China's media and beauty industries, white or "Euro-American" features enjoy heightened visibility and aesthetic privilege. However, unlike countries with deeper colonial histories-such as South Korea, Japan, and Singapore-China's engagement with Eurocentric aesthetics is less a direct legacy of colonial trauma and more a product of globalized cultural imaginaries. Rather than a remnant of colonial occupation, the preference for Eurocentric beauty reflects a modernist narrative that equates Western aesthetics with progress and sophistication.

By treating the face as a political site-where histories of postcolonialism, nationalism, and globalization intersect-I argue that China's "mixed-race beauty" obsession is not merely a beauty trend but a manifestation of deeper anxieties about identity, modernity, and global positioning. Even as China asserts itself as a rising power, the ghosts of its colonial past continue to shape the most intimate markers of self-presentation.

317 Society for Visual Anthropology Flash Session #2

Start Date: 11/21/2025 04:15 PM **through** 11/21/2025 05:45 PM

Venue: Marriott **Room:** Balcony I

Type: Flash Presentation

Presenter(s): Morgaine Lee, Dawn Roe, Rollins College, Sara Wong, Anne Pfister, University of North Florida, Department of Sociology, Anthropology, and Social Work, Ashley J. May, Brown University, Department of Anthropology

Presentation(s): "This does not render the world gentle" An Anthropological Foray into the Worlds of Fungi and Art

This flash presentation sits with fungal magnetism as affect that "does not render the world gentle," but instead invites a non-innocent wonder in the face of indifference. To do so, I present a series of short, poetic vignettes taken from my master's research project working with artists inspired by fungal worlds.

For the project itself, I worked with artists whom I gave prompts, some of which included each other's art, as poachable points of inspiration to create new works in various mediums. Art and interviews for this project are gathered in a written thesis and a short experimental documentary, "do i know you, mushroom?" The film and thesis are not explicitly linked, but rather, entangled as two expressions made with art and themes gathered throughout the research process - two baskets of mushrooms collected along the same forays.

In this talk, I offer some of these 'mushrooms' as 'poachable' prompts for listeners to feel through the pull of mushrooms, to consider what it means to make art in the midst of climate crisis, and to critically examine stories that position fungi as hero.

Presenter(s): Morgaine Lee

Arts/Anthropology Session: What if the H(a)unted Could Make Images?

Informed by ongoing conversations and collaborative work between arts and anthropology practitioners, this quasi-performative talk will draw upon still and moving imagery included within the indefinitely ongoing visual art project, DESCENT ≈ An Atlas of Relation. Presented as a meditation of sorts, the question, What if the H(a)unted Could Make Images?, will be repeatedly posed in correspondence with projected visuals of earth, plant, and animal forms living and dying together across both great and small distances. Occupying the liminal space(s) of water-based worlds permanently re-shaped by extractive actions and colonial forms of "species management," the varied Beings gestating within and along these waters endure ongoing disruptions, forever altering how these spaces have and continue to function as home, and community . As print and video recordings, their bodies are transformed into phantom residue, bringing visibility to aspects of our world(s) that often go unnoticed, or are difficult to see. The screen-based images perpetually cycle and return against their isolated fragments embalmed in still(ed) form. These temporal

distinctions re-present entangled life as unpredictable, dynamic, and relentless, suggesting the rich potential of transgenerational, multispecies relations.

--- Much of the language, above, is indebted to Donna Haraway's thinking and phrasing, explicitly referred to in certain passages. Other sections loosely allude to Luce Irigaray's, *Marine Lover*, a text I became aware of through the writing of Astrida Neimanis who references this work in relation to concepts of hydrofeminism. The session title, "What if the H(a)unted Could Make Images?," cites a version of a question posed by Michael Taussig during a discussion moderated by Andrés Romero related to Taussig's book, *Corpse Magic*.

Ghosts in the gallery: autoethnographic reflections on curation

Drawing on autoethnographic reflections from curating a visual art exhibition, this paper destabilizes the boundary between fiction and non-fiction to interrogate the politics of language and knowledge production within the ghostly architecture of the academy. It stages a fragmented encounter between four figures-the Researcher, the Curator, the Artist, and the Activist-who navigate a collaborative Exhibition in the haunted afterlives of empire. Through these entangled personas, the paper explores the limits of conventional academic forms in representing the embodied, the relational, and the exilic, asking what it means to curate knowledge under the weight of colonial inheritances and epistemological rigidity. By foregrounding the ghostly as both metaphor and method, the work experiments with narrative as research-creation, interrogating who speaks, who is silenced, and how voice is curated in contexts of violence and hegemony. In doing so, it calls for a scholarship that holds space for the spectral-what lingers, haunts, and resists capture by traditional forms-proposing curation as an alternative modality of thinking, feeling, relating, and knowing.

Presenter(s): Sara Wong

Papernest: A Multimedia Project Housing Insect Imaginaries

Papernest is a multimedia project that uses images, film and an interactive website to explore the commodification of insects in Oaxaca, Mexico. It houses research interrogating globalized and colonial forces that impact participants economically, socially, and ecologically, and how their lived experiences might be representative of broader post-colonial tensions and realities (Pfister and Gaytán 2024). We use sensory, ethnographic filmmaking and participatory methods to engender resonances and contradictions between long-standing traditions and newly-emerging narratives surrounding insects that range from shock and disgust, to energies toward "rediscovery" of trendy Mexican "super foods" (Katz and Lazos 2016) and natural dyes with longstanding cultural significance in Oaxaca. Multimedias communicate anthropological ideas with audiences beyond

the academy, including dialogue with research participants about their ideas that informs this collaborative work.

Presenter(s): Anne Pfister

Signifying Blackhood in Toni Cade Bambara's "The Golden Bandit": Or, Notes for the Revolution That Is Here

On 25 February 1985, the late author and cultural critic Toni Cade Bambara opened a Library of Congress reading of her novel *If Blessing Comes* with a tale she fashioned "to remind people to question the official version of things, to put the authorized tale, a con text, into a critical context." (Bambara 1995). This tale, "The Golden Bandit," is a sharp retelling of "Goldilocks and the Three Bears" that offers a Black feminist anti-oppression critique, resituating the classic narrative into a Black space (Sullivan 2022). Bambara continued to fashion and refashion this tale, "The Golden Bandit," throughout the 1980s while working on a novel about the Atlanta missing and murdered children's cases and a documentary about the Philadelphia police's bombing of the MOVE home in the Cobbs Creek neighborhood. In this reimagining, Bambara signifies Blackhood (Bambara 1970), by way of a call and response of strategic utterances with a particular shared meaning (Kernan 1999). Using this film collage as source material, I discuss how language and sound are used to signify Blackhood by way of Bambara's anti-oppression critique. How this tale of the deep south is nothing new—rather, an expression of the Black south's hauntings, its ongoing violent reincarnations as a project and not a place, to conjure the words of Glissant (1989). Fashioned in the wake of serial murders of Black children in Atlanta from 1979 - 1981, it orients us toward an immense devastation in the world that settles, like dust, in barely perceptible traces allowing us to carry on (Glissant 1989). This paper positions the tale as a site where Bambara sets the stage for the ideological work her posthumous novel is doing—revising and challenging a variety of prevailing official narratives about victims, suspects, con/texts, and the consequences of racialized terror, interrupting narratives of place naturalized by western framings of North/South. It is a conversation with the dead, a response to Bambara's call to get our house in order: "If your house ain't in order, you ain't in order. It is so much easier to be out there than right here. The revolution ain't out there. Yet. But it is here." (Bambara 1970).

5106 Specters of Progress

Start Date: 11/21/2025 04:15 PM **through** 11/21/2025 05:45 PM

Venue: Marriott **Room:** Galerie 1

Type: Roundtable/Town Hall

Many anthropologists have sought to make the world a better place or at least to show that improvement does not require undoing differences. Anthropology has also rigorously questioned what "better" means and tirelessly identified violence in modern, colonial, and anthropological projects of improvement. Wary of blueprints, in the late 20th century anthropologists moved towards critical rather than prescriptive projects. Nevertheless, even at its most critical (the period that Sherry Ortner calls "dark anthropology"), when anthropology tried to cleanse itself of all traces of normativity and focused on clearing space for otherwise, it held on to the idea that this otherwise might be or enable something better. Exposing the failure of efforts to improve the human condition has at times itself been a modality in which the discipline has tried to make way for betterment.

"Specters of Progress" takes anthropology's orientation towards something better, variously understood as progress, development, equality, justice, diversity, decolonization or else, as a baseline generalization (what Marx called the abstract) from which to move towards historically specific and concrete articulations. We invite reflections from a range of ethnographic, theoretical, and cross-disciplinary perspectives on what has become a permanent crisis of anthropology.

Indeed, it seems impossible to articulate what "better" might mean and for whom beyond taking a variety of "anti" stances in relation to ever proliferating forms of violence and domination. Might it be that anthropology has thought itself into a corner, whereby its only two options are: (1) serve as an amplifier of the voices of the marginalized without critical engagement or prescription, or (2) accumulate criticisms of ever-adapting forms of racism, capitalism, colonialism? In other words, are debates about the end of anthropology essentially manifestations of the disappearance of the goal of living better with difference? Or are the specters of progress still with us?

3641 Spectral Beings: The Ghosts of Plants Past, Present, and Future in Virginia Nazarea's Botanical Lifeworlds

Start Date: 11/21/2025 04:15 PM **through** 11/21/2025 05:45 PM

Venue: Marriott **Room:** MGB - Salon C

Type: Roundtable/Town Hall

Anthropological engagements with plant-human relations have long demonstrated the centrality of plants to world-making projects. As biological allies of empire, settler colonialism, and plantation economies, plants have shaped the contours of land, labor, and law. As kin, they have nourished bodies, linked generations, and carried cultural memory across time and space. Their materiality is undeniable; they are cultivated, consumed, regulated, and resisted. Yet, plants also dwell in the spectral. They haunt and are haunted, embodying loss, longing, and the enduring presence of past relations.

This roundtable honors the work of Virginia Nazarea, whose scholarship has traced the entanglements of plants, people, and memory with striking ethnographic depth. Across decades, her work has prefigured and shaped key movements in anthropology, including the species turn, plant turn, and ontological turn. In doing so, she has drawn attention to plants not only as ecological and economic actors but as spectral beings: carriers of histories, kinships, and futures otherwise foreclosed.

Nazarea's work reveals how plants, much like ghosts of loved ones, refuse to disappear. The dizzying variety of cultivars she documents are refracted spectra of human-plant relations. In her writing, plants are living testaments to adaptation, resilience, and reciprocity. They bring longed-for places and peoples into the present through taste, smell, and embodied practice. Their ghostly presence unsettles the forced forgetting of industrial agriculture, buffering against epistemic and ecological erasure. If dominant narratives of agricultural modernization center loss, Nazarea's work insists on recuperation. It points to the spectral as not only haunting but generative.

Bringing together mentees, colleagues, and scholars influenced by Nazarea's work, this roundtable explores how plants orient us in the world and seed possibilities for lifeways otherwise. How does memory sustain the botanical lifeworlds she so carefully documented? How do plants carry forward human and more-than-human histories, making themselves felt in kitchens, gardens, and diasporic homes? How might we, following her legacy, remain attuned to the spectral presences that shape our shared futures?

4341 Spectral Ecologies: Residues, Reverberations, and More-than-Human Forces

Start Date: 11/21/2025 04:15 PM **through** 11/21/2025 05:45 PM

Venue: Marriott **Room:** Studio 3

Type: Oral Presentation Session

Feminist and multispecies perspectives—from Anna Tsing's notion of more-than-human socialities to Astrida Neimanis's hydrofeminism and Michelle Murphy's theorization of alterlife and decolonial chemical relations—have offered anthropology powerful tools for rethinking human-environment relations as spatial, temporal, and affective entanglements that exceed the human. Collectively, they illuminate how relations across species, substances, and temporalities are always politically charged, historically situated, and materially uneven.

Extending these insights, the panel turns to spectral ecologies—those phantasmic and often elusive environmental phenomena that resist capture by conventional materialist or anthropocentric logics. From healing energies and harmful algal blooms to extreme weather events, spectral ecologies register environmental presences that flicker at the edge of perception, destabilizing linear notions of time, space, and matter. This panel is an invitation to think with non-humans as lively residues of past ecological actions—actions intricately bound with deep geological and atmospheric processes, colonial and imperial histories, secular regimes of knowledge, and ongoing capitalist extraction.

Presentation(s): Provincializing Energy in the Gobi Desert

Viewed by satellite, Sainshand, the capital of Mongolia's Dornogovi (East Gobi) province, appears as a swath of red in the middle of the camel-colored expanse of desert. This red-colored stone marks the location of Shambala Energiin Töv (energy center), one stop on a pilgrimage circuit where

groups of pilgrims from the capital renew the vitality of bodies exhausted by the demands of a labor force still reeling from early 1990's neoliberal "shock treatment". The pilgrimage circuit situates particular sites of healing to places where the liveliness of stone can be sensed by the human body. This capacity to sense the liveliness of stone and martial it in service of a relationship of healing is enabled by pre-existing relations with landscape entities that the logic of industrial capital attempts to corral into combustible energy that can be translated into labor power. However, approaching the Energy Center on its own terms allows us to make space for particularities that may not fit within post-industrial, fuel-based understandings of energy. The concept of *energi* allows particularities to rush in, encompassing local understandings of energy and re-appropriating them into the capitalist framework while nevertheless exceeding it.

Presenter(s): Jessica Madison Piskata

Haunting, Tourism, and Ecological Futures in Post-Tsunami Southern Thailand

How has the 2004 Indian Ocean tsunami impacted provincial lifeways in the Thai provinces of Phang Nga and Phuket, and how has this event also shaped the subsequent development of tourism up to the present day? I approach these questions through a sensitive and culturally-informed theoretical framework that positions the trauma and memories of the past tsunami event at the confluence of physical, environmental, and cultural factors, which include the coastal locations of the sites and the rich tradition of haunting and ghostliness present in Thai folklore. I seek to investigate how memories of the tsunami might present themselves in contemporary tableaux of local and tourist life through mediums such as ghost stories and public memorials, and how responses to the tsunami event may have affected regional economic and infrastructural changes through the present. Critically, I situate this research project against the ongoing global event of anthropogenic climate change and the human-natural disasters it foments, and seek to explore how cultural perspectives on tsunami past and present can shape future responses to climatic events and resilient Thai eco-futurities

Presenter(s): Moon Pankam

From Prison Farm to Atlanta Forest: Dwelling with the Past in an Abandoned Landscape

From 2021-2023, "forest defenders" occupied a 517-acre woodland in southeast Atlanta to "Defend the Atlanta Forest" and prevent the construction of a privately-run police training center, known as "Cop City." The forest was a powerful metaphor, orienting an emergent, heterogeneous community toward a common set of values and utopian images that could be regarded as ends in themselves (and in opposition to "cop city")—wilderness, deep ecology, autonomy, the sacred, *communitas*, and so on. It was often said that the struggle wasn't just about this forest but all forests everywhere. Yet, the "forest" was only a few decades old, having been a city prison farm for most of the twentieth century, and an antebellum plantation before that. It was shaped as much by natural processes as by the very social processes—plantation agriculture, slave labor, incarceration, capital accumulation—that the symbol of the forest was meant to oppose.

Based on two years of fieldwork, I examine how the American fixation on wilderness was challenged by the landscape of the Atlanta forest occupation. By attending to how and where people dwelled in the landscape—such as in thickets of invasive Chinese privet and among young pines growing on the abandoned prison farm fields—I sketch alternative images of the society/nature relationship emerging from this forest that confront the reality of human labor and of living with the past.

Presenter(s): Sasha Tycko

Spectral Developments: More-than-human Hauntings in a Special Economic Zone

In the Boten Special Economic Zone (SEZ), Laos, ghostly presences unsettle utopian development narratives. This borderlands' twenty-year transformation from sustenance farming village to violent casino zone to abandoned ghost town to node in China's Belt & Road Initiative (BRI) reveals how developers manipulate temporality to attract investment, despite material indications of failure. Yet, nonhuman actors continually disrupt these spatial-temporal enclosures. Mold plagues concrete buildings, dust from land clearings ages new constructions, and alleged ghosts of murder victims prevent locals from walking outside at night. Meanwhile, the protective spirits (pii muang) of displaced villages transgress boundaries despite ritual relocation, moving through dreams, possession ceremonies, and animal forms—challenging the finality of displacement.

My presentation explores development zones as contested terrains where multiple temporal orders clash. I propose that spectral ecologies are not only outcomes of environmental extraction—colonial border-making, Cold War bombing, and capital (un)development— but actively reshape land's material conditions. Pii muang embody ancestral relations to land that predate and outlast the SEZ's spatial and temporal manipulations. As visions of a Chinese world order materialize through BRI infrastructure, spectral ecologies destabilize secular, state-based understandings of land, temporality, and sovereignty.

Presenter(s): Natalie Ng

Data Gaps and Dead Zones in the Johor Straits: Spectral Algae and the Infrastructures of Toxicity

Harmful algal blooms (HABs) are sudden ecological events with devastating, often lethal effects. Caused by overgrowths of microscopic algae, they can kill vast numbers of marine organisms within hours, devastate fisheries, and render seafood inedible through the accumulation of unseen toxins. Yet the harm of HABs exceeds toxicology: even non-toxic blooms kill through oxygen depletion, while multispecies blooms blur causal lines, making it difficult to identify a single responsible species. Currents and wind can rapidly concentrate or disperse algae, leaving behind only spectral traces—dead fish, disoriented communities, and disrupted ecologies.

This paper theorizes HABs as spectral ecologies: elusive environmental phenomena that defy stable classification and challenge anthropocentric logics of causality and repair. Drawing on ethnographic work with marine scientists and coastal residents in the Johor Straits, it explores how HABs generate explanations not only in scientific terms, but in the lived experiences of those

navigating environmental breakdown. In doing so, it highlights problems of sensing, narrating, and surviving environmental disturbance shaped by multispecies entanglements and histories of colonialism and extractive capitalism.

2886 The Journal's Ghosts: Nonjournal Digital Publishing and the Politics of Adjacency

Start Date: 11/21/2025 04:15 PM **through** 11/21/2025 05:45 PM

Venue: Marriott **Room:** Studio 4

Type: Roundtable/Town Hall

Since the early 2010s, sections of the AAA have developed digital publications that feature short-form writing and, increasingly, more-than-textual or multimodal work. Arising in the context of broader trends toward user-generated online content, these publications are sometimes referred to as "journal-adjacent," recognizing both their affinity to and distinction from the peer-reviewed journals that scholarly societies have traditionally used to promote the exchange of knowledge. Inspired by theoretical accounts of adjacency as a space of problems inviting formal innovation, this roundtable takes stock of what is happening in society publishing beyond the journal, at a moment when the journal is being rendered spectral by a constellation of forces including scientific reform movements, commercial dynamics, and changing practices of media consumption.

Structured as a conversation between anthropologists currently or previously engaged in managing nonjournal publications and content channels, this roundtable asks: What are the goals of these publications, as they relate to the wider aims of the sections that sponsor them? Who contributes to them, and what audiences do they address? What infrastructures and labor arrangements are needed to produce, share, find, and preserve these publications? To what extent does this sort of publishing "count," whether in academic systems of reward and recognition or other registers of value? And what other forms could these publications take, as the landscape of anthropological communication continues to evolve at the AAA and beyond? While grounding our discussion in specific, local experiments, this roundtable seeks to explore the shared properties of these emergent media and the claims they stake to both credibility and relevance.

2723 The Living Dead, the Living Landscape, and Other Nonhuman Agents in the Maya World (Part III)

Start Date: 11/21/2025 04:15 PM **through** 11/21/2025 05:45 PM

Venue: Sheraton **Room:** Grand Ballroom E (5th fl)

Type: Oral Presentation Session

What a western framework often labels as ghosts, apparitions, spirits, and specters inhabit the world with us, but they are called different names by different cultural groups. As such, how these groups relate to them also varies from western imaginings. In the Maya world, which spans across the countries of Mexico, Guatemala, Belize, and parts of Honduras and El Salvador, these entities still permeate through an imposed reality that stems from the colonial era. Starting in the 16th century, Indigenous groups of Maya descent were subjected to destabilizing colonizing forces in order to assimilate them to a Christianized way of viewing the world. Often, colonizers labeled these nonhuman agents as demons that needed to be purged from Indigenous minds, bodies, and souls. In Maní, Yucatán, Mexico on July 12, 1562, Friar Diego de Landa commissioned an auto da fe, in which "thousands of sculpted deity images and associated ritual paraphernalia," such as hieroglyphic codices, were burned (Christensen 2016, 22).

Yet, neither fire nor time could destroy these nonhuman agents, as they still inhabit the world-for instance, as features in the landscape. In this interdisciplinary session-split into three parts-we examine the myriad of nonhuman agents who populate the Maya world and regularly engage with human communities, as ancestors, deities, earth spirits, guardian angels, and other powerful beings. Using perspectives rooted in all four anthropological subfields and related disciplines, participants will examine how the Maya conceive(d) of, engage(d) with, and depend(ed) upon these beings in the past and present. Part 1 will focus on the living dead. Particularly, how the Maya interacted with their real and imagined ancestors, from regular ritual offerings to incorporating the dead into the foundations of houses and other structures. Part 2 will focus on the living landscape, from guardian spirits of specific domains to how statues were treated as living humans. Part 3 will focus on a wide range of other beings who populate the Maya landscape, from living mountains to the spirits of unborn children.

Presentation(s): Queenly Power of the Ancestral Maya: An Examination of Birth Magic, Sorcery, and Divination as Political Tools

In recent years, I have focused on the symbolic significance of Classic Maya royal queens of the snake realm (Kaan) and their Late Classic (~AD 550-900) political prominence. I have argued their queenly power was grounded largely from their status as royal women with reproductive power being central to their political cachet. In this talk I explore ethnographic and archaeological data - including material from the ancestral city of Waka' - that concern the potent magic of the womb, fertility, sex, and birth as fundamental to Kaan queens. Specifically, I examine how their capacity for birthing and birth work further legitimized their roles as conjurers and diviners, as sorcery is metaphorically linked to birthing. Following Mesoamerican creation ontologies of gender complementarity, I explore how wielding the sacred power of birthing as conjuring elevated the political legitimacy of royal Maya women of Kaan and beyond for generations.

Presenter(s): Olivia Navarro-Farr

Earth Spirits, Ancestors, and the "Hidden" Economic Costs of Production and Exchange in the Maya World

Contemporary models of ancient Maya production and exchange are rooted in post-Enlightenment perspectives that focus on quantifiable, observable data—raw materials, energetics, etc. Archaeologists often employ least cost pathways and other analyses that prioritize energy conservation above all, with some attention paid to additional obligations to lords and patrons in the form of taxes or tribute. Ritual activities continue to be considered separately in spite of some convincing work by James Brady (2005) and others that caches, tombs, and other ritual deposits formed a major part of ancient consumption practices by removing status goods from circulation. In this paper, the authors examine ethnographic, ethnohistoric, and iconographic sources to argue that ritual activity is an essential and significant part of production and exchange as well. Earth lords, ancestors, and other nonhuman persons were powerful landowners on the ancient landscape who required payment for anyone passing through, building on, taking from, or otherwise working on their land. Classifying the completion of these obligations as "ritual" that is considered separate from economics is the result of our own biases being imposed onto another ontological system which leads to models of production and exchange that do not accurately reflect Maya thought and practice.

Fetal Malevolence in Lacandon Maya Folk Beliefs

Unlike American society where pregnancy and birth are usually a cause for celebration, Lacandon Maya couples expecting a baby are reticent to discuss their pregnancy experiences and do not announce the birth of babies. Newborns are called "possum" and not named for several months. The most common explanation given for this behavior is that with high rates of infant mortality, this

is a strategy to lessen the emotional pain of losing infants by minimizing their social existence until parents are sure the infant is likely to survive. More recent information however, indicates that Lacandon parents perceive a fetus as a powerful and potentially malevolent spiritual being who is capable of harming people and breaking objects. To protect themselves, pregnant women wear curing strings (hach k'uch) as a charm to protect themselves. They also give curing strings to people in their households to protect them from harm and to prevent the fetus from spoiling or breaking things that are being manufactured in the house such as wooden implements or clay containers. Care is also taken not to acknowledge the fetus and draw its attention.

Presenter(s): Reece McGee

Royal Jewels and Conjuring Tools: Royal Authority and the Preternatural at Buenavista del Cayo, Belize

One of the foundations of Classic Maya divine kingship was the privileged role of kings and queens as interlocutors and intermediaries with powerful preternatural forces, such as deities, spirits, and ancestors. Mayanists have elucidated this ideological complex through archaeology, iconography, and epigraphy, and one central element is the practice of conjuring forth powerful beings from other domains of the cosmos to be present in this world. This practice is reflected in the iconography of double-headed serpent bars and vision serpents, glyphs for conjuring, and objects such as mirrors and scrying bowls. In this paper, we discuss nine elite burials, including five royal burials, from Buenavista del Cayo, Belize, to argue that the practice of conjuring was central to claims of legitimate royal authority by the polity's divine kings for at least 250 years, beginning around AD 450. We examine sacra buried with important personages, including a marine shell gorget buried with the dynastic founder; pyrite mirrors and ceramic bowls used for scrying and conjuring; and ceramic vessels with imagery of beings conjured from other realms.

7409 The New Reproductive Order: a roundtable on feminist reproductive studies, Part Two

Start Date: 11/21/2025 04:15 PM **through** 11/21/2025 05:45 PM

Venue: Sheraton **Room:** Grand Ballroom D (5th fl)

Type: Roundtable/Town Hall

In 1995, Faye Ginsburg and Rayna Rapp published the landmark anthology *Conceiving the New World Order*, the first major volume to explore the global politics of reproduction from the point of view of both its marginalization within anthropology and related disciplines and its simultaneous centrality to both the social order and political economy. Ginsburg and Rapp's ambition to 'transform traditional anthropological analyses of reproduction and to clarify the importance of making reproduction central to social theory' has succeeded in many ways. Over the past 30 years,

the rapid expansion of the anthropology of reproduction has been accompanied by the global spread of the reproductive justice movement, and a new centrality for reproductive politics on the world stage. Increasing concerns about reproduction and fertility now intersect with many of the most important political challenges of our era, including climate change, economic instability, the rise of authoritarian regimes, debate over immigration, battles over national borders, and marginalization of varied minority and LGBTQ+ communities. Part two of this roundtable revisits these themes in the context of the launch at AAA 2025 of a new anthology of ethnographic work on fertility and reproduction edited by Sarah Franklin and Marcia C. Inhorn that builds on the pathbreaking work of Ginsburg and Rapp. *The New Reproductive Order: Technology, Fertility and Social Change around the Globe* argues that despite its new centrality to both politics and scholarship, reproduction and fertility remain haunted by past absences as well as the spectral presence of longstanding stereotypes and misconceptions. In the second part of our roundtable we will extend our focus on what has changed and what has stayed the same from the point of view of feminist reproductive studies over the past three decades. What can we learn from the narratives, images and tropes – as well as products, practices and politics – through which reproduction and fertility are organized today about their ongoing significance to social and political life? Using specific examples from detailed case studies around the world, we reflect further on these and related questions at a key turning point in global reproductive politics today. The two co-editors as well as four contributors to *The New Reproductive Order* will be joined by Aditya Bharadwaj as our discussant to offer an historic occasion to look back over three decades of feminist reproductive studies at a crucial pivot point for global reproductive politics.

[Note to General Call Reviewers: This is the proposed second part of an Executive Session by the same title, and both roundtables are linked to a launch by NYU of the anthology at AAA 2025.]

5419 The Ocean Multiple: Spectralities of Oceans Otherwise

Start Date: 11/21/2025 04:15 PM **through** 11/21/2025 05:45 PM

Venue: Sheraton **Room:** Napoleon BR D2 (3rd fl)

Type: Oral Presentation Session

At a time when concerns about the planet's habitability and livability are taking on new salience in the face of biodiversity and climate polycrises, as well as security and trade conflicts, the ocean has taken center stage. But what is the ocean? Attending to the myriad ways in which the ocean comes into being, this panel challenges the idea of the ocean as a singular entity with a singular presence in the world. The papers explore how the ocean carries, through ebb and flow, an inherent multiplicity and an ever-existing potential for becoming otherwise. Drawing on work that

(re)materializes the ocean while considering how it always exceeds its wet materiality (Steinberg and Peters, 2015; Peters and Steinberg, 2019), this panel explores how the ocean always emerges in people's existences with its own 'otherwise'. In other words, how and under what circumstances does 'the ocean multiple' emerge, and with what effects? How, we wonder then, can we understand the ocean in its multiplicity against our current and future challenges, by attending to the ways it always comes haunted by its past, present and future otherwhises? Approaching the ocean through the spectralities of sea spirits, near-extinct marine mammals, insular coral geomorphologies, toxic underwater sediments, technoscientific infrastructures, and decolonial management practices across diverse geographies, reveals an ocean that exceeds itself in spatio-temporal, material and spiritual ways. As such, the panel is an attempt to ethnographically capture 'the ocean multiple' as a multitemporal heterotopia.

Presentation(s): Living on Dead Coral: Geological Specters of Underwater Past on an Uplifted Island

We usually think of the physical ground on which we live as composed of inert, nonliving matter such as rocks and sediments. But what if you walked, every day, on the dead bodies of once-living critters in the ocean? Kikai Island in southern Japan is one of the world's fastest uplifting islands. "Just" 100,000 years ago, a geologically short timescale, there was only water and waves to be found where the island is today. Since then, continuous tectonic activity and seismic events have pushed the shallow-water coral reefs above sea level, forming what is now Kikai Island. The haunting traces of its underwater origins are everywhere: a kaleidoscope of coral skeletal patterns appear on rocks all across the island, while apparitions of ancient giant clam fossils are common inside garden wells. How do the people of Kikai make sense of the manifest specters of past marine life in their everyday? In what ways do dead corals figure as lively agents of the ever-uplifting terrain? What does this story tell us about the promises and perils of geotemporal imagination at a time when thinking on geological scales is critical yet remains so challenging? In this panel presentation, I will explore the geological ghosts of underwater pasts in Kikai and the islanders' imaginative time travels to rethink the ambiguous continuities of the living and the dead, the land and the ocean, now and then.

Presenter(s): Shuhei Tashiro

"They are still alive in memories": The absent presence of the nearly-extinct Okinawan dugongs
Dugongs stand on the verge of regional extinction in Okinawan waters, with only a few remaining individuals, whose whereabouts are unknown. Occasionally these survivors leave feeding trails

behind in the seagrass beds, traces of their lingering existence. However, no actual sightings have been recorded since 2019. Yet, they remain ever-present in public discourse, most prominently as a symbol against the construction of a new military base in the inshore waters of Henoko, but also in the memory of the post-war generation who remember a seascape full of more-than-human entanglements that have largely become unravelled due to coastal development. The former abundance of dugongs also haunts historical documents in the form of catch-quota and they are referred to in a myriad of legends and songs. They have become ghost-like beings, representative of the current extinction crisis. Gan et al. speak of ghosts as "the traces of more-than-human histories through which ecologies are made and unmade" (Gan et al. 2017: G1). It is these traces that need to be taken seriously, if we want to make sense of anthropogenic extinction in meaningful ways. Based on ten months of ethnographic field work, this paper explores the absence-presence relations of these vanishing creatures and how tracing their former existence tells a story of changing environments. Conflicting perspectives of how to make use and care for changing seascapes and their non-human inhabitants exemplify the ocean multiple.

Presenter(s): Marius Palz

Haunted by Materialist Ghosts and Thinking with Sea Spirits in Swahili Ocean Worlds

This paper thinks through human entanglements with sea spirits in Swahili ocean worlds to probe ghosts of the past that continue to haunt academic understandings of the ocean. Swahili ocean worlds denotes how people live with the ocean on the Swahili coast in Tanzania. Their relationships with the sea include various spirits in invisible underwater worlds, in an ocean understood to be created by God. When considered in terms of ocean ontology, the spiritual relationality of Swahili ocean worlds can challenge the materialist underpinnings of scientific knowledge. It is quite common in social science to focus on the materiality of the ocean, while relegating immaterial beings such as spirits to cultural beliefs. By contrast, in African epistemology, we find an ontological hierarchy that spans from spiritual beings to human beings, with the spiritual realm as the ultimate source of knowledge. This paper discusses materialist ghosts and underwater spirits to account for the multiplicity of the ocean from the East African coast. In so doing, it raises some epistemic questions: How can we think the ocean otherwise? Is it really enough to (re)materialize the ocean through more-than-wet ontologies? Or is materialism itself a ghost of our colonial-imperialist past, haunting us through epistemological blind spots that deny Other ocean ontologies? And is it possible that uncanny spirits in invisible underwater worlds can help us rethink the ocean multiple?

Presenter(s): Paula Uimonen

The spectrality of "legacy sediments" in the Bay of Marseille, France

Dredging coastal sediment aims at keeping ports functional. While sedimentation alimnts marine ecosystems, it can complicate human navigation and occasionally leads to shipping accidents. Sediments make up an ecological infrastructure that enables and upsets economic enclosures of the ocean (Carse 2022). For decades, strongly polluted port sediments dredged from the Bay of

Marseille was stored on a dock of the Mirabeau Basin in downtown Marseille. Trying to redefine the city's relation with the ocean, the urban renewal project Euroméditerranée is converting former docks of France's first seaport into offices and condos. Charting efforts to contain toxic sediments, I reflect on how contaminants come to haunt emerging relations with the ocean via the existence and movement of "legacy sediments" (James 2013; Vauclin et al. 2020). Legacy sediments are testimony to human environmental alterations—they indicate the previous character of ocean use and shape present and future trajectories of shore development. Carrying heavy metals or PCBs, port sediments are "material witnesses" (Schuppli 2020) of overlapping histories of resource use and practices of geoengineering. They show the ocean as inherently multiple. A hauntological approach to dredging activities in Marseille will allow to capture the "feral" effects of port infrastructure (Tsing et al. 2024) and the role of the ocean—its depth and geochemical composition—in obscuring and revealing the ecological costs of capitalism.

Presenter(s): Lukas Ley

Water as infrastructure: Re-engineering ocean space in the Dutch hydro-tech elite

In this paper, I investigate how future imaginaries of inhabiting the oceans are haunted by past and present terrestrial ideas of infrastructural control. I draw on ethnographic fieldwork in the Netherlands (2021-2024) to trace how Dutch engineers and architects who aim to build floating cities tap into their national history to shape new stories about seawater – e.g. labelling the ocean a 'new frontier' – in an effort to prime the ocean as a habitable place onto which they can extend a Dutch 'moral geography' (Schama 1987). I stay with the notion of seawater as infrastructure to explore the analytical implications for anthropology. Much literature has discussed how water infrastructure or infrastructures of water serve as a biopolitical means to govern citizens (Strang 2016) or a way to assert nation enterprises as modern (Bakker 2012, Linton 2014). However, the idea of seawater as infrastructure raises new questions: How do developers seek to transform a fluid substance of water into a fixed element by way of science and technology? Which kinds of infrastructural control are at play in such new 'technoceanic imaginaries'? I draw on recent ideas from 'amphibious anthropology' (Gagné and Rasmussen 2016, Jensen 2015) to argue that efforts to narrativize seawater as infrastructure are not only a new form of 'hydrosociality' (Krause 2017), but a highly political development practice fueled by the spectrality of colonial and modernist notions of infrastructural control.

Presenter(s): Lasse Bech Knudsen

Multitemporal and Multispectral Human-Oceans: The Case of South Africa and Lamu, Kenya

New paradigms of ocean management are becoming more prominent in Africa, as national governments seek to leverage both the ocean economy and inclusive ocean governance. In part, this is a response to the decolonial turn on the continent, a process that includes the restoration of indigenous philosophies and beliefs in a bid to restore dignity, knowledge and power to Africans. I discuss the multitemporal, multisensorial and multispectral nature of ocean heritage and show how (1) local/indigenous engagement is advancing a decolonial turn in African ocean management;

(2) in South Africa, environmental and social impact assessments (ESIAs) now include ocean cultural heritage assessments to include indigenous ocean philosophies and beliefs; and (3) in Lamu, Kenya the indigenous knowledge system (IKS) continues to advance a multispectral view and experience of the ocean. I show how seafarers in Lamu diversely engage with the sea to master proprioception, respond to buoyancy and read the clouds for impending weather and the stars for navigation. In South Africa, the apartheid regime devastated local coastal communities and marginalized their philosophies and practices of ocean management, while in Lamu, continued access to the sea and deltas means that ancient philosophies and praxes of ocean heritage remain embedded in everyday life. This paper articulates the multispectrality of ocean heritage in two African countries and what this might mean for a more inclusive ocean governance.

3996 The Promises and Perils of Unity in Christianity, Islam, and their Anthropologies

Start Date: 11/21/2025 04:15 PM **through** 11/21/2025 05:45 PM

Venue: Marriott **Room:** Galerie 3

Type: Oral Presentation Session

Christianity and Islam, two of the world's most expansive religions, are haunted by unity in multiple ways. Despite their vast internal diversity, both traditions are marked by assertions of oneness: the oneness of God, the unity of their respective faith communities, and shared genealogies rooted in monotheistic biblical traditions. While it is true that anthropologists have grappled with this tension between oneness and variation, their efforts in this regard can be found mostly in their work to define an object to encompass the theological, social, and ritual variety encountered across continents. First, the anthropology of Islam coalesced initially around a sense of Islam as a "discursive tradition" (Asad 1986). Then later, the anthropology of Christianity, despite eschewing an Asadian line, similarly asserted that Christianity was an entity whose practices could be explored comparatively across space and time. Since these first unifying moves, however, both subfields have largely avoided engaging with actual discourses of Christian or Muslim unity.

This elision can be partly explained. For anthropologists, claims to unity often seem less compelling because they paper over divergence and invite accusations of essentialism. Thus, in the anthropology of Protestantism, for example, we have seen an expressive focus on discontinuity and schism, while anthropologists of Catholicism have repeatedly deployed a Schmittian description of Catholicism as a *Complexio Oppositorum*, a complex of opposites, despite "unity" being a key Catholic category. Meanwhile, scholars of Islam have consistently interrogated notions of unity and continuity, whether associated with Asad's framework or with invocations of the global Muslim community, the *ummah*, noting that both risk obscuring how Muslims variously interpret, contest, or disregard authoritative texts, practices, and institutions.

Drawing on analyses of Christianity and Islam, this panel aims to address the promises and perils of unity more directly. We explore unity as both a theological and social construct, focusing on how claims to "oneness"-whether of God, community, or tradition-are lived out, contested, and enacted. We ask: how do theological concepts like the oneness of God inform broader discourses of religious and political unity? How are these claims to unity mobilized in response to disunity, both within and outside religious communities? And what might an analysis of these two unities, shaped by shared prophetic traditions, theological exchanges, and histories of coexistence and conflict, offer to our understanding of organizing life in the modern world?

Our panelists address these questions, offering valuable insights into the traditions they study, and even into our current political moment. We think our critical engagements with unity can help us think even beyond religion-and especially about solidarity and political action-without reinvoking troubling universalisms.

Presentation(s): "Servants of the Same God": The Vernaculars of Unity and Difference in Southern Turkey

This paper examines how the Islamic principle of *tawḥīd* (oneness of God) and broader discourses of religious unity are lived, invoked, and fractured in the historically plural city of Antakya, near Turkey's southern border. Drawing on over a decade of ethnographic research, I explore how Muslim and Christian minority communities engage figures such as al-Khidr and the Antakyan saint Habibi Neccar to negotiate esoteric authority, cross-religious genealogies, and shared sacred landscapes. These encounters often index a unifying divine principle or a capacious spiritual community, yet they rarely erase doctrinal or social distinctions. Instead, unity is refracted through everyday acts of differentiation: gendered ritual authority, informal conversions, and patterned silences between unevenly positioned religious groups. Such practices enact a form of oneness that reveals itself in layered, relational ways rather than through universalist sameness. By tracing how political and theological claims to unity persist amid disunity, this paper contributes to emerging conversations about religious cohabitation and minority politics in contexts where Islam and Christianity are not distinct traditions, but terrains of historical intimacy and rupture.

Presenter(s): Mahiye Secil Dagtas

The Idea of a Nonsecular/Nonreligious Anthropology of Islam: The Contextual, the Extracontextual, and the Metacontextual

The academic exploration of Islam within anthropology is often expected to choose between non-secular and non-religious analytics. Focusing on the Muslim engagement with the Qur'an, this paper repositions anthropological inquiry beyond this dichotomy. I argue that the interplay between the contextual and the extracontextual is always mediated by metacontextual practices among Muslims. Conventional understandings of Islamic unity, often assumed to stem from an extracontextual adherence to the Qur'an and other scriptures, and Islamic diversity, usually attributed to contextual reinterpretations, overlook this metacontext. Drawing attention to this missing theoretical element, the paper challenges the assumption that the contextual is a phenomenological-cultural given and the extracontextual is a textual-theological given. While central to the linking of these two elements, the metacontextual—I argue—is always elusive and never fully contextualized. This quality of the metacontextual (the indeterminate context of context) opens up a new horizon for the anthropology of Islam to craft an analytic that is neither secular nor religious.

The Focolare Movement: Chiara Lubich's Vocation to Unity

The Focolare Movement was founded in 1943 in Trento, Italy, by Chiara Lubich and her friends during World War II. Seeking an ideal worth living for amid the turmoil, they found their answer in God. Unlike traditional religious orders, they embraced their faith as laypeople, forming intentional communities known as focolares. This group grew to become one of the most significant lay movements within the Catholic Church, fostering ecumenical dialogue among various Christian denominations and with other religions, including Judaism, Islam, and Buddhism. The Focolare Movement offers valuable perspectives on how the Catholic Church addressed the secularization of nation-states in the 20th century.

Chiara articulated the movement's mission as striving for a United World, resonating with the Gospel's call for unity, "They will all be one" (John 17:21-23). This paper explores how Chiara and her companions deepened their understanding of unity—from the nature of God's love to its role as a unifying force for all people and creation. She viewed even Jesus' abandonment on the cross as a pivotal moment to rebuild connections between God and humanity and within society. By promoting unity through a trinitarian model, Chiara engaged with diverse groups, reshaped the Catholic Church, and impacted Vatican II. Today, Focolarini actively advocate for peace and unity globally, whether among indigenous communities in the Amazon or institutions like the United Nations and Wall Street.

Presenter(s): William Calvo-Quiros

The Cry and the Silence of Unity: Liberationist Legacies in Southeast Pará, Brazil

This paper draws from my forthcoming book, which charts how a will to unity and a sense of its precarity, what I call "the mystic of friendship," has been shaped by multiple Catholic theologies and has animated the colonization of a Brazilian Amazonian highway. I focus here on the legacy of one theology mobilized along the highway, Liberation Theology, whose intense focus on unity

echoes as much in today's mystic of friendship, as it has helped shape a simultaneous embrace and rejection of politics among settlers.

I make this argument through an analysis of images that were published in a liberationist newsletter produced by clergy along the highway from 1980. Through these images, especially of crucified individual peasants and of unified peasant collectives retaliating against oppressors, the newsletter promoted a politics of fraternal unity that radicalized post-Vatican II theology. Yet I demonstrate that these images, and liberationism more generally, despite promoting unity, allowed older allegorical associations among disunity, evil, and the devil to persist. In short, liberationism helped divinize friendship, while (an always divisive) politics remained potentially diabolical. I conclude that a theology—or a theologically-attentive anthropology—aiming to support political transformations over time must be able to articulate how differences are integral to unity. Otherwise, both make unity vulnerable to division and its allegories.

8597 Network of Christian Anthropologists: Informal Networking Gathering

Start Date: 11/21/2025 05:00 PM **through** 11/21/2025 06:00 PM

Venue: Marriott **Room:** Lafayette (41st Fl)

Type: Special Event

The Network of Christian Anthropologists connects those who identify as Christians in the field of anthropology. All are welcome. Following an informal time of networking, we will go out for dinner together.

8571 Archaeology Division Business Meeting

Start Date: 11/21/2025 06:00 PM **through** 11/21/2025 07:00 PM

Venue: Marriott **Room:** Riverview II (41st Fl)

Type: Special Event

Archaeology Division Business Meeting

8768 "Freedom to Grow: Cocurating Movement Archives with Incarcerated and Formerly Incarcerated People"- offsite

Start Date: 11/21/2025 06:00 PM **through** 11/21/2025 07:30 PM

Venue: Offsite **Room:** Skip

Type: Special Event

"Cocurating Movement Archives with Incarcerated and Formerly Incarcerated People" convenes three New Orleans-based organizations that center the experiences and leadership of incarcerated and formerly incarcerated people to shine a light on the lives of those who endure "life without parole" sentences. Anthropologists will gather at the John Thompson Legacy Center, 1212 St Bernard Ave, New Orleans, LA 70116, to learn from and be in conversation with leaders from Freedom to Grow and The Visiting Room about their archival projects. This conversation will serve as the material to amplify awareness of Louisiana's particular carceral histories, including as a site of longstanding activism and solidarities against human rights abuses such as the use of solitary confinement / Closed Cell Restriction and radical sentencing measures. As practitioners skilled in holistic and comparative approaches to social problems, and with an appreciation for the nuances of narrative in cultivating connection and belonging, anthropologists are invited to learn about and support this work.

498 Happy Hour Poster Session

Start Date: 11/21/2025 06:00 PM **through** 11/21/2025 07:30 PM

Venue: Marriott **Room:** Grand Ballroom

Type: Poster

Presentation(s): Board #1: 'God Wants Us to be Prosperous in all Things': Spiritual Capitalism and the Transmodern Logics of Multilevel Marketing among Oaxacan Pentecostals

Part of the appeal of Pentecostalism for many Oaxacans is the promise of economic prosperity. At the Divine Light Church (DLC), where I conducted an eight-year longitudinal ethnographic study, the Lead Pastor devotes specific sermons to empresarios (business people) and instructs the congregation about how true believers can attain economic prosperity despite the difficulty caused by 'Latinos' lacking discipline and purpose. This well-worn trope is often used in Latin America and provides a facile and racialized explanation for Mexico's economic lag. Divinely inspired prosperity is certainly the goal of many DLC congregants, as most Oaxacans struggle economically and employ novel ways to make a living. Becoming a direct seller for a Multilevel Marketer (MLM) is one such way. While Amway and Herbalife were the first MLM companies to appear in Mexico, dozens of homegrown imitators, such as Omnilife (OM) have also flourished. The late Jorge Vergara, OM's founder created a company infused with a Mexican ethos of caring for los demas (others) that stands in contrast to the imagined purely self-interested 'gringo.' In this poster, I discuss how some OM distributors consider themselves to be a 'kind of social worker', because their capital gain is a result of caring for los demas; thus, also infused with spiritual meaning that aligns with their Pentecostal sensibilities. This self-help-sociorelational capitalism defies racialized logics of anti-prosperity, allowing DLC congregants to perform key cultural tenets of Mexicanidad while becoming prosperous, thus performing the work of transmodern citizenship.

Presenter(s): Michelle Ramirez

Board #2: "I'm Sorry I Can't Give You a Hug": A Foucauldian Analysis of Normalized Different-Gender Teacher-Child Physical Contact in a Chinese Preschool

Physical contact, as a daily practice in preschool, plays an important role in conveying care, building trust, and enhancing the emotional connection between teachers and children. However, one concern that is always difficult for teachers to ignore is how to establish the boundaries of intimate physical contact with young children, especially when the teacher and the child are of different genders. Situated within China's cultural context, where traditional prudence governs gendered interactions, overly intimate cross-gender physical contact between educators and children can be controversial, teachers' behavior is actually subject to the gaze and scrutiny of macro-social culture.

This study critically examines the sociocultural dynamics of different-gender physical contact between teachers and young children in a Chinese preschool, framed through Foucault's conceptualization of normalizing power. By employing an anthropological lens, this study

interrogates the tacit boundaries of physical contact, making familiar habits "unfamiliar" in order to reveal tensions that are overlooked in taken-for-granted teacher-child interactions and how teachers negotiate domination and resistance in their everyday practices.

Utilizing an ethnographic methodology, the study draws on about six months of fieldwork (September 2023 - January 2024; March-May 2024) at a Shanghai public preschool, combining participant observation, semi-structured interviews, and reflexive field notes. The sample comprises two kindergarten classes (N=51 children aged 5–6 years) with contrasting teacher configurations: Class A (27 children) features an all-female teaching team, while Class B (24 children) includes a female lead teacher alongside a male assistant teacher. This comparative design facilitates a nuanced analysis of how gender mediates physical contact practices between teachers and children. All four teachers (aged 25–33) in these two classes participated in the interviews, enabling the examination of normative negotiations in cross-gender scenarios.

Through the Foucauldian framework, the study reveals how normalized norms of physical contact intersect with moral panics and cultural anxieties in early childhood education. Findings demonstrate how teachers navigate paradoxical expectations-balancing affective pedagogy with self-surveillance against potential moral censure-while children unconsciously reinforce gendered scripts through differential interaction patterns. This study contributes to discourses on embodied care in education by contextualizing China's distinctive cultural logic surrounding touch, gender, and childhood vulnerability.

Board #3: A Coffee by Any Other Name Would Taste as Sweet: Authenticity and Caffè Leccese

Levi-Strauss suggested that food is good to think. Anthropologists of food have since demonstrated that it is also good to talk about. Food terminology, like food itself, carries cultural and social meaning. The food highlighted in this presentation is a drink associated with the southeastern-most reaches of Italy's Puglia Region, the sub peninsula called Salento. A distinctive geographic, historical and cultural zone, Salento's so-called cultural capital is Lecce, nicknamed "The Lady of the Baroque." Among the most popular beverages there is "caffè con ghiaccio e latte di mandorla" (coffee with ice and almond milk). Its origins may date from centuries of Spanish control. The version enjoyed today, however, is credited to a local family with a coffee roasting firm and the son who, eighty years ago, combined the three ingredients in a novel manner. In recent years this drink has also become known as "caffè Leccese." As its popularity has widened, so, too, has disagreement regarding what to call it. How to refer to the drink was, in fact, the theme of a series of demonstrations held in 2023. Paradoxically, whereas one might expect that the shorter name would be a source of pride, the reality is more complicated. Some residents consider the term "caffè Leccese" to denote local laziness, lack of civic pride, or a truckle to tourism. In this presentation, controversy over how one "should" order coffee in Lecce is a springboard to

consideration of broader issues surrounding the revalorization of the local in Leccese identity, in particular in the face of social changes associated with tourism and immigration.

Presenter(s): Anne Schiller

Board #4: "Pushing the Agenda?" How LGBTQIA+ Communities Construct Support Networks in Rural Spaces

In July of 2024, the citizens of the city of Lubbock checked their daily news platforms, only to discover a shocking story. The Lubbock City Council had decided in a 5-2 vote, to cut \$30,000 of grant funding dedicated to the city's art scene due to what they deemed an unspeakable horror. The event that was so terrible it required what many citizens considered an outlandish response? A drag pageant the council assumed was being hosted during one of the city's most popular, and most economically lucrative attractions. First Friday Art Trail is a farmer's market style community event hosted on the first Friday of each month of the year. This event features art showcases ranging from Master's theses paintings to local band performances and hosts vendors that sell everything from jewelry to embroidered pieces to pottery amidst local food trucks. The ghastly truth of the funding being pulled? The drag pageant was hosted separately from First Friday Art Trail, the only connection between the two being their location. Rural cities often garner the reputation of being haunted by the ideals of America's past, particularly when it comes to the rights and existence of LGBTQIA+ individuals. However, like any good spooky story, there are many layers of nuance to the visibility, presence and acceptance of LGBTQIA+ people. This research has been taken up in the wake of increasing censorship towards LGBTQIA+ individuals and rights. My research argues that community events such as the First Friday Art Trail, Pride events, etc. allow LGBTQIA+ individuals in Lubbock to construct support networks through inclusive spaces. These support networks foster the building of community outside of public events, despite the continual haunting presence of Homophobia in the very same support structures.

Presenter(s): Natalie West

Board #5: "The Basque Community of San Antonio, Texas: An Arts-Based Visual Ethnography and Exploration of Basque Immigration, Basque Community, and Identity"

Using Art-based research, I have conducted visual ethnography to study Basque culture, focusing on their artifacts and traditions. My interest lies at the intersection of community and cultural transformation, aligning with the ethnographic turn in the arts. I am integrating theoretical constructs from visual cultural studies and place-based scholarship in my research, extending arts research through interdisciplinary work. From an ethnographic perspective, one of the interesting aspects of this project is how the past, the present, and the future are entangled. Sharing items of material culture can sometimes provide a tangible connection to intangible memories, mythology, and legends regarding culture, place and identity.

I argue that despite the Basque culture and community having a historical presence in San Antonio before the days of the Alamo, the Basque population has been marginalized from the time of the Spanish Missions through today. Although there are persons currently residing in San Antonio that

have immigrated from the Basque Country during their lifetime, who self-identify as Basque, or have Basque heritage going back many generations, the Basque culture and community presence has been subverted within the larger Hispanic/Latino culture of San Antonio. Certain individuals with Basque heritage have received recognition, as many in the past held important and prestigious positions throughout the history of the city. However, acknowledgement of the Basque culture has been largely ignored. Much of the early Basque population migrated to San Antonio from northeast Mexico, which was comprised of Basque and Indigenous communities. At one time, this northeast area of Mexico was part of the first original "state" of Texas under the Mexican government. Given the long history of Texas and Mexico, borderland issues, and assimilation over time, many people in the San Antonio area have Basque surnames, but are not aware of their Basque heritage. Presently, even though there have been efforts to raise awareness of the Basque culture and community in San Antonio, the results have not been hugely successful. However, for those who are aware of their Basque heritage and identity in San Antonio, there remains a fierce pride and acknowledgment in the culture and history of place. Basque identity and culture in San Antonio is entangled with the long history of colonialism and post-colonialism. Entanglements and complexities regarding colonialism and post-colonialism continue to be present in this area of Texas, as immigration issues and borderland culture are ongoing. Will the contributions of the Basque culture ever be officially recognized in San Antonio, Texas? That remains to be seen. However, this project aims to raise awareness about the presence and importance of Basque culture and identity in San Antonio for future researchers, and for those who celebrate Basque culture, identity, and community in San Antonio, Texas today.

Presenter(s): Diana McCutcheon

Board #6: "A Whole Lot of Nothing: An Ethnography of Joy, Play, and Black Placemaking "

This poster presentation examines how play functions as a form of Black placemaking through an ethnographic study of elderly Black men who gather each evening at a Denver city recreation center. Located in a historically Black neighborhood undergoing gentrification, their nightly meetings manifest the spirit of play, expressed through domino games and lively, playful rhetoric. Drawing on five years of fieldwork, I demonstrate that these acts of play transcend mere leisure, emerging as intentional, collective efforts to preserve and reaffirm Black identity and community. These practices foster a sanctuary of joy amid urban change, countering the erasure of cultural spaces and asserting the men's enduring presence and significance.

The Card Room, where the men gather, becomes a haunted space-not in the spectral sense, but as a site where the past echoes into the present. In the face of gentrification, the men's playfulness serves as rituals of resistance, conjuring the memories and legacies of a once-thriving Black community now threatened by erasure. This interplay of past and present makes the space feel both anchored and transient, as if the ghosts of past residents linger within the laughter and domino clacking. Central to the interactions in the Card Room is the practice of 'talking shit,' a playful, assertive form of communication that interweaves with domino games. The men describe it as 'a whole lot of nothing,' yet it serves a crucial function: fostering social bonds and maintaining a

sense of continuity within their community. The study demonstrates how talking shit, characterized by its loud, confrontational, yet humor-filled tone, is not an expression of hostility but a deeply rooted cultural practice that reinforces camaraderie. Through these verbal performances, the men transform the Card Room into a vital 'homeplace'-a term borrowed from bell hooks (1990) that denotes a space of belonging and refuge where Black identity is celebrated. This research positions the playful, resilient practices within the Card Room as a form of resistance against the displacement wrought by gentrification. As the surrounding neighborhood transforms, the men's rituals of gathering, playing, and talking shit act as counter-narratives to the dominant forces seeking to displace them. By maintaining this space of Black joy and cultural expression, they challenge the encroaching erasure of their community and preserve the historical significance of their environment. In this way, the men's gatherings function as hauntings, keeping alive the spirit of community that gentrification seeks to overwrite. The playful banter and ritualistic games are not only a defense against displacement but a way of refusing to be forgotten-of refusing to become ghosts themselves. By weaving the past into the present through play, they make visible the persistence of Black identity in a space that others might deem already lost.

Presenter(s): Steve Bialostok

Board #7: A Kiss is NOT Just a Kiss: Beyond Western Cultural Myopia

Depending on context, the kiss can be imbued with meaning. It can be a culturally prescribed greeting, a generator of interpersonal bonding and an escalator of erotic intensity. It can facilitate a grand conversation between lovers that goes beyond words in a dance of co-creativity. Partners may simultaneously penetrate and receive each other. DNA is exchanged potentially improving the other's immunity or becoming a vector for the transmission of illness. Kissing, being a cultural construct, depends of the mean a culture ascribes. A kiss can be perfunctory, pushy, inappropriate, friendly, formal, imbued in romantic value or quickly forgotten. This poster presentation will engage the author's original research where she tests differences in kissing satisfaction amongst subjects who were breast fed vs those who were bottle fed. Considering the potential for greater human interactivity for those who were breast fed, she explores how this is expressed in terms of how adult kissing patterns are experienced. Are kissing subjects regarded as overly wet, aggressive and engaging or as uncomfortably dry, passive and non-exploratory? Is eye-gazing considered valuable? Correlations being considered include age, ethnicity, gender of one's partner(s), participation in alternative lifestyles and the number of lifetime sexual partners. The presence (or lack) of seduction motivation will be explored as well. Presumably this motivation must be present for a kiss to feel potent as well as satisfying, while in its absence a party to a kiss may experience sexual violation.

Presenter(s): Leanna Wolfe

Board #8: An Exploration of Educational Language Ideologies in an Arizona Community

This poster will present a pilot study of community focus groups. This study is designed to explore the educational language ideologies of community members (families of ELD students, families of

non-ELD students, as well as community members without active students). This pilot is part of a larger dissertation, a Vertical Case Study of the language ideologies of educational stakeholders involved at various levels of the field.

Presenter(s): Katie Clones

Board: #9 Anthropological enhancement for forensic linguistic analyses of adult male African Americans in civil and criminal cases.

This poster presentation examines four legal cases involving African American men—two criminal and two civil—through the lens of forensic and anthropological linguistics. While traditional forensic linguistics often emphasizes author identification using large language models in cases like suicide notes or anonymous threats, this study applies sociolinguistic methods—particularly discourse and conversation analysis—to assess language evidence presented in court.

The two criminal cases involve murder charges supported by wiretap recordings of jailhouse conversations. Phonetic and discourse analyses revealed key transcription errors in prosecutors' exhibits. As the expert linguistic witness in both trials, I demonstrated how inaccurate interpretations of African American English (AAE), particularly references to gang affiliation and legal strategy, misrepresented the defendants. These findings contributed to avoiding death penalty convictions.

The civil cases address linguistic evidence in workplace discrimination and vehicular liability. One case involved African American workers whose White supervisors allegedly used racial slurs. The African American employees claimed to have experienced workplace discrimination by White supervisors who derisively referred to them (i.e., the Black male workers) as "monkeys." However, the defense claimed that this allegation was false, indicating that the supervisor had no racial malice, but did state that "the job is so easy a monkey could do it." Discourse analysis helped distinguish between racist intent and generalized expressions, supporting a class-action settlement in favor of the plaintiffs. The second civil case analyzed dashcam recordings from a waste truck involved in a collision. The plaintiff claimed the pre-crash dialogue among the Black drivers indicated intent; however, conversation analysis showed the remarks were unrelated to the accident. The case was dismissed based on expert linguistic testimony.

This poster compares forensic linguistic methodologies used in these cases and critiques prevailing author identification techniques, highlighting their empirical and interpretive limitations when applied without anthropological linguistic grounding.

Presenter(s): John Baugh

Board: #10 Archives, Technology, and Historical Memory: Learning in the classroom

While teaching a class on Historical Memory and Guatemala, I assigned an article, published by NACLA in 2021, Historical Memory in the Digital Age (Alvarado, Juárez, and Gettleeson). The article informs on GAM, Grupo de Apoyo Mutuo, a human rights organization in Guatemala that has recovered thousands of documents from the 36-year armed conflict. During the 36-year armed

conflict, activists, scholars, and Indigenous alike were tortured, disappeared, or killed by the military. Recovered material include state documents, posters, news clippings that preserve a history of violence, often silenced in Guatemala. The authors explain how a partnership with Haverford College to digitize the archive is an endeavor to protect the archival material and make them accessible to the larger Guatemalan population.

In class, this NACLA article allowed us to enter into a conversation on the preservation of documents, the role of archives and the role of technology in preserving history and memory. I had not been prepared (but hoped) for the ghost that emerged.

At the start of the course, I shared with the students a personal family history tied to our Historical Memory theme, my father's aunt who was murdered in 1980 in the Western Highlands of Guatemala. In 2014 when I embarked in my doctoral research in Guatemala (unrelated to her murder), I began to meet and interview people who knew her, had met her, and were witnesses to the attempted murder (she was gunned down in front of the school where she was director, later to be killed in the hospital by masked gunmen). Digitally, online, not much was available in 2014 other than a one sentence encyclopedic entry on the date of her murder. Her name was just a name on a long list of students, academics, activists and innocent civilians killed during Guatemala's 36-year armed conflict. Any information I was able to gather was in the form of stories I collected with those who would speak to me.

As I prepared to teach and enter into dialogue with my students on the NACLA assigned reading, I looked up the GAM Historical Archive. There, on my computer, in the newly released archives, I came across a newspaper article of that fatal day. Sharing it with the class, the conversation on archives and technology took a personal (and maybe) much more urgent conversation. The summer after that class, preparing for a conference, I reentered the archives and found a police ledger with her name on it.

In *The Anthropology of Being Haunted: On the Emergence of an Anthropological Hauntology*, citing Langford (2016), Good, Chioyenda, and Rahimi (2022) highlight that maybe it might be worthwhile for the ethnographer to allow their work to be haunted. Since 2014, my scholarship and classroom has been haunted. My father's aunt appears and reappears as if to say, "tell my story."

This poster presentation will share the newly found police ledgers and news clippings as a result of the GAM digitized archival project.

Presenter(s): Lydia Saravia

Board: #11 Artifacts of Activism: Artistic Expression & Symbolism at the UC Santa Cruz Gaza-Solidarity Encampment

In spring 2024, UC Santa Cruz became a focal point for student protests through the student-led Gaza-Solidarity Encampment, where art and activism intersected powerfully. At the encampment, art was more than decoration-it served as a vital tool for communication and solidarity. Signs, banners, and other visual artifacts expressed resistance and unity, creating a dynamic space for

political engagement and personal reflection. This study explores artistic practices at the encampment to better understand its role in shaping identity and fostering a sense of community. A visual-digital ethnographic approach was used to identify emergent themes -- and the resulting analysis revealed a resilient community, grounded in the rich history of the American student protest movement, that boldly explored identity through artistic expression and symbolism.

Presenter(s): Zoe Blalock

Board: #12 Assembling Experience: An Archaeological Case Study from the Ancient Andes

Psychoactive substances have been consumed in the Americas for millennia. Some of the first evidence of psychotropic drug use in South America is found in north central Peru, viz., the geographical and historical sphere of influence of the Chavín-Cupisnique (1200-500 BCE) and Moche (200-900 CE) religious traditions. This project is interested in the context of psychotropic drug use in both systems, the explicit references made to these substances in the material cultural record, and the symbolic and practical edifices within which archaeologists believe they were embedded.

The Chavín-Cupisnique phenomenon offers us a window into the development of early (i.e., "formative") Andean social systems that set the stage for societies like the Moche. The utilization of public rituals as a pragmatic and predictive tool in periods of uncertainty (Rick 2017) was an important technological advancement disseminated by the Chavín-Cupisnique and continued by the Moche. This might have involved varying degrees of access to entheogens and, conceivably, the instrumentalization of entheogens in projects of establishing regional authority.

In my project, I utilize computational techniques to analyze the "sets and settings" of artifacts (e.g., ceramic vessels and ritual paraphernalia) both to add an objective metric to the current interpretations and to determine to what extent the differences and/or similarities in political, shamanic, and social structure between the Chavín-Cupisnique and Moche are reflected in material culture.

The research I hope to present at this year's AAA meeting, which draws heavily on ecological approaches to active inference (Pezzulo et al. 2024; Tison and Poirier 2021; Constant et al. 2018; Parr and Friston 2018; Ramstead et al. 2016; Rietveld and Kiverstein 2014), assemblage theory, and extended mind studies (Welshon 2019; Clark 2015; Di Paulo 2009; Di Paulo 2005; Tomasello 2005), investigates psychotropics as technologies or tools that potentially scaffolded the social and cognitive formations of these two systems in vastly different ways, leading to great divergence in the field of cultural affordances.

Presenter(s): Joseph Petersen

Board: #13 ATRAPADO EN LIMBO: FRONTERAS, ANTHROPOLOGISTS, AND TRANSLATION IN COTEXTS OF THE MISSING AND UNIDENTIFIED AT THE MEXICO-US BORDER

"...even just talking to families, talking in a Guatemalan accent, or sometimes in Mexican, like more like go to the Mexican accent, has been very helpful for the families to just feel like they're talking to

somebody closer to them...But also I think it opened a lot for them to be able to connect with me too back knowing that I can understand a little bit more from the science side but also the human side and to melt that a little bit. (formal interview, 06/03/24)" - Zia

The Missing Migrants Project reports that in the past 11 years, 11,138 missing migrants have been recorded in the Americas, with 6,512 of those migrants situated at the Mexico-United States (US) border (Migration Within the Americas, n.d.). Zia, an anthropologist working at the border, faces this crisis daily, interacting with families of missing migrants, forensic anthropologists, medical examiner's offices, consulates, border patrol, and so many other actors. This research attempts to address the crisis at the border, expanding on the scholarship of family agency and language barriers between Spanish-speaking communities and medicolegal actors by investigating the role of anthropologists, like Zia, in networks of communication (Monge, 2003) at the border, and the forms of translation that they employ. By conceptualizing fronteras (border, frontier, limit) as not just the Mexico-US border itself, but as barriers to communication, this research attempts to understand how anthropologists engage with these fronteras through translation shaped by their particular expertise. Zia forms paths of communication by engaging English and Spanish, different dialects of Spanish, forensic expertise, and personal experiences that create connections with the different actors in these medicolegal investigations. Within the context of la frontera, language is not only a resource (Gal 1989), but access to a common language can be considered a necessity. The construction of pathways for information flow is complex and requires consideration of all involved stakeholders, the real and various barriers to communication, and how anthropological expertise can be used to navigate these pathways. The formal interviews, casual conversations, and observations with Zia and other anthropologists demonstrated that extensive fronteras to communication exist, including language barriers, inequitable access to funding to ensure migrant representation in databases, need for time, intentional miscommunication, and inconsistent data-sharing practices due to the decentralization of data and/or unshared centralized data. This paper discusses how anthropologists working with migrant communities navigate such fronteras through their expertise and training, forming strategic and holistic relationships, and practicing intentional acts of care, as well as how fronteras can be further exacerbated through the overreliance on specific individual translators and communicators, like Zia.

Presenter(s): Aliya Godoy

Board: #14 Bigger and Stronger: An Ethnography of Casual College Weightlifters

Lifting weights is an activity rife with gendered meaning. This poster will engage with lifting to elucidate the ways masculinity is tied up with musculature, what that means, and how we might change it. The poster is developed from my undergraduate honors thesis research, in which I conducted ethnographic research among casual young (18-24) lifters in Boulder, CO. In the thesis I discuss the ideals, aesthetics, and norms which construct the gym as a gendered and engendering space and analyze their relation to broader gendered norms, particularly hegemonic masculinity. I first argue that lifting provides a site for the embodiment and perpetuation of a neoliberal market ethic at an individual embodied level through the valorization of hyper-individualism, antisociality,

self-discipline, endless progress, and the accumulation of personal value through gender capital. Then I turn to the themes invoked in the title: size and strength, which represent the primary motivations for why most men lift. Both these values, I argue, link masculinity to power and a capacity for violence, which marks men's muscular bodies as masculine and powerful and women's as the inverse. Lastly, in the end of the thesis I explore the contradictions and fragilities in both of these previous approaches to understanding lifting's relationship to gender roles and power. I posit the term "bro performativity" to describe moments of contradiction and reflection which reveal the arbitrary nature of masculinity's relationship to the values expressed through lifting. These moments, I argue, provide men with the capacity to exert their agency over the gendered frameworks reproduced by lifting and change them through radical discourse and social action.

Presenter(s): Seamus Klingsporn

Board: #15 Challenging Gender and Queer Normativity in Collegiate Softball: A Preliminary Study

This poster builds research with a Division III collegiate softball team to consider how softball is a cultural, gendered, and ritualistic performance. Specifically, how softball allows student-athletes to embody resistance against the forced heteronormative feminine gendered binary that has historically been imposed on women athletes. While using Butler (1990; 1993)'s gender performativity, I explore how the ritual of a softball game and how through this ritual, players critique and challenge existing social structures surrounding gender and queer normativity. For example, the strength and aggressiveness that is required for athletes to dominate on the softball field goes against the societal expectations that women are supposed to be weak, passive, and submissive. Additionally, I use feminist phenomenology (Young 1980) and embodiment theory to investigate why these structures and societal expectations are put on to women athletes, particularly softball players, while I also consider how the bodies of softball players are central to the experience of being a student-athlete in the context of a Division III institution.

This discussion draws on interviews and participant observation with a Division III softball team in the Southern United States. If awarded scholarships, student athletes at Division III institutions are only awarded scholarship based on academic merit not athletic ability: thus, facing the pressure to excel not only in the sport, but also in the rigorous course load required by their schools. Additionally, the game of softball requires a distinctive mix of physical and intellectual skills as athletes reflect on the intense physicality and acute mental agility of the sport. Softball teams often welcome a wide range of gender expressions and gender identities; however, softball – especially in the South – often includes overt expressions of Christianity, setting up contradictions in norms and expectations. I explore how athletes perceive the expectations of heteronormative sexuality and feminine gender expression and how softball creates a space for embody resistance to dominant binaries.

Presenter(s): Hannah Derouen

Board: #16 Children's Agency and Learning in a Chinese Immersion School: Insights from the Little Tiger Community

This study promotes equity and inclusion by centering children's agency within a culturally and linguistically diverse Chinese immersion preschool. Using video-cued ethnography, it highlights how young children assert agency in collective, relational ways-challenging dominant Western models of early learning. As a Chinese international PhD student, I bring a cross-cultural and reflexive lens to this work, uncovering how power and culture shape both children's experiences and my own interpretations.

Drawing on culturally sustaining pedagogy (Paris & Alim, 2017), participatory learning (Genishi & Dyson, 2009), and culturally grounded understandings of agency (Adair, 2014; Colegrove & Adair, 2014), this study challenges dominant discourses that prioritize standardization and individualism. Using video-cued ethnography (Tobin et al., 2009), it examines how children's agency is negotiated within community relationships and shaped by cultural practices, highlighting the value of relational, context-specific learning.

The research process involves ethnographic fieldwork in two preschool classrooms over one semester; video documentation capturing children's agency in structured and unstructured moments; teacher interviews and video reflections to discuss agency and pedagogy; researcher self-reflection using video analysis; and reflection sessions with parents and community members to examine agency across contexts. As a researcher and participant, I documented shifts in my assumptions about agency and early learning. This iterative process deepened engagement with the data and served as a methodological tool to interrogate how cultural background and prior experiences influence interpretations.

Preliminary findings show that children demonstrate agency even within a structured Montessori curriculum, particularly during outdoor activities. Despite the structure of Little Tiger's Montessori approach, children actively make choices and influence their learning. Outdoor activities provide key opportunities for child-directed exploration, collaboration, and decision-making. Additionally, weekly school-wide gatherings foster agency through collective knowledge-sharing and cross-cultural exploration. These gatherings, involving performance, storytelling, and interaction, allow children from a multilingual community to learn from one another. This shows that agency is also relational and rooted in community.

This study pushes back against dominant narratives that equate agency with individualism and detachment from cultural roots. Instead, it argues that agency is contextually negotiated and deeply embedded in children's relationships with peers, families, and traditions. The research urges educators to reconsider what counts as agency and how policy and pedagogy can support community-driven, culturally responsive learning.

Presenter(s): Li Tan

Board #17 Colonial Echoes, Neoliberal Shadows, and Everyday Resistance in a Bangladeshi Preschool

This poster submission examines the hauntings of the colonial past and the shadows of the neoliberal future in an early childhood classroom in Bangladesh, exploring their enduring presence. Through this ethnography-oriented participant observation in a Bangladeshi preschool classroom, I trace the remnants of British colonial schooling and neoliberal desires for competitive futures in everyday classroom interactions. Here, I analyse the classroom as a liminal site (Turner, 1969), where power, memory, mimicry, and aspiration collide, creating a place where the past entangles with the present and the future.

Drawing on an ethnographic approach, my participant observation, conversational interviews with teachers and students, and detailed fieldnotes from a preschool classroom in Northeast Bangladesh enable me to witness and document children's responses, reinterpretations, and sometimes resistance to everyday schooling practices rooted in colonial discipline and neoliberal economic logic. These subtle negotiations by the children situate their lived experiences and embodied practices within the specific cultural and historical contexts. Through vignettes of classroom moments, I demonstrate how children's reappropriation of physical exercises historically rooted in colonial disciplining of the body (Nandy, 1984) transforms into acts of mimicry (Bhabha, 1994) and refusal.

In the classroom, a state-sanctioned unified curriculum privileges a singular linguistic register, marginalizing regional dialects and oral traditions. In response, children subvert these norms through code-switching, singing local songs, and customizing national anthems, producing potent acts of epistemic resistance. These linguistic performances materialize the hauntings of suppressed local cultures and challenge the homogenizing post-colonial project of nation-building education. Through selective engagement and acts of *flânerie* (Benjamin, 1999), children navigate "borrowed" (Penn, 2011) models of classroom arrangements to make these spaces their own, enacting resistances that question the imposed logics of productivity and developmentalism (Penn, 2011; Rao et al., 2022). These resistances and negotiations represent forms of epistemic disobedience and alternative futurities, where children are the active agents.

By demonstrating classrooms and educational spaces as an assemblage of multiple forces (Latour, 2005), I argue that early childhood spaces in Bangladesh can become sites of multiple possibilities. The paper ultimately tries to explore what it means to foreground the creative, subversive, and haunting practices of young people as they navigate landscapes saturated with colonial and neoliberal ghosts.

Presenter(s): Md Rifat Hassan Liju

Board #18 Community Based Participatory Research and Indigenous Research Methodologies in an Alaskan Tribal Health Setting

Southcentral Foundation (SCF) conducted a community based participatory research (CBPR) program to advance Indigenous health equity in Southcentral Alaska, honoring and uplifting Indigenous Knowledge. We started by conducting a landscape analysis of existing food sovereignty, food security, and diet and health programs in the Tribal health system and broader community.

This process allowed SCF to identify the numerous ways food sovereignty initiatives were being implemented and areas where support was needed to uplift and strengthen these efforts. Findings from the landscape analysis informed the development of a food sovereignty-focused community advisory board (CAB). The CAB prioritized the planning and implementing of a conference-style gathering highlighting regional efforts to document, revitalize, and share cultural food knowledge and practices while connecting those efforts to health and wellness. In August 2023, we hosted the SCF Traditional Foods Gathering that celebrated the diverse ways Indigenous food sovereignty, food security, and diet and health related initiatives have been conducted across Alaska. The gathering helped the Indigenous community celebrate all the ways our peoples' have built relationships with plants, animals, the land, sea, and sky. These efforts aimed to support the transmission of knowledge across generations with an Indigenous and decolonized view of food and health. This presentation will describe our project successes, opportunities for improvements, and the next steps.

Co-author(s): Kyle Wark, Austen Rogers, John Trainor, Georgia Michlig

Board #19 Constructing the "Good Citizen": Contesting Stances Toward Standard American English in an Adult English-Learner Classroom

Building upon work in educational anthropology on how immigrants learn new languages to access new forms of social capital (Warriner, 2008; Monzó & Rueda, 2009) and to gain state inclusion (Migliarini & Cioè-Peña, 2024), this paper examines the stances toward language learning that immigrant Latinx mothers take up in an ESL class in Southern California. The mothers wanted to learn Standard American English (SAE) to index a social persona of "the good citizen." Yet even as they were constrained by pressures from the state, the mothers exerted their own local agency in shaping the English-language classroom.

The intensifications of state violence and surveillance of U.S. immigrants in recent decades have had material and discursive implications for immigrant social lives (De Genova, 2002, Rosa, 2019). We bring this into conversation with work that documents how immigrants have responded to these pressurized positions (e.g. Abrego & Schmalzbauer, 2017). Building on this, we examine how a group of Latinx immigrant mothers see SAE (in particular accent) as a crucial way to respond to state discourses of illegality, languagelessness, and exclusion.

In this study, we deploy ethnographic methods of participant observation as volunteer ESL teachers to analyze classroom activity. We emphasize methodologically that our own positioning in the class - as teachers and observers, afforded us a unique vantage point at the fulcrum of tensions between our language ideologies and those of the mothers.

We examine moments when the women pushed back on our pedagogical approach, advocating for what they understood to be their, and their peers', language learning needs. As teachers and researchers, we had a pedagogical approach that sought to validate translanguaging, de-center pronunciation, and minimize corrective feedback. Yet, the mothers often pushed for a prescriptivist

approach, asking for more correction, more lessons in SAE pronunciation, and more grammar drills. Through classroom discourse analysis, we analyze how hegemonic discourses around citizenship shaped what these women felt they should learn. At the macro-level, the women often felt pressured to strive toward an 'unmarked,' 'unaccented' English as a means of appealing to an idea of the unmarked white, "good" citizen, centering a standard language ideology in their learning. At the meso-level, the mothers' agency within the class allowed them to challenge our teaching approach as an exercise of their own sense of local control at the resource center. They pushed back as a means of taking ownership of resources they wanted to receive and to enact care for one another, by making clear how learning a certain kind of English would help them support each other in the difficult political road ahead.

Co-author(s): Jackson Gzehoviak

Board #20 Contemporary Nomads in the United States: Community and Self

This project examines contemporary nomadism in the United States, focusing on how individuals construct identity, negotiate agency, and navigate societal exclusion within a culture that privileges settlement. While much research on mobility has centered on either digital nomads or economically precarious vehicle dwellers, this study bridges these perspectives by exploring how nomads actively resist mainstream life scripts while managing structural constraints. Drawing on Victor Turner's concept of liminality, Michel Foucault's theory of governmentality, Deleuze and Guattari's nomadology, and Graham Pruss' theory of settlement bias, this research situates contemporary nomadism within broader discussions of identity formation, spatial politics, and state regulation.

Through a multi-method ethnographic approach-including participant observation in digital and physical nomadic spaces, semi-structured interviews, and survey data-this study captures the lived experiences of nomads who transition from settled life to mobility. Findings reveal that nomads employ a range of strategies to maintain autonomy while forming supportive communities in both virtual and physical spaces. Many frame their choice as a rejection of capitalist labor structures, rigid housing markets, and prescribed social expectations. However, this study also highlights the contradictions within nomadic life: while participants emphasize mobility as a path to freedom, they remain subject to legal barriers, economic precarity, and public stigma.

By examining the narratives of contemporary nomads, this research challenges dominant perceptions that equate stability with success and mobility with deviance. It argues that contemporary nomadism is not simply an alternative lifestyle but a reimagining of selfhood, community, and agency in response to a society structured around permanence and property ownership. Ultimately, this study contributes to anthropological understandings of mobility by illuminating the ways in which nomads balance independence with structural vulnerability, revealing both the liberatory and precarious dimensions of life on the road.

Presenter(s): Zane Liston

Board #21 Crafted in Fire: Cattle Brands as Artifacts of Ethnogenesis in Frontier Louisiana

Brands & Marks, registries better known as cattle brands (pyroglyphics), are often regarded as trivial outliers or anomalies meant to demarcate livestock ownership. This poster briefly surveys how cattle brands registered by diaspora peoples in Frontier Louisiana (1766-1812) became visual texts to record, preserve, and create cultural knowledge upended by colonialism and displacement.

In anthropological studies about 18th and 19th century Louisiana, research around processes of cultural change has historically focused on creolization, syncretism, or transculturation. Research of pyroglyphics suggests that identity formation in Louisiana also emerged as a form of ethnogenesis- a process of cultural adaptation in response to, from, and against, dominant colonial powers. Cultural anthropologist Jonathan D. Hill's definition of ethnogenesis expands on this identity transformation as a "synthesis of people's cultural and political struggles to exist as well as their historical consciousness of these struggles" framed by intentional acts of resistance and preservation (1996, p.2). Pyroglyphics are enmeshed in, capable of, and susceptible to transformative relationships in networks beyond brand design, creating meaning across time and place that emphasize kinship, agency, mobility, and cultural adaptation.

To properly analyze these pyroglyphics, I cataloged over 1,500 registries from two primary sources and coded them by name, date, and racial designation when noted. I also coded the brands by preliminary style categories based on visual elements such as design anomalies or similarities to other registries. After initial coding, brand registrants by Acadians, gens de couleur libre (free people of color) and Indigenous people were selected for further data collection and cross-examined with other primary sources.

The results emphasize how African, Acadian, and Indigenous people, at the turn of the 19th century, created and reclaimed pyroglyphics as mediators of self-identity and resistance. These findings will aid researchers engaging in historical scholarship to better understand practices around genealogy, diasporas, and power, particularly where traditional written or oral sources are lacking.

Presenter(s): Charlotte Jones

Board #22 Action Research on Empowering Blue Collar Labor Through Worker Ownership

In my academic work over decades, whether at the University of Utah, at Michigan in Ann Arbor, Claremont in LA, at the University of Rio de Janeiro in Brazil, etc., I've often sought to understand both economic anthropology and action research. Creating, preserving and strengthening new socio-economic challenges in the USA is increasingly now expanding. An important means for this in my work recently is the use of various social science methodologies to facilitate the establishing of manufacturing cooperatives, democratic Employee Stock Ownership Plans (ESOPs), and other radical strategies that also build community development.

Traditional corporate Human Resource programs for "controlling" blue collar workers in manufacturing industries generally consist of top-down rules, education, training, team-building,

and other methodologies which seek to influence and motivate people. Most are generally designed to have laborers work harder and increase their loyalty to the firm.

In contrast, my research focuses on alternative economics, bottom-up change with substantive enterprise restructuring that not only alters the system of corporate power, but yields heightened work performance, substantive employee empowerment through meaningful and shared ownership, whether ESOPs or co-ops. Done intelligently, both of these strategies facilitate greater worker liberation and function to restructure actual ownership, putting workers in as managers, board members, and/or shop floor team leaders.

My paper will briefly highlight three innovative cases, reported and analyzed as tools for achieving heightened productivity, greater business profits, less turnover, increased job motivation, more genuine team performance, higher incomes, and greater long-term worker commitment in the enterprise. How they succeed or fail, their structures, and implications for not only the USA, but developing nations, are suggested.

Board #23 Discourses of Dog Care in the Alaskan Distance Dog Mushing Community of Practice

Distance dog mushing in Alaska represents a unique multispecies context for viewing human-animal interaction and the human-canine bond, as the sport involves humans and dogs working cooperatively to traverse rugged terrain, in extreme weather, with little to no contact with other humans, and limited access to resources. These challenges, and the associated multispecies bond required to overcome them, are saliently marked in discourse throughout the sport of distance mushing. This study uses discourse analysis methods to investigate how discourse is used to construct, reproduce, contest, and negotiate ideas and practices associated with providing world-class dog care to distance sled dogs in Alaska, as these are constructed in the interactions of the

distance mushing community of practice. This project aims to clarify the various meanings of dog care, canine wellness, canine health, and related terms associated with the distance mushing community of practice. This will include documenting and analyzing the similarities and differences in how various community of practice subgroups provide and conceptualize dog care and wellness, as displayed through language use in context. Discourses of dog care in such extreme conditions are expected to show that dog care and expectations about dog care are dynamically tied to place and context. It is also expected to show that the meanings of dog care differ based on different environmental, social, and interactional contexts.

Presenter(s): Nicole Dufour

Board #24 Education in Context: Cultural Reasoning and Academic Practices Among Emirati University Students

This paper explores how students in the United Arab Emirates (UAE) navigate higher education within a macro ecosystem shaped by collectivist cultural values, the relatively recent institutionalization of formal education, and evolving social expectations. Using qualitative methods - in-depth interviews and online ethnography - this research examines how structural forces such as family obligations, social cohesion, and linguistic barriers influence students' perceptions of academic integrity and their everyday academic practices. Through the lens of Boudon's General Theory of Rationality (GTR), the study understands student behavior not as purely instrumental, but as shaped by reasons that are socially and culturally meaningful. By situating these practices within the lived realities of Emirati students, the paper challenges individualistic assumptions around educational conduct and contributes to broader conversations about youth, modernity, and ethical reasoning in post-oil Gulf societies. The findings offer insight into how tradition, structural power, and contemporary educational demands intersect in the shaping of student life.

Board #25 Echoes That Endure: Analyzing the Impact of Cultural Heritage on Bahamian Interest in a Lucayan Legacy Collection on Grand Bahama

The archaeology of the Bahamas illustrates a long, but incompletely understood settlement history beginning with the earliest inhabitants, the Lucayans (circa AD 700-1530). After the arrival of Europeans, Lucayan populations were forcibly removed, temporarily depopulating the Bahamian Archipelago. The current population of the Bahamas primarily consists of African and European descent, sharing no genetic ties to the Lucayans. Despite the lack of genetic ties, researchers have suggested that modern Bahamian population feel a connection to the Lucayan and wish to learn more. This research examines what the residents of Grand Bahama (The Commonwealth of the Bahamas) know about Lucayan Archaeology and if they wish to learn more, as a part of a larger research project on a Lucayan-aged Legacy Collection on Grand Bahama.

Presenter(s): Caitlyn Streseman

Board: #26 Ethnography as Language Model: Speaking Beyond the Text

This poster session explores the use of Large Language Models (LLMs), or Generative Artificial Intelligence, as tools for dynamically evaluating ethnographic writing. Given that LLMs are frequently trained on extensive datasets that include a significant number of ethnographic texts, these offer a unique tool through which to examine and understand cultural representations. Rather than possessing inherent understanding, LLMs function as mediators, connecting myriad authors, voices and perspectives embedded within their training data to the reader. It is essential to recognize the "plural" in authors, as LLMs do not generate responses from a singular perspective but extrapolate from ranked, multiple sources. The generated text is an amalgamation of the diverse cultures and voices present in the training data.

LLMs operate primarily through pattern recognition, identifying relationships within the vast amounts of text processed. Their output is based on statistical correlations and contextual associations, producing text that echoes human language patterns. The meaning attributed to the LLM's generated text is ultimately derived from the reader's interpretation within their own cultural and cognitive framework. This research proposes utilizing LLMs to evaluate new ethnographic texts, examining the models' ability to capture and reproduce culturally specific language patterns. By doing so, we can better understand the limitations and capabilities of LLMs in representing cultures, and potentially gain fresh perspectives on the practice of ethnographic writing itself. This approach opens up new avenues for using LLMs as tools for anthropological research and cultural analysis.

The capacity of Large Language Models (LLMs) to generate text is fundamentally tied to the inherent structure and usage patterns of human language, as captured within their diverse training datasets. These datasets, acting as comprehensive models of language use, enable LLMs to produce responses that readers perceive as meaningful. This observation carries profound implications. For instance, it suggests that the origins of language may be rooted more deeply in social interactions, cultural transmission, and the accumulation of knowledge within communities, rather than in biological adaptations.

Furthermore, this perspective has significant ramifications for our understanding of language more broadly, and for ethnographic writing specifically. If an LLM can construct a viable working model of language use simply by processing examples of language in practice, and then effectively mediate that model in communication with a person, it indicates that language is not merely a passive encoding of internal cognitive functions. Instead, it suggests that language is a dynamic, adaptive system that conserves and transmits knowledge. Language, in this view, serves as a medium for shared external cognition, playing a crucial role in the very process of cultural transmission.

Board: #27 Expanding the Boundaries of Teacher Discourse in Mediating Multiliteracies: An Introduction to a Multimodal Framework

INTRODUCTION: Current research on teacher discourse places excessive emphasis on interactional skills, competencies, and strategies, often grounding discourse studies in a "verbal-centric" orientation within classroom settings. This narrow focus restricts our view to situating discourse within a broader sociocultural framework that can account equally for other non-verbal meanings in communication. Moreover, in afterschool contexts, it overlooks teachers' language use as a system of symbolic tools that play an essential role in mediating multiliteracies and interactions.

PURPOSE: This conceptual paper seeks to reconceptualize teacher discourse by introducing a multimodal framework within a broader sociocultural lens. Its purpose is to expand the recognized boundaries of teacher discourse by highlighting the role of multimodal semiotic modes, as reflected in both human interactions and digital technologies.

METHODS: The proposed framework is grounded in the author's empirical studies which were conducted over the past decade in various afterschool programs across the U.S.

RESULTS: This paper deconstructs the framework to demonstrate how different modes work collectively to represent important meaning.

CONCLUSION: The study highlights the benefits for both pre-service and in-service teachers who need to equip themselves with the knowledge and skills to leverage linguistic resources, various media, and both verbal and non-verbal modes in communication.

Presenter(s): Hengyi Liu

Board: #28 Food Narratives: An Ethnographic Analysis of Food Insecurity

This qualitative ethnographic study examines how socioeconomic status and geographic location influences food insecurity among Latino/a households in the greater Los Angeles area. Food insecurity is defined as limited access to adequate food due to financial constraints or other resource limitations. In U.S. cities, food insecurity is often linked to food deserts—areas with restricted access to nutritious foods, such as fresh fruits and vegetables (USDA ERS). This issue disproportionately affects communities of color, including thousands of Los Angeles County residents. Over four months in 2021, thirteen in-depth interviews were conducted with food-insecure residents across Los Angeles County. Findings reveal that participants often face barriers such as limited education, undocumented legal status, and language challenges, preventing them from securing jobs that provide a stable income for a healthy diet. Notably, while not all participants reside in food deserts, all experience food insecurity, highlighting broader structural (e.g., location of markets) and idiosyncratic socioeconomic factors contributing to this crisis.

Presenter(s): Lilibeth Tome

Board: #29 Flavorful Encounters: An Exploratory Study Unveiling the Experiences of Night Market Vendors in Los Angeles

Driven by economic survival, street vendors in Los Angeles have transformed public sidewalks into strategic "informal" innovations, with night markets being the latest manifestations. With the presence of cultural delights ranging from aguas frescas to birria tacos, community members can immerse themselves in a culinary paradise that functions as a vital economic space. I employ a mixed methodological approach including ethnography, photo-documentation, and in-depth interviews. It is these approaches that allow me to shed light on how night market vendors operate their businesses, co-create spaces of cultural belonging, and utilize social networks to alleviate economic strain. In this study, I ask the following research questions: (1) How do night markets support vendors in establishing their businesses while also creating a space for cultural expression and community belonging? (2) How do vendors market their products, manage day-to-day business responsibilities, and utilize community networks to expand their operations? (3) What challenges do night market vendors face, both in operating their businesses and maintaining profitability? This research ultimately seeks to uplift the contributions of vendors, often Latinx immigrants, who play a vital role in the informal economic sector and in nourishing our communities.

Presenter(s): Darlene Garcia

Board: #30 From Family Farming to Migrant Families: Farm Owners' Perspectives on Labor, Kinship and Nostalgia on Vermont's Industrializing Dairies

Collapsing wooden barns and abandoned silos are the architectural ghosts of dairy farming in Vermont. Though they still evoke the bucolic landscape tourists expect, they rarely store hay or silage now. On a shrinking number of ever-larger farms, hay is stored out-of-doors, in white plastic-wrapped round bales resembling giant marshmallows, while silage is bulldozed into cement-walled bays, covered with black plastic and old tires. Amid these changes, the social composition of farms has also transformed, though it remains nearly invisible to passersby and dairy consumers. Most current farm owners grew up working alongside family members and a few local hired hands; today's industrialized farms require more labor, provided largely by undocumented migrants from Mexico and Central America. These workers live year-round on farms, work 70+ hour weeks, have limited labor protections, and are haunted by the specter of deportation. While my ethnographic research centers on the experiences of the women and families that form a growing proportion of migrants, this final chapter examines farm owners' views on the changing workforce: their memories of family farming, their new relationships with migrant families, and how their notions of kinship shape decisions-such as offering flexible schedules or better housing to women and families to ensure stability and retain skilled workers, or allowing migrant children to play at farmwork in the barn and pretending to pay them for their labor.

Centre for China's Overseas Interests, Shenzhen University, Shenzhen 3688, China

Abstract:

This paper examines how colonial-era anthropological archives on gender in Pakistan influence contemporary artificial intelligence (AI) systems, perpetuating epistemic violence against women through algorithmic governance. Focusing on Pakistan as a case study, this research explores how 19th- and early 20th-century British colonial ethnographies, which constructed Pashtun, Punjabi, and Sindhi women as "oppressed" subjects, continue to shape AI training datasets and automated decision-making in policing, social media moderation, and financial inclusion programs. Through archival research at the British Library and analysis of current AI systems deployed in Pakistan, I trace three key continuities: first of all; the persistence of colonial "civilizing mission" logics in AI-driven gender-targeted development programs; secondly; the silencing of Pakistani women activists through content filters on social media platforms; and lastly, the perpetuation of Victorian anthropological theories in predictive policing algorithms in Khyber-Pakhtunkhwa. These findings highlight the ways in which colonial knowledge structures are reactivated in contemporary AI systems, offering a pathway to decolonize AI by incorporating women's oral histories into algorithmic retraining.

Through archival research at the British Library's India Office Collections and analysis of contemporary AI systems deployed in Pakistan, I demonstrate how these technologies reactivate colonial knowledge structures while erasing local feminist resistance. However, I also explore how Pakistani digital activists are creating "counter-archives" of women's oral histories to retrain algorithms-suggesting possibilities for decolonial AI. This research contributes to: Feminist anthropology of technology, Decolonial critiques of algorithmic governance and South Asian digital ethnography.

Keywords:

Pakistan, gendered AI, colonial archives, algorithmic violence, feminist anthropology

Board: #32 Ghosts in the Neighborhood: Tracing Memory, Place, and Power Through Youth Perspectives

How might shining a light on the spectral voices of youth-unheard, forgotten, and often excluded-guide us toward more vibrant, just neighborhoods? Launched in 2023 under the leadership of Dr. Alysa Handelsman at Wofford College in Spartanburg, SC, the Youth Perspectives project seeks to understand how young people experience their neighborhoods-and how those experiences can inform more inclusive, responsive decision-making in local planning, funding, and policy. This collaborative, multi-year research project brings together Wofford students in Ethnography and Quantitative Methods courses, who have conducted one-on-one interviews, group listening

sessions, and participatory mapping workshops, alongside the creation of GIS visualizations. At the heart of this project are the voices of 3rd and 7th grade students from three Spartanburg public schools. This project has sought to understand what shapes youths' neighborhood life: the buried histories, silenced voices, and power structures that linger in the landscape. It has also sought to explore students' understanding of resources, and their conceptualizations of dream spaces as reflections of lived experiences. By bringing together qualitative and quantitative data, we explore how community planning and development decisions continue to haunt communities, often through racial segregation, socioeconomic divides, and adult-centered decision-making.

In Summer 2025, we will organize and analyze two years of data and launch a multi-modal public website that shares our findings with the broader Spartanburg community. The website will present data and preliminary analysis on a range of topics, including youth definitions of neighborhoods, their understanding of resources, and their conceptualizations of dream spaces as reflections of lived experiences. Additionally, the site will feature a comparative section, analyzing data across neighborhoods and age groups to explore similarities, differences, and the meanings behind them. We will also design components that allow Spartanburg residents to engage in the processes of research design, analysis, and presentation. Furthermore, we will host public presentations to provide additional opportunities for residents to engage with this ongoing research project.

This project invites questions that continue to guide our work: What might we gain when we invite youth into the conversation about the places they call home? How can a mixed method approach, like ours, showcase youth perspectives more effectively? How can planning be transformed by the insights of a neighborhood's youngest residents? By making visible the often unseen, or ghostly experiences of youth in community planning, Youth Perspectives offers both a framework and a call to action for centering young voices in shaping the future of our cities.

Presenter(s): Lillian Vandagriff

Board: #33 Ghosts of Memory: France and Germany Wrestle with the Past and With a United States in Chaos

In 2019 we (Donahue and Heck) published the edited volume *Cycles of Hatred and Rage*. We compared right-wing movements in Europe with the mounting influence of Donald Trump and his MAGA movement on the Republican party, culminating in his election in 2016. We noted that in the Economist Intelligence Unit's Democracy Index for 2017, of three countries, Germany, France, and the United States, only Germany ranked as a "full democracy", while the US ranked slightly higher than France as a "flawed democracy". In the 2024 Democracy Index, while Germany and France both improved their ranking, the US had fallen to third place.

This poster addresses what, for the moment, has been the complete takeover of the Republican Party by Trump's second term. We analyze how extreme right parties in France and extreme right and left parties in Germany have responded to this takeover, and to his antagonism towards, and the chaotic response of his administration, to Europe.

When Trump returned to the presidency in 2024, right-wing groups in Europe hailed his election. On February 9, 2025, right-wing leaders from Europe met in Madrid at an event titled "Make Europe Great Again". Trump, said Marine Le Pen of the French party Rassemblement National (RN), would make a "real change" for Europe. However, within two weeks the enthusiasm for Trump and his administration was waning. On February 21, 2025, Jordan Bardella, president of the RN, canceled his speech at the Conservative Political Action Conference (CPAC) in Maryland saying that Steve Bannon had used a "gesture alluding to Nazi ideology" the day before. On February 28, the combative Trump-Zelensky meeting in the Oval Office hit the news. Le Monde reported that Marine Le Pen, who had formerly supported Russia, "timidly distances herself from Donald Trump". On March 4 "she twice disavowed the Trump administration". In late March her five-year ban on running for political office called into question her political future.

Unlike France, the extreme-right Alternative for Germany (AfD) and the extreme-left Sahra Wagenknecht Alliance (BSW) continue to be pro-Russian. However, the AfD has embraced, and been embraced by, Trump and his supporters, while Sahra Wagenknecht's position has been more muted. While she believes an alliance between Trump and Putin will bring peace in Ukraine, she mistrusts Trump's support. Yet she failed to pass the 5% hurdle in the February 2025 federal elections. She and her party may have little influence on federal politics.

What lies behind the varying responses of the extreme right parties in France and Germany? We argue that the ghosts of the 1930s play a role in understanding these differences. We use ethnographic and media analysis drawn from decades of fieldwork, and familiarity with the changing situation in France and Germany, as political parties try to position themselves in a world leaning toward authoritarianism while the ghosts of the past loom over the present.

Co-author(s): Patricia Heck

Board: #35 Ghosts of Race across the Mediterranean: Researching Blackness and whiteness between Italy and Morocco

This poster presentation examines the enduring specters of race that shape contemporary perceptions and lived experiences of whiteness and Blackness across the Mediterranean, with particular attention to the socio-cultural and historical entanglements between Italy and Morocco. Drawing on ethnographic fieldwork, archival research, and postcolonial theory, the study investigates how racial categories are historically produced, negotiated, and contested within everyday practices, media and artistic representations, and migratory trajectories.

Based on these premises, it presents two interrelated phases of my research. The first stems from a doctoral project in Cultural and Social Anthropology focused on the representations and lived realities of Blackness in contemporary Morocco, particularly among Black Moroccans and so-called 'Sub-Saharan migrants'. The second, developed in the context of current postdoctoral research, investigates the nexus between race and citizenship in Italy, through the biographical narratives of young diasporic Italians of North African origin.

Methodologically, the study adopts a transMediterrAtlantic approach (Zaccaria 2016), inspired by Gilroy's (2020) notion of the Black Atlantic and by recent conceptualizations of the Black Mediterranean (Proglio et al. 2021). This perspective aims to articulate a critical and transnational analytical framework capable of simultaneously engaging with local articulations and broader regional and global configurations of race. Rejecting methodological nationalism, the research also includes a reflexive engagement with the positionality of the researcher-as a white, Italian woman-while problematizing the category of whiteness itself within the Italian context.

Ultimately, this presentation argues for the need to critically examine the Mediterranean not merely as a geographical space, but as a dynamic site of racial formation, shaped by colonial afterlives, migratory flows, and shifting imaginaries of belonging and exclusion.

Presenter(s): Alessandra Turchetti

Board: #36 Grappling with our Racialized Past and Present through Participatory Ethnography with Youth

Polarized public debates about whether and how to discuss race and racism at school, centering adult views, dominate U.S. media and policy. During five summer sessions in 2022, a diverse group of twelve youth, ages 14-17, met with a former teacher (that's me) to discuss race. Members of the Rural Youth Research Collaborative set boundaries for race talk, discussed specific ways that race is salient in their everyday lives here in the rural west, and utilized participatory ethnographic methods to analyze and document what was shared. During contentious political times, the space they created for shared, open dialogue was seen as valuable and affirming to youth in this study, and can be a model for future youth collaboratives. Findings from this study center youth stories about race, racialization, and racism alongside urgent youth-generated recommendations for teachers and schools. As Americans continue to grapple with the ways past and present racialization matter today, consultation with youth is a pathway toward creating more relevant, supportive, and just learning environments. The findings from this study offer teachers, schools, and researchers a chance to better understand how young people develop and enact racialized identities in and beyond rural places, alongside ways they can support youth starting tomorrow.

Presenter(s): Rebekka Boysen-Taylor

Board: #37 Haunted by the Past, Grounded in the Present, Hoping for the Future:

East African Bird Guides Pursuing Professional Trajectories Through the Pandemic

To do their work well, professional bird guides must spend years learning to identify hundreds of species of birds by sight and sound, mastering the art of finding birds in their habitats, learning to design itineraries for birders with different desires and budgets, honing the logistical, linguistic, and social skills needed to lead successful tours, and building extensive professional networks characterized by significant sociocultural, economic, ethnic, and national diversity. All of their efforts, all over the world, came to a sudden halt when the COVID-19 pandemic struck in March 2020, grounding bird guides at every stage of their careers. Over the following months and years,

guides had to navigate multiple unpredictable shutdowns and re-openings as they looked back on what they had lost, considered what they could do in the moment, and prepared for the futures they imagined might come to pass.

For this poster, I draw on social media posts, Zoom conversations, and e-mail exchanges as well as in-person interviews conducted in fall 2023 to convey the varied professional trajectories pursued by bird guides in Kenya, Uganda, and Rwanda through the pandemic. While some guides dropped out of the profession to pursue livelihoods which seemed more secure in unprecedented times, others took up economic activities like chicken farming, charcoal selling, or cake baking to support themselves while simultaneously working to maintain or further develop their professional skills and networks in the hope that they could one day return to guiding. Some young guides-in-training took advantage of the shutdowns to focus on gaining fundamental skills and knowledge, while the most active guide trainer in Uganda aimed to ensure that enough guides would be ready to work again when the time came. Their stories demonstrate the resilience and creative flexibility of people determined to pursue a profession they love through pandemic-related upheavals, qualities they may soon need to draw on again as economies around the world face a significantly heightened risk of recession for very different reasons.

Presenter(s): Wendi Haugh

Board: #38 Hawaiian Cowboys: Paniolo Culture, Mexican Vaqueros, and the Untamed Beasts

The Hawaiian Paniolo (cowboy) tradition reflects a distinctive blend of Indigenous Hawaiian culture and the influences of Mexican and Californian ranching practices. This research explores the archaeological and historical accounts surrounding the emergence of the Paniolo, highlighting their cultural significance to the Hawaiian Islands and its connections to broader trans-Pacific and transcontinental ranching systems. Examining primary and secondary data reveals that the arrival of Mexican vaqueros in the 1830s transformed Hawaiian social, economic, and pastoral practices, leading to the development of a distinct Paniolo identity characterized by cultural resilience and adaptability.

Presenter(s): Ashlyn Weaver

Board: #40 Ib Tsev Neeg (One Family): In our own voices

We can either tell our stories in our own voices or others will do it for us. There is a power that comes from owning and sharing your journey - a lived experience that only you can give voice to. ~ Workshop Participant

Our poster will introduce conference participants to the Nrhiav Koj Lub Suab/ Roots and Routes project, which created a generative space for Hmong American community members in North Carolina to share and make meaning of their life experiences. Roots and Routes was a series of digital storytelling workshops grounded in principles of popular education, which centralizes peoples' experience as powerful sources of knowledge for naming and solving problems (Freire, 1993; Highlander Center, 2025). In the summer of 2022, an intergenerational group of Hmong

community members came together to share experiences, make connections, build agency, and create digital stories. Participants engaged in theater games, collaborative writing, and dialogues regarding their journeys, challenges, and dreams. Each participant developed a digital story that reflected an aspect of their experience that they wanted to share with the larger community. These digital narratives provide counter-stories to the barrage of dehumanizing discourses that attempt to define who immigrants and refugees are and can be in our communities (Carter, 2014; Chávez, 2013). Our poster explores the questions: 1) What are the affordances of using popular education approaches within the specific context of Hmong participants; and, 2) What aspects of identity (gender, race, class, skin color, language, cultural knowledge) did participants highlight in their digital narratives? Our data sources include fieldnotes, program evaluation responses, and the content of participants' digital stories. Popular education promotes the idea that communities are stronger and more powerful when members share stories and strategies for navigating dominating institutions, which is compatible with Hmong cultural norms that recognize strong in-group networks through a clan social structure (Yang, 2013). The popular education pedagogies we engaged with provided an opportunity for participants to explicitly address some of the tensions they navigated in their community regarding gender roles and language use, especially across generations. In viewing the stories produced by participants, several important themes emerged including maintenance, and loss, of language and cultural practices, access to education, and developing resiliency in the face of economic and social challenges, such as poverty and racism. Older participants' digital stories often highlighted a trajectory towards material success, while younger participants' contributions acknowledged the sacrifices of their elders and grappled with their efforts to learn about Hmong history and culture on a deeper level. The poster presentation will spark reflection and raise awareness of the Hmong people and their history in the U.S.

Board: #41 If These Walls Could Talk: Negotiating the Echoes of Carcerality and Coloniality in School Infrastructure

Schools are widely understood as sites of social reproduction: spaces where racialized, gendered, and classed inequalities are maintained through curricula, discipline, and institutional practices (Anyon, 1980; Apple, 1979; Bowles and Gintis, 1976; Wun, 2017). Yet comparatively less attention has been paid to the physical infrastructure of schooling: the material environments through which these logics are made tangible, spatial, and affective. This study examines how racially marked youth engage with the often-overlooked architectural and infrastructural dimensions of their schools.

Drawing on data collected at a high school in a mid-sized city in the Midwest, this study engages in three distinct participatory methods: spatial mapping (Futch & Fine, 2013), walk-along interviews (Kusenbach, 2003), and photo voice (Wang & Burris, 1997). These methods attend to the youths' embodied school navigational practices and illuminate physical manifestations of broader logics of containment and control as youth interact with and experience them.

This project contributes to anthropological and educational conversations by rethinking how space, materiality, and infrastructure participate in the reproduction of inequality. From the hallways and stairwells to the classroom walls and windows, the built environment is not a neutral container for social reproduction; it actively participates in and reinforces these processes of control. This study speaks to the conference theme by examining how the physical infrastructure of schools carries the weight of historical legacies of carcerality and coloniality. Findings highlight youths' understanding of this "haunted" terrain and the many ways they engage in escape and resistance as they maneuver through it.

Board: #42 In/Visible Hope: The Voices of Batey Libertad, Dominican Republic

In summer 2024, Kiskeya Youth, a student-led team from the University of Florida lead a small camp in the Dominican Republic focused on community-building and solidarity between Haitian and Dominican youth. During that time, we also conducted a series of oral histories with Haitian community members residing in Batey Libertad, a small shanty town located in the Valverde province of the Dominican Republic. We documented the testimonies of Haitian migrants and Dominicans of Haitian descent who live under the threat of deportation, statelessness and are continuously excluded from active roles in Dominican society. These individuals, shrouded by the anti-Haitian legacies left behind by the Trujillo Regime between the 1930s and 60s, had been traversing their lives through the obstacles placed and legitimized by the Dominican government, all while silencing and devaluing their existence in the country. Their oral histories were used to create a short documentary which not only documents historical injustices, but also serve as acts of refusal, empathy, and truth-telling during moments of deep political uncertainty. This poster will present the project's methods, findings, and impacts, while reflecting on how fear, violence, racism and historical memory continue to shape contemporary attitudes toward Haitian migrants. I

consider how storytelling and ethnography can confront erasure, reclaim visibility, and challenge the silences enforced by the state.

Presenter(s): Diana Rodriguez Allende

Board: #43 Individual Poster Presentation: Adopting Change: Transnational Adoptee Kinship & Advocacy in Norway

Transnational adoption has been predominantly conceptualized within anthropological and interdisciplinary scholarship as a life-long experiential phenomenon that permeates each developmental stage of an adoptee's existence. Expanding upon this established theoretical framework, this paper argues that transnational adoption constitutes not merely a lifelong but an intergenerational experience—one that fundamentally shapes the identity formation processes, kinship configurations, and political commitments of transnational adoptees. Drawing on ethnographic research conducted in Oslo, Norway, this paper interrogates how intergenerational dynamics and diverse interpretations of "future generations" inform adoptees' approaches to parenting, advocacy, and hope during a politically contested historical moment regarding the past trajectory and future prospects of international adoption in Norway. This research offers substantial scholarly contributions to understanding the contemporary decline of transnational adoption, its intergenerational ramifications, and the evolving conceptualization of adoptive kinship both within the Norwegian context and global frameworks. The study will substantively enhance anthropological discourse on kinship and adoption, while simultaneously enriching theoretical perspectives on generational studies, hope frameworks, and advocacy mechanisms.

Presenter(s): Madeline Nicholson

Board: #44 Inscribing the Spectral: Verses on Walls, Memory Appropriation, and Contested Afterlives of Ghost Voices in 17th Century Chinese Vernacular Fiction

This paper presents an in-depth analysis of spectral poetic expression through the ghost character Zheng Yiniang in Feng Menglong's 17th-century vernacular story collection *Yu Shi Ming Yan* 喻世明言. I examine how her verses—particularly through the medium of tibishi (wall inscriptions)—functions as a critical site where tensions between personal memory, historical trauma, and cultural transmission are negotiated within the liminal space between life and death. Situated within the historical context of the fall of the Northern Song dynasty to the Jurchens in 1126, Yiniang's ghostly presence, manifesting through tibishi, functions as material anchors for her immaterial existence. The transformation of Yiniang's intimate wall poems from fixed archival inscriptions to fluid public songs reveals compelling insights about the politics of memory and the agency of spectral voices in Chinese literary traditions.

Drawing on Wu Hung's theoretical frameworks of reminiscence and monumentality, I argue that Yiniang's wall inscriptions exist at a complex intersection of these concepts. Her verses initially manifests as what identified as personal monuments—sites where memory crystallizes and secretes itself in abandoned spaces that resist official historical narratives. The physical specificity

of her handwriting on walls within Lady Han's deserted residence creates a memory-image that mediates between materiality and immateriality, anchoring her spectral presence in a carefully constructed sanctuary where time effectively stops. Here, her poems function not merely as aesthetic expressions but as embodied extensions of her spectral self, refusing the separation between creator and creation that characterizes traditional monumentality, in stories of ruins.

This paper traces the radical transformation of Yiniang's poetic expressions across three distinct poems-"Lang Tao Sha," "Haoshi Jin," and "Yi Liangren"--revealing how each represents a different negotiation between archival fixity and repertoire fluidity. When "Haoshi Jin" escapes the confines of Lady Han's residence to circulate as a popular song, it undergoes what Diana Taylor describes as the shift from archive (fixed, authoritative) to repertoire (fluid, participatory). The paper demonstrates how Yiniang's final act of vengeance-dragging her unfaithful husband into death-functions as radical spectral resistance against this transformation, forcefully reclaiming her narrative from abstraction and refusing to allow her intimate expressions to dissolve into generalized nostalgia for a lost past.

By examining how female ghost poems move between private inscription and public circulation, between fixed walls and fluid popular songs, this paper cautions on how hauntings operate within cultural systems of remembrance and forgetting, how cross-cultural societies transform collective remembrance into consumption and exploitation of identities.

Board: #45 L1 Speakers and Their Perspectives of Factors Influencing Spanish Acquisition

The purpose of the research is to identify the perspectives of L1 Spanish speakers in the United States so that others can better understand the unique situations and challenges that L1 speakers face regarding factors influencing their decision to teach their children Spanish. This information can then be used by schools and public programs to better connect with this community.

The study found that there are disconnects in identity between many L1 and L2 speakers. The research found that L1 speakers felt that their children were Latino and thus would take on similar characteristics to them, such as language. While it is true that the L2 speakers are of Latin descent, they have also been born and raised in the United States. Most L2 speakers recognized their Latin roots, but also many of the L2 speakers grew up in predominantly Caucasian neighborhoods and associated with these groups. As with most teenagers, "fitting in" was important for the youth. Spanish was seen as a marker that distinguished them from the rest of the group and thus was shunned.

On the part of L1 speakers, this assumption of identity meant that there was an expectation for L2 to speak the language. However, linguistic learning was only encouraged in the home through talking to the child. Children struggled without any formal language learning tools such as books and schooling. It was especially notable that the majority of interviewees brought up grammar. Without the grammatical structure, the children struggled to apply any of the vocabulary that they had learned from family members. Anxious about making mistakes and possibly sounding "silly" to

others while speaking the language only increased social anxiety towards the Spanish language, eventually driving them away from it in their adolescence.

Board: #46 Labor Ethics as Meta-ethics: Accountability during (Post)socialist Decline in the Ultimate Model City of China's Socialist Industrialization

Mao's central government officially recognized Daqing as the ultimate model of all

industrialization in socialist China. In (post) socialist reform, its role has become problematic for its relative decline. The state's retreat and the Massive Laid-off have created chronic disputes, moral breakdown, and nostalgia for the state power in the local community, especially working-class families. Consequently, they emphasize labor value, contribution, and

self-regulation, competing in "hard work and endeavor" to decide who is to blame in dispute

mediation. Many critics of neoliberalism view these values as the neoliberal ideology that justifies the irresponsibility of governments and society by putting all the moral burden of failure on privatized individuals. However, workers in Daqing view these values as a "socialist" legacy that offers them flexibility in responsibility assignment, enabling them to blame others when they cannot identify others' misconducts. Equally confusing, many workers support "authoritarian statism" because, according to them, "authoritarianism" enables them to criticize governments rather than be controlled by governments. There seem to be strange, systematic appropriations of narratives and discourses. This paper aims to investigate the mediation of disputes to understand ways of appropriation by which their emphasis on ethics of labor and endeavor empowers natives in dispute resolution.

Presenter(s): Yuhao Ding

Board: #47 Landscaped Gardens and Hot Stone Massages: Understanding Americans' use of Mexican Beach cobbles within a symbolic framework of Consumer Identity

Mexican beach cobbles, commonly marketed as Mexican beach pebbles [MBP], are smooth, round stones extracted from the shores of Baja California. Since the early 2000s, the extraction of Mexican beach pebbles has facilitated the rise of a commodity chain composed of Mexican laborers who harvest the material, American retailers and landscaping companies who sell the product to consumers, and mid-level shipping and processing centers between Mexico and the United States. A designated luxury item, Mexican beach pebbles have primarily emerged as landscaping rocks used to adorn gardens, fill swimming pools, and aid in drainage and water conservation efforts on suburban lawns. However, the use of Mexican beach pebbles continues to transform each day, as indicated by the use of MBP in the wellness industry in the form of hot stone massages. This poster builds off Dr. Christian Zolniski's seminal ethnographic work that tracks the commodity chain of MBP from the point of extraction in Mexico to delivery to distribution centers in the U.S. The construction of this commodity chain illuminates the transformation of these beach

pebbles into highly coveted materials enmeshed in an international luxury economy. This transformation has heretofore not been analyzed with a critical sociocultural lens that seeks to understand how the consumption and various uses of MBP reflect consumers' and retailers' identities within a wider socioeconomic and political framework. Through interviews, surveys, and extensive dialogue with retailers and consumers of Mexican beach pebbles, I analyze the discourse surrounding the marketing, sale, use, and distribution of these stones in the Dallas Fort-Worth metroplex. Analysis revealed that Mexican beach pebbles have been integrated into a primarily white, upper-middle class identity as a commodity charged with intense symbolic significance, emerging as signifiers of cultural refinement, elite social status, taste, and even the pursuit of mindfulness. The arduous and exploitative nature of the extraction of Mexican beach pebbles is obscured by rhetoric suggesting that the laborious collection process is quaint, selective, and even humanistic in nature. Ergo, this research demystifies the relationship between American aesthetics and identity politics within an international luxury market, thereby contributing to wider conversations on emergent patterns of resource exploitation in the Global South by American consumer markets.

Presenter(s): Alex Helm

Board: #48 Language Pasts and Language Futures: Latine High School Graduates Reflect on Language Loss and Present Enactments

This paper reports on a longitudinal study focused on 3 Latine students who received a dual language education in the same school district in California, from elementary through high school. Dual language (DL) or two-way immersion programs began within the U.S. over 50 years ago as a type of instructional integrative approach to teaching language to minority and language majority students (Lindholm-Leary, 2001). DL programs were designed to teach students high levels of academic literacy and proficiency in two languages by providing native language instruction for language minority students with non-English-speaking backgrounds, while simultaneously offering language majority students access to non-English languages (Howard, Sugarman, & Christian, 2003). Dual immersion programs effectively teach English to emergent bilinguals while also continuing to develop their heritage language to academic proficiency while pursuing an enriched curriculum, rather than prioritizing oral English fluency to the detriment of academic content. As a type of bilingual education program with some of the highest academic achievement scores for emergent bilinguals but with a plethora of critiques levied towards them in the past decade (Cervantes-Soon, 2014; Valdes, Freire & Delavan, 2016), what can be learned from the reflections of Latine high school students who participated in this relatively rare form of biliteracy education?

Ideas of bilingualism, biliteracy development, and investment (Norton, 2010) in Spanish-speaking academic identities are explored through the analysis of the interview data and a focus on change or constancy over time. Students who participated in this dual language program were supported in developing their language proficiencies in both Spanish and English, in both oral fluency (including vocabulary, complexity of usage, and presentation skills) as well as writing. However, these

students also use each of these languages outside of school contexts and choose when, how and with whom to use them. Regular use of minoritized languages outside of school settings can align with identity development (González, 2001), as Latine students and/or investment in social practices that usage of the language allows.

Presenter(s): P. Zitlali Morales

Board: #49 Language Acquisition vs. Language Learning: An Anthropological Perspective

Despite projections that 1 in 4 students in classrooms across the United States will be English Language Learners (National Education Association 2020), recent political discourse-such as the Trump administration's declaration of English as the official language-reveals a persistent monolingual ideology. Given the historical context of the United States, language classrooms continue to exemplify how history repeats itself when pedagogical models fail to evolve-privileging explanation over participation, and acquisition over lived experience. To understand how language is truly learned, we must engage with the social histories of those who use it. This cyclical reliance on outdated teaching models underscores the importance of recognizing the cultural and historical contexts that shape language learners' experiences (Rosaldo 1993; García & Wei 2009; Menken 2008; Valdés 1998; Vásquez 2011). If humans in general-and children in particular-are fully capable of navigating complex linguistic interactions in their daily lives without explicit instruction, then why does education continue to emphasize teaching as a means of transmitting knowledge and prioritizing explanation? (Flores, Conference, March 2019).

This poster presents an exploratory, preliminary study that investigates the historical and sociocultural contexts in which language classrooms have developed in the Lehigh Valley, Pennsylvania. Following Erving Goffman's (1983) insights into interactional order and Dell Hymes (1974) and Sherzer's (1987) work on language and performance, I explore how the historical "imprints" of language policies and ideologies persist in the everyday routines of classroom life. Specifically, the poster will examine how Spanish immersion classrooms and English as a Second Language classrooms function as sites for theorizing the intersection between second language acquisition (SLA) and anthropological theories of learning (García 2009; Garfinkel & Rawls 2002; Lave & Wenger 1991; Menken 2008; Sacks 1995). By centering language as social action, this research aims to move beyond dominant language dichotomies-such as learning vs. acquisition, native vs. non-native, or academic vs. everyday language-toward a more nuanced understanding of how language, culture, and ideology are co-constructed in educational spaces. Ultimately, this research contributes to conversations on the ethnography of language learning by offering a critical, situated lens on how the past haunts the present in language classrooms-making the immaterial tangible in everyday interaction.

Presenter(s): Amanda Fulmer Bressack

Board: #50 Literacy-as-Event and Embodied Meaning-Making: An Ethnographic Study of a Bangladeshi Child's Home Literacies

This study explores the emergent and embodied nature of children's literacy practices through an in-depth, small-scale ethnographic investigation of a young Bangladeshi child within his home environment. Drawing on new materialist, posthumanist, and postcolonial perspectives, it reconceptualizes literacy not as a fixed set of cognitive skills but as fluid, situated events shaped by dynamic interactions among human and non-human entities, material objects, and cultural histories.

Grounded in a qualitative, ethnographic approach inspired by Leander and Boldt's (2012) and Burnett and Merchant's (2018) frameworks of literacy-as-event and embodied meaning-making, the study is sited in a multi-generational home in suburban Dhaka, Bangladesh, chosen for its rich postcolonial histories and cultural hybridity. Data collection involved participant observation, informal conversations, field notes, reflective writing, and informal interviews with the child and his family over a week of immersive engagement to explore (1) how literacy events unfold in the everyday interactions of a child with people, objects, and texts in a family setting (2) the role of materiality, embodiment, and cultural knowledge in shaping meaning-making and (3) how global cultural artifacts and symbols are negotiated within local, postcolonial contexts, producing hybrid identities in a third space.

The researcher participated in daily family life, observing literacy practices in both mundane and eventful moments and negotiating language use and cultural identity within the home. Special attention was paid to the child's embodied interactions with humans and materials, translanguaging, and engagement with religious and cultural rituals. These observations were documented in rich, chronological narratives to capture literacy events' temporal flow and affective texture.

Analysis was informed by poststructuralist and posthumanist theories, particularly the concept of literacy-as-event, which frames literacy as emergent from the relational assemblages of bodies, materials, and affective forces (Burnett & Merchant, 2018; Massumi, 2015). The study also employs Bhabha's (1994) notion of "third space" to interpret how the child's interactions with global symbols are locally reimagined, blending Western pop culture with Bangladeshi religious and familial values to produce hybrid, situated literacies.

Findings reveal that literacy events are deeply embedded in the rhythms of daily life and produced through activity and inactivity, presence and absence, and the unpredictable interplay of people, objects, and environments. The captured moments illustrate the fluid negotiation of identity and the production of new meanings in the liminal "third space" where local and global, tradition and modernity, intersect. It underscores and advocates the importance of recognizing literacy as a dynamic, relational, and embodied process, especially in postcolonial and multilingual contexts.

Presenter(s): Moutushi Mahreen

Board: #51 Lived experiences of trans/non-binary late-diagnosed autistic adults

Abstract

There exists a significant overlap between autism and gender divergence although studies have yet to find a causal link. The research on the subject rarely focuses on lived experiences of trans autistic people, especially trans autistic adults. This research, conducted by an autistic researcher, is grounded in critical autism studies as a theoretical approach and methodological approach. A digital ethnography revealed how online communities have become a resource and refuge for trans autistic adults. In addition, seven virtual semi-structured interviews with autistic adults about the potential connection between their gender and neurological divergence yielded several insights. Interlocutors discussed how their autism made them less likely to internalize social norms, thus finding gendered associations arbitrary and the gender binary nonsensical. Their resistance to others' judgment and shaming also gave them a lower threshold to realizing feelings of gender divergence within themselves. This extended to sexuality as well. They were more likely to be non-binary and have fluid sexual orientations. All were high maskers, having learned to perform their assigned gender and neurotypicality for society. They suffered from invalidation, rejection, discrimination, harassment, and violence from those around them, as well as serious lacunas in mental health professionals' understanding of their identities but found greater self-determination after embracing their transness and autism. These findings matter in a political climate where autism can be used to invalidate transness, painting autistic trans people as confused victims of the trans 'ideology'. Additionally, the study reveals a need to acknowledge the richness that trans autistic people add to their communities.

Presenter(s): Joanna Abillama

Board: #52 Los Verdes: A Gendered Analysis of the U.S. Border Patrol

In 2023, a new record was set for unauthorized migration into the United States, resulting in the mass hiring of U.S. Border Patrol (BP) agents. In this historically white and male-dominated field, the number of Latina BP agents has increased, making them vulnerable to forms of gendered violence stemming from institutional racism and sexism. More specifically, they work in environments where they experience violence in the workplace, witness it against migrants (often female), and may themselves perpetuate it. As such, my work seeks to understand the day-to-day lives of Latina BP agents and how they conceptualize, experience, and resist various forms of gendered violence in their workplace. Coupled with the fact that more Latina women are migrating and experiencing different forms of gendered violence at the border, understanding this phenomenon from the perspectives of Latina agents provides new and important insights into this process. Drawing on in-depth ethnographic interviews conducted in the summer of 2024 and 2025 with Latina BP agents, my work addresses several questions: How does the intersection of gender and race frame the BP experience? How do Latina BP agents perceive, navigate, and perpetuate gendered violence within the workplace and with female migrants? What can understanding the experiences of Latina agents say about the complicated relationships of gendered violence at the U.S.-Mexico border? This data allows for a deeper understanding of the gendered dynamics of the BP and how these dynamics and the violence within them are reproduced when agents interact with migrants.

Presenter(s): Karla Hernandez

Board: #53 Oklahoma City Afghan Community: Material Culture, Belonging and Creating a Sense of Home.

This research explores how Afghan refugees in Oklahoma City create a sense of belonging through material and visual culture. Since the fall of Kabul in 2021, the Afghan community in the city has grown to approximately 1,480 individuals. In response to U.S. political narratives around refugee assimilation, this study examines how Afghan families navigate identity retention while adapting to their new environment. Focusing on homemaking practices, the research investigates how Afghan individuals use clothing, furnishings, food, and religious symbols to foster a connection to family, culture, and spirituality. Through ethnographic methods, including participant observation, photography, and object interviews, the study examines how everyday objects and domestic spaces serve as cultural anchors that sustain Afghan identity despite displacement. By prioritizing women's experiences in the context of material culture, particularly in homemaking activities such as sewing and cooking, this research emphasizes the agency and creativity involved in diasporic life. The findings will highlight how Afghan material culture not only asserts cultural identity but also challenges the notion of assimilation by showing how Afghan communities create home on their own terms. This research contributes to the growing field of Afghan diaspora studies by expanding the understanding of material culture's role in shaping belonging in the U.S. context, thus enriching broader conversations on migration, identity, and cultural retention.

Presenter(s): Maegan Taylor

Board: #54 Organizing Against the Algorithm? Organizing Motivations and Strategies Amongst Unionizing Rideshare Drivers in Los Angeles

In the past fifteen years, most urban centers in the U.S. and abroad have seen the proliferation of "gig work" mediated by app-based services such as Uber and Lyft. These app-based services, enabled by robust digital infrastructures and mass data gathering, constitute part of the platform economy, wherein virtual platforms mediate consumer economic activity and group interaction, such as the act of an Uber customer requesting a ride from a driver through the app interface. Rideshare driving is made possible largely by the outsourcing of labor -- drivers are not employees, rather they are classified as independent contractors, and consequently, they do not receive employee protections such as health insurance and minimum wage. Since its inception, Uber has been the topic of legal and cultural controversy regarding its overt efforts to thwart local regulation; its business model, which some argue misclassifies drivers as independent contractors to reduce labor costs; and its extractive labor practices, including that of algorithmically determined wage payment, in which employers use a black box algorithm to assign payment per ride based on aggregated data unknown to the driver.

In response to deteriorating working conditions and driver grievances, many rideshare drivers have turned to labor organizing to challenge the legally-questionable norms of the industry regarding wages and worker protections. This ethnographic study explores how the experiences of long-time

rideshare drivers in the Los Angeles chapter of Rideshare Drivers United (RDU) have motivated them to unionize and their rationale for employing specific organizing tactics. Utilizing participant observation and semi-structured interviews, this project will investigate how unionizing Los Angeles rideshare drivers view their current working conditions, relationship to their employer, and the algorithmically determined payment model. In an era of historically low unionization rates, I seek to understand how worker resistance has evolved as workplaces become increasingly disaggregated and digitized. Fieldwork will be conducted in the summer of 2025, and I hope to present my findings at the AAA conference to receive input from other labor anthropologists as I develop my thesis.

Presenter(s): Mason Ng

Board: #55 Riding the Line: Florida's Struggles with Motorcycle Deaths

Motorcyclists are some of the most vulnerable vehicles on the road. Specifically in Florida, motorcycle related deaths have sadly been steadily increasing in recent years. While the statistics and physical numbers are available, how do these motorcyclists who are alive feel about the roads in Tampa today? Given the significant increase in traffic following the pandemic, the infrastructure has been noticeably strained. Interviewing members of the USF motorcycle club and my own firsthand experiences as a motorcycle rider I hope to find out how riders feel about the road and how their experiences potentially reflect the haunting statistics.

Presenter(s): Facundo Pereyra-Kluser

Board: #56 Queer(ing) Greek Life: The Experiences and Subjective Identity of Non-Heterosexual Fraternity Brothers in Historically White Fraternities

While homophobia and heterosexism are well-documented in Greek life fraternities on U.S. college campuses, evidence of non-heterosexuality among men in these fraternities (i.e., fraternity brothers) has existed throughout Greek life's history. Of note, expressions of masculinity among fraternity brothers haven't always been characterized by homophobic and heterosexist exclusion. Fraternities' exclusionary practices changed in response to the changing composition of the student body at U.S. colleges. Fraternities first engaged in class-based exclusion in the early 19th century, then race and religion-based exclusion in the late 19th century, and incorporated homophobic and heterosexist exclusion through the 20th century. The term "historically white fraternities" (HWFs) refers to fraternities with this exclusionary history, designating them unique sites of analysis compared to identity-affinity social fraternities. Through person-centered interviews (PCIs) with a small sample of non-heterosexual fraternity brothers in HWFs from multiple fraternity chapters at a public four-year university in Southern California, I seek to explore these men's histories, experiences, and motivations to investigate how agency, personal history, and social context - including historical, cultural, and institutional context, with a particular focus on the hegemony of HWFs - interact in the subjective experience of sexuality and identity formation. Especially considering the assumed tension between non-heterosexual identity and the homophobia and heterosexism of HWFs, why do non-heterosexual men choose to be in HWFs? How do their non-normative sexual identities shape their experiences in these fraternities, and vice

versa? What can their experiences reveal about queer identity in the U.S.? Much of the existing work with this population seeks to make HWFs more inclusive for these men, ignoring the social context in which HWFs and the experiences of non-heterosexual fraternity brothers exist, in turn failing to explore how such context shapes and is shaped by both fraternity life and these men. This work also presupposes universals among non-heterosexual fraternity brothers in HWFs, leading this body of work to deemphasize nuanced explorations of the motivations, identity, and subjective experiences of these men. Data will be collected in Summer 2025 for analysis in Fall 2025 to be presented as a poster at the AAA 2025 annual meeting to receive insight and feedback from other anthropologists before drafting a thesis through Winter and Spring 2026. By exploring the interaction between agency, personal history, subjective experience, and social context through these men's stories, this project will build upon the existing literature with a richer anthropological analysis while serving as an empirical exploration of queer theoretical and anthropological arguments about the interplay between personal history, subjective experience, social structure, identity, and agency.

Presenter(s): Jericho Tran-Faypon

Board: #58 Routes of Ritual: The Sonic Geography of Muharram Processions in Srinagar

This poster maps the spectral geographies of Muharram processions in Srinagar, Indian-administered Kashmir, where ritual sound becomes a medium for the dead to speak and for the living to remember. In a settler colonial landscape that overwrites, displaces, and monitors, Shi'a sonic practices-noha (laments), matam (ritual chest-beating), and majlis (gatherings)-summon what persists: grief, refusal, and embodied memory. These rituals are not only acts of mourning; they are aural archives, movements through a city thick with absence.

Through memory-based cartography and ethnographic fragments, this project traces five overlapping maps that render visible the routes, pauses, and interruptions of Muharram processions-rituals shaped not only by theology but by military presence, spatial restriction, and ambient fear. These processions move through streets marked by past violence and current surveillance; pasts that cannot be fully spoken yet remain carried in voice and rhythm. In this way, the soundscape of Muharram haunts the city, echoing not just the historical trauma of Karbala but the ongoing condition of Kashmiri life under occupation.

This work draws from and contributes to anthropological engagements with spectrality, sound, and political theology. It is informed by Charles Hirschkind's notion of the "ethical soundscape," in which listening forms not only modes of attunement but conditions of moral and political life. In Kashmir, listening becomes risked proximity. To chant is to remain audible in a system designed to suppress. To listen is to align oneself with what the state seeks to erase. Sound becomes infrastructure: not decorative or ambient, but foundational to how spaces are made livable and histories remain unburied.

Inspired also by Larisa Jašarević's work on eco-eschatology and the temporal weight of Islamic storytelling, this project approaches mapping not as a neutral act of representation but as a way to

hold the fragments that resist capture. The maps created are not topographic or bureaucratic; they are affective, relational, and partial. They hold ghost routes-places people avoid, reconfigure, or revisit annually, often without speaking their names. These are spaces where sound gathers and memory leaks out.

In line with the AAA 2025 theme, this project considers what it means to work from within a broken triad-between researcher, field, and academy-where access to the field is severed by political precarity. It asks: what kinds of knowledge are still possible when presence is interrupted? What forms does the field take when it returns through dreams, recordings, or the memory of footsteps? Rather than closure or solution, the poster offers a method of staying with the murmur: mapping what lingers, what aches, what cannot be fully archived-and yet remains.

Presenter(s): Sadam Hussain

Board: #59 Shared Wounds, Shifting Bonds: Queer Trauma, Friendship, and Community in Changing Landscapes

The direct effect of collective queer trauma on the friendship-building of queer individuals has widely gone under-researched, leaving a gap in understanding the potential for trauma to be a source of community formation, relationship-building, and the reinforcement of social bonds. This work highlights potential ways for the collective to overcome trauma, resisting its adverse impacts on expressions and personal understandings of queerness. By utilizing ethnographic methods to engage with queer survivors of trauma, this work strays away from psycho-medical models of pathologizing queer identities and instead probe the socio-cultural systems which foreground anti-queer oppression. This project aims to investigate how trauma based on family/cultural rejection, institutional discrimination, and mounting public/legislative homophobic and transphobic discourse and policy creates a basis for collectivizing, social support, and community resistance for queer students in Southern California. This trauma gets carried through hegemonic power structures to create a collective sense of trauma specifically for queer individuals. The duality of the collective will be examined in terms of how it serves as both a challenge and a resource in creating a sense of self in the community. This study aims to explore how this collective trauma gets understood across the queer community and how the collective informs friendships and queer intimacy on a platonic level. Study participants will be LGBTQ+ undergraduate college students across two universities in Southern California, recruited through their claim as a queer individual who discusses trauma with their peers. Overall, this work aims to illuminate how trauma is both internalized and collectivized through hegemonic power structures, fostering both a shared vulnerability and communal resilience within queer communities. In doing so, this work offers a nuanced understanding of how queer friendships and bonds become sites for healing, solidarity, and resistance.

Presenter(s): Bradley Carol

Board: #60 Revealing the Invisible Barrier: How Gender Norms Shape Disparities in Financial Literacy Across China

Gender norms are a key driver of gender inequality, but their impact on the financial literacy gap remains poorly understood. This study utilizes data from the 2018 China Family Panel Studies (CFPS) and employs multilevel regression to comprehensively analyze, for the first time, how gender norms (operating at the individual, household, and regional levels) influence disparities in financial literacy and how these norms interact with each other. The findings reveal that the gender gap in financial knowledge is smaller in regions where individuals hold egalitarian attitudes, in households where mothers have a college education (reflecting norms of intergenerational equity), and in areas with progressive gender cultures. The results elucidate the structural causes of financial inequality, challenging previous individual-centric narratives. This research also refines the theory of gender-based financial outcomes and offers actionable policy recommendations for interventions targeting cultural norms to combat systemic inequality.

Presenter(s): Qianwen Xue

Board: #61 Social Moments and Interconnected Subjectivities: Ethnographic Methodological Considerations Beyond Rapport and Fieldsite

Anthropological methods are notoriously difficult to teach. Participant observation requires entering into a likely unfamiliar space, building rapport, and becoming embedded in a community. Much is left up to chance. However, rather than throwing our hands up and hoping for the best as we send out generations of "hapless anthropologists" from university to field site, or even sending students to research their local communities, we look to draw the "field" nearer still, into the social science classroom. There, through simple classroom activities, we can build small moments of community reliance, interconnected moments that simulate competition, states of excitement, and anticipation. Students engage in physical and imaginative tasks, mirroring the challenge of fieldwork: to be present in the moment, aware despite unfamiliar circumstances, and analytical in the immediate aftermath. We will present and discuss how our pedagogy draws on visual and symbolic anthropology and how we have applied this approach (the "Murtle Method") in our own teaching and lives.

Board: #62 Subaltern Graves: Identity and Familial Ties to Black Gravesites

This autoethnographic account explores my journey of self-discovery through the physical and symbolic landscapes of family grave sites, both the marked and the unmarked. As a Black American of partial Creole ancestry, my identity is deeply shaped by the historical fractures and continuities of enslavement, colonialism, and indigenous displacement. On my mother's side, I can trace my lineage back to my ancestors' first steps onto the former French colony of Louisiana. In contrast, my father's lineage, descended from Mid-Atlantic early-arrival enslaved Black peoples and first-contact Indigenous communities, exists in a space of historical erasure, where names and records are fragmented or entirely lost.

By engaging with these burial grounds, I confront the ways in which memory, loss, and archival absence shape personal and collective identity. This work interrogates the impact of ancestral visibility and invisibility on my understanding of self, lineage, and belonging, reflecting on how the act of tracing whether through documentation, oral history, or embodied experience becomes a means of reclaiming what was intended to be forgotten

Presenter(s): Berkeley Robinson

Board: #63 The ghosts of Nunapitsinghak: Navigating hauntings and conceptions of more-than-human in place-making

Drawing from six years of teaching experience in a rural Yup'ik community in Alaska, I reflect back on my experience as a white educator within and Indigenous community. In this paper, I explore one memory in particular that continues to haunt me: a visit with friends to an abandoned children's home, Nunapitsinghak, that once functioned as a boarding school for Yup'ik children in the Southwestern Alaskan tundra. In this narrative, I challenge my conceptions of the agency of more-than-human entities and explore concepts of place, Indigenous knowledge, colonization, and decolonization.

When I first entered Nunapitsinghak, I did not have a full conception of what this space was or had been. I knew that it was once a school, and that Yup'ik children from the surrounding villages would come here. I knew that it was a good distance from any community, and isolated in the middle of the tundra. Despite my lack of knowledge about this place, there was a heaviness, a sense of grief and an unsettledness that sat at the pit of my stomach. . One of my friends led the way through the ruins, the other waited outside, refusing to enter.

Here, I found Zomo the Rabbit on an empty book cover, laying next to the boardwalk just outside the old schoolhouse. Something about him caught my attention and I ripped the little rabbit free from his binding. My friend who had remained outside of the building for the duration of our stay there, half-jokingly warned me not to take the rabbit with me, or bad luck would follow. Or was she joking? At the time, not thinking much of it I stuffed him into my pocket.

Thinking back now, though, I wonder, was there more going on there? Had I contributed to the re-disturbance of a colonial disturbance, or had I desecrated a sacred object? We had come here by boat, and our party preceded to get stuck out in the tundra not long after that as we drifted aimlessly down the river for several hours before finally getting rescued just before dark. Perhaps bad luck had followed. "See?" my friend jested. That thought, even as I struggled to let myself believe it, haunted me.

In my questioning and contemplation of this, I was directed to the theories of hauntology. Lisa Blackman (2021) describes Hauntology as the presence of absence or an absent presence. Mark Fisher (2012) explains it more as the failure of a future or in terms hauntological landscapes "when a place is stained by time" (p. 19). Sean Eudaily (2004) engages directly with the 'ghost' of colonialism and looks to the ongoing effects of deculturation through forced assimilation as "physical embodiments of the spirit of the past" (p. 24). The colonial specters of what had

happened here were quite literally spilling out from the schoolhouse and onto the tundra – what stories were held in these more-than-human materials? Later I would look up Zomo the Rabbit to discover that he was a trickster from an African folktale. A trickster. There was something of irony in that.

Presenter(s): Nicole Auhl

Board: #64 The Efficacy of Dog Programs in Women's Prisons

Throughout the United States, many public and private correctional institutions offer dog training programs alongside evidence-based interventions as part of greater rehabilitation efforts. Yet, to date, there has been very little research describing prison dog training programs, much less on their efficacy. What little evidence exists suggests that prison-based dog programs may have the ability to facilitate positive outcomes, including the reduction of internal violence (von Wormer, Kigerl, & Hamilton 2017), community service opportunities (Harbolt & Ward 2001), and providing incarcerated individuals with the space to develop interpersonal skills (Roenke & Mulligan 1998). The existing research is mainly focused on male or juvenile inmates. The focus of my research is on inmate-led dog training programs in women's correctional facilities. Utilizing a qualitative research approach, this study utilizes data from semi-structured interviews with inmates, corrections officers, and other commissioned individuals involved with the program. This research also involves participant observations of female prisoners interacting with dogs. It is hoped that this research might pave the way for understanding the needs of women in carceral environments with regard to managing behavior and reducing post-release recidivism.

Board: #65 The Ghosts We Inherit: Southern Myths and the Rewriting of History

In the Southeastern United States, ghost stories take on diverse forms, yet common narrative themes prevail across these myths. These stories are not merely supernatural tales but socially and politically charged narratives that reflect broader ideological trends, often rewriting historical narratives and providing alternative interpretations of a Southern past (Brundage 2005; Foster 1987). For instance, the "loyal slave" ghost myth was frequently employed by "Lost Cause"

storytellers to romanticize slavery and reinforce Southern nostalgia (Pirok 2023; Miles 2015). In contrast, certain African American ghost stories served as acts of resistance, portraying the resilience of the enslaved while exposing the cruelty of their oppressors. Gender dynamics also shape these narratives, where women often appear as scorned lovers or dangerous femme fatales, while men are depicted as either criminal tricksters or loyal figures (Cooper 2018; Steinberg 2013; Roberts 2023). These motifs extend beyond the South, traveling across the United States and evolving in new contexts while maintaining their original social and political undertones. As these myths spread, they continue to reinforce power structures, influencing perceptions of race, gender, and history. Our research seeks to catalog these recurring themes, tracing their collections, transformations, and geographical movements. By examining how these myths persist and adapt over time, we aim to uncover their role in perpetuating structural violence on the bodies of the living and the deceased, ensuring that historical narratives are not merely retold but critically analyzed for their deeper societal implications

Board: #66 The Relationship Between Cultivation and Martial Arts in Daoism: A Study of Wudang Mountain Daoism and Martial Arts as a Medium of Spiritual Practice

This study examines the role of martial arts as a medium of spiritual cultivation within the Wudang Mountain Daoist tradition. While Daoist practices have historically emphasized internal methods such as seated meditation (zuochan), breath regulation (tuna), and guiding exercises (daoyin), martial arts have also developed in close association with religious cultivation. Despite this integration, scholarly attention to martial arts as a component of Daoist cultivation remains limited. This research seeks to elucidate the spiritual, philosophical, and disciplinary functions of Wudang Mountain Martial Arts, which are not merely combat techniques but holistic practices facilitating physical, mental, and spiritual transformation.

Using a mixed-methods approach that integrates textual analysis with ethnographic fieldwork, this study draws upon interviews, participant observation, and the researcher's own embodied experience of martial training. Fieldwork was conducted at key sites including the Wudang Daoist Association, Wudang Martial Arts Association, and major temples such as Taihe and Zixiao Palaces. Informants include long-standing practitioners and lineage holders, notably Master Zhong Yunlong and American Daoist Jack Pinnick.

Wudang Mountain, with its sacred geography and historical role as an imperial Daoist center, provides a unique environmental and cultural context for martial cultivation. The martial arts practiced here are rooted in Daoist cosmology, emphasizing principles such as wuwei (non-action), yin-yang harmony, and the cultivation and circulation of qi. Techniques favor fluid, circular movements synchronized with breathing to unify body and mind. Training methods integrate repetition, meditative focus, and internal energy regulation to promote self-awareness, emotional stability, and spiritual insight.

This study explores three analytical dimensions: (1) the philosophical foundations of martial arts within Wudang Daoism; (2) their practical functions and methods as cultivation tools; and (3) their relationship to broader Daoist cultivation systems. It highlights how martial training complements static practices like meditation, creating a dialectical unity of movement and stillness. The integrated approach fosters xing yi he yi (unity of form and intent), enabling practitioners to transcend ego, regulate internal energy, and achieve spiritual transformation.

In conclusion, Wudang Mountain Martial Arts constitute a dynamic and embodied form of Daoist cultivation that integrates traditional knowledge with contemporary relevance. Their continued adaptation in modern contexts-particularly in the realms of health promotion, stress management, and holistic wellness-underscores their enduring spiritual value. This study contributes to religious studies, martial arts scholarship, and the anthropology of embodied practice, while offering a foundation for future comparative and interdisciplinary research.

Co-author(s): YI XUAN ZHANG

Board: #67 The Sound of a Digital City: Neo-Cru R&B

The "sound of a city" once streamlined the creation of popular music genres. But the physical notion of the city has digitized, birthing spatiotemporally independent music scenes such as "Neo-Cru R&B." This project illustrates how digital spaces mirror the function of cities in creating genre. Drawing from one year of hybrid ethnographic fieldwork, this project explores how a particular R&B scene manifests a post-pandemic condition: "anemoia", or the nostalgia for a time one has never known. This poster illustrates the collaboration between an undergraduate anthropology student and a hybrid community of emerging R&B musicians to produce an ethnographic documentary.

Presenter(s): Joshua Jung

Board: #68 The South Up North: Experiences in and Perceptions of the South in New England

What does it mean to be Southern in a space where "the South" is often decided for you or worse, dismissed entirely? This poster explores the tension between lived identity and social expectation, drawing from the experiences of a Southern student navigating life in Massachusetts. In both classrooms and casual conversations, regional origin often prompts assumptions about politics, culture, and values that rarely align with reality. Sometimes, these assumptions are strong and vocal. Other times, they're replaced with apathy, a quiet disinterest that renders the South irrelevant or undeserving of complexity.

This project uses personal narrative, informal peer dialogue, and reflexive observation to explore how those expectations are not only confronted but actively unraveled. The intersection of Southern roots with queerness, leftist politics, spiritual nonconformity, and veteran experience challenges dominant regional scripts and reveals how identity is continuously negotiated between perception and truth. Ultimately, the poster asks what regionalism means in contemporary U.S. life and who gets to define it.

Presenter(s): Caitlin Worthington

Board: #70 Toward Ethnographic Fabulation as a Theory and Method for the Analysis of Historical and Contemporary Black Life

This poster introduces ethnographic fabulation, a transdisciplinary methodology emerging from my dissertation research on Black literacies across archival and ethnographic contexts. Responding to the epistemic violence of traditional qualitative research and archival representation, ethnographic fabulation blends rigorous archival analysis with participant-centered ethnography to imagine the lived experiences and literate worlds of Black people across generations. The method takes seriously Saidiya Hartman's call for critical fabulation (2008)-an engagement with archival silence that embraces speculative storytelling-and extends it by integrating ethnographic data from a contemporary Black children's enrichment group in the California Bay Area.

This study engages two data sets: narratives from the Federal Writers' Project slave narrative archive and 18 months of ethnographic research with twenty Black children aged 4–12 in a community-based, racially affirming learning space. Working across time, I develop transtemporal synthesis as an analytic strategy that brings these sources into critical dialogue. My analysis centers themes of learning conditions, community literacies, and educative storytelling. Across both data sets, I trace how Black subjects-then and now-negotiate, challenge, and reimagine dominant narratives about literacy, intelligence, and belonging.

Ethnographic fabulation emerges from this work as a method rooted in radical imagination, Black epistemology, and ethical representational practice. I introduce two signature practices: retranscription, a method for correcting the raciolinguistic (Rosa & Flores, 2017) distortions of Black speech in archival texts; and transtemporal synthesis, which defies linear temporality to connect past and present forms of literate world-building. This work is inspired by McKittrick's assertion that "wonder is study" (2021) and Pandian's definition of ethnography as "a practice of critical observation and imagination, an endeavor to trace the outlines of a possible world within the seams of this one" (2019, p. 4). I position Black children's imaginative inquiry as methodologically and theoretically generative.

This work contributes to anthropological conversations about history, temporality, and method by offering an approach that is both critically reflexive and future-oriented. Ethnographic fabulation challenges traditional empiricist norms and invites anthropologists to consider how imagination and care might be methodologically necessary in research with and about marginalized communities. As Escobar observes, "realities are plural and always in the making" (2020, p. ix), and as such engaging with multiple realities within an ethnographic context opens up limitless possibilities. In centering the lived and imagined realities of Black people-across centuries and contexts-this work offers a hopeful, rigorous mode of engagement for scholars committed to reparative and liberatory research.

Presenter(s): CoCo Massengale

Board: #71 Towards Decolonizing Archival Collections: Promoting Access & Dialogue Through Online Subject Guides

The National Anthropological Archives (NAA) and the Human Studies Film Archives (HSFA) are home to a vast and diverse array of collections that serve as important historical records of cross-cultural interactions spanning decades. This project delves into the imperative need for a subject guide for the NAA and the HSFA Central African collections to improve accessibility for Central African researchers. A subject guide enhances the discoverability of collections by organizing and sorting information into a cohesive document. It achieves this through the implementation of Indigenous geographical and cultural terminology in the index, thereby facilitating a more intuitive search process. Furthermore, the guide contextualizes historically offensive terms that are present in some collections, acknowledging their existence while actively rejecting their use. This method promotes a nuanced understanding of historical contexts while fostering sensitivity to the implications of language. This study aims to challenge colonial narratives and stereotypes, highlighting the significance of integrating diverse voices and community perspectives. To support this effort, contact information is strategically placed throughout the guide to encourage individuals to report any inaccuracies or omissions. This inclusive approach is essential for enhancing the accessibility of the collections. Through this exploration, the project aims to create more accessibility through a culturally sensitive museum subject guide for the Central African collections, fostering greater engagement and understanding.

Board: #72 Traditional Cultural Knowledge and Livelihood Diversification Among Pastoralists in Northern Tanzania

Traditional Cultural Knowledge (TCK), defined as the shared practices, skills, innovations, and values produced and reproduced by indigenous communities to understand themselves in relation to their environment and the organization of their social, political, ecological, and economic structures, is a key aspect in the development of sustainable livelihood diversification efforts (Hodgson, 2017; McCabe 2010; PINGO's, 2022; Semali and Kincheloe 1999). In northern Tanzania livelihood diversification projects are supported by numerous community-based organizations. Despite the increasing recognition of cultural knowledge in sustainable development, understandings of Maasai cultural knowledge's role in livelihood development projects remains limited. Conventional development approaches often prioritize external, modern methodologies that may overlook the valuable insights embedded in Maasai traditions, leading to interventions that are less effective, culturally misaligned, and unsustainable in the long run.

Using semi-structured interviews, survey data, and participant observation, this research examines how cultural knowledge and practices engage with income-generating projects in Monduli district in Arusha. Generally, the projects in Monduli district focus on cattle grazing rotations, beekeeping, crafting, and cultivation. Within these projects There is also a gender divide within these projects;

men are the main participants in many labor-based and cattle grazing projects, while women engage more with the beekeeping and handicraft projects. This research aims to explore Maasai cultural knowledge's current role in livelihood development initiatives and identify how Maasai communities ensure that projects are both culturally relevant and sustainable. By examining traditional Maasai practices in livestock management, natural resource management, and gender roles within Maasai communities, this study seeks to bridge the gap between Maasai traditional cultural knowledge and modern development strategies. The findings will contribute to creating inclusive, community-driven approaches that enhance economic opportunities while preserving cultural heritage and ecological balance.

Presenter(s): Abigail Ryan

Board: #73 Mortuary Revelations Recorded in Bone: an osteohistological assessment of the British Beaker People to investigate burial treatments using Micro-CT

This paper examines the mortuary practices of British Early Bronze Age 'Beaker' people (c.2450-1850 BCE) using micro-computed tomography (MCT) and an enhanced Oxford Histological Index (OHI) quantification method to assess bone diagenesis. Previous studies indicate postmortem manipulations of Beaker bodies often took place, including disarticulation, secondary burial, and possible 'mummification', though their extent and complexity remain uncertain. The objective of this study is to gain a fuller understanding of these practices by analyzing for the first time a large sample of Beaker individuals using MCT data. Key aims include: (1) determine postmortem treatment observable in bone microstructure; (2) identify variation in corpse management practices relating to age/sex categories, grave types and mortuary environments; (3) assess the effectiveness of MCT for the investigation of ancient bone diagenesis.

MCT scans of humeri and femora from 52 individuals from 19 sites across southern England have been analyzed. Preliminary results indicate: (1) variable levels of diagenesis both in the overall sample and among individuals interred at the same site, demonstrating variation in corpse management practices and possible applications of preservation techniques that arrested decomposition; (2) variation in some cases between upper and lower limbs of the same individual, which has significant implications for evaluating the results of previous histological analyses of ancient human skeletons based only on single bone thin sections; and (3) preservational differences between young and mature adult individuals, suggesting application of differential burial treatments was based on age.

Board: #74 When One's Voice Is Not Alone: Heteroglossic Hauntings in Queer Youth's Dramatic Monologues

This paper explores how queer undergraduates in a theatre-based sexual health education course at a large public university in Southern California negotiate the tensions surrounding their sexual

identities through the process of creating, workshopping, and performing a dramatic monologue. Storytelling has long been considered a significant tool for meaning making and self-understanding (De Fina, 2015; Holland, 2001; Ochs & Capps, 2001). As a form of storytelling, the monologue is a dramatized tale of self-construction where the students actively acknowledge (listen to) and address (question/respond to) the – sometimes painful – ghosts from their pasts while summoning visions for their futures. Thus, we should not misinterpret the personal monologue as just the voice of the speaker. Rather, it is heteroglossic in nature – consisting of multiple, competing discourses – and saturated with historical, sociocultural meanings (Bakhtin, 1981; Waring, 2017).

I assumed the dual role of participant-observer/performer-ethnographer (Conquergood, 1985) by enrolling in this theatre-based sexual health course alongside 11 undergraduate students. Throughout the winter quarter, we developed various creative assignments inspired by our lived experiences. Together, we workshopped and expanded on our material to devise a cohesive performance piece, which we delivered in the spring for high schoolers across a large metropolitan area. Data for this paper come from 20 weeks of ethnographic participant observation I conducted during our class rehearsals, written drafts and public recordings of performances, and ethnographic, person-centered interviews (Levy & Hollan, 2015) with three queer students from the course. Our interview space acted as an extension of our class rehearsals where we could collaboratively construct meaning around our creative assignments and experience in the course overall (Vossoughi & Zavala, 2020; Seidman, 2019). I met with each of my focal participants at two distinct periods during the course. The first phase took place while we were developing our monologues; the second phase took place concurrently with our performances.

I draw from Bakhtin's (1981) heteroglossia as a framework of inquiry and performance as an epistemic lens (Bauman, 2000). Preliminary analysis demonstrates the dialogic nature of the creative process of monologuing, particularly through the evolution from inscription to performance. The desire to save face resulted in acts of self-censorship during the writing process (Goffman, 1990). Ensuing group rehearsals introduced heteroglossia through healthy, affirming discourses, enabling us to challenge our inner dialogue (Hermans, 2003) in later drafts and live performances.

Presenter(s): Amanda Harris

Board: #75 'Assombrações do Racismo Médico: Corpos Negros e os Fantasmas da Saúde Pública no Brasil'

Este trabalho parte da premissa de que o racismo estrutural no Brasil se manifesta como um fantasma persistente na saúde pública, assombrando os corpos negros - vivos e mortos - que circulam por hospitais, centros de pesquisa e arquivos médicos. Inspirado pela paisagem espectral de Nova Orleans, exploro como, no contexto brasileiro, ruínas coloniais, práticas médicas violentas e epistemologias biomédicas excludentes continuam a produzir assombrações materiais e simbólicas nas comunidades quilombolas. A partir de entrevistas com médicos negros e lideranças quilombolas, bem como análises de arquivos hospitalares e memoriais urbanos, investigo como os vestígios de práticas eugenistas, as negligências institucionais e os silêncios

médicos constituem uma paisagem fantasmagórica na qual a saúde é constantemente negociada. Ao mesmo tempo, proponho que esses fantasmas também falam: eles aparecem como testemunhos da resistência e como fontes de memória ancestral, abrindo caminhos para políticas públicas mais inclusivas, para a produção de conhecimento contra-hegemônico e para novas formas de cuidado territorializado. O fantasmagórico aqui não é apenas um lembrete do que foi, mas uma provocação sobre o que ainda precisa ser descolonizado.

Board: #76 "BLIND SPOT OR NOT: MINING GETS BETTER WHEN WE ARE BETTER"

Are the statistics of mining employment as a gender-based-dominated field becoming a trend of the past? With jobs and collegiate student interest in mining trending downward for over a decade, how can mining experience a resurgence of talent with the assurance of continuous growth and systemic change along gender lines? Where are women situated in mining? How does adhering to gender norms impact employment and retention? From 2023 to 2024, we asked over 50 women working in mine operations, technical service, and administration within the United States about their experiences as women in mining. The poster will present the selected data trends shown publicly in this format for the first time. The audience will visually witness the employment data collected and audibly hear selected testimonies from anonymous data sets, including focus groups, one-on-one interviews, and surveys. This presentation aims to provide participants with empirical data and compelling critical insight into employment trends and to inspire ways to attract women to work in mining and retain their talent.

Presenter(s): Sharon Saffold-Harris

Board: #77 "Closeted in the Classroom? Queer Navigation in Cisheteronormative Academia"

This study aims to explore queerness among students at Chapman University and to understand its impact on how students conduct themselves within cisheteronormative academic spaces. The research focuses on understanding how the cisheteronormative structure of academia affects queer students' expression, well-being, academic success, and overall life experiences. This was accomplished through participant observation, interviews, and photography. Finally, this study may help raise awareness of microaggressions, discrimination, and self-policing among queer students in higher education and contribute to future initiatives aimed at alleviating the problem.

Presenter(s): Renee Arehart

Board: #78 "On the Razors Edge:" Women's Sex Work, Roles of Advocacy, and the Law

Amid ongoing debates surrounding morality, legalization, and human rights, the landscape of sex work in the United States has significantly shifted due to legal changes, particularly with the 2018 passage of the FOSTA (Fight Online Sex Trafficking Act) and SESTA (Stop Enabling Sex Traffickers Act). As a result, sex workers find themselves increasingly exposed to legal precarity and social stigma. This study examines how women engaged in sex work navigate shifting legal terrains while simultaneously advocating for their rights and building networks of care. Drawing on ethnographic

research that includes interviews with 37 current and former sex workers, as well as participant observation at a sex worker-led advocacy organization in Los Angeles, I highlight the complexities, resilience, and political engagement embedded in their labor, as well as their processes of self-recognition. This research contributes to critical conversations on sex work by centering the voices of those directly impacted, challenging state narratives of victimhood and criminality, and underscoring the necessity of policies that prioritize safety, autonomy, and labor rights for sex workers.

Keywords: Sex Work, Survival, Community Resilience, Precarity, Legislation

Presenter(s): Kristina Dove

Board: #79 Global Resonances of Shipibo Amazonian Art: An Anthropological Analysis of Its Impact in Europe and North America Since 2000

Since the early 2000s, Shipibo indigenous art from Peru has captivated international audiences in the United States, Canada, Germany, France, Austria, Spain, and Norway, despite limited recognition in its home regions and Peru's capital, with works valued on par with established global artists and surpassing prominent non-indigenous Peruvian artists. This study applies Alfred Gell's anthropological theory of art to explore the role of institutions-galleries, festivals, exhibition centers, funding agencies, museums, and universities-in shaping artistic discourses, political contexts, and indigenous authenticity, while analyzing the impact of Shipibo art in Europe and North America through concepts like hybridization, appropriation, and transculturation. Using classic and modern ethnographic methods, including fieldwork in exhibition spaces, interviews with artists and specialists, and digital platform analysis, the research reveals an exponential increase in Shipibo exhibitions, artists, and artworks since 2000, interrupted only by the pandemic. Though modest, their global impact is significant, introducing new anthropological concepts to understand contemporary Amazonian art and highlighting its economic, political, and emancipatory success in global art markets.

Presenter(s): Daniel Castillo

8846 CAE Community Event

Start Date: 11/21/2025 06:00 PM **through** 11/21/2025 08:00 PM

Venue: Beanlandia **Room:** Meet in the Marriott Lobby st 5:30

Type: Special Event

The Krewe of Red Beans is a movement dedicated to sustaining cultural traditions, addressing pressing community challenges, and promoting sustainable tourism. Its permanent headquarters, Beanlandia, serves as a community hub, museum, and cultural incubator where they host mural festivals, educational events, and music initiatives. This event will feature a 60 minute panel discussion by Krewe of Red Beans leaders, followed by a musical performance and food (red beans

and rice). The event will be held at Beanlandia, 3300 Royal Street, in New Orleans. Meet in the lobby of the Marriott at 5:30 PM on Fri., Nov. 21, 2025, to take a van to the event.

8705 Council for Museum Anthropology and Council on Heritage and the Anthropology of Tourism Joint Reception and Awards Ceremony- offsite

Start Date: 11/21/2025 06:00 PM **through** 11/21/2025 09:00 PM

Venue: The Museum of the Southern Jewish Experience

Type: Special Event

Council for Museum Anthropology section members and Council on Heritage and the Anthropology of Tourism section members are invited to the annual joint CMA/CHAT Reception and Awards Ceremony. The reception will be held at The Museum of the Southern Jewish Experience (818 Howard Avenue, New Orleans; <https://msje.org/>). Galleries are free and open to attendees during the event, preview starting at 6:00 PM. The reception begins at 6:30 PM, with open bar and light appetizers served until 8:30 PM. Details also will be shared on CMA's and CHAT's member channels (Linked In <https://www.linkedin.com/in/cma-council-for-museum-anthropology-80301a2b5/>; AAA Communities page, go to Member Login to the Communities/Groups/My Groups/CMA Membership page via <https://my.americananthro.org/community/s/>; the CHAT section website <https://chat.americananthro.org/>).

8736 SAFN, SEA, C&A Joint Reception- offsite

Start Date: 11/21/2025 06:30 PM **through** 11/21/2025 09:30 PM

Venue: Disappear Here, 301 N. Peters Street

Type: Special Event

All are welcome! Friday Nov 21, 6:30pm to 9:30pm at Disappear Here, 301 N. Peters Street. Join Culture & Agriculture, AND the Society for the Anthropology of Food and Nutrition, AND the Society for Economic Anthropology for a joint reception!

8786 SAE Douglass Book Prize Award

Start Date: 11/21/2025 07:00 PM **through** 11/21/2025 08:00 PM

Venue: Marriott **Room:** Studio 9

Type: Special Event

SAE Douglass Book Prize Award

8572 Archaeology Division Patty Jo Watson Distinguished Lecture

Start Date: 11/21/2025 07:00 PM **through** 11/21/2025 08:30 PM

Venue: Marriott **Room:** Riverview II (41st Fl)

Type: Special Event

The Archaeology Division's Patty Jo Watson Distinguished Lecture will be given by Shannon Lee Dawdy, Department of Anthropology, University of Chicago. The Title: Recruiting Ghosts for the Revolution. Abstract: Archaeology loves revolutions. We have embraced the Neolithic Revolution, the Industrial Revolution, and the Radiocarbon Revolution. So why don't we have a coherent subfield that focuses on political revolution? Surely the forces that result in revolts, rebellions, and foundation-shaking revolutions are just as important to political formation as the concentration of authority that fuels the building of monuments and empires, the grist for so many archaeological mills. What would an archaeology of revolution look like? What potentials could it release? Walter Benjamin turned to the dead for political hope during an extraordinarily bleak time in human history. There he found victories ignored by history, paths not taken, and struggles not yet over. He found the fighters. I argue that archaeology, as a practice built on resurrecting the dead, is uniquely suited to documenting revolutionary forces in political life. I offer a survey of what archaeologists have said about past revolts and revolutions (there is some work if you hunt for it) and reflect on the close encounters I have had with rebellious ghosts in New Orleans.

8759 GAD Awards Dinner- offsite

Start Date: 11/21/2025 07:00 PM **through** 11/21/2025 09:00 PM

Venue: Chartres House

Type: Special Event

Please join the General Anthropology Division as we celebrate this year's prize winners whose works cross multiple sub-fields and extend the reach of anthropology. RSVP with the GAD president by emailing parrenas@cornell.edu with the subject, "GAD Awards Dinner." The event will be at Chartres House, 543 Chartres Street in the French Quarter on Friday, 7:30pm to 10pm. The event is open to GAD members and friends, however capacity is limited to 30 people. Presentation of awards will begin at 8pm.

8851 Musica y Comunidad as Tools of Resistance, Resiliency, and Transformation

Start Date: 11/21/2025 07:00 PM **through** 11/21/2025 10:00 PM

Venue: Offsite

Type: Special Event

Musica y Comunidad as Tools of Resistance, Resiliency, and Transformation

Event Sponsored by ALLA, Familias Unidas en Accion, Fermin Ceballos, and Dominican NOLAfest

The Association of Latina/o & Latinx Anthropologists invites members of the American Anthropological Association to meet with Familias Unidas en Accion, a non-profit organization working with immigrant communities and the community at large in New Orleans. This presentation and cultural exchange will inform participants of current issues impacting the Latinx and Caribbean diasporas in NOLA and efforts to build resilient communities. This cultural exchange will be followed by music of consciousness and belonging presented by Fermin Ceballos, music writer, performer, producer, and organizer of the Dominican NOLAfest. This evening event will provide participants with an opportunity to connect with community through dialogue, music, dance, and cultural exchange in New Orleans.

8639 Association of Black Anthropologists - Awards Ceremony & Party

Start Date: 11/21/25 7:30PM **through** Midnight

Venue: Offsite

Type: Special Event

ABA Awards Ceremony & Party 2025! Ashé Cultural Center 1712 Oretha Castle Haley Blvd, New Orleans, LA 70113.

This is the annual awards ceremony for the Association of Black Anthropologists (ABA). The awards ceremony is followed by a catered party. All ABA members are welcome!

8771 Association for Africanist Anthropology - Reception, Awards Ceremony, Business Meeting, Distinguished Lecture

Start Date: 11/21/2025 07:30 PM **through** 11/21/2025 09:30 PM

Venue: Sheraton **Room:** Grand Ballroom D (5th fl)

Type: Special Event

The Association for Africanist Anthropology will hold an exciting combined business meeting, awards ceremony, and reception to celebrate our accomplishments and organize for the next year. This year, our event will feature a distinguished lecture by Professor Louisa Lombard.

Members, award nominees, friends, and colleagues are welcome to attend and learn more about how to participate in AfAA.

8577 Society for Anthropology of Religion Section Business Meeting (welcome all -- finger food and drinks available)

Start Date: 11/21/2025 07:30 PM **through** 11/21/2025 09:30 PM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Special Event

Awarding of the Clifford Geertz Book Prize for 2025, and Honorable Mentions

Awarding of the SAR Student Paper Prize

Announcement and presentation of newly elected Board Members

Solicit suggestions from members for new initiatives, activities, and theme for the next Biennial Conference in 2027

Other Business to be announced.

8562 The Anthropology of Childhood and Youth Special Interest Group (ACYIG) Reception

Start Date: 11/21/2025 07:30 PM **through** 11/21/2025 09:30 PM

Venue: Marriott **Room:** Studio 4

Type: Special Event

The Anthropology of Childhood and Youth Special Interest Group (ACYIG) is pleased to invite scholars of childhood and youth to attend our ACYIG Reception at the 2025 AAA Conference. We will have light refreshments, and encourage those interested in young people's lives to attend. This will be a space to build our academic community, share our research interests, and create new partnerships. We will also be offering scholars a chance to share their book details, so please bring your publication flyers and advertisements and we will display them!

8824 Biological Anthropology Section Distinguished Speaker Award & Reception

Start Date: 11/21/2025 08:00 PM **through** 11/21/2025 09:30 PM

Venue: Marriott **Room:** Galerie 2

Type: Special Event

The annual Biological Anthropology Section distinguished speaker award and reception

8838 SVA Business Meeting, Award Ceremony & Reception

Start Date: 11/21/2025 08:00 PM **through** 11/21/2025 09:30 PM

Venue: Sheraton **Room:** Bayside C (4th fl)

Type: Special Event

Society for Visual Anthropology Business Meeting & Award Ceremony

8547 Donor Reception

Start Date: 11/21/2025 08:00 PM **through** 11/21/2025 10:00 PM

Venue: Sheraton **Room:** Waterbury (2nd fl)

Type: Special Event

Donor Reception at the Sheraton on Friday 11/21 from 8pm-10pm.

9090 Reception for Graduates and Friends of the Yale University Department of Anthropology

Start Date: 11/21/2025 08:00 PM **through** 11/21/2025 10:00 PM

Venue: Sheraton **Room:** Armstrong BR (8th fl) (access via elevator only)

Type: Special Event

Cocktail hour for Graduates and Friends of the Yale University Department of Anthropology

8626 Society for the Anthropology of Europe William A. Douglass Lecture and SAE RECEPTION: Lea Ypi, Ralph Miliband Professor, LSE

Start Date: 11/21/2025 08:00 PM **through** 11/21/2025 10:30 PM

Venue: Marriott **Room:** Studio 9

Type: Special Event

Society for the Anthropology of Europe

William A. Douglass Lecture followed by SAE reception :

WILLIAM A. DOUGLASS LECTURE

Lea Ypi,

Ralph Miliband Professor of Politics and Philosophy, London School of Economics and Political Science

Dignity and Historical Injustice: The History of an Albanian Family

Professor Lea Ypi will discuss the themes of her new book entitled *Indignity*, tracing the journey of a woman from Ottoman Salonica to a life under surveillance in post-war communist Albania. The book explores the moral and political meanings of individual and collective dignity, in connection to questions of truth and reconciliation, historical injustice and the relationship between fact and fiction.

SAE RECEPTION WILL FOLLOW

Saturday November 22, 2025

8591 Executive Board Orientation

Start Date: 11/22/2025 08:00 AM **through** 11/22/2025 09:00 AM

Venue: Sheraton **Room:** Armstrong BR (8th fl) (access via elevator only)

Type: Special Event

A meeting of new executive board members to review an orientation of board responsibilities.

8637 Association of Black Anthropologists (ABA) - Mentoring Event

Start Date: 11/22/2025 08:00 AM **through** 11/22/2025 09:15 AM

Venue: Sheraton **Room:** Grand Chenier (5th fl)

Type: Special Event

This is a mentoring event for members (and aspiring members) of the Association of Black Anthropologists. Information about the theme and details of the workshop is sent separately to ABA members.

8650 Department Services Program Chairs Breakfast

Start Date: 11/22/2025 08:00 AM **through** 11/22/2025 09:30 AM

Venue: Marriott **Room:** Galvez

Type: Special Event

Department Services Program Chairs Breakfast - RSVP only

8836 Society for Visual Anthropology Film & Media Festival-- Day 4

Start Date: 11/22/2025 08:00 AM **through** 11/22/2025 09:00 PM

Venue: Sheraton **Room:** Bayside A (4th fl)

Type: Special Event

The Society for Visual Anthropology screens the best of ethnographic film at the annual SVA Film & Media Festival. The Festival is held as part of the American Anthropological Association (AAA) Annual Meeting, giving filmmakers and distributors broad access to an audience of thousands of anthropologists, educators, and other attendees.

Ethnographic film and media can be defined broadly as works that emerge through ethnographic fieldwork or that use, are informed by, illustrate, or evoke concepts and principles of anthropological theory, methods, or practice.

2025 SVA Film & Media Festival Directors:

Dr. Anna Neumann

Dr. Mariam Abazeri

8804 AFA Business Meeting

Start Date: 11/22/2025 08:30 AM **through** 11/22/2025 10:00 AM

Venue: Sheraton **Room:** Orpheus (8th fl) (access via elevator only)

Type: Special Event

The AFA (Association for Feminist Anthropology) Business Meeting

8909 Ghostly Energies: Infrastructures, Renewables, and Social Science in the Contemporary “Energy Emergency”

Start Date: 11/22/2025 08:30 AM **through** 11/22/2025 10:00 AM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Late-Breaking Roundtable/Town Hall

In early 2025, President Trump issued an executive order declaring a national "energy emergency". He promised to "unleash American energy" (White House 2025) while making federal permitting for new solar and wind projects far more onerous. This order, alongside cuts to research and infrastructure funding, inculcated new senses of uncertainty about meeting state and federal climate goals. The passage of the "big beautiful bill" in July 2025, the continued clawback of Inflation Reduction Act (IRA) funding to promote renewable developments, and a cross-departmental war on the wind and solar industries have all intensified.

We are living in a contemporary moment haunted by the ghosts of renewable energy infrastructures and the stillborn renewable future the IRA promised. This late breaking roundtable steps into the fray of the energy emergency to ask: what is happening to the communities that we work with, and what is the role of social science in speaking back to the politics of crisis unfolding at this moment? How can we cultivate an ethos of persistence in spite of the regressive turn in contemporary energy policy and what energy related issues are ripe for more scholarly attention moving forward?

Bringing together a variety of early career scholars, we will discuss how the politics of the energy emergency intersect with issues of, labor, settler-politics, indigeneity, and the contemporary politics of energy access, regulation, and infrastructure. Our panel will build on the longstanding history of anthropology's engagement with energy, exploring the multi-faceted entanglements energy systems have with contemporary global life (see Phillips 2025). We will build on work which explores the political dimensions of renewable energy development and energy justice efforts (Sovacool et. al 2023). Departing from insights in political theory and environmental studies which remind us that the politics of (climate) crisis more often lead to regressive than progressive outcomes (Hulme 2011; Masco 2017), we posit that all hope is not lost. The persistence of ghosts—the reminder of what was—can also show us what can be.

9003 Immigration Court Watching, Pedagogy, and Resistance in a Time of Crisis

Start Date: 11/22/2025 08:30 AM **through** 11/22/2025 10:00 AM

Venue: Marriott **Room:** Galerie 3

Type: Late-Breaking Roundtable/Town Hall

In this moment, immigration courts stand as critical yet opaque sites where law and due process are under attack. While these courts are haunted by the ghosts of past exclusions, they are also sites where nightmares are made real: masked agents apprehend people with pending hearings, families are torn apart in hallways, people are ordered deported in absentia.

Formally "administrative," immigration courts fall under the Department of Justice. They operate with far fewer protections than criminal courts, despite adjudicating life-or-death matters. Grant and denial rates vary dramatically across courts nationwide, and even within the same courthouse. With a record 2.5 million cases in backlog, judges face crushing caseloads and political pressure, producing systemic arbitrariness. Courtrooms are formally public, but transcripts are rarely produced unless appealed, leaving these spaces both visible and invisible.

Ethnography allows us to make these dynamics legible. This session introduces several faculty-led initiatives that engage undergraduate students and community members in court watching. Presenters will reflect upon and offer findings from recent pilot research where students were trained and then spent time in immigration court to record judicial behavior, interpretation practices, tone, and off-the-record exchanges—details that never enter official records. Presenters highlight training models, preliminary findings, and frontline advocacy, while reflecting on the dangers and possibilities of innovating collaborative methodologies in a decentralized federal system. Their work generates urgently needed data while raising questions about the role of witnessing, neutrality, and solidarity in ethnography.

Conducting this work is urgent yet fraught. Being present in immigration court – as observer, as accompanier – allows us to witness, document, and communicate the ever-changing conditions and emergent iterations of legal violence introduced into the courts. Under authoritarian conditions, however, risks extend beyond respondents and their families to community members, students, and faculty researchers. The jailing of professors, revocation of visas, repression of student movements, and surveillance of campus spaces have become commonplace. Ethnographic court-watching brings vicarious trauma, ethical dilemmas, and questions of complicity: What does it mean to document silently, docket after docket, without reacting? Who can safely participate? How should researchers respond to risks that extend from the courtroom into the university itself?

Together, panelists probe how ghosts of past injustices and nightmares of present enforcement haunt immigration courts, while asking how anthropology can illuminate opaque institutions, safeguard due process, and resist systemic violence. The session closes with an invitation to join a

growing network committed to documenting, safeguarding due process, and resisting systemic violence.

Presentation(s): Board:#1 "Examining Occupational Disease Through a Paleopathological Lens: Phossy Jaw, Radium Jaw, and their Modern Equivalents"

Occupational medicine is a field that is inherently concerned with history, as identifying occupational diseases is often reliant on close examination of symptomatology and patterns of patient demographics over time. Given this discipline's connection to history, pathology, and medicine, the holistic and interdisciplinary approach of paleopathology (a sub-discipline of bioarchaeology) is an ideal lens for examining this discipline and its influence. Working under the paleopathological understanding of 'One Paleopathology' (the deep time understanding that disease is the product of interaction between numerous interconnected factors), two historical occupational diseases causing jaw necrosis ('Phossy Jaw' and 'Radium Jaw') were examined to gain a holistic understanding of their determinants and effects. This approach utilized examination of primary documentation (hospital records, court records, autopsy reports), medical journals and reports, examination and analysis of extant pathological remains, and side exploration relevant to various disciplines (chemistry, physics, sociology, and cultural anthropology). This holistic analysis of these historic conditions was then used to identify the widespread impact these events had through history into our present; changes to industries, public influence, political/legal influence, understanding of modern diseases (radium osteonecrosis and bisphosphonate-related osteonecrosis of the jaw), and influence on the discipline of occupational medicine. This study clearly illustrates the value of a holistic approach to understanding disease.

Presenter(s): Meghan Banton

Board:#2 "Soundcestral Remembrance: Fugitive Memory, Congo Square, and the Struggle Against Historical Erasure"

This late-breaking submission explores the urgency of memory work at Congo Square, a landmark of Black cultural history in New Orleans that continues to embody both resistance and erasure. Building on theories of Black fugitivity and Black geographies, I advance the framework of soundcestral remembrance-the practice of sustaining cultural memory and ancestral presence through sound, rhythm, and gathering.

Drawing on multimodal narrative anthropology and ongoing fieldwork, this research interrogates how Congo Square operates simultaneously as a site of remembrance and a battleground against systemic erasure. The November 2025 AAA conference coincides with the anniversary of November 23, 1997, when the Congo Square plaque was installed following decades of advocacy by the Congo Square Preservation Society. Today, the preservation of such spaces faces renewed threats amid political efforts to dismantle Black historical recognition and weaken national memory infrastructures.

Through attention to sound, embodied memory, and community space-making, this project connects the historical struggle to preserve Congo Square with emerging discussions in fugitive anthropology and multimodal narrative practice. It demonstrates how African diasporic memory

traditions endure despite erasure, foregrounding rhythm as a vehicle of cultural continuity, resistance, and survival.

By situating Congo Square within the current wave of attacks on Black history in the United States, this presentation highlights the critical role of anthropology in documenting, safeguarding, and amplifying cultural memory in contested landscapes or what Katherine McKittrick calls "terrains of struggle". The findings urge anthropologists to engage with questions of preservation, erasure, and resistance as live, urgent issues rather than historical inevitabilities.

Presenter(s): Tylar Campbell

Board:#3 "Yeah, that's when it needs to transition to be normal": Exploring Impact of the COVID-19 Pandemic on Disability Caregivers' Conceptions of Normal

When the COVID-19 pandemic emerged, disability caregivers faced distinct and varying challenges shaped by familial ties, financial constraints, and compassion fatigue. Some non-professional caregivers suddenly transitioned from tertiary or secondary care to become primary caregivers in the wake of international uncertainty. Drawing on journal entries contributed to the Pandemic Journaling Project (PJP) and follow-up interviews with disability caregivers, this study explores changing understandings of the "normal" among caregivers in the years since COVID-19 was first declared an epidemic. Changes in caregiving statuses were largely impacted by widespread isolation measures. We show how conceptions of normalcy changed over time, and how current conceptions of a "post-pandemic normal" are inextricably tied to earlier conceptions of a "pandemic normal." In exploring what the "future normal" might look like, we examine participants' varied views of their obligations to the people for whom they provide care. For some, their perceived obligation to the person receiving care would involve placing them in a professional care facility. Other caregivers integrated future living arrangements into their plan to remain the primary caregiver. This research examines the critical impact of the pandemic redefining relationships between non-professional disability caregivers and those who are cared-for, providing valuable insight into how disability and caregiving are impacted by changing temporal dynamics and, moreover, how they are co-created with ideas of the normal.

Board:#4 (Re)thinking non-places and unspoken ghosts through archives.

In *No Archive Will Restore You*, Julietta Singh writes "The stories that comprise us have left us both wanting more, wishing we had access to a fuller narrative frame. I call this wishing-wanting desire "the ghost archive." Everything we need to know but cannot know as we keep circling and sniffing around the edges. Everything that keeps affecting us and affecting others through us. Everything that remains right there, but just out of reach". (2018: 96)

This presentation explores ways to reflect on the archives: it underlines how ghosts of the past represent an incessant search for meaning through fragmented traces but always charged with

spectral meanings. Rather than seeking to reveal the story of present-absent character, or hidden meaning of unspoken events in a narrative, why can't we turn our attention to the wider issues of twists and turns, interpretations and backflows? We propose that to engage with the ghosts of the past is to give them a voice ; we believe that death is a revealer of those small, "noiseless" deaths that guide the Grim Reaper : not only physiological death, but also social, political, moral, spiritual, symbolic and even existential death. This infra-ordinary of death that can be read on, and through, archives. Is that proofs, like historians say? Or just snippets of yesterday that lay out there? Flat in folders, in boxes? Here they are, take what you like. Write lines, transcribe words, sentences, paragraphs to feed, swallow and evacuate them into oblivion.

History, as the study of the past, should remind us of death everywhere and everytime. Like Michelet once said, we are "condemned to haunt the dead, or to be haunted by them" (Crouzet, 1976). In this presentation, we will draw from the suicide letters within the archives, fragments of words and pictures left by incarcerated people, those who linger and haunt the prisons long after their departure. To accomplish this, we had to encounter them: blows of the heart, blows of hatred, blows of desperation, or blows that dissolve like ripples in water. The archive may remain silent, yet it reverberates, it is spectral. Knots in the bars, the crumpled fabric of prison uniforms, a metallic silence, a life evaporating into the void leaving behind only a thread. The prison fabrics take shape and dissolve, as do the prisoners who have taken their own lives, leaving behind only their shadows. These deaths that overflow. "It's the event itself; a first time is a last time. All other. Staged for the end of history. Let's call it hauntology. [...] the spirit comes back; it figures both a dead man who returns and a ghost whose expected return is repeated, again and again". (Derrida, 1993: 29).

Presenter(s): Isabelle Perreault

Co-author(s): Lucrezia Selva Curreri

Board:#5 A Precolumbian Mesoamerican Medical Manual: Reading Folios 29-32 of the Codex Borgia through Medical Metaphor

I use the conceptual lens of a "medical imaginary" to guide an analysis of the corporeal imagery found on the first four pages of the ritual sequence of the pre-Columbian Central Mexican codex (suspected to originate from Puebla-Tlaxcala) commonly called the "Borgia". Thinking with this lens encourages us to pay particular attention the affective and metaphysical contexts within which anatomical and medical imagery operated in order to generate potentially illuminating readings of paleographic documents such as the Borgia. The 18 folios of the 'ritual sequence' (from folio 29-45) of the codex are oriented 90 degrees askew from the rest of the corpus, and have been subject to disparate interpretations. The polysemic nature of the Mexica calendrical codices means that there are likely multiple diverse layers of meaning embedded within these same pages. These first four folios are, even among this enigmatic sequence, unusual – I interpret them as representations of systems or layers of the body.

In my analysis, folio 29 depicts "the empty vessel" – the corporeal system which the teyolía animates; folio 30 depicts "bone and muscle" – which is nourished and supported by the tōnalli;

folio 31a shows the dark fluids, bile, and winds which the ihīyōtl fills and moves through; folio 31b shows the blood and excrement which course through and out of all of the other internal systems; and folio 32 depicts two different views of "the outer shell" – the hair, teeth, skin, and nails that enclose and obscure the other layers. The five enclosures on the first four pages of the ritual sequence, seen this way, can be understood as different medicinal, ritual, and/or spiritual layers of the body encountered by an indigenous tīcītl during medical consultation and anatomical study.

This system of layers may resemble the biomedical conceptions of the

nervous, musculoskeletal, nutritional, circulatory, and immunological systems, but this kind of conceptual translation is counter-productive for the purpose of engaging with diverse medical ontologies on their own grounds. I prefer to situate these layers within the temporal and cosmological patterns that have traditionally been used to narrativize the Borgia's ritual sequence. These frames mirror grand cosmological narratives of the world being made and/or Venus travelling through the underworld; relating aspects of a medical (or bodily) imaginary with the cosmogony of the world and with divine narratives. For medical eyes reading these pages, the bodily materials of blood, excrement, water, tendon, and bone can serve to take us from the flesh to the calendar, and from the earthly body to the celestial.

Presenter(s): Li Hayes

Board:#6 The Influence of Age on Pain Care Practices in Tanzanian Hospitals

The lack of essential pain medications in lower-income countries is a persisting issue impacting healthcare services. Pain management disparities in lower-income countries disproportionately affect older adults. In Tanzania, geriatric pain is often undertreated due to misconceptions that pain is a natural part of aging, communication barriers, side effect concerns, and patients underreporting pain. The older population in Tanzania forms a significant percentage of people seeking care for chronic illnesses, and the majority of older Tanzanians reside in rural areas, decreasing access to sufficient health management. As the aging population grows, understanding these challenges is crucial for health, anthropology, and aging studies.

This medical anthropology research project, conducted in Iringa, Tanzania, as part of Dr. Adrienne Strong's NSF-funded project on pain care practices, took place at Tosamaganga District Hospital over nine weeks in the summer of 2025. Using ethnographic methods such as semi-structured interviews, rank-ordering, focus groups, and participant-observation, I explored how age influences pain treatment. Interviews with healthcare professionals, patients, and patients' family members revealed key themes: the normalization of pain in aging, structural and social barriers to seeking care, and the link between emotional distress and physical pain. Specifically, how loneliness is a prominent experience among elders and shapes experiences within and outside of the hospital. Additional core themes discovered include the way support networks, residence, and daily responsibilities impact not only the perception of pain, but also the care received. These findings highlight age as a critical factor in the allocation of pain medication and in shaping patient experiences within biomedical health settings. By examining the intersection of aging and pain

management in a low-resource healthcare system, this study contributes to a broader understanding of challenges in geriatrics.

Presenter(s): Kelsey Cook

Co-author(s): Adrienne Strong

Board:#7 Access and Care in the Florida Heartland

Communities of color in the Florida Heartland suffer from inadequate economic structures stressed by compounding natural and political disasters. My project examines kidney disease as a socio-political problem created by poverty and insufficient access to healthcare in rural communities. Poverty and health are inversely related to disease risks and patient outcomes. Interviewing members of patient care circles (family, friends, providers) expands lived experience analysis to a community rather than just the patient. Analyzing the alliances in a patient's care network through the anthropological frameworks of structural violence, suffering, and care will highlight central experiences and themes. These experiences and themes can reframe current policies and ongoing healthcare reform to address gaps in healthcare access and socio-economic inequalities. This project is a multi-sited ethnographical study of lived kidney disease experiences.

Presenter(s): Danae Ayra-Barboza

Board:#8 Aging Out: Transformation of the Gymnastics Bodymind and the Shifting Structures of Support in College Athletics

"My body feels older. Like when I get out of bed in the morning I can feel it. I have different injuries that bother me in my daily life. Not even just at the gym" – Sasha. In early 2024, I spoke with Sasha, who was one of the two collegiate gymnasts I interviewed to explore the reasons why gymnasts choose to compete at the college level. Unlike many other sports, gymnastics does not offer a professional path where participation in college athletics is required for drafting. Over three separate interviews per gymnast, we conversed about topics such as structures of the sport, bodily changes, concepts of health and injury, identity, and personal histories. Gymnastics produces women who transition from simply doing gymnastics to being a gymnast. Sport transforms bodies and minds (Besnier, 2018), and areas of transformation include the physical (e.g., 'gymnastics' body type and aging out) and mental/emotional (e.g., making "adult" decisions as a child and body awareness). The transition begins in club gymnastics, which is a highly individualistic sport with intensive training and repetitive, large number assignments in practices. When the girls reach college gymnastics, their bodies are aging out, or the accumulation of injuries and daily aches and pains that make doing the sport more difficult with age. The structure of college gymnastics shifts from club by prioritizing rehabilitation, quality versus quantity of practice assignments, and becoming team orientated. This paper discusses how college gymnastics changes to support bodymind transformations from participation in sport.

Presenter(s): Skyler Yakes

Board:#9 Agro-Politics and the Moche: A Stable Isotope Analysis of Moche Agricultural Management During the Early Intermediate Period, Moche Valley, Peru

Stable isotope analysis of macrobotanical remains from archaeological sites in the Americas has often been overlooked, with most analyses of this nature occurring in Eurasia. Analyzing $\delta^{13}\text{C}$ and $\delta^{15}\text{N}$ of macrobotanical remains, especially domesticated crops, provides insight into past agricultural practices and management, such as the use and application of irrigation canals and fertilization techniques. Utilizing $\delta^{13}\text{C}$ and $\delta^{15}\text{N}$ of macrobotanical remains from three Moche Valley sites spanning AD 100-800 (West Cerro León [MV224], Cerro León [MV225], and Ciudad de Dios [MV83]), temporal changes in agricultural practices were examined. These sites date just prior to and during the period of Moche state formation on the north coast of Peru. The Moche are among the first archaic states in Peru, known for their construction of irrigation canals, mould-made ceramics, and expanding rule into various river valleys along the north coast. However, little is known about how Moche cities were fed and what impact agriculture had on the ability to expand influence in the region. Through the isotopic analysis of macrobotanical remains from sites dated to various periods of Moche rule, this study addresses changes in agricultural practices associated with the development of the Moche state.

Presenter(s): Julia McCuaig

Co-author(s): Dana Bardolph, Brian Billman, Paul Szpak

Board:#10 An Analysis of Phase II Facets Among European Neanderthals via ISO Standard 25178

The following study analyzes the relationship between dental microwear texture data and

ISO Standard 25178 on European Neanderthal molar Phase II facets. This study explores ISO

25178's ability to distinguish Neanderthal populations and supplement DMTA data from various Neanderthal sites including Krapina, Vindija, Hortus, Spy, Kůlna, Švédův stůl, Engis, El Sidrón, La Quina, Arcy-sur-Cure, and Pech-de-l'Azé. In an effort to understand the efficacy of ISO 25178 in dental microwear studies, the priority objectives were to observe correlations within the dataset and see if the ISO standards are useful in regard to distinguishing populations. The results demonstrate that dietary reconstruction can be achieved with more precision; therefore, ISO 25178 standards should be included in future DMTA studies.

Presenter(s): KayLee Blum

Board:#11 Ancient pathogens and microbes and responses to contemporary disease risks

Combined, skeletal evidence from deceased humans, as well as biomolecules (e.g., ancient DNA (aDNA)) recovered from their substrates can capture otherwise historically and archaeologically invisible interactions between human hosts, environments, non-human animals, plants, and pathogens or HEAPP interactions. Further, when ancient -omics tools (e.g., paleogenomics) and data are combined with broad collaborations, perspectives, data, and knowledge (e.g., historical, Indigenous, oral history) from diverse groups and disciplines and funneled into translation science,

findings can also have direct relevance to contemporary societies. Staying within ethical parameters, such research can uncover the transmission, virulence, burden, and resistance mechanisms of past pathogens relative to specific biosocial (e.g., ecological, political-economic) conditions in past societies. In turn, these can be used to directly inform our understanding of contemporary and potentially future diseases and disease risks with diverse benefits. These include tailored and thus more efficient pandemic preparedness and public health responses, and even generating novel therapies. Relevant research includes genome-phenome approaches and reconstruction of human immune responses in differential vulnerability to past pandemics via integrated data from ancient biomolecules and skeletal material (e., 1918 influenza, 14th c. plague); paleogenomics fused with synthetic biology to generate novel paleobiotechnology and reconstruct ancient microbiomes (e.g., ancient oral microbiomes); and emerging infectious disease (EID) origins, including zoonoses, origins and spread within One Health/ One Paleopathology. Nevertheless, practical and ethical considerations challenge these promises. Amongst others, these include engaging with descendant communities and communities of practice and diverse rights holders, as well as issues of disproportionate destructive sampling, funding and policy decisions, data re-purposing, and concerns over descendant community genetic privacy and authority over biomolecular heritage. Amongst other recommendations made, further collaboration will ensure that ancient pathogens and microbes research ethically contributes to deeper understandings of health, disease, and HEAPP interactions in the past and their practical implications for contemporary societies.

Presenter(s): Molly Zuckerman

Co-author(s): Courtney Hofman

Board:#12 ARCHAEOLOGICAL EXPLORATION OF NSAKYE THROUGH CO-CREATION AND COMMUNITY ENGAGEMENT.

Ghana faces a significant developmental challenge due to the disconnect between the present and the archaeological past. This poster reports on archaeological research at Nsakyé, an understudied and endangered region in the Eastern Region of Ghana (West Africa). Ivor Wilks (2001) suggests the town is one of three capital towns linked to the Akwamu Empire in the 18th century. The Akwamu was the most powerful Akan kingdom in the late 17th and early 18th centuries, stretching about 250 miles along the Gold and Slave Coasts (the coast of present-day Ghana to Benin). Nsakyé was also a site of conflict that contributed to the decline of Akwamu and played a role in trade with Danish merchants. In the 19th century, a Basel missionary station was established in Nsakyé, marking a significant Christian presence, although the extent of its influence remains unclear. By adopting a co-creative approach, I leverage the potential of Public archaeology to shed light on the historical significance of Ghana's past. Through mapping, surveys, and preliminary interviews, I investigate Nsakyé's past and contribute to a literature that remains scant. Nsakyé holds historical significance; however, it remains under-researched archaeologically, and its settlement history is unclear, with varying accounts of its establishment. My research reflects on Nsakyé's historical narrative within the broader historiography of Ghana.

Presenter(s): Kelvin Asare

Board:#13 Between Bedside: Nursing Assistants in the Margins of Medicine in China's Public Hospitals

This paper examines the experiences of elder-care nursing assistants (hu gong) working in public hospitals in Hunan, China. These women, primarily middle-aged and from rural backgrounds, occupy a precarious and often invisible space within China's urban medical system. Highly mobile and positioned at the social and economic margins, they perform labor that is emotionally intensive, physically demanding, and symbolically fraught.

While their work is officially categorized as non-medical support, nursing assistants are deeply embedded in the intimate rhythms of hospital life and of medicine. Within the confined, emotionally charged space of the ward, they not only tend to the daily needs of elderly patients but also forge complex relationships with nurses, patients' families, and fellow caregivers. Their care work blurs the lines between employment and kinship, duty and affection-often extending into the terrain of grief, dying, and death, which remain culturally taboo in China.

Despite being underpaid and overlooked, these women exercise moral agency and emotional tact in navigating class differences, institutional hierarchies, and the moral weight of end-of-life care. Through ethnographic attention to their everyday practices and relationships, this paper explores how nursing assistants subtly reshape employer-employee dynamics, challenge the binary between center and periphery, and reimagine what it means to care in an era of capitalist healthcare.

Ultimately, this work seeks to illuminate the layered moral, affective, and social worlds that rural women inhabit as they labor at the threshold between life and death-between marginality and intimate centrality.

Presenter(s): Yueqi Cheng

Board:#14 Body and identity in the digital age: a bioanthropological analysis of aesthetic norms of young adults in Brazil

This research aims to examine the impact of digital technologies on the perception and body identity of young adults in Brazil, focusing on platforms such as TikTok, Instagram, and Facebook. Adopting a bioanthropological approach to one that integrates both biological and cultural dimensions combined with a netnographic methodology, the study explores how these social networks shape aesthetic norms and influence body representations. Young adults, constantly exposed to retouched images and idealized content, often experience pressure to modify or "reconstruct" their bodies, leading in some cases to aesthetic interventions such as liposuction or breast augmentation. The findings reveal that the body is perceived both as a form of social capital and as a personal project, influenced by global standards (the impact of influencers and international beauty ideals) as well as local specificities (such as Brazil's cultural history of racial mixing and the fetishization of certain body types). Preliminary observations indicate that this

ongoing exposure to idealized beauty standards contributes to a redefinition of body identity, heightening insecurities and intensifying social comparison. In response, many young people are developing coping strategies, including active participation in body positivity movements that promote self-acceptance and challenge dominant norms. These counter-narratives are particularly significant in Brazil, where affirmations of Afro-Brazilian identity and the visibility of "non-normative" bodies are gaining cultural momentum. Through a literature review and critical analysis of digital content and participant narratives, this poster aims to provide an understanding of contemporary issues related to body image and identity. By integrating historical and cultural perspectives, this research highlights the importance of an interdisciplinary approach to understanding modern challenges related to body perception and identity, while also shedding light on the sociocultural implications for the psychological well-being of young adults in the digital age.

Key-words: Aesthetic norms, corporal identity, digital technologies, bioanthropology, netnography

Board:#15 Ch'oc Ayin: Salt Cakes and Dried Fish at an Ancient Maya Household Group, Belize

Excavations in 2025 at the submerged Maya site of Ch'oc Ayin at the Paynes Creek Salt Works, Belize were placed according to results from previous sea floor mapping. The wooden posts from four pole and thatch buildings preserved below the sea floor in mangrove peat were mapped in 2008. Systematic sea floor mapping of artifacts in 2023 revealed patterns of artifacts associated with different activities. The diversity of different pottery shapes and types, as well as stone and wood objects associated with Building A suggested it was a residence. The abundance of briquetage--salt pottery used to boil brine in pots over fires to make salt cakes--associated with Building B suggested that it was a salt kitchen for the resident salt workers. Building C was more enigmatic due to the limited sea floor mapping but the presence of clay funnel fragments from the brine enrichment process suggests it was also involved in salt making. Chert stone tools associated with Building B, particularly in the overhang of the west wall, suggested tool refurbishing or perhaps processing fish or animal meat. Use-wear analysis of chert from other Paynes Creek Salt sites indicated most chert tools were used for processing fish or meat and not woodworking. The excavations and artifact analyses supported our evidence from sea floor mapping.

Board:#16 Civic Engagement and Community Organizing in Slab City and Bombay Beach

Located in inland southern California, the Salton Sea is a man-made landlocked lake best known for its high salinity and extreme pollution, owing to decades of agricultural runoff. I focus on residents in two unincorporated communities on the north Salton Sea: Slab City and Bombay Beach. Here, residents often turn to atypical forms of government and political structures to fulfill basic needs, as well as establish a sense of community; they do this out of a sense of belonging

that they cannot find or foster anywhere else. This study is an interdisciplinary inquiry on political engagement, environmental justice, poverty, and community. This research was primarily conducted through participant observation and interviews in these areas during the spring and summer of 2024. I highlight how residents deal with ecological ruin, poverty, and poor health conditions, which are exacerbated by the perceived lack of government support and intervention. Ultimately, they cope with their struggles through community-based organizing, nonprofits, and other nontraditional means of problem-solving. These tactics, however, frequently fail because of the region's poverty and lack of infrastructure. Despite this, residents keep going because they believe in the possibility of a better world. This study adds to the dialogue around the Salton Sea by highlighting how residents in these communities exercise their agency in counteracting the obstacles they face, albeit within limited means.

Presenter(s): Victoria Gutierrez

Board:#17 Community-Building in Veterans Through Psychedelic Use

This research project qualitatively explores the motivations and perceptions of U.S. veterans who engage with psychedelics post-service through a systematic content analysis and in-depth interviews with veterans. In popular news, media, and political advocacy, many veterans are raising awareness around their successes with psychedelic treatments, aiming to improve access to these highly restricted, or illicit, treatments within the U.S. Aiding veterans' anecdotal accounts of psychedelic use, a resurgence of research explores the promising effects of psychedelics in reducing symptoms of PTSD, TBIs, addiction, and more, bolstering their appeal as a therapeutic agent. The VA is now funding studies and despite stigma, policy makers in several states already have decriminalized certain psychedelic substances and advocacy groups are pushing for further legislative reforms.

While emerging studies focus on the quantitative and clinical effects of psychedelic treatments, there is a gap of qualitative research available on veterans' accounts of their psychedelic experiences. Veterans, who are a main focus in current psychedelic discourse, are biopolitical subjects both during and after their military service, and their positionality within American culture and medical and military institutions raise interesting questions about their use of psychedelics as a form of treatment, even healing. How do veterans perceive and understand psychedelic use as a form of healing? What role does community play in their psychedelic use? Why are veterans, who have access to low-cost, comprehensive care under the VA, seeking out potentially expensive, illicit, and hard-to-access psychedelic treatments?

I approach these questions by engaging anthropological theory on biopolitics, healing, and the role of community and care in the lives of U.S. soldiers and veterans in the post-9/11 wars, drawing on works from Wool (2020), Chua (2020), MacLeish (2019), and Lutz and Millar (2012). Soldiers, who are strictly controlled political subjects under the military, are re-organizing themselves as veterans outside of the realm of military biopower and supporting one another to receive treatments that otherwise remain inaccessible to them. Investigating this phenomena may aid future research in support of the veteran community and health care at large.

Board:#18 Connecting Past and Present: Supporting Indigenous Food Sovereignty through Archaeological Education

La Via Campesina (1996) defines food sovereignty as the right of peoples to define their own food systems through ecologically sound, culturally appropriate, and sustainable practices. While the movement has gained global traction, Indigenous thinkers like Charlotte Côté (Tseshah/Nuu-chah-nulth) advocate for the "Indigenizing" of food sovereignty and challenge the conventional rights-based discourse. Côté (2016) asserts that food sovereignty must be rooted in Indigenous self-determination, where revitalizing ecological knowledge systems and foods is central to communal and personal well-being. Similarly, Winona LaDuke (2019) frames food sovereignty as an affirmation of Indigenous identity and a vital pathway for restoring relationships to the world around us. This poster explores how archaeological education can serve as a powerful tool for Indigenous food sovereignty, examining a collaborative pilot program that braids ancestral food knowledge and archaeological research through hands-on learning experiences that connect past practices with present needs.

The "Indigenous Foodscapes and Climate Resilience in Willapa Bay" Family Educational Pilot Program was developed by the U.S. National Science Foundation Center for Braiding Indigenous Knowledges and Science (NSF CBIKS), in collaboration with the Shoalwater Bay Indian Tribe (SBIT) and the Chinook Indian Nation (CIN) to engage community members in exploring archaeological and traditional knowledge of their food systems. The program serves as a model for future CBIKS-sponsored youth initiatives that integrate braiding methodologies into STEM education through hands-on learning, grounded in community-led approaches that honor specific needs and cultural interests. Activities were designed for learners of all ages to explore archaeological concepts of traditional food systems and connect that learning with traditional knowledge and present-day food sovereignty in SBIT and CIN. These include introducing learners to archaeological concepts by creating a stratified site through a transparent shoebox dig, designing and building a model fish weir, testing atlatls, and a community food event.

Three questions serve as an educational guide for the program:

How can we learn about past food systems on this land?

How can that knowledge impact present-day food sovereignty?

How does learning about sustainable food systems impact culture, community, and livelihood?

This poster examines both the successes and challenges of developing this pilot program, with the aim of providing models for others looking to braid archaeological methodologies with Indigenous knowledge systems in ways that strengthen community-driven STEM education. By reflecting on our achievements alongside lessons learned, we offer practical tips for researchers and educators seeking to create similar programs that honor cultural contexts, build scientific literacy, and support Indigenous food sovereignty goals.

Board:#19 Controlling Cahokia: Implications of site placement and regional visibility for elite surveillance.

Flourishing roughly 1,000 years ago, the city of Cahokia, located on a floodplain across the Mississippi River from modern day St. Louis, Missouri, was a thriving city with well over ten thousand of residents. The large region around Cahokia, once filled with a mix of farmers, craftspeople, and village leaders, is today known as Greater Cahokia. Yet, after decades of archaeological research, questions remain regarding the spatial organization at Cahokia. Detailed excavations at the site have been largely limited to either the central core or to periodic salvage operations prior to federal infrastructure projects. Such work gives an incomplete picture of the site's extent, thereby influencing how we understand Cahokia's urbanism. This research empirically analyzes the organization of residential and ritual areas, as well as the visible interconnections, to clarify the city and regions spatial arrangement and thus design preferences of Greater Cahokia's builders. To accomplish this, archaeological data are compared to random points across the landscape. First-order spatial properties are assessed using average nearest neighbor and kernel density estimates. LiDAR data of the region is also used to create a bare earth DTM raster for Line-of-Sight analyses. A random points visibility analysis is conducted for key study areas as a source for comparison. Overall, the use of these remote sensing tools allows for an empirical, large-scale analysis of Greater Cahokia's spatial design, giving critical insight into the cultural complexity of the region. Results demonstrate elites preferred locations for structures and mound groups that were visible from the seat of power at Monks Mound while providing a connection to the Mississippi River waterway. These results support a hierarchical political structure that favored elite visual influence and surveillance, suggesting a centralized decision-making process at Cahokia.

Board: #20 Cultural Consonance and Hair Cortisol Concentrations: A Case Study of Immigrant and Non-Immigrant Latter-day Saints' Social Support

Migrants rely upon both formal and informal networks of support. These networks can both assist and constrict migrants (Rosales 2014). Migrant religion, which has been documented to provide support to migrants throughout the migration process (Eppsteiner and Hagan 2016), merits further examination because of its potential influence on migrant health and wellbeing. This research addresses this need by comparing cultural consonance in social support and its association with stress among Latinx Latter-day Saint (LDS, Mormon) migrants and non- Latinx non-immigrants in Texas (n=51). I find that these two groups share a cultural model of social support. However, based on psychological and biological measurements of stress and depression (hair cortisol concentrations, perceived psychological well-being scores) explored on this poster, there is a difference in the relationship between the perceived availability of support and health outcomes for immigrants and non-immigrants in this sample. Specifically, while there is an inverse relationship between the perceived availability of support and depression levels for non-immigrants, this same relationship does not exist for immigrants. Based on ethnographic data, I argue that this difference may be due to immigrants encountering racism and anti-immigrant stereotypes, including within religious spaces. Thus, for immigrants, perceiving an availability of support is not necessarily associated with psychologically beneficial outcomes.

Presenter(s): Elizabeth Bingham Thomas

Board: #21 Dead in the Digital Age: An Analysis of Contextualization within Digital Bioarchaeological Archives

Digital Bioarchaeological Data can be defined as any images, whether 2D or 3D, and text that represents human remains. One form of such data includes digital 3D models of human skeletal remains, which can then be published onto digital archives. The creation and publication of the digital models is an interdisciplinary process. Even though each field involved has different standards, they all promote the idea of contextualizing the digital models. For this project contextualization means that any 3D models of human skeletal remains within digital archives should have a notation connected to the model that explains why it is being shared, and any background information that is relevant. Contextualization is an important factor in promoting a more ethical bioarchaeology by reminding the audience to view the body as holistic and multiple, lowering the chances of the remains being dehumanized on the internet. This project analyzes the amount of contextualization within 3D digital models of human skeletal remains housed on two digital archives: SketchFab and MorphoSource. The relationship between factors such as fragmentation, in-situ status and contextualization is also assessed.

Presenter(s): Sydney Worrall

Board: #22 Death Imagery and Communities of Practice Among Indigenous Potters of the Northern Gulf of Mexico Coast, ca. 1300-1700 CE

Indigenous potters living along the northern coast of the Gulf of Mexico ca. 1300-1700 CE decorated certain pottery vessels with incised imagery emphasizing themes related to death and the afterlife journey, including skull, hand-eye, and raptor motifs, among others. Designated by the type name "Pensacola Incised," most published examples come from funerary contexts excavated beginning in the early 20th century. However, Pensacola Incised vessels bearing death iconography circulated widely within and among living communities, and potters deliberately chose iconographic motifs that referenced broadly-shared Mississippian religious symbolism, linking coastal people with a broader cultural phenomenon. Our ongoing research in the Pensacola culture area explores the choices potters made regarding clay source, temper material, form and style, and iconography, drawing on these attributes to better understand communities and constellations of practice among Pensacola potters. High visibility attributes such as iconography are likely to express cultural affiliations extending beyond face-to-face interactions, including diasporic communities and affiliative communities linked by boundary objects. However, fine details in the production of the pottery vessels signal closer-knit networks based in relationships of face-to-face teaching and learning, while also reflecting the preferences and creativity of individual artists. Thus, we understand iconographic subject matter, composition, and execution to reflect communities of practice operating at different scales. While previous attempts to characterize Pensacola iconography have focused on a limited number of sites in the Pensacola heartland (centered around Mobile Bay in southwest Alabama) and prominently feature pottery from funerary contexts, we compile examples of Pensacola iconography from non-funerary (midden and domestic) contexts across the entire Pensacola culture area, including coastal portions of present-day Louisiana, Mississippi, Alabama, and Florida, as well as interior riverine sites north of Mobile Bay. Here, we characterize variation in Pensacola iconographic subject matter, design execution, and pottery recipes to illuminate relationships among potters, and compare it with elemental data to better understand how these meaningful images were shared and reproduced.

Board: #25 Echoes in Bone: Tracing the Lives of Historic Missoula Remains

In 1973, the skeletal remains of an adult and subadult were uncovered during residential construction in the southeast Rattlesnake area of Missoula, Montana. Archival and spatial evidence suggests the burials were located between the sites of a historic poor house and a former sanitarium, raising questions about the social and medical histories of those interred. Initially documented as historic remains and stored as teaching specimens for over five decades, these individuals remained largely unstudied beyond an early case report that speculated on their biological relationship, pathology, and potential origins.

Archival reports describe the presence of coffin hardware and professional casket construction, suggesting a formal burial of the juvenile placed above or beside the adult. While originally speculated to be of Chinese ancestry based on casket style and burial orientation, the location was

also broadly referred to as a "Chinese cemetery," a term often used historically to denote a burial ground for impoverished or marginalized individuals (Smits, 2008).

This study reexamines the individuals using updated bioarchaeological, molecular, and historical methodologies to assess kinship, biological profiles, and potential pathological conditions. A comprehensive skeletal reassessment confirms the young adult as a probable biological female aged 17 to 30 years, and the subadult as a child aged 2 to 4 years. Bone samples from both individuals were analyzed for genetic markers of ancestry, sex, and maternal relatedness based on mitochondrial DNA sequencing. Additionally, molecular techniques were applied to investigate the presence of ancient pathogens.

The adult exhibits cranial lesions potentially indicative of tuberculosis. Molecular analysis is underway to confirm the presence of *Mycobacterium tuberculosis* complex DNA, with a focus on unusual perforations in the temporal and frontal bones that may suggest cranial TB. These lesions appear to result from taphonomic changes rather than trauma, supported by the absence of fracture patterns consistent with blunt force or ballistic injuries. Observations from earlier reports also support a pathological origin for these cranial lesions, noting premortem deterioration and localized bone defects consistent with chronic disease (Nadolny, 2003).

To enhance detection in degraded samples, two sets of primers were selected: IS6110, a highly sensitive marker specific to the MTB complex (~123 bp), and 16S rRNA, which offers broader bacterial detection (~150 bp) though with reduced specificity. Sequence results will confirm the presence of TB, or potentially if another pathogen is present to cause the lesions. Findings may reveal patterns of co-infection and potential pathogen evolution. This approach aims to clarify the etiology of the observed pathology and expand diagnostic frameworks for identifying infectious disease in archaeological remains, while solving a local Montana mystery.

Board: #26 "Individual Submission: Homeotic Transformation of Vertebrae, Assimilation of Coccyx with the Sacrum, and Evolution of Birthing Big Babies"

Number of sacral vertebrae, defined as the block of fused vertebrae that includes the auricular surface that articulates with the ilium, is highly variable in humans. This study considers the association between homeotic transformation of the thoracic-lumbar (T-L), lumbar-sacral (L-S), and sacral-coccygeal (S-Cx) boundaries, number of sacral vertebrae, and obstetrical implications of variation in that number. Sample is of modern humans who died in the United States whose ages at death range from 20 to 39 years. Results show that the number of sacral vertebrae ranges from 4 to 9; females and males do not differ significantly in that number. Both anterior and posterior homeotic transformations of vertebrae at regional boundaries are significantly associated with number of sacral vertebrae (anterior transformation is the situation in which a vertebra has the morphological trait of its anteriorly-neighboring vertebra, and vice versa for a posterior transformation). Anterior transformation of the T-L and L-S boundaries account for 25% of the

anterior transformations of the S-Cx boundary. The latter is colloquially referred to as coccygeal fusion to the sacrum. This fusion confines the pelvic outlet and can be a constraint to successful delivery. Evolution of sexual dimorphism of angulation of the sacrum (visually evident as dimorphism of the greater sciatic notch) may have been a response to pelvic outlet confinement associated with assimilation of the coccyx with the sacrum and the birthing of big babies.

Presenter(s): Robert Tague

Board: #27 Coaches' perspectives on football, health, and well-being among Title 1 Athletes

Sport participation during adolescence is associated with improved health outcomes later in life. This is particularly significant in areas like Alabama's Black Belt, where both health and economic resources are scarce, and chronic disease is prevalent. Despite the well-documented benefits of physical activity, the voices of those best positioned to inspire and motivate sport participation in these communities remain underrepresented in existing literature.

As an extension of our ongoing community partnerships, we conducted interviews with 16 coaches and administrators from six Title 1 high schools in Central and South Alabama to better understand their perspectives on the role of sport in promoting adolescent health and well-being. Our results indicate that these educators see significant benefits of sports, not only in terms of physical health, but also in improving health behaviors, health knowledge, academic motivation, and social development.

Specifically, sports are viewed as a gateway to success in life after high school due to their role in helping students build confidence, discipline, communication skills, personal accountability, and more. Coaches and administrators also recognize the multifaceted roles they play in the lives of student-athletes, often as mentors and emotional supporters. They highlight essential needs such as logistical support from schools, emotional support from parents, and donations from the broader community to promote and sustain participation. However, participants noted that financial constraints are a key barrier to engagement.

To reduce the chronic disease burden in Alabama and improve adolescent health, it is important to increase monetary investments in sport accessibility for underserved communities.

Boar#28 Excavating an Ancient Maya Salt Kitchen at Ch'oc Ayin, Belize

The submerged Classic Maya (A.D. 250-800) salt work Chok Ayin is part of a large salt making industry in Paynes Creek National Park, Belize. The site consists of at least four wooden buildings with posts preserved in anaerobic mangrove peat. One of the buildings, Building B, consists of a cluster of wooden posts with a northeast to southeast alignment. The salt produced at the Paynes Creek Salt Works was traded to inland cities. Excavations were undertaken in March and April 2025 inside and outside of Building B to determine if the building was a salt kitchen, a residence, or had a

different function. An additional objective was to investigate other activities taking place in addition to salt making. We report on excavation techniques used at Building B including setting up a transect, excavating mangrove peat sediment, and preliminary analysis of the artifacts. The results of excavations show variation of cultural deposits inside and outside of Building B. Most of the artifacts are briquetage-the broken pieces of pottery used in boiling brine over fires to make salt. Building B was a salt kitchen dedicated to boiling brine over fires to produced salt cakes. The salt makers did not live in the salt kitchen but likely in a nearby residence.

Board: #29 Empires Override Local Diet: Imperial Periods in The Central Andes Show Subsistence Homogenization

Empires have a strong influence, and practiced subsistence is one way their effect may be expressed within local communities. To explore how empires affect diet in the Central Andes, we compare the statistical variance in $\delta^{13}\text{C}$ and $\delta^{15}\text{N}$ values between individuals from the Central Andes Isotope Database clustered based upon whether they lived during a time of an expansive empire or greater balkanization. The results indicate that dietary isotopes are significantly more homogenous during periods of expansive empires, suggesting empires overruled local subsistence. During times of balkanization, diets express more widespread heterogeneity. The pattern is more strongly expressed in $\delta^{15}\text{N}$, suggesting that protein sources are most influenced by the homogenizing effect, possibly an effect of highland empires such as the Inca transporting marine resources far inland and/or social and environmental pressures resulting in more universal reliance on maize as a protein source during such periods.

Presenter(s): Michael Hale

Co-author(s): Kurt Wilson

Board: #30 Excavating Open Spaces and Buildings to Discover Ancient Activities at the Ancient Maya Salt Works of Chok Ayin, Belize

Chok Ayin is part of over 100 known ancient Maya salt works surveyed and mapped in Paynes Creek National Park, Belize. The salt works are associated with wooden architecture preserved below the sea floor and submerged due to sea level rise. The purpose of the excavations Chok Ayin Building C and Plaza A was to determine the function of the space based on recovered material remains. An eleven meter transect was placed in Building C to extend inside and outside of the building to capture activity areas associated with the building. A 2 x 2 meter excavation was placed north of Building C, located between Buildings A and B, in order to investigate 'open areas'. The results of excavations indicate different functions between Building C and Plaza A. Building C is likely a salt kitchen dedicated to boiling brine over fires. Comparatively, Plaza A had more diversity of artifacts. The spatial distribution of artifacts reveals a variety of activities took place at this ancient Maya

household group, both for family subsistence and for participating in the broader Classic Maya economy by supplying salt cakes to the inland Maya.

Board: #31 Facing uncertainty: how Haitian TPS recipients in Tampa Bay experience liminal legal status

Impacts of immigration policy and legal status on health and wellbeing have been widely treated by migration and mobility scholars. However, these issues have become even more acute and theoretically compelling amidst rapidly changing policy. This project will contribute to understanding how drastic policy changes and subsequent legal challenges affect the well-being of people with temporary legal status in a country, specifically people with Temporary Protected Status (TPS) or Humanitarian Parole (HP) from Haiti residing in Tampa Bay, Florida. Through participant observation and semi-structured interviews, our project describes the experiences of Haitians who now occupy this liminal immigration status. Despite the humanitarian premises upon which TPS is granted, the temporary nature of these designations makes them highly detrimental to individual wellbeing. This timely and urgent research sheds light upon the varying impacts of changing legal designations for Haitian non-residents at a time of heightened sociopolitical dynamics and negative rhetoric toward immigrants.

Board: #32 Florida Public Archaeology Network's Free Field School

The Southeast Region Florida Public Archaeology Network (FPAN) has run a field school at the Jupiter Inlet Lighthouse Outstanding Natural Area (JILONA), funded by the Bureau of Land Management (BLM) for the past two springs. FPAN is a statewide program of the University of West Florida. The Southeast Region is hosted by Florida Atlantic University. The field school program is a semester-long free program that meets every Monday, providing credits for college students and a learning experience for lifelong learners. Field schools are essential for getting a job in archaeology, but are often cost-prohibitive. The program is an effort to increase accessibility for those who can't afford traditional field schools, offering a more local option for students in south Florida. The field school focuses on professional development and teaches students about standard archaeological techniques in cultural resource management, and brings in scientists and scholars from local schools to discuss and perform other aspects of archaeology and related fields such as marine archaeology and soil analysis. This year, we were working with the Bureau of Land Management to create an informational display around its primary excavation unit which features a cistern from the 1800s, which will function to inform the hundreds of weekly visitors to the site about its past. The site is also located on a heavily eroding shoreline with over 5,000 years of human history, and provides the opportunity for students to learn about conservation techniques on Florida's rapidly

changing shores while helping inform the greater archaeological record about the past of this unique part of Florida history. Every year, we host a public day run by the students of the field school, inviting local families and interested individuals for a free day at the site to learn about different archaeological techniques. The students design activities based on what they learned, creating family-friendly stations to show adults and children alike what real archaeology is all about. This year, some of the activities involved mapping, creating mock stratigraphic layers with colored sand, and explaining the kinds of artifacts found at the site using a timeline and fabricated miniature soil cores. The students learn how to translate their work to the public, and get the chance to help plan a big event as a group with the help of FPAN.

This poster will present the work done by the field school, highlighting the findings made by students, the importance of public archaeology as a whole, and the contributions to conservation information that can be used to protect the future of our beautiful Florida sites.

Presenter(s): Victoria Sherwood

Board: #33 Friend, Not Food? The Degradation of Domestic-Focused Diet in the Face of Collapse at an Urban Settlement in the Northern Negev Desert

Tell el-Hesi, a short-lived Early Bronze Age II-III (2900–2500 B.C.E.) urban settlement in the marginal zone of the Northern Negev Desert, presents a unique opportunity to examine how food systems reflect broader social, ecological, and political dynamics. Unlike other contemporaneous urban sites in the Southern Levant, recent isotopic evidence suggests that Tell el-Hesi pursued a self-provisioning model of meat production rather than relying on redistribution from rural hinterlands. This research draws on political ecology and resilience theory to explore whether this locally focused subsistence strategy, while initially adaptive, ultimately contributed to the site's rapid collapse. Intensive faunal analysis, including cut mark and species identification across multiple occupational phases, reveals a progressive broadening of dietary breadth in response to environmental and social stress. In its final phase, the site's inhabitants consumed animals typically considered outside the normative food spectrum, including cats and dogs, raising questions about the symbolic thresholds crossed during crisis. This research argues that the breakdown of a domestic-focused diet not only marks the failure of a provisioning strategy but also reflects the erosion of key cultural boundaries. By tracing the entanglement of food, identity, and collapse, this study contributes to broader anthropological debates on sustainability, urbanism, and the political dimensions of consumption.

Presenter(s): Kara Larson

Board: #34 Gastro-Politics: Renegotiating Relationships Between Communities, Animals, and Food on the Early Bronze Age Steppe

The Early Bronze Age (EBA) was a period of significant transformation in steppe foodways, marked by a shift from foraging-based subsistence to forms of animal husbandry and pastoral production. These changes reconfigured relationships between communities, animals, and food, as evidenced by material traces found in kurgan (burial mound) contexts. This research explores dimensions of

food in mortuary contexts on the EBA Eurasian steppe through the lens of gastro-politics, the ways food is used to express, negotiate, and contest power and social relationships. Drawing on prior publications and incorporating data from a forthcoming excavation of Kumsay, an EBA cemetery in western Kazakhstan (planned for summer 2025), this research examines how funerary food practices such as provisioning graves with animal offerings, operated as mechanisms of hierarchy, kinship, and political identity within steppe communities. Through analysis of burial architecture, faunal assemblages, and grave goods, this project contributes to an emerging framework for understanding gastro-politics in pastoral societies.

Board: #35 From Ragas to Instrumentation: Experiences and Influences of Indian Music on Health and Healing in Bengaluru

India has had a long-standing tradition of musical healing. Music has been incorporated into people's lives as a method of restoring balance to the mind and body, and to aid individuals in various ailments. Western research has been learning more about the importance music can play in the healthcare system by examining the neurological effects of components of music, such as rhythm and tonality (Bowling 2023). Indian research has explored the physiological and energetic impacts of Indian music through lenses including Vedic scriptures, sacred music therapy (Cook 1997), and modern music healing in conjunction with traditional knowledge (Sundar, 2007). These papers have corroborated the value music has played in Indian societies and cultures and have explored the neurological, physiological, and psychological benefits of music for health and healing. Within the urban city of Bengaluru, located in the Indian state of Karnataka, there are several music healing centers; some have incorporated music into their Ayurvedic treatments, others have created retreats that blend yoga with music, and other centers are solely focused on classical music therapy (Chauhan et al, 2024). The objective of this research project will be to increase understanding of contemporary Indian musical healing within the context of its medical and cultural importance in this region.

While the tangible centers and the literature have provided quantitative data for the wide range of interest placed on Indian music healing, there are no anthropological perspectives regarding the experiences, narratives, and sonic choices made within music healing in present-day India. This project will work towards bridging this gap through qualitative data analysis (Graue 2015, 8) of the opinions, experiences, and impacts of Indian music healing among music healing practitioners and individuals who choose to integrate music into their or their family members' lives.

The research will focus on opinions of how individuals feel after musical healing practices, along with why participants choose to incorporate healing music into their lives. These perspectives will focus on emotional and physical influences to portray the effects that music has had on each person's well-being. This project is also oriented around the narratives of music healing, specifically focusing on how various methods of healing, such as the Western medical system or

the traditional Ayurvedic system, have impacted the framework under which contemporary musical healing is practiced in these centers. This will be achieved by asking practitioners where their theoretical views of musical healing stem from, why the specific techniques of musical healing are used, how the music should be used, and other technologies incorporated into these practices. Overall, these focuses will allow for a deeper understanding of why musical healing is valued in these centers and how the ideologies behind music healing have impacted its practice.

Presenter(s): Riya Prabhakar

Board: #36 Haunted by the Bar: Substance Use, Grief, and Meaning-Making

This paper engages with the ghosts that linger in the aftermath of substance-related death-ghosts not only of the deceased, but of the rituals, places, and cultural narratives that continue to animate life for the living. Anchored in my embodied experience of losing a brother to a fatal mixture of alcohol and cocaine, this work interrogates how grief, memory, and addiction are culturally constructed and emotionally navigated within specific geographies of meaning.

The central ethnographic scene unfolds at a memorial held in a bar-both a literal site of communal gathering and a symbolic space implicated in my brother's patterns of use and eventual death. Initially perceived as an affront to the pain of loss, the bar comes to be understood as a locus of belonging, where alternative kinship networks gather not to condemn, but to commemorate. Haunted by trauma, pleasure, loyalty, and silence, this space embodies the complex contradictions that make us human.

Drawing on the social construction of addiction (Fraser et al. 2014), the cultural theory of risk (Douglas 1992), and narrative theory (Saint Arnault & Sinko 2021), the paper explores how memorials serve as meaning-making rituals through which communities re-narrate loss, reclaim agency, and maintain social realities. Grief becomes a narrative act, and addiction is a contested terrain shaped not only by medical models but also by collective memory and cultural symbolism.

Through tattoos, storytelling, acts of altruism, and symbolic rituals, the deceased's community constructs a legacy that transforms pain into purpose. Yet, beneath these gestures lies an unresolved tension: the simultaneous honoring and normalization of the very practices that led to death. The memorial becomes a site where ghosts are not exorcised, but accommodated.

This paper contributes to anthropological conversations on mourning, substance use, and the affective dimensions of place. It argues for a more nuanced, culturally grounded understanding of addiction and bereavement-one that recognizes how people live with the ghosts of those they've lost, and the ghosts of selves they once were. Ultimately, it asks: how do we carry forward the dead when their absence is entangled with our social identities, our rituals of remembrance, and our most intimate spaces of meaning?

Board: #37 Haunted Corridors: A Comparative Study of the Materiality of Undocumented Migration and the Violent Remains of Routes Once Taken

For over 17 years, the Undocumented Migration Project (UMP) has utilized a mixed-methods approach to study clandestine border crossings between Latin America and the United States, focusing on the 1994 immigration enforcement policy Prevention Through Deterrence (PTD). PTD is a strategy that increased security in unauthorized crossing areas surrounding urban ports of entry which shifted undocumented migration towards remote, harsh environments such as the Sonoran Desert of Arizona, under the assumption that the physical dangers would deter future crossings. Much research has shown that PTD has failed to deter migration, but has succeeded in shaping border crossing into a well-organized and violent social process with a unique set of material culture and technologies. Since PTD's implementation, the US has increasingly externalized its borders to Mexico and parts of Central America in an attempt to intercept undocumented migrants before they reach US soil. Similarly, Europe has adopted a range of externalization policies aimed at preventing migrants-primarily from Africa and the Middle East-from reaching EU territory. These strategies include the closure of borders and pushback operations that divert migration routes towards riskier and more remote terrain. Here too, the material afterlives of movement reveal a comparably spectral geography: corridors haunted by the presence of those who have passed through, disappeared, or been forcibly immobilized. This poster presents a comparative archaeological study that examines the material traces of undocumented migration across two geographically and politically distinct border regimes. Drawing on the UMP's work in Arizona, and new preliminary research conducted in the Balkans (particularly near the borders of Italy, Slovenia, and Croatia), this project investigates how material traces-discarded belongings, makeshift shelters, ruins of infrastructure, and landscapes of suffering-function as witnesses to the enduring impacts of state violence on migrant lives. By placing these two regions into critical dialogue, this poster explores the globalized logics of border enforcement strategies while attending to the local textures of migrant experiences. We ask: What role does landscape play in shaping the material strategies of undocumented migrants in different geographic regions? How do the material remains of migration act as both evidence and memory and how does the environment influence what stories these artifacts can tell? What might a comparative approach offer to migration discourse especially as it relates to archaeologies of the contemporary?

Board: #38 Haunting Materialities: Waste as Temporal Crisis in a Small Indian City

Waste does not vanish- it lingers, stains, and returns. Based on PhD ethnographic research and a visual arts practice, this poster traces how waste disturbs temporal and infrastructural rhythms across landscapes of a small Indian city. Haunting here is not metaphorical; it is material, administrative, and affective. Waste unsettles aesthetic regimes, exposes infrastructural breakdown, and resists the fantasy of circular renewal. If the Anthropocene is the epoch of planetary crisis, then waste is its daily, intimate remainder.

By haunting, I refer to the ways waste persists and reappears, disturbing linear notions of progress and resolution. Haunting is the material and political excess that refuses disappearance.

Materiality, here, includes not only the physical presence of waste but its temporal and affective properties: its capacity to stain the present, disrupt infrastructures, and shape social life.

The poster explores three interlinked landscapes: the municipal office, a migrant slum, and the city's dumping ground and beyond. These spaces mark different stages in the life of waste - from policy papers and bureaucratic visions of cleanliness, to street-level collection and negotiation, and finally to the afterlives of discarded matter in dumping grounds and homes. Specific objects- dustbins, broken machinery, and suspended files- anchor the analysis. Through them, the poster examines how waste infrastructures mediate urban time: stalling, leaking, looping, and resisting closure.

In the municipal office, waste is imagined alongside dreams of a world-class city. Files pile up, suspended in bureaucratic time. Haunting here is administrative- policy circulates on paper but rarely materialises in the world. The poster then moves on to the streets. In a migrant slum, daily waste collection reveals how waste moves through caste-based, informal, and politically charged systems. Often used in protest or sabotage, waste becomes a visible tactic. Haunting takes the form of deliberate excess- a material presence that refuses to disappear and disrupts official ideas of order.

The final vignette shifts to the city's dumping ground and the homes of ordinary people. Here, haunting is slow and embodied: waste pickers navigate decay, risks, and uncertain futures, while residents quietly subvert state recycling schemes. Materials resist reuse, outlast value, or transform entirely. Waste here is not a linear input or output- it is a temporal agent that delays, reactivates, and lingers. This framing challenges dominant circular economy narratives by foregrounding waste's unruliness- its refusal to be absorbed into technocratic visions of seamless renewal.

As a visual artist and anthropologist, I approach the poster as a visual tapestry: layering hand-drawn illustrations, theoretical interventions and ethnographic fragments. I invite viewers to dwell in the leaks, stains, and returns of waste- to follow its haunting materialities across time and space.

Presenter(s): Aishwarya Mukhopadhyay

Board: #39 Haunting Wastes: Religion and the Perception of Bodily Wastes among the Yorùbá

The belief among the Yorùbá of Southwest Nigeria is that whatever has been inside of or has touched the body even when it leaves those spaces, must not be treated with levity, and must be properly disposed of. They believe that such things have become an extension of the body they once inhabited or touched even now that they have become wastes. These wastes carry the person's essence, vital life force (àṣẹ), and improper disposal of bodily wastes may haunt them if people with bad intentions take possession of them. These wastes become magical and dangerous. This is why the Yorùbá are wary of disposing of their used clothes by giving, donating them to strangers or even family members, because their sweat, bodily fluid, bodily waste have touched them. For example, their sweat is believed to contain their essence, their àṣẹ (life force), their being, selfhood, part of their orí inú "inner head, fate, destiny" which is transferred to any piece

of clothing it touches. There are stories among the Yorùbá about people whose essence was stolen, (good) destinies were destroyed, exchanged, or replaced with a bad, useless one because they didn't dispose of such bodily waste properly or that those who wished them ill got a hold of it. This belief is also performed by Nigerian Christians, particularly Pentecostals, and Muslims. Therefore, even though hair has left the head, eyelids, and pubic areas, old clothes have been discarded, excreta and urine, have left the body, saliva has left the mouth, menstrual blood and placenta have left a woman's womb, vaginal and seminal fluids have left the bodies, a baby's umbilical cord has fallen off, have left their original order, and have become bodily wastes, they are still connected to the essence of the owner and because of that have acquired new (haunting) power in their new order.

Against this backdrop and using an ethnographic lens, this study points out that what is considered sacred or dirt/trash is not just an order that may be acquired or lost because of movement within, from, or to it. The end of an order may be the beginning of another, their wasteful condition starts, activates their ritual powers. I claim that even waste, especially bodily wastes, may become powerful again in their new order. To achieve what I set out to do, I will attempt a tripartite approach. 1) I will interrogate Mary Douglas, Mircea Eliade, and Nimi Wariboko's idea of sacred, profane, and uncleanness to explain, reflect the religious and political interpretation of bodily wastes in postcolonial societies; 2) I will make use of ethnographical narratives to expound perception and treatment of bodily wastes among the Yorùbá; 3) I will explore Yorùbá orature and some selected literary works to demonstrate how bodily wastes are treated within sacred environments. This was done with the intent to argue that there is a common thread of understanding (regarding bodily wastes) among these three streams of interpretation.

Board: #40 Is it worth taking the anti-racist struggle to the courts? Reflections on the first hate crime conviction in Ecuador

In recent decades, several Latin American countries have adopted laws criminalizing racism and racial discrimination. However, those who decide to bring racism cases to court face multiple obstacles. Moreover, these cases rarely result in convictions. Research on anti-discrimination laws argues that such laws end up reproducing the racial status-quo because they do not address the structural and systemic nature of this racism. Through an analysis of the first hate crime conviction in Ecuador, in this article I assess the possibilities and limits of bringing anti-racist struggles to the courts. Despite its limitations, I argue for not abandoning legal anti-racist strategies.

Presenter(s): Maria Moreno Parra

Board: #41 New Weaving with Old Patterns: The Use of Traditional Ecological Knowledge in Indigenous Coastal Resilience

Within the neighboring Terrebonne and Barataria Basins on Louisiana's coast, communities are facing the most acute effects of coastal degradation. This region of the coast is losing land at among the most rapid rates in the world, so much so that it now holds the dubious distinction of

being home to the United States' first climate change refugees. In only the last century, Louisiana's coast has been subject to manifold, anthropogenic changes ranging from manipulation of waterways through dams and levees, rampant pollution, saltwater intrusion, and degradation of buffering wetlands paired with the increased rate and severity of tropical storms and hurricanes.

With plans to work in collaboration with the United Houma Nation, this research explores ways in which traditional ecological knowledge (TEK) helps these communities weather the current and incoming effects of coastal degradation and climate change. Employing ethnographic and indigenous-based methods, this research empowers coastal indigenous communities to develop TEK-informed resilience strategies. These strategies would address specific local concerns, as well as act in complement to larger scale coastal restoration efforts, thus strengthening coastal restoration efforts as a whole. Additionally, the development of such localized strategies serves to strengthen coastal communities' relationship with their environment. Increasingly alienated from these landscapes once known by these communities' previous generations, as the landscape is increasingly at risk, so too are the living TEK that these communities possess.

Presenter(s): Samantha Allen

Board: #42 PASTORALIST LIFEWAYS FROM NAKWAPERIT 2; A MID-HOLOCENE SITE, WEST TURKANA KENYA

Pastoralism, a way of life centered on herding domesticated animals, is highly adaptive in arid ecosystems with limited alternative land utilization options. In Africa, pastoralism was the first mode of food production and it remains an important economic strategy and cultural identity today. After emerging in northern Africa by 8000 BP, pastoralism spread to eastern Africa's Turkana Basin ~5000BP, with the earliest pastoralists practicing fishing and herding. However, these groups are primarily known for the megalithic "pillar site" cemeteries they constructed around the lake. Until now, Dongodien on the east side of Lake Turkana has been the only pastoralist habitation site securely affiliated culturally and chronologically with the pillar sites through Nderit pottery, microlithic artifacts, domestic fauna, and parallel radiocarbon dates. Because most archaeological evidence comes from mortuary sites, there is limited knowledge about the daily life of the early pastoralists in the Turkana Basin. To expand knowledge on early pastoralist practices during the mid-Holocene, we excavated at Nakwaperit 2, a newly documented habitation site west of Lake Turkana. Situated on the south bank of the Turkwel River near Lake Turkana's receding paleo shorelines, Nakwaperit 2 saw mid-Holocene occupation based on the presence of Nderit pottery. This paper presents archeological data from two excavation units (N669-671 and N671-673) analyzed to understand the lifestyle of the early pastoralists. For analysis, the artifacts were divided based on material densities from the excavated levels. Based on this, different horizons of occupations were observed, indicating that the site had different phases of use. Preliminary observations of the artifacts, such as pottery, lithics, and animal bones from Nakwaperit 2, show similarities to Dongodien. Further surveys and excavations are needed at Nakwaperit 2 to expand the sample size, understand

Board: #43 Ghosts of Reproductive Knowledge: Cross-Cultural Pregnancy Advice in the Probability Sample Files

Across cultures, pregnancy is a period marked by close attention, concern, and advice. In high-income countries, reproductive guidance increasingly comes from physicians, online resources, and social networks. In contrast, ethnographic accounts from small-scale societies often highlight the role of experienced women, especially elders, as primary sources of support and instruction. To explore cross-cultural variation in pregnancy advice, we analyzed entries categorized under "Pregnancy" in the Probability Sample Files of the electronic Human Relations Area Files (eHRAF). We documented the types of advice recorded, their intended targets, and the identified sources when available.

Preliminary findings show that the most common form of advice involved behavioral guidance, such as what actions to take or avoid, followed by ritual or ceremonial practices, dietary recommendations, and medical advice. While most advice was oriented toward fetal or infant wellness, there was no strong association between the type of advice and its target. When the source of advice was specified, older women were cited most frequently.

These results highlight the persistence of intergenerational knowledge transmission in small-scale societies and raise questions about how sources of reproductive guidance have shifted in more recent contexts. In keeping with the conference theme of ghosts, these findings suggest that elders' voices, once central to navigating pregnancy, linger as traces in the archive. Our data suggests experience-based knowledge continues to surface across cultural settings and how these sources both shape and reflect reproductive practices in a rapidly changing world.

Board: #44 Peripheral Bodies, Hidden Identities: Tracing the Lives Behind Iceland's Historical Cadaver Trade

Dissection has long been central to Western medical education, with bodies often acquired through exploitative means, including grave robbing and colonial networks targeting marginalized groups. While much of this history focuses on major European powers and the United States, less attention has been given to peripheral colonial nations like Iceland, which, despite its geographic isolation, participated in these global networks through its ties with Denmark.

This research examines the history of Icelandic cadaver collection through the documentation of the Læknagarður Anatomical Skeletal Collection at the University of Iceland. Iceland's early medical education relied on locally sourced human remains, including those retained opportunistically from surgeries and archaeological bodies excavated by medical students. As demand grew, the focus shifted to the bodies of marginalized social groups, such as water carriers ("vatnsberar"), the poor and infirm, and foreign residents - reflecting evolving views on who was

considered an "acceptable" subject for anatomical study. As Icelandic physicians expanded their training abroad in the early 20th century, they began sourcing remains through international trade networks in places where they had received their education. This shift highlights Iceland's increasing involvement in international scientific discourse and ever-evolving perspectives on race and identity in the early 20th century. After World War II, Iceland's medical practices were further influenced by its growing ties with the United States, with more contemporary bodies procured from mass-market anatomical supply companies that targeted regions, especially in India, where U.S. and European colonial networks had significant influence.

By documenting the ancestral remains in the Læknagarður Collection alongside historical records and oral histories, this research reveals how Iceland's participation in global medical networks shaped its anatomical practices. It highlights the colonial dynamics underlying the circulation of human remains in peripheral colonial nations and emphasizes the changing views on whose bodies were deemed acceptable for study. This work also contributes to understanding how these practices intersected with Iceland's own cultural and medical development, illustrating how the nation benefitted from larger colonial networks to advance its medical education.

Board: #45 Placemaking without Belonging: Migration, Labor, and Uncertainty in Northern Italy

The project examines how migrants and long-term residents live together under conditions of fragmentation, labor precarity, and institutional neglect in Northern Italy. Focusing on informal labor in a rural town and the urban center of Bologna in Emilia-Romagna, it analyzes how people inscribe themselves into landscapes in ways that sometimes coincide with and sometimes disrupt the spatial divisions created by internal borders. The research investigates how everyday routines, particularly those organized around precarious work, structure uneven forms of inclusion and co-presence in public space. The project addresses the following topics: how migrants and long-term residents inhabit shared spaces under conditions of economic precarity, racialized surveillance, and institutional decay; how informal labor practices, including agricultural work and gig-based food delivery, structure routine co-presence in the absence of stable belonging; and which kinds of relationships emerge across internal borders and under differentiated regimes of legitimacy and recognition.

Presenter(s): Ernestine Whitaker

Board: #46 Pseudo-Recovery: Informal Leadership, Moral Practice, and the Politics of Ward Governance

This article presents the long-term hospitalization experience of an inpatient named "Ming Gu" in a psychiatric hospital in mainland China. He took on the role of Dazuzhang in the ward, a position similar to that of a patient leader, responsible for assisting the medical staff. However, this role is informal and derived from abolished ward-level policies that had once established positions such

as the art group leader and cleaning team leader. In order to present this case, the article adopts the elements of recovery orientation and uses them as a structural dialogue with the individual's lived experience. From this, the concept of Pseudo-Recovery is constructed, which refers to Ming Gu's patient/non-patient identity, and is also used to describe the intertwined process of recovery and rehabilitation. In this process, discharge is not the ultimate goal. This article attempts to answer the changes in recovery orientation and the conditions for maintaining this process. This article employs ethnographically informed qualitative research. Through participatory observation, in-depth interviews, and analysis of diaries and field notes, the personal story, as well as the relational and cultural dimensions behind it, is structured in time and theme. The case shows, as an important feature of the governance of psychiatric institutions in history, morality still occupies an important position in the formation and performance of the self. What is a good patient? Who defines it? This case illustrates Ming Gu's answers in thought and action: individual collectivist vision, repaying hostility with kindness, flattery, display of authority, and the performances entangled in them. The patient leader is not the role of speaking for patients, but the intermediary of ward governance. Here, there is acquiescence, reminder, avoidance, and control from the medical staff. The moral self, seemingly the presentation of individual agency, is affected by the power structure in institutional interaction, and is also deeply embedded in interpersonal emotions, thus having the characteristics of expediency. This is a politics where moral identity is invoked, adjusted, and hidden, an ambiguous world of Us/Them. Through the intersection of personal experience, institutions and culture, this article calls for greater attention to the emergence and retreat of non-normative and non-institutional subjectivities, as well as the holistic relational world.

Presenter(s): Bowen Wu

Board: #47 Refuting ghost stories: The possibilities of public scholarship for shaping respectful narratives about Eastern Cemetery

This poster explores the public-facing outcomes of a multi-year research collaboration between archaeologists, cultural anthropologists, and biological anthropologists about Eastern Cemetery. Located in Louisville, KY, Eastern's history of massive over burial, mismanagement, and abandonment has long been a topic of public discussion, including rumors of hauntings and other eerie associations, as well as use of the site to mark supposed burials of "witches," hold zombie-themed photo shoots, and other uses that emphasize a dark and spectral interpretation of the cemetery. Working alongside the community group that now voluntarily manages the 29-acre site, our research utilized mixed methods – including participant observation, interviews, Ground Penetrating Radar, magnetometry, and GIS mapping – to non-invasively document past practices and to examine the perceptions and experiences of those closely connected to Eastern today. With our 2-year NEH-funded project conceptually focused on necroviolence (De León 2015; Wahbe 2020) and structural violence (Farmer 2004; Seidemann & Halling 2019), in this poster we highlight the ways we chose to present our academic and applied findings for public audiences. Through an intentional selection of the topics, narratives, and designs of a report, and through the presentation of findings at community meetings, we explore the importance of crafting public scholarship that

respectfully acknowledges the violences of the past and present but does not sensationalize Eastern's history or stigmatize those for whom it is their final resting place.

Presenter(s): Angela Storey

Board: #48 Religiously-Motivated Refugee-Migrant Care: Social Nonmovement in the Lower Rio Grande Valley

In this poster, I engage data from previous field work with refugee-migrant care providers in the Lower Rio Grande Valley of Texas with arguments and examples provided by Asef Bayat (2010) in his book *Life as Politics: How Ordinary People Change the Middle East*. I discuss Bayat's concerns with prevailing perspectives on the poor and how his alternate framework– "social nonmovements"– helps to bypass rigid dichotomies of 'active'/'passive,' 'individual'/'collective,' and 'civil'/'political,' resistance that have often muddled my own ability to understand and articulate the practices, groups, and spaces I study. By employing Bayat's conception of social nonmovements, I analyze interview data collected in 2023 to understand the refugee-migrant care network of the Lower Rio Grande Valley as participating in both "quiet encroachment" and "art of presence" (Bayat 2010), with the potential to be or develop into more "unnoticed social practices that may in fact be harbinger of significant social change" (Bayat 2010, 26).

Specifically, my poster draws from a paper I wrote that asks: 1) What are the limitations of prevailing perspectives on "the poor" and "resistance"? 2) What is social nonmovement according to Bayat? 3) How is this framework helpful for understanding the role and development of refugee–migrant care practices in the Lower Rio Grande Valley? I rely on Bayat's social nonmovement framework to better understand participant observations at various shelters/service sites as well as interviews with volunteers and employees of organizations providing care that I collected when living in Texas in 2023. The particular care network I study operates right on the line (if there is one) between religion and politics, between civil society and the state, between everyday volunteerism and collective action. Many of the prevailing frameworks around "the poor" and "resistance" are insufficient for understanding activism and care practice of this sort. The dichotomy between active and passive and between civil and political lead ultimately to a critique of service providers for not being more politically and publicly active, but may miss the ways in which seemingly passive everyday volunteerism has the potential to transform the state's governmentality by weaving religious logic (welcoming the stranger, feeding the hungry, clothing the naked, caring for the orphan, protecting human dignity) into the very "fabric of society, into norms, rules, institutions, and relations of power" (Bayat 2010, 25). Bayat argues that social nonmovements really can have this sort of impact when they operate in a society for a long period of time. Even if the state attempts to offset their subversive practices by submerging them in the the state's logic of power, a social nonmovement can achieve notable reform and diminish the state's ability to neutralize their effects if the nonmovement continue to practice its "incremental disposition of claim making" (Bayat 2010, 25).

Presenter(s): Josie Cohen

Board: #49 Returning to Displacement: Kashmiri Pandit Homelands

My poster presentation examines the theoretical and methodological dimensions of return migration among displaced Kashmiri Pandits, an upper-caste Hindu minority community, to government-established settlements in Indian-Occupied Kashmir. Drawing on spatial-political theory and critical security studies, this research interrogates how state-sponsored "return" initiatives may paradoxically reinforce experiences of exile rather than facilitate genuine homecoming.

Methodologically, my study aims to employ multi-sited ethnography within securitized Pandit colonies in the cities of Kashmir, conceptualizing these spaces as sites of contested belonging. The analytical framework centers on three interconnected dimensions: spatial confinement within security architectures, temporal liminality of "perpetual return," and the political reconfiguration of minority identity within conflict zones.

My research contributes to theoretical discussions on forced migration by proposing that traditional binary conceptions of displacement/return are insufficient when analyzing populations in securitized resettlement contexts. Instead, this work introduces the concept of securitized return to theorize how state security imperatives transform the phenomenological experience of homecoming, creating spaces where communities exist in a condition of simultaneous return and exile. This framework offers new analytical pathways for understanding return migration in contested territories where security concerns fundamentally restructure notions of home, belonging, and identity.

Presenter(s): Vatya Raina

Board: #50 Ruins-as-Ghosts, Ruins-as-Cemeteries: Placemaking and Necropolitics in Late Horizon Samanco, Nepeña Valley, North-Central Coast of Peru

Anthropologists, archaeologists, and historians have long recognized the agency of ancestors, spirits, ghosts, and other metapersons in shaping politics, especially burial practices and other forms of necropolitics. In imperial and other colonial contexts, where political legitimacy is often tied to placemaking, new relationships with the past, especially with memories, places, and ruins, have the potential to emerge. In the Central Andes, the Tawantinsuyu (aka Inca Empire) expanded from its heartland in Cuzco to incorporate vast swaths of the Andean region during the 15-16th centuries CE. On the north-central coast of Peru, despite robust ethnohistorical accounts, archaeological evidence for the Inca presence is scant and the relationships between imperial Cuzco and local Chimú leadership are still poorly understood. Recent archaeological research in Nepeña, a small coastal valley located 800 km from Cuzco in the southern portion of the Kingdom of Chimor, brings new empirical light on Inca expansionism and its engagement with local ruins, including the construction of mortuary chambers. This poster reports on the archaeological discovery of an incomplete Late Horizon (1470-1532 CE) mortuary context within the ruins of Samanco. We describe the grave context, including the construction of funerary chambers, the placement of the deceased, and the presence of a variety of grave goods. We analyze the

assemblage considering the hybridized identities and artistic practices that emerged at the time and pay particular attention to the location of the tomb within the ruins and the surrounding landscape, including nearby hills and the Pacific Ocean. We frame our analysis to shed light on the materiality and agency of ancestral places in shaping Late Horizon necropolitics in a region far removed from the Inca heartland. We evaluate imperial strategies of placemaking in light of the Nepeña case and offer a broader reflection on the role of abandoned places and other "ghosts" in imagining and building more-than-human worlds in the Andean past.

Board: #51 Health and Wealth: A Microhistory of an Elite White Male in the Plantation South

Osteobiographies have recently become common in social bioarchaeology and paleopathology for direct reconstructions of biosocial lived experiences in past populations. Here, we present an osteobiography of a known-named individual, Josiah Gale, exhumed through salvage bioarchaeology in central Mississippi. Gale was a member of Mississippi's elite plantation class and participated in the 19th-century migration of European American and Black and/or African American individuals from the Carolinas into Mississippi Territory. Following established methods for paleopathological and osteological analysis of Gale's skeletal material (70% present for observation), mortuary assemblage (i.e., clothing fastenings, cast iron coffin), and associated archival evidence, we will explore the health history, exposure to stressors, activity, diet, behavior patterns, and general social ecology of a wealthy, elite White male within a deeply hierarchical and structurally violent social and economic system. Despite poor preservation, preliminary analysis shows evidence of limited-to-absent early life exposure to stressors, but later life negative health outcomes, including periodontal disease, indicative of local-to-systemic inflammation; osteoarthritis, indicative of systemic inflammation; and mandibular exostoses, often associated with bruxism and typically caused by psychosocial stress. With the obtained permission of lineal descendants, we intend to provide a microhistorical narrative on the association between health and wealth, exploring the complexities of constructing differential diagnosis in the context of poor preservation.

Board: #52 Mortality During 19th Century Yellow Fever Outbreaks in New Orleans: Exploring the Potential Role of Health Boards and Institutions.

Yellow Fever is a viral infectious disease commonly transmitted by mosquitoes. Most scientific evidence points to an African origin, and due to the slave trade, it arrived in America around the 1600s. In the United States, it started causing significant outbreaks and high death tolls in the late 1700s and, during the 1800s, caused major catastrophic outbreaks in different cities, where New

Orleans was one of the most affected places. During the 1800s, in New Orleans, the mortality rate in each outbreak did not always show a clear pattern and trend, and different factors (biological and non-biological) could have played a distinct role in various historical and environmental contexts. In this study, we analyze human mortality during three major Yellow Fever outbreaks in New Orleans during the 19th century (1847, 1853, and 1867) and explore how the existence, structure, and policy changes of different city and state boards and health institutions could have had an impact on mortality risk in these three outbreaks. The outbreak of 1847 generated more than 2,200 deaths, with a peak on September 5th (435 deaths). The following outbreak in 1853 was the deadliest one, with more than 7,800 deaths, with a peak on August 27th (1,365 deaths). Interestingly, the trend of increasing mortality changed and reverted in 1867, with more than 3,000 deaths and a peak on September 23rd (489 deaths). The first version of the City Board of Health was established in New Orleans in 1804, following the Louisiana Purchase. This would not be the only iteration. In 1816, the City Health Committee was reorganized by the New Orleans City Council, only to be dismantled and changed again, this time by the state legislature in 1818. Several more iterations and dissolutions of the City Board of Health would occur in 1821, 1837, 1841, and 1846. Contagionists and non-contagionists (sanitationists) disagreed on a plan for implementing any long-lasting plan of action against Yellow Fever. The first-ever State Board of Health was established in Louisiana following the passing of the Quarantine Act of 1855. This created a permanent institution and provided the infrastructure to build and maintain quarantine stations surrounding New Orleans. Our preliminary analysis showed institutional changes in each outbreak, with a clear shift after the one with the most significant death toll in 1853, where the State control of health policies could have helped to generate more centralized sanitary actions. Our next steps will focus on specific political and economic decisions that, beyond outbreak mortality, could help us explain institutional changes that could have exacerbated mortality as observed in 1853.

Board: #53 Jamaican University Women's Mate Choices in a Context of Mate Scarcity

Women's enrollment in higher education has reached a level that surpasses male enrollment in many universities. With the tendency of women to prefer partners with the same or higher level as themselves, this raises questions about how heterosexual identifying women in female-biased institutions are able to find romantic partners. Previous research suggests that when women perceive being in a mate-scarce environment, they may modify their behaviors to find a partner. The present study takes place in Jamaica, an island nation for which approximately 70% of enrollment in higher education is women. This study draws on evolutionary theory and sociosexuality frameworks to examine how Jamaican university women perceive mate availability, and how those perceptions shape their preferences and behaviors.

The survey data (n=108) collected from UWI-M students revealed that women reported significantly higher perceptions of mate scarcity-especially for short-term relationships-compared to men. However, perceived scarcity of long-term mates did not differ by sex. Results also suggest that

perceived mate availability among women is positively correlated with a more permissive sociosexual attitude, but not with behavior or desire. Contrary to predictions, perceived scarcity was not associated with increased intrasexual competition. Exploratory findings show that women in mate-scarce environments expressed greater behavioral flexibility and were more willing to compromise on mate attributes like income and education-especially for long-term relationships.

This poster highlights the nuanced ways in which education, culture, and mating market dynamics intersect to shape mate preferences among young Caribbean women. The findings offer valuable insight into human mating strategies in gender-imbalanced institutional contexts.

Board: #54 Lived Experiences in highland Ecuador: two case studies from Urcuquí (AD 500-1500)

Osteobiographies are an innovative technique in bioarchaeology that allow for close examination of an individual in order to explore unique life trajectories. In this poster, we will present the osteobiographies of two individuals excavated from Urcuquí, Ecuador (AD 500-1500). As part of the Otavalo chiefdom in the Carnqui polity, Urcuquí has been the focus of excavation in Ecuador for many years. However, despite this archaeological attention, little is yet known about daily life for individuals living at Urcuquí. Bioarchaeological analysis begun in 2021 has started to explore the patterns of health, activity, and trauma across this community; here, we focus on two case studies in order to highlight the varied life experiences of people who lived there. The first individual (163A) was a possible female adult between 25 and 50 years old at the time of death. This individual had signs of wear from labor across their body, mainly focused on the joint surfaces. This individual was a part of a double burial. The second individual (218) is a probable female of middle age (35 - 50 years of age at the time of death) who had signs of lumbarization of the first sacral vertebra, osteoarthritis of many vertebrae, as well as potentially severe mandible dislocation. This poster will address how their lives might have been affected by their pathologies over time. We also emphasize the utility of consulting medical specialists in the context of ancient human remains as a way to understand the impact beyond the skeleton of pathology and disease. The focus will be on the day-to-day lives that they might have lived based on the known symptoms associated with their pathologies and bodily changes and what is known about the diet and activity of the people at the time.

Board: #55 Maya Perspectives on Archaeology: Palenque Vendor's Contribution to the Material Culture

Archaeological projects invariably affect the local communities where they are conducted. Attention from these projects is often followed shortly after by tourism, particularly in the Mesoamerican region since the inception of the Maya World Project. The mix of academic,

commercial, and political interests in the area shapes the locals' economic prospects and relationship with their cultural heritage. Examining how archaeology can become an economic and political tool that shapes the local community's perception of archaeology has become a matter of increased importance to the subfield and has been brought to the forefront of conversation with the development of the Maya Train project.

Mexico's Tren Maya Project is an intercity railway connecting historic Maya sites across the Yucatán Peninsula for tourism. Since construction began in June of 2020, over 25,000 new archaeological sites have been uncovered, and a significant portion of the train is already in operation, with the latest stop situated in Palenque. This is an incredibly pertinent time to examine what local Maya communities perceive to be the value of archaeology as it is being undertaken around them at a rapid pace and underlies the development of their communities. Considering the complex role Maya culture plays in Mexican identity and the debatable extent to which archaeology in Mexico serves as a state apparatus, their insights are crucial for answering larger theoretical questions on who owns the past and what the focus of archaeological projects should be.

Developing an understanding of the Maya perspective is achieved through ethnographic fieldwork in the archaeological tourist site of Palenque, Mexico. Close examination of how the cultural landscape of Palenque is constructed and consumed every day through the interactions between Maya (workmen, vendors, etc.) and non-Maya stakeholders (archaeologists, tourists, etc.) elucidates how the Maya perspective on archaeology is formed. Maya vendors situated outside the entrance of the archaeological park of Palenque are of emphasis in fieldwork due to their function as a crossroads for interaction between all local stakeholders of Palenque's archaeological tourism economy. How Maya communities have been responding to archaeological tourism in Palenque, which has been an archaeological tourist site for decades, serves as a basis for how Maya communities newly exposed to the archaeological tourism onset by the Maya Train Project will respond. Findings are based on preliminary data analysis.

Presenter(s): Jonatan Naranjo Lugo

Board: #56 Motivations for Conservation: Exploring Citizen Responsibility for the Marine Protected Areas of Los Angeles County

The Marine Protected Areas (MPAs) of Los Angeles county are co-managed by both the state government and non-governmental organizations (NGOs), as California legislature has acknowledged the fact that these prized coastal resources must receive local aid in order to be successful public projects. Heal the Bay (HtB) is a non-profit research aquarium based in Santa Monica (although the Los Angeles MPAs are in Malibu, Palos Verdes, and the Channel Islands). HtB retains a vast number of both paid employees and volunteers who participate in maintenance, scientific, and educational programs at and for MPAs. Through my work with HtB as an MPA human use data collector, many who also perform work for MPAs through the nonprofit have been contacted in order to understand their lived experiences. Using theories of socio-natural cultural construction and use/definition MPA guidelines put forward by environmental scientists, anthropologists, and politicians, the related beliefs and opinions of the working members of HtB

will be gathered ethnographically via semi-structured interviews at MPA sites or aquarium headquarters. Guiding questions are: What life events and/or personal-social ideologies do people cite as motivating them to work or volunteer in their respective forms of management of Los Angeles's Marine Protected Areas, and how can more people be inspired to participate in these efforts? What are challenges paid workers and volunteers report upon entering and/or participating in NGO Marine Protected Area management? How does each individual that works with MPAs in Los Angeles county define environmental conservation and successfully achieve it, both at the NGO and state level? The appearance of patterns in open-ended responses to these questions between employees and volunteers will be recorded and transcribed while cultural theories of human relationships with nature as governed by policy (especially in the new conservative presidential era) can be expanded upon in relation to oceans specifically. Fieldwork data collected in summer 2025 will be presented at the AAA conference for other anthropologists to view and comment on in order to build a thesis with diverse professional input. The non-government persons that care for MPAs are integral to their success - they must be supported in their endeavors, especially because Heal the Bay brings communities together to achieve "good" or "important" deeds the government may fail in carrying out. A critical way to achieve that is through investigation into what prompts the care of ocean and intertidal ecosystems so that key factors brought up by one or both groups can continue to be promoted while challenges can be identified for reduction. As our climate becomes more vulnerable and environmental anthropology expands as a discipline, this work must be done in order to grasp and compare patterns presented by MPA collaborators so that successful environmental management can be achieved.

Presenter(s): Mila Mucic

Board: #57 Multi-crafting Revealed by Sediment Chemistry at The Ta'ab Nuk Na Salt Work, Belize

A record of activities is preserved in mangrove peat at the Classic period (A.D. 250-800) Maya salt work, Ta'ab Nuk Na. The anerobic peat has preserved wooden architecture and botanical remains at many underwater salt works in Paynes Creek National Park, Belize. However, the peat is not favorable to the preservation of remains from meals and other organic material. Survey of the sea floor found posts that formed the outlines of at least ten buildings. Analysis of the artifacts revealed the buildings were associated with a residence and salt kitchens. Activities included boiling brine over fires to make salt, brine enrichment, and salting fish. Questions remained about if salt production was organized as a workshop engaged in multi-crafting or the production of a single good. Sediment chemistry using Inductively Coupled Plasma-Atomic Emission Spectrometry was undertaken to identify additional activities occurring at the salt works. Sediment was collected at one-meter intervals in Building B identified as a residence and along transects to capture the inside and outside of buildings. The results show variation in trace elements around the buildings related to human activity including potassium (K), manganese (Mn), aluminum (Al), magnesium (Mg), calcium (Ca), Zinc (Zn), and phosphorus (P). Spatial analysis indicates a hearth inside in the residence, an expansion of salt production related activities such as brine enrichment and provides additional support for salting fish. The results show that the Maya salt makers at Paynes Creek engaged in multi-crafting for workshop production of subsistence goods of both salt and fish.

Board: #58 Seon Buddhist practitioners physiological and psychological narratives

I will examine how Korean Seon Buddhist lay practitioners experience Buddhist practices in monastic settings, paying particular attention to both their bodily responses as well as their narratives about these experiences. Korean Seon Buddhism distinguishes itself by its focus on meditation and the idea that immanence is experienced in the quotidian. However, the ways lay practitioners engage with its rituals within monastic settings have, as yet, been little studied (Sŏngch'ŏl Sŏnsa, Myŏng Wŏn, and Tek Wŏn. *Echoes from Mt. Kaya: Selections on Korean buddhism* by Ven. song-chol; edited by Ven. won-tek; 1988.). In my research on lay practitioners engagements with Buddhist practices, I will focus in particular on how lay practitioners incorporate prostrations and meditation into their lives while also exploring the personal and symbolic meanings these practices hold for them. I will focus my observations on Seon Buddhist temples from the Jogye order. In this work, I employ Empatica bracelets to document biomarkers of heart rate, blood pressure, body temperature, and electrodermal conductance – all of which provide indicators of stress (and relaxation) levels. Through ethnographic fieldwork in Seoul, including participant observation in temples and semi formal interviews with lay practitioners and monks, this research explores the embodied experience of prostration and meditation as acts of devotion and humility for some, while for others, they may offer therapeutic benefits, such as emotional regulation and stress relief.

Presenter(s): Alexandra Jefferies

Board: #59 Reclaiming Names, Restoring Identity: Reassociation in a Historic New Orleans Cemetery

Most bioarcheological studies-even with historical records and context-cannot reassociate skeletal remains with their names and individual identities. The historic Cypress Grove Cemetery #1 in New Orleans, Louisiana, presents the rare opportunity to attempt this. A portion of the wall vaults in this cemetery, which date from the mid-1840s to the 1930s, that housed hundreds of people, were recently demolished by the cemetery operator. Members of the descendant community operate the cemetery to this day. For decades, the wall vaults decayed, became overgrown, and the nameplates were lost over time. These decaying vaults had become a public safety risk and were intentionally demolished. From 2022 to 2024, all human remains and associated materials from vaults in the worst state of repair were disinterred for reburial elsewhere in the cemetery. Many interments were commingled in their vaults and exhibited varying preservation. Initial bioarchaeological analyses conducted with the permission from the descendant community estimate the minimum number of individuals totaling over 1000. This work attempts name reassociation of the 36 people in individualized burials. Using the Tombstone Index, which the Works Progress Administration completed in 1934, publicly available burial data, obituaries, and records from the cemetery, this research presents the feasibility and challenges of name

reassociations. To determine potential matches, data collected from their skeletal remains, such as estimations of both age-at-death and osteological sex, are compared to the various records. Despite dying in the recent past, their identities were quickly lost to time. This work aims to remedy this, and by using the individualized burials as a starting point, it determines the feasibility of reassociating the identities of the others buried and disinterred at Cypress.

Board: #60 Skull Taphonomy of Burials in England

This study classified the taphonomy and preservation of cranial elements from burials in medieval and post medieval England. Examining demographic characteristics of individuals and their areas of burial in relation to states of cranial preservation may provide insights into taphonomic processes that differentially affect individuals' cranial state of preservation. Approximately 1100 individuals excavated from seven different sites were surveyed, and the state of cranial preservation for each individual was documented using a categorical system of classification that used observations of relative cranial completeness. The results showed that approximately 42% of all recovered individuals lacked evidence of a cranium, 43% of individuals had a partial or fragmentary cranium, and 15% had a mostly complete cranium. Results of Chi-Square tests exhibited significant relationships of cranial preservation with estimated sex and burial site. Though sex may have had a significant influence on the state of cranial preservation, cranial preservation may have influenced sex estimates. This is exhibited by the large percentage of individuals with indeterminate sex estimations (~34%) and cranial preservation of less than mostly complete. The correlation between burial site and preservation may be influenced by a multitude of factors such as date of burial, earth composition, and excavation techniques. This study provides information on preservation of the cranium and potential taphonomic biases that may result from burial location and demography.

Presenter(s): Benjamin Moss

Board: #61 "Martin County is the Forgotten County": The Haunting of Water Insecurity in an Appalachian Hair Salon

Martin County, located in eastern Kentucky, has been battling water insecurity since the 1970s when the water supply was contaminated by the coal industry. Today, residents still experience shut-offs, boil water advisories, burst pipes, and significant bills for water they cannot drink. Women working at a hair salon in Inez, KY, rely on running water for a stable income and the water crisis drastically determines their success. Through interviews and photo-voice, this poster reveals the ways in which their experiences with the water crisis haunt their daily lives by forcing them to anticipate water outages that lead to the loss of income, thus creating a constant feeling of worry. I use the concept of haunting to think beyond paranormal experiences and instead explore daily

occurrences that affect those who must navigate them. A focus on haunting emphasizes collective trauma from the initial contamination in the 1970s, and links this to the challenges that the hair stylists have had in present times. The concept of agency is also used to think through responses, as women at the salon feel powerless and do not have access to resources that could help them during water shut offs. Consideration of agency helps to examine the lasting structures that perpetuate powerlessness and domination in Appalachian spaces.

Presenter(s): Chloe Hale

Board: #62 Storage Raiders: Database Design and Artifact Curation for Future Research and Public Engagement with the Riviera Archaeological Collection

Rivieras' cultural material-currently housed at Florida Atlantic University (FAU)-has seen limited curation or analysis in recent decades. This situation reflects a broader issue, the Curation Crisis, in which accumulated archaeological materials remain inadequately stored, cataloged, or preserved due to institutional constraints.

My goal is to address the Curation Crisis at a local level by developing a centralized digital database for FAU's archaeological collections, beginning with those from the Riviera Site and using existing institutional resources that aid in cataloging, digitizing, and 3D printing a representative sample of the collection. The 3D models will be used to create a teaching collection to increase educational access for students K-12. Demonstrating how curation and digitization can be achieved without external funding, contributing to academic research infrastructure and public outreach. It highlights the importance of low-cost, scalable strategies in preserving cultural heritage and promoting inclusive, community-based scholarship.

Presenter(s): Micaela Candia

Board: #63 Tackling Contemporary Community Issues Using Local, Place-Based Heritage

The continued practice of cultural heritage is dependent on a community's ability to adapt the sites and performances specific to their historical narratives. Social cohesion is essential to mitigating complex, contemporary issues like climate change and migration. Building from my experience with the National Park Service's History and Hope Interpretive Toolkit for Climate Change, I present strategies to uphold community's stewardship of their heritage through education which relies on place-based history. Connecting past anecdotes of change, collaboration, and loss to current issues can help present data to communities in a way which prompts constructive hope. In addition to providing narratives of resilience and errors, the toolkit can introduce ways in which cultural groups have adapted to danger and change. Hyde Park, in Burkeville, Virginia, is listed on the National Register of Historic Places in connection with Jewish German immigration and agricultural efforts during WWII. This case study will further articulate connections between agriculture, climate change, and migration, as well as the Toolkit's potential in politically conservative regions of America where global warming and other contemporary issues are likely to have significant impact.

Presenter(s): Emma Gruesbeck

Board: #64 The Commodification of Death: An Exploration of the American Funerary Industry

Title: The Commodification of Death: An Exploration of the American Funerary Industry

Objective:

This research aims to show how the industrial revolution transformed the environment, human societies, and cultural practices with emphasis on death practices. Industrialization and capitalist ideology have completely changed death practices in American society. Death has become a distant, disconnected concept enshrouded with fear for the average person, largely due to capitalist influence on funerary traditions, transforming them from a social and culturally significant practice into an industry to be exploited. Through historical analysis and literary review, I will examine the rise of the funeral industry in the United States following the Civil War, the environmental consequences of modern death practices such as embalming, casket burials, and cremation, and how these practices are changing in the modern era through concepts such as green burials, and the Positive Death movement.

Historical Background:

Early American funerary traditions were heavily influenced by Christian religious ideology and Victorian superstition; themes of the afterlife, spirits, and God are found throughout the funerary art styles and social traditions of the time. American society gradually lost its personal connection with death as Victorian-style funerary practices were left behind. The Civil War ushered in a new era of funeral traditions with the introduction of chemical embalming as popular practice, slowing decomposition and turning death into slumber.

Advancements in medical technology in the early 1900s would further serve to transform social and cultural thought about death and dying in America. The rise of funeral services as an industry introduced another layer of separation from death as an exercise in humanity, with multi-billion dollar companies controlling contemporary Western death practices. Traditional funeral practices in the United States have been overtaken by a profit-driven industry that charges exorbitant fees for management of the deceased, and perpetual care costs to maintain their gravesites. As well, many of the embalming, cremation and burial practices that are now standard in the Western funeral industry are also sources of chemical contamination in the soil and water sources near cemeteries.

The cultural obsession with prolonged, sanitized death has given rise to the Death Positivity and Green Death movements. The "Death with Dignity" movement began in the 1970s, aiming to generate public discussion and understanding of contemporary issues of death and dying in the United States. This movement caused a shift in federal funding for in-home end of life care, and culminated in the "rite to die" 1976 Quinlan case in New Jersey, which resulted in the creation of the Uniform Determination of Death Act.

Board: #65 The Needs of the Few and the Many: Exploring the Evolutionary Origins of Healthcare using Agent Based Modeling

The evolutionary development of healthcare behaviors in humans is a relatively neglected area of inquiry, in part due to the limited preservation of care-related behaviors in the fossil record. Yet understanding how and why such behaviors emerged is crucial for anthropological approaches to health, cooperation, and sociality. This paper draws on primate behavioral research and evolutionary psychology—specifically the Hominin Pathogen Control Hypothesis (Kessler 2020)—to explore the adaptive significance of early caregiving in the genus *Homo*. The hypothesis suggests that individual-level care (e.g., self-sanitation) and community-level care (e.g., provisioning sick group members) could have interacted synergistically, reinforcing positive selective pressures and giving rise to more complex healthcare behaviors over time.

To test this hypothesis, we develop an agent-based model simulating Mid-Pleistocene *Homo* populations. The model incorporates observed care behaviors from non-human primates and other species—such as food provisioning and hygienic maintenance—as proxies for early healthcare actions. We examine how these behaviors affect individual and population-level mortality under varying ecological and social conditions.

We hypothesize that the combined presence of self-beneficial and group-beneficial care behaviors buffers mortality and enhances population resilience, creating a feedback loop that supports the long-term evolution of caregiving practices. Our findings offer a novel lens through which to consider the evolutionary foundations of human health-related behavior, demonstrating how seemingly altruistic practices may have become embedded in the human lineage through co-evolutionary dynamics.

This interdisciplinary project contributes to ongoing conversations in biological anthropology, evolutionary theory, and medical anthropology by providing a computational framework for exploring the deep roots of human care.

Co-author(s): Miriam Kopels

Board: #66 The Outlaws That Never Left: Haunting Tales of Rattlesnake Jake and Longhaired Owens

On July 4, 1884, two outlaws, Rattlesnake Jake and Longhaired Owens, rode into Lewistown, Montana, and ignited a shootout that left a deep-rooted impact on the town's history. In the aftermath, ghost stories and folklore quickly developed, shaping public memory through reenactments, parades, and haunted happenings, but how much of the legend is true? With only seventeen eyewitness accounts, this project turns to anthropology to confront the ghosts of Lewistown's past. Drawing on ethnohistorical research, ethnographic interviews, osteological and aDNA analysis of two human crania, and digital facial reconstruction, this study seeks to recover the true identities of the outlaws behind the legend and to piece together what really unfolded that

Fourth of July. In tracing the line between folklore and fact, this research gives voice to the long-silent dead and breathes new life into the stories that refuse to rest.

Presenter(s): Averí Jones

Board: #67 The Specter of Antimicrobial Resistance: Pharmacists' Role in Community-based Antibiotic Use

The role of pharmacists in the global challenge of antimicrobial resistance is understudied and undervalued. Pharmacists are significant participants in the network exchanges of antibiotics, existing in the community as moderators between physicians and patients. Based on long-term, in-depth observation (N=104 hours) of patient-pharmacist behavior at three private pharmacies in Palm Beach County, Florida, U.S.A., the researcher took handwritten field notes on patient-pharmacist behavior over the course of six months. Handwritten field notes included timestamps for each patient, recording patient demographics and details surrounding antibiotic dispensing, pharmacist-patient interactions, and patient education. Patients were observed disclosing pertinent information to their pharmacists, who were observed relating to the patients to create a well-rounded prescription and dosing regimen. Subsequent semi-structured interviews (N=5) were conducted with pharmacists to further understand pharmacy-based encounters between pharmacists and patients. The interviews were recorded with a handheld device, and notes were transcribed. Supported by the Ethnography Lab at Florida Atlantic University (ELFA), the researcher qualitatively coded the transcribed documents using Dedoose (SocioCultural Research Consultants, Los Angeles, California) to elicit dynamics of patient education encounters. Discerning these socio-professional interactions in healthcare settings is pertinent to understanding processes and behaviors surrounding the prescription and use of antibiotic medicines that could impact global health issues like antimicrobial resistance.

Board: #68 To See Again: Failing Vision and a Simple Remedy in the Northern Peruvian Andes

Mirroring US Health Care in general, vision is a neglected area of focus in anthropology. While doing survey research in the northern Peruvian highlands in 2019 as part of the NSF-funded multi-site ENDOW Project (Economic Network Dynamics of Wealth and Inequality), we noticed the difficulty participants had in seeing to sign their consent forms. During the 2024 wave of data collection, we assessed people for their ability to read and fitted the majority of those over 50 with over-the-counter readers. To a fault, everyone was astonished and overjoyed that there was a solution to their 'cloudy' and failing ability to see. While they have recently become available elsewhere in Latin American, off-the-shelf reading glasses are unknown in Peru, while a prescription pair would cost several months of income. We intend to present our evidence to the Peruvian Ministry of Health and petition for a similar change in optical regulations.

Presenter(s): Kathryn Oths

Co-author(s): Olivia Radcliffe

Board: #69 Transatlantic Encounters, Trade and Wealth in Early Igbo Societies: The Case of Arochukwu

Scholars of West Africa in recent years have combined oral history and archaeology to provide valuable information and corroborate historical narratives about the past. Historical documents are limited and problematic in West Africa: they often have Eurocentric bias and colonial views, and mostly lack information on gender, power, and agency within African polities. With methods from oral history and archaeology, this paper presents preliminary results from investigations on how trade led to wealth and status differences in Arochukwu, a town in present day Nigeria, which became a key actor during the trans-Atlantic slave trade in the 17th century. Understanding the dynamics of early trade in Arochukwu not only advances regional discussions by illuminating the region's history and involvement in trans-Atlantic trade, but it can also bring perspectives on "African prehistory" into broader dialogue with a global literature about wealth, status, gender and power, enslavement, state formation, and exchange systems.

Presenter(s): Stanley Nwosu

Board: #70 Typologies: A Case Study of Petra Jordan Tomb Façades

Typologies are a commonly used tool in archaeology and across other disciplines. This method is often used without a full understanding of the inherent limitations and biases within typologies. Despite scholars' awareness of these problems, typologies pervade archaeological research and are powerful tools for classification. This research examines and describes the process of creating a typology to uncover the subjectivities and logical strengths and weaknesses of the method. After a logical analysis of typology creation, Rae Larson analyzes the application of the Petra tomb façade typology with an outlier found at Site 6A in Petra, Jordan. This site is found in the Wadi Mataha and was excavated under the direction of David Johnson in 2005 by Brigham Young University's archaeology department. Through an attempted application of the typology's iterations, with the most recent adjustments to the typology from Josie Newbold (2021), this analysis unveils the limitations of typologies when interpreting outliers. Typologies are not perfect systems, but they still have their uses. Larson argues the importance of having an awareness of the variables prioritized in a typology to make accurate assertions and arguments about a dataset.

Presenter(s): Rachel Larson

Board: #71 Unseeing the Prison, Seeing the Ghost:

Counter Visual narrative on Epistemic Violence

Applying a politically contextualized ethnographic sample of third-country immigrants within a legal-academic-therapeutic framework, I examine how institutional attitudes convert noncompliance into narratives of low-qualification and pathology (Foucault 1978; Smith 2005; Salehi 2020). This concept encompasses the academic network of knowledge production, which,

rather than functioning as the neutral domain of inquiry, can operate under implicit political considerations and geopolitical limitations.

Particularly in times of international crisis or asymmetrical war, such institutions not only fail to produce reconciliatory or pluralistic knowledge but also exacerbate epistemic polarization, leading to the silencing, defamation, and institutional pathologization of dissent.

This thesis presents a framework of counter-visual ethnography to observe how institutions generate ghosts-subjects made hyper-visible as dangers yet muted by indirect epistemic violence (Spivak 1988; Gordon 2008; Mirzoeff 2011).

Instead of rendering the invisible apparent, I advocate for a technique of unseeing the prison-subverting the prevailing visual syntax that legitimizes surveillance, diagnosis, and absorption yet presents the audio-visual writing of knowledge uncourtly (Azoulay 2008; Camp 2017; Mirzoeff 2011).

Expanding upon Spivak's (1988) theory of subalternity and Gordon's (2008) concept of ghost logic, I demonstrate that institutional vision not only marginalizes the subaltern but also characterizes their resistance for knowledge making as illogical, so obliterating their epistemic authority. Here, ghosting is not an act of vanishing but rather a form of containment: the individual is rendered visible just in manners that invalidate their discourse (Berlant 2011; Halberstam 2011; Mignolo 2009).

I conceptualize this phenomenon as network-system haunting, wherein the rejection of normative roles (such as the asylum seeker, thankful migrant, the obedient thinker, or the recovered patient) leads to spectralization instead of expulsion. These institutions exert control through biopolitical and necropolitical mechanisms (Foucault 1978; Mbembe 2003), employing affective surveillance, care (Ticktin 2011), and performative inclusion (Butler 1997; Puar 2007).

Presenter(s): Navid Ghadimi

Board: #72 "Bones and Charm Stones: The Stories of Native American Artifacts in Lost Hills, California"

Artifacts are one of the most significant storytellers in history; they are where memory and mystery intertwine, and the Pelicans Jaw Hybrid Solar Project in the Lost Hills area of the Central Valley in California is unearthing some of the rich history of Native American tribes there. Charm stones, beautiful shell fragments, shell beads, bone (both human and faunal), obsidian, modified tool flakes, and other lithics have been discovered during shovel pit testing (STPs), as well as on the surface during surveys and construction monitoring. Since it is known that the area contains at least four burial sites, within the project site, every precaution has been taken to ensure the stories of the artifacts and their people are kept safe and do not lose their cultural and historical significance.

Tribal monitors from the Tejon Tribe and the Rancheria: Santa Rosa Rancheria Tachi-Yokut Tribe, along with Archaeologists, Paleontologists, and Biologists from Sapphos Environmental Inc. in

Pasadena, California, have been meticulously working together on the treatment plan for the solar project to ensure the actual land and the spirit of the land are being handled with great respect. Archaeologists conducted a thorough pedestrian-level survey of the entire 4,000+ acres of the project site between May and October of 2022, and in an added section of the area in February of 2023. Six previously unidentified prehistoric and historic era resources were identified and recorded, which included four prehistoric lithic scatters with groundstone and shell artifacts, and two historic water conveyer features. Shovel pit testing began in July 2024 and is ongoing, producing a great many more artifacts. Since December 2024, construction has been a part of the Pelicans Jaw site, including trenching, which has unearthed at least one human tooth and a decent amount of daub (Native American building material), some covered in a rusty, orange-colored ash-remnants from huts that may have been burned during burials. As the project continues over the next year or two, it is assumed many more culturally significant artifacts will be uncovered. All artifacts and resources discovered on the site will be catalogued by the cultural resource department at Sapphos Environmental Inc., and either returned to the tribes at the end of the project for proper housing or reburial on site or remain with Sapphos Environmental Inc. for curation and housing using proper curatorial procedures.

Board: #74 Anthropology's Lost Library

"Anthropology's Lost Library" is a newly launched digital archive (accessible at www.lost-library.net) that will feature the unpublished and abandoned works produced by researchers in the discipline of anthropology. Though the field has generated a vast and unruly compendium of texts that crisscrosses continents and disciplinary lines, the field has also been marked by countless absences: books never finished, fieldwork never completed, dissertations abandoned, conference papers never ultimately published. This lost scholarship is significant not just for its own sake but also because it traces the structural conditions that inform the production of anthropological research--mentorship relationships gone wrong, safety in fieldsites, illnesses and geopolitics, funding and time constraints, and more.

This poster session will announce the launch of this archive, outline its mission, and invite engagement from conference attendees about its design. How should the archive be organized? Given the nature of the project's focus on the excluded and absent works in the field, what should be the conditions of a work's inclusion in this particular archive? As a repository for lost and abandoned ideas (no matter how unfinished, no matter how small), the archive that emerges from this poster session promises to offer a virtual home for the casualties of intellectual circumstance in anthropology.

Presenter(s): Joshua Rubin

8993 Resilience in Research & Teaching : Addressing the Impact of Political Climate on Biological Anthropology

Start Date: 11/22/2025 08:30 AM **through** 11/22/2025 10:00 AM

Venue: Sheraton **Room:** Southdown (4th fl)

Type: Late-Breaking Roundtable/Town Hall

In a highly politically-charged moment where executive orders and policies are being driven by a general mistrust of expertise and evidence-based information about the nature and state of human variation, we ask what it means to be a biological anthropologist; what is the future of biological anthropology? We bring together experts in the field to address both theoretical and practical issues such as (1) confronting the challenges to teaching and learning in the classroom, (2) navigating precarious times as a domestic/ international graduate student, and (3) grappling with obstacles to conventional research activities and funding (i.e., use of secondary data). The goal of the roundtable is to discuss how the current federal administration is impacting our discipline and to exchange ideas on how to adapt to these novel circumstances while also maintaining institutional demands for research productivity and teaching excellence. The intention of this workshop is to address current challenges collectively and to work toward ensuring the sustainability of our discipline that is both mindful of its past, but proactive in shaping its future.

Discussant: Jada Benn Torres, Vanderbilt University, Department of Anthropology, Kristine Joy Chua, University of Notre Dame, Department of Anthropology

8991 The Brown Joy Project

Start Date: 11/22/2025 08:30 AM **through** 11/22/2025 10:00 AM

Venue: Marriott **Room:** Galerie 1

Type: Late-Breaking Oral Presentation Session

This Late-Breaking session brings together four new ethnographic and creative works emerging from the Brown Joy Project, a collaborative initiative that centers joy in the lives of people of color—not as erasure of harm, but as its counterpoint and refusal. Against dominant anthropological narratives that render marginalized communities legible primarily through trauma, suffering, and precarity, this session foregrounds joy as a critical, embodied, and worldmaking practice. It asks: what does joy look like, sound like, and feel like in the aftermath of displacement, surveillance, grief, and survival?

Each paper draws on new research conducted since April 2025 and speaks to urgent questions about how people of color are remaking the textures of everyday life within a global context marked by escalating precarity, burnout, and backlash. Through personal narrative, sensory ethnography, and critical reflection, the papers trace how joy emerges in intimate domains-childhood play, intergenerational storytelling, migration, faith, language, kinship, and beauty and care work. Collectively, they illuminate how small rituals and fleeting moments-braiding hair, choosing a song, telling a family story, smelling cardamom or attar-become vessels of survival, desire, and collective memory.

Methodologically, this session experiments with ethnography as attunement rather than extraction, integrating autoethnography, collaborative storytelling, visual and sensory methods, and archival fragments. By foregrounding embodiment and lived experience, the contributors challenge disciplinary conventions that privilege textual authority over relational knowledge. The session also reflects on our own positionalities as women of color and diasporic scholars navigating the academy, asking how joy might be cultivated as an intergenerational practice of care within and beyond our institutions.

Theoretically, the Brown Joy Project builds on Black and decolonial feminist scholarship (Ahmed, Sharpe, Benjamin, Hartman) to argue that joy is not antithetical to critique but integral to it: a fugitive sociality that refuses to be fully consumed by the logics of racial capitalism, heteropatriarchy, and the medical/academic-industrial complex. By bringing joy, beauty, and care into the anthropological archive as serious sites of knowledge-making, this session offers timely, field-based insights into how people of color are making life livable, and beautiful, against the odds.

Organizer: Lalaie Ameeriar, York University, Department of Anthropology

Chair: Lalaie Ameeriar, York University, Department of Anthropology

Presenter(s): Ramah McKay, Lalaie Ameeriar, York University, Department of Anthropology, Christen Smith, University of Texas at Austin

Discussant: Lalaie Ameeriar, York University, Department of Anthropology

Presentation(s): Life and grief in the Zoom room

Intensely missing my grandmother a few years ago I enrolled in online Arabic language classes with a group of women. This piece reflects on how my experiences and my classmates - mostly diasporic subjects living in the UK - have brought home to me the beauty of non-traditional classrooms and the value of learning spaces outside the repressive, hierarchical, anxiety-driven spaces of the US academy. As the politics of higher education in the US intensify pressures on what classrooms can be and do, the practices of learning and relating that I find as a student in this Zoom classroom are precious to me.

Presenter(s): Ramah McKay

Lali: On Names, Memory, and the Inheritance of Joy

This paper traces how joy can be carried inside a single word. All my life, my mother called me Lali. I thought it was just a nickname, a soft sound folded into the hum of our home. The hiss of the pressure cooker. The smell of cumin rising in hot oil. The murmur of Indian serials on TV. After she died, Lali disappeared. I became Lalaie to the world. On forms. On prescriptions. In waiting rooms. Even my grief felt bureaucratic.

This paper places that moment inside the Brown Joy Project, a collaborative archive that centers joy as an embodied and intergenerational practice among people of color. Drawing on autoethnography and memory work, it shows how small gestures—combing hair, peeling oranges, saying a name—can hold whole emotional worlds that outlast their makers. Building on Black and decolonial feminist thought, I argue that joy is not the opposite of grief. It is its quiet companion, carried in sound, touch, and memory.

Presenter(s): Lalaie Ameeriar

Cite Black Women

This paper examines the Cite Black Women movement as both a call to action and a methodology of refusal. It explores how the project reframes citation as care, accountability, and memory work, and argues for citation as an embodied practice of justice that makes Black women's intellectual labor visible and enduring.

Presenter(s): Christen Smith

8590 Annual Meeting - Second Executive Board Meeting

Start Date: 11/22/2025 08:30 AM **through** 11/22/2025 12:00 PM

Venue: Sheraton **Room:** Armstrong BR (8th fl) (access via elevator only)

Type: Special Event

Second of two sessions of Executive Board meetings to be hosted at the Annual Meeting. This will be a hybrid meeting with some board members virtually attending but most attending in person. It starts with a breakfast.

8829 HAMPI: An "Arthropological" Project by an Andean Artist-Scholar

Start Date: 11/22/2025 08:30 AM **through** 11/23/2025 12:00 PM

Venue: Marriott **Room:** third floor,

Type: Installations

See this at the Marriott on the third floor, all day Saturday and Sunday morning.

HAMPI is a multilingual, multimedia, autobiographical, and autoethnographic project by River Coello. In its book form, it chronicles the author's journey of reconnection to the Andean cosmovision.

The AAA installation is an abridged version of the project's forthcoming gallery exhibition. The New Orleans installation will bring together various elements. Digitally, it will include photographs taken throughout the Andes, illustrations of the region's sacred animals, and audio samples of the text (accessible via headphones). In person, there will be physical copies of the award-winning book, small textile samples from its special edition, and replicas of Ecuadorian artifacts from pre-colonization sourced from the Cuenca Museum of Aboriginal Cultures.

HAMPI is published by For the Birds Trapped in Airports in Los Angeles and features illustrations from Kiki Lechuga-Dupont. Its special-edition hardcover will feature a custom textile from LMRM in Chicago. The project was concocted between the United States, Ecuador, and Peru. Its writing and performance are in English, Spanish, and Quechua.

Since its launch, HAMPI has also been widely recognized, earning a Florida Book Award, an International Latino Book Award, an Independent Publisher Book Award, and a Nautilus Book Award, in addition to fellowships from Lambda Literary, the Virginia Center for the Creative Arts, and Jack Straw Cultural Center.

8679 Haunted by the Gaze: Fluid Identities and Spectral Encounters in Medellín's Parque Lleras

Start Date: 11/22/2025 08:30 AM **through** 11/22/2025 05:00 PM

Venue: Sheraton **Room:** 4th floor

Type: Installations

Located in the Sheraton on the 4th floor on Saturday.

This ethnographic installation invites participants into an immersive experience exploring the shifting, gendered identities of women who inhabit Parque Lleras—a central nightlife zone in Medellín, popular among international tourists for its accessibility, perceived safety, and concentration of entertainment and sex-related services. Based on fieldwork, the piece centers on how women—public employees, private service providers, informal vendors, and sex workers—move through this space in pursuit of income, negotiating visibility, safety, and self-definition under the weight of multiple gazes.

The installation uses a circular visual display: projected or printed images of male figures (tourists, police officers, and private security guards) are positioned around the perimeter. These figures act as spectral presences—ghosts—whose gaze frames and constrains women's movements, choices, and possibilities. Standing at the center, the viewer is invited to rotate slowly on their own axis, physically embodying the experience of being surrounded and seen. As they turn, the visitor

experiences shifts in perspective and positionality, echoing the ways identity flows between self-perception and the projections imposed by others.

The piece incorporates photographs and short ethnographic texts drawn from field notes and interviews. Together, these elements create a layered environment that blurs the line between the visible and the invisible, the intimate and the institutional. It invites participants to consider: Who has the power to define identity? How are gendered bodies made legible in space? What remains unseen, disallowed, or ghosted?

8820 Postal Incantations & other spells to ward off catastrophe

Start Date: 11/20/2025 08:30 AM **through** 11/22/2025 05:00 PM

Venue: Sheraton **Room:** Grand Ballroom Foyer

Type: Installations

Located at the Sheraton in the Grand Ballroom Foyer, Thursday, Friday and Saturday. Look for a post office box.

The performative intervention "Postal Incantations & other spells to ward off catastrophe" is a multi-sited installation that takes place at Merchant House (as part of Spectral Remix) and the AAA conference venue. The project is focused on current environmental threats and the speed at which they are defined and redefined. This includes the sense of overwhelm from the 24/7 news cycle that covers catastrophes on a global scale. We want to counter this elimination of the present and the perpetual breathlessness that comes with it by pairing it with slow and situated communication on postcards.

At the Merchant House, the project is embedded in the exhibition "Spectral Remix" where we will set up a postcard stand and writing booths to invite conference participants and interested visitors to take a moment and reflect on constantly haunting polycrises that are not acutely palpable but linger on in the in-betweens and interstices. We ask participants to choose from a variety of postcards that thematize past, ongoing, and future threats, address them to colleagues and peers at the conference, and write a short affective and reflexive greeting. Participants then have the choice of delivering the postcards personally or leaving them in a mailbox on site. Every night, the mailbox will be emptied and the postcards delivered to the convention center.

At the convention center, we are requesting a space to set up a postal sorting cabinet that functions as a public mailbox. The conference participants can skim through the alphabetically arranged shelves to find a postcard addressed to them, take it with them, and maybe send and deliver a reply from the Merchant House.

For our installation at the convention center, we therefore ask for a central, highly frequented, ideally open space (main entrance area, registration area, main hall, etc.) for a table and chairs next to a sorting cabinet with affixed posterboard for information on the installation and further

instructions for participation. We want to make the installation as recognizable as possible with signs and posters attached to it that bring it to around 7 feet in height, 6 feet in width, and roughly 2-3 feet in depth. We would provide the cabinet and posterboard but request the table and chairs from the conference center.

With the installation at the convention center, we seek to create a mingling space that invites people to get in touch with each other, send postcards and greetings to inspiring speakers, commentators, and/or peers and colleagues. We imagine the space around the faux postal office as a gathering spot that sparks conversations about current affairs and struggles, and future actions. The postcard, as a gift and courtesy, is meant to create solidarity networks amongst an international audience to deal with the too-often disembedded and shadowy repercussions of environmental and political threats. Further, we hope to draw attention to the accompanying exhibition at the Merchant House that adopts this year's AAA theme as "Spectral Remix" and showcases critical artistic interpretations and interventions on the topic.

8636 Sound portraits of workers in the hypermodern era

Start Date: 11/22/2025 08:30 AM **through** 11/22/2025 06:00 PM

Venue: Sheraton **Room:** Second Floor

Type: Installations

Located at the Sheraton on the second floor all day Saturday.

The sound installation requires minimal technical equipment. A computer on which the various audio files are stored. One or two headphones, which I can also provide, are available to listen to the soundtrack, which plays a series of portraits of French workers. The portraits last between seven and nine minutes. The computer allows the written English transcription of the various portraits to be read in sync with the original language. The ideal location is a quiet corner with comfortable seating for two listeners. The soundtrack and subtitles are played on a loop. The audio portraits tell the stories of employees; it is not so much the job itself that matters, but what each person does in it.

Taking the opposite tack to the question of the crisis of meaning in work that is the subject of my first book (Wiley ed.), the subjects here show what they get out of work, not just employment and activity. Navigating between anthropology of the self and radio reporting, the narrator steps aside, as does the analysis, to make way for the idiolectic function of the audio documentary, which recounts what work is, drawing on the daily routine of work and its function in the daily life of the worker, as an anchor

8535 A Tkaronto Rhapsody: A Multi-Medium Experience of Neurodivergent Students in a Neoliberal Age

Start Date: 11/22/2025 08:30 AM **through** 11/22/2025 07:00 PM

Venue: Sheraton **Room:** Lianappe Foyer

Type: Installations

On display Saturday all day, in the Lianappe Foyer.

This installation emerges from a design anthropology project exploring the lived experiences of neurodivergent international students at the University of Toronto. Through multimedia and interactive elements, it invites participants to engage with the everyday challenges faced by neurodivergent students in higher education. Rooted in both personal and collective narratives, the project brings to light hidden burdens, emotional landscapes, and systemic barriers-inviting participants to step into these perspectives with empathy and reflection. The installation consists 2 parts: an interactive exhibition that artistically presents the 'masked' lived experiences of neurodivergent students, and a roleplay game that simulates the embodied experience of navigating university life through neurodivergent modalities. By addressing issues that resonate with many educators, particularly those working with GenZ students with neurodivergence, this project may offer a meaningful contribution to current anthropological practice.

The small-scale exhibition unfolds across modular stations, each linked by poetic metaphors inspired by affect theory. It has 4 parts: 1)Dual Realities: Participants wear red-blue filter glasses to reveal layered visuals. Through naked eye, the material presents a socially acceptable version of student life. But with the glasses, a chaotic and emotionally drained reality emerges -- highlighting the contrast between public perception and lived experience. 2)Masked Portraits: This features double-layered portraits representing the dual realities of students. The front layer displays a 'normal' student image, but a hidden layer, revealed through backlighting, contains diary excerpts and visual breakdowns. Viewers must move around the portraits to uncover these hidden elements which symbolizes the effort required to understand neurodivergent experiences. 3)Haunting: An augmented reality experience activated via QR codes. Scanning the code reveals fragments of failed accommodation requests, poetic reflections, and interactions with a neurodivergent chatbot (ghost in the system). The digital encounters evoke the institutional fractured attention often felt by neurodivergent students. 4)Quiet Reckoning: Visitors receive a takeaway zine that contrasts masked and unmasked narratives through fieldwork quotes, illustrations, and reflective prompts. A nearby mirror poses the question: "What do you carry that others don't see?" encouraging deeper reflection. Visitors can also anonymously write about their masked selves in a hidden notebook. These may be published on our website, according to each participant's preferences.

The second part of the installation is a guided role-play game. Each participant receives three randomized cards: a character card (detailing public perception and private reality), a skill card (reframing neurodivergent traits as cognitive/sensory strengths), and a task card (simulating an academic/administrative challenge). Players need to role-play this character and use the skills to

complete the task. To reconstruct the feeling of being inside a neurodivergent body, special items will also be used alongside the skill cards (e.g., when players receive the skill of Dyslexia, all the text presented to them will visually imitate how dyslexia student see in real life, and they will need to complete the task under such conditions). Such embodied experience then will foster empathy and understanding from participant.

8732 Diagramming Worlds: A digital projection installation

Start Date: 11/22/2025 08:30 AM **through** 11/22/2025 07:00 PM

Venue: Marriott **Room:** Jackson

Type: Installations

We propose an installation that draws on multimedia work connecting immersive art practices and visual anthropological approaches, focusing on different forms of 'diagramming' as both a methodological and philosophical undertaking.

Our goal is to share and engage with multiple creative and analytical practices of visualization and visual translation – presenting a range of modes of practice for bringing social relations, events, concepts, and diverse modes of existence into the visual realm.

A pair of digital projectors will display a looped series of video clips and images drawing on previous, thematically-linked exhibition work by artist-practitioners Allison Leigh Holt, Robert Nideffer, and mediamaker Tristan Partridge in collaboration with Mexican artist, Santiago Borja. All participants in this installation have experience in sociocultural and ethnographic research and fieldwork, applying insights from those processes within creative work and public-facing projects.

Allison Leigh Holt has exhibited widely, for example at The Ford Foundation Gallery, Stanford University, and SFMOMA. Holt is currently pursuing Ph.D. studies at Rensselaer Polytechnic Institute. Projections to be included in the proposed installation at AAA 2025 are the works "Stitching the Future with Clues" (Black and white and color, sound; runtime: 14:30) <<https://vimeo.com/oillyoowen/stitching>> and "The Cloud Model" (Color, silent, looping) <<https://vimeo.com/1055014843?ts=0&share=copy>>.

Robert Nideffer is Professor in Arts at Rensselaer Polytechnic Institute. He has exhibited widely, for example at the Museo Nacional Centro de Arte in Spain, the Museum of Modern Art in New York, and the 2002 Whitney Biennial. For the proposed installation at AAA 2025, Nideffer will show looped visuals from "12 Years in Azeroth: A Case Study," a hybrid work of digital ethnography, autobiographical narrative, and interactive game design. 12 Years in Azeroth operates as a mode of diagramming -- not as reductive visualization, but as the dynamic staging of experience, tracing affective and relational arcs of identity, labor, love, and loss.

Tristan Partridge is Lecturer in Global Studies at the University of California, Santa Barbara, where he also co-founded the CREW Center for Restorative Environmental Work. His fieldwork photography and visual works have been exhibited and published widely, including in the recent

books "Mingas+Solidarity" (T&G/Pazmaen 2024) and "Burning Diagrams in Anthropology: An Inverse Museum" (punctum 2024). Projections to be included in the proposed installation at AAA 2025 build on a series of images (made with Santiago Borja) that remix and re-adapt canonical anthropological diagrams as a means for questioning the linearity and assumed teleological trajectory of intellectual histories, including those of sociocultural anthropology.

We see this proposed installation as a contribution to current debates around data visualization, the ethics and politics of collaboration, and anthropological engagement with creative endeavors.

Space requirements are flexible (though ideally the two projection environments will be away from direct sunlight, to maximize daytime visibility).

Equipment requirements include power for two digital projectors (which we can arrange, if necessary).

8625 AA Editorial Board Meeting

Start Date: 11/22/2025 09:00 AM **through** 11/22/2025 10:30 AM

Venue: Sheraton **Room:** Rex (8th fl)(Access vis elevator only)

Type: Special Event

AA Editorial Board Meeting with a breakfast

8728 Environmental Injustice and Place Keeping Tour: Claiborne Corridor and Treme- offsite

Start Date: 11/22/2025 10:00 AM **through** 11/22/2025 01:00 PM

Venue: Offsite

Type: Special Event

This offsite event builds off of the Anthropology and Environment Society's successful 2024 Environmental Injustice and Place Keeping Walking Tour in Tampa, FL, in which we partnered with Lena Young Green and the Tampa Heights Junior Civic Association (THJCA) to experience the realities, injustices, and joys of life in Tampa Heights with members of the community. This year (2025) we are partnering with Amy Stelly and the Claiborne Corridor Alliance on the ground in the Treme/7th Ward neighborhood of NOLA. This event continues to expand both local community and anthropological partnerships to combat environmental injustice as the AAA meetings travel around the country.

This event will include a bus tour of the Claiborne Corridor from Treme to the highway, featuring local advocates and site experts like Amy Stelly, who will speak to area history, present injustices, and goals for the future. The bus tour will be followed by a lunch with additional speakers, community organizers, and advocates at the Treme Market Branch.

Please register for this event here:

8376 "It's So Hard to Say Goodbye to Yesterday": New Orleans Brass Bands, Grief Work, and the Afterlives of Sound

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Balcony J

Type: Roundtable/Town Hall

New Orleans knows how to process death, how to grieve communally. When a beloved community member transitions, it's not long before brass band musicians take to the streets to celebrate their lives and turn their absence into a resounding presence. T-shirt shops work quickly to design and print shirts and life-sized cardboard cutouts that visibly honor the dead. Musicians make calls to check in on each other and coordinate a sonic response to grief. From the first thuds of a bass drum at a jazz funeral, brass bands are integral in choreographing the mourning process. The musicians who channel this communal grief into sound often harbor complicated feelings about these gigs. Like any other gig, a jazz funeral is a money-maker, but it is one where business is conducted in a moment of intense vulnerability for grieving families and where musicians must navigate challenging moral and ethical terrain in mounting a collective response. Through conversation with brass band musicians who work in the Stooges Brass Band, Rebirth Brass Band, Big 6 Brass Band, and Free Agents Brass Band, this roundtable attends to (1) the ethical challenges of profiting from loss and (2) the role of sound in collectively responding to death.

3358 13 Ghosts of Multimodality: Critiquing, Rejecting and Learning to Live with Multimodality's Problems

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Studio 7

Type: Oral Presentation Session

William Castle was the director and producer of countless horror movies, many of which utilized various "gimmicks"--seats wired to deliver electrical shocks, puppets that appeared from behind

the movie screen, props of all kinds. His film "13 Ghosts" (1960) was no exception: the movie recounts the efforts of a family to spend the night in a haunted house and the audience was given special glasses to see the ghosts or make them disappear, an effect ("Illusion-O") that critics found a distraction and that did not last into the re-making of the film in 2001. Indeed, many of Castle's tricks didn't work as intended: too much voltage to the seats, puppets that people would throw their popcorn at, props that ran far afield of the films they were supposed to support. These were the "ghosts" that bedeviled Castle films. Whatever their success or failure, however, Castle could be considered a multimodal pioneer—constantly trying to reach beyond film to engage other senses. And like Castle, we are also faced with our multimodal "ghosts"—the media that distract, that open alternative narratives, that escape us to create their own, refractory meanings or that produce their own attendant inequalities. Finally, we face some of the same charges of glib insouciance in adopting media that are often seen as outside of anthropology's usual purview. Here, the gravity of anthropology itself haunts the work.

This panel considers all of these ghosts, and not necessarily to vanquish them. In the spirit of Avery Gordon, ghosts emerge from the past to demand that we act in the future to address an injustice. These multimodal ghosts challenge us to confront digital divides, interrogate what we mean by "collaboration," and, ultimately, address ethnographic revanchism at the edges of an aesthetic multimodality. Alternately, as Alfred Russel Wallace believed, ghosts are messengers from a utopian future that might stimulate us to lean into the multimodal in order to "burn down" the colonialism of anthropology. Finally, like the hapless Zorba family in "13 Ghosts" who try to last the night in the haunted mansion, we might choose to leave—to reject the multimodal—or stay on, learning to live with meanings, platforms and narratives that do not always go as planned. Accordingly, this panel seeks to include papers in a variety of registers: theoretical, confessional, accusatory, communicating through text or through diverse media. Like Castle's "Illusion-O" glasses, we shift perspectives to see the ghosts or render them invisible; this is both the promise of the multimodal and its inherent weakness. From one perspective, the multimodal helps us to understand and intervene in an increasingly unequal world; from another, power retreats behind a re-deployment of the auteur for a digital age.

Presentation(s): Summerland, Otherwise and the Ghosts of Alternative Futures: the Limits of Multimodality in Anthropology and Spiritualism

As anthropologists work with collaborators in evoking alternatives to capitalist fascisms, they increasingly engage multimodal registers; games, design, drawings and soundscapes join film and text in innovative work that seeks to ground worlding in sensorial engagement and haptic experience. Here, the multimodal can support the emancipatory politics of communities where anthropologists work. But what of the politics of multimodal? Is there anything inherently emancipatory in the engagement with diverse platforms? In order to problematize the multimodal, this paper explores another moment in multimodal evocations of alternative futures—19th century Spiritualism. While "spirit rapping" may have been the first Spiritualist media, the movement soon incorporated writing, drawing, sounds, photographs and multiple objects into its evocations of a "Beautiful Beyond" that represented not only the afterlife, but the utopian promise for humanity itself. In many ways, though, the multimodal proved inadequate to the task of evoking the hereafter, with these diverse media platforms dragged down by their obstinate corporeality and their quotidian fabrication. While our concerns are different today, comparing the fate of spirit photography, object levitation and apportioning to the multimodal anthropologies of today can nevertheless help us explore the limits of multimodality in our similarly anxious age. Can the spirits we evoke be more effective than those nineteenth century ghosts?

Inscription: Archaeological Techniques and the Cost of Multimodality

This paper is concerned with the multimodal techniques through which memory is inscribed in land, as well as a reflection on my own multimodal approach to understanding and documenting these techniques. I focus on a group of Sonoma State University archeologists recording and archiving in multiple modalities including metal detection, ground-penetrating radar, and drone powered aerial tomography. Situated in Sonoma County, California's wine country, my field site, The Sonoma Developmental Center (SDC) was once among the largest facilities for people with disabilities in the United States. After its closure in 2018, the state entered a years-long process of redevelopment, settling on a private developer with intentions to build a utopian vision of both affordable housing and large single-family plots; a 500-room luxury hotel and a state-of-the-art climate center; a "tech hub" and group homes for people with disabilities. Placed in the context of this ongoing development by three years of audiovisual fieldwork for my film project *A Proposed Alternative to Ghosts*, I observe that the archaeologists' recording of material history serves to mitigate the cost of remembering the center's more troubling history of mid-century eugenics and radiation experiments. The inscription of land by archaeological techniques offers a space in which private and public interests meet to redefine land against the memory that haunts it.

Presenter(s): Max Oginz

Multimodality in the Age of Advanced Neoliberalism, Surveillance, and Securitization

My project explores Delhi's pervasive security and surveillance apparatus, and how it mediates the state's relationship with its citizens. With more than 415,000 CCTV cameras surveilling 1,482 square kilometers of the city around the clock, Delhi is among the most surveilled cities globally.

How has video surveillance and private security reshaped the social and political geographies of Delhi along with the lives of its inhabitants? My forthcoming multimodal project, Surveillance City explores the everyday lives of Delhiites, their interactions with state surveillance and the geographies of this complex city, and the seemingly inconsequential ways in which the neoliberal state monitors (and controls) its citizens by normalizing video surveillance while chipping away at basic rights and freedoms.

Presenter(s): Harjant Gill

Haunting Aesthetics and Conventions Ghosts: Hidden Presences within Documentary Practices

Ethnographic films emerged at a particular moment in time when presence (being there) and urgency (sharing widely) through the one-man-crew-limitations (handheld 16mm cameras and synchronized sound) pretty much defined the genre aesthetics. With few exceptions –Flaherty's reenactments, Marshall's experiments with time, and Rouch's social plays; such conventions framed the genre vis-a-vis the more structured, storied, and 'aesthetic pleasant' Blockbuster-like documentary creations. My inquiries within this presentation are three-fold. First, I'd like to trace the genre changes concerning commercial productions and avant-garde experiments. Secondly, I will explore pieces in which such conventions are broken and the idea of the ethnographic film is expanded –I will look at a global scale but will center my discussion within Latin America. And third, such radical ethnographic examples will lead us to a 'local aesthetics' concept, a perspective in which media piece shapes are formed through the local cultural settings to fulfill ethnographic films' premise of a transcultural cinema.

Presenter(s): Carlos Tobon Franco

Haunting Multimodality: What do you do when a project ghosts you?

Over the last several years I have been part of a team of anthropologists, archivists, and public historians developing two projects with the National Park Service. These multimodal projects focus on the reinterpretation of Ellis Island immigration narratives and Black perceptions of the Statue of Liberty respectively. The first project involves opening the possibilities of the inclusion of immigration stories around Ellis Island that move beyond the well-known tales of predominantly white European journeys through this site that are often celebrated in various forms of media. The latter project is volatile by definition and seeks to open perceptions of the Statue of Liberty as a site of protest and demonstration by Black activists and others throughout its history. But what happens when a president is elected that positions the National Park Service as an enemy? How do you celebrate inclusiveness and birthright citizenship as a pillar of democracy while it is being dismantled? How do you create a dialogue and contestation around a statue that is the most well-known symbol of democracy and freedom in the world? These projects are ready for public consumption, educational possibilities and contestation but they now exist in a liminal and haunting space. Is there a possibility of an applied multimodal anthropology as a means of circumventing silencing and moving from projects that become specters that can strategically haunt power?

Presenter(s): Matthew Durington

5328 After Theft

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Galerie 3

Type: Oral Presentation Session

What comes after theft? This panel explores theft committed or commissioned by state actors –of property, of labor, of life, of memory – and attempts to grapple with their consequences, whether ongoing or after decades or even centuries. These thefts were never clear violations of law at the time; they were either explicitly legal, not illegal, or fell into a gray non-space of law. This makes confronting them a doubly difficult task, because the imprint of legality complicates any attempts at accountability, and because the act of theft is entangled within a violent gift economy of taking and owing. The cases here concern the enslavement of Chinese by Japanese corporations during World War II, the contemporary seizure of Haitian freighters by state actors, the disposition of Nazi- and colonial-looted art, artifacts, and human remains in Germany, and the mediation of the memory of descendants of Japanese internment camps in the United States. All of these cases are haunted by law as it simultaneously frames and displaces these otherwise different acts of thievery into extra-legal spaces of redress.

Presentation(s): Unrepayable Debt

What does it mean to reckon with imperial violence through legal means decades after the formal end of violence? What do out-of-court settlements settle, and what does reconciliation look like on the ground? This paper ethnographically explores Chinese slave labor settlements following a series of lawsuits filed within Japan since the mid-1990s by survivors against the Japanese government and corporations that enslaved them in the 1940s. Headlines announcing the successful signing of settlements after decades of legal battle cannot capture the emotional labor of reconciliation among Chinese victims and their bereaved families, Japanese lawyers who represent them pro bono, and civic activists in Japan. This paper shows how the transnational legal redress movement itself has become a site of reconciliation that defies the assumed model of redress, in which the story ends with the perpetrator acknowledging historical wrongs and making amends. It unsettles assumptions about where and how reconciliation takes place, who counts as victims, and whose needs are served. This includes facing uncomfortable questions about the lack

of accountability within the movement, reckoning with the unsettled figure of victims as collaborators, and asking what it means to be faithful to historical truths in a context that privileges a clear-cut binary between perpetrator and victim. Instead of settling accounts, the paper shows how the work of reconciliation opens up even more to account for.

Presenter(s): Yukiko Koga

After Theft: Loot, Loss, and Reckoning in Germany

What does it mean for Germany to navigate the colonial past alongside the memory of fascist and socialist regimes? How does reckoning with Germany's vast museum collections of colonial-era artifacts, objects, and human remains map onto past and ongoing attempts to deal with Nazi looted art? This paper explores the shifting landscape of the aftermath of state-sanctioned theft. Focusing on the elevation of provenance research to a major approach for dealing with historical injustice, it traces how provenance research shifted from a technical to a moral practice, enabling and producing different forms of knowledge and new social relations. The paper draws from ethnographic research in Germany to explore how what I call a memory infrastructure has emerged around the discourse of provenance, and how provenance research itself is shifting from the realm of a sober, legalistic, and historical method to a site of narration, rediscovery, and implication in emotional and violent histories. I call this provenance-centered reckoning, and explore its potential to reshape our moral and political landscapes of historical responsibility through new directions in art and law.

Consoling the Spirits: Language Politics in the Afterlife of Japanese-American Incarceration

This paper explores how Japanese American communities negotiate different narratives to reshape their collective memory of wartime incarceration, and how practices of "breaking silence" among victims and their descendants paradoxically create new layers of silencing. To explicate these oft-invisible dynamics, it traces debates on terminology to reflect the violence of Japanese American wartime incarceration—including "internment" vs "incarceration," and "internment camp" vs "concentration camp." How are historical narratives negotiated by different stakeholders, with different consequences of silencing? Who tells these narratives, and for whom? This paper recovers victim voices through archives, ethnography, and extensive interviews with formerly incarcerated Japanese Americans and their children, scholars, and activists. In contrast to existing literature on trauma, this paper reveals that practices of "breaking silence" do not necessarily center the voices of victims: rather, they are enabled by mediators who frame victimhood in ways that conform to dominant trauma narratives. It shows how the experience of suffering after release—such as familial disintegration and economic devastation—remains underexamined. The case study of Japanese American wartime incarceration shows that historical silences persist not only through suppressing discourse, but also through encouraging certain narratives over others.

7486 Anthropological Session Title: “(The) Misdirection (of human conduct) through formalism”

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Rhythms I (2nd fl)

Type: Oral Presentation Session

Many varieties of formalism pervade the social sciences and the institutions they examine or inform, and thereby percolate into ordinary life as well. Statistical formalisms are implemented in technologies of governance, industry, health care, and education. Taxonomic formalisms organize the manner in which people are grouped into categories of the national census, systems of taxation, and into electoral districts. Academic disciplines (sociology, linguistics, ethics, demography) incline towards protocols of reasoning in which abstractions and generality of results are valued.

The papers in this panel focus on the manner in which formalisms are created or negotiated through the activities of people trying to cope with specific social phenomena. All formalisms are created through forms of discursive semiosis that invest locutionary forms (whether taxonomic, enumerative, legalistic, algorithmic, or any other) with uses adapted for specific purposes. Some are created in institutional domains, as in linguistics, where early 20th c. formalisms for describing 'language structure' were created when the wider range of properties of human language were poorly understood (Agha); or in bioethics, where the prestige accorded by medical ethicists to mathematical formalisms transplants rational choice theory (and idealized assumptions about people's mental states) into settings where the conduct of people seeking healthcare must be reformulated into computably deterministic outcomes in order for something called 'ethics' to be applied to them (Clapp). Others emerge when everyday forms of communication become peppered with formalisms, as when vernacular Italian is invested by business executives with memorably archaic forms of verb deixis under emblematic formulations of autochthonous tradition designed to make modern brands and customer outreach work (Perrino); or when a genuinely traditional and typologically unusual genre of communication such as Mazatec whistle speech is studied by Western scholars through the denotational formalisms they use to study ordinary language, thereby leaving out much of the object of study in the course of exhibiting fidelity to favored formalisms (Faudree); or when discrete formal categories are created for analyzing gradient contrasts, which works when linguists rely on introspectable intuitions to create "acceptability judgements" in published articles, but not so well in the Indonesia-Malay borderlands where gradient choices made by actual people depart entirely from the results of papers published elsewhere (Carruthers). When formalisms are far from home, their vulnerabilities become apparent, the results they yield do not fit the phenomena they allegedly describe, and the conditions under which they appear to prosper become contrastive objects of study. The papers in this panel approach these issues in diverse ethnographic settings and through entirely distinct questions, allowing the theme itself to become visible.

Presentation(s): An epitaph for language structure

All attempts to describe human language require the use of metalinguistic devices, of which linguists' technical terms are a special case. As technical tools change across eras and schools of thought, so do object-formulations of what language is taken to be. Such changes sometimes rely on conspicuous notation, more often on giving new senses to old words; in the latter case, the change may be barely noticeable. The nouns structure, language and form (and derivatives like language structure and linguistic form) were invested with new senses in the 20th century and came to denote objects that could not exist in the 19th century because the metalinguistic idioms through which these objects are curated had not yet been devised. Who created these idioms? What were they groping towards? Is it sensible to use such idioms today? These questions are easily answered if we attend to certain motifs that recur—over and over again—across the course of 20th century linguistics. This paper describes (a) how formal-grammar/language-structure got metalinguistically extracted from the range of semiotic properties that human languages have, (b) how it came to be constituted as a discrete object of study through specific metalinguistic idioms, (c) how idioms that led to undeniable insights also led to extraordinary delusions, and (d) how the salvageable portions of this enterprise can be retained only if these delusions are abandoned.

Remote Past and Made in Italy in Northern Italian Narratives

Often referred to as the crib of the Renaissance, Italy has been promoting art and history as cornerstones of Italian culture and identity. Italian rootedness in the past visually emerges from the numerous medieval buildings, Renaissance palaces and villas, and ancient Roman ruins. This connection with history and art is part of Italian sociocultural life as well. Even in the business sector, Italian executives resort to overlooked historical deeds to elevate a supposedly collective "Made in Italy" brand. In this paper, I examine how Northern Italian executives perform and inhabit a collective identity that is deeply rooted in their history as it emerges in their storytelling practices. More specifically, I show how these executives change their official register(s) while they tell stories about their companies. By constantly shifting between the Italian remote past tense (*passato remoto*) and the more commonly used past tense (*passato prossimo*), for example, these executives inhabit various gradients of conventionalism. Crucially, this remote past tense, which was used across Italy centuries ago, has been replaced by the *passato prossimo* in many Italian regions. Yet, as the narratives that I collected demonstrate, using this remote tense helps narrators

take a more formal stance, especially when they elevate their companies and their identities to align them with the Made in Italy brand.

Presenter(s): Sabina Perrino

Formalism, mind, & mystification in bioethics

A central mission of the field of bioethics is to increase the participation of patients and laypeople in healthcare and research. In this fight against clinical and scientific paternalism, bioethics has drawn inspiration from Kantian and Rawlsian theories of autonomy and justice and from the amorphous paradigm of decision theory. This talk will show how these theories project properties onto the referents of terms like value, preference, and desire by extracting the linguistic expressions in which the terms are commonly used from their social context. These terms can thereby be taken to refer to mental states or contents, which serve as building blocks in formalistic ethical theories centered on rational introspection and calculation. Such theories mystify efforts to sort out the moral complexities of clinical care and research.

Presenter(s): Justin Clapp

On the (mis)direction(s) of comparison

Formal linguists have long sought to typologically disaggregate the paradigmatic "comparative construction" — i.e., NPj [is--]MOREADV-¬ADJ than NPk — in terms of its constituent semantic features. Not least of these disaggregated features has been the so-called direction of comparison (Ultan, 1972; Stolz and Stolz, 1995; Dixon, 2012), one emblemized (in English, at least) by way of degree operators like "more" or "less." This paper considers what such formalistic accounts leave behind in their analysis of the tropological more-or-lessness of life, by ethnographically attending to "comparison" as a categorially and co-textually emergent socio-semiotic phenomenon. Drawing on data of speech from the Indonesia-Malaysia borderlands, the paper moves beyond formalistic, "prototypical" (Dixon, 2012) accounts of comparison's grammatical categoriality, to more broadly examine its "co-textual" semiotics in a borderland region. I conclude by considering the "spectre of comparisons" (Anderson, 1998) as it inflects current anthropological theorization.

Presenter(s): Andrew M. Carruthers

7179 Anthropologies of Disillusionment and (Un)Belonging

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Estherwood (4th fl)

Type: Oral Presentation Session

This panel explores the possibilities and contradictions that emerge from considering how disillusionment, precarity, and belonging function, materialize, or are absent from ethnographic field sites, among communities, and in the social, economic, and political processes that we as

anthropologists observe. Through deeply ethnographic case studies from Abkhazia, Uganda, El Salvador, Egypt, and Thailand that attend to the multiple forms, layers, and scales of belonging, this panel investigates how belonging shapes social relations and dynamics in diverse communities, and when and how belonging is experienced alongside alienation, exclusion, and disillusionment. Drawing on various bodies of work in feminist anthropology, political anthropology, critical race studies, and more, this panel interrogates the possibilities that emerge from considering how people negotiate belonging and disenchantment in contexts of political turmoil. Recognizing that many of the people we work with may be haunted by skepticism, cynicism, harsh breaks to pre-existing world views, silences, or ghostly encounters, this panel addresses the myriad ways that these hauntings of disillusionment and (un)belonging are negotiated. For instance, this panel attends to the ways that hauntings and disillusionment are negotiated through humor, labor (Buch 2013), the building or shaping of intercommunal relations (McGovern 2012; Ring 2006), the careful navigation of interactions with authority (Aretxaga 1997; Streicher 2020), and intimate homemaking and kinship-making practices (Feldman-Savelsberg 2020; Salas Carreño 2016; Wellman 2017). To do so, this panel explores how peoples' racialized, gendered, and classed embodiments and positionalities reflect in and through their experiences of belonging, exclusion, and disenchantment. The format of this panel emphasizes discussion and collaboration, bringing together scholars from different regional backgrounds and at different stages in their careers. Following individual paper presentations, the panel will respond to questions presented by the panel discussants intended to foster a dialogue across regional contexts, before moving onto an open question and answer session. In engaging in a panel conversation across regions, this panel works to develop theories of belonging and disillusionment, while maintaining the ethnographic particulars of layered socio-temporal contexts.

Presentation(s): Witches and Flags: National Disillusionment in Kampala

Witchcraft is a classic anthropological subject, and much has been written about its role in creating and undoing social bonds. In Kampala, Uganda, the ubiquity of witchcraft is evident from signs scattered throughout the city advertising cures for it. While people are indeed concerned about the possibility of a friend, neighbor, or coworker bewitching them, this paper specifically interrogates

witchcraft accusations against President Museveni. Foregrounding the experiences of ethnic minority migrant workers, I contrast the ways in which President Museveni was called a "witch" while notoriously violent dictators of the past, such as Idi Amin and Milton Obote, escaped such characterization. I ask: What distinguishes the violence of the current political regime from that of previous leaders? How does the accusation of witchcraft, in particular, help us understand the disillusionment and resentment felt towards President Museveni? In exploring these questions, issues of ethnic and national belonging are revealed to be intimately intertwined with ideas of who can be a witch.

Presenter(s): Christine Chalifoux

Improvising Life: Hidden Epistemological Logics of Humor in Cairo

This presentation examines how young adults (18–35) in Cairo, Egypt deploy humor and improvisation to navigate authoritarian neoliberal rule and economic precarity. Despite increased state censorship and shrinking expressive spaces, stand-up comedy has been proliferating; stand-up comedians dominate cultural centers, YouTube shows, podcasts, etc. often masking political commentary in an apolitical guise. Through ethnographic fieldwork in Cairo's comedy scenes, I analyze improvisational humor through locally embedded concepts such as *fahlaw* (cunning) and *etsaraf* (figure it out). Moving beyond dominant frameworks that reduce humor to resistance or relief, and drawing on Black Radical Traditions, I theorize humor as an epistemological practice for navigating contradictions beyond compliance/resistance binaries. Improvisational humor emerges as a tactic of maneuvering—an embodied, relational knowledge that operates in the interstices of power. By tracing youth's experiences and interactions across stand-up shows, digital content, and urban spaces, I analyze how humorous improvisation cultivates social consciousness, fosters agency, mitigates repression, and negotiates belonging. This work engages with anthropological debates of humor, the state, and urban studies by centering improvisation as an adaptive mode of sense-making, not merely a form of defiance.

Presenter(s): Adam Adam

Disillusioned Belonging: Precarious Lives in an Empty Paradise

This presentation explores how forcibly displaced migrants negotiate belonging, housing, and homemaking in the aftermath of war, particularly within the context of an emergent statecraft project. Relying on extensive ethnographic fieldwork with Syrian-Circassian women in Abkhazia, a semi-recognized state in the Caucasus, my analysis centers the gendered transformations—including entrance into the workforce, care labor, and homemaking—that take place in post-conflict contexts of displacement and exile, at the margins of war and defeated revolutions. I ask: How do war-time migrants contend with their politics of (un)belonging within a racialized and gendered statecraft project through the intimate labor of homemaking? As they struggled to create homes for themselves, Syrian-Circassians had to contend with their politics of (un)belonging, their gendered racialization as Muslim and Syrian women, and the reality of economic precarity in an isolated post-Soviet state. I argue that my interlocutors expressed a form of "disillusioned

belonging" that provides an ethically driven critique of their instrumentalization in a statecraft project under a globally militarized and racialized border regime. Through their labor within and beyond the home, these women's attempts to create opportunities for themselves in a context of material and social ruination serve as a means of building a sense of self and wider communal belonging, even in its disillusioned forms.

Presenter(s): Gehad Abaza

Compromised bodies, imperiled lives, and threatened stories

Compromised bodies, imperiled lives, and threatened stories haunt my work as an anthropologist. In this presentation, I take up the invitation to "embrace the creative potential of the ghostly and the spectral." I present new, experimental writing and thinking that explores four discrete and positioned projects, their attendant sources of knowledge, and the weight of this work. These projects consist of 1) an ethnographic archive of postwar El Salvador; 2) a collaborative, horizontal and decolonial project on photography and historical memory; 3) crafted writing on disease and disability in family life; and 4) generational loss and silences of migrant life. The paper will play with the arc of my writing that falls within a now well-developed anthropological understanding of *compromiso* and global calls for *solidaridad* alongside the various interpellations regarding the haunting of that which is compromised about/of this work. For example, what does an exploration of compromised lives, instances, memories, relations do for this panel's question on belonging, which for many is always spectral and rooted in exclusion and disillusionment? From my original doctoral research on a "spectral reconciliation" as an afterlife of war, to narratives about compromised bodies and experiences of anticipatory sorrow, the proposed presentation offers a window into bringing together an anthropology of postwar with critical disability studies to address comprised lives as abundant spaces.

Presenter(s): Irina Carlota [Lotti] Silber

Fragile Kinships: Region, Ethnicity, and Belonging in Thailand's Tin Industry

Industries of extraction have long flourished in the resource rich region of southern Thailand, the confluence of state interests and capitalist production coming to shape intercommunal relations and to define and enforce categories of ethnicity and religion in the region. This paper focuses on one such industry – the tin mining industry, which exploded along the southern coast of then Siam in the 19th century. Attending to the relations of kinship, region, and ethnicity generated through the mining industry, this paper examines the ways that kinship practices came to inform belonging or its absence. In particular, this paper shares the story of one woman's journey to the south in the 1970s, following her migration from the rice growing region in the northeast of Thailand to her efforts to survive in the volatile world of the southern tin industry, a world made all the more unstable by earlier state policies that had cultivated debt and addiction within the mining laborer community. Following Yai's (Grandmother's) stories as they unfolded over time and her embodied practices of kinship, this paper analyzes how the building of intimacy and kinship can operate as a strategy of survival in unpredictable times. Yai's story, however, reveals that the making of kinship

requires continuous cultivation, her belonging to the southern imaginary tenuous even after decades of living together in a shared space, fragility and risk inherent to kinship and, through kinship, belonging.

Presenter(s): Zaira Magana Carbajal, Rosalina Diaz, CUNY, Medgar Evers College, Brenda Garcia, Yadira Silva Rios, Kimberly Melgoza, Gloria D'Alessio, Linda Sanchez, University of South Alabama, Department of Sociology, Anthropology and Social Work, Gloria Sosa

Presentation(s): Between Classrooms and Disciplinary Landscapes: Educational Experiences of Latinx Youth in the U.S.

The U.S. is going through a historical moment in terms of attacks on democracy, civil rights, free speech, and public education. One of the most impacted is the migrant population and, within them, the Latinx youth who have arrived at U.S. public schools in recent years and months.

My research is an ethnography of an urban high school in a white, mid-size Midwestern city. It examines the current political moment through the experiences of young people from Latin American countries who recently arrived in the country. By pointing out the disciplinary apparatus in the school and how it confluences with broader discourses of law enforcement and the threats of deportation, this research asks young Latinx people how their belonging, presence, and educational experiences are shaped in uncertain times. It also looks at how the school navigates the current political climate and to what extent it generates a space of safety and belonging for Latino families.

The paper for this presentation presents preliminary findings on the intersections of disciplinary practices and law enforcement enactments both inside and outside the school (e.g., the policing of school surroundings) and will discuss Latinx experiences in the education system regarding such elements. It will also discuss the methods used in this research. In an attempt to propose more youth-oriented data collection methods, this research uses semi-structured interviews, but also field trips, workshops, lunch hangouts, and dialogue circles with youth. As part of data collection and analysis, youth gather multimedia artifacts (like pictures and social media screenshots) to describe experiences of belonging and safety in educational spaces in the current moment that schools and Latinx communities are facing. These artifacts are being analyzed in small groups where Latinx youth frame their understanding of their presence in the U.S. at the current moment

and how this shapes their educational experience. Overall, the project aims to contribute to the fields of Latinx Youth and Education, as well as to the Anthropology of Education, by employing non-traditional methods of data collection that center the experiences of young people in urban schools.

Presenter(s): Zaira Magana Carbajal

Haunted by the Sins of our Fathers: Redeeming the Ethnographic Sins of Anthropology's Past.

The history of Anthropology is riddled with examples of exploitative and unethical research practices perpetrated on the Global South in collusion with a Eurocentric imperialistic/colonial agenda. The very nature of our practice is haunted by these often-unacknowledged sins. How do we, as heirs of this legacy, begin to undo the harm our discipline has caused to countless oppressed, marginalized populations around the world and recreate/redefine Anthropology as a tool for liberation and decolonization?

Post Hurricane Maria, I engaged in ethnographic research in the tiny island nation of Puerto Rico to track changes and growth in small-scale farming/gardening, grassroots activism, community-supported agriculture (CSA), and community agroecological movements, primarily led by women. My research study was met with apathy, indifference, and even disdain from the local populace. As an insider-outsider, this response was jarring, even hurtful. After some reflection and soul-searching, I pivoted and shifted my methodology radically, abandoning my research focus and instead prioritizing the immediate needs of the informants. The result was a five-year study culminating in a co-written edited volume (Decolonizing Paradise: A Radical Ethnography of Environmental Stewardship in the Caribbean) as well as a new framework for teaching radical ethnography in the classroom.

In this presentation, I will explore the ethical complexities and challenges of conducting research with colonized peoples, while sharing a radical vision of ethnography that repositions the ethnographer as a learner, helper, and community activist/collaborator.

Presenter(s): Rosalina Diaz

Mexico's Militarized Aesthetics and the Hauntings of Mestizaje

This presentation examines the hauntings of an exhibit in Campo Militar Marte, a military camp in Mexico City. The exhibit consists of 32 monuments constructed from firearms such as AK-47s, guns, rifles and other weapons molded into different nationalist symbols such as archeological artifacts, regional animals, and historical objects. Former president Felipe Calderón inaugurated the exhibit (or module as its official documents call it) as part of a larger plaza dedicated to the fallen soldiers in Mexico's war against narcotrafficking. The monuments invite onlookers to forget that these weapons crossed national borders, killed innocent and not so innocent people in the name of national security. Each monument invites the audience to look beyond the horror of the weapons and instead focus on the beauty of the Mexican nation. From monuments representing

the iguanas of Guerrero to the bikes of Mexico City, the beautified firearms trap the spirits of the lives they took.

I discuss the ghosts that haunt the monument's militarized aesthetics. I examine the conditions that these ghosts create, in particular the racial capitalism that justifies the international exchange of weapons and the desperate conditions that pushed some people to become soldiers while other enemies of the nation. I argue that the Mexican government continuously erases life histories through art and architecture, only to create ghosts that haunt the monuments, the military camp, and Mexico City at large.

Presenter(s): Brenda Garcia

Reflections from Early-Career Academics on Navigating Challenges in Community-Based Participatory Research

Community-based participatory research (CBPR) has been used throughout various disciplines for decades as a way to bring community work into academic spaces. CBPR is not just a method but also a praxis used by many scholars, especially scholar-activists, to encourage more equity and inclusion in research, from the design, to the implementation, to the dissemination. However, there are numerous challenges that researchers often face as they aim to center their work around this model, especially for scholars working in institutions that undervalue the labor and dedication this approach requires. Despite the widespread applications of CBPR, there is a lack of scholarship critically examining when and why challenges arise and how early career scholars navigate them. Using kitchen table reflexivity and pláticas, this paper presents ongoing conversations between a PhD student and her mentor, a pre-tenure professor, two Latinas working to align their food systems research with community needs while working in an overwhelmingly White institution. We aim to demonstrate how efforts to stay dedicated to CBPR can prove difficult when trying to progress professionally and academically, but we offer strategies and insights for how we stay true to our convictions in community engaged work. Most importantly, this paper hopes to offer an honest reflection on the difficulties faced over the past year as we considered social, academic, and political variables that could impact our capacity to adhere to a CBPR model.

Santa Muerte: The Statuette

Santa Muerte is a saint that has been popularized in Mexico during the last few decades. This saint is depicted as a skeleton figure that sometimes resembles the death reaper. Due to her display and her connection to narcoculture, crime, and violence, Santa Muerte is thought to be part of a religion of evil, and specifically in Mexico seen as a demonic cult. However, Santa Muerte is much more than that, she is a saint of healing, love, and everyday needs. The veneration of Santa Muerte has many artistic dimensions, including visual representations, home altars, and a complex system of

color symbolism. This paper will emphasize the importance of her physical presence in a follower's life.

Presenter(s): Kimberly Melgoza

The Making and Unmaking of a Borderland: Mobilities and Everyday Negotiations in the Darién jungle

This research examines the making and unmaking of the Darién borderland between Colombia and Panama by tracing the entangled infrastructures, actors, and everyday negotiations that shape migration in the region. Focusing on the period between 2020 and 2025, the study explores two key transformations: the surge of south-north migration through the Darién corridor, and the recent reversal marked by the U.S. reimplementation of deportations and border closures in early 2025. Through multi-sited ethnographic fieldwork across Afro-Colombian coastal towns of Necoclí, Capurganá, and Acandí, this study investigates how migration channels are assembled, transformed, and governed by a plurality of actors-including paramilitary groups, brokers, humanitarian organizations, religious institutions, and local municipalities. Rather than approaching the Darién as a stateless or exceptional zone, the research analyzes the region as a dynamic site of political and moral economy, where power is negotiated through both formal and informal institutions. Drawing from critical migration studies, border anthropology, and moral economy theory, the project explores how everyday practices of bordering, mobility, and smuggling challenge dominant narratives of sovereignty and post-conflict peace in Colombia. Ultimately, this work contributes to rethinking borders not as static lines but as contingent, lived processes shaped by competing forms of governance and value.

Presenter(s): Gloria D'Alessio

Underground Railroad Spirits Influencing Immigrant Rights Advocacy and Activism in the Deep South

The spirit and spirits of the Underground Railroad, a network that assisted enslaved people in escaping to freedom, actively influence the immigrant rights movement in today's Deep South. Given the current presidential administration's push through virulent executive actions to deport noncitizens, and even threats to deport citizens, the importance of underground and grassroots methods are reinvigorated in this sociopolitical moment.

This research focuses on immigrant advocacy and activism in the red Deep Southern states of Alabama and Georgia. I argue that while these states are extremely conservative, they also have strong subversive currents of activism not just with the Underground Railroad's history, but also with the legacy of the 1960s Civil Rights Movement, and are pushing back against the current administration through ongoing demonstrations, advocacy work, activism, creating networks of care, and more. Here in these states, the immigrant rights movement draws heavily from African American resistance tactics and communal care approaches.

This study utilizes ethnographic fieldwork methodologies such as participant observation and interviews with the local community, nonprofit organizations, institutions of higher education, student led activism, Freedom University, and so on. Located in Georgia, Freedom University offers college-level instruction to undocumented students, since this region does not allow undocumented students to enroll in public universities. It is modeled after the 1960s Freedom Schools, which were spaces established by community organizers after various local governments shut down public schools in an attempt to stop integration. My work spotlights Freedom University's college readiness retreat, which prepares undocumented youth for higher education and provides tools for academic success.

In Alabama, I focus on Mobile, a port city on the coast of the Gulf of Mexico in close proximity to New Orleans. Being the birthplace of Mardi Gras, Mobile's motto is "Born to Celebrate," and the city is well suited to large gatherings and a collective response, which adapt well to demonstrations and providing systems of care. Protests at Mardi Gras Park and Mobile Government Plaza occur frequently, draw diverse demographics, and even elicit downtown shopkeepers to walk out of their establishments to cheer on the procession of marchers.

Contrary to public perceptions of the Deep South, my findings reveal that this region is actively pushing back against draconian immigration policy, not just through demonstrations, but also with things such as know-your-rights-workshops, Q&A panels for immigrant students, non-profit work, humanitarian assistance, and celebration. The spirits of the Underground Railroad paired with the spirit of Mardi Gras make Mobile unique in resistance tactics. The South honors the life and spirits of those who were part of the Underground Railroad and Civil Rights movement by continuing their work.

Presenter(s): Linda Sanchez

Undocumented High School Girl Activists Leading Social Change in Los Angeles

This article underscores the political agency of undocumented underage adolescent Latina girls living in Los Angeles. Current scholarship examining the activism of undocumented youth revolts around college students' ungended experiences. This suggests that undocumented students begin their activism after attending college. However, I show that the onset of activism starts in high school, especially for girls. Undocumented underage Latina adolescents' political consciousness stems from their awareness of the vast socioeconomic barriers they must overcome to pursue a college education. Learning this forces undocumented adolescent youth to seek support from allies outside their family, especially girls who wrestle with family and culturally bounded expectations. In securing resources to pursue a college degree, they exercise active citizenship, engaging in risky activism and exposing their unauthorized status, a relentless source of retaliation power. Their activism led to local institutional changes that benefit themselves and undocumented and United States citizen peers alike.

This paper draws from three years of fieldwork in Los Angeles, engaging in active participant observation of public demonstrations led by undocumented youth activists. I complemented my

fieldwork by conducting oral history housed in the "Disruptors: Cal State LA's Undocumented Working-Class Youth Activism Digital Archive," which is publicly accessible through the California State University of Los Angeles library website. Examining the oral histories of former undocumented youth activists, I demonstrate that their positionality as underage students both enabled their community-led activism and, at times, hindered their progress but ultimately transformed them into social justice agents. My analysis adds to the understanding of why vulnerable communities engage in risky activism and expands our knowledge about grassroots social movements during social unrest.

5211 Attending to the Circulations of Care: Critical Medical Anthropology in the Global South

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Gallier AB(4th fl)

Type: Oral Presentation Session

The geopolitical category of the Global South/the Majority World reflects a history of imperial rule and economic subjugation brought about by the multiple dimensions of European colonization. The construction of differential racial positionality as a justification for colonialism gave rise to a complicated world history wherein different kinds of supremacy – both local and global – structured social, political and epistemic institutions that continue to influence our contemporary lifeworlds. Health infrastructures and conditions of care in and beyond locations in the Global South are part of such assemblages of postcolonial situations that continue to embody the ghosts of colonial subjugation.

This panel centers the Global South in interrogating the spirit of supremacy that haunts the biomedical infrastructures that came into being in the aftermath of colonialism. In particular, the panel seeks to intervene in conversations within critical medical anthropology, extending analytical attention toward interrogating the legacies of extraction that are imbricated with global flows of biomedicine. The panel also attends to how these legacies are resisted, reconfigured or otherwise situated. Furthermore, the panel draws upon histories of advocacy and activism to investigate how negotiations are taking place in accessing healthcare in the respective countries. Finally, the panel is concerned with how interpersonal questions of care are intertwined with the ways that care is made available to communities amidst the backdrop of failing neoliberal healthcare infrastructures.

The panel consists of scholars who work in and on countries classified as belonging to the Global South while attending to how healthcare providers, patients and patient advocates, disability activists, communities, and policymakers negotiate with the ghosts of supremacy, at times re-materializing and at other times exorcising them. All participants further engage critically with the category of the Global South resituating its theoretical import in anthropologies of the body.

The panel addresses the following questions in/and/from critical medical anthropology in the Global South, including:

1. How are experiences of disability and illness shaped by - and come to shape - the navigation of care as provided by health systems?
2. In what ways has the digitization of healthcare and the proliferation of digital health interfaces influenced the development of a burgeoning economy of surveillance amidst the provision of care?
3. How does the intertwining of capital and health come to influence the political economies of the provision of care in different locations across the Global South?
4. What are the moral and sociopolitical universes that surround the provision of healthcare for historically oppressed communities in and through the welfare state?
5. How might we attend critically to both state investment in health infrastructure and policy regimes across locations?

Presentation(s): Healthcare at the Border: Bodies, Migration, and Surveillance in the Mediterranean

This paper is based on an ethnographic fieldwork on the island of Lampedusa, at the center of the central Mediterranean route – one of the deadliest of "illegal" migration corridors in the contemporary world. The research work focused on the medical apparatus of the border, its use as an organizational, legal and political tool of border management, and the ways in which that border is embodied by those attempting to reach, cross, and survive it. The question of medical care in the space of the border specifically intersects with all the political and technological dimensions that shape it, with a transformative, sometimes resistant and adaptive effect. This contribution aims to investigate the ways in which, in the framework of the contemporary European border regime, the interaction between innovations in forms of biometric control, clinical practices, and related political, racial, and moral frames shapes the bodily experience of the border, as well as its colonial legacy and contemporary effects. The analysis of the legal, medical, and technological entanglement observable in the maritime threshold between Europe and Global South offers insights and perspectives that go far beyond the border itself.

Affective Bureaucracies: Love, Care, and the Struggle to Recognize Podoconiosis in Ethiopia

Neglected tropical diseases (NTDs) disproportionately impact marginalized populations yet remain overlooked in global health agendas. Podoconiosis—a disabling but preventable disease endemic to Ethiopia—exemplifies this systemic neglect. Though excluded from WHO's official NTD list, Ethiopia included it in its 2023 NTD Masterplan, a milestone achieved not through technocratic decision-making alone, but via the often-invisible labour of care. This multi-sited ethnography (2020–25) traces how care—as emotional commitment and political action—shaped podoconiosis policy. Combining document analysis, biographical interviews with Ethiopian/ UK researchers, NGO staff, government officials, and ethnographic observations of WHO meetings and advocacy events, we show how disparate actors united by shared concern navigate institutional silences and policy gaps. Their work, supported by limited yet critical evidence, counters dominant paradigms of 'evidence-based' policymaking, revealing how affective engagement reshapes bureaucracies. We argue policymaking is not merely a rational exercise, but a terrain shaped by multiplicities of care, personal dedication, and collective advocacy. By centering lived experiences, this study unsettles assumptions about how global health policy is made, highlighting care's quiet but transformative role in confronting structural neglect. These insights call for a reimagining of equity in NTD responses & broader health justice in the Global South.

Postgenomic Imaginaries of Health in Urban India

After the completion of the Human Genome Project in 2003, postgenomic science or the "-omics" turn has troubled the hold of genetic determinism or has "demoted the gene" while situating the body in the social (Lock 2012). In urban India, postgenomic interventions powered by biocapital (Sunder Rajan, 2006) constitute narratives of health (as opposed to narratives of illness). As my fieldwork among gut microbiome test takers suggest, they seem to form uncanny contours between rural and urban, ancient and modern, poor and rich, where the idealized health imaginaries of the "rural", "ancient", and the "poor" come to haunt the categories of "urban", "modern", and economically "rich" through intervention of postgenomic knowledge. For example, through the introduction of gut microbiome tests. The subsequent health imaginaries bear upon the care and management of gut microbial ecosystems of primarily urban and socioeconomically privileged Indian guts. In this paper, I explore the arc of these contours while delineating the emergent care practices of the non-humans primarily in humans. Through exploring the molecularization of the body (Landecker, 2011), I reflect on ways in which biocapital and biopolitics shape the postgenomic subjectivities in the global South.

Ghostly Protocols: Neo-colonial Legacies in Neurological Care in Kenya

Neurological care of neural tube defects [NTDs] and childhood disability, brain injuries, epilepsy among others in Kenya is shaped by colonial and neo-colonial protocols, biomedical practices and technologies which disentangle these conditions from culture-specific ideas that intersect with them. This has exposed the local health care infrastructures as spaces of reproducing decontextualized global health techniques that are unsuited to respond to these neurological and disability conditions. Drawing on clinical ethnography in Kenya, this paper explores the structural deficits of the local health care infrastructures dealing with neurological conditions and childhood disabilities which have been compounded by ghosts of neoliberal market policies. It adopts critical disability studies approach to investigate the power, privilege, and oppression of the bodily and mental norms which devalue the social perspectives, practices, and concerns about disability. Indigenous, moral ideas, practices and discourse, perspectives and conceptions of disability from the local context are explored. The paper proposes attending to neurological conditions and associated disability as interconnected phenomena that require paying attention to creative local systems and cultural practices as forms of life.

“They are Very Rigorous About Screening”: The Unmaking/Making of Surrogacy Markets in India

The Indian state has recently criminalized commercial surrogacy, legally recognizing only altruistic surrogacy for select clients. While commercial surrogacy compensates surrogate workers for the gestational labor provided, altruistic surrogacy involves no monetary compensation for this form of heavily biomedicalized, intimate labor. Surrogacy in India, much like forms of intimate labor worldwide, is built on imbalances of power, with largely lower-income, oppressed-caste, migrant women outsourcing their wombs to wealthy, upper-caste clients. My ethnographic research in West Bengal interrogates India's new surrogacy legislation as an instance of reproductive governance that naturalizes and devalues marginalized women's reproductive labor. Bengal is the first state in the country to implement the new legislation and has a rich history in the field of assisted reproduction. My research in Bengal highlights the stratified biomedicalization of the surrogacy process, now situated within new legal dynamics of altruism. I ask how the state systematically "unmakes" reproductive labor markets, and how surrogacy work becomes the site for this unmaking. Raising crucial questions for the ethics of rendering such corporeal, intimate, and affective labor as free, my research explores how surrogate workers and other actors navigate the new bureaucracies of the surrogacy industry, and how they secretly resist these structures to "make" informal markets of reproductive labor.

Japan Depends on Overseas Organ Donors: Are Organ Donors from the Global South, Angels or Ghosts to Japanese Transplant Patients?

Although Japan is a medical advanced country, there is a severe organ shortage, so most recipients rely on living donors and overseas transplants. Especially, there has been an increase in overseas organ transplants in countries of the Global South recently. The reasons for organ shortage are first,

a distrust in organ transplants and second, a lack of care for donor families. So, donor families revive donors like ghost and keep donors alive in their hearts. Whether the donor becomes a ghost or pride depends on the grief of care. Also, the Japanese concept of the dead body prevents organ donation.

Overseas transplants were from the US for hearts, Australia for livers, and Southeast Asian for kidneys. Currently, Japan depends on Global South countries for overseas transplants, especially China and such as the Philippines, Colombia, Belarus, India, Pakistan, Vietnam, South Korea, Thailand, Turkey, Kazakhstan, Mexico, Brazil, Cambodia, Taiwan, Argentina and Egypt.

For Japanese people, there is a psychological resistance to overseas transplants. There are various post-transplant issues and how recipients perceive donors is very complicated. While there are recipients who come to love the donor's country, there are also recipients who feel a negative burden towards the donor's country. Also, organs are always flowing from the poor to the rich. In Japan, the issue of organ donor's nationality is complex and the current situation is that the issues are intricately intertwined.

3456 Be Your Own Fairy Godmother with the Power of Career Readiness

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Galerie 1

Type: Roundtable/Town Hall

There is a lot going on in higher ed that you might want to wish away, but what do you wish for you and your students? With the assorted crises affecting higher ed, anthropology programs are awakening to a new cultural reality. The vast majority of students will not work in academia, including PhD students. Anthropology programs are facing increasing pressure from legislators, administrators, majors, and the parents of prospective students to show the value of anthropology in the world. A transformation is needed. But unlike a pumpkin becoming a carriage, you can choose how you and your anthropology program adapt. Preparing students for careers in the work sector of their choice has the virtue of confronting and addressing these external forces head on and departments become more resilient.

This session offers an opportunity to learn what is involved in "teaching practice" to students. It demystifies this process, reducing much of the burden that instructors feel and simultaneously benefiting students. A variety of strategies are introduced during the Anthropology Career Readiness Network's (ACRN) service known as the Departmental Advisory Initiative (DAI). ACRN facilitators coach anthropology programs on integrating career readiness and practitioner voices into their curriculum and overall programming. DAI is customized for each anthropology program since each has its own unique history and surrounding "ecosystem."

Initial questions from anthropology program participants in DAI range from How can we teach practice when most of us do not have that experience? to How do we leverage our context to benefit our students? Over a 12+ month period, facilitators and participants brainstorm, discuss, craft an implementation plan, and then execute it. One emerging pattern is that DAI helps anthropology programs coalesce to identify and accomplish their own set of career readiness goals. A second pattern is also notable: discomfort and apprehension give way to confidence and excitement as DAI anthropology programs begin achieving their objectives.

Eight anthropology programs have partnered with ACRN since 2023. The U of Delaware has finished DAI, while the other programs are at various stages of completion. These early adopters represent a range of universities in terms of research productivity, institution type (i.e., public/private), size, and other factors. DAI participants from several universities take part in the Roundtable sharing their experiences and offering reflections on the following questions:

- What did you learn about your program by participating in DAI?
- To what extent did DAI help you to change how you teach?
- How would you describe the effect that DAI has had on your anthropology program during this time of change?
- How would you explain DAI to other anthropology programs contemplating a shift toward career readiness?

Come join us and discover how career readiness can be integrated into your academic program!

2541 Being Curious: The Art of the Question

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR A3 (3rd fl)

Type: Roundtable/Town Hall

Curiosity may have killed the cat, but this roundtable discussion posits that being curious is a critical method, skill, and, fundamentally, ethical claim in anthropology. But what does it mean today for scholars and students in our discipline to be curious and to hold onto curiosity as an intellectual value? How can curiosity be taught, and why would it be focused on? Is being curious more akin to mere dabbling, risking the warning to "stay in one's lane" rather than to tread on the

theoretical or ethnographic toes of others? This roundtable seeks to foster a space and time for thinking with and working through the politics, poetics, and potentials of curiosity in our contemporary moment. At a time when the very questions we ask, let alone the answers we hold true, are perceived by some as dangerous or requiring surveillance, what does it take to continue to insist on curiosity as a fundamental right? We make the argument that one way of thinking about being curious in anthropology is as the art of the question.

We are motivated by a desire to collectively remember and extend the work of Berkeley anthropologist Nelson Graburn (1936-2025). However, this roundtable discussion explores not what his conceptual contributions were to the discipline, but rather the fundamental characteristic – curiosity – that defined his intellectual worldview. You do not need to have ever met Nelson Graburn or read his work to come to this roundtable; all are invited. Being a Graburn student had only one real requirement: being up for conversations with anyone and actually listening to them. In retrospect, it was a tall order. Curiosity is infectious. Curiosity is emboldened by company. Many scholars are remembered by their scholarly contributions: the core concepts they coined, or the theoretical apparatuses they constructed. But within and beyond his scholarship on tourism, kinship, museums, and Native arts, Nelson excelled at being curious and in turn, he trained, encouraged, and supported generations of very Graburn curious beings: anthropologists whose research topics range from medical to media anthropology, and whose field research sites span across Asia, Africa, the Middle East, Europe, and the Americas. As his students, collaborators, and friends, the participants in this roundtable will begin with brief remarks on how curiosity has shaped our scholarly work and relationships, to be followed by an open discussion on the necessity and problems of being "curious beings" in academia today.

2590 Beyond War and Conflict: Exploring Lives and Worlds in Contested Spaces

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Studio 8

Type: Oral Presentation Session

Conflicts and wars, particularly those that are protracted, are often analyzed in state- and territory-centered ways, dominated by grand narratives of geopolitics and ethnic divisions. Such politically contentious and violent contexts draw attention due to their perceived political exceptionality, while issues such as socioeconomic disparities, infrastructural inequalities, and environmental changes-concerns shared with the so-called stable settings-tend to be overlooked. However, a growing number of anthropologists have challenged these dominant frameworks, shifting focus on

the more nuanced realities of everyday life in politically contested spaces. Stamatopoulou-Robbins (2019), for instance, focuses on an emergent, a seemingly apolitical form of siege in Palestine, the waste siege that occupies people's everyday lives in unexpected, tangible, and urgent ways. In doing so, she re-introduces Palestine into the conversation with broader issues of the world by examining it through the lens of waste. Focusing on life rather than death in a war zone, Munira Khayyat (2022) unpacks the enduring relationships between humans and other species amidst pervasive destruction, offering a picture of war as a space where "ecologies of resistance" enable life. Decolonizing "distant theories of war" (Khayyat 2022), such anthropological studies allow us to consider war and conflict from innovative, overlooked perspectives, and help us understand everyday realities and creative ways of living in such turbulent and destructive spaces.

This panel focuses on contexts of war, conflict, and political dispute in ways that go beyond state- and territory-centered analyses. The panel includes papers exploring diverse issues in contested spaces such as technology of water in Jerusalem, DNA identification in post-war Azerbaijan, hazelnut cultivation in Georgia's contested periphery, Kashmir's handicraft industry, and "rubbletopia" in Bangladesh. By focusing on such themes in war and conflict zones, the panel aims to bring together anthropologists who offer novel and decolonizing perspectives on a long-standing issue in social sciences.

Presentation(s): Contested Lands of Nutella: Cultivating Hazelnuts under Conflict and Climate Change in the de facto Georgian-Abkhazian Borderland

In the unrecognized Georgian-Abkhazian borderland, spatial engagements of the displaced Georgians go beyond arbitrary fences and checkpoints. Sedimented histories of landscape engineering and agricultural practices also interact with conflict-driven lives. By exploring these interactions, this paper seeks to understand people's changing relationships with the land under displacement, conflict, and, more recently, climate change. To do so, I focus on the hazelnut—a

centuries-old product of the region. Despite being a primary crop in the Black Sea region, hazelnut trees could not venture beyond family-owned orchards in Soviet Georgia, as its homeland was colonized by the engineered fields of subtropical crops. After the Soviet Union, vast plantations were abandoned, stripping people of their jobs. Hazelnuts became the main cash crop for households shattered by shortages and wars. For the people of Gali, hazelnut orchards in Abkhazia have enabled lives by providing a reliable income for three decades. Involving a range of actors, from criminal groups to multinational companies like Ferrero (the producer of Nutella), hazelnut production in the region has been increasingly disrupted by flooding and invasive pests, altering people's relationship with lands. By focusing on hazelnut cultivation in the contested borderland, this paper explores how people constitute, experience, and perceive their land as they produce hazelnuts in a conflict zone, under the impacts of climate change.

Presenter(s): Gorkem Aydemir-Kundakci

Craft in a Time of Conflict

Kashmir, the site of a conflict between India and Pakistan for over 77 years now, is often reduced to its disputed nature. By extension, everyday life as it unfolds in the region, much like other places embroiled in protracted war, is often sidelined. Drawing attention away from such "distant theories of war," this paper centres Kashmir's nearly 600-year-old handicrafts industry and its artisans to highlight ordinary and everyday practices of work. With Kashmiri artisanal imaginaries as a lens, I focus on how artisans rely on the long histories of their craft, often transmitted generationally, to think beyond the physical containments imposed by the Indian nation-state and the temporal confines of 7 decades of conflict. Their craft histories connect them to Iran, Central Asia, Tibet and beyond—unsettling dominant geopolitical frameworks. Concomitantly, Islamic missionaries are thought to have disseminated both craft and religion in the region, thereby entangling artisans' narratives of their work with their religious sensibilities. Both *deen* and *dunya*—the spiritual and the worldly—permeate their livelihood narratives as they navigate a violent terrain. Underscoring everyday life in Kashmir as it is mediated by daily practices of religiosity and craftwork thus helps us understand life beyond the dominant narratives of war, even as it takes place within it.

Presenter(s): Huzaafa .

Hydrological Surveillance: specters of securitization along Jerusalem waters

How does occupation shape the technology of water in a thirsting world? Along pipelines under the city of Jerusalem, devices designed to monitor water quality send signals to the urban utility, depicting chemical parameters in real-time. Their effects conjure specters connecting global regimes of securitization to situated imaginaries and histories of contamination, offering a vantage point to grasp the less obvious consequences of settler colonial rule. When urban flows transform into data points, I explore how daily acts which seemingly do not involve digital technology – a toilet flush, a running tap – can become the basis for surveillance. In Jerusalem these metrics can be the grounds to remove a Palestinian Jerusalemite's ID. As potential tool for dispossession, hydrological surveillance augurs the intensification of surveillance into ever more intimate realms, just as it

brings into relief other modalities of protecting water which challenge the state. And as water innovation continues to be a channel for Israeli soft power, it articulates the presence of colonial formations, state violence, and racial capitalism within technologies that at first glance appear removed from militarization while claiming to solve a global water crisis. By tracing what haunts the securitization logics of water infrastructure, this paper draws attention to forms of violence away from the extremes of war, to show the affects, imaginaries, and ideologies that pervade its far wider reach.

Presenter(s): Emilie Glazer

Living with and within Rubble

The violent destruction and subsequent commodification of reconstructed sacred spaces as tourist attractions generate "infrasecular geography," where various forms of belief and non-belief coexist, intersect, and come into conflict in everyday life. The dazzling spectacles of infrasecular spaces are often disrupted by everyday placemaking strategies in the city that cultivate a deeper awareness of the underlying processes of ruination from which these spaces emerge. Drawing on ethnographic fieldwork in Ramu, Bangladesh, following the 2012 destruction and ongoing tourism-driven reconstruction of Buddhist religious sites, I argue that rubble serves as the primary locus of this awareness. By collecting, selecting, preserving, and displaying certain rubble in deliberate ways, people often carve out distinct spaces within infrasecular landscapes where the positivity of newly built religious structures is contested and resisted. I call this new space "rubbletopia"—a site of resistance that disrupts normative arrangements of built spaces, evoking uncertainty and unease. It highlights the ongoing material and social sedimentation of destruction in the aftermath of violence. By situating rubbletopia within broader conversations about how spatial destruction is integral to the production of space, this paper explores how people around the world navigate life in and through rubble, thereby illuminating the complex realities of everyday life in politically contested spaces.

Presenter(s): Aanmona Priyadarshini

Persisting Presence in Absence: Desire, Relational Continuity, and the Missing in Post-War Azerbaijan

War and conflict are often examined through frameworks of absence—what is destroyed, what is lost, and who is missing. Humanitarian forensic interventions frame disappearance as a void to be resolved through the recovery of bodily remains. Forensic technologies, particularly DNA identification, have become central to these efforts, positioning scientific evidence as the arbiter of presence and absence. Yet, for families of the missing, absence does not only merely rupture; rather, it reconfigures relationality, allowing the missing to persist socially, affectively, and spiritually. Drawing on ethnographic research in post-war Azerbaijan, this paper explores how families sustain presence through practices of relational continuity such as narrating dreams, consulting fortune-tellers, and circulating rumors. Rather than conceptualizing absence as a void, I turn to Deleuze and Guattari's philosophy of desire, which challenges the notion of lack as a

defining condition of subjectivity. Families do not simply long for their missing kin; they actively sustain their presence in their daily lives. In doing so, they challenge dominant frameworks that equate resolution with bodily recovery, foregrounding ongoing relationality and the endurance of the missing within lived experience. By centering presence rather than loss, this paper highlights how families create an alternative epistemology of persistence—one that reconfigures kinship, care, and futurity beyond dominant epistemologies.

Presenter(s): Leyla Jafarova

4374 Body as a Target of Intervention: Emergent Modes of Governance in Authoritarian Contexts

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Southdown (4th fl)

Type: Oral Presentation Session

Anthropological examinations of "the state" have long emphasized that it is not a uniform, fixed entity but rather a dispersed set of discourses, practices, and actors (Aretxaga 2003, Das and Poole 2004, Sharma and Gupta 2006). This analytical framework has led anthropologists to study the blurred boundaries and porosity between state and non-state actors, the multiplicity of contemporary governance orders, as well as informal, nested, and incomplete sovereignties, among other themes. However, anthropologists have had little to say about authoritarian rule. Often conceptualized as "one-man rule," imaginations of the authoritarian state as a centralized machinery that enacts the will of a despotic leader have left little room to analyze the diffuse discourses, techniques, and technologies of governance that encompass authoritarian rule.

Against dominant narratives that take authoritarianism as a taken-for-granted analytic or a strongman rule opposite liberal democracies, this panel seeks to conceptualize authoritarianism not as a uniform, fixed, or novel regime but as a dispersed set of discourses, techniques, and technologies of governance. While the latter may not be new, we aim to situate them within long-standing political and economic currents while identifying what might be particular or emergent about their deployment and reconfiguration in the contemporary moment. The panel pays particular attention to the body as a renewed target of intervention and examines the ways in which mobility, labor, and reproduction have emerged as key sites of governance in authoritarian contexts, as well as how they are mobilized to negotiate and respond to such interventions.

Presentation(s): Nacer sin cariño: Family-First Authoritarianism in El Salvador

A biopolitical imperative to regulate family life has been a cornerstone of governance in the Americas since colonization. El Salvador continues this tradition under the dictatorship of Nayib Bukele, in which the heterosexual nuclear family is promoted to the detriment of other kinship formations. By framing heteronormativity as a technique of authoritarian governance, this paper highlights the role of the presidential family in the proliferation of totalitarianism. I argue that the Bukeles' evocations of heterosexuality, childhood and pureness act to safeguard these national investments, with real consequences for bodies who fail to reproduce, or fail to reproduce through intelligible family formations, such as trans people, lesbians, transients, sex workers, pro-choice feminists and women who abort.

As self-proclaimed caretakers of the nation, the Salvadoran presidential family helps render already suspect bodies even more vulnerable to state intervention, protecting an infantilized citizenry from these "dangerous" subjectivities. While others have rightly highlighted the Bukele administration's masculinist displays of hard power, such as mass incarceration and torture of political opponents, I turn to writing by Lee Edelman, Cathy Cohen and Roderick Ferguson to examine how a focus on the Salvadoran family violently forecloses common forms of nonnormative kinship under authoritarianism, through techniques like gentrification, censorship and pro-natalist policies.

Presenter(s): Nicola Chávez Courtright

Monitoring Reproduction: Data, Surveillance, and Authoritarian Governance in Turkey

In 2008, the Ministry of Health in Turkey launched an ambitious yet controversial public health surveillance project aimed at combating high rates of maternal and infant mortality. Known as the Pregnancy Monitoring System, the project built a vast data infrastructure that tracks the sexual and reproductive health information of not only pregnant individuals but also all women of childbearing age in the country. The Ministry praises the project for its success in improving efficiency in healthcare planning and delivery. Opponents, however, view it as yet another mechanism of authoritarian governance that curtails reproductive privacy and instills fears of being constantly

monitored, particularly among young people using public health clinics. Based on two years of ethnographic fieldwork in Istanbul—among activist networks and in healthcare clinics and people's homes—this paper explores how the implementation and impact of public health surveillance reveal complex configurations and negotiations with authoritarian governance. Against the backdrop of growing concerns about data surveillance, this paper provides new insights into how emerging modes of governance operate not through control and coercion but through selective manufacturing of information.

Presenter(s): Seda Saluk

The Right to Return

In response to mass demonstrations against austerity measures in 2018, the Nicaraguan government has enacted arbitrary controls over the movement of its citizens, denying them travel documents, impeding their exit from and entry into the country, and most recently, deporting its own citizens, leaving thousands effectively stateless. Independent journalists and human rights organizations have documented the chain of command that issues such extralegal decisions, often traced back directly to Nicaragua's First Lady and Vice-President. However, in the case of citizens who are denied entry into the country, they rarely have any interface with government authorities or receive any official notice informing them of this decision. Rather, the Nicaraguan state relies on airlines or bus companies to refuse boarding, often leaving passengers stranded mid-route during layovers, and without the documentation necessary to make any claims for international protection. This paper examines the network of actors involved in making sovereign decisions effective, including the transnational corporations effectively tasked with enforcing the government's arbitrary and illegal border controls. Here, I revisit theorizations of sovereignty to illuminate the ways in which the most extreme manifestations of authoritarian rule take place through already existing commerce and security frameworks rather than spectacular displays of force.

Presenter(s): Luciana Chamorro

Guarantee or Threat?: Bureaucracy, Authority, and the Double Life of Occupational Diseases Certificates in Turkey

Drawing on eighteen months of multi-sited ethnographic fieldwork in occupational diseases hospitals, courtrooms, workplaces, and households, this paper analyzes how state power circulates through seemingly mundane documentary practices—barcode labels, medical certificates, legal filings—that mediate interactions among doctors, patients, judges, and institutions. Although occupational disease certificates are framed as "obligatory points of passage" (Callon 1984) for accessing care and legal compensation, their submission to employers often results in workers being dismissed due to reductions in bodily capacity. The slippage of these documents between legal guarantee and punitive outcome not only unsettles monolithic conceptions of the state power but also raises pressing questions about the limits and contradictions of biological citizenship (see also Mathur 2016, Poole 2004). Focusing on the

entangled dynamics of sovereignty and biopolitics, I argue that these documentary artifacts simultaneously function as instruments of entitlement promised by rights and techniques of surveillance and exclusion, rendering laboring bodies visible yet institutionally illegible within medico-legal regimes. By taking up the documentary and diagnostic infrastructures that shape the governance of worker health, I theorize authoritarianism not as top-down command but as a dispersed assemblage of techniques that blur the boundaries between care, control, and abandonment.

Presenter(s): Zeynel Gul

Lessons from Migrant Russia: Navigating Legal Ambiguity, Informality, and Precarity under Authoritarianism

Russia is the world's fourth top migration destination. In line with global trends, officials have restricted labor migration, on which the economy is dependent, further marginalizing migrants. In contrast, officials have made it easier to obtain citizenship. The same individuals who experience legal and economic precarity—Russian speakers from other post-Soviet countries—are often eligible for Russian citizenship in as little as three months. To learn more about these opportunities, migrants turn to online forums and social media to exchange information, document their journeys, and provide civic oversight on opaque and often corrupt bureaucratic processes. In this paper, I turn our attention to one such site, the online forum "Home to Russia [Domoi v Rossiia]." Based on ethnographic fieldwork I conducted with migrants and officials in Moscow and Vladivostok, between 2014 and 2017, I examine the forum as a site for responding to mechanisms characteristic of Putin's brand of authoritarianism, a system that thrives on ambiguity and informality (Reeves 2017). How do individuals utilize the forum to mitigate uncertainty and increase their chances of obtaining Russian citizenship? How do they build community to document bureaucratic challenges? How do they return to the forum to navigate censorship after Russia's full-scale invasion of Ukraine in 2022? And what strategies might we learn from migrants and officials in Russia to navigate emergent forms of authoritarianism?

Presenter(s): Lauren Woodard

3827 Calling It Failure: Ethnographies of Unfulfilled Plans and Failed Projects

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Orpheus (8th fl) (access via elevator only)

Type: Oral Presentation Session

Not fully executed plans are everywhere in contemporary societies, yet only at certain moments are unfulfilled plans cast as failed projects. This panel explores the social, material and political effects of unfulfilled plans that are (or are not) deemed as failed to analyze how "failure" haunts, lingers, disrupts, or enables future possibilities for action, planning, and projecting. What conditions

influence plans so as to render them unfulfilled and eventually failed? What political effects does "calling it failure" bring about?

Over the last decades, anthropologists have studied the generative potential of incompleteness and unfulfillment in infrastructure (Carse and Kneas 2019), political mobilization (Armbrust 2019), kinship (Franklin 2013), and temporal orientations (Bryant and Knight 2019). Others have ethnographically examined failures in knowledge production and temporal dynamics (Alexander 2023), while scrutinizing the always slippery notion of failure (Ssorin-Chaikov 2016), and the powerful side-effects that follow in failure's wake (Ferguson 1994).

In an attempt to spotlight more closely the interplay of these processes, this panel ethnographically interrogates how unfulfilled plans do (or do not) get cast as "failures". How does a plan or a project end up on a trajectory toward unfulfillment, and when exactly is the struggle for fulfillment abandoned and failure proclaimed in its stead? To what extent is failure understood as irreversible, and in what contexts and by whom? While exploring these often unpredictable trajectories, the panel asks: how are abandoned (life) projects, delayed or unrealized goals and failed aspirations shaped, contested, and reconfigured? How do failures materialize? What does failure mean to different people, and what kinds of social, material and political work does it carry out?

The panel brings together ethnographic case studies from five different sites where infrastructural reconfigurations have made unfulfilled plans and "failures" acutely tangible in local communities - from a submerged and relocated town in Turkey, to one of the Europe's busiest transshipment ports in Spain, to a long "failed" but recently booming Egyptian desert city, to a mining village in Serbia undergoing relocation, and to a former steel manufacturing town in East Germany. Together, the papers examine how unfulfilled plans and failed projects not only enable or disrupt everyday life, but also how "calling it failure" disrupts and generates new forms of knowledge, challenges temporal frameworks, and (re)shapes political and material configurations.

Presentation(s): Origins of the Urban Landscape: Reevaluating Socialist Failure in the Former East Germany

Eisenhüttenstadt, Germany offers a case study in rethinking socialist legacies as necessarily associated with failure. Founded in 1950 as Stalinstadt, an East German steel manufacturing hub and showcase for humane urbanism, the city's socialist origins were scrubbed from the urban landscape following German reunification. Lenin Avenue became Linden Avenue and Red Square, Rose Square.

Yet socialist urbanism persisted, understood as both a strategy of urban design and a commitment to communitarian values. And in recent years, that legacy has been instrumental in revitalizing Eisenhüttenstadt, undergirding large-scale projects aimed at both social and material change. This paper draws on over ten years of ethnographic research to examine the shifting legacy of East German socialism, showing how Eisenhüttenstadt's origins are widely credited with enabling the city's current success. Indeed, urban administrators, architects, and citizens alike point to various facets of the socialist past as critical enabling forces.

Such claims, I show, are acts of "social stratigraphy" (Dawdy 2016), excavating the social in ways that reincorporate elements of the socialist past into the present. As such, they refute the assumption that socialist urbanism is an obsolete legacy (Murawski 2018; Ringel 2018; Schwenkel 2020) and point to new forms of value (Graeber 2001) and ruination (Stoler 2016) forged in a moment of sociopolitical turbulence.

Calling It Shortcomings: The Political Power and Limits of Promised Improvements

Yusufeli, a small northeastern town, has, over the last decade, become a microcosm of authoritarian populism in Turkey. Since the start of the construction of the country's tallest dam in 2013, most town inhabitants saw it as a necessary project requiring self-sacrifice, in return for which they asked not to be victimized. The authoritarian populist AKP regime – along with its local municipality – promised to fulfill these expectations through strong political rule, claiming capability and readiness to serve the people.

While the town is now submerged under the reservoir, dam construction and resettlement have been marked by unfulfilled promises of decent compensation for "docile" inhabitants—a process that, however, has not been cast as "failure" overall. Based on ethnographic fieldwork conducted in this submerged and relocated town, this paper explores the political work of "calling it shortcomings." How are un/half-fulfilled promises framed as shortcomings? What role do "shortcomings" play in circumventing the register of "failure" and cultivating a sense of expected improvements? How do inhabitants experience and mobilize shortcomings? Finally, to what extent does the framing of shortcomings serve to contain criticism? By addressing these questions, this paper will explore the discursive and practical maneuvers that allow the politics of promised improvements to persist despite failures.

Cemented Failures: Contesting Concretized Seafronts in a Spanish Port Town

When does the expansion of a cargo port turn into failure? This paper explores the material, political, and affective dimensions of cemented port growth, examining its transformation from water to land. While concrete is traditionally linked to the construction and aesthetics of mobility and logistics, it also serves as a medium through which the destructive aspects of infrastructure can be interrogated. Ethnographically, this presentation traces the politically contested urban

transformations of Algeciras, a Spanish town on the Strait of Gibraltar that hosts one of Europe's busiest transshipment ports. It focuses on a seafront development project, The Maritime Lagoon, which was conceived to address historical urban planning failures caused by the port's expansion. But what happens when an urban renewal project meant to rectify past mistakes becomes a failure itself? This paper introduces the concept of concretization to illustrate how abstract processes of port-making materialize through concrete—a substance that, in turn, becomes central to local understandings of political betrayal. In Algeciras, I argue, a cemented seafront continues to concretize what it means to live with failures that refuse to disappear.

When Failure Is Not Called: Reflections on Projects in an Egyptian Desert Town

Badr City – an industrial town 60 kilometers east of Cairo – has never lived up to expectations. Planned in the 1980s, journalists and urban planners have long noted the lack of residents, businesses and services, casting it as an epitome of the regime's failed attempts to transfer populations into the empty deserts. Regardless of facts on the ground, however, the government never admitted that Badr had failed. In the last decade, the city has also experienced a boom triggered by the construction of Egypt's New Administrative Capital 15 kilometers away. Today, investors, workers, state functionaries and small-scale business owners flock to Badr, which suddenly looks both central and attractive.

This paper reflects on the Egyptian government's reluctance to label Badr failed, in an effort to analyze the work that not-calling-it-failure does. Combining media material and ethnographic fieldwork with men who launch small investment projects in Badr, I spotlight the connotations and visions vested in the Egyptian notion of a "project" (mashru'). For my interlocutors, project making is typically cumulative and nested rather than sequential; insofar as incomplete projects work as platforms for the initiation of new projects, it rarely makes sense to label any of them as failed. By the same logic, Badr, the project city, never failed. Indeed, small projects often thrive in glitches between the city's incomplete, but not necessarily failed, urban plans and infrastructure projects.

Presenter(s): Carl Rommel

"Failures" and Unfulfilled Plans: Ethnographic Exploration of Temporalities in a Mining Village in Serbia

The mining village of Krivelj in eastern Serbia has faced relocation plans for over forty years due to its proximity to what could potentially become an expanding open-pit mine. When a Chinese copper and gold company acquired the mine from the formerly state-managed company, its sudden expansion made relocation seem imminent, forcing villagers to quickly question their future. Despite promises of a new village, the collective relocation project never materialized. Instead of resettlement, residents experienced displacement, seeing themselves as victims of discrimination, colonization, and neglect.

This paper ethnographically examines the experiences of failed promises in this context. It explores moments when unfulfilled plans came to be seen as failures and analyzes their social, material, and political effects. By tracing how failed relocation attempts have haunted, disrupted, or enabled future possibilities, I ask: Under what conditions do unfulfilled plans come to be recognized as failures? In what ways such distinction differentially affects the ways in which people acted upon their futures? How is failure contested and normalized in daily life? How does a stalled and potentially failed collective relocation project shape residents' temporalities and agency? While addressing these questions I theorize "failure" as a political tool that, I argue, sustains extractivist projects while ultimately extracting time from those affected.

6330 Children's heteroglossia and resistance/conformity to language norms

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR D2 (3rd fl)

Type: Oral Presentation Session

Children's everyday language practices in peer group interactions exhibit marked heteroglossia, with children pulling in words from different named languages and social voices, all of which carry indexical ties to social categories and features (ghosts, so to speak). These practices serve as a site for children to explore adult roles and registers (Paugh 2018; Dyson 2005), learn and create new language forms, and take critical stances (Bakhtin 1981; Kyratzis, Reynolds, & Evaldsson 2010; Minks 2013). For example, through translanguaging, that is, engaging in fluid bilingual or multilingual discourse practices, children can "resis[t] the historical and cultural positionings of English monolingualism" as well as ideologies that blame them for 'incomplete acquisition' of 'heritage languages' (García & Leiva 2014; de León 2018; Otheguy & Zentella 2012). Alternatively, they can uphold dominant language norms (Evaldsson & Cekaite 2010) and domain-language patternings. It is in multilingual peer groups that children have opportunities to engage in playful interactional practices and use innovative/transgressive language forms such as play with word forms, pretend role voices, language-crossing, verbal improvisations, corrective practices, joking, and teasing (Goodwin & Kyratzis 2011) that are unlikely in more asymmetrical interactions with adults.

There is a wealth of sociolinguistic research on how youth in multilingual interactions orient to, take stances on, and exploit linguistic diversity along with ethnic divisions and racial stratifications (Rampton 2017). This panel adds to previous research by exploring children's creative language use and heteroglossic verbal practices, that is, their use of multiple codes and registers, and the larger socio-political meanings and ideologies that are negotiated through those linguistic forms (Kyratzis, Reynolds & Evaldsson 2010). The papers document children's sensitivity to heritage and standard language forms and orthographic conventions, and emphasize how children in everyday interaction

play with and juxtapose linguistic features and their social and cultural meanings (Maybin & Swann 2007; Cekaite & Aronsson 2014), forming their own associations between linguistic codes and social categories, or breaking through regimented patternings that exist in the adult culture (Bailey 2007). By attending to the plurality of language practices, values, identities and groupings that children are exposed to and exploit in everyday interactions, the panel will contribute knowledge on children's heteroglossia and spontaneous play in situ, as it emerges in varied activities and settings (free plays, transitional spaces, after-school social-networking platforms) in multilingual and culturally heterogeneous communities in Sweden, Japan, and the U.S.

Presentation(s): Heteroglossic practices and everyday poetics in multilingual children's peer talk

This presentation examines young children's (3–5-year-olds) peer group interactions, heteroglossic language use and everyday poetics in two multilingual preschools in Sweden. It demonstrates multilingual children's creative use of various language varieties, including the societal language (Swedish), English, and their heritage languages (Kurdish, Albanian). Video-ethnographic data is analyzed by using language socialization (Ochs, 1996) and multimodal interaction analytical (Goodwin, C., 2018) perspectives. The study shows how young multilingual children exploit their multilingual knowledge, creating variations and transformations of various features of the languages available in their educational settings. "Everyday poetics" involved young multilinguals' aesthetic exploratory talk produced by reference to sound and meaning associations, category-explorations, cross-speaker sound and word play in both institutional languages. Children's language play had multiple purposes that were not limited to the social relationality of the peer group. Aesthetic performances as well as language teaching/learning were part of the social episodes that started out as language play. Heteroglossia was supported by children's peer group word meaning explorations and comparisons between various languages. The presentation argues that analytical attention to aesthetic and playful features of everyday encounters contributes to our deeper understanding of human sociality.

Presenter(s): Asta Cekaite

Heteroglossic practices and play with school genres: Multilingual children's interactions in the literacy corner

This paper reports on peer interactions in the literacy corner of a bilingual Head Start preschool in Southern California serving Mexican heritage families and preparing children for English-medium public school education in California, drawn from a larger video-ethnography that followed friendship groups of children at the preschool. Data are analyzed using the theoretical frameworks

of language socialization, heteroglossia (Bakhtin 1981) and multimodal conversation analysis. Children picked up books and enacted multiple genres of school talk, including reading voice, teacher talk, counting, writing, and talk as disruptive students using marked embodied, linguistic and prosodic features to do so. They "pulled in" resources without much regard for which linguistic system, English or Spanish, or role, they "belong to" (Minks 2013), partly based on perceived linguistic competencies of the shifting group present in the corner. As the example unfolds however, pressures that push towards English for literacy become evident. The example illustrates how children's playful heteroglossic explorations enable them to organize participation (Goodwin & Goodwin 2004) as well as carve out spaces for English, Spanish, and where boundaries between them can be blurred, underscoring how competing language ideologies are interactionally negotiated and contested in everyday peer interactions.

Presenter(s): Amy Kyratzis

Heteroglossic, bilingual peer interaction in the classroom: Adhering to and subverting an "English only" norm at a Japanese international school

This paper explores children's heteroglossic, bilingual peer interaction in an "English only" classroom at an interactional school in Japan. In this classroom, children are socialized into the school language policy of "English only," through various teacher practices, including reminders, reprimands, and corrections. Yet, during specific moments in the classroom, especially outside teacher-fronted lessons, particularly during activity transitions (i.e., unstructured spacetime configurations between two scheduled lessons or other events) and at lunchtime, children engage in robust forms of translanguaging whereby they mobilize two languages (English and Japanese) in interacting with peers. Based on audiovisual recordings in a first-grade classroom, the analysis details ways in which children employed talk and multimodal resources (e.g., gesture, facial expression) to engage in bilingual, interactional practices in creative ways, which at times adhered to and at other times subverted the "English only" norm. Based on this analysis, it argues that peer interaction outside teacher-fronted lessons are a key site through which children perform heteroglossia and create a "translanguaging space" through which they display their interactional and sociocultural competence in challenging the ideology of "one language at a time" that ungirds the "English only" norm, thereby reproducing and transforming the moral order of the classroom and socializing peers in the process.

Presenter(s): Matthew Burdelski

Heteroglossic literacy practices and identity performances in multilingual children's engagement with social media.

This study uses Bakhtin's (1981, 1986) processual view of heteroglossia as a framework for examining multilingual children's creative peer language practices and hybrid identity performances in their engagements with social media. The study draws on a language socialisation approach (Ochs & Schieffelin 2012) to children's peer group as a central socializing agent (Kyratzis, Reynold & Evaldsson, 2010). The data is based on video ethnography with Swedish children (8-9

years) of diverse multilingual immigrant backgrounds (mainly Kurdish, Turkish, Arabic) in an urban Swedish afterschool setting with a monolingual policy. It examines how the children exploit their multilingual experience and play with the linguistic varieties at their disposal mixing features from i) a local urban youth style, ii) heritage language forms and iii) monolingual orthographic forms (e.g. social values and pragmatic uses) in their chat communication within social media. Such heteroglossic literacy practices – while mainly used for playfulness, social status and identity performances– show how children's peer engagement with social media affords linguistic creativity and playful explorations of a plurality of norms, repertoires and identities. The findings underscore the need to broaden empirical research on multilingual children's language practices from co-present to mediated interaction, and to explore the heteroglossic practices and ideological tensions children exploit in interplay between the two.

Presentation(s): Chinese American Transnational Adoptees: Unveiling Our Stories and Experiences

In this multimodal ethnographic research, I am bringing the voices of Chinese American adoptees to the center of knowledge production-first, by my own positionality as a Chinese American adoptee myself, and second, through feminist collaborative ethnographic research methods. Historically, global North academia remains overshadowed by Eurocentric knowledge production, praxis, and methodologies. In these spaces, the stories and experiences of people who speak from the margins, such as Chinese American adoptees are intentionally erased. My research project is a multimodal ethnography of transnational adoptions with a focus on adoptees from China that have been raised in the United States as Chinese Americans. In addition to contributing to ethnographic studies of transnational adoption at large, my research will also have a public scholarship component in that it will provide a platform for Chinese American adoptees to share our unfiltered adoption experiences, combat the existing harmful stigmas that have been assigned to adoption and adoptees in the United States, and challenge past and existing policies surrounding adoption and social services. I am conducting ethnographic research to collect and record these rare and crucial adoptee experiences by engaging in a mix of formal and informal collaborative interviews with 10 Chinese American adoptees as well as surveying a larger sample of adoptees on social

media platforms. Through the practice of multimodal approaches, I am producing an experimental ethnographic film to expand my storytelling of the transnational Chinese American adoptee experience.

Presenter(s): Leianna Kunz

Claiming Chineseness in the Borderlands: Sense of Belonging within the Youth Lion Dance Troupe

The lion dance, originated in China, is an art form performed by two individuals who synchronize their movements to imitate those of lions. The lion dance culture was carried by migrating Chinese groups to various countries, such as Malaysia, Singapore, and North America, during their emigration (Walden 2019; Austin, Penney, and McGuire 2017; Feltham 2010; Avaunt 2022). The lion dance performance serves as a symbol of global Chinese diaspora identity (Feltham 2007). This project analyzes the Chinese lion dance performed by Chinese American adolescents in Tucson, drawing on the literatures of Chineseness within the Chinese diaspora and border studies. Using data gathered from my fieldwork, I examine how young performers conceptualize their Chineseness through participation in lion dance. This paper highlights the importance of cultural connections for Chinese American youth residing in multicultural borderlands. This study aims to document cultural practices that enhance ethnic identity and pride, contributing to the existing literature on the Chinese diaspora.

Presenter(s): Linfei Yi

Cultural Genocide and the Politics of Forgetting: Reclaiming Specters of Armenian and Greek Histories in Türkiye

Armenians and Greeks, ancient and once prominent communities integral to the multicultural fabric of the former Ottoman Empire, have left a haunting imprint on the landscapes of contemporary Türkiye. Following their violent expulsion and genocide by the Ottoman state between 1913 and 1923, villages and sacred spaces were left vacant only to be appropriated and reconfigured under new ideological mandates. State-curated tourism narratives now condition visitors of these spaces to prioritize exoticized consumption of the vanished 'Other' rather than an ethical engagement with traumatic histories. This state-sanctioned systematic erasure of Armenian and Greek heritage in the modern nation state of Türkiye epitomizes cultural genocide and extends historical violence into the present through institutionalized forgetting.

Derrida's concept of hauntology illuminates these landscapes and sites as spaces of absent-presence, where people are gone but their traces persist. The concept of dark tourism has been used to refer to sites that memorialize and acknowledge genocidal violence. However, Türkiye's denialism creates voids where historical violence is actively ignored. We documented sacred sites stripped of ethno-religious symbols and iconography, villages rebranded as "ancient ruins" or "symbols of peace," and the looting and appropriation of architecture and artifacts as "Ottoman," which exemplify Lemkin's vandalism, the "second act" of genocide.

Although appropriated by the Turkish state, these sites are permeated by spectral traces that demand us to bear witness; the people's absent-presence defies state narratives, asserting a counter-memory that resists institutionalized forgetting. Counter-memorialization efforts reclaim these spectral traces through digital counter-archives, grassroots preservation campaigns, and subversive pilgrimages, all of which promote a more ethical witnessing of history. By addressing Armenian and Greek erasure in tandem, this work not only challenges their historical separation but also exposes the ongoing process of cultural genocide in Türkiye.

Grief in Limbo: The Haunting Absence of Ritual and Closure in COVID-19 Deaths in Kolkata, India

My paper focuses on the haunting aftermath of the COVID-19 deaths in India, particularly Kolkata, the pandemic's epicenter in the state of West Bengal. In Kolkata, the COVID-19-infected dead bodies, irrespective of religion or caste, were wrapped up in plastic and non-ritually disposed of by the state in landfills, disrupting both ritual practices and the closure typically afforded to the dead. As a then Kolkata resident, I witnessed the media circulate images of these piled-up bodies in trash bags, yet whether these bodies were cremated or buried was left to the assumptions of the public. Moreover, families of the deceased were denied the right to identify their loved ones, leading to a haunting ambiguity about whether a person was truly dead or still lost in limbo. In many cases, families were forced to wait months for death certificates, leaving them in a perpetual state of grief without closure, unsure whether their mourning was legitimate or premature.

Focusing on Hindu and Muslim populations that are majoritarian in Bengal, this paper explores how these non-ritualized deaths have become spectral presences that haunt the living. I ask, in situations like epidemics or pandemics, when there is no proper closure about the deaths and when bodies end up in wastelands, how do the families and the larger communities to which the dead(s) belonged perceive and grieve the loss? How do they symbolize the exclusionary rites on the inanimate bodies? In India, which still practices caste-based and religion-based untouchability, how is the mixing of bodies in the garbage pile seen by the respective religious communities? Through in-depth interviews conducted over five months in the summer of 2024 with Hindu and Muslim individuals who lost loved ones to COVID-19, this paper explores how the absence of customary rites has reshaped the way the afterlives of the deceased are imagined and memorialized. In doing so, I offer new insights into how grief is redefined and experienced in the wake of societal ruptures, highlighting the enduring impact of crises on collective memory and mourning practices.

Presenter(s): SREEMOYEE PAUL

Re-inscribing Heritage on the Mojave Road: Motorized Backcountry Exploration in the California Desert

This thesis examines how overlanding - motorized backcountry exploration in off-road vehicles - functions as a mode of settler heritage-making on the Mojave Road, a 130-mile trail traversing the California desert. Through ethnographic fieldwork with members of the Mojave Desert Heritage and Cultural Association (MDHCA) and participation in the annual Mojave Road Rendezvous, I analyze how overlanding re-inscribes settler colonial narratives onto desert geographies while engaging with military and recreational imaginaries of the Western frontier. Drawing on frameworks from settler colonial studies, cultural geography, and anthropology, I argue that overlanding contributes to what scholars term "settler amnesia" - the selective forgetting of Indigenous presence, sovereignty, and resistance - by romanticizing historical exploration and obscuring the region's colonial past and ongoing dispossession.

I trace the trail's transformation from Indigenous footpath to wagon route, military road, and now recreational site, revealing how heritage narratives mediate contemporary relationships to land, history, and identity. Overlanders reproduce cultural capital through slow travel, environmentalist distinction, and vehicle preference, while invoking idioms of authenticity, endurance, and rugged individualism. These practices are deeply entangled with the militarized and infrastructural history of the desert - a landscape shaped by World War II training sites, Cold War testing grounds, and postwar recreational development.

Through a methodology of patchwork ethnography, I explore how overlanders perceive themselves as heirs to the frontier ethos, drawing on settler nostalgia and environmental stewardship discourses. Yet these narratives often align with exclusionary conservation ideologies that marginalize Indigenous land relations and uphold settler territorial claims under the guise of preservation. I foreground how the Mojave Road's popularization reproduces colonial place-naming practices and materializes through rock cairns, guidebooks, interpretive signage, and other mechanisms that privilege settler histories. This thesis ultimately challenges dominant narratives of outdoor recreation and conservation as neutral or apolitical, and calls for deeper critical engagement with how mobility, infrastructure, and leisure reinforce systems of power, militarization, and Indigenous erasure in public lands and protected areas. By interrogating the cultural politics of overlanding, this work exposes how settler cultural memory is enacted and sustained through seemingly benign acts of travel and preservation.

Presenter(s): Carrie Zaremba

Resisting Specters: Resistance against Modernity and Developmentalism in Assam

In recent years, Assam in India's northeast has experienced a massive saffron wave, bringing in the promises of a new India. This promise of development also created a category of marginalization that furthered the historical oppression of certain social groups, particularly the Adivasi/Indigenous communities inhabiting resource frontiers, and subsumes the Adivasi movements of resistance and change, overshadowing efforts that were already underway. However, the Adivasi/Indigenous youth of Assam have adopted different modalities to resist exclusionary state policies of developmentalism and modernity amid the rise of Hindu nationalism and its saffron wave that poses a threat to their Adivasi identity, religion, and culture. Hence, through the student led

organizations, the youth are resisting the ghost of modernity, colonialism, and developmentalism. Drawing on eighteen months of ethnographic research over the course of three years in the Udalguri district of Assam (India), this paper explores how the Adivasi youth are challenging the ghosts of modernity and developmentalism and asserting their Adivasi identity through the integration of symbolism and semiotics function in political movements to disseminate knowledge about their communities and movement. This paper unpacks the ghosts in the ethnographic context providing an alternative mode of communication, resisting the normative narrative of the Adivasi communities rooted in a deficit-based rhetoric. By doing so, the paper challenges the normative epistemologies used to understand the marginalized communities in the periphery bringing in the stories of resistance from borders and frontiers.

Presenter(s): Asha Devi

When Incarceration Becomes Entertainment: A Reflection on Prison-Themed Leisure Spaces

This project examines how prison experience is repackaged as leisure, marketed either as "educational" or straight-up entertainment. My preliminary findings draw on first-hand visits to a few sites: the Alcatraz prison-themed bar in London; two former U.S. prisons now operating as "museums" (Alcatraz in San Francisco and Eastern State Penitentiary in Philadelphia); and several prison-break escape rooms. Each site sells its own "prison experience" as leisure: Alcatraz puts visitors in orange jumpsuits with cocktails in mock cells; Eastern State Penitentiary runs haunted night tours every Halloween; escape rooms turn jailbreak into a timed game. Even attractions that claim to "raise awareness" of mass incarceration rely on haunted tours, souvenir photos, and gift shops to keep visitors engaged.

This study explores the following questions: Why is prison considered an acceptable and profitable theme for leisure? What does it mean when real suffering becomes part of an entertainment experience? Using a mix of personal observation, brief visitor interviews, and analysis of promotional materials, I argue that both the "educational" and straight-up entertainment sites soften the cruelty of incarceration and help normalize it. By turning punishment into a product, these venues encourage the public to consume, and ultimately overlook, the harsh realities of the carceral state.

Presenter(s): Omer Hacker, Nguyễn Huy Hoàng, Tarryl Janik, Muyan Guo, John Dennehey, Holly Walters, Wellesley College, Department of Anthropology, Samantha Hochmann

Presentation(s): Incorporating the Spirit: Tech Companies' Sovereignty and the Inclusion of Religion

Tech workplaces are now inviting workers to "bring their whole self to work." This paper examined whether religion is invited as well, and under what circumstances. Studies of the realm of religion in the public space of the state assume a legally grounded position of minorities and individuals debating social norms (e.g., Engelke 2013; Mahmood 2015; McCrary 2022). Yet corporations are a kind of "private government" that holds one-sided control over work norms and rules, especially in the non-unionized tech sphere (Anderson 2017; Gershon 2024; Lofton 2017; Prentice 2022; Stern 2023).

Thus, when exploring the expansion of the corporate realm into more personal aspects of workers' lives, we need a different conceptualization of this private yet shared sphere. Based on fieldwork in the tech industry, I offer to conceptualize the accommodation of religion using the social framework of hospitality. This kind of relationship involves a combination of sovereignty and generosity on the part of companies, and conditional and temporal presence on the part of workers (Derrida 2000; Shryock 2012). I illustrate the norms for what I term a 'religion of guests,' which includes company sponsorship for various religious activities in the workplace that nevertheless dissociates these practices from broader religious-based social perceptions.

Presenter(s): Omer Hacker

Mơ Mơ Màng Màng: An Encounter with Thought, Otherness, and the Figure of Cá Ông in Quy Nhơn

This thesis examines the cosmological figure of Cá Ông, or the Holy Whale, in Nhơn Lý, Quy Nhơn, Việt Nam, as worshiped by the locals and fishermen for safe passage across the sea and harmonious weather conditions for seafaring business. Emerged from fieldwork among the fishermen and Xương Lý, Hừng Lương shrines' custodians is a series of ontological contradictions, the possibility that there is a fundamental clash on what Cá Ông is, not merely a fish, a human or a deity. I thus make a twofold argument as follows to reconcile with Cá Ông as a force of otherness. First, drawing from Viveiros de Castro's concept "perspective," I argue that Cá Ông has double perspectives, or a double-natured being. This formulation explains the phenomenon of "mơ mơ màng màng" (half-dreamy, half-awake)-a term used by Nhơn Lý fishermen to describe the effect of Cá Ông's saving on their state of being-not as a mere trance-like state but a slip across perspectives. Second, for Cá Ông's double perspectives to be comprehensible without resorting to the language of errors, Nhơn Lý fishermen continuously think through him instead of defining Cá Ông in discreet terms. The alternative conceptual shape to their thoughts, I advance, is a double flow. The analytic "mơ mơ màng màng" is then recast as a verb to signify such flows of thought. Combining these two arguments, this thesis makes a case for a mode of doing anthropology that sustains contradictions in motion-that when a thought exceeds itself.

Sacred Sanctuary & Soul Quest Ayahuasca Church: The Intersection of Transpersonal Psychology & Law

In this paper I focus on how transpersonal psychology and law affected individual and collective post-ceremony integration at Soul Quest Ayahuasca Church and inform the current integration approach and engagement with the DEA by Sacred Sanctuary (a new ayahuasca church that emerged from the bankruptcy of Soul Quest in 2024). I look specifically at how Soul Quest's syncretic approach to ayahuasca integration was made sense of by church members and was situated in the philosophy and ethics of a secular psychedelic integration training program called Being True to You. Being True to you is an integration program which employs a transpersonal psychotherapeutic approach to psychedelic health and healing. I argue that Sacred Sanctuary, who is currently seeking religious exemption from the DEA to use ayahuasca for religious purposes, draws from Soul Quest's oeuvre as well as nuances their approach based on Soul Quest's bankruptcy and denial for religious exemption.

Self-Apprenticeship', an Improvisation of Learning Amidst Structural Transformation -- Reflected in UK's AI PhD Training

The rapid development of artificial intelligence (AI) has profoundly transformed cultural production, challenging traditional knowledge-making paradigms. AI represents both a rupture-disrupting established educational and professional systems-and a new flow that fosters emerging connections and relationships. Intrigued by how AI designers-arguably the key architects of humanity's future-imagine and shape this future, I conducted ethnographic fieldwork at Cambridge and Oxford in the summer of 2024, focusing on PhD students in AI-related fields.

This study builds on Lave and Wenger's (1991) concepts of situated learning and legitimate peripheral participation, constructing the theoretical framework of "self-apprenticeship" to describe the learning and working modes of these AI PhD students. Self-apprenticeship reflects the loosely structured advisor-student and peer relationships in UK doctoral training, granting students greater autonomy in learning and resource-seeking. Their learning no longer depends on long-term physical co-presence but instead unfolds across physical and virtual spaces, centered on students' individual needs. Their interactions may be human-to-human, human-to-online communities, or even human-to-AI systems mimicking human cognition. This reconfigures the spatiality of "situatedness" in the digital age.

At the same time, AI as a highly applied field shaped by computing paradigms fosters a professional trajectory where the PhD is merely a stepping stone toward full participation in the AI industry. Rather than pursuing academic careers, these students aim for core positions in the tech industry, seeking high-level employment instead of repetitive or marginal IT work. However, due to the structural gap between AI research and industry in the UK, many PhD graduates must seek positions abroad, leading to further mobility and brain drain.

This ethnography thus examines how new technologies reshape learning models and academic trajectories while also revealing how education-conditioned by industrial globalization, capital flows, and concentrated knowledge production-unfolds across multiple spatial and temporal

dimensions. Through the lens of AI PhD students, this study offers insights into how flows of knowledge, talent, and labor interact with systemic ruptures, shaping contemporary and future educational landscapes.

Spirits in the Material World: An Exploration of Evil Spirits Within China's Material Culture

Evil spirits play an important role in Chinese cosmology. They are an enduring presence in daily life, always threatening misfortune for the living. China's extensive typology of demons and malevolent forces possess a variety of characteristics and abilities rooted in the diversity of regional belief systems. A fear of these evil spirits has led to the development of a protective material culture that is equally diverse and multifaceted. China's protective objects are grounded in apotropaic beliefs, relying on the ability of the physical world to manipulate the spiritual landscape. Symbolism and cosmology are key components - stones taken from sacred mountains are placed at entrances where sacred power is transformed into protective strength against evil. Meanwhile, mythological creatures guard vulnerable locations, and symbolically placed walls and features protect those living inside. This presentation examines how China's apotropaic objects, prevalent within the material record, provide an opportunity for greater insight into shared cosmology and the built environment. The challenges of changing public perception are also discussed as this material culture is both reclaimed as cultural heritage and reimagined in pop culture.

Techno-Dharma and Mechanical Maya: Automated Adoration in a Virtual Age

The research for the presentation began, in a very real sense, while I was conducting ethnographic work for my first book on Shaligrams, the sacred fossil ammonites of the Himalayas. While working in Nepal, and in Northern India, on Shaligram pilgrimage and interpretation from 2015 to 2018, I was introduced to a series of websites and online forums devotees had been using for several years as a platform for community building. These virtual connections were particularly important for many people at the time due to increasing challenges in maintaining a spiritual and ritual community in an ever-increasing international diaspora. But, as the user base had grown considerably in a short amount of time, the online practice of Shaligram worship was swiftly beginning to constitute something of a digital religious revival. The main idea, as one young Hindu explained to me, was that the use of social media and dark web media hosting (meaning that the sites were not visible to search engines) was allowing practitioners to "decolonize and protect" their ritual practices from outsiders and to ensure that the Shaligrams themselves were kept out of the hands of unscrupulous sellers and souvenir hunters. This, however, was only the beginning. I soon became even more fascinated by the growing relationships between religion and technology when, during the Ganpati festival in Pune in 2017 (and again in 2021), Pune-based tech company Patil Automation Pvt Ltd (PAPL) - followed by Monarch Innovation in Ahmedabad for 2021 - unveiled a fully robotic puja arm programmed to conduct aarti (offering of a fire lamp) to a Ganesh deity icon that had a concurrent cellphone app for users all over India to log into and view the ritual.

This paper aims to further my previous research into object-agency and ritual object-personhood by approaching two emerging concepts in the study of South Asian religion ethnographically. One, what is the relationship between Hinduism (and other included syncretic practices) and generative AI/LLMs? And two, what is the relationship between Hinduism and robotic ritual automation? These questions then form the foundation for an argument that will focus on the "haunted" nature of sacralized technology and digital ritual practice in South Asia today.

The Secret Afterlives of Ghosts: Uncovering Local History Through Hauntings

From creaking floorboards to ghostly whispers, haunted spaces offer more than spine-tingling stories—they reveal the cultural narratives communities choose to preserve, question, or forget. This presentation explores how paranormal tours at the historic Tinker Swiss Cottage Museum serve as a unique form of public anthropology, blending folklore, memory, and material culture to tell Rockford's story from the shadows.

Drawing on anthropological ideologies such as collective memory, symbolic interactionism, and liminality, we'll examine how ghost stories function as modern myth-breaking—providing insight into local identity, and the social life of buildings long after their original occupants are gone. The Tinker Swiss Cottage becomes more than a haunted house; it becomes a living archive, where the past speaks not only through preserved artifacts, but through the legends that linger in the shadows.

Attendees will leave with a deeper understanding of how paranormal investigations and interpretation can enrich historical preservation and offer emotionally resonant, community-driven storytelling that connects people to place—and to one another.

Presentation(s): Embodied Hauntings: Colonial Ghosts, Urban Exclusion, and the Defiant Presence of Peripheral Youth in a City of Northern Italy.

To be a young offender in a major city of Northern Italy means to possess an intimate knowledge of the socio-economic and symbolic geography that dictates where one is allowed to move—and where the rest of the city prefers to exclude and confine.

The streets, squares, and parks these youth inhabit are part of a «compartmentalized world» (Fanon 1961: 7), where they learn early on which spaces are permitted and which must be internalized, even devoured. In the peripheries, daily life feels like home: time is spent with friends in small parks, smoking on benches, navigating concrete alleys and polluted parking lots-every wall, shop, and street corner is intimately known. This fractured fragment of the city has its own border: not impenetrable, but clearly drawn. Those defined as «excluded» are in fact included in the space designed precisely for them (Benasayag & Del Rey 2008: 182). On that threshold, a complex relationship forms with the city center-a treasure island (Taussig, 2005) - the object of a «gaze of lust» (Fanon, 1961: 7). These youth know how to cross into its gray zones, often through inventive means. The city center is where their gaze reaches out, seeking what is desired but withheld: a place of expectations and conquest, where they imagine a stolen future.

To seize these central spaces-by making noise, breaking rules, disturbing indifferent passersby-is an attempt to inscribe a suspended presence, to reclaim the meanings on which exclusion rests.

Drawing from the experiences of four adolescents who participated in my fieldwork between 2022 and 2024, I invite my colleagues to reflect on the colonial hauntings that surface in the bodies, gestures, language, clothing, and music of so-called second, third, and fourth generations in Europe, resonating with youth cultures in the U.S.

If violence is the mark most visibly etched into the lives of youth in the margins, reading its postcolonial messages is a task that implicates us both as anthropologists and as citizens.

These youth express contradictory political claims and lay bare the crises of contemporary democracies: dis-integration, institutional and police violence, the flow of wealth and consumer goods, external and internal wars, substance use, and the failure of care services.

These "barbarians" of the peripheries, in Louisa Yousfi's sense, terrify and invade spaces from which they are systematically excluded-exposing the cruelty at the heart of the so-called civilization. Barbarism becomes a longing for what never was: the haunting question of what might have been, had colonialism not happened. To remain barbarian is to resist the Western Empire and its poisoned promises of integration: to resist becoming like the White Man. In the face of threats to existence, history, and the body, young offenders become vessel and voice of a rage that defies labels and constraints. They offer a privileged perspective on a world in decline - one they traverse with fierce clarity.

Haunting Repetitions: Dating Fatigue and the Ghosts in the Dating Lives of Young Danish Adults

In recent years, dating apps have reshaped how people meet, communicate, and imagine romantic futures across diverse contexts (Broeker & Spector 2024; Rye Thomsen & Poder 2022). Based on 15 months of digital and in-person ethnographic fieldwork in Denmark, this presentation examines how users navigate repetitive cycles of hopeful anticipation, rejection and disappointment, and withdrawal - with particular attention to the experience of repeated disappointments. For the male

participants, repetitions most often occur when others "ghost" them - either by suddenly stopping communication or deleting them - typically after exchanging 15–20 messages or on the day of a planned date. For the female interlocutors, it most often happens the day after having sex, or when their male partner suddenly withdraws after having shown strong interest and even imagined a shared future together after dating for a couple of months.

Informed by Byron Good et al.'s (2022) article "The Anthropology of Being Haunted: On the Emergence of an Anthropological Hauntology" and Tine Gammeltoft's (2013) theorization in "Potentiality and human temporality: haunting futures in Vietnamese pregnancy care", I develop the concept of haunting repetitions. Individuals who disappear or disengage do not simply vanish - they become spectral presences, not easily forgotten, but carried forward as reminders of past rejection and future uncertainty. These affective residues shape users' expectations and interpretations of new encounters, they question their desirability and self-worth, and doubt the possibility of future relationships and love. I argue that these haunting repetitions contribute to what has been termed dating fatigue (Degen & Kleeberg-Niepage 2025), which I understand as a mooded background (Throop 2024) characterized by exhaustion, ambivalence, and disillusionment that pervades contemporary dating culture. Further, acts such as ghosting or sudden withdrawal are not merely individual choices but are embedded in a broader techno-social system that normalizes emotional disposability and operates as a haunted infrastructure - where the past continually informs the present and shapes users' orientation toward the future.

This presentation offers two contributions: First, it contributes to an anthropological hauntology (Good et al. 2022) by illustrating how haunting is not only central in postcolonial or historical contexts, but also in the very different setting of Western, everyday digital life, where absence, loss, and unfulfilled possibility become ghostly forces in the pursuit of romantic love. Second, it adds to anthropological debates on technology and media studies discussions by showing in ethnographic detail how dating app users are entangled in cycles of repetition and emotional uncertainty, thereby advancing our understanding of the contemporary dating experience.

Presenter(s): Malthe Sebastian Rye Thomsen

Health in Decline: The Xavante Struggle Against Socioeconomic and Cultural Impacts. Systematic Review.

From a biocultural perspective, health is shaped not only by biomedical factors but also by social, cultural, political, and economic forces. In Indigenous contexts, health is a particularly vulnerable aspect, influenced by external socioeconomic and cultural changes often imposed by national society. The Xavante Indigenous community, located in the Central-Western region of Brazil, is one of the most extensively studied groups in the country regarding health. Despite a rich body of literature, comprehensive studies tracing the historical evolution of their health status through bibliographic analysis are notably absent. This research aims to fill this gap by examining the historical transformation of Xavante health, positioning it within the broader discourse of Indigenous health as a public health concern, while applying a decolonial perspective. I conducted a systematic bibliographic analysis to trace the transformation of health of the Xavante. A total of

109 academic publications meeting the inclusion criteria were identified. The analysis revealed sustained scholarly interest in Xavante health, and a comparative examination of the earliest and most recent studies highlighted a marked decline in Xavante health over time. Despite constant shifts in the administrative frameworks governing Indigenous healthcare in Brazil that resulted in the reduction in mortality rates and increased hospital service utilization, the overall health of the Xavante has deteriorated significantly. I critically analyse this trend through a decolonial lens, highlighting the limitations of existing health policies and interventions. I argue that the prevailing colonial approach to healthcare, compounded by the denial of culturally appropriate services, represents a clear violation of human rights. It underscores the impact of social determinants such as historical trauma, cultural disruption, and systemic inequality on the health outcomes of this community.

Presenter(s): Katarzyna Górka

Psycho-Pedagogical Governance in Chinese Colleges: Its Origin, Impossibility and Success

Increasing scholarships in psychiatric anthropology have engaged with the popularization of psychological knowledge, interventions, and management in China, termed as "psycho-boom" (xinli re) in recent years, among which some have considered the use of psychology as governance means to achieve political projects, largely borrowing the theoretical vocabulary from scholarships on neoliberal subjectification through psychologization in the West. Its entanglements in China with Confucian and Maoist legacies and affinity with political-ideological education, however, are less noticed. This paper, based on in-depth interviews with current college students in Shanghai and historical tracing of the policies of psychological interference with students, argues that the management and engineering of the Chinese students' inner worlds could be best described as "psycho-pedagogical governance," a term borrowing from the historian Greg Eghigian's discussion of forensic psychology in East Germany (2004). Psychological management in Chinese colleges often concerns less psychology as a specialized set of knowledge and practices than the Confucian ideal of pedagogy as making personhood and Maoist engineering of the socialist new person, which holds the same aim with political-ideological education and is historically and practically mixed with it. I will also examine the tensions within such governance, especially arising after the Chinese "psycho-boom" in the 2010s and the mental health crisis during the COVID-19 pandemic, which rendered the aim of remaking the new person practically impossible and the therapeutics inefficient. Despite such ineffectiveness, however, it succeeds through its specific institutional arrangements in producing unresponsiveness from students and maintaining the State's monopoly in discursive space.

Presenter(s): Florian Zhang

Shifting Crises: College Mental Health and Where We Go from Here

The mental health of college students is an area of growing concern in higher education. Studies have documented a rising burden of mental illness among college students at universities in the U.S. with the 2010s marking the beginning of an 'college mental health crisis' that has continued

into the present. Where did the 2010 mental health 'crisis' come from? Or rather, how did college mental health trends discursively move into the 'crisis' category? Certainly, the college mental health crisis is epiphenomenal to other political, economic, and social crises-crises that impact students' general well-being, emotions, capacity to care, and experiences in the world. I draw on archival analysis and preliminary fieldwork to discuss the coalescing crises that characterize contemporary student experiences. I offer a reflection on how we might approach the college mental health 'crisis' and move beyond care practices that localize distress as an individual psychosocial affliction. In doing so, I underscore the importance of expansive understandings of crisis, distress, and their solutions.

Spectral Belongings: Hauntings, Fragmentation, and Fugitivity within the Mad Transfeminine Death World

In the aftermath of empire, the transfeminine bodymind emerges as a haunted, ruptured archive, living within death worlds shaped by colonial, carceral, and biomedical violences. This paper traces how crip/mad/transfeminine hauntings materialize not only as residues of imperial violence but as insurgent practices of survival and world-making.

Drawing from crip of color critique, mad methodology, and decolonial embodiment, I theorize how transfeminine existence navigates fragmentation, opacity, and rupture as embodied archives of the colonial wound. Working through autoethnographic fragments, graphic counter-archives, and selfie aesthetics, I argue that the transfeminine body, rendered spectral by regimes of erasure and hypervisibility, refuses colonial logics of legibility and cure.

Haunting, in this context, is not a metaphor but a lived reality: an archive of survival stitched through broken narratives and non-linear temporalities. Building on trans necropolitics and desire-based frameworks (Tuck), I explore how trans/crip/mad bodyminds move beyond damage-centered narratives by claiming presence in rupture, forging spaces where alternative futures can be imagined.

Rather than framing home as a stable site of belonging, I theorize home as a hauntological trace, a spectral geography of memory, violence, and survival. Madness and disability are not objects of cure but insurgent epistemologies that dismantle colonial infrastructures of knowledge and care. The refusal to be healed or contained becomes a critical strategy against the biomedical and carceral technologies that seek to erase racialized, queer, and disabled life.

Through crip technoscience and abolitionist desire patchworks, I propose that transfeminine spectralities hold insurgent potentials for building fragmented, relational, and non-normative worlds. Haunting thus emerges as a form of political fidelity to lives lost and lives yet to be imagined - a way of tending to colonial wounds without seeking closure, and of inhabiting the ruins of empire to dream beyond its relentless grip.

This work insists that survival, rupture, and spectrality are not signs of brokenness but forms of radical endurance. Against the fantasy of normative healing, I center crip/trans/mad bodyminds as bearers of abolitionist, decolonial futures.

Title: Technology, Loneliness, and the Haunting of Human Connection

This paper explores the subtle yet powerful ways digital technologies permeate young people's social worlds, shaping their experiences of connection, selfhood, and loneliness. Based on ethnographic research with students at Northern Arizona University (ages 18-24), we examine how the presence of technology seeps into embodied relational life alters how intimacy is felt. Social media platforms and technology in the broader sense (including devices such as headphones) leave their imprint not just within media ecologies, but in the atmosphere of non-digital encounters even in the absence of technology. Technology here acts as a spectral force, both enabling and stranding, haunting the subjectivities and spaces between young individuals. These "ghost traces" of digital infrastructures call for phenomenological attention to how young individuals live, sense, and resist the often-invisible architectures that contour their relationships. This approach invites a reimagining of ethnographic attunement to include invisible and ambient loneliness.

Unhaunting the Self: Autoethnographic Rituals for Reclaiming Identity from the Wounded Past

We are all haunted. By fragments of former selves. By inherited shame. By the silences that shaped our becoming. In anthropology's 2025 invitation to explore Ghosts, this paper responds with a method: autoethnographic ritual, a healing practice and ethnographic tool for engaging what we can call the Wounded Self (Paul & Chopich 1998) or Protective Personality (Mortier 2019).

From van Gennep's rites of passage (1909–2019 reprint) to Turner's liminality (1969), from Csordas's embodiment (1994) to Luhrmann's sensory spirituality (2012), anthropologists have long mapped ritual as a site of transformation. My work continues that lineage, but shifts the gaze inward. Here, ritual is not an object of study—it is a methodology of un-haunting. A way to meet the internal ghosts that linger: unprocessed grief, cultural rupture, self-abandonment, and the inherited ache of dislocation.

Rooted in applied psychological anthropology and informed by somatic, narrative, and spiritual epistemologies, I engage with autoethnographic rituals as self-designed, embodied practices that bridge personal narrative with cultural inquiry. They invite the practitioner to engage memory, sensation, and meaning—not just intellectually, but ritually—through symbolic action and reflective awareness. In this frame, haunting is not pathology, but a call toward integration.

This paper (and related presentation) draws from my own journey as an immigrant woman, anthropologist, and practitioner. I outline four mytho-psychological stages-symbolic phases of identity evolution rooted in both lived experience and collective story:

- 1) Ancestral Bedrock - the quiet force of inherited values, silences, and unresolved legacy
- 2) The Fracture - rupture from homeland, language, safety, or sense of belonging
- 3) Terra Incognita - the liminal space of becoming, uncertainty, and grief
- 4) The New Topography - emergence of the Soulful Self, marked by voice, agency, and coherence

Although time will not allow for a full sacred theater enactment, I will briefly reference two original ritual technologies developed by Courageous Being, the center I founded: the Inner Bonding® Guided Journal and Courage Cards. The Journal supports emotional integration through a six-step framework designed by Paul and Chopich, while the Cards act as intuitive tools for symbolic engagement, emotional inquiry, and ancestral reconnection.

Through these tools-and the broader lens of autoethnographic ritual-this paper and related presentation position healing as both ontological and ethnographic: a site where theory meets embodiment, and where ritual becomes a conduit for re-membering the self. As anthropology opens to the immaterial, the haunted, and the embodied, we are invited not only to study transformation-but to undergo it.

3809 Compromised Bodies: Cultural Imperialism, Agency and the ban on Female Genital Mutilation in Senegal - a discussion with the author

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Lafayette (41st Fl)

Type: Interview

The Senegalese parliament decreed a national ban on Female Genital Mutilation in 1999. As only around a third of the Senegalese population practiced female genital cutting (FGC) at the time, policy makers did not expect that the new law would cause commotion. Yet, in Fouta Toro - homeland to the Fulani and so-called "cradle of Islam" in West Africa - the response to the new law was full of anger and violence. More than a decade after the ban Fouta Toro was known as "the most difficult region" for governmental and non-governmental awareness raising activities. Tires were burnt, international NGO delegates were threatened and kept inside a hotel, activists publicly speaking out against the practice were religiously condemned, people were afraid - not just of physical violence but also of the marabouts' spiritual power. Today, animosity towards the law is still palpable in the region. The ban, many locals say, is nothing other than an act of cultural

imperialism imposed by the West, and resisting the ban is paramount to maintaining the autonomy and integrity of lifeways within the region.

From the outside, opposition to the law and NGOs seemed unified and strong. On the ground, however, things were far more complicated. This ethnography unravels the continued political tensions surrounding national and international interventions that place protection of the female body at the center of their concerns. Sarah O'Neill shows how some claim the female body as a reproducer of cultural identities, with reference to duties through kin obligations; others refer to human rights and the state. By way of the many stories of women and men caught up in these debates, the book reveals the personal struggles and difficult decisions Fulani face, be they traditional cutters, religious leaders, mothers and husbands, divorced women, male or female activists.

3028 Corporations and the Afterlife of Empire

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Oral Presentation Session

In recent years, corporate sovereignty – as the exercise of power by a non-state entity – has seen increasing attention and theorization in anthropology with regards to its constitution alongside and against state sovereignty (Hull 2022; Appel 2019; Rogers 2015; Welker 2014; Cattellino 2011; Sawyer 2006, Hansen and Stepputat 2006; etc.). Corporations receive unique exemptions from national laws and jurisdictions, while challenging states' claims to exclusive territorial authority. Yet, the modern business corporation as we know it today is an artifact of empire (Kelly 1999; Barkan 2013; Stern 2023), and the imperial foundations of the corporate form continue to haunt the postcolonial world as companies gain control over lands, resources, and populations, frequently in collaboration with state actors.

In this session, we explore the relationship between corporations and states in the aftermath of empire in the postcolonial world. Contributions draw upon archival and ethnographic data to excavate and illuminate the making of corporate regimes as shaped by the legacies of empire, and the political-economic circumstances that have enabled the expansion of corporate regimes across Africa and Asia. In particular, we examine corporate strategies and interactions with state actors and agencies in the establishment and maintenance of corporate authority in the

postcolonial political terrain with the aim to shed light on the nature of contemporary sovereign power itself. Finally, the papers show new configurations of postcolonial state sovereignty as it acknowledges, incorporates, and/or defends itself from private interests in the long shadow of empire.

Presentation(s): Making the corporate sovereign: Concessions and company rule in Gabon, Central Africa

Private concessionary regimes have characterized Equatorial African forests since their first allocations by French colonial authorities in the late 19th century. However, initial debates in the metropole saw acute divisions between those who argued for the deployment of concessions as an efficient mode of privately financed colonization, and others who feared the threat of emergent corporate sovereigns overwhelming the nascent colonial state. Based on archival and ethnographic research conducted in Gabon, France, and the Republic of the Congo, this paper considers the triumph of colonial concessionary delegations as the grounds for contemporary corporate governance over peoples and resources in Gabon. Examining the architecture of past and present concessionary contracts, this paper argues that the concessionary company has been constructed as both an extension of the state and its most important constituent. Thus, while the social and environmental non-compliance of recently arrived Chinese logging companies appears to challenge the terms of their concessionary agreements vis-à-vis rural populations, the contractual position of concessionary companies in relation to the Gabonese state ensures them a political status – of sovereign-subject – that remains inaccessible to the country's nominal citizens.

Presenter(s): Wen Zhou

Mapping Empire through Oil and Climate

In the 1950s, oil companies initiated large-scale projects to establish networks of weather observation stations to facilitate oil extraction. By deploying hundreds of on- and offshore stations in specific regions, companies like British Petroleum and Exxon Mobil not only sought to extract oil but also to map climate, all while reshaping territorial power. This paper examines one such project in the Arabian Gulf, interrogating how the production of meteorological knowledge allowed oil companies to map regions in new ways where imperial influence appeared to be waning and postcolonial state sovereignty was still in flux. By leveraging weather and climatic knowledge to determine where infrastructure would be placed and which areas were most viable for resource extraction, oil companies effectively delineated new imaginaries of political boundaries. This study

contends that these oil industry practices facilitated the stabilization of imperial power by anchoring territorial claims in environmental science, linking oil exploitation with the reshaping of colonial geographies. In doing so, it engages the production of oil and climate as a lens for rethinking the relationship between the formation of postcolonial states, corporate sovereignty, and the changing contours of empire. It further offers a critical window into the ways corporations continue to co-produce sovereign power alongside and against the state in the long afterlife of empire.

Presenter(s): Emilia Groupp

Contested Sovereignty: Chinese-led urban development, city-making, and urban futures in Nairobi, Kenya

The paper focuses on city-making and on the stakeholders involved in it to identify ways in which sovereignty is at stake beyond the scale of national polities, especially in postcolonial contexts. The rise of Chinese private businesses in the construction sector in Nairobi, Kenya, since the early 2000s has transformed how the city is planned, built, and lived. In Nairobi, China-built urban infrastructure not only divides the local urban middle class but also evidences conflicting interests among Chinese stakeholders. In the paper, I'll explore the effects of China's financial engagement in Kenya, asking which kinds of contested visions of the city may emerge and how these visions are tied to concepts of citizenship, governance, and sovereignty in a postcolonial context.

Based on eight months of ethnographic fieldwork in Nairobi, the paper argues for the necessity of nuanced and careful differentiations among stakeholders, among which businesses, residents, and the local municipality, and proposes that we venture beyond the level of the nation-state – which in Kenya also means the domain of sovereign debt and government-to-government loans – to examine how sovereignty can operate. The scale of the city ultimately offers new vistas to the powers at work to produce visions of the future, which are often different from those that urban dwellers imagine and aspire to.

Presenter(s): Elisa Tamburo

The Making of a National Oil Company in India: Corporate Sovereignty at the End of Empire

The discovery of a large oil field in the state of Assam in India's northeastern periphery by the British-owned Burmah Oil Company in 1953 inaugurated an expansive political drama concerning the rights over resources in the nascent Republic of India. It also put the spotlight on the place of British companies in the economy of independent India. This critical event shaped the ground on which the question of corporate sovereignty in a postcolonial democracy would be articulated and reconfigured. Following the 1953 discovery, this paper explores the encounter between Indian state actors and British corporate actors, and traces the making of Oil India Limited, through a series of contested negotiations between the Government of India and the Burmah Oil Company. Despite the socialist aspirations of political leaders in India, the paper shows how the new oil and gas industry in India had to be crafted in significant alliance with foreign capital which gave new life to the British colonial-era rationalities of exploration licenses, concessions, and subterranean

property rights. Drawing on archival and ethnographic research, this paper explores the legacies of empire in the postcolonial Indian energy corporation as it takes formidable shape and works through immunities in the name of the national community in an ever-expanding "state-sanctioned permissive space" (Diphoorn and Wiegink 2022).

Presenter(s): Tanmoy Sharma

1922 Critique the World/Save the World: Ghosts of a Global Order in the Present

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Grand Ballroom E (5th fl)

Type: Roundtable/Town Hall

This roundtable explores how we conduct ethnographies of the international in the shifting world order. We bring together scholars whose ethnographic work spans key inflection points for political, legal and economic anthropology: the 1990s era of global democratization and rule of law initiatives (many of which struggle to continue in the present), the post-9-11 period of Bush Doctrine militarization and securitization, responses to the 2008 financial crisis, and the contemporary expansion of global authoritarianism and neo-imperial projects. In each moment, political, economic and legal anthropologists have tracked the role of international networks and institutions in constituting infrastructures and ideas about global orders, variously defined. Together, panelists bring over 30 years of perspective to the study of globalization and its imaginaries via ethnographic engagement, including global governance, human rights, humanitarianism, transnational NGOs, and the financialization of global capital. Key to our analysis is not simply that an era of internationalist world building is behind us. Rather in interrogating the conditions of possibility of that order and its legacies, we better identify the seeds of the authoritarian, carceral and grossly unequal logics of the present.

The roundtable will explore a range of topics including the rise of police states and the use of carcerality in conjunction with militarization and the authoritarian turn; approaches to financialization that center race as key to understanding the interrelated processes of elite financial resurgence; the integral relationships among rule-of-law-driven modes of internationalizing liberal democracy in the post-Cold War era, and rising populist, authoritarian politics. We ask how the very mechanisms that internationalized liberal proceduralism -- rights-based legal advocacy, initiatives of transparency and good governance and neoliberal market mechanisms -- are now implicated in liberalism's undoing. Building on varied research perspectives and research settings, with the common ground of "the global," roundtable participants will reflect on the unsettling of settled terms and terrain. We consider our earlier research, conducted in the heyday of globalization, in relation to the current ethnographic contexts we find ourselves exploring in our multi-polar world. What are the afterlives of the old order, and how do they shape our conceptions of the present? How do we study the global in this unsettled world, or do we abandon the project altogether? Our

comparative perspectives seek to identify historical resonances, and shadows of past paradigms and examine how these paradigms help or hinder political and legal organizing.

4280 Desire and Materialism: Anne Allison's Scholarship and Mentorship

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR D1 (3rd fl)

Type: Roundtable/Town Hall

This roundtable panel pays tribute to Anne Allison, a dedicated scholar, passionate teacher, and generous mentor whose work has left an indelible mark on the anthropology of capitalism in and beyond Japan. Throughout her career, Allison has illuminated the entanglements of intimacy, labor, precarity, and care in contemporary Japan and beyond, forging a distinctive blend of methodological experimentation and intellectual rigor. Her scholarship has advanced our understanding of capitalism not only as an economic system but also as an intimate, affective force that shapes everyday life. From the commodified fantasies and intimacies of *Nightwork*, to the enchantments of fantasy play and the disenchanted realities of economic uncertainty in *Millennial Monsters*, to the fractured social worlds and quiet survival strategies in *Precarious Japan*, and most recently, the existential confrontations with social death and precarious relationality in *Being Dead Otherwise*, Allison's work probes the emotional economies and social imaginaries that sustain and trouble contemporary existence. Beyond her writings, Allison's unwavering commitment to teaching and thoughtful mentorship have nurtured generations of anthropologists, modeling an engaged, empathetic, and courageous approach to both ethnography and academic life. This panel brings together scholars whose research programs have been shaped by Allison's scholarship. The presenters will reflect on the ways in which Allison's work has inspired their research and the ways she continues to inspire new modes of thinking, teaching, and being in the world.

4079 Dynamic Belonging: The Formulation of Social Bonds in South Korea

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Riverview II (41st Fl)

Type: Oral Presentation Session

This panel explores the diverse ways individuals and communities negotiate belonging within the dynamic landscape of contemporary South Korean society. Across a variety of social spaces, Korean individuals emphasize uri (우리 - "we" or "us") over the self, making community an essential facet of their lives. The purpose of this panel is to delve into uri's place in social circles of the dynamic cityscape of Seoul. Through five distinct ethnographic lenses-ranging from faith communities and food culture to labor, migration, and urban subcultures-this panel's research collectively highlights how social identities are shaped, expressed, and contested in everyday life. The panelists, throughout nine weeks of ethnographic study in the field, explore the daily experiences of Koreans as they choose or refuse to engage within certain social spaces, focusing particularly on how this is influenced by the development of bonds. Overall, through analyzing the role of various social spheres within Seoul, this panel seeks to contribute to a critical discourse on the formulation of belonging within a collectivist society.

Discussant: Charlotte Hancock, Brigham Young University, Department of Anthropology

Presentation(s): Education and Faith: The South Korean Balance of Religiosity with Schooling

The purpose of this study was to explore how the Church of Jesus Christ of Latter-day Saints (hereafter "the Church") provides spiritual experiences in order to strengthen the faith of their South Korean youth (ages 11-17). Youth in South Korea are known to be subject to rather demanding schedules, with school during the day, hagwon after school, and, for some, private tutoring into the night. At the same time, the youth program of the Church is also known to be very demanding of young people's time, with not just regular church attendance expected but also often early morning

seminary and evening activities being normatively expected of youth. Through 9 weeks of ethnographic research with young female Church members in South Korea, this study documents how South Korean young women navigate these multiple and significant demands on their time. This study's methods included participant observation in and around religious meetings, lessons, and activities as well as semi-structured/unstructured interviews about these youth's experiences with the Church. The majority of time was spent with teenage girls whose families attend church in Seoul. This research documents the ways that young women in the Church navigate their relationship to the Church while managing intense secular demands. At the same time, this research offers insight into the demands of being a young person in Korea today by documenting the first hand experiences of youth.

Presenter(s): Charlotte Hancock

Jeong in Korean Ping Pong Clubs

Jeong (정) is a Korean cultural concept that describes deep emotional and social connection that grows over time. Characterized by repeated reciprocal exchanges between people in a shared community, jeong is typically said to be found in tightly knit village communities, in families and between spouses, and in ban (반) homeroom classes in school. Scholars have suggested that jeong has been declining in urban life as social exchanges have become less reciprocal and more transactional (Olga Fedorenko, "From Unsaid Feelings to Frank Communication: Portrayals of Jeong in Orion Choco Pie Advertisements and the Encroachment of Emotional Capitalism in South Korea," *Korea Journal* 62, no. 4 (2022), <https://doi.org/10.25024/kj.2022.62.4.226>). In my research, based on two months of field research in which I participated in a ping pong club in Seoul, South Korea, I investigate how jeong may persist in the less formally connected community of the ping pong club. I ask questions such as: can the community formed by a ping pong club be well described by jeong? Is jeong more a function of repeated exchanges over long amounts of time, more a function of in-group belonging, both, or something else?

Presenter(s): Parker Skousen

Latino Immigrants, Calor Humano and Jeong in South Korea

South Korea has had a long-standing internal narrative about the relative ethnic homogeneity of its population. However, due in part to what its recently impeached president called a national emergency, namely, the birth rate crisis, South Korea is faced with a growing need for immigrant labor and thus for immigrants. The objective of this research is to understand how Korea's population is developing its relations with one particular group, Latino immigrants and travelers. In this research I consider the different cultural characteristics of Koreans and Latinos as they interact with one another. This research builds on research by a colleague (Lopez 2024) that pointed to the fact that Latinos in Korea felt a distinctive lack of warmth (calor humano) while living, working, and moving about in Korea. This finding is particularly interesting because it showed that the Korean concept of jeong (which, in practice is similar to calor humano) did not seem to translate to their

experience. This study employs ethnographic methods, mainly studying places where Latino culture has bloomed, such as celebratory festivals, restaurants, dance clubs/classes, etc., as well as included interviews. This research then analyzes how Koreans and Latinos interact in multiple settings, their comfort with each other and their cultures, their capacity to create relationships, and their general level of interest in one another.

Presenter(s): Bella Valdizan

Architectural Anthropology: The Influence of Our Built Environment

This project explores the intersection of architecture and anthropology by examining how the design and structure of spaces—both ancient and modern—shape human behavior, social interaction, and cultural meaning. Drawing on methods from ethnographic research and architectural analysis, the study investigates the anthropological dimensions of built environments and how physical space both reflects and produces specific ways of living, gathering, and relating to one another. Through comparative analysis, I will examine architectural elements in ancient sacred spaces such as temples, ziggurats, or pyramids alongside modern structures like museums, public buildings, and minimalist homes. This contrast will help highlight the continuity and transformation of spatial influence over time. The project will focus on how these environments guide movement, foster emotional responses, and cultivate collective identity or isolation. I aim to learn how intentional design choices—light, openness, scale, acoustics—are made with social and emotional outcomes in mind, and whether these ideas are informed by or diverge from the functions of ancient spaces. Ultimately, this research seeks to offer insight into the silent power of architecture: how it not only shelters but also shapes us. By placing modern design in conversation with the ancient, the project contributes to a deeper understanding of how space becomes a social actor in human life.

Presenter(s): Sergio Romero

Education Aspirations

This ethnographic study investigates how South Korea's social class system influences students' educational aspirations. In a society where academic achievement is closely tied to social mobility and job security, students from different socioeconomic backgrounds often face unequal access to educational resources, support systems, and opportunities. Drawing from my own background in the United States—where ideals of self-determination and individualism shape career narratives—this research contrasts how cultural and structural forces shape ambition and success. Through interviews with South Korean students currently studying in the U.S., along with field observations in South Korea during the summer, this study examines how class status affects students' perceptions of academic success, the types of careers they believe are attainable, and the pressures they experience. Special attention is given to the role of private education (hagwons), observations in libraries, and interviews with individuals who have become lawyers and doctors in Korea. This research aims to reveal how deeply embedded class differences contribute to shaping both opportunity and outlook within Korea's education system.

Presenter(s): Denisse Sanchez

Kimchi Culture and Food Community in South Korea

This research is based on 9 weeks of ethnographic research in South Korea, both in Seoul and the surrounding countryside. This research explores kimchi culture and food commensality within South Korea, focusing on how these play a role in people's everyday relationships. It also examines the impact of the industrialization of kimchi and the importation of Western goods on food traditions and commensality. Kimchi is an integral part of South Korea's food culture, and has been called the pride and identity of Korea by various scholars (e.g., Surya & Nugroho, 2023, para. 12; Surya & Ga-Yeon, 2022). In addition to the cultural importance of kimchi, this research also considers its health benefits - including those of other traditional foods - taking inspiration from and seeking to expound on the research of these scholars. This paper examines various aspects of kimchi and food culture such as son mat (hand flavor), yaksik dongwon (food as medicine), and small/local family businesses. It investigates how these cultural concepts affect relationships in South Korea and how industrialization has impacted, and still is impacting, these traditional concepts. Through ethnographic fieldwork, thematic and discourse analysis and coding this paper additionally explores the connections between food and wellbeing in Korean culture as seen in modern day interactions with kimchi and other Korean foods, as well as the history of kimchi in Korea.

Presenter(s): Rachael Channer

2764 Earthly Echoes: Beyond the Textual in Ecological Anthropology

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** MGB - Salon A

Type: Oral Presentation Session

The rapidly increasing scale of environmental destruction forges complex multi-species encounters and demands new modes of ethnographic representation. Recently renewed calls for multimodal ethnography, which has existed in the discipline for nearly a century, provide an avenue for scholars to address this need (Collins et al. 2017; Westmoreland 2022). In this session, we invite scholars working on more-than-human relations to reflect on how multimodality has influenced their research. We ask: How might non-textual vignettes uniquely capture the complexities of qualifying, moralizing, politicizing, or simply representing the relationships between humans and non-humans? How might multimodality promote cross-disciplinary dialogues? Multimodality is not just an alternative to textual representation in our discipline; it enacts a politics of invention that engenders new methods of knowledge production and analysis. (Dattatreya and Marrero-Guillamón 2019) Thus, scholars have advanced novel frameworks for examining 'landscapes' and multispecies relations, conceptualizing them as active agents and material expressions of socio-ecological histories. These approaches interrogate the spatial politics between species, the

semiotic dimensions of material phenomena at scale, and the affective and moral contours of human–more-than-human dynamics (Ahman 2024; Barra 2024; Dawdy 2016; Morimoto 2023; Roane 2022; Zee 2022). Alternatively, we ask how might multimodality produce "bad habitus," wherein power structures and knowledge systems are reinforced via the privileging of specific non-textual representations (Takaragawa et al. 2019)? This panel includes visual essays, photography, illustrations, film, audioscapes, and smellscapes offering new ways to think, feel, and engage with the entangled worlds we study.

Presentation(s): Closure, containment: ethnographic comics and their environments

Sequential art invests a great deal in the gutters – the frames between panels that allow readers to stitch together meaning by filling the gaps to create a continuous narrative. Popularised by McCloud's influential work, *Understanding Comics*, the principle of "closure" relies on the active participation of the reader to establish mood, pacing, and storytelling.

Economic anthropology offers a conceptual entry point to understand how financial instruments also rely on certain forms of closure through data-driven frames or models stitched into temporal sequence. In the collaborative ethnographic comics produced by the Paraguayan studio *CómicClub*, sequential art has become a powerful mechanism to engage the complex speculative logics of weather derivatives, climate insurance, and agricultural commodities markets. We find that crops such as sesame are subject to similar modes of containment. Containing sesame within an insurance frame also promises to contain values such as yield and purity, contain risk within the terms of a contract, and ultimately to contain the unknowable effects of the climate crisis. Can the productive melding of narrative closure in comics with the (un)contained promise of financial speculation offer novel theoretical entry points for anthropological theories of value in increasingly troubled environments?

Presenter(s): Caroline Schuster

Sonic Traces, Toxic Grounds: Witnessing Environmental Remediation Through Audio and Filmic Imagery

Brunswick, North Carolina stands in the shadow of nine former rice plantations and a toxic EPA Superfund remediation site. Human and more-than-human relations co-configured this landscape: hauntings of tidal irrigation systems endure as deep depressions, once used to move waters and now morphed through centuries into stagnant receptacles of a tar-like carcinogen—creosote.

This presentation will examine how film and audio are critical tools to render perceptible the often-invisible dimensions of this toxicity, and to limn crosswires between the legacies of fast (chattel slavery) and slow (ongoing toxicity) violences in post-industrial rural counties.

Through ambient soundscapes, fragmented interviews, and visual sequences attuned to stillness and distortion, I reframe ethnographic witnessing in environmental anthropology and ask: How could these sensory mediums evoke the affective weight of contaminated land? How could they interrupt the dominant narratives of cleanup, progress, or historical closure underpinning the ethos of 'environmental justice'? Rather than representational clarity, my approach privileges sensory dissonance and material traces—patterns of connection and rupture between the human and more-than-human in sound and filmic imagery—to register both the presence of toxic matter in landscapes and the social life of its remediation. I examine ethical and perceptual gaps in how toxic landscapes are narrated, addressed, or ignored.

Presenter(s): Ayluonne Txai Tereszkievicz

A Sense of Scents: Olfactory Explorations in Lemur Captivity

What can anthropologists learn through olfaction? To answer this question, this paper considers zookeepers and primatologists as they engage with the olfactory-centric world of lemurs. Among the most endangered primates on Earth, hundreds of lemurs live in breeding facilities in the United States and Madagascar, eventually to be rewilded in their native ecosystems. To improve lemur welfare in captivity, keepers provide intensive enrichment regimens that stimulate their senses. Unlike their primate cousins, however, lemurs have relatively poor eyesight and a very heightened sense of smell.

By illustrating how zookeepers and primatologists attune to lemur olfaction as a form of care, this paper first argues for the importance of sense-reorientation in multispecies encounters. I then consider ethnographic uses of scents more broadly. By presenting olfactory experiments and "smellbooks," during the talk, I invite listeners to reflect on the sense's ethnographic affordances (and limitations). Lastly, I conclude by underlining the political dimensions of using smell in my work. Responding to critiques of visibility and ocular rhetorics as prompting colonial and scientific violences, I offer olfaction as an exploratory means of engagement with ethnographic encounters.

Presenter(s): Quinn Georgic

Collaging earthly inheritance: Heirs' ecologies and Black land strategies in the American South

This paper describes my efforts to use visual methods—collage—to think through the ways Black families in the American South tend to and protect family land, specifically heirs' property. Heirs' property denotes property ownership that has been passed down from generation to generation among family without having the land title of the land changed from the original owner. Over time, when title is not changed, a piece of land can have upwards of hundreds of legal owners who each own non-geographically specific "share" (or interest) in the land. This category of land ownership is

common among many Black southern families and has been linked to the widespread dispossession of Black land ownership in the US over the past century.

This paper explores the material and cultural dimensions of heirs' ecologies through collage (deconstruction, reconfiguration, and re-creation of images and objects) as a way to question the reductive and extractive relationships to land that heirs property, as a legal category, represents. Materials are sourced from fieldnotes, ephemera, legal documents, scholarship, and land (soil), and layered together to think through the distinct human-earthly relations between kin, soil, home, and law encompassed within heirs ecologies among Black families in the American South.

Presenter(s): Monica Barra

Qamaya Puka: Multimodal Experiments in Anti-Colonial Ecological Film

The cochineal beetle has been cultivated in the Americas since pre-Hispanic times to produce bright red and pink pigments. The only source of natural red and pink color, cochineal has seen a resurgence in Peru due to growing global demands for organic dyes used in fashion, food and cosmetics. This industry not only relies on the labor and knowledge of Andean Indigenous communities but is seen as environmentally sustainable—making arid lands productive while mitigating climate change. Using cochineal, its host cacti, and other organic materials from this landscape to process and produce film, has offered a methodological approach to center the politics of matter to explore how aesthetic and ethical ideals configure ecological relations tied to the material demands of more-than-human worlds, indigenous lives, and notions of capitalist sustainability. The Qamaya Puka experiments, explore the materiality of color to challenge the bad habitus of our modalities of documentation and consider the entropic force of cochineal—as pigment, animal, symbol—and its complex connection to Indigenous histories, presents, and futures. Besides moving away from the use of photo-chemicals to produce images, these experiments are exercises considering new ways to embrace ethnographic refusals while accounting for indigenous knowledges and material ontologies.

Presenter(s): Patricia Alvarez Astacio

6898 Echoes from the Past: How Political Culture Haunts Medical Education and Patient Advocacy

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Regent

Type: Roundtable/Town Hall

Medical education does not exist in a vacuum. It is shaped by historical legacies, political constraints, and institutional structures that determine how future physicians conceptualize patient advocacy. In today's shifting political climate, legislation increasingly limits discussions of racism and structural inequities. The ghosts of past medical injustices, such as medical research conducted on enslaved people, continue to influence training, practice, and the doctor-patient

relationship. Anthropology has an important role to play in shaping the future of medicine. This roundtable explores how historical reckonings, or the lack thereof, manifest in medical curricula, health policy, and advocacy efforts.

Participants will examine how race-based medical theories persist in contemporary training, how hidden curricula transmit past ideologies, and how political restrictions, such as anti-DEI legislation, shape medical students' preparedness to address health disparities. Drawing on research in medical anthropology, science-based best practices in patient care, and firsthand experiences in medical training, this discussion will highlight the tensions between historical accountability and present-day political constraints.

This session focuses on both the structural challenges and the pathways forward. It aims to brainstorm strategies for involvement by anthropologists as advocates, educators, and practitioners. We'll explore insights into how political culture influences medical education and what can be done to ensure that the next generation of physicians is prepared to advocate for equitable healthcare.

4157 Embodied Archives: Bones, Memories and the Afterlives of Enslavement and Genocide

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Riverview 1 (41st Fl)

Type: Oral Presentation Session

This panel concerns the present absences of embodied archives (Weller 2021, Semerdjian 2023), the simultaneous materiality and spectrality of bones and bodies, of memories and memoirs. How might we approach these tensions and complementarities, both methodologically and epistemologically? The panel has a comparative focus on two geographies and histories and their afterlives: the Armenian genocide and trans-Atlantic enslavement. We center on ethical questions that arise around refusal: when should bones (or ghosts) be left alone, and when do we engage? How do we dig deeper without enacting further violence on the living and the dead? How does one navigate the field when the ethnographer herself is turned into an embodied archive? Do we turn to spectral methodologies, echoing Navaro's (2020) call for a negative methodology for the study of mass violence with a focus on erasures and voids?

The panel – an interdisciplinary conversation of bio-archaeologists, social anthropologists, historical anthropologists and a historian– traverses landscapes that offer intertwined material and spectral traces of genocide and enslavement: in Van, a Kurdish region in Turkey, where the quest for enchanted gold unfolds amid bones and cryptic maps of century-old genocide; in the American mid-Atlantic, where ancestral remnants of slavery persist as sticky and tricky palimpsests; in early 20th-century Istanbul, where a writer, having barely escaped genocide but lost his entire family, wanders incessantly through the urban landscape as an act of creativity and survival; and in the South Atlantic, where attempts to (re)articulate the remains of the "liberated" can be sources of simultaneous repair and constraint.

Organizer: Ayse Parla, Boston University, Department of Anthropology, Andreana Cunningham

Chair: Ayse Parla, Boston University, Department of Anthropology, Andreana Cunningham

Presenter(s): Anoush Suni, Andreana Cunningham, Delande Justinvil, American University, Ayse Parla, Boston University, Department of Anthropology

Discussant: Ayse Parla, Boston University, Department of Anthropology, Andreana Cunningham

Presentation(s): Ghostly Gold and the Material Traces of Genocide

This paper examines the material and spectral traces of histories of genocide through imaginaries of buried and enchanted gold in the Kurdish majority region of Van in Eastern Turkey. A century after the Genocide of 1915 destroyed the Ottoman Armenian community of the region, Kurdish treasure hunters imagine, search for, and unearth the material remnants of that violent history. They hunt for gold but often encounter bones as they dig in cemeteries and around medieval churches, their efforts often thwarted by enchantments that keep them at bay. Treasure hunters rely on maps with captivating images, old texts in incomprehensible alphabets, and inscriptions with cryptic messages. These maps and images engender new imaginations of the past, present, and future, as Kurdish residents of Van—a landscape marked by historical and contemporary violence—seek to read the material traces of the past as they imagine possible futures enriched by treasure. As they attempt to access the information held captive within these enigmatic texts and images, treasure hunters also seek an interpreter who can guide them to the riches they desire. As an Armenian-American ethnographer studying the traces and remnants of the Armenian Genocide in Van, I reflect on the way that Kurdish treasure hunters position me as the missing link, the key to the cypher who can unlock the secrets in the maps, and as a living, embodied archive, who can restore the severed link between past and present.

Presenter(s): Anoush Suni

Disorientations of Researcher and Bone: Pivots in conceptualization of the material legacies of enslavement in the South Atlantic

Despite the growing emphasis in skeletal research on descendant community collaboration and conceptualization of remains as complex and inherently valuable, tensions persist in skeletal analysis. The process of disarticulating and rearticulating remains—recording bone measurements

and later integrating them into a composite interpretation of a person—forces researchers to dramatically pivot between seeing remains as scientific objects and as individuals with intricate past and present lives. This process risks overexposing the intimate histories of the dead, projecting false life onto them, and in some cases causing irreparable harm. I apply these considerations to a case study of 19th century "Liberated Africans" who were laid to rest in St. Helena, whose dislocations reflect both the horrors of trans-Atlantic enslavement and their ensuing relocation to a transit zone in the South Atlantic Ocean. Skeletal and archival evidence boldly inscribe their fraught navigations of surveillance, health, and kinship in this transitional home. However, the processes of dis-/rearticulation from these data, which may profess to rehumanize, have the potential to instead flatten the material legacies of the "Liberated Africans." Further, these processes can clash with modern St. Helenians' own entanglements with the humanity held at this site of the dead.

Presenter(s): Andreana Cunningham

Residual Impacts: Palimpsests as windows into resituating enslavement era sites and embodied archives of the Black Atlantic

This work explores the concept of dislocation—understood as the coercion of bodies out of place historically, socially, and spatially—not merely as a violent act of erasure, but as indirect evidence of prior existence. By acknowledging death, loss, and removal, dislocation simultaneously recognizes the presence of lives and bodies that once were. My research centers on Black ancestral remains, with a focus on the DMV area, but situates these remains within broader Atlantic heritage contexts. Influenced by Marisa Fuentes's frameworks of the body and the archive—specifically the body of the archive, the body in the archive, and the body as the archive—I employ these concepts to frame my contributions. Through the notion of "residues" as persistent, even "sticky" traces of the past, I emphasize the importance of critical fabulation and speculative historiography in uncovering the traces that guide the work of bioarchaeologists and archivists alike.

Presenter(s): Delande Justinvil

The Limbs and Bones of Hostage Writing and the Art of Survival After Genocide

Walking- as- writing is pivotal to the artistic self-fashioning of Hagop Mintzuri, pivotal intellectual of early 20th century Istanbul, prolific short story writer, columnist, bread distributor, school teacher, baker, secretarial clerk, fodder seller, coal seller, church caretaker, and genocide survivor. This paper follows in the footsteps of Mintzuri's *Istanbul Memories* (1897–1940), first to honor him as a meticulous chronicler of urban life, one who offers exemplary thick descriptions of how class, ethnicity, and nationality were inscribed and performed in fin de siècle Istanbul, through the Armenian Genocide, and World War I, and extending into their aftermath. At the same time, the paper takes a step back to reckon with what it must have meant to continue to walk and observe when collective mobility for surviving Armenians was violently ruptured. How does an author navigate a city that is not only exclusionary but also haunted by an attempt to annihilate the walker? How does one go on walking and writing, when one's entire family was marched to their deaths and when each step carries the body into a denialist present that refuses to acknowledge

one's status as a survivor? I also ponder questions of method and archive: how does one conduct an ethnographic, historical, and embodied reading of a memoir that hovers between what Weller (2021) describes as present absences and absent absences?

Presenter(s): Ayse Parla

8050 Ethnography, Voice, and the Question of Violence in Anthropology Today

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Grand Ballroom A-C (5th fl)

Type: Roundtable/Town Hall

This roundtable brings together an intergenerational group of cultural and medical anthropologists to reflect on how conducting research in contexts marked by conflict, war, and violence influences ethnographic writing and pedagogical practice. Drawing on fieldwork from diverse global settings, we explore the complex interplay between ethnographic voice and the role of autobiography in anthropological knowledge production.

Our conversation is driven by a shared curiosity about how sociocultural anthropology engages with the embodied and affective experiences of ethnographers working in environments shaped by both historical and ongoing violence-where human suffering and the ruptures of everyday life-are continuous and deeply entangled. In response, we trace three interconnected threads:

First, we explore autobiography not as confession or solipsism, but as an epistemological and ethical mode-one that reveals the porous boundaries between knowledge of the self and knowledge of the other. This perspective invites relational accountability and attentiveness to the complexities of centering the self within the entanglements of fieldwork.

Second, we reflect on how fieldwork lingers in the form of echoes, fragments, and unresolved (sometimes unanticipated) traces. These often emerge belatedly-registering what exceeds narrative closure-or surface as disruptions that resist being flattened into coherent ethnographic accounts. Recognizing that meaning often unfolds gradually, we ask how ethnographic writing might create space for these nonlinear and affective dimensions of experience.

Third, we consider how violence challenges us to rethink pedagogy. We approach teaching as a space where the ethical and emotional complexities of fieldwork can be acknowledged rather than suppressed. This involves cultivating learning environments that support vulnerability, critical reflection, and care. Rather than reproducing harm or attempting to neutralize the affective weight of field experiences, we emphasize pedagogical practices that hold space for what is carried back from the field-its traces, tensions, and unresolved questions.

Ultimately, we ask how proximity to violence, and the entanglement of personal and collective histories, shapes the form and content of our writing. At times, ethnographic texts may appear

almost ghostwritten, mediated through silence, refracted through the voices of others, and marked by the weight of what remains unsaid. In conceptualizing ethnographic voice as embodied and relational, we seek to write and teach in ways that trouble the notion of context as something added "from the outside." Our aim is to reflect on how the ongoing work of reckoning-with violence, with the past, with ourselves-can illuminate, rather than obscure, the communities with whom we work and the stories we are still learning how to tell.

2958 Exceptions to Exceptionalism: Toward a New Anthropology of France

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Studio 10

Type: Oral Presentation Session

In ethnographies of France and francophone contexts, ideas about tradition, stability, and cultural coherence rest in permanent tension with cultural crises, rapid demographic change, and social unrest. As Susan Rogers observed over twenty years ago in an Annual Review article, tropes of "social disarray and exclusion" have largely been taken for granted as "social problem[s]...to be analyzed in terms of the breakdown of institutions of integration" (2001: 493). On Rogers' view, central to both mainstream narratives of social change in France, and to anthropological studies of that change, are questions about hegemonic culture, powerful institutions, and the state. Alongside these idioms, however, there has been a consistent ethnographic focus on "social relations expressed in the symbolic and material practices of everyday life" (Ibid).

In this respect, there are at least two longstanding, intersecting themes in ethnographies of France and French empire. Firstly, scholars have wrestled with the seemingly irreconcilable contradictions between "top-down" and "bottom-up" ethnographic approaches. While the former home in on (mainly Parisian) political and economic institutions, the latter figure France from the perspectives of rural villagers, banlieue and outer-seas department residents, migrants, and other marginalized subjects. Secondly, conversations about fragmentation and coherence often implicate fraught geographic divides. That is, scholars have tacked continuously between romanticized visions of the rural heartland and the turbulent realities of a racially riven, postcolonial (sub-)urban contexts.

This panel asks whether and how these dynamics in the anthropological study of French and francophone contexts have shifted, and, if we continue to recycle these tensions, what this might suggest for new ethnographic approaches. How can we better interdigitate imaginaries of France as

a holistic, durable social order with attention to fragmentation and crisis? How might we track political instabilities and mounting extremism without reproducing the simplistic divide between Paris and la France profonde, or between metropole and colonies? To focus our discussions, we home in on exceptions and exceptionalisms. If French people have long seen themselves as participating in an exceptional liberal, humanist, Republican tradition, then ethnographers of France have proved particularly adept at illuminated exceptions to this exceptionalism (Ticktin 2011, Fernando 2014, Fleming 2017, Beaman 2017, Silverstein 2018, Kleinman 2019). Emphasizing contradiction and paradox, we seek to transcend the polarities that have long marked the anthropology of France and French empire.

Presentation(s): Citizens Beyond Borders: French Exceptionalism in the Era of Transnational Migrant Rights Activism

Based on an ethnography of a transnational migrant rights network made up of overlapping activist collectives in France and West Africa, this paper examines how activists both engage with and contest French traditions of labor rights, international solidarity, and activist struggle. By following the trajectories of activists in the network, I propose a methodological approach that examines how people encounter French exceptionalism and its paradoxes in practice. I argue that West African activists offer a model for confronting France's longstanding "racial project" (Beaman 2017) by creating non-hierarchical networks that mobilize the "prefigurative politics" (Graeber 2014) of resistance, whereby networks' structure and function seek to establish the equitable solidarity and social justice that constitute the ultimate objective—even in the face of crisis and setback for migrant rights. This paper concludes by reflecting on the methodological lessons of decentering France as the ethnographic focus, as well as the possibilities and limits of mobilization given increasing deportations, border violence, and rights violations that further question the relevance of the universalist model.

Presenter(s): Julie Kleinman

From Media Exceptionalism to Mediated Nationalisms: Thoughts Midst Fieldwork with the French Far-Right

Mass media in France have long served as sites of French exceptionalism and cultural protectionism, perhaps most famously through the 1996 Toubon laws which required that 40% of

radio songs be in French. French public media, especially through TV, are among the most robustly funded in the world, as are France's press subsidies, which total €400-€500 annually. The Ministry of Culture has powerfully shaped what French people see and hear on screens, and this has generally been understood to be in keeping with ideas about the unifying, edifying functions of Republicanism. In this paper, drawing from my first project at the TV channel ARTE, and with recent examples from fieldwork among supporters of the Rassemblement National and other far-right ideologies in southern France, I demonstrate how French media exceptionalism has come under attack from the right as "establishment propaganda." I argue that a decades-long mediatic stability and coherence (namely, as a public good and commons) is loosening and fragmenting. I detail how people in one southern French town are "tuning out" from mainstream media sources and increasingly connecting to digital platforms and apps like Telegram, where they find alternative and often extremist political sources and perspectives. I conclude that new tensions and paradoxes are emerging through novel, competing mediated nationalism(s), corresponding to new social and cultural polarizations that are at once local and unevenly national.

Presenter(s): Damien Stankiewicz

The Melancholy of the Universal: Rethinking French Republicanism

Many have shown that the French ideology of Republican Universalism paradoxically depends on a racial and cultural "differentialism" (Fassin 2011). Put otherwise, exceptions are integral to French exceptionalism: Universalism particularizes even as it claims to unify (Schor 2001, Camiscioli 2009, Wilder 2005). Ethnographers have understandably focused on showing how the paradoxes of Republican Universalism are displaced onto marginalized subjects (e.g., Fernando 2014). However, little attention has been devoted to how white French subjects experience and inhabit this ambivalent political ideology. Documenting these experiences is critical for understanding how white French people maintain their power.

This talk builds on "third wave whiteness studies" (Twine and Gallagher 2008) and French Whiteness studies (Cohen and Mazouz 2021) to ask how white French people experience the contradictions of Republican Universalism. Through ethnographic portraits of "Primitive Expression" practitioners, white French people who mimic African spirit possession rites, I show how Republican Universalist ideology leaves white French people with a melancholic orientation to racial and cultural difference. While they fear and reject these forms of difference, they also feel a deep yearning to embody and incorporate them. Ultimately, this talk argues that thinking through Universalism as a form of melancholia (Freud 1917, Butler 1997) changes the way we think about French hegemony.

Presenter(s): Luke Forrester

Postcolonial Marriage Exchange in France: l'amour est dans le pré?

Since the turn of the millennium an explosion of research has emerged on transnational marriage and kinship in France; much of this research has focused on urban settings, where narratives of "unruly migrant kinship" and threats to the French national family abound. As is so often the case,

the focus on crisis and breakdown in urban centers tends to imply that more provincial French contexts remain much as they always have – part of a romanticized vision of la France profonde. They contribute to a synoptic illusion which obscures the important continuities between rural and urban contexts as well as the ongoing interdependence between (former) colony and (former) metropole. Building on these observations, this paper explores the formation of a system of postcolonial marriage exchange between men in rural southwest France and women from the former French colony of Madagascar. I show how marriage between French men and Malagasy women simultaneously challenge and uphold aspects of racial and gender hierarchies and contrast this case with other examples of France's reliance on their overseas empire to repopulate rural areas of French society. The paper concludes by considering some of the unexceptional, everyday aspects of social change in contemporary France.

Presenter(s): Jennifer Cole

A Faithful Restoration: Reconstructing France as Exception through Notre-Dame

A number of narratives imagine France as the ultimate expression of liberty, secularity, and equality, despite the violent histories of missionization, colonization, and enslavement that it has pursued around the globe. The myth of France's exceptional status is what necessitates its exceptions. The exceptions are those whose experiences and critiques of France deny the nation's France's exceptional status as a space of true freedom and equality and, therefore, must be refused. Key to rethinking the anthropology of France, therefore, is the need to address the historical formation and ongoing reproduction of its myths, a task that requires addressing France in ways that exceed the Hexagon. As the literary scholar Jared Hickman has argued, in order to come to terms with our current world order, we need to address Europe not as defined primarily by its "secular," but by its "global" condition. In this paper, I will explore visions of France in its "global" condition by analyzing the expansive work necessary to assert France's exceptional status through the "faithful restoration" of the Notre-Dame cathedral. Relying on exhibits, publications, lectures, and interviews that asserted the necessity – and necessarily "faithful" – reconstruction of the edifice to its exact form prior to the 2019 blaze, I will highlight the surprising moments when France's exceptions – or its "global" condition – rose to the surface and had to be contained.

4134 Feeling in Illiberal Times

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Oak Alley (4th fl)

Type: Roundtable/Town Hall

Across the world today various forms of racial and ethno-nationalism, elite capture, and eugenicist rhetoric are on the rise amid a renewed contestation over so-called rational knowledge at a level not seen since the "science wars." In the United States, for example, white supremacist power thrives on the cultivation of anger, disgust, resentment and victimhood among its supporters to

animate the cruelty and vigor of violent actions ranging from brutal anti-immigrant carceralism, to the autographing of bombs destined for Gaza, to the promotion of anti-masking and transphobic policies. In India similar feelings embolden anti-Muslim violence, while in France they enable the proud wearing of Nazi uniforms and attacks on those they call "Islamist-leftists." This panel asks: what does illiberalism feel like, and how do people enact or endure those feelings? Liberalism offers us a grammar that focuses on sympathy, compassion and tolerance, which enable both care and violence. How might we expand or nuance our affective grammars beyond liberal feelings, to understand this growing underbelly of discontent, and its vicious enactments? Liberalism was never innocent, but its violent dismantling leaves us to wonder about the built-in cracks in its architecture, and to question how it was ever the ground we stood on. Even as innocence, that cornerstone of liberal affect, speaks in the language of life when used by illiberals – the life of the unborn child – it has fed their desire for death: from banning vaccines and masks, to promoting genocide. We ask, how do claims to innocence actually underlie the slide into illiberalism, rather than protect against it?

Together our panelists will pursue what the loss of liberalism feels like for those who ever believed in it: from the loss of academic freedom, which has translated into what seems like an event of an entirely different order: students being kidnapped by ICE and detained and deported; to the twisting of any implied or assumed community of care under covid to a politics of distrust and disconnection. We will consider the rapacious desires of illiberalism, to redo the world: a spectacular appetite for deportations, for numbers, for agencies and capacities demolished. How do people feel these forms of destruction as celebratory, even ecstatic, from the US to India? For instance, the inauguration of the Ram Temple, erected on the site of Babri Masjid, which symbolized the squashing of Muslims in India, generated new feelings of pride, joy, and ecstasy as people celebrated across India. Finally, as we contemplate the feelings of illiberalisms and lost liberalisms, what are the surplus effective grammars that we are seeing emerge, captured by neither of these, from indifference, respect, discomfort, to comradeship and pleasure?

8211 Gesture Politics: Powers and Circulations of Mimetic and Memetic Performance

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** MGB - Salon C

Type: Oral Presentation Session

Elon Musk's attendance at Donald Trump's 2025 presidential inauguration became a key focus for news platforms reporting on the event. What attracted most attention was not anything he said or did, but rather a gesture he performed while celebrating the moment, which both drew attention and played on deep and anxiety-laden ambiguities over its meaning and potential historical resonance. The term "gesture politics" tends to imply an empty yet demonstrative action, oriented toward the expectations of an assumed public. Together with other idioms such as making a "formal" or "official gesture" it contributes to the understanding of gestural performance as something somehow empty, lacking meaning. However, Musk's action (later controversially copied by other public figures, ranging from priests to politicians) suggests a richer range of interpretations, pointing not only to the ways in which gesture might play simultaneously on absence and plenitude of meaning, but also to its capacity to provoke both mimetic and memetic forms of circulation: embodied signs that may be semantically obscure yet socially consequential.

Analysis of gesture reaches into the history of anthropology. Tylor, Boas, Mead, and Mead & Bateson, all considered the role of gestures in social interaction (Kendon, 2019). Marcel Jousse, now relatively unknown in Anglophone circles but regarded by some as the founder of an anthropology of gesture, was a Jesuit scholar and student of Mauss (Sienaert 1990). However, Adam Kendon (2019) argues that after Lloyd Warner's (1937) work on signs in North Australia, there was only one article published in 1954 before he published his first piece in 1975. More recently, what Michael Lempert (2019) calls the 'fitful history' of gesture is undergoing a revival. Its interdisciplinary potential is being appreciated anew, alongside its capacity to shift across themes relating to ideologies of gesture (Hoenes del Pinal 2011) and broader questions of cognition and language development (Cartmill 2022). Here, our particular interest is in two, interrelated themes: 1) connections between gestures and social power that emerge because of the ideological work they perform beyond spoken language (Hall, Goldenstein, & Ingram 2016); 2) the ways in which such social power is itself constituted by the capacity of gesture to circulate widely through performances that are both mimetic and memetic.

Presentation(s): Lifting for the Lord: Muscular Christianity and the Gestural Politics of Orthodox Christian Conversion

Gesture in Orthodox Christianity is most readily encapsulated by one singularly famous gesture: the sign of the cross. It is ubiquitous in Orthodox practice and performed by lay and clergy alike, often seemingly through unconscious habit. Despite this unconscious usage, gestures in Orthodoxy historically play an intriguing, often political role. Recent trends in Orthodox Christian conversion, particularly in the United States, necessitate a focus on gesture. For some newer converts, the sign of the cross is not the primary gesture of Orthodoxy that it has been for longstanding members. Rather than using the sign of the cross as an icon of the entire faith, a new genre of gesture has emerged among "Orthobros" that indexes a specific vision of masculinity in Orthodoxy. Orthobros are an archetype of young men drawn to Orthodoxy for its perceived masculinity amidst what they deem a feminization of Christianity. Using the framework of Muscular Christianity (a twentieth century movement that mirrors the express concerns of Orthobros), I propose to examine the ways in which these Orthobros enact masculinity, particularly through weightlifting. The indexicality of this gestural weightlifting "lifts" a particular vision of Christian manhood and is further compounded by the memetic nature of online circulation. Finally, the politics of Orthobro conversion also represent a figurative "gesture" towards Russia – alongside ideals of authoritarianism and masculinity embodied by its politics

"We are not dancing; we are making gestures": gestures and embodiment among children in the most Evangelical city in Brazil

Gesture is a native category among some Evangelical groups in Brazil. They call "gestos" gesticulate especially with your hands and arms along with a song. Gesture in this sense entails acts performed in collective contexts, and are accompanied by loud singing. Despite its similarity with dancing, the two actions cannot be mixed up. In the most Evangelical city in Brazil, Abreu e Lima, it is widely known that dancing is a sin while making gestures is not. The number of Evangelical Christians in Brazil grew from 6% to 22% in thirty years, however in the city discussed here, this number grew close to 50%. In research among 3rd grade children in a public school in this city I found that the local Assembly of God is an important center of social activities – even for children whose parents are not members of the church. These children indicated how fond they were of the "grupo de gestos", meaning gestures group. Participating in gesture groups, they gathered with other children to rehearse different sets of gestures for different songs, and to participate in events that could occur as frequently as every week. This article discusses the importance of the set of body movements articulated through these gesture groups, and the events where they are performed, for the constitution of the "Evangelical subject" among children in Abreu e Lima.

4596 Ghost Routes: The Haunting Realities of Mediterranean Border Deaths

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Galerie 4

Type: Oral Presentation Session

Death and disappearances haunt European borders, where political violence and abandonment leave uncanny traces and create chasms. The Mediterranean Sea is seen as an open cemetery, where lives are consumed on the altar of indifference or the violence of border control. Deaths during migration constitute and reconstitute the very idea of the Mediterranean, transforming it into a space of death. What ghosts emerge from these watery graves to inscribe stories of erasure and interruption? How does framing Mediterranean disappearances through the lens of the ghostly allow us to theorize forms of haunting that are not confined to the past, but are actively produced through ongoing border violence? In what ways do these mobile shadows - following migrants' routes, inhabiting border objects, and propagating beyond intimate bonds - challenge conventional understandings of haunting while revealing the broader political and social implications of systematic disappearance? What do the ghosts of the Mediterranean want to bring to light, what do they ask us to reckon with?

In the tension between movement and interdiction, between surface and marine abysses, ghosts inhabit these routes, narrating stories of interrupted journeys. Through an ethnographic examination of what de Martino termed "the crisis of presence," this panel investigates how these spectral absences manifest in contemporary border spaces. Looking at the Mediterranean as a region of passage beyond its shores, we examine how these ghostly presences persist and inflect the everyday through prayers, legends, fears, and material remains.

This panel explores the ghostly dimensions of migration routes, analyzing how disappearances and deaths at borders transform the Mediterranean region, at maritime frontiers and beyond, into haunted landscapes. Disappearance creates profound disruptions leaving behind interrupted narratives, ambiguity, debris, and a peculiar geography of loss: graves without names on one side of the border, and graves with no bodies on the other. Those who traverse these same paths are haunted by the specters of those who came before, while families and communities bear the marks of severed bonds through unresolved grief. Even those on the other side of the border find themselves grappling with these deaths - from the concrete task of managing and burying unidentified bodies to the crushing weight of collective responsibility.

These are not mere accidents but manifestations of a deadly border regime that enforces racialized hierarchies of mobility. This panel calls for an urgent anthropological engagement with the structural violence and moral crisis underpinning border policies, advocating for critical examination of exclusionary systems and the fundamental right to freedom of movement.

Presentation(s): Inhabiting Absence: Ethnography of Ghosts in Migratory Routes in Morocco

The frontiers are inhabited by the deaths and disappearances of those who were denied passage. For the family left behind, these unresolved losses produce a haunting temporality, where grief is deferred in the absence of a body to mourn or a truth to reconcile with. In their lives, absence is materialised in a haunting presence: personal objects are kept intact, spaces are preserved, and conversations oscillate between present and past, creating an ecology of waiting in which the absent continues to inhabit the present.

Based on ethnographic research in Morocco, this paper aims to explore border disappearances through the lens of the haunting, focusing on how families navigate the uncertainty of loss. Through rituals, practices, and the search for the truth of family members, the disappeared assert a presence that disrupts official narratives about migration and border control. The ghost emerges as a manifestation of unresolved grief resulting from violent and unexplained disappearances, configuring itself as an emblem of border violence that transcends material boundaries. It accompanies the search for truth, constituting a constant reminder of the systematic and racial violence of border policies and demanding justice. By analyzing the material and grieving landscapes shaped by these absences, this paper explores how haunting becomes a form of political testimony, revealing the persistence of border violence in the lives of those left behind.

Presenter(s): Michela Lovato

The Sea as a Shallow, Fluid Grave: Migrants Encountering Floating Bodies on Their Route to Spain

This paper analyzes the sea as a haunted landscape by exploring the ghostly presence of the dead among West African migrants crossing the Atlantic Ocean and Mediterranean Sea routes to Spain. Beyond facing deaths aboard their boats, migrants frequently encounter the remains of those who perished during simultaneous or earlier crossings, in the form of floating bodies. Rather than merely making the dead disappear, the sea functions as a fluid and forensic archive, with the bodies of migrants washing up on beaches, becoming entangled in fishing nets, or drifting on the surface of the sea. Thus, despite being consigned to a watery grave, the sea remains in constant horizontal and vertical motion, shifting bodies and either submerging or keeping them afloat.

My research data shows that while crossing the sea, migrants witness floating bodies either due to their stage of decomposition or because objects hold them on the surface. However, even when confronted with the dead, they are unable to act, as doing so would endanger their own lives, forcing them to pass by and continue their journey onwards. In this way, former migrants actively haunt those attempting the passage today, narrating stories of their interrupted passages and reminding them of their own peril and mortality. Even in Spain, as bodies wash ashore to be

identified, buried, or repatriated by the former crossers, they act as a stark reminder that they, too, could have been among the dead instead of the living.

Presenter(s): Saila Kivilahti

Lampedusa's Cross to Bear: Boat Fragments as Spectral Relics of Mediterranean Border Deaths

The transformation of migrant vessel debris into sacred objects represents a distinctive manifestation of the spectral presence that characterizes Mediterranean migration routes. This study examines how boat fragments recovered from Lampedusa and Southern Italy, diverted from disposal and transformed into religious artifacts by inmates in Italian penitentiaries, become vessels of memory revealing the ghostly dimensions of border deaths. Through participant observation of recovery, transformation in carpentry workshops, distribution in churches, and subsequent religious use, I explore how these objects function as spectral presences, embodying interrupted narratives that inhabit everyday spaces. Through transformation, the deceased migrant is symbolically reconfigured within the paradigm of martyrdom, allowing these wrecks to become modern relics bearing witness to the structural violence of border policies. These sacred objects mediate between absence and presence, between visible and invisible realms of experience. By analyzing the relationship between border deaths and migrants' boats, this research demonstrates how the anthropology of death and religious practices contributes to understanding debris as manifestations of spectral absences, enriching our understanding of the political life of border deaths and revealing how the Mediterranean becomes a haunted landscape where current tragedies persistently inflect the present.

Presenter(s): Giorgia Mirto

Haunting remains: Bodies, objects and images from deaths in the central Mediterranean

In recent years, deaths and disappearances of people on the move in the Mediterranean Sea have undergone significant changes. The externalization of borders and the growing obstacles to rescue operations have reinforced a deterrence strategy, resulting in a decrease in the visibility of shipwrecks and, consequently, in the ability to recover bodies. This has widened the gap between the number of missing persons and the number of bodies found. In this context, the sea acts as an agent of transformation, returning nameless bodies to the shores of Italy. This paper interrogates what occurs when the management of the corpse is not handled ritually by the deceased's relatives, but by forensic pathologists, dissection room technicians, and forensic anthropologists. What do we witness when a "bad" death is not tamed, and the "secondary burial" becomes the exhumation of an identified body before it is returned, cremated, or reburied? The sensory involvement of medical examiners, particularly through the touch of remains, contrasts with the centrality of sight in the dreams, visions, or hallucinations of the missing person, experienced by family members or fellow travelers. These individuals may express feelings of being haunted to psychologists, doctors, or lawyers who listen to their stories. The shadow of the deceased manifests differently to doctors and survivors. If we take these stories seriously, the question becomes: can ghosts become part of the identification process itself?

Presenter(s): Nives Ladina

Mobilizing Violent Deaths as Emblems: The Ghostly Political Afterlives of Migrant Street Vendors in Southern Europe

The risk of death, as a spectral and haunting presence, follows the experiences of irregular migrants who cross borders at the cost of their lives, particularly in the Mediterranean. Even after arriving in Southern European cities, this spectral threat continues to shape the lives of precarious migrants engaged in dangerous jobs such as street vending. By focusing on the violent deaths of undocumented migrant street vendors, this paper investigates how these deaths become politicized and fuel both local and transnational mobilizations. Based on ethnographic research in Spain and Senegal, it examines cases where the violent deaths of Senegalese migrants in Spain have sparked political action. The study explores how these deaths generate demands for justice, shape collective memory, and mobilize migrant, community, family, and state actors. It argues that violent death in the context of migration is not just an endpoint but a catalyst for political engagement and claims-making, extending beyond the victims themselves.

2969 Ghostly Media and Popular Culture: An Anthropological Approach to Invisible Presences in East Asian Media

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Galerie 5

Type: Roundtable/Town Hall

Contemporary popular media exist within a technetronic society, where technology and information networks reshape sensory and cultural experiences. In this environment, ghostly presences are not merely supernatural figures but cultural elements that shape memory, identity, and affective experiences. This roundtable explores how an immaterial media phenomenon—referred to as "ghostly media," which reconstructs memory and existence—is represented, consumed, and interpreted in East Asian popular media and how they differ from Western conceptualizations.

Western academia, particularly through media archaeology, has examined how technology summons forgotten presences (spectral return) and materializes memory and presence. However, these discussions remain largely Western-centric, with limited research on how ghostly presences function in East Asian media. While spectral entities in Western media are often confined to the horror genre, in East Asia, they are deeply intertwined with animism, ancestral veneration, and the power of words, taking on more complex cultural meanings.

This session will attempt to broaden the definition of ghosts in media from pure horror categories to invisible presences such as sound, memory, and avatars. This expansion is not merely a genre-based reinterpretation but a critical inquiry into how media construct sensory experiences and cultural memory. From a media archaeological perspective, ghostly presences are not simply cultural metaphors but recurring phenomena shaped by technological shifts, deeply intertwined with how media materiality and sensory perception operate. These spectral entities simultaneously recall the past and generate new meanings within contemporary technological and social contexts, a process that unfolds differently in East Asian popular media compared to Western narratives.

By comparing these perspectives, this session aims to propose a new analytical framework that integrates media archaeology and anthropology through East Asian case studies. In doing so, we highlight how ghostly presences are not merely remnants of the past but continually reconfigured through evolving technological and cultural landscapes.

2570 Ghosts of the Past, Spirit of Place, and the Politics of Memory

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR B1 (3rd fl)

Type: Oral Presentation Session

This is one of two sessions forming a cross-cutting exploration of how "ghosts" - as traces, metaphors, or spiritual forces – inform contemporary engagements with heritage and tourism landscapes.

In this panel the presentations draw from diverse ethnographic contexts, addressing forms of investigating how haunted pasts and intangible presences shape practices of heritage-making and historical reckoning. The papers explore how heritage sites become haunted by legacies of past and contested memories to examine how difficult pasts are haunting the present, and how these affect community identities, collective memory, and institutional heritage narratives.

Presentation(s): The Spirit of Lengnangulong: Ongoing Debates on a Ghost from the Past in the Present

The Lengnangulong sacred stone from the village of Magam in North Ambrym, Vanuatu, which is exhibited since 2000 in the Pavillon des Sessions of the Musée du Louvre in Paris, is at the forefront of discussions between people about who owns what of culture in Vanuatu and in France. Lengnangulong, the pig-devouring creature that materialised in the form of a human head, has been restless in the museum in France, people say on Ambrym, wanting to come back home to Ambrym, with disputes ongoing about who is the kastom (custom, traditional) owner of this beautifully carved stone sculpture. Requests for the restitution to Vanuatu of the valuable object - a spirit - go back to the 1990s, without much result. In France, the exhibition of the Musée du Quai Branly's '150 chefs d'oeuvres' (150 masterpieces) inside the Louvre museum is a topic of heated debate in itself. In this paper I revisit my original fieldwork and research into this much contested artifact and the many transformations in meaning and value that it since underwent. While people on Ambrym continue to claim allegiance and ownership to Lengnangulong and continue to sing its songs and perform its rituals, be it in transformed and transforming and contemporary ways, it remains exhibited inside the Pavillon wing of what people on Ambrym refer to as the biggest museum long wol, the Louvre.

Presenter(s): Hugo DeBlock

The elephant of forgotten memories: The First Portuguese Colonial Exhibition revisited

In 1934, the First Portuguese Colonial Exhibition was held in the gardens of the Crystal Palace, in Porto. The "sample-exhibition" of the Portuguese Empire consisted of an official section ("scientific" exhibitions), a private one (400 pavilions of trademarks) and one of attractions (train, cable car, luna park, theater, cinema, zoo, etc.). However, the biggest attraction was a large open-air exhibition re-creating "indigenous villages" from various Portuguese colonies. To be exhibited there, 324 people were "brought" to represent the various "civilisational states", a "human-zoo" used to structure the reading of the Other according to the hegemonic Eurocentric lens. The exhibition attracted 1.3 million visitors. Its mascot was an elephant, materialised in a huge sculpture (reproduced in souvenirs such as prints and porcelain miniatures). In 2021 the space of the exhibition (which is the most visited public garden in Porto today) was critically addressed via a curatorial program that while addressing the ghostly and spectral elephant through activities that brought together artists, activists, academics, students, teachers and a diverse audience, aimed at an urgent collective exercise in reflecting on an element part of the city's history. This paper describes the historical context of the colonial exhibition and the 2021 curatorial statement aimed at critically revisiting the place that hosted the colonial exhibition, an invisibilised, spectral event in the history of Porto.

Presenter(s): Nuno Coelho

Negotiating Memory: Statue of Peace and the Performance of Heritage

This presentation examines the heritage of Korean comfort women—victims sexual slavery by the Japanese military in the first half of XX century—through the lens of its most iconic representation: the Statue of Peace, first erected in Seoul in 2011. As a site of memory, the statue not only embodies historical narratives but also becomes a space where heritage is negotiated, contested, and performed. This study explores how the discourse surrounding the statue extends beyond its material presence, shaping public engagement and institutional narratives. It considers the interactions of various stakeholders—activists, survivors, tourists, students, cultural institutions and governmental bodies—with the statue and the meanings they attribute to it. By analyzing the statue's spatial context and modes of public interaction, this research investigates the performative dimensions of commemoration and the tensions between personal memory, collective recognition, and political framing. Ethnographic research conducted in Seoul, South Korea, incorporates visual methodologies, including photographic documentation of the Statue of Peace. Utilizing semiotic analysis, this study examines how representations of a contested past shape contemporary heritage-making and public discourse.

Presenter(s): Maria Kim

The ghosts of Heritage Past, Heritage present and Heritage yet to come

In 2009, works to build an underground carpark outside the southern Portuguese city of Lagos' Old City walls started. The works revealed human remains. The archaeological works carried out that year revealed, among other remains, the remains 158 individuals who were identified as being 15th century enslaved Africans. In 2018, Djass, an association of Afrodescents, submitted to the Lisbon City Council Participatory Budget a proposal for the creation in Lisbon of a memorial to enslaved people. The project was approved by the popular vote and in 2019 the Lisbon City Council approved the project. In 2020 Djass selected the actual project for the memorial. In 2025, almost 20 years over the discovery of what is the earliest burial grounds of enslaved Africans in European soil, the remains of these enslaved men, women and children are still being held in boxes of the University of Coimbra facilities. In 2025, almost 10 years over the popular vote that approved the construction of a memorial to enslaved people, the memorial is still unbuilt.

Taking heritage as a 'structure of feeling', this paper will address these two instances of resistance to memorialization and to heritage creation, as related both to colonial aphasia and to imperial continuities present in Portuguese society, ultimately producing an 'orphaned heritage'

Presenter(s): Paula Mota Santos

Confronting the Ghosts of Heritage: An autoethnography of World War II intergenerational trauma experienced by Canadian Polish Diaspora

Poland is referred to the "bloodlands" of World War II (WWII) since it is the location where so much conflict occurred. As a result, the prevalence of WWII post-traumatic stress disorder is high among Poles who witnessed these traumatic events; however, little is known about how these events

haunt successive generations, known as intergenerational trauma (IGT). Given that immigrants with severe exposure to violence have higher rates of trauma-related disorders than other immigrant groups, studying WWII IGT among Polish diaspora is important. As a first-generation Canadian of Polish heritage, I use Chang's autoethnography as method to document my IGT and IGT healing. I present a narrative summary of data collected from internal sources (i.e., personal memory, self-observation, and self-reflection) and external sources (i.e., interviews, archival records, photographs, visits to historically relevant sites, a scoping review) wherein I identify and confront ghosts of heritage. In my interpretations, I draw upon my nursing disciplinary knowledge and experience as well as national dialogues of IGT within Canadian society. Findings are presented for academic and clinical audiences to consider how cultural learning and expressive methods – integrated into an easily adopted, economical intervention – can be used to support individuals experiencing IGT.

1598 Ghosts, Spirits, Gods, and Zombis in Vodou, Voodoo and Hoodoo in New Orleans, Haiti, and Beyond

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** MGB Salon D

Type: Executive Oral Presentation Session

This panel features ethnographers of contemporary cultural and religious formations rooted in the tradition known as Haitian Vodou, with its historical branches in New Orleans. These forms hold a rich set of cosmologies and knowledge. The person is always embedded in an extensive network of relationships that stretch to living relatives and fictive kin, as well as ancestors, family spirits and the divine (Karen Richman 2005). This panel examines various forms of ghosts, hauntings, and "spirited works" (Paul C. Johnson 2014) produced by histories of violence and enslavement, as well as by new digital technologies that allow divinities to manifest in ways hitherto unimaginable. One paper draws attention to the power of spirit possession (by lwa) to recollect the ancestors (mò) in whose bodies they once manifested. The stirring intimacy and physicality of this mode of recollecting the dead is an overlooked aspect of spirit possession. Another paper recounts ritual spirit-work that enslaves the recently dead in a form of "zonbi astral" wherein a spirit is captured in a bottle and commanded to "work," and then finally liberated in a ritual undoing, or liberation. A third presentation reaches into the space of New Orleans, where denizens encounter the deceased, "haints," and ghosts, and must soothe, draw on, or repel them as necessary. The final presentation will show how devotees of these traditions use Artificial Intelligence image generators to empower themselves to materialize their deities on-screen, and create a vision of the figure they have come to know through spirit possession.

Athias-Robles, Fairfield University

Discussant: Elizabeth McAlister , Hillel Athias-Robles, Fairfield University

Presentation(s): The Return of the Ancestors in Body and Spirit

Whereas studies of Haitian possession performance typically view it as a powerful expression of the bonds between the spirit and the assembled participants, few studies have recognized how this practice brings ancestors back to life as well. Drawing upon ethnographic research over the past four decades on ritual practices in a transnational community anchored in the Léogane Plain of western Haiti, this paper argues that possession is felt as a corporeal performance of interdependence between living members of a descent group, deceased members, and their inherited spirits. Connecting the living and spirits in a deeply embodied way to their ancestors, their lineal history, and their family land is an overlooked aspect of Haitians' experience of possession. The intimacy and physicality of this mode of symbolizing moral interdependence and indirectly motivating recollection of the dead reveal a profound and stirring aspect of spirit possession.

Presenter(s): Karen Richman

Zombies as Ghosts of Slavery and Freedom in Haitian Vodou

Three decades ago, I acquired a bottle in Haiti, which I later learned contained spirits of the dead known as zonbi. These spirits had been enslaved in a ritual by a spirit-worker and commanded to 'work' for me. Years later, a different spirit-worker performed a ritual to liberate the captive spirits, and he converted the bottle into an empty object. This talk delves into this case study and discusses the ghostly remnants of the slave system in Haiti, the first nation to achieve independence by way of a rebellion by enslaved people. In many ways enslavement and freedom are both materially and symbolically present in Haitian culture. This talk allows us to consider the ghosts of both slavery and freedom in Haiti, and Haitian spirit-workers' ritual treatment of the hauntings of the past.

Presenter(s): Elizabeth McAlister

Saints and "Haints": How New Orleanians shelter the living and dwell with the dead.

Hardware and home décor stores in New Orleans always carry a paint color called "haint blue." Neither Sherwin-Williams nor Benjamin Moore make a color by that name, but employees know how to find a robin's egg blue or shade of cyan that looks right. If you peer up under eaves or porch ceilings, half the houses on any block will reveal "haint blue." The color is said to repel ghosts or malevolent spirits.

In New Orleans, household habits, recipes, cemetery customs, and Black parading organizations incorporate rites that protect denizens from misfortune, spirit predation, and encourage the deceased to repose. Featuring conversations with neighborhood culture bearers and city tradition keepers, my presentation focuses on both Creole folkways and African American maskers known

as Bonesmen who roam the cemetery at dawn on Mardi Gras morning to "wake the dead" and bring dispatches about right conduct to the living.

Presenter(s): GRETE VIDDAL

“Gods in the Machine”: Reenvisioning the Vodou Spirits and Afro-Atlantic Gods through AI

The mass circulation of European chromolithographs during the late 19th and early 20th centuries played a key role in providing devotees of Afro-Atlantic religions with a vast visual repertoire that could be used to represent, and re-imagine, their deities beyond their traditional correlation with the Catholic saints. A lithograph of a bust of the Virgin of Sorrows bedecked with jewels and heart ex-votos became the perfect image to stand-in for Ezili Freda, the Vodou spirit of love, wealth and beauty. Even a secular lithograph of a dark-skinned female snake-charmer was appropriated in Haitian Vodou to represent the snake divinity Ayida Wedo, and in Dominican Vudú to represent Santa Marta Dominadora, who helps women dominate men like snakes. A similar, crucial moment impacting how followers of different Afro-Atlantic religions envision the sacred has arrived with the rise of AI image generators, allowing them to transcend beyond the standard forms of the Catholic saints and chromolithographs. With a few prompts, grand deities emerge in line with the intimate ways in which devotees have come to know them through multiple modes of engagement. These modes include the personalities they show during possession, intimate conversations, and on the stories about them heard and shared. Furthermore, these new tools empower those wanting to decolonize the sacred's likeness. Ogun, the Yoruba god of war, no longer appears as St George in armor, but as the muscular Black God that he is.

6957 Haunted Infrastructures: Temporality, Accumulation, Urbanization, and Governance

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Studio 2

Type: Oral Presentation Session

Anthropologists have insightfully analyzed infrastructures as systems that facilitate the circulation of people, commodities, information, and capital (Larkin 2013). Recent ethnographic work reaches beyond the literature's initial focus on space and materiality, taking temporalities into consideration (Anand et al. 2018) and analyzing capitalism's influence on infrastructures (Buier 2023). Taking up the conference theme, this panel extends those interventions by theorizing the "hauntedness" of infrastructures.

Rather than forward-looking frames like "promise" or "modernization" or "development," hauntedness highlights how the speculative futures of infrastructures are linked to histories of racialization, colonialism, and militarism. Levees in Louisiana are built by the sedimentation of successive extractive regimes: plantations, petrochemicals, and now real estate confronting risks

of climate catastrophe. NGOs clearing ordnance in Vietnam are addressing the history of war while also negotiating futures for safe and sustainable development. The housing crisis in Los Angeles and the liberal promises that undergird its "solution" are the result of past and present racio-colonial dispossession, as well as the immediate and intensifying climate crisis.

Beyond temporality, hauntedness also enables a generative approach to the tension between the promise of infrastructure and the constant risk of its failure, disruption, and decay. More than just pointing towards such inherent tension, this panel asks: What is haunting the infrastructure, for whom, and how? How do different actors react to the specters? Congestion haunts Manila's working-class commuters; demolitions threaten the houses of Chinese migrant workers; checkpoints spook logistics firms in Memphis; the presence of racialized people scares Pittsburgh's property managers and investors. These hauntings lead to new kinds of infrastructural work and speculative investment, so this panel explores processes of value creation, extraction, and destruction that emerge in and around these infrastructures.

Haunted infrastructures offer new insights on urbanism, labor, and politics. These papers unpack how infrastructures shape urban life and expand processes of urbanization past city limits; they reckon with work beyond the wage and outside the formal workplace; they uncover political antagonisms and alliances that lurk within landscapes and the built environment. This panel traces these tendencies across geographies, starting from right here in New Orleans to other sites in the United States, China, the Philippines, and Vietnam. The papers show how haunted infrastructures are productive sites to examine tensions between histories and speculative futures, promises and failures, cities and hinterlands, labor and capital, states and subjects.

Presentation(s): "It feels like a ghost city": Security work, Infrastructure of Feelings, and Asset Value in Post-Pandemic Downtown Pittsburgh

Allied Universal, a name unfamiliar to most, is currently the third-largest employer in the U.S. after Walmart and Amazon. Most of its employees are contracted unarmed security guards (Jones, 2024). They are low-paid service jobs taken primarily by racialized and gendered workers. This research focuses on the neglected expansion of the guard industry and asks what kind of "security" is being produced and how they are rendered valuable. Specifically, I contextualize these questions

under the post-pandemic concerns for commercial real estate value among property managers and investors in downtown Pittsburgh. Impacted by the hybrid working, more than two dozen office buildings are close to foreclosure (Belko, 2024). This presentation argues that the affective labor of unarmed guards enables a particular "the infrastructure of feeling" (Gilmore, 2022). As a spatiotemporal project (Appel et al., 2018), such infrastructure facilitates "security" against haunting threats: spatially, there are the racialized others coded as homeless people outside of the buildings and vacant office spaces inside the buildings. Temporally, the recent past of the pandemic and the potential risk of foreclosure and devaluation in the future. Drawing on the call to focus on the ordinary infrastructure worker (Star, 1999), the talk pushes us to rethink the role both labor and infrastructure play in capital accumulation on the horizon of the "asset-manager society" (Christophers, 2023).

Sedimentary inheritances and abstract reassurances: the work of proposed levee infrastructure in Louisiana's northshore

In January, Congress approved 17 major water infrastructure projects across the U.S. The largest of these is sited in south Louisiana, on Lake Pontchartrain's northshore, the St. Tammany Flood Risk Management Project, and authorizes \$5.9 billion for new levee infrastructure. The term 'levee,' referring to artificial embankments constructed to impede flooding, originates in French colonial Louisiana. As an earthworks technology, levees have long been entwined with the racialized concentration of wealth and resources in the region, facilitating successive extractive regimes, from plantations to petrochemicals, and advanced by landowners as a means to inflate land value, from the 19th c. to the present. Levees contradictorily condition the emplacement of many Louisianans reliant on their protection, at the same time that they have so compromised the geomorphological stability of the region that they are considered principal drivers of coastal deterioration. I address St. Tammany's specific recuperation of the levee, and consider especially the project's affective dimensions, in which its abstract reassurances are arguably more impactful than its material guarantees. As a 'generational project,' the levee's extended construction timeline is jarringly out of step with the immediacy of climatic and landscape change. And still, tentative promises of safety do work in the present, in a manner that reproduces and retools this earthen technology's fraught history in this floodplain.

The Specter of the Chokepoint and the Rise of the Hub in Memphis, Tennessee

Since the 1970s, elites in Memphis, Tennessee, have marketed their city as "America's Distribution Center" to attract capitalist investments. Boosters boast that Memphis moves commodities via river, rail, road, and runway. This marketing campaign seems successful; technocrats now recognize the city as a prototypical global "logistics cluster" (Sheffi 2012).

Some scholars conceptualize places like Memphis as "chokepoints" (Carse et al. 2023) because the infrastructure is haunted by the possibility that something could constrict the movement of

commodities. My paper discusses how the specter of the chokepoint haunts the logistics industry in Memphis. But my analysis also moves beyond that haunting, to examine how logistics firms and their allies respond to the risks of the chokepoint.

The specter of the chokepoint, I argue, spurs more investment in logistics infrastructure, as companies demand redundancies that they hope will produce "supply chain resiliency" impervious to crises. These speculative investments in the built environment transform Memphis into a "hub," not just a chokepoint. Developing in dialectical relation to the specter of the chokepoint, the hub leverages overlapping infrastructures and creates localized economies of scale to deal with the risks of the chokepoint. Thinking through the hub, then, raises doubts about the potential for radical uprisings that some scholars have attributed to chokepoints (Alimahomed-Wilson and Ness 2018).

Presenter(s): Nick Welna

Carmageddon: Infrastructures of Urban Exhaustion in Manila

Manila's streets are a gridlock. Over the years, the Philippine government has adopted infrastructural projects and policies centered on alleviating traffic, but with little success. Central to these conversations on traffic are urban planning and the jeepney, Manila's most accessible form of public transportation at around 15¢ per ride. American colonization haunts both: following World War II, car-centric urban sprawl was built over the destruction, while Americans left behind military surplus vehicles—jeeps, from which "jeepneys" get their name. Stopping in the middle of the road, the jeepney is an easy scapegoat compared to the burgeoning private ownership of cars by the middle and upper class. Mass transportation systems are underfunded, buoyed by public-private partnerships, private cooperatives, and state-owned corporations. This paper delves into the class inequalities prevalent in Manila's transportation system, focusing on the narratives of Manila as a congested dystopia which is historically rooted and experienced by all. How do the everyday frustrations of traffic and urban infrastructure fuel demands for strict governance? In my paper, I will explore the various ways in which frustration and exhaustion are invoked through discourses on traffic. I draw upon literatures that infuse infrastructure with affective and temporal underpinnings, unsettling the linear development timelines of planning imaginaries.

Whose Peace?: Explosive Ordnance Disposal and Infrastructures of Remediation in Postwar Vietnam

Building upon scholarship that examines the role of military waste in shaping postwar spaces (Schwenkel 2013; Zani 2019; Sisavath 2020), this paper attends to the work of explosive ordnance disposal in postwar Vietnam by following the work of PeaceTrees Vietnam (PTVN), a non-governmental organization that coordinates explosive clearance operations in the provinces of Quang Tri, Quang Binh, and Thua Thien-Hue. Founded in 1995, PTVN asserts its mission as not only the clearance of unexploded ordnances but also the restoration of lands to communities for safe and sustainable development. On one hand, I examine the ways that PTVN's objectives are realistically implemented on the ground and negotiated alongside local and governmental

interests. In particular, this paper explores what takes place after munitions have been cleared and the ways that different notions of development, especially in the form of infrastructure, converge when determining the future of remediated landscapes. At the same time, this paper also situates bomb clearance efforts within the present context of Vietnam's increasing ecological vulnerability, charting the ways that PTVN has had to more recently adapt its operations in response to ever more extreme climate conditions. In so doing, I foreground the infrastructures that presently enable explosive ordnance disposal in Vietnam, all while shedding light on the different futures that such operations may either promise or imperil.

The making of illegal housing: infrastructure, politics, and everyday life in China's informal settlements

In recent years, the state has used the category of illegal housing as a tool to manage informal settlements amid rapid urban expansion. However, by examining the material-social history of illegal housing, a different story emerges. In the informal settlement, rural migrants have gathered due to the availability of affordable housing. Local homeowners, driven by speculation, have expanded their buildings to maximize future demolition compensation and benefit from rental income. In doing so, they constantly negotiate the boundaries of legality with the state. Meanwhile, rural migrants, who often work as laborers in the construction process, refer to these structures as "fake houses" due to their poor materials. I examine how their engagement in making such housing shapes their understanding of illegal housing and how both groups interact with the state. Together, they demonstrate that illegal housing is not a fixed or predetermined category. Rather, the legality and materiality of housing are constantly negotiated between residents and the state. This challenges the state's use of illegality as a stable and legitimate basis for demolition, while also revealing how the emergence of illegal housing is deeply tied to the state's sustained ambiguity toward informal settlements. This research contributes to the study of informal settlement politics by breaking down the legal/illegal binary and foregrounding the material and infrastructural dimensions of politics.

3617 Haunting Materialities in States of Extraction

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Oakley (4th fl)

Type: Roundtable/Town Hall

This roundtable begins with the twinned assertions that ghosts are at once temporal and profoundly material beings, tied to places and political economies that render their presence both uncanny and untimely. In this lively conversation about the role of the spectral dead in extractive states including the United States, Canada, Mexico, and Myanmar, participants will speak from several different "haunted" materials and their transubstantiation: black plastic totem poles that intricately

re-member what Zoe Todd calls "fossil kin" as souvenirs; Kodak film as photochemical memory borne in the bodies of workers; extractive projects that link colonial imaginaries with petro-futures; "unearthing" in land speculation; contemporary photographic practices that dwell in the ghostly and chemically unstable aesthetics of the afterlife of industrial materials; ghosts of Wanuskewin buffalo who tell their stories through zoepolitical alliance lodged in stones; and poetry that engages ongoing questions of the living and the dead in a toxic historical order. In addressing these lively matters, each speaker will draw in interdisciplinary methods from art, performance, science and technology studies (STS), and critical phenomenology, that anthropologists might use in tracing material hauntings. Building on recent work in cultural and visual anthropology and the environmental humanities, our performative conversation will raise questions about those human-matter entanglements that Vanessa Agard-Jones has theorized as "body burdens," toxicity, futurity – and the strange things that happen around the cult of oil in extractive states.

5574 Hauntings vs. Lively Legacies: How the Past Manifests in the Present in the U.S. South

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Studio 9

Type: Oral Presentation Session

This panel responds to the conference theme of "Ghosts," which fits squarely within Southern gothic narratives that frame the U.S. Southeast as uniquely haunted. Past events associated with the violent displacement of Native Americans, the violence of enslavement and Jim Crow, and the violent suppression of labor organizing can and do linger in the present, shaping Southern lives and places. This panel wishes to question: in the context of the US Southeast, does framing these events and their legacies as hauntings create a move towards abstraction that ultimately makes violent histories more palatable via metaphorization? In what ways can we use hauntology (Good 2020, e.g.), and in what ways might the language of ghosts render abstract and distance us from histories that we are the inheritors of? Anthropologists of the US Southeast have pushed back against regional political or social reification and instead attended to the ways that the region's history informs complex social relations in the present (Benson 2011, Buck 2019, Griffith 2021, Jackson 2011, Joos 2023, Kingsolver 2011, Ogden 2011, Stuesse 2016, Thomas-Houston 2004). We invite papers that reckon with the fine-grained details of the lively legacies of Southeastern history, of the ways that those histories manifest in the present to guide the way communities imagine what

life in the Southeast can be, rather than leave people fearful of what was/is. We are especially interested in the region-specific activism that may (or may not?) get overlooked or recast when the Southeast is primarily thought of as haunted/dead.

Presentation(s): Ghost Routes and Resonant Things: Object Itineraries and Hauntological Landscapes at the Concord Quarters Plantation in Natchez, Mississippi

This paper examines the late 18th-century Concord Quarters plantation site in Natchez, Mississippi, through the dual frameworks of object itineraries and hauntology to reinterpret its

landscape and material culture. Rather than treating artifacts as static remnants of a closed past, I explore how objects at Concord—bricks, bottles, tools, and domestic wares—circulated through entangled networks of labor, trade, violence, and resistance. These material itineraries chart routes shaped by enslavement, global economies, and ongoing struggles for Black sovereignty. Hauntology further deepens this analysis by centering the absences that linger within the plantation's architectural and archaeological record—voices, futures, and lives excluded by systems of racialized labor and domination. As Sadeq Rahimi argues, haunting emerges from the unfulfilled potential of what might have been; at Concord, spectral presences are embedded in the very ground, evoking both the trauma and the resistance of those who lived and labored there. The plantation landscape thus becomes a palimpsest of intersecting temporalities: past objects remain in motion, while the spectral absence of enslaved lives continues to shape the present. By collapsing the distinction between heritage and history, presence and absence, this paper foregrounds Concord as a site where ethics, memory, and materiality converge, offering new modes of archaeological storytelling that reckon with both what remains and what haunts.

Presenter(s): Shawn Lambert

“I’ve Never Experienced Racism”: Chinese American Survival Strategies, 1940’s and Today

This presentation considers Chinese American experiences of Southern racialization and discrimination in two distinctly Sinophobic eras. Ethnographic interviews collected primarily in Atlanta, Georgia, just after the COVID-19 pandemic and the city's notorious Spa Shootings, will be analyzed alongside archived interviews of attendees at the first Chinese-language schoolhouse in Mississippi, just after the repeal of the Chinese Exclusion Act (1943). Resonances across these interviews trace a living legacy of racial triangulation—a practice by which Asian Americans strategically accept presumptions of foreignness to create conceptual space for themselves outside of the South's Black/White racial binary (Kim 2001). This consistent practice, I argue, has given rise to a regionally specific form of racial dissociation: a psychic defense mechanism in which, under conditions of obvious discrimination, individuals assess their situation to be unaffected by race (Eng & Han 2018). This analysis considers the possibility that racial segregation and Chinese Exclusion constitute living legacies which have taken shape in new, modern forms (Cox Richardson 2020), and which have catalyzed generational trauma responses which haunt Southerners of all backgrounds, including Asian Americans.

Presenter(s): Kristin Buhrow

Policing and the Ghosts of Slave Patrols in Southeast Texas

This paper examines how the history of mounted patrols in Houston—beginning with slave-catching patrols and evolving into contemporary police units—constitutes a "lively legacy" shaping state power, public memory, and protest management. Tracing the transformation of mounted officers from slave patrols to "Cow Catchers" to today's crowd-control specialists, I show how their presence still evokes earlier regimes of bodily regulation and racial control. This tension came into sharp relief during the Red Summer of 2020, when the same streets that saw police on horseback

corralling protesters also witnessed a powerful reversal: Black riders from the NonStop Riders club led a march on horseback, shirts bearing Floyd's image. Their presence reclaimed the horse as a symbol of resistance, unsettling dominant associations of horseback riding with whiteness, wealth, and frontier masculinity. In conversation with this panel's questions around haunting and metaphor, I ask: does the trope of the ghost risk making the materiality of racialized policing more palatable—as seen in museum displays and civic spectacle? While hauntology offers one register for reckoning with historical violence, I argue that mounted patrols operate not only through ghostly traces, but through ongoing infrastructures of racial control and selective nostalgia. This paper foregrounds how the past animates the present through institutions that continue to police, surveil, and stage power in the U.S. S

Presenter(s): Jessica Olivares

Everyday Historical Production in the Rural South: Challenging Southern Gothic Orientalist Tropes

In his landmark work, Edward Said (1978) explains that orientalism functions through "imaginative geography and history" that accentuate differences, real or imagined, between Europe and "the Orient." Similarly, Southern Gothic portrayals of the U.S. South that paint the region, and the people who live in it, as strange, violent, grotesque or otherwise aberrational create temporal and geographical distance between the South and the rest of the country, or between the contemporary and past South. That distance enables ahistoric explanations of present-day political economic realities in the U.S. South, divorcing them from deeper regional histories. In this paper, I draw on archival, interview, and participant observation data from 19 months of fieldwork in rural, Black Belt South Carolina to analyze when and how South Carolinians invoke the past in their explanations of the present. South Carolinians are engaged in their own, everyday practices of historical production, developing nuanced and/or contradictory historical narratives. Their stories of navigating poverty and racism challenge Southern Gothic Orientalist tropes as they indicate that the political economic dynamics of the U.S. South are hardly exceptional and highlight the ways that Southerners draw on histories of exploitative, racialized labor hierarchies to guide their struggles for a more just South.

Presenter(s): Sydney Pullen

4052 How it lingers: the cultural adoption of disaster aesthetics

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR C2 (3rd fl)

Type: Oral Presentation Session

Disaster, for better or worse, is a community event where a population shares an experience that destabilizes and reconfigures how society operates and is organized. Some of these changes are temporary and fade away when things start to recover, sometimes these things linger and become

imbedded in a new normal. The human experience is punctuated by moments of collective trauma that can be observed in the archeological, historic and contemporary record. The process of communities metabolizing these events can express themselves in a multitude of ways; A hurricane becomes a cocktail on Bourbon St., skyscrapers rise out of the ashes to form a Second City, your favorite coffee shop issues branded cotton face masks. We show in so many ways that we are in constant communication with our environment and our past. Following the example of Shannon Dawdy's work *Patina*, this panel will explore the ways in which disaster iconography becomes pervasive and embedded.

This session explores the way disaster and disaster recovery influences cultural semiotics. Presenters will explore how disaster impacts imprint themselves on community aesthetics and how these aesthetic expressions become an act of healing, protest, memorial, and celebration extending far beyond a singular event. In that spirit we will examine disaster as a generator of cultural practice and material, and how communities embrace the unforeseen aftermath of catastrophic impact.

Chair: Kathryn Lucas

Presenter(s): Kathryn Lucas, Evannrue Cox, Miles Jordan, Louisiana State University, Department of Geography & Anthropology, Heidi Buratti

Presentation(s): Hurricane Parties: rituals and souvenirs from hurricane land

For those who have lived on the Gulf of Mexico, there is nothing so anxiety inducing as the start of a new hurricane season but imbedded in that anxiety is a type of irreverent levity that unifies people in the path of these storms. Since the advent of satellite weather forecasting and state policies enacted after Hurricane Andrew, Florida, along with other Gulf states have realigned their relationship with storms.

This paper will examine how residence of Florida have created seasonal rituals revolving around storm anxieties, through archival research and ethnographic interview. It will explore the role of storm motifs and "souvenirs" generated by repeated exposure to these potentially catastrophic events as a tool for cultural resilience, and how hurricane parties operate as unifying events during and after a storm. This paper asks how do these rituals and motifs help communities heal and process the threat of hurricanes, and what roll do they serve in encouraging people to stay and persist in these precarious geographies?

Presenter(s): Kathryn Lucas

Fan Depictions of Mass Shooters in American Culture

We know that disaster is commonly described as an event that shapes a community, but what happens when, instead, disaster creates a new one? This paper will delve into the world of the online "true crime community", or more specifically, the fandom revolving around specific mass shooters. Like any other online community, there are participants who create and perpetrate art

and iconography of the shooting and its shooters. This study seeks to analyze what these works mean to those who create and engage with them, as well as what it means for media's portrayals of the disaster, as well as American society at large.

Other topics addressed in this study are gender, normalization of trauma and violence, and white supremacy. The glorification of online violence is commonly associated with men, but the true crime community is dominated by young women -- yet, it also revolves around shooters who are most often men, and who also often engage in gender-based violence. Many of these men are also white supremacists, meaning that the glorification of their acts online have layered implications for the afterlives of slavery and colonization (following Deborah Thomas' *Political Life in the Wake of the Plantation*), as well as skewing the demographics of those involved. What does it mean when a population not only normalizes violence, but begins to idolize it?

Visual Reclamation and Dispossession: Photography, Disaster, and

Gentrification in Post-Katrina New Orleans

This research examines how disaster recovery in New Orleans is embedded in the city's visual landscape, focusing specifically on the role of photography in documenting these changes. Through an extensive photographic survey of post-Katrina urban environments, the project explores how visual markers—such as memorials, public art, and home renovations—serve as symbols of resilience while interrogating the more complex and often troubling forces of gentrification and displacement. The photographs capture the dual nature of recovery: symbols of survival and hope are juxtaposed with visual cues of socio-economic shifts, where gentrification reconfigures neighborhoods and displaces long-standing communities. By analyzing the semiotics of everyday visual forms—ranging from murals to home color shifts and architectural changes—this project uncovers how these aesthetic choices not only commemorate the past but also contribute to the ongoing transformation of New Orleans. The study demonstrates how disaster iconography functions as a site of cultural resistance and memory, while simultaneously reinforcing the exclusionary forces of urban redevelopment, revealing the layered complexities of recovery and displacement in a post-Katrina New Orleans.

Volunteering in Fire-affected areas: Practicing Community-Accountable Archaeology Through Remains Recovery.

Many communities within the state of California have been ravaged by wildfires, leaving what appears to be a bleak and hopeless landscape. Fires driven by powerful winds change people's lives and result in the loss of their most prized possessions – family heirlooms, symbols of major life events, and their loved ones' remains – in an instant. For many, the loss of the family members' remains revisits the initial loss of their loved ones, further compounding their grief and

desperation. Volunteering with Alta Heritage Foundation provides hope and healing to those affected by the fires.

This presentation will address the impact of archaeology during disaster recovery, and its role in processing trauma and bringing closure to those most affected by the fires. Furthermore, participating in cremains recovery is a form of community-accountable archaeology – prioritizing the needs of the communities we work in using our archaeological expertise. Our unique skills as archaeologists may answer impossible questions and illuminate a community's resilience.

6198 How to Live An Invisible Life: Coming Out or Staying Stealthy?

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Studio 5

Type: Oral Presentation Session

Our present is never a moment of solitude. Through the echoes from the past, it is as important to draw on the scanty evidence of existence that was reduced to void, the invisible people that speak from where it was thought to be silence. This panel explores the historical and ongoing constructions of invisibility by seeking out China, tracing its roots in literature, archives, and lived experiences. Through interdisciplinary perspectives, we examine how lives have been systematically rendered invisible and how they generate insights from where they were constrained.

By re-presenting the events in divergent histories and from contested points of view, we challenge the infrastructure that grounds invisibility as something embedded in the past. Zhishan LIU's study uses an anecdote collection to trace how Song dynasty female bodies emerge as sites of subtle autonomy and desire within the constraints of Confucian ideology. Zheyu HU's work turns to examine the persistent entanglement between the fox cult and imperial, Confucian, and patriarchal authorities. The fox spirit, as a class- and gender-fluid entity, embodies nonconformity and the transgression of Confucian ideals, enabling marginalized individuals' means to subvert dominant social normativity and distinction, as well as access forms of power otherwise denied to them. Temporally, there is a gradual process in which various women subjects seek out their voice in documenting their experiences as if they communicate across time.

The panel continues to interrogate contemporary invisibility. Qianwen XUE's work explores how intimate care has been transformed into a gendered labor of endurance in late-life Chinese marriages. The temporal-material entanglements of elderly women's ghostly embodied caregiving institutionalize what she terms "silver-haired wife punishment." Turning to the younger generations, Tate PAN examines young adults who operate biomedical and tacit knowledge as technologies to care for and guan their sick family members, navigating filial morality that assumes care duty and renders it "invisible." Tracing the origin of care politics, Jingchen XIAO looks at the genealogy of care

from socialist China to the present female care workers in urban China, who use mutual care as a channel to form a revolutionary self-care and make a time for resistant caring.

Together, we recognize invisibility not as an analytical task but a commitment to reframe life beyond tradition/modernity, East/West, and mind/body. Centering the spectral presence of historical violence in present-day care economies, we ask: How to see invisibility as a site of both oppression and resistance? What methodologies can reveal the embodied, affective, and temporal dimensions of care that dominant frameworks overlook? This panel invites dialogue on how invisibility is reproduced, endured, and contested across time, urging a rethinking of invisibility in social change.

Presentation(s): Matters that “I Cannot Not Guan”: Biomedical and Tacit Knowledge as Technologies of Care and Guan in the Chinese Family Life

In Chinese family life, one does not become a caregiver but assumes the care work by being a family member to a sick person. This study examines how Chinese young adults (18-24) operate biomedical and/or tacit sensory knowledge as technologies to care and 管 guan (care, control, manage, and/or parent) their sick family members, reimagining knowledge as pragmatic tools to navigate filial morality. Based on interviews with 20 young adults and autoethnography, I show how young adults operate biomedical and tacit knowledge pragmatically: participants cited/adopted medical expertise when convincing elderly to take medication, yet relied on sensory knowledge for daily care. The paper highlights how caregiving is not a role/identity to become but assumed by Chinese family moral duty, rendering care work "invisible." Sick family members often suppress their needs to avoid "adding bother," while caregivers are expected to intuit these needs without direct communication. This family moral expectation shapes caregiving practices and use of knowledge. These young adults developed medical competence not just for treatment efficacy, but to guan elders. Simultaneously, their cultivation of sensory attunement - learning to detect unarticulated needs - serves as technologies of care, yet taken by granted within the moral relation of guan. The findings complicates feminist STS's notion of "matters of care" to consider "matters that one cannot not guan" (or that one cannot not stay with).

Sharing Bodies, Making Time: Domestic Workers’ Practices of Mutual Care, Self-care, and Resisting Capitalist Discipline

The word 'care' is slippery because of its multifold meanings. Linguistically, socially, and politically important and yet ambiguous, the term "care" renders discrepancies between how the market of care labor commodifies care and how domestic workers, as the subject of labor, understand care as a daily practice. The research examines archival works to comb through the genealogy of care in

PRC history and situate the ethnography of a community of domestic workers in Beijing as ethnographies of the present. As the daughters and sisters of socialist China, these workers in Beijing gathered as a community and paved their way to mutual care, using massage, collective learning, and writing to share mutual experience and care for others. The reciprocity extends to a revolutionary sense of self-care, which the workers practice through micro-dispersed practices in their workplace to resist capitalist discipline. Drawing together Western and Chinese feminist thoughts, I argue that there is a new temporality emerging from their daily practices and language of care, which I call making a time for caring. In rethinking the meaning of care and building dialogues across traditions of theories, I build the framework of the study at the intersection of "providing care" and "paying attention to," trying to challenge a more affective and supportive mechanism of making care.

Presenter(s): Jingchen Xiao

Transcending Social Structure: the Fox Spirit and the Social Reproduction of Marginalized Individuals in Late Imperial Northern China

This thesis examines fox spirit worship during the Ming–Qing dynasties and its role in empowering communities marginalized within Northern China's social landscape. The entanglement between the fox cult and imperial, Confucian, and patriarchal authorities produced complex and anomalous consequences for the communities that found agency through its veneration.

Existing scholarship has explored the fox's multiple roles in the dynamics between officials and civilians, between genders, and its connection with gender-nonconforming individuals. The subjectivity of marginalized individuals through the fox worship remains undiscussed.

This research interrogates the ambiguous space between orthodoxy and marginality through the lens of fox worship. Drawing on Ming–Qing zhiguai (tales of the strange), alongside 1930s ethnographic works, the study investigates how the fox spirit symbolically represented marginalized figures such as disenfranchised scholar-officials, women, prostitutes, and gender-nonconforming individuals.

The fox, as a class- and gender-fluid entity, embodies nonconformity and the transgression of Confucian ideals such as ritual, righteousness, and social hierarchy. Through its liminal status, the fox spirit offered these individuals not only symbolic refuge but also a means to subvert dominant social normativity and access forms of power otherwise denied to them. In this way, the "way of animals" becomes a critique of orthodoxy—and a space of resistance.

Phantom Labor in Late-Life Marriage: Embodied Narratives of Elderly Female Caregivers

This study examines how intangible forces—material traces, mnemonic residues, and foreclosed futures—reshape intimacy among aging couples through fieldwork with 15 Beijing suburban households. Situated at life's twilight where corporeal decline disrupts romanticized futures, marriages transform into contested sites where care obligations intersect with spectral presences

of unrealized possibilities. The cohort reveals gendered health disparities: men exhibit higher rates of stroke, disability, and chronic illness linked to occupational hazards and risky behaviors (smoking, drinking, commercial sex), while women shoulder intensified care burdens amidst vanished sexual/affective bonds. Physical touch becomes mechanized labor devoid of intimacy—a "cursed" ritual sustaining biological existence without emotional reciprocity.

Drawing on Gammeltoft's (2021) framework of kinship as imaginative labor, I argue women's endurance emerges through temporal negotiations with "socially impactful non-realities"—ghostly presences of absent relatives and internalized futures sustaining daily care regimes. Mrs. Chang's declaration "my husband's body is my prison" epitomizes this carceral domesticity where marital duty materializes as unremitting bodily management. Contra narratives of elderly marital bliss, spousal loss may paradoxically liberate caregivers from chronic stress, exposing marriage's transformation into disembodied labor under gerontological crisis.

Presenter(s): Qianwen Xue

What If She Came Back? Women in the Cracks of Neo-Confucian Ethics in Song Anecdotes

"To perish from hunger is but a trifle; to lose a woman's chastity is of utmost gravity." This maxim encapsulates the Neo-Confucian demand placed upon women in Song dynasty elite discourse. Women were expected to embody moral purity within the social order, regardless of their own desires or survival. Yet, beyond the didactic voices of male discourse, how did women act in practice in the Song dynasty? The paper turns to *Yijian zhi* 夷堅志, a major Song dynasty anecdote collection, to examine alternative narratives of female subjectivity and bodily practice. In these stories, women traverse cosmic realms and employ their bodies as mediating agents between Heaven, the human world and the underworld. Drawing on narrative and visual analysis, including comparisons to religious iconography such as *Danuo tu* 大難圖 and *Soushan tu* 搜山圖, this paper explores how the female body becomes both a site of spiritual labor and a force of epistemic disruption. No longer confined to passive moral archetypes, these female figures initiate disruption, reveal hidden truths, and articulate their desires. While acknowledging the anxieties and constraints are still embedded in male-authored texts, the study analyzes how moments of female intensity—through resurrection, birth, or haunting—generate narrative and spiritual transformation, leaving indelible traces through the ink and brush of male narration.

6303 In What World Do We Now Find Ourselves? Ghosts in Post-Pandemic, Late-Socialist China

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Oral Presentation Session

In the wake of deferred revolutions, failed promises, and shifting global dynamics, ghosts return-not

as mere metaphors, but as active figures shaping memory, mourning, and the possibilities of the future in post-pandemic, late-socialist China.

This panel examines how disruptions rooted in various socialist constructions underlie the fraught, uncertain transformation unfolding in post-pandemic China: from the remnants of socialist infrastructure and urban homemaking to diasporic reading groups and the ritual, revolutionary resonances of global Black popular culture. These papers offer a salvage footage and temporal depths that engage both speculative futures and spectral continuities of the past-of lost histories, uncertain progress, and fractured collectivities-made newly urgent as previous promises collapsed, leaving hope and the good life suspended in a prolonged liminal stage marked by political and economic stagnation and existential displacement.

Ghosts, here, are not singular beings but plural presences; not merely echoes of traumatic pasts, but also dynamic, but shifting actors in the ongoing (re)configuration of memory, identity, and futurity. They do not always arrive through clear callings, but emerge through bodily states, ambient intensities, and non-teleological encounters. They differ not only by type, but by their depth, texture, and the affective-imaginary projects they partake in. Moving through cracks where official narratives falter or cannot reach, ghosts whisper untimely stories-stories that challenge state-sanctioned visions of modernity, unsettle linear promises of progress-but also cast a skeptical eye on any impulse of hope whenever it aligns too easily with the forward march of history.

Presentation(s): Chronotopes of Grief: Hip Hop, Memory, and the Ghosts of Revolutionary Solidarity

Abstract: This presentation explores how haunting travels through Black music and dance, evoking social memory in participants beyond racial lines. It is part of a larger project on the politics of Black popular culture in contemporary China and the United States, exploring how Chineseness, Blackness, nation states, and the cultural self- and group-making intersect amid current global geopolitics. Drawing on fieldwork in Philadelphia's underground Hip Hop dance scene, I highlight a public mourning event commemorating two recently deceased community members. Using autoethnography (Han, 2020), I explore how this ritual evoked a personal sense of grief in me, a foreign ethnographer, across chronotopic dimensions (Ng, 2021). Examining the semiotic bundle that constitutes the Black mourning ritual's enregistered style (Agha, 2007), I argue that its efficacy—grief—offers a lens into PRC's socialist and post-socialist transformations. This grief also gestures toward an often-forgotten revolutionary solidarity between Chinese and Black Americans during the 1950s—how it is remembered, contextualized, and recontextualized across both sites in contemporary times (Brown, 2016; Frazier, 2014; Ke-Shutte, 2023).

Presenter(s): Zhuoli Gao

Fragments, Foreclosures, Futures: The Ethics of Psychoanalytic Reading in China

Reading groups have emerged as intellectual spaces in China and its overseas over the past decade. At the intersection of Marxist legacies, post-structuralist critique, and leftist thought refracted through China's modernization, psychoanalytic reading—as a genre and a practice of listening (Marsilli-Vargas, 2022)—carries demands for sustained engagement with the fractured self. Dreams, silences, and trauma are not merely interpreted but treated as historical inscriptions (Pandolfo, 2018), making reading both a mode of knowing and a medium for working through collective and personal wounds. Across in-person and diasporic sites, I trace reading groups as experimental spaces where authority and collective life are reimagined under post-socialist governance. Intergenerational dialogues animate suppressed histories, revolutionary afterlives, and disavowed affects, rendering psychic pain a register of political economy and state restructuring. Here, psychoanalysis resurfaces not as doctrine but as a language of delay, fracture, and encounter—inhabiting the unresolved pasts. Two motifs recur: the search for an inner psychic site amid social and existential dislocation, and the textual pursuit of a political potentiality where past insurgencies collide with suspended presents. I approach psychoanalytic reading as an epistemological and ethical gesture of staying with pain—rather than interpreting the revival of psychoanalysis fully integrated into liberalization or psychotherapeutic

Between the Cruel and the Dreamlike: Reconfiguring Hope in Socialist Ruins in China's "Garbage Time"

Ghost lingers amid the debris of once-cherished visions of a good life, in China's post-pandemic era of prolonged economic downturn, political authoritarianization, and social disillusionment. In this era that some phrase as the "garbage time of history," regions long deemed geographically, culturally, and economically peripheral since the intensification of neoliberal reforms at the close of the last century—along with the nostalgic and rudimentary lifestyles they index—have become newly valorized as symbolic and material sites for economic revival and the restoration of public confidence in everyday life: sites for the reconfiguration of hope. This paper explores how spectral remnants of socialist infrastructure in their peripheral areas—state-led structures built to serve socialist construction purposes before the late 1990s—become central to the emergent practices of "hope-making" in the crisis time when the promise-oriented technologies of statecraft and rule have been proven unsuccessful and a set of new narratives is being called to deny failures and reinvigorate the national and societal dynamism. Based on ethnographic fieldwork and archival research in Harbin, Hegang, and Yumen, I ask the heterogeneous aspiration of hope and its affections, narratives, aesthetics, histories, and the lifeworlds that wind through them, as well as what a prefigurative politics they might be doing or engaging with and how. I argue that ghost is neither merely a facilitator for hope to rise

Presenter(s): ruize xu

Murder at the End of the World: A Case in Southwest China

This project explores how individuals, after losing the promised certainty of a future vision, reconfigure their understanding of loss through narratives of the past, and how this retrospective construction colludes with the present. Based on fieldwork conducted in Harbin, Chengdu, and Panzhihua from 2024 to 2025, I focus on a childhood "murder case" in the memory of a Chengdu restaurant owner—specifically, the death of a secret base at the city's margins. The narrator describes this event as "the beginning of everything collapsing," a disintegration of cosmology from within that culminated in his parents' layoffs during the enterprise restructuring of the late 1990s. His family migrated from Northeast China to Panzhihua, a southwestern industrial city, during the Third Front construction of the 1970s, where he was born. Constructing the past through narratives of death has long been a theme in ethnographic writing (Mueggler, 2014), but studies focused on non-biological deaths remain nascent. I argue that this specific story—and the narrator's deliberate shifts in discourse, even accent—reveals spatiotemporal experiences that offer a new lens to examine the metabolic transformations of urban life and futurity itself. These transformations surface like spirit photography on the ruins of history, particularly in 2025, a moment of renewed uncertainty.

Presenter(s): Kuo Guang

Home Without Ancestors: Intergenerational Homemaking, Inheritance, and Rejection

Abstract: For many second- and third-generation Beijingers, Beijing is not their ancestral home but rather a place where their parents and grandparents, who migrated from multiple parts of China, came together and formed new, mixed families that do not share a common identification with a regional kin group or community. Children of these mixed families form a blurry category as they try to find their places in Beijing, selectively inheriting and rejecting certain elements of their complex family backgrounds, as well as their migratory histories entangled with political violence and social upheavals in modern Chinese history.

I offer an intergenerational oral history of family and homemaking that centers on how second- and third-generation Beijingers understand and experience notions of home and hometown. Engaging with immigrant and diasporic anthropology (Abu-Lughod 1988; Behar 1993; Appadurai 2013; Desmond 2016), it takes "home" not as a fixed concept but as a collectively constructed narrative subject to continual reimagining, and a site for intergenerational inheritance and reckoning. It argues that the identification of home and place-based belonging among second- and third-generation Beijingers comes with the consequence of rejecting other possibilities of what home could be. By studying how they make home in Beijing, I examine how narratives of memory, belonging, and hopes for the future intersect with their gendered, classed, generational experiences and interperso

4466 Insurgent materials: spectral encounters with urban matter

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Grand Chenier (5th fl)

Type: Roundtable/Town Hall

The roundtable examines the spectral force of material insurgencies. While scholarship has shown how concrete (Choplin 2023) or water (Anand 2017) shape tangible urban worlds that anchor and stratify social relationships, few studies investigate the role of matter in producing confrontations with an immaterial and disembodied world. Inspired by recent fieldwork in and across cities, contributors interrogate how matter – sediment, vapor, or mold – connect people with the unseen, unaccounted, and uncanny and produce encounters "that stir ethical consideration and potential intervention" (Shapiro 2015,369).

How do chemicals, liquids, and other non-organic things determine how cities come to exist in the mind and imagination of inhabitants? We ask roundtable participants to engage with seminal scholarship in urban anthropology and geography (Augé 2008; Appadurai 2000; Roy 2013; Swyngedouw 2018) to examine the role of material uprisings as moments in which other realities that lurk under the surface of the visible world come to light (De Boeck and Plissart 2014). We invite reflections into how these moments make and destabilize residents' and communities' claims to urban space and infrastructure. Spectral traces across the city reveal past acts, such as incidents of colonial violence, displacement, or environmental destruction. Toxic plumes, floods, or outages can be described as urban haunting, that is, when matter imposes its own temporality on urban design and infrastructure. These hauntings can serve as "a mode of reading the city" (Best and Ramirez 2021) that refuses the burial of alternative histories under modern ideals of development. At the same time, their fleeting materiality evokes imaginaries of futures that may or may not be actualized, opening up alternative planes for political action.

Contributors are encouraged to conjure up spectral urban situations via auditive, visual, or other means. They may discuss how ethnographic attention to matter can help transform the immaterial into tangible evidence of that which has been silent. They can engage with the spectrality of matter in the context of topics as varied as housing, climate adaptation, or waste management to show how insurgent material not only undercuts and disrupts human building projects and infrastructure designs, but also mediates the experience of being haunted.

4520 Interdisciplinary Perspectives on the Late Postclassic to Colonial Transition in the Maya Highlands

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** MGB Salon E

Type: Oral Presentation Session

Despite the growing body of archaeological and ethnohistorical research on the Maya highlands of Chiapas and Guatemala, much remains unknown about the transformations that Maya and other Mesoamerican communities in the area experienced during the transition from the Late Postclassic period (1250–1524) into the colonial period (1524–1821). This panel brings together scholars and approaches from the fields of archaeology, ethnohistory, linguistics, and ethnography to address key questions around interconnected issues relating to social organization, political economy, and identity. Rather than focusing on single cultural groups in isolation or addressing questions from one methodological angle, each of the papers in this session view Maya peoples and their neighbors as engaged in dynamic interaction and take a comparative and interdisciplinary approach. Thus, Postclassic K'iche' elite marriage practices are analyzed for what they can tell us about "international" relations with other Maya polities; archaeological and ethnohistoric data are connected to sort out entanglements among Tsotsil (Maya), Zoque, and Chiapanec populations; the dynamic social and political organization of Q'anjob'alan communities is reconstructed and compared to those of K'iche'an peoples using a mix of folklore, ethnographic, and documentary sources; and the economic strategies of Nahua and other central Mexican groups in southern Mesoamerica are considered through inventories of trade goods and material culture in the wake of the Spanish invasions. Collectively, this panel sheds new light on intersections of kinship, statecraft, trade, and ethnicity and how these phenomena changed and were deployed before and after the Spanish invasions of the early 16th century.

Presentation(s): Creating kinship networks between the Postclassic K'iche' and other Highland Nations

The K'iche' was one of the strongest political units of the Maya Highlands during the Late Postclassic period (1250–1524 CE). It is thought that the K'iche' had a militaristic state that subdued several nations through coercion. However, this is a generalization that hides diverse strategies employed by the K'iche' to create lasting relationships with other highland nations. The K'iche' ruling lineages practiced exogamy, which resulted in creating kinship networks at the regional level that chroniclers and Spanish authorities identified after their arrival in the territory now known as Guatemala in 1524. In this presentation, I will discuss the creation of kinship networks at the regional level by the K'iche', which had the purpose of maintaining peace in the region, strengthening existing alliances, and colonizing new territories. This presentation aims to understand kinship among the Postclassic K'iche' and its political implication at a regional level.

Presenter(s): Iyaxel Cojti Ren

The Título de Chiapa and archaeological evidence for the study of the Postclassic horizon in Central Chiapas

Recent studies in the Guatemalan Highlands on the Postclassic horizon represent both a methodological challenge and a significant milestone in the investigation of these phenomena in Central Chiapas from the perspectives of archaeology and early colonial history. Our study area lies within the transition zone between the Jobel Valley (present-day San Cristóbal de Las Casas Basin) and the Central Depression of Chiapas.

During the period preceding the arrival of the Europeans, historical sources, particularly the Título de Chiapa (Navarrete 1966; Annereau-Fulbert & Flores 2021), document deep in time and complex patterns of population movement. These processes had significant implications for the interactions among the Zoque, Chiapaneca, and Tsotsil groups, who occupied the region through diverse forms of territorial settlement. As a result, establishing a direct correlation between archaeological sites and the ethnic and linguistic organization of the early colonial period becomes challenging.

Drawing on documentary evidence and the spatial configuration of the Monte Guineo archaeological site, located in the present-day municipality of San Lucas, we analyze key indicators to better understand these ancient socio-political dynamics.

Presenter(s): Marie Annereau-Fulbert

A Tale of Brothers: Reading Postclassic Q'anjob'alan History in the "Title of Jacaltenango" and Oral Narratives

Scholarly awareness of the *konob'* ("town") and *niman konob'* ("Great town") and their cognates among Q'anjob'alan Maya peoples (Q'anjob'al, Popti', Chuj, and Akatek) in northern Huehuetenango has been limited by a lack of coordination of relevant data across ethnography, history, archaeology, and folklore. Each provides key pieces of information about these social units comparable to, yet distinct from, the *chinamit* and *amaq'* among K'iche'an Maya peoples. Here I connect these disparate sources, focusing on the "Title of Jacaltenango," a Spanish-language land title containing critical information about the region's early history. Reading this and related texts in conjunction with oral narratives and ethnography, I reconstruct the area's Postclassic and colonial political and social organization. This reconstruction is related to the limited archaeology done in the area and compared to the *chinamit* and *amaq'*. In contrast to the latter's focus on ranking noble houses, *konob'* and *niman konob'* emphasize ritual hierarchies among towns connected by common descent from ancestral couples, using kinship among elder and junior siblings as a metaphor for intra- and intercommunity relationships. This is shown in narratives about named ancestors venerated at specific locations within a sacred landscape, reinforcing common identification and potential alliance (or rivalry) with "brothers" and "sisters" across town boundaries, a pattern that endured into the colonial era and after.

Survivance in Small Things: Interregional Trade on the Camino Real de Abajo, 1570–1640

This paper is premised on the frequent claim that central Mexican allies of the Spanish conquistadors sought fuller access to ancient trade routes running through present-day Chiapas and Guatemala, which had never been fully incorporated by the tributary Mexica empire. If this is true, did the mostly Nahuatl allies get what they wanted by the end of the 16th century? This period was also the nadir of Indigenous demographic collapse in the wake of Spanish invasion. I use economic data not only to suggest the state of Mesoamerican interregional trade in a globalizing era, but to imagine Mesoamerican lives amid disaster through the small details of things they produced and purchased. I will focus on four documents: three prosecutions of illicit sales by Spanish priests or administrators who were forbidden by law from selling to Mesoamericans, plus the postmortem inventory and auction of a middling Spanish merchant in the Izalcos (San Salvador). These documents, along with some 20 other inventories or bills of sale, provide a unique view of merchandise marketed to Mesoamericans by Spaniards at the turn of the 16th to the 17th centuries. They cannot tell us why someone would have bought feathered huipiles, leather children's booties, blue *naguas* from Oaxaca, or rosaries in a given situation. But examining them as a corpus, with an eye towards pre-Columbian versus Spanish colonial patterns of production and interaction, suggests a wider range of possibilities than is often admitted.

Presentation(s): Phantom Shores: Black Feminine Invisibility in Coastal Narratives

Black women exist as spectral presences in the historical and environmental discourses of coastal spaces. While coastlines have long been sites of colonial conquest and diasporic memory, the presence of Black women within these narratives remains curiously absent, erased, or reduced to faint traces. Water is linked to rebirth, healing, and ancestral memory. Yet Black women, who are so often the bearers of life and knowledge are ghosted from coastal histories. This absence forces Black women anthropologists of the African Diaspora to face the haunting reality of seeking ourselves in archives that were never meant to hold us. With little historical documentation and enduring bias, our histories take on a mythical quality. Black women are seen as legend rather than fact, which in turn disrupts our research and sense of truth. Researching Black femininity in coastal narratives becomes a process of reclaiming these histories, because Black women have been ghostlike figures, whose labor, lives, and knowledge were erased from dominant narratives.

Presenter(s): Bria Brooks

Mummy Gan Work: Entanglements of Gendered Labor in the Domestic Sphere

Historically, women's labor in Jamaica has been heavily gendered, making it essential for the maintenance of tourism infrastructure. Dating back to the era of slavery on the island, where the productive and reproductive capital of Jamaican women has been controlled and commodified within the industries of service and sale. This interrelation is central to the construction of, and interplay between, the home and the Jamaican tourism frontier. Precepts of the home were influenced by the exclusion of Jamaican women from the discursive territories of womanhood and the domestic, predicated on their captivity within these exploitative labor structures. The domestic lifeworld of hospitality laborers becomes entangled, yet remains invisible, and "haunts" the daily realities of the island's recreations and pervades in the lives of their loved ones. This presentation

speaks to the lingering spirits of the Jamaican women who have labored in tourism for decades, and whose identities and domestic spheres have been shaped by their work. Behind the walls of the island's recreational arena, lies the incarnations of those who have lived and died in the service of others, yet not afforded the fruits of their labor.

Infrastructure That Haunts Us: Confronting Legacies of Environmental Racism Across the Diaspora

Black Americans have long been disproportionately and negatively affected by federal infrastructure projects. Exclusionary zoning policies, such as redlining, have contributed to persistent racial segregation, economic disruption, and unequal exposure to environmental hazards. Historically, federal initiatives have justified the marginalization of Black communities by emphasizing the economic benefits of these projects—benefits that are often unevenly distributed. As a global superpower, the United States has served as a model for many developing nations, influencing their social and economic policies. Just 550 miles south of Miami, the island nation of Jamaica recently celebrated the completion of its longest and widest bridge: the Montego Bay Bypass Bridge. However, the development has disproportionately harmed the poor, rural communities through which it runs. Jamaica's national motto, "Out of many, one people," promotes a collective identity rooted in a history of colonialism and creolization. Yet, in practice, socioeconomic status in Jamaica still closely aligns with skin color—its poorest rural communities are overwhelmingly Black. The experiences of Black Americans and Black Jamaicans are linked not only by the shared legacy of the Trans-Atlantic slave trade but also by the ongoing replication of U.S. neoliberal policies that perpetuate racialized economic and environmental injustice.

Holy (S)Hainthood: The Rhizomatic Possession of the Homeplace

To be from the deep South, specifically Mississippi, often is to be misread and mythologized. Your lived experience is called upon to answer questions that other's recall from a nearly-forgotten family member, asking for confirmation on how things "are" in Mississippi. Saul Ostro discusses in "Spectacle and the Self" the politics of illusion, fantasy, and exaggeration. I pair this with Saidiya Hartman's critical fabulation and Daphne Brooks' thought on historical performances expressed in *Bodies in Dissent* to craft a narrative of experience. In this paper, I offer a personal reflection on haunting and performance, reckoning with what it means to be from the Deep South while moving through academic and geographic spaces. As a Black woman anthropological archaeologist from rural Mississippi and a first-year PhD student, I carry with me not only the weight of my history but experiences of living through it. These hauntings that come with being a Mississippian persist, and I engage the mirror as both metaphor and method, exploring what happens when the world shows you a distorted image of yourself and your community. Last, I invoke a personal Sankofa, exploring what it means to look back in order to go forward.

2907 Is Sustainability Sustainable? Corporate Value(s) Now, Part 1

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** MGB - Salon B

Type: Oral Presentation Session

We live in a time of monsters. Fires, floods, and other disasters (natural and unnatural) abound. Fantasies of disembedded markets-which anthropologists have long loved to hate-sound quaint when life seems swamped, swarmed, and stuck in an increasingly disorderly socio-ecological world. At such a time, we ask: what can anthropologists learn from capitalist pursuits of sustainability?

Corporate sustainability may be an unlikely sphere to seek new insights, often critiqued as a "green" fig leaf covering up business-as-usual depredations, and now condemned from different angles as a "woke" assault on capitalism's values. The prevailing anthropological disposition has treated capitalist enterprise as unsustainable (in descriptive and normative terms) and capitalist "sustainability" as a ruse for profit. We might pause here and attend ethnographically to whether, or which, capitalist sustainability actors are keeping on in the first instance, let alone profitably. Advocates for sustainability now seem fewer and farther between in many markets, beset by rollbacks, cutbacks, and backlashes. Existing practitioners grapple not only with external arguments but also doubts and uncertainties within their projects and workplaces. Where are those holding onto corporate sustainability, amid a diversifying mob of ghosts, zombies, and other returns of sustainability's repressed?

This panel assembles papers that take capitalist sustainability projects, pursuits, and people seriously even at a moment of apparent defeat and disorder in much of the corporate world. Is there more than meets the headlines? We offer anthropological interventions in the political ecology of capitalism, engaged with practices and practitioners of corporate sustainability, SDGs, sustainable finance, etc., as geo-historically situated phenomena and as arenas for ongoing and uneven negotiations of capitalist value(s). What are the contradictions, contingencies, and unexpected convergences involved in making capitalist enterprises sustainable, or trying and failing to? What are the relations, practices, and epistemologies through which profit and other values are sustained, lost, or transformed? How does all this vary in space and time?

We will avoid the analytical traps of capitalocentrism while also holding at bay reflex temptations to imagine otherwise. Instead, scholars will present papers that stay ethnographically with corporate forms, markets, supply chains, ecosystems, and their troubles.

Presentation(s): "We Produce Future": Green Corporate Visions and Forest Politics in Uruguay

Recent multibillion-dollar corporate investments in pulp mills in Uruguay accompanied the expansion of tens of thousands of hectares of commercial forestry plantations across a country of natural grasslands. Rapid afforestation has generated widespread socio-ecological harm, including groundwater depletion, industrial contamination, toxic spills, forest fires, land concentration, and rural community displacement. For its corporate boosters, pulp mills and tree plantations symbolize the promise of green capitalism and sustainable development through forest certifications, globally traded carbon bonds, and the green "bioeconomy." Corporate actors "naturalize" tree plantations as integral to local ecologies, improvements upon "empty" grasslands, and as antidotes to chemically intensive, competing plantation monocrops. Meanwhile, these Scandinavian pulp/forestry corporations have financed some of Uruguay's most ambitious conservation initiatives. They have set aside vast swathes of land as protected areas, engaged in biodiversity conservation and rewilding initiatives, and partnered with small-scale farmers in promoting organic production and harvesting activities on plantation forest lands. This paper analyzes these new and contradictory frontiers of capital and conservation, examining how biodiversity conservation has been threatened, enabled, and revalued through corporate plantation logics and their contested visions of (as one corporate slogan puts it) "producing future."

When more-than-human Meshworks Push Back: Infrapolitics in an Indian Tech-entrepreneurial Sustainability Program

Since the Paris Agreement in 2015, agriculture has gained increased prominence in global climate negotiations, both as a source of greenhouse gas emissions and for its potential to reduce them through carbon storage and sequestration. In the past decade, hundreds of agriculture technology (agtech) start-ups have emerged, promising to design and scale "climate-smart agriculture" (CSA) solutions. India has become a key destination for CSA investments, offering a unique vantage to examine their impacts. This paper traces how aspirations to address the ecological crisis urgently and at scale intersect with the complex environmental, social, economic, political, and cultural relationships that shape agriculture. Alternate Wetting and Drying (AWD) of rice fields, a technique aimed at mitigating emissions by killing methanogenic soil bacteria, has gained traction among tech-entrepreneurs as a key CSA program. Based on an institutional ethnography of an AWD program at an Indian agtech start-up, this paper examines why and how technological interventions like AWD consistently face challenges, often fail, and yet continue to reappear. What drives their

persistence despite repeated failures on the ground? How are these tied to the financing and scaling models of climate-smart technologies? This paper highlights the tensions and contradictions at the heart of scaling climate-smart agriculture and their implications for addressing the intertwined crises of climate change and agriculture

Responsibilities of Sustainability: Orienting Pakistan's Health Systems to Enable Exports to the European Union

Sustainability directives have long shaped governance especially in factories within global supply chains. This paper demonstrates how health systems in Pakistan are being shaped through sustainability directives introduced through the European Union's Green Deal. Recently, EU directives have sought to shape occupational health as a social sustainability marker needed for continued exports. Different stakeholders including, private factory owners, government employees, and worker unions, discuss how responsibilities regarding occupational health would be divided between industries and the private-public worker healthcare system. In this process, these stakeholders came up with innovative and makeshift methodologies in managing occupational health, especially heat at work and workers' muscular pains. Therefore, I ask: what relationalities emerged between stakeholders as they worked towards the common goal of enabling exports to the EU through managing occupational health? Further, a focus on the methodologies devised for meeting occupational health standards reveals how the role of public health systems is being shaped to enable private factory exports to the EU. Therefore, I argue that when occupational health is shaped under sustainability directives, production sites and healthcare systems do not work as distinct private and public systems but align, albeit with tensions over responsibilities, to enable meeting occupational health standards and continued exports to the EU

When the Durable Becomes Disposable: The Paradox of Corporate Sustainability in the Chinese EV Industry

What happens when the world's largest greenhouse gas emitter pivots toward clean energy? In recent years, electric vehicles (EVs) have rapidly proliferated on China's roads, accompanied by sweeping changes. The network of charging points has increasingly expanded into remote areas, and public space is filled with advertisements for sleek cars, with pop-up shops in malls and airports inviting passerby to experience "vehicles of sustainable tomorrow." This spectacle results from close state-corporate cooperation on both material (e.g., subsidies) and meaning-making levels, as the state fervently embraces terms like "ecological civilization" and takes pride in the industry's meteoric growth. Similarly, new domestic EV corporations incorporate "sustainability" into their marketing language and corporate values. However, my fieldwork in Shanghai's EV infrastructure—studios, carshops, charging points, industrial seminars, expos, etc.—reveals a complex paradox of how "sustainability" plays out on the ground. I discovered that, irrespective of

intentions, EV corporations have fostered a disposable mindset among customers. Few of my interlocutors raised environmental concerns, and most believed that EVs are much less worthy, durable, and reliable than traditional vehicles. Adding to controversies surrounding EVs' carbon footprints, this work investigates questions of value, materiality, and circularity in the Chinese EV industry, ultimately questioning what is sustainable about it.

4130 Listening to Future Ghosts: Towards a Universally Haunted Anthropology

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR C3 (3rd fl)

Type: Roundtable/Town Hall

In anthropology, there are ghosts everywhere: the ghosts of those who founded the discipline, and of a discipline that continues in the present-day to accompany violence (AAA 1969; Asad 1973; Said 1979; Sharpe 2023); the ghosts that haunt our interlocutors, who we have argued are co-presences, if not themselves ethnographic subjects (Beliso-De Jesus 2015; Nelson 2009; Ng 2020); the ghosts produced by enslavement, settler colonialism, and late capitalism that haunt the silences, the absences, the overproductions of the present (Garcia 2010; Good 2019; Harney and Moten, 2013; Stoler 2006; Taussig 1987). Social figures that trouble, inhabit, and mediate the lines between the living and the dead, the past and present (Gordon 2008[1997]), ghosts haunt; lurking, seething, accosting, ghosts give voice to marginalized voices unheard, livelihoods denied or eroded, hopes and dreams destroyed, moral and political betrayals, alternative moral and political paths not taken (Hollan 2020). We agree, it seems, that ghosts live in the past and the present; but what of haunted and haunting futures?

Surely, ghosts have proliferated in our writing since Derrida's *Specters of Marx* and Gordon's *Ghostly Matters*; perhaps this mirrors the field's reflexive turn, its desire to write more justly. Derrida writes, "It is necessary to speak of the ghost, indeed to the ghost and with it, from the moment that no ethics, no politics, whether revolutionary or not, seems possible and thinkable and just, that does not recognize in it a principle that respect for those others who are no longer or for those others who are not yet there, presently living" (1994, p.xviii, italics in original). And, writing from a different tradition, Beliso-De Jesus (2024) demonstrates that ghosts' work is not limited to memory work; rather, haunting is a dynamic process that continues to unfold across time, to make new presents and futures.

With this roundtable, we discuss ghosts' work on futures. We ask: How might we properly attend to ghosts of other temporalities, including the time of Black feminism, the future real conditional, that which hasn't happened yet but must (Camp 2014)? Is the appearance of ghosts dependent on violence, or do they appear in other contexts? Similarly, must ghosts either be freed or unseated for justice to be achieved, or are there other forms of living with, walking alongside? Is it possible to

write "literature without a show" as Taussig (2022) suggests, which might bring an end to killing, or will our work always generate new forms of haunting? Finally, what literary forms would our writing take if it were also haunted?

1890 Marxism and Anthropology: The Present and Futures of a Relationship

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR B3 (3rd fl)

Type: Roundtable/Town Hall

In the 1970s and 1980s, Marxism – as both a mode of critique and a normative politics – occupied a central place in Euro-American anthropology. The prominence owed much to a global wave of political movements that took their bearings from Marxism: from Maoist-inspired national liberation struggles in the global South to Black and Red Power movements closer to home. Marxism's standing within the discipline was significant enough to prompt Maurice Bloch to publish *Marxism and Anthropology: The History of a Relationship* (Clarendon Press, 1983). Yet Marxism was soon eclipsed in the discipline – a reflection not only of its waning influence as a global political force but also as an outcome of debates internal to the discipline itself. As culturalist approaches triumphed over political-economic ones to acquire hegemony over the discipline, both were later displaced by post-structuralist and Deleuzian turns. Of late, however, Marxism has acquired renewed interest within anthropology – perhaps a sign of both transformations in the broader political terrain and the inadequacy of prevailing anthropological tools to make sense of them. From escalating capitalist crises and widening (racialized and gendered) class inequalities to an intensifying climate catastrophe intrinsically tied to capitalist growth, renewed imperialist wars, and the re-emergence of national liberation struggles – most visibly in Palestine – the current conjuncture has fueled a revival of interest in socialism and Marxism for the 21st century.

Our panel asks, on the terrain of anthropological theory, a question increasingly posed in political struggle more widely: what does Marxism look like in anthropology's 21st century? Can – and should – a Marxist anthropology and/or an anthropology of Marxism cohere as an intellectual practice? What might Marxism offer to anthropology, and what might anthropology offer to Marxism

today? We assemble a group of anthropologists traversing across these intellectual terrains, employing Marxism variably as a set of analytical tools, a horizon of normative political commitments, and/or as an object of anthropological inquiry in its own right. In reflecting on this relationship, we also hope to shed light on the constituent terms themselves. What does "anthropology" mean today, at a moment when its coherence is again questioned, when calls not just decolonize the discipline but even let it burn grow louder? And what of "Marxism," a term that is increasingly misapplied by a fascist right against the political center?

7723 Nationalism and its Discontents: A Conversation on Studying Majoritarian Victimhood

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR D3 (3rd fl)

Type: Conversation/Debate

Over the past decade, a surge of populist, right-wing, and nationalist movements have trafficked in rhetoric that paints ethnic, racial, and religious majorities as the members of society who are truly vulnerable or besieged, under threat from "powerful minorities". We are three graduate students with a shared theoretical interest in the mechanisms by which this happens across three geographic sites: the United States, India, and Israel/Palestine. We ask: how do those who hold majoritarian positions in these contexts, even those who may not identify as right-wing nationalists themselves, construct their subjectivities as victims? What effect does that process of subject-formation have on how we study slippery concepts such as whiteness, indigeneity, and caste? At a theoretical level, how do we locate victimhood within the context of both recent right-wing politics and the nation-form itself? In asking these questions, we intend to interrogate the affective, material, institutional, and discursive mechanisms by which majoritarian movements may politicize pain, invert victimhood relations, or respond to imagined or real attempts at redistributive justice. How are these mechanisms experienced in everyday life, in various state and non-state domains, and across geographies? How do we as ethnographers position ourselves to this felt victimhood or pain and create political projects that challenge reactionary movements? Moderated by Xavier Robillard-Martel, who documents victimhood and marginalization among white Cajuns in Louisiana, this conversation will feature our initial impressions from the field, providing us a space to interrogate the similarities and differences across distinct geographies.

4361 Ordinary Hauntings, Absent Ghosts, and the Everyday Work of Death

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Studio 6

Type: Oral Presentation Session

The papers in this panel take as their context places one might expect to be haunted: a massed grave, a street lined with funeral parlors, a cremation ghat, and a city in the midst of political tumult. Our interlocutors are those for whom dealing with death is the everyday, for whom corpses are everywhere and ordinary, their accounts set in biographies of repeated loss.

What does haunting mean in times and places where ghosts are merely ordinary? When interlocutors have little interest in speaking of hauntings or ghost possessions precisely because they are so common-place, the least pressing parts of day-to-day life? Or when we, as anthropologists, expect ghosts but fail to find them? When we commit to taking hauntings seriously, but those we work with make clear they do not? If "ghosts thrive in settings that are far from ontologically pure" (Good et al 2022), perhaps places where they can be taken for granted, or accounts in which they are hidden in plain sight, create new space for the "uncanniness of the ordinary" (Cavell 1988) to creep in?

What else haunts our interlocutors' accounts? And our ethnographic writing? To borrow Michael Jackson's phrase, are we "haunted by the hubris of reductionism," while our interlocutors' demand "a resistance to closure" (2019)? Haunted by anthropologists' past, from whom we cannot escape? What are the spectral dimensions of quotidian life that we cannot shake? What does haunting hide, as much as it reveals? And what if it's the anthropologists who are uncanny?

In this panel, we draw together a series of mistaken ghost stories and unlikely possessions: from New York City's massed grave, where despite its grim purpose, Hart Island apparently withheld ghosts and instead soothed the souls of those who laboured there; to an apparent case of possession during Delhi's Emergency – and what researchers were really trying to say about the politics and conditions of life then; to Singapore, a city-state rich with ghost lore but where the only places that are reliably ghost-free are funeral parlors; and to Northern Indian cremation sites, to examine how claims of religious continuities are marked by haunting breaks in modern state power.

Presentation(s): Hart Island's Solace

One might expect that Hart Island, New York's massed grave of one million unmarked dead buried by Rikers Island Prison inmates, would be seething with unhappy ghosts. Yet I heard no ghost stories, though interlocutors often said they sensed something uncanny when they visited. But former Rikers inmates who had worked the burial detail described carrying Hart Island and its dead with them long afterwards. One had dreamt about it persistently for years.

They found the burial work morally distressing, physically difficult and sometimes hazardous. They also thought of those they buried. But Hart Island itself seemed to offer them solace, providing an insistent and peaceable presence that intruded on their thoughts long after they were freed. How can we reckon a place usually associated with death and horror that also, for a few who really knew its business, meant consolation? How had Hart Island's significance shifted so dramatically that for some it became, paradoxically, a dreamscape? And what is at stake when inmates find refuge in a place where the only human activity is a massed grave?

Presenter(s): Sally Raudon

Sita's Ghosts, Sita's Bodies: Reproduction, Affliction, and the Political Body in Emergency-Era Delhi

From the 1960s through the 1980s, anthropologists Ruth and Stanley Freed wrote detailed monographs about a village they called "Shanti Nagar" at the edge of the expanding city of Delhi. One of their main interlocutors was a woman they called, variously, Daya and Sita, whose life they recounted in detail, especially in an extended case study. The case study included accounts of Sita's illness history and reproductive life (babies born, lost, and possibly taken by government nurses) as well as her domestic labors in the context of Delhi's Emergency and the years before and after it. The monograph, in all its complexity, was contained by the framing question of her "ghost possession" and how anthropology might understand it, even as it, ultimately, offered a complex multiplicity of explanatory frames. This paper considers the political narratives that run through what is, at the same time, a narrative framed by key devices: the mystery of spirit possession and the explanatory structure of "conversion disorder," and, remarkably, the eventual rejection of those frames by a more complex and less familiar reckoning of the biological body in the context of political and social change. How did a multiplicity of "bodies" that appear in the Freed's accounts allow for a - possibly covert - critique of political conditions? What are the stakes of possession, reckoned as a site for one such body, not as a singular explanation, but as part of other, even contradictory ones?

Presenter(s): Sarah Pinto

“Did you feel the dead pull you down?” Singaporean funeral parlors and other places that cannot be haunted

When I returned to Singapore, after several years away, the funeral parlor where I worked as a mortician was suddenly inundated with the worst kinds of deaths, with suicides and drownings, far more than one would usually expect. At night, I dreamt of nothing but corpses. And, a week into my stay, as I ran in the park at dusk, I smelt the dead then felt them drag me down into an uncovered storm drain, breaking my leg.

Singaporeans are, as a rule, fond of ghost stories. The city-state can be mapped by the places where ghosts linger: sites of the Japanese occupation, overgrown cemeteries, abandoned hospitals, and national service military camps. There are nine-tailed fox spirits, frangipani-fragranced flying Pontianak, and multiple headless and faceless but highly scented ghosts. But there are to be no ghosts in the funeral parlor, nor at the state-run crematoria, and absolutely none at currently operating cemeteries. And nothing is quite as unprofessional as a death worker who has seen (or smelt) a ghost.

This is an account of all the people who saw ghosts when they absolutely shouldn't. Of a visit to a "Luck Enhancement Service" at Katong Shopping Center, overseen by the Taoist Jade Emperor. Of an awkward exorcism. And of why every Singaporean Mass Rapid Transit station is haunted but funeral parlors are not.

Presenter(s): Ruth Toulson

More Delicate Degrees of Otherness: Narrative Management of Death Impurity at a North Indian Cremation Site

The space of the Hindu cremation ghat (site), usually set by river bodies is layered with many kinds of nonnormative meanings. The Simariya cremation site at the banks of River Ganga in Northern India where my fieldwork is based, as good as drowns come the monsoon season. In contrast, the dham or the pilgrimage site right beside it has seen a spate of renovation projects in an attempt by the state to raise the 'Hindu' glory of the holy site. The whole enterprise then, takes on a haunted quality - with what is seen as desirable by the state shadowed by what must find ways to sustain itself without any kind of investment. By investigating the proximity of life worlds and death worlds, this paper elucidates how death is not only the limit condition of modern governmentality, but also constitutive of it.

Presenter(s): Sargam Sharma

7027 Policing War, Militarizing Peace: Ethnographic Perspectives on State Violence

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Maurepas (3rd fl)

Type: Oral Presentation Session

This panel invites ethnographic attention to the legal concepts and practices that shape state violence. Specifically, we examine how the jurisdictional division between military intervention (war) and police action (peace) is enacted, contested, and transformed through legal-bureaucratic concepts and practices. Scholars have shown how military violence has been legally reframed as mere "police action," thereby denying the existence of conflict or war—such as in the case of Colombia's civil war, where conflict was legally reframed as a fight against criminal narco-terrorists. Conversely, the language and logic of war have facilitated the militarization of state policing forces—whether police, border enforcement, or other security officers. This is extensively documented in scholarship on the War on Drugs in the Americas, the War on Terror, and on the militarization of border enforcement on the U.S.-Mexico border and globally. Building on this scholarship, this panel explores how law and bureaucratic concepts and practices are mobilized to reinforce or dismantle the jurisdictional distinctions between military intervention and police action in the exercise of state violence. We consider comparative ethnographic perspectives from Mexico, Colombia, the U.S., and Pakistan on questions such as: How do legal concepts and practices enable or deflect material practices of state violence? What are the specific ways in which a jurisdictional divide of the forms of state violence appropriate to war or peace is enacted? How do lawyers, social movements, or individuals and their kin seek to challenge or disrupt the legal mechanisms that enable state violence normalized as part of "war" or "peace"?

Presentation(s): Shadow Accountability: How Prosecutors Legalize Police Violence in Mexico City

Political liberalism promises to safeguard populations from unlawful state violence through accountability mechanisms. To achieve this, liberal regimes have established extensive oversight systems. However, police violence remains a widespread problem. How do law enforcement agents evade the legal frameworks intended to restrain their violence? This paper draws on two years of ethnographic fieldwork with prosecutors and criminalized populations in Mexico City to examine how systems of accountability sustain police impunity. I argue that chains of command—intended to establish responsibility—also facilitate coordination among prosecutors, police, and judges to circumvent institutional checks. Sanctions such as demotions, transfers, and even criminal charges are not used to enforce accountability but to ensure loyalty to political priorities, including shielding police officers from prosecution. Prosecutors referred to this alignment with political directives as "toeing the line." This practice cultivated a disposition of obedience to the ruling party's interests, which they called "being institutional." The enforcement of political directives and the cultivation of obedience created a system of shadow accountability that

employs bureaucratic oversight to undermine the liberal promise of protecting populations from state violence.

Presenter(s): Esteban Salmon Perrilliat

Gendering the Legal Life of War: Displacement, Surveillance, and Everyday Policing in Pakistan

This paper examines how gendered forms of state violence are sustained in the transition from military conflict to peacetime governance in post-Global War on Terror Pakistan. Drawing on ethnographic and digital research with displaced Pashtun women in Peshawar, I examine how the aftermath of the 2014 military operation Zarb-e-Azb blurred the line between war and peace—legally and materially. The 2018 merger of the Federally Administered Tribal Areas (FATA) with Khyber Pakhtunkhwa (KP), framed as civilian "integration," instead extended counterinsurgency logics through bureaucratic surveillance, conditional aid, and social policing. Pashtun women, already marginalized at the intersection of gender and ethnicity, continue to navigate militarized governance under the guise of peace. They face mobility restrictions, moral scrutiny in universities, and pressure to repatriate as markers of "rehabilitation." This paper explores how displaced women contest these gendered technologies of control by refusing return, asserting presence in urban centers, and building alternative political networks online. By foregrounding how post-conflict governance functions as gendered policing, I argue that legal reforms in KP mask a reconfiguration—not a cessation—of state violence. This paper contributes to feminist and legal anthropology by showing how the logics of war are not dismantled but redistributed, and how women's acts of refusal challenge the state's rebranding of militarism as peace.

Presenter(s): Zainab Najeeb

War's Jurisdiction: Law, Amnesty, and the Remaking of Conflict in Colombia

This paper examines how technical jurisdictional decisions at Colombia's transitional justice court are reshaping the history of conflict after a peace agreement. In 2016, the Colombian government signed a peace accord with the FARC—the Americas' longest-standing leftist guerrilla—ending five decades of war. The accords created a special court to prosecute commanders for atrocity while granting amnesty to low-level militants for political crimes. Amnesty would erase criminal records, free ex-militants from prison, and support their reintegration. Yet to grant it, the court must sift through these records to determine which acts count as political crimes of "the conflict" under its jurisdiction, and which are "ordinary" crimes for penal courts. These jurisdictional decisions are fraught: FARC militants were often prosecuted as narco-terrorists before the accords to deny the conflict's existence. Based on 14 months of ethnographic fieldwork in Bogotá, this paper traces a single amnesty case excluded on jurisdictional grounds. It approaches jurisdictional decision-making as a site of anthropological inquiry to examine how boundaries around conflict and rebellion are reconfigured in the aftermath of a peace accord. It contributes to the anthropology of jurisdiction as the "governance of legal governance" (Valverde 2015) and shifts ethnographies of transitional justice from atrocity cases to consider how low-level militants are configured as legal subjects.

Contesting the Border: Law, Violence, and the Politics of Accountability

The militarized border apparatus dividing the Mexico–U.S. borderlands has increasingly been criticized for waging a so-called 'war on migrants.' Over the past decades, diverse forms of violence, both state-sanctioned and extralegal, have shaped the trajectories of people on the move seeking entry into the U.S. from Mexico. This paper examines the legal and political conditions that enable such forms of violence against civilian populations in the name of border enforcement during times of peace. Drawing on ethnographic research conducted between 2019 and 2022 with asylum seekers, legal practitioners, and human rights defenders, I analyze how these violences are interpreted, challenged, and rearticulated. Focusing on strategic litigation and monitoring as sites of contestation, I trace how migrant and civil rights attorneys and their clients engage the law to pursue accountability for grave rights violations, challenging state practices such as the use of chemical agents, unlawful expulsions, and lethal force by border agents. These legal and political contestations reveal law both as a mechanism of state violence and a terrain of resistance. Drawing on multiple legal regimes (i.e., domestic and international), interlocutors variously frame these violences as human rights abuses, or, in their systematic and repetitive form, argue that the severity and recurrence of such acts amount to crimes against humanity.

Presenter(s): Sara Bellezza

The Walls Have Eyes: Policing Migration through Surveillance and Automation

Migration is increasingly becoming digitized. From robodogs surveilling the US/Mexico border to drones flying over the Mediterranean Sea to biometrics being collected in refugee camps, untested and high-risk technologies have made their way into virtually every aspect of human movement. States have developed these experimental projects without public scrutiny or accountability mechanisms, and the current governance and legislative frameworks around border technologies remain inadequate to safeguard people's human rights. The political discourse around migration control also plays a central part in normalizing surveillance and artificial intelligence to manage borders. This paper explores how fears around migration and systematic exclusion of certain communities prevent people-on-the-move from Majority World countries from exercising their freedom of movement and animate the techno-solutionism at the centre of the decisions that powerful actors make to police migration and borders. The private sector is also a major player in normalizing surveillance, profiting in a multi-billion dollar industrial complex built on testing out new technologies in places like the Occupied Palestinian Territories and exporting them for border enforcement to places like the US/Mexico border and the fringes of the European Union.

4941 Portals and Promises: Black Movement, Memory, and Architectures of the In-Between

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR A1 & A2 (3rd fl)

Type: Oral Presentation Session

"Portals and Promises" is an interdisciplinary panel consisting of emerging scholars in the fields of art history, education, history, and visual art. Inspired by the 2025 AAA theme of "Ghosts. Apparitions. Spirits. Specters," this panel examines how Black temporalities defy linear histories and disrupt Eurocentric understandings of subjectivity, ontology, and humanism. Through recurring themes of movement and stillness, presence and absence, captivity and freedom, the presenters of this panel interrogate Black existence through the lens of liminality, attending to how Black life is navigated, narrated, and remembered in these interstitial spaces — the in-between. "Portals and Promises" provide the audience with introspective understandings of Blackness, ones that stretch boundaries of colonial imaginations and articulate how Black beings possess archives. In looking at movement, physically, geographically, and temporally, the main objective of this panel is to discuss afterlives, Black imaginations, and redefinitions. We engage the questions: How can the Black body be both a haunted space and a locus of care, creativity, and survival? How can we rethink the possibilities of return and connecting to those in their past lives through dance, art, commemoration, and engaging with the archives? How do historical actors, liberatory spaces, dance, and art function as connective threads across geographical locations and generations in the African diaspora, offering not only a sense of belonging but also modes of knowing, remembering, and imagining otherwise?

This panel will be organized into four presentations, concluding with a roundtable discussion facilitated by the chair. Stephanie Gibson's work, grounded in theories of memory, diaspora, and spatiality, uses historical analysis and site interpretation to examine a symbolic place of return for the African diaspora. Glynnis Reed-Conway, through Conjure Feminism, analyzes artmaking as a critical method for mapping iconographies of transcendence. J. Norma Watson applies speculative fabulation to imagine Black experiences in the colonial past. Quiana M. Jackson's presentation utilizes ethnographic frameworks to theorize movement as a method of conjuring memory and resisting historical erasure. Together, these contributions reveal how Black diasporic communities navigate, reimagine, and transform the liminal—whether through architecture, law, the body, or spiritual practice—into spaces of survival, connection and becoming.

Presentation(s): Embodied Memories: Choreographing the Ghosts of the Diaspora

This paper explores the body as a site of haunted memory and ancestral transmission in the Black diaspora, focusing on how dance becomes a methodology for conjuring history. The dancing body doesn't merely move through time and space; it remembers, carries, and channels the unspoken. Within this framework, movement becomes both ethnographic practice and epistemological archive, revealing how performance bears witness to what official histories repress. This paper posits that the choreographic works of Katherine Dunham and Pearl Primus are not only artistic acts but embodied ethnographies—rituals invoking diasporic pasts and spirits that refuse erasure.

Dunham's dance anthropology in the Caribbean and Primus's research in the American South and West Africa offered choreographic vocabularies steeped in cultural memory. Their bodies moved with, and through, spirits: of the enslaved, the displaced, the ancestral. These performances didn't illustrate ghostly presences—they were the hauntings, staging what was systematically absented. In dialogue with Black feminist theories of embodiment and diaspora, this paper argues that Black performance resists colonial modernity's death-drive by reanimating the affective, spiritual, and ancestral registers of memory. Through embodied citation, Dunham and Primus blur the boundaries between living and dead, past and present, anthropology and art—offering knowledge that is felt before it is known, and remembered before it is archived.

Presenter(s): Quiana M. Jackson

Confined Freedom: Complexities of Blackness and Mobility 19th century Brazil and Cuba

This paper examines African-descended people's experiences in Brazil and Cuba before, during, and after the processes of gradual emancipation. Using speculative interpretation and movement as a lens of analysis, I investigate Black folk's contradicting experiences of freedom rooted in confinement. Brazil and Cuba's gradual emancipation laws, or "Free Womb Laws," declared all children of enslaved mothers born after its legislations in 1870 and 1871 "free". How does one transition from being a socially labeled controlled object to an emancipated being? Juxtaposed alongside close reading of the Free Womb Laws, I use letters such as one from an enslaved mulatto,

Andres Marquez who is searching for an emancipated Black woman Paulina, who "promised" to marry him and work for his enslaver Doña Isabell Drysdale. While exploring Paulina's possible whereabouts, I investigate what I call the "complexities of Blackness", that deem us as being neither confined nor free but in a middle space of existence. My research argues that Black people's movement exposes the contradictions of racial capitalism. I focus on intersectional identities of enslaved, emancipated men and women to uplift resistance strategies and radical imaginations used to navigate antiBlack colonial states. I engage the questions, how were tools of confinement used to control Black people after they gained freedom? And what can Black people's movement tell us about Black life, Black subjectivity, and slavery's hold?

Presenter(s): Jasmine Norma Watson

Iconographies of Transcendence: Navigating the Spiritual in Art by African Diasporic Artists

As I create art, I contemplate my reflection in the emerging imagery as though it were a mirror, and sense, at times, guardian spirits dancing with me in the artistic process. I often create art in the same room that I keep my ancestral altar, forming a milieu where spiritual channeling intersects with art making. Often, I am guided as a vessel for otherworldly communication and find myself in somatically driven conversations with spiritual energies beyond my conscious awareness. Using an autoethnographic method, I explore the relationship of my interiority to communication with the spirit world through art making. I examine images from multiple artworks created over a span of nearly 25 years to show how my relationship to interiority and the spirit world has shifted over time. Global feminist scholar, M. Jacqui Alexander's theories of sacred subjectivity and embodiment offer foundational perspectives for my explorations of creativity in liminal realms of the supernatural. I interpret hidden messages and meanings in my work and that of other African Diaspora artists through Conjure Feminism. Conjure Feminism is a Black feminist theory developed by scholars that critically engages with the situated knowledges of Black women within the contexts of community and ancestral legacies. In this paper, I analyze art making as a critical method for mapping iconographies of transcendence and to study the navigation of the spirit world as seen in the work of African Diaspora artists.

Presenter(s): Glynnis Reed-Conway

Maison des Esclaves: Constructing a lieu de M moire

The rupture caused by the trans-Atlantic slave trade eradicated the sense of place, specifically a place to call "home," in the collective memory of the Black Diaspora. Analyzing the importance of the return to home in critical Black memory, this paper is focused on the real and imagined site of memory that is the Maison des Esclaves, the colonial home of Madame Anna Colas P pin on Gor e Island, Senegal — the location of the infamous "Door of No Return," whose modern interpretation commenced in 1962. This paper is an examination of the way in which the Maison des Esclaves became an important site of memory for the African diaspora and exploration of the importance of memory and the power of space in constructing a lieu de m moire. By leading visitors on a narrative journey through space, executive director and lead curator, Joseph N'diaye, provided a space for members of the African Diaspora to call home. This sense of possible connection is the result of a targeted information campaign and careful cultural programming undertaken by L opold Sedar Senghor, Senegal's first post-independence president. During his presidency (1960-80), he fashioned Senegal, specifically Dakar, as a site of return for the people of the Black Atlantic – as a place for the African diaspora to return home.

1901 Predatory Politics: The Wily Animal-Human Relationships of Hunting and Fishing, Part One—Sea

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Bacchus

Type: Oral Presentation Session

Experiences of hunting and fishing across diverse cultural contexts have been central to the analysis of human environmental relationships in environmental anthropology. Hunting and fishing have been investigated as generative social spaces of place-making, environmental perception, and relationship formation. But these practices have also been critical sites of colonial and state interventions that aim to shape and regulate relationships between humans and their material environment. These efforts to regulate hunting and fishing-and the embodied relational practices that join the lives, and deaths, of humans and non-humans- also work to reshape the relational worlds of indigenous and socially marginalized communities in the colonial and postcolonial world.

Yet the complex socioecological life of hunting and fishing seems to consistently exceed, and often undermine, efforts of state control or regulation. These two linked panels explore ethnographic accounts of human relationships with animals that are cunning, wily, or tricky-relationships that challenge notions of human agency and that resist the bounded categories of colonial and postcolonial life. Part one explores unruly relationships in watery contexts, ranging from spectral forces in fishing worlds in Bangladesh, to vigorous tarpon in the Caribbean Sea, the relationship between ancestor spirits and marine prey in Indonesia's Savu Sea, and the networks that connect salmon, killer whales and humans in Southeast Alaska. In each of these contexts, panelists foreground the ways in which fishing and hunting in the sea creates human-nonhuman social assemblages that unsettle the boundaries of fundamental anthropological categories: the human, gender, race and citizenship, among others.

Presentation(s): A Predatory Politics of Serpentine Beings in Chittagong's Fishery Economy

Surrounding Bangladesh's 1971 independence, many members of the Hindu minority community grappled with the choice to flee or stay. In Chittagong—Bangladesh's major port city—Duhita, a

woman from a Hindu fishing-caste community, describes how her family chose to stay because her mother was recovering from an attack by a serpentine nature spirit. I place this attack within a history of violent claims that serpentine more-than-human beings snakes, spectres, and a snake goddess—continue to make upon Duhita's family and community. Sea fishing communities of the Bay of Bengal work in a context where the unintended capture of venomous sea snakes is routine. Far at sea or on fish-drying islands without medical facilities, these attacks can be fatal. These fishing communities live around water bodies and as historically non-settled "out-caste" communities, have lived in places associated with wildness—where one would expect to find snakes. In this paper, I follow how a relationship to the spectral and divine non-human is framed by the experience of living and working in a coastal ecology with

venomous snakes. As these fishing communities become dispossessed from riverine and coastal land and work in the fishery—I explore how more-than-human beings make violent claims on this family and how these claims are part of a politics of land and work.

Hunting in the Savu Sea: Relationality, Conservation and Struggle in a Marine Hunting Community.

Lamalera is a coastal community of about two thousand people gathered around a small, south-facing cove of Lembata island, looking into Indonesia's Savu Sea. It's also the last traditional marine hunting community in Indonesia and the community's cosmology and livelihood system is tied to hunting a diversity of large marine prey,

including rays and toothed whales, by hand, from small wooden boats. Because of this, Lamalera is also a site of long-term marine conservation conflict, international media fantasy, and a struggle over customary or traditional identity. Missionized in the 1800's by German Catholics, Lamalera is a wholly Catholic community, but it

remains committed to previous belief practices based on the veneration of ancestors and animal spirits. At its core, is the understanding that ancestors are responsible for bringing marine prey to the waters off Lamalera's shores for crews to hunt, and for the community to share. Over the years, a series of regulatory interventions, by a

range of state and ngo bodies, have attempted to stop, or to limit, Lamalera hunting. In this paper I explore how Lamaleras have resisted various attempts at control and underscore a fundamental misalignment between the community and most regulatory efforts: the central importance of maintained relationality, between humans and animals, between community members, and between the living and the dead.

Killer Whales and King Salmon: Political Paradoxes in North Pacific Fisheries Conservation

Tahlequah has another dead baby. We know this because she belongs to a pod of killer whales who live uniquely near dry land and its hordes of humans, and because she is again bearing the corpse

around on her head, haunting surface dwellers with the bad news. The story makes headlines. The headlines demand a response. Her gesture is political. Indeed it has already complicated international politics, throwing a wrench into long standing but fragile agreements between the US and Canada over the management of Tahlequah's favorite, and increasingly scarce, food: king salmon. King (or Chinook) salmon were never easy to manage, even when Alaskan stocks were healthy enough to sustain fisheries in every major river. Stocks have plummeted in recent years; openings for the small commercial harvest in Southeast Alaska have shrunk to a few days a year. Yet this fishery has been targeted for legal action on behalf of Tahlequah and her hungry pod. This may be because it is seemingly the only piece of the vast web determining king salmon and killer whale health that can be affected by a court order—the State of Alaska can cancel the Southeast fishery while it cannot combat Russian fleets in the Bering Sea or the absorption of CO2 in seawater—or it may be because the time is ripe for another rift in US-Canada relations. This paper considers the possibilities and perils of human and nonhuman political action across increasingly unmanageable borders between political and ecological regimes.

5053 Race, Caste, and the Global Rightward Turn

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Galerie 2

Type: Roundtable/Town Hall

This roundtable brings together anthropologists whose work attends to how the categories of race and caste operate in dynamic relation in the present moment as right-wing political movements surge across the globe. We are particularly interested in the ways academic knowledge production—particularly, but not exclusively, in the Euro-American academy—reproduces an area-siloed approach to each and the repercussions of this in the age of right-wing revanchism. For example, the scholarly conversation on caste has tended towards "provincializing," understood as only relevant to South Asia, India, and/or Hindus. This siloing has worked within Orientalist understandings of where and who caste is pertinent to and has allowed the Hindutva state to argue that caste is a culturally specific "internal matter" not to be discussed, debated, or challenged in global conversations on oppression. Similarly, race has only recently been taken seriously as a scholarly category in the context of South Asia, primarily because race has been largely understood in relation to the Americas while South Asia has remained captured in the colonial lenses of religion and caste. How do we attend to the ghosts of this siloed geographic legacy in ways that activate an attention to the connectedness and conceptual differences of these projects of hierarchical differentiation? How might, for instance, a global caste critique challenge right-wing politics and allow us to see aspects of caste that may operate in contexts not usually associated with it while, simultaneously, thinking through the ways racism functions as part of authoritarian projects?

4269 Repetition, Transformation, Annihilation: Ethnographic Encounters with the Psychoanalytic Drives

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR B2 (3rd fl)

Type: Roundtable/Town Hall

This roundtable brings together anthropologists exploring the analytical potential of psychoanalytic drive theory across diverse ethnographic contexts. Moving beyond conventional anthropological emphasis on culture and subjectivity, participants investigate how conceptualizing human experience through Freudian notions of drives-as liminal forces operating at the threshold of the psychic and the organic, simultaneously conservative and transformative-opens new interpretive possibilities for ethnographic material.

Presenters examine varied manifestations of drives across global settings: illicit drug use in Vancouver's Downtown Eastside reconceptualized through the Lacanian death drive; regression dynamics in Chinese Group Relations Conferences; death drive enactments in an Iranian content creator's violence; digital media's hypnotic animation of repetition and self-annihilation; disgust, compulsion, and the death drive in horror film consumption; compulsive repetition in TikTok's "brainrot scrolling"; and the relationship between death and speculative thinking in the context of a psychiatric hospital in the West Bank.

Through these diverse cases, we interrogate several questions: How might ethnography describe and understand the movements of the drives rather than cultural forms? What analytical purchase do the death drives and life drives offer for understanding seemingly self-destructive behaviors without pathologizing them? How do drives function as binding forces with otherness? In what ways are drives simultaneously regressive and progressive, conservative and transformative?

By returning to psychoanalysis' foundational texts while engaging contemporary ethnographic material, this roundtable explores how drive theory illuminates repetition, compulsion, regression, and death across cultural contexts-challenging us to reconsider anthropological approaches to human experience at the boundaries of life, death, pleasure, and destruction.

3621 Roundtable Title: On the Frontier of a Critical Anthropology: Celebrating Ida Susser and her Legacy

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Grand Ballroom D (5th fl)

Type: Roundtable/Town Hall

This round table celebrates the trailblazing career of Ida Susser from the perspective of her students. As a distinguished professor at Hunter College and the CUNY Graduate Center, former President of the American Ethnological Society, co-founder (with Maria Vesperi) of the Society for North American Anthropology (SANA), and co-creator (with Emily Martin) of Anthropology Now, Ida Susser has pushed the boundaries of anthropology in creative and productive ways. Her earliest work on the ramifications of New York's 1975 fiscal crisis on working class neighborhoods, of the health impact of industrial pollution in rural Puerto Rico, and the AIDS crisis in New York City and Southern Africa, all centered the experiences of working class women and the power of collective mobilization to counter devastation. Her most recent work in France encourages us to find hope in progressive mobilization across class divides. Ida trained and supported a generation of students to engage, interpret, and theorize the global transformations of contemporary life and inequality, while highlighting the human face of daily struggle, resistance and transformation. From the dynamic vantage point of New York City, Ida conceptualized an urban anthropology "that was a prism through which to visualize class, social movement, gender, and changing relations of race." With the founding of SANA in the 1990s, along with Maria Vesperi, Ida challenged the discipline to apply anthropological insights and methods not only overseas, but at home to an understanding of contemporary North America. Our roundtable brings together some of Ida's many students to acknowledge the multifarious ways her influence has permeated and sharpened contemporary anthropology.

Presentation(s): Can spirit be decolonial and neoliberal?

This study explores the complex role of nonhuman spirit from the past in shaping the decolonial and neoliberal transformations within a local pesantren (traditional religious educational institution) community in Indonesia today. Drawing on ethnographic fieldwork, it examines how spiritual practices (religious teachings), economic programs (goods and service trades), and environmental (such as renewable energy production) initiatives are mobilized in ways that both resist and align with development discourses. The pesantren, traditionally a site of Islamic learning and spiritual formation, has become a hybrid space where spiritual forces (and entities) intersect with entrepreneurial training and decolonial environmental actions. Rather than framing neoliberalism and decoloniality as mutually exclusive, this study highlights the entanglement of these forces in everyday life of community. Spirit-understood not merely as belief, but as embodied, affective force-is central to how the community navigates shifting power relations, moral economies, and environmental pressures. While community actors invoke spirituality to critique Western epistemologies and assert a decolonial move, they also use the same spiritual vocabulary to justify participation market driven initiatives. This presentation aims to reveal a nuanced development practice in which spiritual values, economic programs, and environmental actions mediate contradictions, open possibilities, and reshapes what development means in the local context.

Presenter(s): Ulil Amri

Ghosts of a Massacre: The Legacy of the 1965-66 Killings for an Indonesian Youth Movement

Banser is the paramilitary wing of Ansor, the young men's organization for Nahdlatul Ulama (Renaissance of the Scholars; NU). NU is the largest Islamic organization in Indonesia, and because Indonesia is so large, the largest in the world. It has been long committed to Indonesia as a non-shariah state as well as multi-religious and multi-ethnic nation (Barton 2002, Bush 2009). Nahdlatul Ulama's young men's organization Ansor, seeks to train non-radical Muslim leaders with a range of expertise and foci. Ansor has a sub-organization called Banser which regularly guards Christian churches, liberal Muslims, and businesses from being targeted by extremists like the Islamic Defenders Front. If the present, or even recent, history of Banser and Ansor is that of protecting religious minorities and pluralism, this has not always been the case. Ansor/Banser was

an important auxiliary force in the Revolution (1945-1949) and in the 1965-1966 national bloodletting that left 500,000 alleged communists dead. It is even more telling and interesting if we explore the ways in which the newer socially progressive actions are based on conservative, traditional understandings of Islam and not liberal or progressive religious understandings. It is in the content we will use an analysis of how the perpetrators of historical violence negotiate their current role in society as defenders of social justice and diversity.

Presenter(s): Ronald Lukens-Bull

Haunted by (His) Choice: Spectral Rejection and Disguise in a Moroccan Sacrifice Forsaken

This paper presents the case of Professor Zayd, who has forsaken the act of (sheep) sacrifice for the annual Muslim Feast of Sacrifice, Eid al-Adha, yet is unable to communicate his choice publicly with his Moroccan peers in the Casablanca region. Haunted by a specter of extreme social rejection that becomes especially acute in the annual lead-up to the event, this paper elaborates the struggles Zayd faces to conceal his choice each year in the decade since he stopped sacrificing as well as the logics he privately draws on to uphold such a locally unpopular position. In doing so, I demonstrate how the choice to not sacrifice for this event is a loaded one, under-acknowledged in the sacrifice literature, and--given expectations for male heads of household to sacrifice--experienced viscerally and painfully. Introducing spectral rejection as a generative force, both 'projected' and 'real, this paper explores its role in Zayd's experience of not sacrificing, where the risk of exposure involves innovative means of disguising such a choice. It also explores how spectral rejection limits competing logics--especially those that draw on ideas of development, progress, and science--in the celebration of this event. This work contributes to the anthropologies of sacrifice, religion, and Islam, and draws on recent work on publics and future-making.

Presenter(s): Tierra McMahon

K'in Altsilal: Tojol-ab'al Mayan Day of the Dead

The Tojol-ab'al Mayan festivity of k'in altsilal is often translated into Spanish as Todos Santos or All Saints' Day. Also known in Tojol-ab'al as k'in santo, this festivity marks the annual return of ancestors' souls to be venerated and celebrated by the living. This paper provides a brief explanation of this celebration in two different communities and details some of the changes elders in these communities have noted over the years. While k'in altsilal shares many traditions with mestizo Day of the Dead celebrations in wider Mexican society, like the preparation of altars, offerings, and visiting cemeteries, its historical and current manifestations exhibit notable differences. These practices include the ceremonial sacrifice of chickens, fireworks, and the collective purchase of a cow to divide up among families to prepare a traditional beef stew. The Tojol-ab'al conceptualization of altsil (soul), central to this celebration, also differs significantly from mestizo understanding and is reflected in both philosophy and language. Elders note that, in parallel with social changes in the community, k'in altsilal festivities have shifted over the last century and certain traditions are no longer practiced with the same vigor, despite increased access to economic resources. However, k'in altsilal remains an important religious event in Tojol-

ab'al communities and this paper will also discuss youth perspectives on how it continues to be celebrated and what young community members envision for its future.

Presenter(s): Sophia Walters

Mediated Connections Across A Gender Restrictive Border: The Case of Mount Athos, Greece

The Orthodox Christian monastic community of Mount Athos, Greece was established more than one thousand years ago, that it may serve as a space of withdrawal and renunciation for male monastics. To this day, the community's twenty monasteries pursue ascetic gender isolation by maintaining a rigid prohibition against 'women' entering Mount Athos' peninsular territory. This prohibition is legitimized by social convention and by the Greek constitution (Article 105), and enforced by a physical border. Based on eighteen months of ethnographic research on Mount Athos, this paper examines gender and gender relations in the context of contemporary Athonite monasticism and spirituality in Greece. Lying at the intersection of the anthropology of religion and gender studies, it specifically illustrates the ways in which the community's monastic proscriptions and border do not so much foreclose, but rather mediate, connections between male monks on Mount Athos and devout women in Greece. It argues that these mediated connections are in turn facilitated by both the devotion and labor of women and the religious vocation of male monastics.

The monasteries of Mount Athos have undergone an important demographic, economic and infrastructural revival over the past sixty years. In this period, the community has hosted hundreds of thousands of pilgrims and wage workers, welcomed reporters, researchers and writers, and established vibrant dependency parishes in Greek urban centers. Each of these developments broadened Mount Athos' relational network and brought monks into increased contact with groups that have been historically understood as belonging to a 'world' that exists outside the boundaries of monastic exile. For most of these groups (pilgrims, workers, researchers) contact came as a result of the male publics' increased access to the Athonite territory. On the other hand, for women, it was the consequence of the increased mobility of monks outside the peninsula and the actions of particular devout Orthodox women who facilitated it.

For monks on Mount Athos, inter-gender relations take place most commonly in the dependency parishes of their monasteries. My research in the community focused on one such parish in a working class neighborhood of Athens that has been functioning since 2016. The property on which the parish church stands, was donated to the Athonite monastery of St. Demetrios by a woman, Eleni, who had known its Abbot for several decades. The consequence of this votive act has been to bring the monastic brotherhood of St. Demetrios-which sends a different priest-monk to the dependency every week-closer to the devout Orthodox Christians of Athens. It has thus provided women and monks in particular, the opportunity to meet, form relationships, co-labor and inflect each other's religious lives. Importantly, the dependency parish exists and functions uniquely in relation to monastic withdrawal,

Presenter(s): Paul Melas

Specters of Resistance: Ghostly Narratives in Uncle Boonmee Who Can Recall His Past Lives

This paper explores the ghostly narratives in Apichatpong Weerasethakul's film *Uncle Boonmee Who Can Recall His Past Lives* (2010), arguing that the spectral figures function as a form of resistance against authoritarianism, historical amnesia, and cultural erasure in Thailand. Drawing on theories from S. Brent Plate's *Religion and Film*, Birgit Meyer's *Religious Sensations*, and Donovan Schaefer's *Religious Affects: Animality, Evolution, and Power*, the analysis examines how the film's portrayal of ghosts critiques state violence, marginalization, and the loss of rural identity. The ghostly narrative, rooted in Thai animism and Buddhist cosmology, disrupts linear temporality and spatial boundaries, creating a liminal space where past traumas and suppressed histories resurface.

Methodologically, the paper employs close textual analysis of the film's cinematography, sound design, *mise-en-scène*, and narrative structure to demonstrate how Apichatpong crafts a haunted atmosphere that challenges dominant historical narratives. The study highlights the film's use of lighting techniques, such as the "day for night" effect, and its immersive soundscapes to evoke a multi-sensory engagement with memory and affect. By juxtaposing surreal elements with documentary-like realism, the film resists exoticized representations of Thai culture and instead foregrounds the marginalized voices of Northern Thai villages.

The thesis posits that the ghosts in *Uncle Boonmee* symbolize the unresolved traumas of Thailand's political past, particularly the anti-communist purges and military repression in the Isaan region. The jungle, as a key setting, becomes a site of resistance and remembrance, where human and non-human entities coexist, challenging anthropocentric hierarchies. The film's ritualistic structure, informed by Buddhist concepts of reincarnation and karma, transforms the cinematic experience into a sacred act of witnessing. Through its ghostly narrative, *Uncle Boonmee* not only resists state-enforced silence but also reasserts the agency of the oppressed, offering a counter-memory to official histories. Ultimately, the paper contends that Apichatpong's film transcends traditional storytelling to create a space where the spectral and the real converge, inviting viewers to confront the lingering specters of violence and displacement in contemporary Thailand.

The Afflicted City: Haunting and Devotion in São Paulo, Brazil

São Paulo is a city of ghosts. So is every city; after all, "haunted places are the only ones people can live in" (Certeau, 1988). Scholars sometimes speak of haunting as something that happens to nations and ages—the New World as haunted by the ghosts of colonialism, or late capitalism as haunted by its "lost futures" (Fisher, 2014). But the ghost is also an object of experience. What makes a ghost powerful is its immediacy, the fact that "it demands its due" (Gordon, 1997). More than just metaphor, the revenant dead bring us down to earth.

This talk draws on twenty-six months of fieldwork carried out over a decade in São Paulo, this flash talk explores a popular Catholic devotion to the souls of the suffering dead (known in Portuguese as *devção às almas* or *culto das almas*). Today, this centuries-old practice of purgatorial

devotionalism thrives at sites of haunting and erasure, where past social violence has been obscured through successive waves of urban development.

This talk focuses on two of São Paulo's most popular sites for the devotion to souls: the Chapel of Our Lady of the Afflicted and the Church of the Holy Cross of the Souls of the Hanged. These Catholic churches, situated down the street from one another, index the neighborhood's history as a site of social and physical death. Once known as the Hanging Field, this neighborhood was rechristened Liberdade (Liberty or Freedom) in the late nineteenth century and transformed into a "Japanese" ethnic enclave in the 1970s. But when human remains from an old paupers' cemetery were discovered in a lot adjacent to the Chapel of the Afflicted in 2018, an activist movement emerged to memorialize the site.

In this talk, I suggest we can do social theory without being squeamish about the supernatural. Social analysis and spectral phenomenology are hardly at odds. If anything, São Paulo's ghosts suggest one way that otherwise abstract social forces can impinge upon lived experience. In the case of the devotion to souls, I argue, the practice connects devotees' personal afflictions with the memory of social violence in São Paulo. It points to the times and places where São Paulo's frenetic process of modernization haunts the city. And it shows how the suffering dead have motivated devotees and activists to advocate for official recognition of historical injustice-especially, but not exclusively, as related to slavery and its afterlives-through interventions in São Paulo's built landscape.

Presentation(s): Between ecology, spirituality and economy: Ontological Conflicts and the Economic Imaginaries of Green Transformation onomy

This paper looks into ontological conflicts in the context of Colombia's green energy transition, with a focus on wind park developments in the Wayuu territory of La Guajira. It argues that conflicts emerging around energy infrastructure projects are not reducible to disagreements over environmental impacts or failed participation processes, but are results of deeper ontological contradictions-specifically, conflicting economic imaginaries. Building on recent debates in political ontology and political ecology, this paper proposes to treat economic reasoning itself as

an ontological category, thereby shifting the analysis of socio-ecological conflict from a dispute over means to a confrontation between divergent worlds.

The fieldwork traces how different actors-Wayuu community leaders, consultants, company representatives, and government officials-mobilize distinct conceptions of value, development, and most importantly land. These are not variations of a shared economic framework but represent fundamentally different ontological logics. While some actors conceive land as a resource to be optimized for national progress or local employment, others understand it as inalienable territory part of a valuable ecosystem that has to be cared for to be able to create sustainable ecological future. Economic action is not interpreted through a single rationality but enacted within distinct regimes of meaning and practice.

These conflicts are haunted by the historical backdrop of coal extractivism, colonial dispossession, and failed state integration. Economic interventions under the guise of green development revive long-standing patterns of territorial fragmentation, marginalization, and erasure.

By attending to the ontological dimension of economic reasoning, the paper provides an alternative framework for understanding socio-ecological transformation. It demonstrates that consultation, participation, and even resistance form implicit alliances on an ontological level that are often misrecognized, leading to accusations of betrayal, corruption, or irrationality. The analysis displaces the notion of a unified "local voice" or "indigenous perspective" and instead foregrounds the internal heterogeneity of Wayuu positions, each grounded in a distinct understanding of what constitutes a viable future and how reality works.

The paper contributes to anthropological debates on ontology by grounding them in the empirical study of economic transformation, arguing for the necessity of incorporating ontological analysis into the study of development, infrastructure, and environmental governance. By tracing the character and spirits of the land and objects of transformation understanding economic development becomes as much about profit as it is about addressing variety of old ghosts, current possessions and the spiritual world of coal and wind.

Financialising Conservation: The Role of Market-Based Instruments in Global Biodiversity Governance

This study interrogates the financialisation of nature through the lens of the UNEP World Conservation Monitoring Centre's (WCMC) ENCORE Programme. At the intersection of environmental conservation and capitalist governance, ENCORE emerges as a critical tool in transforming natural capital into monetisable assets. The research problematises the belief that market-based solutions can adequately address ecological crises. Instead, it argues that financial instruments, such as biodiversity derivatives and carbon credits, serve to reify environmental degradation as deferred obligations while simultaneously creating new market objects.

By integrating remote sensing data and satellite imagery into its analytical framework, ENCORE quantifies ecosystem services and environmental risks, recasting ecological degradation as an immediate credit obligation rather than a future liability. This process not only illustrates the inherent contradictions of capitalist realism but also highlights the tensions between speculative financial practices and the ethical imperatives of conservation. In this credit-based natural capital accounting model, environmental damages are transformed into measurable, tradable assets, which, while generating new investment opportunities, risk obscuring the diffuse, dynamic nature of ecosystems.

To explore these dynamics, the study employs interviews and field site observations at the WCMC centre in Cambridge. Interviews with key actors involved in ENCORE's development provide firsthand insights into how the programme is used to engage businesses in managing their ecological risks and how these market-based approaches are reshaping conservation governance. The findings reveal that while financial mechanisms can drive innovation and profit, they often reduce complex environmental phenomena to simplistic metrics, perpetuating a cycle in which the problems and solutions of conservation are indistinguishably intertwined.

Ultimately, this research contributes to a critical understanding of how capitalist logics shape environmental governance. It calls for a reimagining of natural capital frameworks, one that prioritises immediate ecological accountability and social justice over speculative financial gain, thereby ensuring that environmental stewardship remains at the forefront of conservation policy.

Ghosts in the Machine: Double Movement and the Venture-backed Tech Startup, the Case of Uber in New York City

Over the past decade, venture-backed tech startups have matured into the monopolistic corporations of "Big Tech," rewiring circuits of social reproduction on a planetary scale and materializing a new tech-enabled way of life for millions across the globe. This represents the latest turn in a decades-long process of "digital transformation," defined as the deployment of digital technologies to mediate, automate, and accelerate economic activity. This flash presentation examines the impact of digital transformation in the specific context of "double movement" in the New York City rideshare and taxi industry, exemplified by the ascendancy of Uber, seen as paradigmatic for a further evolution of the capitalist economy toward a new configuration defined by some as "techno-feudalism" (Durand 2020, Varoufakis 2023), and resistance by drivers and civil society allies through strikes, litigation, legislation, and creation of a driver-owned platform cooperative, presenting seeds of a systemic alternative.

The presentation argues that core elements of the current "techno-feudal" paradigm can be identified as in embryonic form in prior pre-neoliberal epochs, and now live on as "ghosts in the machine," embedded in the core logic of the digital age. Namely, in the "New Deal Order" (periodized from 1935 to 1975), techniques of power that have now become dominant were already evident, for example, in the practices of the public authority as a semi-private governmental

organization. These practices include privatization of system-level planning, enclosure of public or common assets, socialization of costs to the gain of private actors, tolling flows as a revenue generation strategy, ringfencing of assets, segmentation of the labor force into groupings with different and lesser rights, opaque concealment of the operations of power, and direct materialization of new infrastructures compelling new political-economic patterns of life. These practices were complemented in the post-1975 neoliberal era by innovations in the taxi industry itself: mass "responsibilization" of workers through the ambiguous freedom of entrepreneurship—evident in the shift to independent contractor status for taxi drivers orchestrated by taxi fleet owners at the end of the 1970s, and asset inflation as a core strategy for accumulation—evident in the commodification and eventual securitization of the taxicab medallion. All of these practices became core elements of neoliberalism, the dominant political-economic paradigm in the United States from 1975 until present. Rather than reflecting a value-neutral teleology of technological advancement, through "digital transformation" of the economy these once-marginal value-laden practices became deeply embedded in the way of life of capitalist societies. However, these "ghosts in the machine" are now facing challenges by movements of drivers and civil society allies to materialize a new reality, animated by a different core logic.

Presenter(s): Erik Forman

Haunting JAM-DEX: three styles in the study of central bank digital currencies

The presentation suggests three domains in the study of CBDCs that invite further anthropological research: the exploration of the dichotomy between private and public-sovereign money; the relationship between class and race inequalities and the financial inclusion rhetoric; and the religious anxieties that can prove to be a strong resistance force to CBDCs adoption. These analytical frames address a critical gap in the CBDC discourse, which often focuses on technology and monetary issues, leaving behind qualitative analysis. Like ghosts haunting contemporary reality, past structures, ideologies, and unresolved histories persist and shape the present and future. JAM-DEX, Jamaica's CBDC, is haunted by multiple historical and structural forces that shape both its design and its reception.

JAM-DEX embodies an aspirational modern future—a vision where most of the economic and bureaucratic processes are digitalized, marginalized communities that base their economy on informal activities become part of the formal financial sector, and, less explicitly, where their economic sovereignty will uphold the pride that characterizes this small island. However, this vision is haunted by its long history of economic dependencies, social inequalities, and religious anxieties towards state-led initiatives.

I argue that the design and communication choices of JAM-DEX replicate the mainstream narrative of CBDCs to please the global central bankers' élites without disrupting the (im)balances of the current financial system. By doing so, JAM-DEX introduces latent but unanticipated tensions between the central bank and the private sector that cash and electronic transactions did not entail. It also fails to provide "greater financial inclusion" or a "more modern, seamless, secure and easy to use" method of payment (Haynes 2020), mainly because it fails to overcome the structural

class and racial inequalities. This is exacerbated by the long-held subcultural perceptions that both Jamaica's government and financial sector are part of the "Babylon system"-a term derived from a religious perspective denoting corrupt, secular, and oppressive national or global structures. These perceptions foster a resistance characterized by mistrust and hyper-vigilance toward CBDC adoption.

JAM-DEX, therefore, exists in a liminal space, the reappearance of Jamaica's historical ghosts in digital form. On one hand, it is promoted as an instrument of modernization, while on the other, it is shadowed by historical patterns of dependency, control, and exclusion.

This analysis draws on an extensive ethnographic study (16 months between May 2022 and October 2024) that coincides with the initial rollout of JAM-DEX.

In Pursuit of Stability? Post-Crisis Capitalism and the Rise of Cryptocurrency Trading in Turkey

By drawing on 18-month ethnographic fieldwork conducted amongst people who participate in state-regulated games of chance activities in Turkey during the recent Turkish economic crisis in 2021-2022, cryptocurrency trading was identified as a game of chance that swings between hinging on luck or skills. In the meantime, cryptocurrency trading was also viewed as an investment technique that would accumulate savings for the future amidst fluctuating national currency and polarized political realities. Through engaging with scholarly work on the anthropology of Turkey, economic anthropology, and anthropology of gambling, this paper illustrates the rise of cryptocurrency trading in Turkey since 2019, and unpack imaginaries of wealth, if it is understood to be generated with /or without labour (Foster 2018), and materiality of money, both as token and commodity (Hart 2012) through pursuing speculative economic practices within a 'post-crisis' economic capitalism (Weiss 2015, Bear 2020). It shows how people situated the volatile cryptocurrency trading within their own techniques to ameliorate financial volatility and mistrust in governmental financial institutions during times of economic uncertainty and financial crises. This paper suggests that cryptocurrency trading is a contested topic in the Turkish context, where the controversy of cryptocurrency trading is also thought to be a result of the presence of dissonance between traditional ideals, that condemn easy money and emphasize the value of hard work, and capitalistic realities and neoliberal modes of accumulation in neoliberal Turkish economy since the 1980s. In the paper, I argue that during heightened times of economic and political uncertainty, the boundaries between gambling, investing, and savings are porous, leading to prioritizing the 'lucky moments' in time that needs to be captured to be able to make uncertainty productive. As a consequence, I argue, states of fragmented temporalities (Fuchs 2007, Alexander et al 2011, Couclelis 2003) are created to tolerate the uncertain realities, when time is divided into several smaller units (moments) that people chase to make profits.

The ghost in the machine: the CAPM case in finance

The intellectual justification for managing portfolios by following a broad market index (named "passive investing") stems from a paradigmatic model of financial theory, the Capital Asset Pricing Model (CAPM) developed by William Sharpe (1964). The CAPM is the ultima ratio of the relevance of benchmarks in asset management.

Financial technology resulting from the CAPM has revolutionised the risk culture of portfolio managers. We argue that the technical components of the CAPM can be interpreted as a theatrical script defining role-playing games, leading to a theatrical staging of asset management. The new form of life that develops from this theatre raises the question of the autonomy of the asset manager's own desire in relation to the desire of the machine whose algorithm dictates its design. The CAPM acts as an invisible director in the everyday life of asset managers. We argue that CAPM can be thought as the "ghost in the machine" in asset management practices. We document a case in which an investment desire derived from the CAPM mathematical structure has replaced the manager's desire.

A form of life generally refers to a set of practices, beliefs, modes of action and institutions that shape our individual lives, our values and our societies. The culture of the asset management industry had created a form of life for asset managers in which they could develop their careers and their existence at work. In the field of asset management, the CAPM profoundly changed this initial form of life, as the intellectual framework of the mathematical model acted invisibly inside the technical devices. This invisibility raises the issue of the autonomy of the desire of portfolio managers in relation to the desire of machines algorithms designed based on the CAPM principles, and of the production of the discourse of financial institutions developed based on the same intellectual principles of the CAPM. The form of life of asset managers is directed by the ghost in the machine.

In fact, the financial technoscience that emerged from the CAPM was not axiologically neutral. The artificialisation of management decisions due to the ghostly presence of CAPM in computer systems and the calculation of managers' performance in relation to reference portfolios (the benchmarks) led to a change in the desire of human managers. In the 2010s, the use of artificial intelligence (AI) in the financial sector of portfolio management reinforced the mechanising trend of previous developments. One of the characteristics of the use of AI in portfolio management is that it gives the impression of being able to free oneself from the parasitic emotions that produce decisions described as irrational. But as CAPM acts, the so-called parasitic emotions were replaced with a theatrical script, written by the mathematical structure of the CAPM. The ghost became the leader of decisions. Hence, the asset management industry became "the most haunted field" of finance.

The Sovereign Commodity: State Power and the Circulation of Goods

Karl Marx opens *Das Kapital* with the analysis of the commodity, asserting that to understand capitalism, one must begin with its most basic unit-the commodity. Building on this foundational

insight, this paper argues that to fully grasp not only economic systems but also the political structures that sustain them, we must start with an analysis of the control exercised over commodities. Drawing on ethnographic research on Serbia's customs regime, I demonstrate that commodity management is not merely a technical or economic procedure, but a central mechanism through which state power is enacted and sovereignty is produced. In Serbia, nearly half of the national budget is derived from customs duties, making the regulation and surveillance of goods essential to the state's ability to fulfill its social contract. To sustain this fiscal and political capacity, the state has increasingly deployed technologies such as risk analysis algorithms and GPS tracking systems to monitor commodity flows. These infrastructures serve a dual purpose: they enable the state to assert control over transnational exchanges while meeting market demands for speed, efficiency, and predictability. Yet, these same technologies also deepen the mystification of the state's role in market-making. Revisiting Marx's concept of commodity fetishism, this paper argues that commodities obscure both the labor that produces them and the political structures that enable their exchange. Through customs classifications, tariffs, and tracking and surveillance technologies, the state shapes the market while presenting its influence as neutral and technocratic. By examining the everyday bureaucratic labor of customs officers, traders, and policymakers, this paper shows how commodities become sites of negotiation between economic practice and political authority. In tracing these entanglements, the paper reveals the political stakes of commodity control and the embeddedness of state power in global economic life.

Presentation(s): "Being With the Ghosts in the (Birthing) Room: Resisting the Urge to Exorcise Vulnerabilities during Midwifery-led Birth Care Provision"

Discourse around childbirth tends to address tensions between the medical/natural dichotomy with both 'sides' mobilizing concepts such as (scientific) evidence and (patient) satisfaction to ground birthing care practice and policy. In this work-scape, midwives in Ontario, Canada, in their ever increasing integration into the healthcare system, navigate the space between medical (the larger healthcare system within which they work) and natural (the traditional midwifery milieu) and find neither realm wholly adequate to meet birthing client needs. Both the medical and the natural

realms demand an authoritative knowledge that labour and birth - when they are actually happening - consistently evade. The error is in the attempt to ascribe to birth a cleanly comprehensible and reproducible mechanistic order, whether through application of medical technical proficiency dictated by protocols or by avoiding such 'interference'. Birth, instead, can be seen as an enmeshed web of relational doings, refusing to fit any (medical nor natural) mold. Inspired by author Robert MacFarlane's (2019) call for a new language to describe and delineate the relationship between trees and mycorrhizal fungi for which the term 'care' seems inadequate, I, a midwife and anthropologist, search for a new way to conceptualize what-is-needed-during-birth. What if one looks beyond care-as-medical and care-as-not-medical to a care-provision that demands of the carer what labour and birth demands of the birther: an adaptable, responsive, uncertainty - a watchful and humble presence? What if care-provision was not based on generalizable evidence (supporting either medical or normal actions) but was, rather, enacted as a series of intimate, particular connections, requiring attention, changeability, and denial of authority? This paper explores and imagines a midwifery practice whose expertise requires the discomfort of vulnerability. It explores the potential (re)conceptual consequences for birthing care provision in Ontario should midwives be able attend to the Ghosts of Uncertainty (see them, hear them, work with them) rather than expunge them.

Presenter(s): Emily M. Gillard

Cesarean or Vaginal? The Embodied Politics of Birth in Rural Bangladesh

This study examines how middle-class women in Bangladesh experience pregnancy and childbirth methods. It explores their cultural perspectives on vaginal and cesarean births and whether these perspectives influence their decision-making regarding which birth method to choose. Data was collected through in-depth interviews with 18 women from a rural village in Bangladesh. The analysis was conducted using the frameworks of feminist theory, the Mindful Body theory, and the Theory of Habitus. The experiences of these mothers reveal a range of social explanations and perceptions surrounding vaginal and cesarean births, all of which affect their choice of birth method. Many people view cesarean births negatively, leading to pressure on women to opt for vaginal births, often dictated by family members or healthcare practitioners. However, research findings indicate that the choice of birth methods is evolving rapidly. Women are becoming more proactive and sometimes assertively determine which methods they prefer. This shift highlights how women empower themselves in this area, particularly within a society influenced by patriarchal views.

Presenter(s): Nigar Sultana

Coercion Under the Guise of Care: Reproductive Health and Authoritarian Humanitarianism in Rohingya Refugee Camps in Bangladesh

This study examines the authoritarian logic underpinning family planning interventions in Rohingya refugee camps in Bangladesh, where systems of surveillance, control, and coercion shape reproductive health policies. Contraceptive adoption-promoted through Community Health

Workers (CHWs) via door-to-door counseling on implants and IUDs-is framed by NGOs and state authorities as a means of managing high birth rates within the camps. While presented as a humanitarian effort, these interventions operate within a broader governance structure that prioritizes population control over reproductive agency, reinforcing power hierarchies between refugees, aid organizations, and the state. Based on semi-structured interviews, surveys, and ethnographic observation, this research examines how reproductive health policies function as tools of biopolitical regulation, where access to care is conditional, selective, and often aligned with securitization agendas. It reveals that refugees' reproductive choices are limited not only by cultural and religious conflicts but also by policies that demonstrate a form of soft authoritarianism, where consent is influenced by structural coercion, economic dependence, and limited healthcare options. The top-down enforcement of family planning reflects broader patterns of containment, where reproductive governance intertwines with strategies of social control, displacement, and exclusion. This study highlights the tensions between reproductive care and coercion by situating family planning interventions within the framework of authoritarian humanitarianism. It critically examines how refugees and community health workers navigate and resist these pressures, rearticulating reproductive health as a field of struggle rather than compliance. In doing so, it advocates for a shift from population control paradigms to community-centered, rights-based approaches that emphasize equity, agency, and self-determination in refugee health governance.

Presenter(s): Md Asaduzzaman

Decay and Preservation of 'Womanhood': Navigating Menstrual Health and Identity in an Urban Slum of Delhi

Kusumpur Pahari, an urban slum tucked within the affluence of South Delhi, forms the backdrop for an ethnographic inquiry into the intimate, embodied experiences of reproductive health among migrant women. Drawing on a year-long ethnography, this paper explores how womanhood is experienced, challenged, and reimagined through the lens of menstrual and reproductive health. In a setting where formal healthcare is unreliable and biomedical knowledge remains partial or inaccessible, women's narratives of their bodies become deeply entangled with moral, emotional, and symbolic understandings of fertility, menstruation, and decay. Central to these narratives is a profound anxiety around bodily decline. For many women, irregular menstrual cycles, infertility, or unexplained bodily changes are not simply biomedical disruptions but signs of an internal "decay", a term frequently used by participants to describe the sense of their bodies deteriorating in the city. This decay is experienced as both material and moral: a breakdown attributed to the polluted urban environment, relentless work, and emotional stress, but also as a collapse of the self as a reproductive, relational, and gendered being. Womanhood, in this context, is not static or purely biological; it is something continuously enacted, proven, and policed through cycles, fertility, and the ability to reproduce.

Menstrual blood itself occupies an ambivalent position in this landscape. While culturally coded as polluting during menstruation, it also signals vitality, fertility, and normalcy when it appears

regularly. It becomes a diagnostic tool of sorts: a way to assess whether the body is functioning "normally," and by extension, whether one is still inhabiting a viable form of womanhood. In this sense, the menstrual cycle becomes more than a biological rhythm- it is a site of interpretation, a moral and affective register through which women measure their health, worth, and place within families and communities. Rather than choosing between biomedical and traditional knowledge, they move fluidly across systems- government clinics, informal practitioners, spiritual healers, and ancestral remedies- constructing hybrid repertoires of care. These practices are not only attempts to 'fix' the body but also to reassert claims to womanhood, kinship, and dignity in contexts that often deny them recognition.

This paper argues that reproductive health in Kusumpur Pahari cannot be understood solely in terms of access or infrastructure. It must also be approached as a domain of meaning-making, where ideas of femininity, decay, and healing are constantly negotiated. By foregrounding these narratives, the paper brings attention to how gendered subjectivity is shaped not only through structural conditions but also through intimate, everyday acts of interpreting and caring for the self.

Presenter(s): Prerna Singh

Maternal placentophagy: a scoping review of the consumption of the placenta postpartum as a reproductive health practice

The consumption of the placenta during the postpartum period is an emerging practice purported to provide therapeutic benefits, such as improved mood, increased lactation, reduced fatigue, and accelerated physical recovery following birth. Scientific evaluations of these claims often emphasize the lack of statistical significance, small sample sizes and other methodological problems. Here we argue that such narrow metrics should not limit anthropological inquiry or determine the validity of placentophagy as a practice. This paper positions placentophagy as a culturally and symbolically robust lens for the analysis of maternal agency, depression prevention, and decision making in health care. In doing so, we call for an expanded research paradigm that values experiential knowledge, cultural context, and the subjective dimensions of health. Through this work, we aim to contribute to a broader rethinking of how postpartum practices are studied, validated, and integrated into frameworks of perinatal care.

Medicalization & Women's Health Beyond Reproduction in Karachi Pakistan

This paper will examine the medicalization of women's health in the context of 20th century colonial and post-colonial Pakistan. There is a long history of "dais" on the Indian subcontinent that underwent modernization through the synergistic processes of British colonialism and the institutionalization of the biomedical apparatus. 'Dais,' loosely translated to midwives, were women who were known within rural communities to possess healing abilities and knowledge. These women were often called upon to assist at the time of birth due to their expertise with women's

bodies. The knowledge they possessed was passed down experientially. 'Dais,' while commonly referred as to midwives, often served a much larger scope of healing to the villages and rural areas they served. They were an integral part of Pakistan's health system during the 20th century but following the colonial encounter their presence declined and their authority has been greatly devalued. A version of dais endures in the model for Lady Health Workers (LHWs). LHWs care for women in both rural and hospital settings in Pakistan and are often specifically trained in two-to-three-year diplomas to address gynecological issues (Varley 2003). Despite a wealth of work on women's reproductive issues in South Asia, women's health in the post-reproductive years demands increased scholarly attention. Building on previous research, this paper aims to look at the healthcare practices of peri and post-menopausal Pakistani women. Drawing on archival research and ethnographic data, this paper will investigate how Pakistani women navigate their health in the transition to menopause and how LHWs shape the post-reproduction experience of care. Further, this paper will consider how the colonial encounter and the transformation and decline of 'dais' has impacted the landscape of care. Similarly, in the context of women's health and menopause, how have bodily changes as a natural part of aging transformed into a medicalized "illness" to be treated by physicians and medical institutions? This paper ultimately examines what constitutes the landscape of care for Pakistani women beyond reproduction and how this landscape has been shaped by processes of decolonialization, medicalization, and traditional healing practices.

Vertical Birth, Horizontal Power: Kichwa Midwifery and Decolonial Cracks in the Ecuadorian Amazon

In Ecuador and across the Americas, Indigenous midwives are increasingly targeted by state-led reproductive governance regimes that criminalize ancestral knowledge and constrain birthing practices. In this article, I draw on over 150 interviews and 300 surveys conducted with Kichwa midwives, women, and biomedical practitioners in the Ecuadorian Amazon, to understand broader dynamics of racialized health inequities, Indigenous resistance, and Amazonian feminisms. I ask how race, geography, political movements, and language shape both the systemic harms that Kichwa women experience during prenatal and birth care, as well as the movements that seek to name, confront and transform these forms of violence.

I use Maylei Blackwell (2023)'s concept of "meshworks" to describe how midwives create horizontal, relational formations-rooted in care, reciprocity, and shared struggle-that cut across national borders and epistemic regimes, to resist state-led biomedical hegemony and create

alternative spaces for prenatal and birthing care. I draw specifically on two events, the first and second national conferences of Ecuadorian and Latin American Indigenous Midwives, to sketch and reflect on how Indigenous midwives weave horizontal networks among themselves to simultaneously generate decolonial cracks, while also weaving resurgences among themselves.

These formations allow for the circulation of strategies, stories, and healing knowledge, while resisting the isolating effects of state violence. At the same time, drawing on Catherine Walsh, I argue that midwifery activism opens decolonial cracks within state-run health systems-spaces where other worlds momentarily emerge, and where "intercultural health," a term co-opted by the government, is reimagined from the perspectives of Kichwa midwives.

"Examining Perspectives of Shared Decision-Making and Informed Consent for Cesarean Birth as Experienced by Bangladeshi Immigrants in the USA"

There is a significant association between patient satisfaction and maternal well-being within biomedical birthing contexts. Studies show that shared decision-making (SDM) and informed consent (IC) are associated with higher levels of patient satisfaction, reduced decisional conflict, and better health outcomes in the context of cesarean birth. Cesarean birth is a life-saving procedure in which a fetus is delivered through an incision in the mother's abdomen and uterus. Our research examines how the practice of SDM and IC affects patient satisfaction for Bangladeshi immigrants who are living in the United States, have previously given birth via cesarean, and/or are currently pregnant and planning to have a cesarean birth. The examination of cultural factors associated with practices of SDM and IC within the context of cesarean birth allows for an in-depth examination of standard of care practices as they are experienced by immigrant populations.

Venue: Sheraton **Room:** Nottoway (4th fl)

Type: Oral Presentation Session

We have gathered papers that explore the labor of contending with waste from Italy to Ecuador, the work of gardening and (re)construction of shared land-knowledges, and enacting the present in Miami amidst a future sea level rise. Launching from a framework of political ecology, engaged ethnographic practice, and environmental justice, this collection of papers engages politics, ethics, and ecology by exploring intimate entanglements between daily life and material infrastructures, waste, labor, and multispecies kinship. We remain especially attuned to visibility as a regime of

understanding, the haunting presence of an imagined past or future, everyday negotiations in light of that spectral presence, the work and enactment that recreates particular human-non-human entanglements, and the opening of nuanced socio-political understandings based upon those entanglements.

This panel explores traces of ecological kinship, how individuals embody and become entangled within their infrastructures, landscapes, labor, and imaginings of past and future. If traces serve as reminders, then we are also concerned with memory and how memory develops into an embodied practice where the past then becomes inseparable from future imaginings. Given the rapid pace of change in our globalizing world, there are elements of nostalgia, fatalist rhetoric regarding the end of the world (as we understand it), and the necessity of alarmist discourse as a means to influence change towards desired futures. Launching from ongoing work on environmental justice, especially Rob Nixon's (2011) concept of slow violence, along with ethnographic interventions in political ecology like Tim Choy's (2011) anticipatory nostalgia, we will explore the impressive and undeniable presence of what appears as a specter but carries most dire consequences. Similarly, we are concerned with how something as essential as the invisible labor of waste pickers or the ignored practice of land-knowledges forces us to think about justice when confronted with questions about land, labor, and multispecies entanglements. In each case, what may not be immediately visible - like marginalized labor or knowledge, as well as future environmental catastrophe - haunts our everyday practices and becomes equally compelling as what is visible - leading us to question the political prominence of visibility itself.

Presentation(s): Gardens of Memory: Intergenerational, Indigenous, and International Sites of Ecological Kinship

Botanic gardens are a relatively recent innovation buttressing the epistemological cartography that propagates westernized science and so-called modernity. Spaces of curated beauty, legacies of early genetic experimentation by progressive religious, and colonial aesthetics converge in a unique space—one that, in its living collections, simultaneously transcends the borders ascribed to nation-states regardless of sovereignty of First peoples, while also encasing histories of such exploitative colonial world-making. Less publicly known is that these academic networks become institutionalized between the 16th and 20th centuries, fueling biopiracy and constructing emerging modernity through the kinds of decontextualization and dehumanization required for capitalist transactions and their infrastructure to take shape. In this increasingly compartmentalized and intellectually-credentialing system, alienation through distributions of labor and the differentiating of disciplines seek to dispossess Indigenous peoples of their knowledge—knowledge intimately based on land relations. As colonial ways of knowing, being, and doing function to determine distinction from racialized others, settlers forsake their own relationships to homelands and ancestors' interconnectedness to the more-than-human world—weather, land, waterways, flora,

and fauna. Between the 19th and 20th centuries, life cycles and relationships among ecological kin are obfuscated through the post-industrializing U.S.

Miami as Mirage: Echoes of past and future on the threshold of sea level rise

Miami is once again a city on the edge – the edge of a future that will be defined by the severity of sea level rise and the possibility of mitigation. Sea level rise is neither temporally nor spatially linear, and this rhythm manifests in echoes and ephemeral traces, revealed and obscured as if cleared by a wave. These ghostly forms range from immaterial to concrete, appearing as memories, mirages, and the destructive force of matter. This talk will focus on the mirage as a ghostly threshold that bridges the immaterial and material experience of ecological uncertainty. The mirage distorts the fabric of everyday life, invoking anticipatory loss and rattling the foundations of cities and the lives within them. Complicating both what we see and how we respond to it, the mirage engenders the structures of feeling (Williams 1954) and embodied atmosphere of inhabiting a present that is haunted by an unsettled past and unknowable future.

Presenter(s): Aja Cacan

Visualizing the Green Regime: Living Amongst Environmentalist Hauntings

In this paper I aim to present the aesthetics of environmentalism as the haunt, disrupt, and become entangled with everyday life – especially within the cases where I'm most familiar in Costa Rica. From street art to drawings to tattoos, Costa Rican environmental agendas create an unmissable iconography and an aesthetic sensibility that makes the national character and its inseparability from conservationist ethics impossible to ignore. These environmentalist hauntings call forth ethical and political agendas that also – given the rise of tourism in the neoliberal context – parallel capitalist developments. This means that the green regime includes elements of nationalism, environmentalist ethics, socio-political movements, capitalism, embodied aesthetic sensibilities that are meant for affect. Scoping the green regime looking for ecological entanglements and fatalist messaging leads to a review of photos, signs, iconography, and other types of media derived from years of archive collection and mixed participatory method research in Costa Rica, which has been concerned with the politics of environmentalism.

7088 Spectres and Presences: Necessary Hauntings and Contingent Exorcisms in Ethnographies of Addiction and Recovery in North America and Europe

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Studio 1

Type: Oral Presentation Session

Reflecting on his opium habit, the French writer and artist, Jean Cocteau, famously wrote, "The dead drug leaves a ghost behind. At certain hours it haunts the house." Cocteau was not the first, and certainly won't be the last to understand the power of haunting to frame the experience of addiction and the process of recovery. Strangely, in the near-century since his death, the spectres have refused to leave this opposition and continuum. Currently, Addiction and Recovery remain both agreed-upon terms in multiple discourses as well as being sites of strenuous contestation. Not only do older models, of, say Recovery, haunt modern discourses, say, of harm reduction, but ghostly idealized types of these terms can inhabit and are alternately summoned by their respective use. For many decades, for example, especially in North America, "addiction" has made uncomfortable bedfellows of a saccharin spirituality and a bitter materialist science, neither of which can shake the other for long, leaving many people uncertain as to which belongs in this dimension and which in another. Some modern popular theorists, such as Gabor Maté, matter-of-factly talk about "Hungry Ghosts" inside of us to model trauma and addiction, an idea which he has increasingly built up as a foundation for a very conservative cultural politics. Yet, "ghosts" can also be therapeutic, as Recovery Genealogies attest to, where people in Recovery can be connected by departed sponsors, whose presence is recalled in group meetings. Thus, which spectres can be summoned (or, alternatively, which can be exorcised) produce regimes of policy-making, waves of diverse social activism, and various moral panics, all of which have helped constitute modern Addiction and Recovery Studies. These papers interrogate ethnographic work in North America and Europe from the perspective of ghosts and their exorcising.

Presentation(s): Capitalism and the Spirit of Addiction: The Making and Unmaking of the Social in the Business of Appetites

Famously, Weber credited an accumulation-oriented economy to the "Protestant Ethic", an immaterial force at the heart of capitalism. Some decades later, Keynes, reflecting on Capitalism's crises, posited "animal spirits" as an ephemeral but necessary driver of economic growth. But, if capitalism accumulates profits, based on the growth and satisfaction of ever-increasing and refined appetites, then other, darker spirits also appear. As the 20thC progressed "Addiction" emerged as the spectre haunting capitalism, appetites unleashed to individually and socially destructive ends. Thus, Maté sees a "hungry ghost" at the heart of addiction, left there by modern capitalism's relentless ability to melt into air all that should be solid. In the USA at least, Addiction, especially the opiate crisis, has emerged as a stable metaphysical platform to critique a society based solely on contracting, self-interested individual at the heart of the bourgeois political

imagination. Similarly, theorists of the Anthropocene worry that we are sleepwalking into a mass extinction due to our collective addition to petrochemicals. This paper examines how a variety of actors talk about addiction from this perspective of ghostly presences and haunting appetites, while reflecting on both the making and dissolving of social ties. Included are the musings of small-scale drug-dealers in Ireland through manifestos of mass-murderers, all of whom assume addiction as a social fact in the modern world.

Presenter(s): A. Jamie Saris

Temperance, Prohibition, and the Haunting of the American Recovery Movement

In this paper I argue that the prohibition era, and the specter of the temperance movement that birthed Prohibition, has haunted how the U.S. imagines and treats alcohol addiction. I begin with Alcoholics Anonymous, founded two years after Prohibition ended. Notably, early AA literature deliberately distanced the group from temperance crusaders. The temperance movement was associated with Protestant middle-class white women protesting the alcohol industry. In contrast, AA was male-dominated and focused solely on helping the struggling alcoholic, showing no interest in the broader industry profiting from addiction. AA likewise takes no position on outside matters, including alcohol industry regulation. In the 1980s, as advocacy groups urged Congress to regulate alcohol advertising much like earlier tobacco reforms, the recovery movement with AA at its center remained silent. This silence paralleled AA's institutionalization that began with the creation of the Minnesota Model in the 1950s, which brought its philosophy into inpatient treatment settings. The widespread adoption of this model has entrenched the view that alcohol addiction is an individualized problem requiring a single mass-produced model for the treatment of the individual, with little attention to the structural forces enabling and profiting off addiction.

Presenter(s): Benjamin Strassfeld

"Something sleeping that shouldn't be woken up": Embodied Uncertainties of Relapse in Internet Addiction Treatment

Patients entering an Austrian addiction clinic encounter bureaucratic procedures—signing paperwork, receiving predictable medications, and following structured timelines—all producing an illusion of certainty, bounded space, and linear time. Yet as narratives unravel in group therapy, traces and untold stories of those returning after relapse introduce a spectral presence that haunts the therapeutic space. This fear of crossing the threshold of relapse is especially potent when no clear thresholds exist to begin with. Unlike abstinence-based alcohol treatment, where relapse is openly acknowledged and viscerally discussed, internet addiction treatment faces a core challenge: abstinence is impossible in a digitally dependent world. This paper examines how clinicians use a "traffic light" metaphor for behavioural self-classification—creating a seemingly simple system in which treatment success remains largely self-defined. I argue that this interpretative ambiguity amplifies embodied anxiety about relapse, described by therapists and patients as "something sleeping that shouldn't be woken up" or a dormant "stomach worm." While biomedical models frame addiction as a "relapsing neurological disorder," internet addiction

treatment reveals how recovery is haunted by the unique challenges of behavioural addictions lacking clear physiological markers. This paper explores how linear recovery pathways are haunted by the immaterial presence of uncertain relapse threats.

Presenter(s): Suzana Jovicic

“We are all ghosts here”: Hauntings, Memories, and Institutions

The institutionalization of recovery in the U.S. unfolds across three distinct but overlapping forms: state-regulated treatment facilities, extra-institutional and culturally dominant mutual aid groups like Alcoholics Anonymous, and the newer, ambiguously governed, and rapidly proliferating sober house. Though structurally different, most of these institutional settings participate in hegemonically accepted understandings of addiction and recovery. In this paper, I draw on recovery genealogies to analyze how people speak about their dead in divergent ways. I contrast two cases: (1) a nonprofit treatment facility that, after becoming for-profit, erased its deceased cofounder by demolishing his namesake hall; and (2) a sober house that, following a resident's death, ceased operating as such and became a site of reflection, prompting affiliates to reassess recovery and the role of the sober house. In these settings, addiction treatment language preemptively assigns subject positions to the living, but in some cases, also the departed subject. I also examine how these institutions incorporate, erase, or silence the dead, making death a site for institutional change in terms of how the dead can haunt what is said, what is practiced, and what is remembered. I will show how recovery practices can be re-moralized in settings where dominant discourse is supposedly stable yet shared beliefs and practice about healing may be subject to change.

2980 Spectres of Ruptured Time: Distemporalities and Their Afterlives

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Evergreen (4th fl)

Type: Oral Presentation Session

This panel examines the complex relationship between time and its ruination, focusing on how communities navigate temporal disruptions resulting from mass violence, genocide, colonialism, enslavement and racial capitalism, forced displacement, and environmental destruction. The panel considers how habitual modes of communal time-reckoning – both evental and everyday social rhythms – fare against such contexts of forced disorientation. It asks how these temporalities might manifest within spaces of exile and return, the economies of enslavement and dispossession, as well as in rituals, dreams, storytelling, and artistic practices. We are concerned with more-than-human temporal relations and their systemic unravellings. Our discussion will seek to critically interrogate the role of imperialism and the state in the processes of distemporalisation-

understood as a variety of projects that deny, restructure, or obliterate temporalities deemed nonconforming. In thinking distemporalisations, we take time both as a structuring force and a matter of unfolding encounters, feelings, and exchanges, entwined with space, ideologies, infrastructures, and bodies. The panel thus asks what occurs when temporal lifeworlds are ruptured. Do temporal structures disappear, merge with, or resist new orders? Do they haunt? How are disrupted temporalities commemorated? Contributors address nationalism, colonialism, systemic enslavement, archival violence, gendered, and racialised time-making, as well as the affects and economies of time, offering insights into the lives and afterlives of distemporalities.

Papers examine the spectral presence of disrupted time, from the haunting archival traces of gender nonconformity in colonial New Orleans to the fragmented timekeeping of Bosnian returnees after genocide. The interplay of temporalities of catastrophes emerges in the reconstruction of Nepal's earthquake-stricken heritage, while colonial archives in Sudan and Palestine raise urgent questions about ongoing epistemicide and historical erasure. Environmental and legal temporalities are interrogated through critiques of the exclusionary framing of future generations and the struggle for arboreal jurisdiction in Australia. Together, these discussions trace how distemporalities linger as spectral forces—unruly, unsettled, and insistent—haunting the landscapes, archives, and juridical structures that seek to erase them. The fractured temporalities do not simply disappear; they persist in echoes of epistemicide, in spectres of personhood beyond the colonial ordinary, in contested reconstructions of place and memory, in the spectral weight of dispossession, and in the legal fictions of progress. These hauntings remind us that ruptured time is never fully lost but instead returns, unsettles, and demands reckoning in the present.

Presentation(s): Re-temporalising Etienne La Rue outside the Colonial Ordinary: Gender Non-Conformity and Distemporalisation in Early New Orleans

This paper zooms in on the trial of one Etienne La Rue, a twenty-two-year-old free person of colour from Senegambia in West Africa, before the Superior Council of Louisiana in New Orleans, in May 1747. I examine, in particular, a gendered and racialised insult hurled at La Rue by a French soldier, and La Rue's quick response, which had started the brawl and led to the trial. Mistranslated, misspelled, and seemingly purposely mis-analysed in the resultant archival afterlife—especially by the Jim-Crow-era archivists and historians—this insult sheds light on a peculiar practice of personhood- and time-making in the colonial legal archive. I maintain that this insult and La Rue's story are exemplary in the history of early New Orleans in that its insurrectionary potential, its ways of telling a past that does not quite square with the colonial ordinary, is speculative and contingent

on a critical analysis of the very way that extractive, dispossessive colonial ordinary came into being. Could La Rue's own senses of the self and the other have been incongruent to an extent, or altogether, with the surviving categories of colonial difference—such as race and gender—in linear time? And to what extent can the surviving, often ghostly, archival traces of eighteenth-century Senegambian time-keeping and non-linear temporalities interrupt and expose diverse distemporalising effects of the colonial ordinary, centuries after La Rue's trial?

Presenter(s): Vanja Hamzic

Surviving Chronocide in the Bosnian Highlands

Three decades after the genocidal destruction of their towns, landscapes and communities, small groups of returnees to the Dinaric Bosnian highlands are the uncanny timekeepers of an erased world. Based on their stories and my long-term ethnographic research, I trace the religiously plural and more-than-human relations that their temporal structures and devices held together. Following seasonal agricultural work, neighbourly interactions, rituals, feasts and attempts at their postwar reconstruction, the paper engages with time as, first and foremost, communal orientation. I encounter haunting spiritual matter of the deceased and mass-murdered inhabitants, as well as the exiled supernatural beings, with competing cosmological and political claims over the living and their landscapes. Then, I sketch out the main features of nationalist distemporalising violence, as it latched onto the communities, with attention to the reappropriation of the traditional cyclical calendar and the constructions of the 'wounded history-ominous future' ideological complex employed to perpetuate the genocidal regime. Chronocide, I suggest, is neither straightforward nor immediate; like nationalism more generally, it slowly and insidiously fabricates new worlds out of the rubbles of those it destroys. The fragments of usurped time thus haunt it intrinsically.

Presenter(s): Safet HadžiMuhamedović

Arboreal Jurisdiction

Inspired by Indigenous resistance to the Victorian State government's destruction of sacred Djab Wurrung trees for road construction, I examine human affective and legal relations with trees, alongside legal refusals to recognise nonhuman legal relations as known within non-Western legal systems. The paper—and the law it examines—is haunted by the Australian genocide, including on Djab Wurrung land, and which reverberates through settler-colonial laws in Australia. I examine the legal temporalities that shape the ways of knowing permitted within Western legal traditions and draw on Indigenous legal knowledge to evidence the role of genocide in haunting contemporary legal arrangements in the region. I argue that the refusal to acknowledge the Djab Wurrung trees, and their presence in Djab Wurrung knowledge structures, repeats the settler-colonial violence that the Australian state is the product of, and denies the affective, intergenerational and cross-jurisdictional claims offered through arboreal encounters. I develop an account of arboreal jurisdiction to address the temporal residue and repetitions of law's violence, and to think beyond Western progress narratives. The building of a road becomes a more-than-metaphor for liberal

legalism's obsession with progress, while Direction Trees are felled and the knowledge of intergenerational, ecology-grounded legal relations is refused.

Presenter(s): Gina Heathcote

Colonial Archives and Violence: The Cases of Sudan and Palestine

This paper interrogates the meaning of colonial archival sources for understandings of ongoing violence and conflict. I draw upon two sites of continuing violence in Palestine and Sudan in which temporal lifeworlds have been ruptured through the destruction of cultural, social and educational institutions. In both cases of ongoing conflict and state violence, people are subject to lethal violence, expulsion from their homes, forced migration and starvation. In both cases also, institutions of social and cultural memory, educational institutions, libraries and archives have been subject to destruction and erasure, to the extent where, in the case of Palestine, the systematic obliteration of knowledge has been termed 'epistemicide'. This paper asks questions about the meaning of colonial records about both of these states given ongoing destruction of national memory. It asks, how are colonial records differently read upon a background of ongoing violence? How does archival violence persist and in what shapes does it appear today? Following decolonial approaches to the archive, this paper further questions whether these records can ever be spaces of redress, and whether, through engagement with impacted communities they might be relied upon to re-write national histories and reimage possible futures.

Presenter(s): Alice Finden

Earthquake Afterlives: (Re)Constructing Heritage, (Re)Claiming the Past in Bhaktapur, Nepal

This paper examines the overlapping temporalities of earthquakes and their aftermaths that are in operation in Nepal. A country that is perennially 'between' earthquakes, with a devastating seismic event recurring every century, previous and future disasters continue to haunt public imaginaries. In the aftermath of the 2015 Gorkha Earthquake, as the citizens and local government officials in Bhaktapur rallied to reconstruct over 124 heritage buildings across the city, an opportunity arose to 'right' the wrongs of past reconstruction efforts that followed the 1934 Nepal Bihar Earthquake. A dramatic change in aesthetics and style, returning to a pre-1934 state was chosen across multiple sites, reclaiming, through built form, the identity of Bhaktapur as a political capital and centre of power. But simultaneously, driven by national policy and community sentiment, reconstructed buildings are required to address a future inevitable earthquake and its aftermath. And so, spectres of past earthquakes and their aftermaths coincide with the disruptions sure to be brought upon by future earthquakes. Through a series of cases across the city, I draw attention to the multiple temporalities unfolding in each building, some drawn anew, some reassembled, and others left as ruins commemorating past disasters, each shaping the current identity of Bhaktapur as a 'heritage city.'

Presenter(s): Vanicka Arora

The Temporality and Hauntology of Future Generations

The idea of protecting the environment for future generations has been gaining traction in recent years. This paper argues, first, that the concept of future generations, as deployed in environmental law is, however, deeply exclusionary, with only some humans being envisaged as future generations, these exclusions being marked by gender, race, class, ableism and anthropocentrism. This argument is made through an analysis of the figure of the universal child, held alongside an evaluation of how future generations, as a concept, was conceived of in international law in the 1970s. In particular, the links between future generations and debates on population control and speciesism will be discussed. Second, the paper will discuss the politics of temporality that underly the concept of future generations. The notion that the planet should be protected for those to come sounds hopeful. However, the concept, as deployed by courts, assumes a modernist idea of linear time as progress. Furthermore, claiming that future generations need a right to environment is problematic given that such a right does not yet exist for present generations. The paper will end by asking whether the concept, given its haunted past, should be abandoned or whether it can be recast considering the critiques made of it here. In doing so, the paper will reflect on both the hauntology and temporality of future generations while centering Indigenous conceptions of space-time and intergenerational equity.

Presenter(s): Emily Jones

3795 The Art of Haunting: Spectral Legacies behind the Creative Economies

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR C1 (3rd fl)

Type: Oral Presentation Session

The arts are often positioned as drivers of economic growth, yet they remain haunted by histories of labor exploitation, uneven patronage, and political appropriation. This panel explores how ghosts, both metaphorical and material, shape the contemporary culture industry. What past artistic movements, state cultural policies, and economic structures continue to haunt today's creative economies? How do artists grapple with the lingering presence of institutions, ideologies, and labor conditions that partially define artistic "value" and "legitimacy"? Topics may include the afterlives of colonial cultural institutions, the shadow of state censorship, the ghosts of precarious labor in the gig economy and in self-styling. By engaging with the theme of haunting, this panel considers how artists, cultural institutions, and policymakers navigate the unseen forces that shape artistic production, circulation, and economization.

Anthropology

Discussant: Tara Westmor, University of California, Riverside

Presentation(s): Dead Forms: Thirdness and Immortality

Cultural industries are built on reproduction of dead forms. Images, emblems, icons, and forms float across time and rise from graves. This paper will consider iconography as a house of apparitions, reflections and uncanny reappearances: the semiotics of thirdness, the replica or legisign (the sign that's experienced as a token of type), a resemblance of an absence. Focusing on recurring forms in political art and numismatics, this paper will consider how pattern-books of decorative form and databases of motif-elements (Azuma) contribute to industrial processes of resurrection, and spectres of dead faces and dead forms operate as political and economic powers.

Presenter(s): Lily Chumley

"Poets Were Soldiers": Haunted Aesthetics in Vietnamese Contemporary Poetry

During the American War in Vietnam, poetry was mobilized as a weapon: an instrument of revolutionary consciousness and an armament of the cultural front. This paper examines how Vietnamese poets, particularly those affiliated with the Writers' Association, inhabited dual roles as both artists and soldiers, blurring the line between aesthetic production and state-sanctioned warfare. Formed in 1957 by wartime poets, the Association institutionalized the ethos of "poet as soldier," and canonized a genre of revolutionary verse that welded nationalist sentiment to lyrical form. Drawing on archival material and contemporary interviews, I explore how the specter of revolutionary verse persists not only as a nationalist relic but as a recurring aesthetic mode, one that animates ongoing debates about authenticity, memory, and the cultural labor of poets in post-reform Vietnam.

Presenter(s): Tara Westmor

Positively Haunting: Ritual, Signs, and Belief within a Spectral Science.

The supernatural and the aristocratic share epistemological discursive space in the worlds of American ghost hunters. The contemporary search for empirical evidence of the afterlife is reflected in resurgent signs of Judeo-Christian identity in the social praxes of otherwise secular middle and working-class Americans. Filtered through the so-called "Death of God" and seeded by the paranormal works of William James and Carl Jung, latter-day ghost hunters are increasingly guided by a consecration of western science. With meaning cultivated in the dual invisibilities of electromagnetic fields and demons, informed by the rotating sign values of noises, goosebumps, and camera compression rates, contemporary ghost hunting has given the paranormally-attuned the ability to simultaneously anchor themselves to the legacy of Cartesian rationalism while surrendering to the mysteries of an elusive supernatural Gnosis. Once-sacred liberal formations such as democracy and equality are conspicuously absent. The acceleration of identity-centered communication platforms including YouTube has made the performative a crucial aspect of the

hybrid rituals of the paranormal scene. In the tumult of branding, hoaxing, and relentless self-promotion, humble subservience to the mystical and divine and any belief in the righteousness of the meek has been replaced by the aristocratic impulse of 21st Century American life, furnishing a latter-day feudal ethics validated at the fulcrum of science and religi

Presenter(s): Andrew McGrath

Crafting the Empire's Echo: Design, Labor, and (Anti- / Post- / Neo-) Colonial Hauntings in India

To build a more just world order, philosopher Olufemi Taiwo argues that we must contend with the fact that our current social order rests on relations of colonialism that did not end with colonial independence in the 1940s-1960s. Slavery, colonialism, and racial capitalism have created what he calls the "Global Racial Empire" which accumulates advantages and disadvantages, harms and capabilities unevenly (2022). How might we understand "design" as a set of practices that operates within such a world system? Drawing on 8 months of ethnographic fieldwork with furniture and interior designers in India, this paper examines the ways in which designers navigate capitalist markets that continue to be haunted by colonialism. On the one hand, creative experts shaping Indian elite homes describe design as an anti-colonial project, poised to free India from tastes, fashions, and products from abroad. On the other, designers navigate hierarchies of values set by global markets, including demand for exotic, uniquely "Indian" products. Furniture production also relies on craft methods still defined through neocolonial discourses of "crafts difference" (McGowan 2009) and on caste and class dynamics that legitimize labor exploitation. By investigating how these unseen forces – histories, values, and ideologies – structure design practice in India, this paper contributes to our understanding of the politics of the creative industries and their imbrication in the "Global Racial Empire."

Presenter(s): Llerena Searle

From Opium to Indigo: Histories of Trade, Development, and Cultural Governance in Vietnam's Ethnic Minority Textile Economy

This paper explores how the legacies of opium trade history, rural development policies, and cultural preservation agenda continue to shape not only the material practices, but also the discursive positioning of ethnic minority textile artisans in Vietnam's emerging creative and cultural economy. Drawing on ethnographic fieldwork and archival research, the study focuses on Hmong indigo dyers in Pà Cò, Hoà Bình Province to highlight how former opium-producing zones have become experimental sites for development interventions and heritage policies. Rather than treating ethnic craft economies as isolated or ahistorical, I trace how artisanal production is entangled with shifting state visions of development, market inclusion, and cultural governance. It foregrounds the tensions and negotiations artisans have to navigate within Vietnam's cultural and creative industries, where contemporary discourses of sustainability, indigeneity, and creativity converge while the political ecology of earlier livelihood transformation tends to be obscured.

1873 The Gendered Labor of Education in East and Southeast Asia

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Studio 4

Type: Oral Presentation Session

Education is often framed in popular discourses as an individual endeavor, in which students progress through school according to their own efforts and aspirations. Such accounts fail to recognize, however, the ways in which young people are enmeshed in relations of dependency. This panel examines the labor—both waged and affective—performed by kin and classmates that defines and makes possible students' educational trajectories. It takes gender as a central analytic, focusing on the ways that this labor that underpins education relies upon and reworks gender norms, in turn transforming the social relations and subjectivities of those performing it. It also draws attention to the ways in which the structure of education systems matter in this regard. Seemingly "gender neutral" policies related to competitive school admissions and grading standards, segregated school spaces, educational privatization, organizational management models, and school-to-work pipelines all have gendered effects, not just for students, but for those who support them. Anthropologists and other feminist scholars of social reproduction have long highlighted the importance of seeing labor in the home and the paid workplace as co-constitutive of gender inequality and other intersecting forms of oppression. This panel shows that it is crucial to also consider the role of education, and how it is connected to the work performed by multiple people across these spaces.

To explore these issues, the panel brings together papers based on research in East and Southeast Asia. Göransson's paper examines parents' gendered and affective labor around emerging tensions between aspirations for their children's academic achievement and school-life balance within Singapore's competitive school system. Drawing on work in Chinese special education schools, Wu's paper asks how fathers navigate the fraught terrains of masculinity and (dis)ability and engage in care labor in a setting that destabilizes men's self-understanding. Ling and Xiao focus on middle-aged female migrants returning from Chinese cities to their rural hometowns to become "mom workers" in local industries, demonstrating the links between gender, education, industrial upgrading, labor organization, and care regimes. Estes shows that due to the semi-privatization of the Cambodian state education system, rural students rely upon feminized labor, including remittances from migrant siblings who become wage workers in precarious urban labor markets. Based on research in a Chinese university, Sum's paper explores how student organization leaders' attempts to move beyond bureaucratic organizational culture by treating members as kin serve to intensify women's affective labor. By putting these papers into conversation, the panel sheds light onto how the labor of education shapes gendered roles and relations of dependency across the region and beyond.

Presentation(s): Navigating 'Cruel Optimism': Ambivalent Aspirations and Parents' Care Labor in Education among Singaporean Families

In Singapore, children's education is typically presented as "an overriding and all-consuming concern," fueled by extreme competition for grades and school admissions (Waters 2015: 290). However, parents' desire for academic excellence as a route to better lives is not as straightforward as it may seem. Drawing on ethnographic fieldwork with Singaporean families, this paper explores parents' gendered and affective labor around emerging tensions between aspirations for academic achievement and school-life balance. It examines how parents navigate these conflicting desires and their implications for gendered divisions of roles and responsibilities, drawing on Lauren Berlant's (2011) concept of "cruel optimism" – a state marked by significant anxiety over the unfulfilled promises of modernity and neoliberalism. This is particularly evident in affective attachments to fantasies of "the good life," such as upward social mobility, job security, or freedom. The conditions of cruel optimism are marked by a prevailing sense of impasse, requiring hypervigilance—a "proactive, hopeful affective force that remains open and indeed seeks out possibilities for change" (Sotirin 2020: 12). In examining how parents renegotiate ambivalent aspirations with regard to their children's education, this paper highlights the affective landscape underpinning vigilance and the reconfiguration of upward social mobility.

Vulnerable Fatherhood: Masculinity, Disability, and Moral Becoming in China's Special Education Schools

This paper examines the less-known realm of vulnerable fatherhood in the practical and emotional realities of raising and educating children with disabilities in urban China. It is set in a particular type of institutions called special education schools where students with complex needs are accommodated in socially, spatially, and educationally segregated spaces. In China's cultural and familial ideals, women bear disproportionate shame associated with birthing "less-than-perfect" offspring; as well, the "diminished" personhood of children with disabilities also renders fatherhood fragile and insecure. This paper explores the embodied practices of "caring masculinities" performed by fathers, in the context of a special education school where disability profoundly destabilizes men's self-understanding in relation to their children, partners, and educators. How do fathers navigate the fraught terrains of masculinity and (dis)ability and engage in the worlds of care? How do they mesh lingering patriarchal ideals with new embodiment, emotionality, and moral becoming in their everyday encounters in and out of the special education school? This paper, based on long-term ethnographic research on disability segregation in contemporary China, explores vulnerable fatherhood as a site of gender and disability intersection, and as the unintended consequence of a patriarchal structure that supposedly privileges men.

From "Dagongmei" to "Mom workers": Gender, Education, and Return Migration in Post-reform China

This paper probes into some of the changing patterns among female migrants in post-reform China and explores how gender intersects with educational ecology, industrial policy, and labor organization under late-socialist transformation. After reviewing the early well-documented "dagongmei" phenomenon, in which young, usually unmarried, women migrated from rural hinterlands to the Pearl River Delta and other east coastal areas to work mostly in export-oriented industries in the 1990s and 2000s, this paper examines the recent trend of middle-aged female migrants returning to their hometowns for jobs in the e-commerce and artificial-intelligence related industries. By exploring the underlying sociocultural undercurrents in addition to the institutional factors that contribute to such changes, this paper departs from an economic-centric explanatory model and reveals how the agentive role of gender has to be understood not only within the domestic realm of intergenerational care but also in the macro spheres of industrial and educational policies. This also seeks to construct a dynamic module that situates gender in the central node of the compass that links education, industrial upgrading, labor organization, and care regime into one to enrich the current literature on migration.

Paying For Social Mobility: Educational Privatization and Gendered Labor in Cambodia

In Cambodia, neoliberal economic policies have resulted in untenable agrarian livelihoods, limited state support for social reproduction, and widespread indebtedness. Against this backdrop, many rural families see children's education as the best way to secure their household's economic future. With a secondary school diploma, youth can achieve social mobility by attending university and qualifying for white-collar careers in the capital city. However, Cambodia's nominally free education system is semi-privatized, requiring that students spend significant amounts of time and money on supplementary private classes in order to graduate. Drawing on ethnographic research in a rural community, this paper explores the gendered labor that underpins this educational landscape. Women, including daughters who are often students themselves, continue to do the vast majority of domestic work that allows youth to dedicate their time to schooling. Many students also rely on the paid labor of siblings who have dropped out of school and migrated to enter gendered job markets in urban areas and abroad. In particular, households often receive remittances from young women working in Cambodia's garment sector to help cover educational expenses. This paper illustrates how possibilities for social mobility via education rely on and rework gendered relations of production and reproduction.

Toward Humanistic Management: New Opportunity or Burden for Female Students in University Clubs?

Many extracurricular groups on the twenty-first century Chinese university campus aspired to becoming a "happy and loving big family." In student participants' imagination, kin-based interdependence and affective belonging to a fictive family were emblematic to a desirable organizational culture. Student leaders attempted "humanistic management" of extracurricular affairs, as it would purportedly foster "workplace" wellbeing and a people-centered culture in ways that adults' institutions beyond the ivory tower lacked. As opposed to ossified socialist institutions that relied primarily on impersonal bureaucratic logic to mobilize, youth organizations treated members not as workers but more importantly as affectively-connected kinspeople. In reality, however, turning peer into family had the unintended effect of exacerbating inequity in gendered labor, as a result undermining Chinese students' effort in building moral institutions characterized by flattened hierarchy and gender egalitarianism. This paper shows, through vivid ethnographic examples, how students' reimagination of female student leaders as loving mothers intensified women's affective burden in caring for individual students and justified the deeply gendered expectations for women to make sacrifices for the collective. Feminine work continued to be rendered invisible, and women's voice became further marginalized in fictive families that mimicked the operation of patriarchal Confucian households.

1387 The Ghosts We Eat: Unseen Entities Forming and Deforming Our Food Systems

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Sheraton **Room:** Edgewood AB (4th fl)

Type: Executive Roundtable/Townhall

This roundtable focuses on the ghosts, the unseen and immaterial but acting entities that form and deform our global food systems, and which we ingest, sometimes unaware. Of special interest are the ghosts of the past, and ghosts we refer to in shorthand as of present. Following the work of Thompson, Stoler, Tsing and others, past ghosts include ecological traces of multiple more-than-human histories, including the afterlives of colonialism, plantations and plantation technologies. Here, we think also of the material debris of colonialism, of camps that may change from being colonial to migrant, labor to refugee in function or name. The ghosts of the present are invisible specters in the ways Derrida and Merleau-Ponty have theorized-the 'becoming-body', the 'nothing visible' that needs a body to exist and can only come to be and be seen by inhabiting visible entities or by figuring in different kinds of bodies. We think of these present ghosts as forces of hierarchy such as racial capitalism, bordering practices, and nationalisms. We also conceive of them as unseen but palpable elements; for example, excessive heat in greenhouses, smoke downwind from

wildfires in fields, carcerality and fear in the workplace, supply chain infrastructures, as well as pesticides, viruses, bacteria and their health effects.

This multi-modal roundtable explores conceptually, textually, and visually how these past and present ghosts form and deform the social structures in and through which food is produced and consumed. These ghosts manifest the ways in which socio-agri-food systems are formed as well as how these figurations at times, become deformed, destroyed, and left in ruins. Simultaneously, we analyze the ways bodies process past and present ghosts in sensory and affective registers. We discuss ghosts through ethnographic research in various food settings in the U.S., Mexico, Spain, and Austria; in vegetable greenhouses, strawberry fields, orange orchards, as well as in packing warehouses, refrigerated trucks, and industrial and personal kitchens. The roundtable juxtaposes the visual-sensory with the textual in order to understand the haunting of bodies – of humans, societies, food, landscapes and waterways – as well as of the contemporary and future otherwise. In this historical moment, we find it critical to examine the ghosts we eat, the beauty and brutality in the food we consume, specters that become part of our bodies, inflecting our individual and collective futures.

4477 The Left Behind: spectres of the past and promises for the future

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Bonaparte

Type: Roundtable/Town Hall

The term 'left behind' has appeared in public and policy speak over recent years placing certain communities and territories at the crossroads of celebrated pasts and uncertain presents/futures. In popular discourse, left behind is imagined as a constituency of otherness, whereby disenchantment with the status quo is a consequence of the economic and material decline that has accompanied shifts in the economic order as we know it. It is a condition of inhabitation that is threaded through the ruins of once eminent industries, which now appear as a blot on the streetscapes of numerous post-industrial cities across the world, as well as rural terrains now at a standstill when juxtaposed against the modern over-developed world. In contemporary politics the category 'left behind' has been used to mobilise the affections of certain dispossessed communities, whose subsequent inclination toward populist politics renders them vulnerable to political designs of welfare retrenchment and austerity.

Firmly grounded in ethnographic inquiry, in this roundtable, we seek to interrogate some of the antinomies around the concept of left behind through considering its adoption in dramaturgical discourses of stigma, as well as co-option in the phantasmic promises of populist politics. The table brings together six presenters with ethnographic contributions that examine the lived experiences of individuals and communities situated in spaces marked by marginalization, abandonment, or symbolic decline. Spanning diverse sites-from rural China to the Greek island of Chios, from Brittany in France, and migrating Estonian youth, to peripheral regions in Denmark-these contributions illuminate how people navigate and contest dominant visions of modernity, belonging, and development. Presenters address topics such as the embrace of neo-rural utopias by disillusioned Chinese urbanites and their paradoxical alignment with state agendas; the resistance of Greek villagers to EU-funded migrant infrastructure through localized narratives of neglect; the reframing of productivist farmers in Brittany as marginalized actors within environmental debates; and the role of nostalgia and care in sustaining place-based belonging in Danish localities experiencing symbolic erosion. Together, these perspectives interrogate the complex intersections of space, agency, and affect in shaping what it means to be-and to respond to being-left behind. By drawing on a rich set of ethnographic contexts across Europe and beyond, the roundtable offers a comparative lens through which to critically examine the political, social, and emotional contours of "left behindness" today.

3692 Trump, Orbán, MAGA, MEGA: The Specter of Hungary Haunting the U.S.

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Studio 3

Type: Roundtable/Town Hall

For over a decade, the specter of Viktor Orbán and the fear of "becoming like Hungary" have loomed large in the political nightmares of the liberal order across the West. In the context of the second presidency of Donald Trump, this specter is anything but a phantom. Trump has openly praised Hungary's authoritarian Prime Minister as a role model, lauding the country's illiberal regime-building as a potential blueprint for the future of the United States. Institutional ties, intellectual exchanges, sponsorships, and personal visits underscore a relationship marked by mutual admiration and ideological alignment. Yet, the two leaders also diverge significantly. Orbán, with decades of strategic regime-building under his belt, has meticulously expanded Hungary's

global ambitions while Trump has embarked on reducing the United States' global commitments. Despite this, both leaders learn from each other: "Make Europe Great Again" has become a slogan also for the second Trump presidency, and the two leaders converge in their anti-liberal rhetoric and shared ambition to reshape state apparatuses, ushering in a new political era. Anthropologists have shown that the mass defection from liberal hegemony can be understood as a consequence of neoliberalism. However, much remains to be explored about the connections between political economy and the cultural and epistemic aspects of far-right regime-building. This roundtable brings together anthropologists working on these two contexts to examine how the two leaders, from opposite sides of the Atlantic, are simultaneously haunted by the remnants of the old liberal order while constructing post-liberal hegemonic regimes. What steps of far-right regime-building have anthropologists observed in Hungary and the United States? What parallels and divergences can be drawn, and can one regime's trajectory illuminate the other's? Furthermore, how does the decline of liberal epistemic hegemony reshape the conditions of anthropological research in these contexts? Finally, can anthropology's long-standing critique of neoliberalism help us better understand the rise of anti-liberal regimes?

7652 'Borrowed' magic: multimodal representations of women's witch practices as a hauntology for a feminist decolonial manifesto on spiritual healing.

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** Galerie 6

Type: Roundtable/Town Hall

Contemporary magical religious Witchcraft and allied traditions are bricolage identities underpinned by practices, well known for magpie 'borrowing' of rituals, images, substances, and stories. Today's practitioners –women, in the west, predominately white – are often highly attuned to political debates and anxieties about their sources and histories. Criticisms have highlighted extractive and neo-colonialist practices in spiritual discourses (including Witch/Wicca) and wellness communities. There are pertinent questions about how to – as Bucar (2022) says – borrow 'better', more responsibly. This roundtable addresses different perspectives and experiences of

'magical borrowing' from diverse scholarly and practitioner perspectives, focusing on visual, sonic, material, and media representations and explorations.

How do these representations, artefacts and testimonies go beyond text to convey the emotional and sensory nature of magical and participatory consciousness (Greenwood 2015, Maggiocco 2015)? We consider neoshamanism from Finland, Romani practices, Dianic witchcraft in the UK, Sex magic in the US, Afro Caribbean Obeah and traces that feed into and from these practices as feminist healing. Can increased recognition of practices origins and histories of their adoption affect healing qualities and their impact?

This will be a multisensory presentation comprised of discussion alongside examples of multimodal research including ethnographic film, soundscapes & artefacts.

We discuss how to generate further dialogue without text between: soundscapes and music, magical objects, books of shadows, photographs, film, visual art, autoethnography (for example) to facilitate feminist discourse around responsibilities, authenticity, power and bricolage practices. The panel will form as the first iteration of a new network or collective working to explore these themes using multimodal approaches that reach out beyond the academy. The group will collectively conceive an open access event to follow these conversations begun at the AAA.

Confirmed Speakers:

Dr Linda Annunen (Åbo Akademi, Finland): Ritual Studies. Religion and Wellbeing / Religion and Sound / Neoshamanism

Professor Ethel Brooks (Rutgers University, US): Women's Studies. Romani Identities / Performance / Women's Work

Dr Helen Cornish (University of London, UK): Anthropology and History. Alternate Historicities of Witchcraft / Museum of Witchcraft and Magic, UK

Lilith Dorsey (Magickal Practitioner, US): Afro-Caribbean, Celtic, and Indigenous American spirituality.

Dr D Ferrett (Falmouth University, UK): Feminist Sound Studies. Ecocriticism / Ritual / Voice / Violence Against Women

Dr Rosie Reed Hillman (Manchester Metropolitan University, UK): Visual Anthropology, Filmmaker. Menopause / Magical Healing / Emotion

Professor Jane Ward (University California Santa Barbara, US): Feminist Studies. Queer theory / Sex Practices / Green Witchcraft

Section: Association for Feminist Anthropology

Organizer: Rosie Reed Hillman

4887 “The Wound is a World:” Writing Trauma as Politically Engaged Research

Start Date: 11/22/2025 10:15 AM **through** 11/22/2025 11:45 AM

Venue: Marriott **Room:** MGB Salon F/G

Type: Oral Presentation Session

Inspired by traditions of feminist testimonio, "felt theory" (Million 2009), fugitive anthropology (Berry et al. 2017), and the work of tracing "imperial intimacies" (Carby 2019), this session considers the possibilities and challenges of writing about/with trauma as politically engaged research. Agreeing with Billy-Ray Belcourt that "the wound is a world" that opens up otherwise futures and Dian Million's assessment of academia as a gatekeeping institution that dismisses alternative forms of knowing—namely, Indigenous women's intimate storytelling about structural violence—we center ways that activist-scholars document, "witness," and practice care with others' and our own lived traumas. Rather than romanticizing this process or celebrating the scholar-martyr, we center papers that think critically about these intimate collaborations and often uncomfortable, laborious exchanges. We ask, what are the roles of writing and witnessing as part of politically engaged scholarly projects? What do we owe each other, and what is the work of mutuality and care when documenting trauma? How might, to return to Million, feelings re-enter our accounts: feelings that carry histories, structural wounds, and hopes for alternative futures? Our papers dwell on these questions and complexities. Largely uninterested in seeking resolution, we linger in paradoxes and ambiguities that "haunt" our work and inspire us to theorize otherwise.

Notably, the papers in this session are under review to be part of a special issue of *Feminist Anthropology*, forthcoming in spring 2026. We envision the proposed session as a space for dialogue with a diversity of feminist anthropologists to further enrich our critical analysis. It will also serve to preview and publicize the forthcoming issue of *FA*. Inspired by Mariana Mora's (2017) insistence that decolonizing feminist research requires focusing on the research process itself, "This Wound is a World" intervenes in conversations around the field, fieldwork and homework, and the practice and politics of writing. Like *FA*, our session is committed to multidisciplinary and experimental approaches to research that refuse what Macarena Gómez-Barris (2017) calls the singular masculinist vision. Gómez-Barris invites scholars to embrace "queer femme methodologies" that move beyond the singularity of "extinction, colonial absorption, and violence" and instead look for, listen to, and are guided by submerged perspectives that prioritize forms of life bubbling below the surface. Our collective understands feminist anthropology as an approach that tends to the submerged, sensorial, embodied, intimate, and "fugitive." Importantly, we have learned from feminist scholars like Chandra Mohanty (1984) to refuse essentialism and "unity," instead celebrating the differences, fault lines, and tensions in our approaches and methodologies.

Organizer: Angela Stuesse, University of North Carolina, Chapel Hill, Department of Anthropology

Chair: Angela Stuesse, University of North Carolina, Chapel Hill, Department of Anthropology

Presenter(s): Angela Stuesse, University of North Carolina, Chapel Hill, Department of Anthropology, Robin Reineke, University of Arizona, Chandler Classen, Isabel Abarca, Kathleen Coll, University of San Francisco

Presentation(s): Finding Our Way Through: On Activist Scholarship, Co-Authorship and Trauma

Following a sequence of traumatic events involving a home raid, immigrant detention, and family separation, over fifteen years after co-authors Angela Stuesse and Daniela A. Vargas first met, our lives became entwined in ways we could never have predicted. In the eight years since, we have been collaborating to narrate that experience, interweaving Dany's life story with an analysis of how U.S. immigration policy since 9/11 has indelibly shaped the lives of undocumented youth. As part of a commitment to horizontal, longitudinal, activist scholarship, our co-authorship of #FreeDany and our grappling with the many questions this experiment generates stretches the bounds of collaboration beyond research design/data collection into the less explored realms of writing and publication. But one thing about trauma is that it lingers. You think you've healed, and here it is again. You revisit it and it surprises you with its intensity. And, we've found, it insistently confounds our best intentions of collaborative storytelling and authorship. Looking to Latin(x) American, Black, and Indigenous feminist theorizing of testimonio and witnessing (Latina Feminist Group 2001; Murphy 2019), relationality and embodiment (Berry et al. 2017; Stephen and Speed 2021), desire and refusal (Tuck 2009, Tuck and Yang 2014) in this paper we attempt to come to terms with how trauma has troubled, made demands upon, and ultimately reshaped the possibilities for our collaborative scholarship.

Presenter(s): Angela Stuesse

Contraband Grief in the US-Mexico Borderlands

This paper reflects on experiences of practicing forensic anthropology and writing ethnography from a place of grief. By weaving together reflections on personal grief with ethnographic observations about the grief of others—namely, families of migrants who have died or disappeared while crossing the border—this paper theorizes personal grief as a form of haunting. Following Gordon's (1997) definition of haunting as circumstances "when the people who are meant to be invisible show up without any sign of leaving, when disturbed feelings won't go away," this paper considers the role of stigmatized emotions in forensic anthropology and the intrusion of personal grief in the process of ethnographic writing. Drawing on these anthropological ways of knowing alongside critical indigenous theorizations of ancestors and relationality, it is argued that contraband grief has a role in anthropological practice whether we welcome it or not.

Presenter(s): Robin Reineke

“Re-Opening Wounds”: Community Fallout in the Aftermath of Failed Nuclear Waste Siting

When I was 12, my family told me a story about their community falling apart and coming together, a time someone tried putting a nuclear facility in their (our?) hometown. The story lingered in the

background, rarely spoken of. As such, the story – I believed – had little significance until I embarked on a "homeplace" ethnographic journey (hooks). As I returned home, heightened tension permeated the community atmosphere in the affective and geographic shape of community life. One collaborator asked (accused?), you just want to re-open our biggest wounds, don't you? Even though he wasn't alive during the "nuke-dump fight," woundedness has been passed down. These deep wounds became central to my ethnographic inquiry, one complicated by the intimacy between myself, family, and the community. Inspired by these tense, traumatic relationships, this essay articulates ethnographic practices of productive care and reciprocity in which re-opening wounds bears communal risk – risks that can deeply attune us to the stakes of research and understand the structural inequities that rely on community trauma.

Presenter(s): Chandler Classen

Mapping Diasporic Inheritances: Through Memory, Autoethnography, and Family Ethnography

This paper explores questions of what constitutes inheritance, how it's felt and embodied, and the ways it can be conceptualized, understood, and enacted upon. Through autoethnography and positioned as a second-generation, American-born, child of a Salvadoran immigrant, I consider notions of inheritance and felt responsibilities as both an aspiring politically engaged scholar and daughter of the diaspora. Inheritance will be mapped out through everyday interactions and conversations, ranging from childhood memories to present, and conceptually addressed in relation to themes of trauma, care, responsibilities, obligations, and hope. This work aims to contribute to theorizations of how inheritance informs practices of care both as a daughter and as a scholar, especially when the inheritances are intimately intertwined with trauma. I also consider, through these autoethnographic reflections, methodological and theoretical possibilities within anthropology of what it could mean to conduct family (auto)ethnography. This is framed, broadly, as the study of a family within the family and works to extend autoethnographic conventions for both the ethnographer and participants. I argue that this approach could open up new anthropological understandings of family, generational relationships, intergenerational knowledge production and transmission, and how generations are engaging with memories to look towards a collective and imagined future.

Presenter(s): Isabel Abarca

Sanando juntas: Community Research on Trauma, and Activism that Heals

This paper considers testimonio as a key methodological and epistemological tool in both grassroots community organizing and research on trauma and healing. Mujeres Unidas y Activas (MUA) is an immigrant women-led grassroots organization in the San Francisco Bay Area with over thirty years of history working with survivors of violence. In early 2020, MUA launched a research team with academic allies to study, document and analyze their approach to community power-building and domestic violence prevention. Key organizational values and practices of mutuality and care, including dialogue and testimonio, made research a space for healing during the COVID-19 pandemic. Sharing testimonios within the group builds trusting relationships and collective

knowledge (Latina Feminist Group 2001). Sharing testimonios publicly is an activist intervention linking personal healing with political engagement and advocacy. Testimonio and reflective dialogue turned research team meetings about interviews, focus groups, surveys, and archives into opportunities for healing and support. At the same time, the realities of democratic collaboration across multiple lines of inequality and privilege, from research design through dissemination, were far more complex, uncomfortable, and laborious than we could have predicted. This paper considers both on the tensions and limits of conducting such research, including the feminist anthropologist's role in the project of "sanando juntas."

Presenter(s): Kathleen Coll

8850 ALLA Intergenerational Mentoring Session

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Sheraton **Room:** Evergreen (4th fl)

Type: Special Event

Association of Latina/o & Latinx Anthropologists invite senior, mid-career, early career, graduate and undergraduate students to join this inter-generational mentoring session. Participants will discuss writing and publication strategies, strategies for getting your research funded, and best practices for building a career in Anthropology in and outside of the academy.

8775 CHAT Business Meeting

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Marriott **Room:** Beuregard

Type: Special Event

During the Council on Heritage and the Anthropology of Tourism Business Meeting, board members will update the general membership on ongoing activities. Discussion will include a report of the past year's activities, plans for next year's annual meeting, progress on our book awards program, the expansion of membership activities and opportunities, and other new business.

8691 GAD Distinguished Lecture by Danilyn Rutherford: The World in Anthropology

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Marriott **Room:** Galerie 2

Type: Special Event

The General Anthropology Division Distinguished Lecture proudly features Danilyn Rutherford, President of the Wenner-Gren Foundation. Dr. Rutherford has led the foundation since 2017 in its

mission to advance diverse anthropological knowledge and to safeguard the future for anthropological ways of knowing. Dr. Rutherford is also the author of four books, including the recently published *Beautiful Mystery: Living in a Worldless World* (Duke UP, 2025). The lecture is open to all.

8684 History of Anthropology Interest Group Luncheon-offsite

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Offsite

Type: Special Event

This History of Anthropology Interest Group (HOAIG) will once again host its luncheon during the annual AAA meeting. Operating under the banner of the General Anthropology Division, the HOAIG provides a gathering place within the AAA for all those interested in the history of anthropology and the human sciences.

If you are interested in attending, please contact the group Convener, Nicholas Barron (nicholas.barron@unlv.edu). As we get closer to the date and we have a better sense of the number of attendees, we will provide more details including location and directions.

When: Saturday, 11/22, noon

Where: TBD

If you are unable to attend the lunch gathering but are interested in learning more about the interest group, please contact the Convener so that we can add you to our email list.

497 Poster Overflow Lunch Session

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Marriott **Room:** Grand Ballroom

Type: Poster

Presentation(s):

Board #1 Postwar Reconstruction of Anthropology and Racial Science in Vienna's Natural History Museum

In 1948, Vienna's Natural History Museum reopened after World War II with a new exhibition: "Die Menschheit, Eine Familie" (Humanity, One Family). Framed as a moral and institutional break from Austria's fascist past, the exhibition sought to denounce Nazi ideology and promote democratic values by emphasizing global human unity and shared cultural heritage. It marked a sharp rhetorical turn from the museum's prewar exhibitions, which celebrated Austrian scientific achievement and actively supported Nazi racial policy-including a 1938 display of stolen Judaica and human remains. Through an analysis of the exhibition catalog and related archival material, this project explores how the museum attempted to re-legitimize the field of anthropology while avoiding a direct confrontation with its role in using science to support fascist and racist ideology. Despite its commitment to inclusivity and equality, the exhibition upholds many of the tools and assumptions of Nazi-era anthropology, such as racial typologies, anthropometric measurements, and historical racial mappings retained from 19th- and early 20th-century frameworks by figures like Blumenbach, Pösch, and Eugen Fischer. The resulting exhibition narrative attempts to display moral progress and discredit racial supremacy, relying on the museum's postwar dedication to scientific complexity and global scope, all while maintaining prewar worldviews. This project highlights the shortcomings of institutional reform without epistemological change and examines how museums can reshape public memory while obscuring their own pasts as agents of political power.

Presenter(s): Dina Garber

Board: #2 A Black Dog in the Bottomlands: Folk Tales as Cultural Negotiation in Carroll County

Caught between a history that is sometimes difficult to resolve and a future that is uncertain, the people of Carroll County look to imaginative storytelling to solve the conflicts between the past and the present. These narrative traditions serve as a means to confront uncomfortable truths while ultimately preserving local identity. By reimagining painful historical episodes as metaphors, ghost stories and fables these folk stories create a shared language for coming to terms with troubling or disturbing historical events without wholly erasing them. This project endeavors to better understand how storytelling can function not only as entertainment, but also as a sophisticated and adaptive means of cultural negotiation that holds space for processing historical trauma and providing a pathway towards reconciliation.

Presenter(s): Katherine Kirkemide-Harris

Board: #3 Bald Knobbers, Bluegrass, and the Beverly Hillbillies: How an American Amusement Park Shaped Cultural Memory

Since its founding by the Herschend family in 1960, the popular American amusement park, Silver Dollar City, has drawn visitors from around the world, sharing Ozarks culture well beyond the region. The site first began to draw visitors when the former mine, Marvel Cave was bought by Canadian businessman, William Henry Lynch in the late 19th century. After selling the cave to the Herschend family in 1946, the site expanded to eventually include an 1880's style Ozarkian style town, known as Silver Dollar City, at the cave entrance to entertain visitors as they waited for their cave tour. Over the following decades, the city grew to become a popular amusement park filled with roller coasters, shows, restaurants, and demonstrations. Meanwhile, the focus on Ozarks history and culture never faltered. This is best illustrated by the great fame and popularity of the rollercoaster known as "Fire in the Hole", which celebrates the history of real-life masked vigilantes of the Ozarks, the Bald knobbers. Over the years, Silver Dollar City became imbedded in popular culture, even playing a significant role on the Beverly Hillbillies tv show. In this presentation, we discuss how Ozarkian cultural memory was not only maintained but even created through Silver Dollar City. From the introduction of cultural memory concepts by sociologists Maurice Halbwachs and Emille Durkheim to theoretical discussions by anthropologist Victor Turner and historian Benedict Anderson, we explore how the amusement park served to spread Ozarks culture across America, while also indirectly dictating what it means to be an Ozarker. This study serves as an interesting case study combining history, anthropology, and political science to explore how popular entertainment can create a feedback loop creating and maintaining cultural identity and memory.

Board: #5 Communities of practice, kilns, and ceramic production in Panamá Viejo

We discuss the transformation and emergence of competing and complementary communities of practice for the production of ceramics in Panama Viejo. Extensive research since the 1950s in Panama Viejo allowed the identification of pottery types and kilns associated with the production of

colonial pottery. This paper is based on the compositional and technological characterization of pre-Columbian and colonial ceramic samples recovered in Panamanian colonial contexts including two different kilns in Panama Viejo. Neutron activation analysis (NAA) and thin section analysis of 267 samples allowed the identification of four recipes used to produce ceramics in Panama Viejo. The results contribute to understanding the adoption of pre-Columbian recipes and the creation of new recipes to produce colonial ceramics. The comparison of the ceramic samples recovered in the two kilns gives insights into the use of different recipes developed in the colonial town. The analysis contributes to the study of the configuration of communities of practice in colonial Panama.

Board: #6 Death to Santa Muerte: Church and State Repression of the New Religious Movement

The meteoric rise of the new religious movement of Santa Muerte has sparked fierce opposition from the Catholic Church and state authorities throughout the Americas. Once a clandestine folk devotion, Santa Muerte now commands a global following in the millions, attracting devotees from the marginalized fringes of society, including the urban poor, LGBTQ+ individuals, prisoners, and even cartel foot soldiers. Yet, her rapid ascent has drawn fire from the Vatican, which has branded the movement as satanic, and from law enforcement agencies that frequently associate her with criminality. This paper examines the ecclesiastical and governmental crackdown on Santa Muerte, analyzing the ideological and political forces driving this opposition and the broader implications for religious pluralism in the Americas.

Few religious movements in contemporary Latin America have ignited as much controversy as Santa Muerte. With roots in Mexican folk Catholicism and Indigenous death veneration, Santa Muerte has transcended her underground origins to become one of the most potent spiritual figures of the 21st century. Yet, while her image graces millions of home altars and street-side shrines, she remains a pariah in the eyes of institutional Catholicism and the secular state. Church leaders in Mexico and the U.S. have condemned her veneration as an affront to Christian doctrine, while Mexican and U.S. law enforcement agencies have framed her as a narco-saint, a patroness of criminals. This paper explores the conflict between Santa Muerte devotion and these dominant institutions, exposing the intersection of faith, fear, and power.

The Church has mounted a full-scale rhetorical assault on Santa Muerte, with top-ranking clergy denouncing her as a satanic aberration. In 2013, the Vatican's top expert on exorcisms, Father José Antonio Fortea, likened Santa Muerte veneration to a "cult of the dead" that stands in direct opposition to the Christian faith. Cardinal Gianfranco Ravasi, head of the Pontifical Council for Culture, condemned the movement as a "blasphemous devotion." The Church's reaction, however, is nothing new. Throughout history, it has battled folk Catholicism and unregulated religious expression, seeking to maintain control over the spiritual landscape. Santa Muerte represents a

challenge to this hegemony, offering a direct, unmediated relationship between devotee and saint-one that bypasses the institutional Church entirely.

Beyond theological objections, Santa Muerte has also been targeted by the state. In Mexico, Central America, and Ecuador authorities have demolished her shrines under the pretense of combating cartel influence, while in the U.S., law enforcement has used her iconography to profile suspected criminals. While some devotees are members of organized crime, the vast majority are everyday people seeking her protection in a world of systemic violence and economic precarity.

Board: #7 Engaging Polarization Productively: An Applied Anthropology Film Project

This project in applied anthropology involved consulting with The Colossian Forum, a non-profit focused on conflict transformation. The project included twelve pastors from diverse theological and political views, engaging them in a year-long process of discussion and relationship-building. The resulting film is "Leap of Faith" (director Nicholas Ma). It encourages friendship and understanding across difference, even in the face of deep and deepening social divides. Applied anthropology brings vital perspectives and techniques to organizations working at impasses related to political and sociocultural polarization.

Presenter(s): Jenell Paris

Board: #8 From Repression to Remembrance: Exploring the Transformation of ESMA as a Detention Center to a Site of Memory

Microhistories examines localized or narrowly focused cases to illuminate broader cultural, social, and political dynamics. This poster explores the controversial history of ESMA, or the Escuela de Mecánica de la Armada (Naval School of Mechanics) in Buenos Aires, Argentina as a case study. By tracing the institution's perverted role during the last military dictatorship and its subsequent transformation into a memory site, it analyzes the evolving discourse surrounding memory, trauma, and reconciliation in Argentine society from the late twentieth century to the present. In doing so, it highlights how efforts to reckon with the past remain ongoing and politically contested, as successive governments-including the current administration-continue to grapple with, reinterpret, or even undermine human rights discourses.

Presenter(s): Teresa Velarde

Board: #9 Genetic Prevalence and Socio-Cultural Impact of lactase persistence/non-persistence among Mexican Populations in the United States and Mexico

Within mammals, lactose digestion does not persist after weaning due to the biological consequences of decreasing intestinal lactase activity. However, in most humans, milk digestion persists even into adulthood as a result of gene-culture co-evolution, resulting in the genetic mutation at the Minichromosome Maintenance Complex Component 6 (MCM6). However, the predisposition to the cultural and genetic forces that drove the mutation at the MCM6 complex has

been primarily studied in European and African pastoral populations. Thus, this study aims to analyze the prevalence of the MCM6 mutational adaptation in Mexican individuals who speak a Mayan language/ with Mayan ancestry living in Chiapas, Mexico, and individuals of Mexican ancestry living in Los Angeles, California. As a result of pastoralism being a driving force in the selection of the MCM6 mutation and the historical colonization of Latin America by Europeans, these two populations will be studied to assess the prevalence of the single-nucleotide mutation before colonialism and after colonialism (including diasporic factors). Data from the 1,000-Genome Project and data from Dr. Abigail Bigham's Laboratory at the University of California, Los Angeles (Quality Controlled and Phased) will be used. Considering the MCM6 mutation promoted the production of the Lac enzyme (lactase) in pastoral populations, this study will hypothesize that the prevalence of the MCM6 mutational gene is not present in Mexicans of Mayan ancestry but will be prevalent in individuals of Mexican Ancestry living in Los Angeles. Furthermore, the presence of lactase non-persistence (no production of lactase enzyme) has cultivated discourse surrounding the production of what is the homogenized standardized expectation (normality) for the consumption of lactose. These "normalities" stem from the push to drink milk to the encouragement of drinking milk alternatives. So, this study will further assess the current socio-cultural effect of the phenotypic conditions of the MCM6 mutational gene in Mexico and the United States through experience-based surveys and interview data from parents and their children aged 10 to 17.

Presenter(s): Andrea Roman

Board: #10 Ghost Dances and Mobile Labor: Mapping Indigenous Legacies in the Roads, Railways, Language and Communication Networks of the American West

This poster maps roads and railroad networks that spread what became

known as the 1870 and 1890 "Ghost Dance;" even as the same transport channels spread migrant laborers amassed by the California Gold Rush to towns of the Northwest. This poster illuminates post gold-rush linguistic and social conflict zones, placing settler, immigrant and indigenous languages, and mobility styles on the same landscape and within colliding world systems. After the goldrush, indigenous terms and social movements traveled along newly constructed railroads to late 19th century Washington and British Columbia. Here, an indigenous pidgin, Chinook Jargon, is taken up in the civic experiments of self-ascribed hobos, and by an incipient labor movement. By focusing upon languages, mobility and communication networks in the gold-rush contact zone, this poster reveals a legacy brought into being by early indigenous-immigrant mobile labor networks.

The many linked mobile religious movements that were reported upon the United States Press as "Ghost Dances" take on a transformed history-making meaning when considered as a decolonial movement contributing to the social environment that births an incipient labor movement in the railway and mining towns of the West.

Presenter(s): Marybeth Eleanor Nevins

Board: #11 Haunted by Plastic: Recycling and Pollution in the Anthropocene

In the Anthropocene, plastic pollution lingers as an uncanny presence, ubiquitous, immortal, and out of place. This project explores plastic as a spectral material, haunting landscapes and ecosystems through its resistance to decay. Drawing on theories of materiality and the agency of objects, I intend to frame plastic waste as a ghost caught between worlds: manufactured for utility, often abandoned without purpose, and endlessly persisting in the shadows as a byproduct of human consumption. Recycling, often imagined as a form of redemption, attempts to exorcise these material spirits. Through ethnographic and visual analysis of everyday encounters with plastic waste and recycling in Austin, Texas, this work considers how the immateriality of responsibility collides with the hyper materiality of pollution. In doing so, it positions plastic pollution not just as a symptom of an environmental crisis, but as a haunting reminder of the social, economic, and ideological systems that gave rise to its proliferation.

Presenter(s): Madeleine SenGupta

Board: #12 Haunted Inheritance: Eugenics, and the Afterlife of Scientific Discrimination

The American eugenics movement was one of the most robust and deeply integrated eugenics movements in the world. Since its formal development in the early 1900s, the movement relied on pseudoscientific claims about heredity to bolster its rise to widespread popularity and implementation. Eugenics became a way for oppressive systems to control the bodies of women they felt were "undesirable" and a "threat" to society. The movement quickly targeted women of color, disabled women, and women with mental illness. Today, the movement is often imagined as a closed chapter in the nation's history. This work begins with the unsettling premise that the American eugenics movement never truly ended. Instead, it mutated, and took on new forms as it absorbed into modern-day procedures, policies and institutions. The movement persists primarily through the practice of forced sterilization, one that became widely institutionalized during the early decades of the eugenics movement. The movement remains in practices of forced sterilization, which were widely established in the early decades of the eugenics movement and continue to take place today. Akin to the eugenic definition of "undesirable" bodies, contemporary sterilizations disproportionately impact the same groups of women who faced abuse at the height of the eugenics movement. This work focuses on how power endures, and asks how the political, societal, and cultural structures of the American eugenics movement continue to harm minority populations and their rights to bodily autonomy. The purpose of this research is to examine how power reproduces historical violence under new guises. Drawing on case studies from modern-day prison systems, care facilities and legislation, it demonstrates the continued discrimination towards marginalized people. These instances are not isolated incidents, as they are often presented, but part of a larger historical continuum. This work places them in the framework of American eugenics, and explores how the movement's legacies continue to shape and violate the lives of women in the modern day. The effects of the movement are analyzed in diverse lenses, particularly from the perspectives of feminism, disability justice, BIPOC rights, and prison system reform. The women most impacted by the movement historically continue to remain the subject of

the widespread mistreatment perpetuated by oppressive, coercive institutions. Structural changes to these institutions is necessary to address the lasting injustices brought by the movement. By revealing the reality that women's bodies continue to be controlled without their consent, this work calls for a radical reevaluation of bodily autonomy and its unequal distribution. In tracing the lines between past and present, this work argues that historical afterlives must be treated as material continuity. Such analysis pushes for an awareness of the ways in which deeply rooted historical violence permeate contemporary society.

Presenter(s): Lakshmi Ananya Nakka

Board: #13 Acquiring Meaning: Motivations, Tensions, and US-Korean Relations in the Smithsonian

This poster details how US-Korean museum infrastructures were used as both an imperializing and indigenizing tool by anthropologists in the latter half of the 20th century. In 2007, the Smithsonian Institution was gifted an ornate box by the National Folk Museum of Korea containing a gold, dragon-shaped replica seal. The seal celebrated the (re)opening of the Korea Gallery at the National Museum of Natural History (NMNH.) As both a token of goodwill between museums and an implicit assertion of South Korea's right to withhold "real" heritage objects, its existence questions the roles authenticity, ownership, and curation play in defining contemporary anthropological practice. What type of relationship, then, does this seal symbolize?

This object and the many "ethnographic" Korean materials within the NMNH's collection speak to the complex systems of extraction, exchange, and translation that have governed the interactions between American ethnographer-curators and their Korean counterparts within postwar museums. Examining these lineages of contact through this imagined 20th century prestige replica, this poster argues for the power of individual actors and researchers within museums to shape historical narrative through subtle decisions of display and archiving.

This work is especially pertinent in the wake of the Trump Administration's desire to "comprehensively review" and censor items across the Smithsonian Institution's cultural heritage sites containing "divisive or partisan narratives." This object, held in the Smithsonian, highlights that museums—and anthropologists—exist in tension somewhere between two possible purposes. As extensions of infrastructural arguments, they are each defined by their proximity to colonial violence, censorship, and assimilation, yet also by their capacity to iterate, restore, resist, and indigenize colonial spaces.

Examining this tension, I will address the work of two past scholars within NMNH's East Asian Anthropology Department, Eugene I. Knez and Chang-su Cho Houchins. I highlight how Knez's role as a military-appointed postwar supervisor of the eventual South Korean National Folk Museum contributed to American and Korean ontologies of ethnographic collection and authority in the Cold War period. Conversely, Houchins's identity as an anthropologist and Korean immigrant to the US empowered her to correct the flawed NMNH records of Korean material culture and repatriate stolen national seals through her knowledge and access, driving support for the re-opening of the Korea Gallery in 2007.

The legacies of these anthropologists animate not only the histories of Korean objects within NMNH like the seal, but the role of ethnographic collections themselves. A case study of tensions animating a single acquisition offers a valuable perspective on how material objects record anthropology's histories, and how critical reevaluation of said histories might function in an era of "shuttered" archives.

Presenter(s): Alex Calloway

Board: #14 Haunting Categories: Guatemalan Adolescents and the Ghosts of Ethnic Labels

In Guatemala, ethnic terms are more than demographic descriptors—they are haunted by the legacies of colonialism, racial hierarchies, and contested meanings that continue to shape everyday life. While academic discourse often frames ethnicity in terms of a Maya–Ladino binary, individuals use several different labels to identify themselves and classify others, such as natural, indígena, and mestizo. These terms are historically contingent and ideologically loaded and their shifting and sometimes ambiguous meanings may defy rigid classification. This poster draws on a "draw-and-write" methodology with adolescents in highland Guatemala to examine how youth interpret and engage with these labels. Findings show that ethnic terms function as ghosts—spectral remnants of colonial and postcolonial regimes of power that continue to inhabit contemporary social life. Participants often associate these terms with phenotypic traits, clothing, language, and place, reflecting the persistence of racialized logics inherited from colonial hierarchies. Yet these same youth also question and rework the labels, revealing their contradictions and exposing the instability of ethnic boundaries. By centering adolescent voices, this research highlights how the past continues to haunt the present—not only through institutional structures, but in the very words people use to describe themselves and others.

Presenter(s): Jonathan Maupin

Board: #15 Heritage Tourism and Community Culture: The Case of Fujian Tulou in Southeast China

In 2008, the vernacular architecture tulou (rammed-earth building) in China's Fujian province was designated as UNESCO World Heritage. This recognition, along with the development of heritage-inspired tourism, has profoundly transformed local community culture and everyday life. As key stakeholders in both heritage and tourism, local people's relationship with their living world and the outside world have dramatically changed since tulou and local Hakka culture were transformed into symbolic capital for and in heritage tourism. My ethnographic research at the UNESCO Fujian Tulou World Heritage sites examines the dynamic ways in which local people navigate cultural and social changes and explores how community members negotiate tradition, identity, social relationships, and daily economy in the context of heritage tourism.

The touristic development that followed the metacultural transvaluation of tulou permits local people to make a living on the basis of newly recognized heritage assets; it also enables them to generate a new sense of cultural pride and to recognize new forms of cultural expression. While tulou residents are experiencing more frequent cross-cultural and intergroup encounters through the heritage process, they have become much more conscious and mindful about how they present

and represent their culture and tradition. This leads to the museumification of domestic and public space in the community.

Presenter(s): Lijun Zhang

Board: #16 How We Might Live: a Collage of a Possible Future

I have spent the last several years (2018-2024) speaking with, stitching and immersing myself within the quilting community in northwest England, recording through sound, photography and material media the storytelling that emanates from these communities of practice.

The patchwork quilt is a material object constructed from the fragments, remnants and scraps of everyday life. As a craft practice, it is organised around many centres, put down, picked back up, returned to at a later date or forgotten about. It is partial and interrupted, temporally marked by the meander of life, faded from use, creased from being folded away.

In response to this creative practice of world-making, I argue that there must be a more creative and poetic way to write and conduct research, one redolent of the patchwork quilt. This poster presents the composite biography of the quilting communities' diverse visual culture. In this poster presentation, I display the saved scrapbooks of one of my interlocutors that materialise the ethnographic data of how she imagined her future through assembled images, employing it as a device to explore patchwork/assemblage as a conceptual device that narrates the vibrant and diverse community of women. The pages record Margaret's imagined married life to come and envisage a future full of colourful quilts. Assembled before she became a quiltmaker, it visualises colourful handcrafted domestic scenes, which, fifty years later, she materialised in her own home through her textile pieces.

Presenter(s): Lydia Donohue

Board: #17 Immigration Diaspora: Perpetual Foreignness in Unofficial "Chinatowns"

This paper seeks to understand the experiences of immigration diaspora among Chinese nationals and Chinese American individuals in unofficial "Chinatowns." It focuses on the individual and community experiences of residing in regions around the San Gabriel Valley of Southern California where Mandarin Chinese and/or Cantonese fluency is sufficient for day-to-day living. This paper examines the diaspora experienced by intergenerations of Asian immigrants and seeks to explore the variations in practice through the lens of social networking, common languages during day-to-day conversations, as well as underlying ingroup and outgroup attitudes. By tracing through well-developed business areas and cultural streets surrounding the San Gabriel Valley region, this paper looks at the positionality of immigrants with Asian ancestry in colonial and post-colonial America. By exploring the overlooked and unofficially-coined "Chinatown" of local socialization and community gathering, this paper seeks to understand how localization of concentrated communities of similar ethnic background attributes to the development of individual identity and experience of diaspora in the politically unstable postmodern US. As such, this paper aims to disrupt the race and ethnicity-based identification and associations of social groups by examining

the differences in diasporal experiences across multi-generations within local communities and household units. Specifically, it traces the progression and challenges in identity formation throughout generations of migration and seeks to explore how perpetual foreignness continues to accompany individuals of Asian ancestry despite spending more than half of one's life, or even more, being born and raised in the US.

Presenter(s): Ezriella Tang

Board: #18 Indignation as Moral Sentiment: Perlocution in Peril

There is an unsettling paradox about humanitarianism (Fassin 2012). While initiatives of aid and assistance are grounded in genuine human solidarity with those who are disadvantaged, victimized, or vulnerable, the conduct of such assistance tends to perpetuate the very structural inequalities that make people disadvantaged, vulnerable, or victimized in the first place (see also Korf 2007). Aid recipients are not unaware of these implications. In sum, the mix of moral sentiments that swirl around disaster aid include not only compassion and gratitude, but also indignation.

The conundrum is writ large in ethnographic studies of the aid response to the tsunami of 2004 in the Indian Ocean. Indeed, in that case, disaster aid was immensely voluminous; Gamburd's ethnographic account is entitled *The Golden Wave* (2014; see also (Holgersson-Ivarsson, 2015; Korf, 2007; Samuels 2012, 2013, 2019).). Interestingly, however, while the triad of compassion-gratitude-indignation is easily read in the big-picture case of external "foreign" aid as it meets with tortured landscape of loss and expectation, the same play of moral sentiments may be found in quite local gestures, arrangements, and programs of "aid" and "assistance." That is, compassion, gratitude, and indignation are just as inextricable without the machinations of foreign philanthropy.

To explore this, we present a close analysis of two stories of disaster aid that took place in the aftermath of Hurricane Maria in Puerto Rico in September 2017 in a small city in the central mountain range that bisects the island. Of particular interest, these are stories of failed disaster aid. That is, these are two stories in which aid-recipients refused the donations. Further, both giver and recipient enjoyed more or less the same social status, with the same moral challenges, moral sentiments, and moral response-options. In short, we find that the conundrum of disaster aid comprises a highly recursive set of values, practices, moral discourses, and sociopolitics that span seemingly minor tussles to rebuilding whole cities and indeed nations.

We bring to this analysis a re-reading of moral sentiments through the lens of speech act theory (Austin, 1962; Enfield & Sidnell, 2017). Of particular importance for our analysis of moral affect are perlocutions and passionate utterances as developed in recent philosophical treatments (Cavell, 2005; Laugier, 2018, 2020; Lorenzini, 2020). Our data show a much more complex interplay of affects and moral sentiments than the simpler picture that we painted above of the conundrum of disaster aid. In fact, our narratives are told, not from the perspective of the aid-recipient but rather from the perspective of a local activist who is providing the aid and assistance. We see how she sees the mobilization of affect by aid recipients, and we see how she manipulates the narrative to serve her ideological purposes.

Presenter(s): Robert Schrauf

Co-author(s): Patria Lopez de Victoria Rodriguez

Board: #20 Morality, Body Conceptualization, and Subsistence: Food Pathways in the Toledo District of Belize

In recent years, scholars have studied how food procurement has changed in post-colonial Belize, particularly within. Studies have found an increase in the consumption of purchased food in the Toledo District of Belize but have failed to acknowledge how this change impacts Q'eqchi' Mayans' concepts of the body, self, and their own morality. Through ethnographic research done in the village of Agucate, I will explore how purchased, or "outside", foods have been villainized, while local foods are seen as fuel for, and of, hard work. The narratives and experiences of the villagers in Agucate will highlight how food can be imbued with moral and economic meaning. Ultimately, this research will identify the ways economic, political, and cultural changes in Agucate have influenced the Q'eqchi' conceptualizations of the body and self.

Presenter(s): Brinlie Benson

Board: #21 New Heritage Entrepreneurship and the Challenge of Sustainability in a Digitizing World: Examples from Singapore

This poster draws on new research into heritage entrepreneurship in Singapore. The larger project takes seriously the decades-long research findings of folklorists, anthropologists, and other heritage specialists that heritage (like culture and folklore more generally, and in particular intangible cultural heritage [ICH]), is defined by the transmission of values, skills, knowledges, and practices; by processes of communal valuation; and by transformation in this dual process. In other words, the revival of heritage may share much with "entrepreneurship" in other domains – through a focus (beyond commoditization) on capitalization, investment, and re-valuation.

The connection between heritage and entrepreneurship is especially relevant in pro-tech and hyper-modern landscapes (like Singapore, but not only), where there is substantial social and economic support for innovation, but less explicit support to "preserve" or "maintain" vestiges of the past.

The poster draws out examples of new initiatives in Singapore, and outlines the opportunities, challenges, and choices faced by heritage entrepreneurs in navigating systems of financial, professional, and technical support, as they make choices about their institutional form, (e.g. freelancer/charity/private company); access to funding streams and professional networks (e.g. as commercial or social enterprises, educational or arts organizations, sustainability initiatives); investment into new technologies; and the cultivation of local or international partnerships – among others. Indeed, the languages of "sustainability" and "digitization" exert strong influences on the shaping of new heritage. Special attention is paid to initiatives focused on botanical knowledge, plant use, and food.

Presenter(s): Jennifer Cash

Board: #22 New York as a Safe Haven for Abortion Post-Dobbs

After the Supreme Court's decision in *Dobbs v. Jackson's Women's Health Organization* overturned the constitutional right to abortion in the United States, reproductive justice activists working in New York state prepared to meet an influx of patients. They knew the immediate bans on abortion in states with "trigger laws" would send floods of new clients into New York, where abortion is legal up to 24 weeks gestation for any reason, and after 24 weeks if the pregnancy threatens the life or health of the pregnant person. New York has become a top destination for people from states impacted by abortion bans, and its clinics and access organizations are more important than ever. Support staff at the clinics who are receiving these patients are also becoming key figures in ensuring that a person seeking a legal abortion is able to get the care they need, especially when they are traveling to New York from another state and require extra support to pay for travel and lodging. Yet this increased volume of patients from Texas, Georgia, Florida, Pennsylvania, and South Carolina was not met with an equal increase in staffing, funding, or resources. Therefore, this moment is one dominated by strained resources and capacity in the "sanctuary state" for abortion. This study uses ethnographic research across the formal (hospitals and reproductive health clinics) and informal (abortion funds, local reproductive justice organizations) spaces where abortion access is facilitated in the Empire State, to document the material and social impact of abortion bans even on states where laws have not changed. Through participant-observation, in-depth interviews with over 30 abortion access workers, and systematic qualitative content analysis, we explore how the changing political and legal climate for abortion access on a national level impacts reproductive healthcare access, workplace conditions, and social meaning at the state and local level. This research was conducted with advanced undergraduate research assistants from SUNY Geneseo's Anthropology and Sociomedical Sciences program.

Co-author(s): Olivia Jaworski

Board: #23 Operation Wandering Soul: An Analysis of the Supernatural and Psychological Warfare in the Vietnam Conflict

The utilization of ghost imagery as a tool of psychological warfare during the Vietnam War underscores a complex interplay of folklore, collective trauma, and cultural memory, which significantly influenced the ways in which both Vietnamese and American actors experienced, interpreted, and internalized the conflict. In the Vietnamese cultural context, ghosts-often understood as the spirits of deceased soldiers and civilians-function not only as potent symbols of ancestral presence but also as psychological instruments embedded within broader wartime strategies. These spectral figures occupy a central position in Vietnam's collective memory, embodying unresolved historical traumas that continue to shape public consciousness and postwar reconciliation processes. The use of shamanistic practices and the commissioning of 'ghosts' as psychological agents highlight the profound interweaving of traditional beliefs and modern military operations, revealing an evolutionary path in which fear of the unseen became a central tenet of warfare. The enduring relationships that many Vietnamese maintain with the dead

reflect ritualized engagements with history, wherein spiritual beliefs offer both solace and susceptibility-conditions exploitable through U.S. psychological operations aimed at destabilizing enemy morale.

U.S. psychological operations during the war actively engaged with local spiritual cosmologies, including beliefs in ghosts, as a means of manipulating both enemy perception and public sentiment. The integration of ghost narratives into psychological warfare thus exemplifies the strategic mobilization of cultural belief systems as tools of influence and disruption. Ultimately, the spectral dimension of the Vietnam War-both as culturally embedded spectral phenomena and metaphorical expressions of trauma-reveals the enduring entanglement of warfare, memory, and identity, highlighting the ways in which cultural symbolism can be weaponized in both literal and psychological terms. This analysis not only enhances our understanding of the psychological tactics employed during the Vietnam War but also illuminates the enduring legacy of cultural beliefs in shaping military strategies. The use of ghosts serves as a compelling case study in the broader field of psychological warfare, suggesting that the intangible can be as influential as the tangible in the hierarchy of combat. This analysis calls for more comprehensive studies into the integration of cultural psychology in contemporary military operations, revealing opportunities for targeted psychological strategies in the face of modern conflicts characterized by cultural asymmetries and diverse belief systems. Through this conference poster, I aim to engage scholars and practitioners alike in a nuanced dialogue regarding the intricate interplay between cultural narratives and psychological warfare.

Presenter(s): Colleen Lane

Board: #24 Over a barrel: A biography of remittances sent to the Caribbean

In the past fifty years, transnational movements of capital, people, and ideas have proliferated across the globe. Remittances are a prominent example of this trend. In 2023, 155.4 billion dollars worth of remittances were sent to Latin America and the Caribbean, with informal remittances estimated to be 50 percent higher. Understudied in the literature, material remittances are utilized widely by Caribbean migrants. These objects are sent back to home communities, blurring the line between gift and commodity. This paper seeks to understand how these remittances are acquired, how their value is assessed by senders, and what their expected value will be when sent to home communities. Using the "biography of things" as a theoretical framework, this paper will analyze the past, present, and future trajectories of remittances sent to the Caribbean. This research will be conducted in Florida, in the cities of Tampa, Orlando, and Miami.

Presenter(s): Peter Kyriacou

Board: #25 Paleoanthropology Updates from South Africa.

New developments from fossil finds in South Africa are having an impact on interpretations of hominin and human evolution. With the first discovery of the Taung fossil in 1925, South Africa has taken a leading role in producing fossils from *Australopithecus*, *Paranthropus* and extinct *Homo*. This presentation will summarize the latest South African discoveries from the Cradle of

Humankind up through the present and review key debates surrounding the new finds. Hominins from four Plio-Pleistocene sites will be highlighted: Australopithecus from Malapa; Paranthropus from Kromdraai; Paranthropus and Homo from Drimolen, and Homo from Rising Star Cave. The scientific evidence will include data from this author's research on A. sediba and H. naledi fossils. The presentation ends with recommended articles that overview recent topics in paleoanthropology, with special reference to scientific works that are foundational to our undergraduate teaching.

Presenter(s): Debra Bolter

Board: #26 Possessed by David: Conjuring the Spirits of Reception History with Psalm 23

Psalm 23 is probably the most widely recognized biblical text in American culture. It is cherished in the diverse spiritual practices of Jewish and Christian communities, of course. For example, both Jewish and Christian liturgies recite it at funerals, and its poetics play a therapeutic role in many people's lives. In the study of religion, these rituals and practices take on new significance when we recognize the unique status Psalm 23 holds in Western artistic lineages. Over several centuries, Psalm 23 has frequently been referenced in literature, film, poetry, public speeches, visual art, and other contemporary media.

In biblical studies, studying the many afterlives of a text is usually called reception history. Indeed, the practice of "reading" scripture has predominantly been theorized in American and European philosophical tradition as a hermeneutical/interpretive practice. In this poster, we present the view that "references" to Psalm 23 in artistic lineages function more like ghost-practices: excavations, exhumations, possessions, and conjuring rites. These various practices with the mediated ghosts of David's most famous Psalm offer a new pathway for theorizing the Bible in American culture, especially in relation to power, spirituality, and subjugation.

Presenter(s): Ingrid Lilly

Board: #27 Queering Nicotine: An Interdisciplinary Study of Community Perspectives on Alternative Tobacco Use and Smoking Cessation in LGBTQ+ Populations

LGBTQ+ individuals use tobacco products, including e-cigarettes, vape pens, and smokeless tobacco, at higher rates than the general population. This disparity stems from a range of social and structural factors, including chronic stress linked to discrimination, targeted marketing by the tobacco industry, and the role of smoking in LGBTQ+ social spaces. While public health efforts have sought to reduce tobacco use in these communities, the perspectives of LGBTQ+ individuals on alternative tobacco products and cessation strategies remain underexplored. This study aims to bridge that gap by using qualitative methods-focus groups and in-depth interviews-to explore how LGBTQ+ individuals perceive and experience nicotine use and smoking cessation.

Grounded in medical anthropology, public health, and queer theory, this research will explore three core questions: (1) How do LGBTQ+ individuals understand the role of alternative tobacco products

in their daily lives and communities? (2) What factors make quitting nicotine particularly challenging-or more accessible-for LGBTQ+ individuals? (3) How do LGBTQ+ community networks, including physical social spaces and online platforms, shape tobacco use and cessation efforts?

Data collection will take place in a metropolitan LGBTQ+ community with a documented high prevalence of smoking and alternative tobacco use. Participants will be recruited through LGBTQ+ community centers, advocacy organizations, and social media outreach. Focus groups will allow for discussions on shared experiences with tobacco use, while individual interviews will provide deeper insights into personal perspectives on nicotine and quitting. Using thematic analysis, this study will identify key patterns related to identity, stress, coping strategies, and attitudes toward public health interventions. Findings will be placed in conversation with existing research on LGBTQ+ health disparities and used to inform culturally competent, community-driven smoking cessation efforts.

By centering LGBTQ+ voices and experiences, this study will provide a richer, more humanized understanding of tobacco use and cessation in this population. The goal is to move beyond one-size-fits-all public health models and toward strategies that acknowledge the specific social and cultural realities shaping LGBTQ+ nicotine use. These insights will be valuable for public health professionals, policymakers, and LGBTQ+ advocacy groups working to support healthier futures for queer and trans communities.

Board: #28 Reshaping Death in the United States Through Static and Dynamic Digital Technology

This research paper looks at how death-a traditionally taboo subject in the United States-is being brought into the everyday digital sphere. It addresses how the integration of new technologies into mourning practices is affecting how Americans deal with death. Building on recent scholarship, I examine two categories of online communication platforms-static (Facebook memorial pages) and dynamic (interactive artificial intelligence chatbots)-to ask: How are emerging technologies reshaping contemporary mourning practices and understandings of death in the United States? What do these innovations reveal about shifting ontologies, beliefs, and values regarding the relationship between the living and the dead?

In my research, I analyzed users' reviews of the dynamic platforms Replika and Project December, coding reviews using a four-point magnitude scale to determine their perceived emotional states while they used the technology. These emotional states mark the positive and negative aspects of the user experience. I applied the same coding system to users' posts and comments on Facebook memorial pages, a static platform. I also analyzed whether Facebook posts are in the first, second, or third person, which reveals the user's implied audience (i.e., living-to-living or living-to-dead).

I found that static technologies enable predominantly positive engagement among mourners that declines in frequency over time. While Facebook memorial pages foster strong communal support, they primarily serve as traditional transitional tools (helping the living to "move on" following the death of a loved one) rather than fostering strong living-dead relationships. These pages are spaces for shared remembrance rather than digital stand-ins for the deceased. However, the conversations that the living have with the simulated dead using dynamic technologies create more complex interactions. They blur the boundaries between life/death, presence/absence, and real/unreal, which elicits mixed reactions among users. I argue that these conflicting experiences may be proof that dynamic technologies are reshaping how people in the U.S. think of death and interact with the dead. My work is significant in light of American social realities, namely that major advances in dynamic technology are underway.

Board: #29 Revisiting Ujamaa's Ghosts: Rituals for the Construction of Statehood

This presentation reexamines Tanzania's Ujamaa villagization program (1967–1976) not simply as a failed economic initiative, but as a symbolic ritual of statecraft. Drawing on archival records, planning documents, and ethnographic accounts, we argue that villagization operated less as a practical policy and more as a performative enactment of modernity and national unity, systematically isolating local cultural and economic practices. While existing scholarship has critiqued the epistemological limitations of centralized planning, this study extends beyond high-modernist critiques to frame state planning itself as ritualized performance. It contends that the deep cultural incongruity between elite planning visions and grassroots values was not a byproduct, but a necessary condition for asserting state authority through spectacle. Through case studies from Dodoma, Kilimanjaro, and Rufiji, the presentation illustrates how geometric village layouts, technocratic blueprints, and politicized community education functioned as theaters of state power. This helps explain the leadership's persistence despite overwhelming evidence of economic failure. By interpreting development planning as ritual rather than merely failed technique, the presentation offers new tools for understanding how postcolonial states legitimize authority through the aesthetic and symbolic subordination of existing structures, even when doing so undermines their own economic aims.

Board: #30 Scripts of Commerce: Language Choice and Translation in Chinatown Storefronts

This ethnographic project investigates the written language on signs, storefronts, and menus in Manhattan's Chinatown, and how that reflects the identity of writer, viewer, business-owner, customer, native, and tourist in one of New York City's most prominent cultural enclaves. Through the lens of linguistic and semiotic anthropology, this research explores the decisions to translate signage and the choices in how to translate culturally embedded terms. The project examines the effect of Chinese-owned businesses that translate their signage into English and American-owned

businesses that translate their signage into Chinese. It examines the effects on visibility, reputation, and identity.

Fieldwork takes place in lower Manhattan's Chinatown and involves photo documentation, structured interviews with business-owners, and informal conversations with Chinese and English-speaking passerby. The project also engages with various other writings and academic projects in regards to the Chinese language in the United States. Research is still in progress, and is expected to be completed by June 2025.

Preliminary observations show that those businesses that choose not to translate signage are forced to battle against an economy that relies entirely on the anglophone tourist industry, and those stores who center their business strategies on tourism risk losing business from the Chinese cultural community that makes up Chinatown. The ethnography homes in on businesses that are stuck between these two extremes, trying to hold on to the authenticity and comfort of the Chinese immigrant community and balance the anglophone mass that keeps New York City afloat.

This ethnography contributes to broader studies of linguistic anthropology, social-cultural anthropology, semiotics, and sociolinguistics by studying how written language interacts with culture and economy. The poster will present discoveries through photographic data, detailed field notes, and reflections on discussions with on-site interlocutors.

Presenter(s): Michael Tropeano

Board: #32 Talking to Migrants Like Children: Linguistic Indexing of Childhood at a Migrant-Focused Adult English Literacy Program in North Carolina

The information presented on this poster is an analysis of the use of features of motherese and other baby talk speech registers with non-native English-speaking adults at a migrant-focused adult English literacy program in North Carolina. The ethnographic and linguistic data was gathered through attending 3-hour classes once a week over a 9-week period, across the offered 4 levels of literacy education at the Rural County Literacy Council (pseudonym). The data suggests that through the use of language and physical signs, the instructors, staff, and program director at the Rural County Literacy Council, both directly and indirectly, linguistically indexed their adult students as children. The findings are significant because across the existing adult SLA literature, the use of motherese and baby talk registers is not being suggested as best practice for adult language instruction, implying that the use of this register is not out of necessity for instruction, but rather a result of something else. This data possibly speaks to a larger cultural phenomenon of viewing non-native English-speaking adults as less capable or intelligent than native English-speaking adults, hence the choice to speak to them as if they are young children.

Presenter(s): Ezekiel Kempster

Board: #33 The "Backside" of the Kentucky Derby Racetrack: The Social World of Working with Horses Which Makes Possible "The Most Exciting Two Minutes in Sports"

The thoroughbred horse racing industry in the United States, particularly at renowned venues like Churchill Downs, relies heavily on expansive, and traditionally low-cost, backside workforces to maintain day-to-day track operations. At Churchill Downs, aside from jockeys and trainers, approximately 1,000 individuals - primarily Latin American immigrants - work to manage the horses' welfare, their responsibilities ranging from facility and stable maintenance to grooming/exercising the horses. The requirements for these jobs typically involve long hours, difficult physical labor, and exceptional horsemanship skills. To spectators in the grandstands (i.e. the "frontside"), backside workers are virtually invisible, carrying out their work on the opposite side of the track. Churchill Downs's frontside is a display of extravagance and elite sports culture, where individuals bet on and watch horses compete from a distance; international audiences flock to the site annually to witness the Kentucky Derby, a race many regard as the crux of the state's horse racing culture. Meanwhile, the backside lays the foundation for Churchill Downs' traditional horse racing culture to thrive. This study aims to contribute to backside discourse through peering at the factors that shape the backside's social atmosphere as a knowledgeable community engaging with horsemanship, specifically exploring how backside workers understand and view their multispecies interactions with horses, and the extent to which horses enter into the social lives of backside workers. The majority of workers live on Churchill Downs' campus in purpose-built dormitory buildings or rooms atop stables throughout its racing seasons; their day-to-day lives encompass the caretaking of race horses. This study will take into consideration theories of reciprocity on the backside, exploring the intersection between human-animal interactions and social identity formation. Racehorses are exceptionally expensive, competitive beings that require consistent management; the intrinsic nature of a backside worker's lifestyle revolves around their wellbeing. Employing methods of semi-structured interviews with individuals I meet volunteering at the Backside Learning Center, this study explores backside worker social identities - specifically how they view themselves, each other, and their daily interactions with race horses, and why. It seeks to understand the extent to which the backside is a distinctive social community where multispecies interactions, migrant experiences, and horsemanship expertise intersect, with a broader goal of unveiling lesser-known relationships and legacies within Kentucky horse racing culture.

Presenter(s): Caroline Elliott

Board: #34 The Call of Strigoi: A Study of Romanian Ghostlore and Its Realism

This study examines Romanian tales of ghosts and analyzes its effects for Romanian people. In his analysis of Dracula tourism, Duncan Light (2007) criticized a hierarchy between the representing and the represented; the West and Romania. It seems true that Romania is still represented as a place of fantasy and/or wilderness.

The representational hierarchy is ambiguous since it is Objectification of Romania and their culture but, simultaneously, it provides economic chance, for example, to promote tourism, as Light (2019) called it dilemma. However, from an anthropological point of view, what is concerned is how they, Romanian, represent and recognize their own culture and themselves. In fact, Romania has rich

stories of supernatural entities such as ghost, werewolf, and demons even though it was a Western creation that Vlad III was a vampire.

Furthermore, such folklores are not just an entertainment, they still have social impact and power to make people actually do rituals against these creatures. In 2005, in a village named Marotinu de Sus, six local people were arrested by illegally exhuming a corpse. According to a news source, they took the heart from the corpse, burnt it, and let his niece drink the ash in order to heal her illness (McLaughlin 2005). There, the dead, Petre Toma, was blamed as a ghost (strigoi) which caused harm to a living person, and these villagers performed a traditional ritual against it. Here, the Romanian concept of ghost is not merely a tradition of the past nor the imaginative figure represented by the West. Rather, it is a possible factor to explain some kinds of phenomena. Therefore, ghost 'can only be understood within their own proper historical and ethnographic context' (Spooner-Lockyer and Kilroy-Marac 2021, 27).

Following the necessity to understand Romanian ghost in their own right, this study points out how the tales of ghost constitute a part of what Montell (1975) called "deathlore." As Shinmen (1990) clarified, the story of Romanian ghost occupied a part of the Romanian funeral rites, and a human soul turned to a ghost by failing ritualistic transition from the world of life to that of death.

Though it is often recognized such paganism as a failure of Christianization of local people (Shinmen 1990), the ethnographic data collected by the author demonstrates its commensurability and complementarity with Christian belief. The ghostlore is portrayed by those who identify themselves faithful Christian, and the ghostlore provides them a certain spiritual security and stability in the moment of precarity. Thus, this study insists that ghost in contemporary Romania is not just an entertainment which was created by the West or Romanian themselves but also a clue to understand their cosmology where Romanian actually live.

Presenter(s): Naoki Asada

Board: #35 The fleeting city: density, sound, and atmospheres in the everyday of urban spaces

What happens when nobody is around? Studying the city, is in many ways about presences, of things and beings, researchers and others. I follow narratives of encounters and making sense of the sensory environment across three cities – Toronto, Tallinn, and Reykjavik. What starts in the dense, busy, and fast-moving Toronto, switches to pockets of activity in Tallinn, and continues onto the empty streets of Reykjavik.

The city is made up of fragments (McFarlane 2021), overlapping, side-by-side, and superimposed (Moretti 2015). There is always something happening, a reaction or aftermath of something else. The city is evidently eventful (de Certeau 1984; Low 2009). With this work, I wonder how we can study the gaps in-between, or places, where seemingly little happens. This is not to suggest that these places are in any way dormant, or outside of the sociopolitical logics and working of the city. Rather, I draw attention to the vitality and possibility of the mundane, and the creativity which revels in it (Stewart 2007, Bennett 2010) .

With this poster, I explore a simple question which arose out of fieldwork encounters, or lack thereof:

What happens when nobody is around? Using walking, waiting, wandering, and wondering as ethnographic methods, I found myself faced with empty streets. Rather than seek out that which is not there, I focus on the emptiness of these spaces. Not an emptiness of meaning or purpose, but quite literally an absence of other people. There are, of course, cats, birds and other beings, circling above me, interacting with, or ignoring, the howling wind. The city is by no means empty. I juxtapose these movements of solitude with conversations, casual exchanges, and recorded interviews. I look to comparisons not as ways of finding similarities or establishing hierarchies but instead seek porosity and multiplicity (Choy 2011; Le Breton 2020; Low 2023) within the spaces and encounters which emerge through an attention to the everyday and ordinary.

"Field devices" (Criado and Estalella 2023) – an assemblage of ethnographic encounters and the practices we study – act as guide posts for the researcher and the reader/listener/viewer. Attunement, as an "everyday way of attending to" (Peterson 2021: 45), figures in this work as a way of engaging with everyday encounters as they happen, sometimes fleeting and passing, and coming to terms with the contingencies of change.

I do not problematize the lack of people but instead look to sound. Using field recording and readings in and of the city, I use sound to examine how density, air pressure, and atmospheric elements feature in the everyday of urban spaces. This poster will include a multimodal aspect through links to sonic elements, which do not merely illustrate, but act as ways of doing ethnography and anthropological theory.

Presenter(s): Johann Sander Puustusmaa

Board: #36 The Future-Ruins of Snailbrook, TX in Two Parts. [Poster 1]

In technocapitalism's fast-paced, pseudo innovation-driven environments, expansionism is one of the ostensible tactics of gaining influence over local communities, politics, and social (urban) fields. Massive production sites, like Tesla's Gigafactory and Elon Musk's other company projects (Starlink, Boring) on the outskirts of Austin, TX, create unhinged land-grab politics that cater to technocracy's needs. In vast farmland areas, these expansionist urges seem to happen undetected, with little to no visible change in the landscapes and the fallow lands recently acquired by private companies.

With the highly volatile economic disposition of those fast-growing tech companies, speeds of expansion and development happen asynchronously, raising questions of economic sustainability and spatial futures. With the notion of future-ruins our project addresses this apprehended asynchronicity. Future-ruins refer to a temporal rift: Whereas ruins point to a completed history that is merely carried into the present through remnants and remains, holding a ghostly, uncanny aura of failure, future-ruins can be understood as a projection of present turbo-capitalist economics into a (not-so-distant) uncertain future. They materialize in the present as absences, rifts in the

landscape, and voids holding failed promises: Empty office buildings, uninhabited residential neighborhoods, and unfinished factories are scattered across urban and rural landscapes.

This first poster thinks with a day of collaborative fieldwork done in Snailbrook, reflecting on the methods of attunement made (un)available when the field is designed for displacement from the present. When we got there, no one had the feeling of having arrived anywhere. Snailbrook was half-built and half-alive, a construction site hidden behind walls of fake ivy. It was a blueprint for a future existence, mostly signs naming the location of things that didn't yet exist, impenetrable factories and prefab buildings, modular facades chunked in the middle of a fallow field.

This poster explores the relations to self, world, and future that form from the middle of a field that forces us out of the present before we can speak into it. It asks how we might keep ourselves situated as our attentions get strapped to the vague shape of an imaginary future, one defined mostly by its distancing from the present. To challenge these mechanisms of displacement, it grounds itself in the terrain technocapitalism has enrolled as its new frontier, the Terra Nullius it produces and terraforms with promises for the future, the future-ruins it builds.

As a method of situating myself in the materiality of Snailbrook, I created paints from colors found on its grounds, distilling the pigments of local materials. With them I painted reproductions of Snailbrook's construction plans, representing the tension between the techno-utopian logics productive of future-ruins and the very material effects that they instantiate.

Board: #37 The Future-Ruins of Snailbrook, TX in Two Parts. [Poster 2]

In technocapitalism's fast-paced, pseudo innovation-driven environments, expansionism is one of the ostensible tactics of gaining influence over local communities, politics, and social (urban) fields. Massive production sites, like Tesla's Gigafactory and Elon Musk's other company projects (Starlink, Boring) on the outskirts of Austin, TX, create unhinged land-grab politics that cater to technocracy's needs. In vast farmland areas, these expansionist urges seem to happen undetected, with little to no visible change in the landscapes and the fallow lands recently acquired by private companies.

With the highly volatile economic disposition of those fast-growing tech companies, speeds of expansion and development happen asynchronously, raising questions of economic sustainability and spatial futures. With the notion of future-ruins our project addresses this apprehended asynchronicity. Future-ruins refer to a temporal rift: Whereas ruins point to a completed history that is merely carried into the present through remnants and remains, holding a ghostly, uncanny aura of failure, future-ruins can be understood as a projection of present turbo-capitalist economics into a (not-so-distant) uncertain future. They materialize in the present as absences, rifts in the landscape, and voids holding failed promises: Empty office buildings, uninhabited residential neighborhoods, and unfinished factories are scattered across urban and rural landscapes.

This second poster explores the possibilities of imagination and representation of the future-ruins of Snailbrook based on fieldwork around the company town. Despite the place's early media coverage and its incipient narrative as a "utopia town", neither the neighborhood nor the companies surrounding it exude a notion of splendor, homeliness, or community. On the contrary, the surroundings produce a constant sense of dislocation and disorientation, their alleged exclusivity resonating as a haunting isolation on the fringes of technocapitalist urbanism.

Foregrounding the scale of this technocapitalist utopia and its future orientation, the poster draws from ideas on landscape representation, photography, and operational imageries to visualize the dystopian ramifications of dwelling in the shadow of the factory. Employing design and visual anthropological methods, this contribution uses openly accessible imaginations of development plans and in situ photography to speculate about the future-ruinous becomings and future specters facelessly haunting these landscapes today.

In addition, our project utilizes the place-making abilities of postcards to envision a future Snailbrook community and its quotidian life. In postcards from Snailbrook, the imagined future-ruin sends greetings back in time to a present where they only exist in mediated simulations or as anticipation of economic failure.

Board: #38 The Haunting of Real Connection: Touch, Technology, and the College Experience

As physical touch becomes less common in our technology-driven world, research suggests that college students may be especially affected by touch starvation. This project explores how students experience and respond to a lack of physical contact, especially through their use of dating apps. While apps like Tinder and Bumble have reshaped the way people connect and date, it is still unclear if they actually help students feel closer or simply offer the illusion of intimacy. This pilot study was conducted at the University of Alabama and surveyed 33 students using a combination of three validated tools: the Touch Deprivation Scale (TDS), the Tactile Nurturance Scale (TNS), and a modified Longing for Interpersonal Touch Picture Questionnaire (LITPQ). The survey also included questions from the Tinder Motives Scale (TMS), focusing on why students use dating apps. Findings showed a strong desire for affectionate touch, such as hugging and kissing, even among those who reported positive early experiences with physical affection. Only eight participants in the sample reported actively using dating apps, which complicates interpretation of the data. With such a small number, it is difficult to draw broad conclusions about app users, and results can easily be skewed or distorted by individual variation. Among these eight, emotional validation and the hope of forming romantic relationships were the most common reasons for app use, rather than seeking physical contact. Regression analysis showed that two specific aspects of touch deprivation, feeling a lack of touch and using sex as a way to access touch, were linked to dating app use. However, general feelings of touch deprivation did not always lead students to use

these platforms. This suggests that while many feel deprived of touch, only some turn to dating apps to cope, and even then, the experience often feels emotionally disconnected or unfulfilling. The study also revealed some demographic trends. All app users in the sample were white, and a large portion identified as LGBTQ+, raising questions about how identity and marginalization shape how students seek out or experience touch through technology. Though limited by a small and non-representative sample, this study opens the door for further research. Future work will include a larger and more diverse group of participants and use interviews or focus groups to better understand personal experiences. In the end, this study adds to a growing conversation about digital life and physical connection. As colleges face rising concerns around student mental health and well-being, it becomes increasingly important to recognize and respond to the often invisible effects of touch deprivation. This work calls for a broader, interdisciplinary effort to understand how technology is shaping the way we feel, connect, and care for each other in a world where real touch is harder to come by.

Presenter(s): Phineas Fleming-Smith

Board: #39 The Identities and Relationships of an Educational NGO in Guatemala

Guatemala is an economically poor country, with a rich culture that makes it a destination for foreign assistance through non-governmental agencies (NGOs) and tourism. The history of conflict and foreign economic development within the country has created a dichotomy of identities, divided across economic wealth, ethnicity, and urban/rural landscapes. NGOs, their presence as transnational actors, and their organizational identities augment the identities present within the spaces in which NGOs work. Additionally, these identities are fluid and relational. I argue that the identities and relationships that form within the NGO space are reflective of NGO work and development structures. The identities and relationships that are present within an educational NGO reflect these power structures, as well as the identities and relationships of those working within the NGO space, such as community members, volunteers, and donors. The relationships formed from the identities present in the NGO space have the potential to sustain or alter these structures in the future.

Presenter(s): Brittany Blomquist

Board: #40 The Ivory City: redefining community, world, and purpose

Urban universities sequentially and over time develop the Ivory City, a knowledge economy space that caters primarily to people from privileged socioeconomic and white ethnic backgrounds. Using Columbia University as an exemplary model of the Ivory City, I show how the university adopts an allegedly hands-off approach to local community affairs, even as its real estate agendas and research practices continually serve the interests of the dominant elite class. Drawing from Columbia and the Rockefeller family's archives, participant observation of university-community land and resource negotiations via the Community Benefits Agreement, and interviews with university administrators and housing activists, I argue that universities attempt to recreate cities

according to their own imagined culture of wealth and its pertinent ideologies. The Ivory City thus serves as a space of moral retreat from the destructive effects of university land policies while simultaneously enabling universities to lay claim to moral, legal and economic authority over, and entitlement to, city land, resources and accessibility to public-private partnerships.

Key words: critical university studies, race, urban anthropology, real estate

Presenter(s): Isabelle Soifer

Board: #41 The Taste of French Islam: Muslim Foodways and the Semiotics of Belonging in Republican France

In France, the significant relationship between food and national identity is well documented, as are the ways in which Muslim belonging to the nation is often called into question by the state, the media, and people with whom Muslims interact in their everyday lives. Here, I explore the ways particular French Muslim foodways afford possibilities for the negotiation of Muslim belonging in the face of Islamophobic overdetermination. These foodways include le tacos, a kind of hybrid of shawarma wraps, burritos, and paninis that first emerged in immigrant neighborhoods in Lyon and has come to dominate the French fast-food scene, la charcuterie halale, halal versions of traditional French meat dishes sold everywhere from supermarkets to organic farms, and the sale of le pain marocain, Moroccan bread, in some traditional French bakeries. I consider various sensory engagements with these foodways drawn from ethnographic fieldwork in France and Morocco and examine the semiotic uptake of these foods in relation to discourses about Muslimness, Frenchness, and national belonging. From this analysis, I demonstrate how each of these foodways affords a unique site in which Muslim subjectivities can be negotiated and renegotiated in relation to racializing and Islamophobic discourses that might otherwise place Muslims outside the boundaries of the nation. In this way, I demonstrate that even as the semiosis of food can reinforce axes of differentiation, it can also trouble overdetermined notions of subjectivity and open space for political possibilities.

Presenter(s): Clayton Van Woerkom

Board: #42 Transcultural prevalence of afterlife expiation and contextual transmigration at a civilizational level- notion of a universal anthropological ghost

The notion of the afterlife and associated aspects of its cultural philosophizing are a fundamental basis of anthropological evidence of the 'ghost phenomenon.' The occidental and oriental difference in the notion of afterlife, transmigration, and thaumaturgy is emphasized.

Historical aspects of prevalence indicate a transcultural motif of shamanic conceptualities defining afterlife and post-mortal consciousness. These are progenitors of the 'afterlife ghost' as a universal anthropological entity.

Animistic references as artistic and philosophical renditions in expiation are culturally universal and feature expiation in the manner of articulations of afterlife concepts. These refer to a psychic reality of life beyond the bodily existence in its scope of transmigration.

The notion of expiation is an afterlife inference with shamanic overtures in its animistic reference, thus making animism a progenitor of afterlife theories. Universal and transcultural shamanistic references to ghost-like phenomena as spirit helpers, guardian totems, and angelic influences, all refer to a ghost conclusion in terms of an animistic footprint in the principle of post-mortal existence.

These concepts form a skeleton of themes implying the contextual reality of ghosts as depicted in literary and religious motifs.

The occidental mention of the 'ghost phenomenon' has a true religious emphasis and constriction of spiritual manifestation in religion, while the oriental viewpoint admits a freestyle acknowledgment of ghosts as a natural consequence in religion and spirituality. The shamanic and meta-shamanic (i.e., conceptually influenced cultures) viewpoints attest to a natural setting of 'ghost phenomenon' by application of philosophical concepts such as karma, maya, and rebirth. These make a plausible case for an intrinsic ghost (spectre) manifestation at the level of rebirth and appearances, attesting to philosophical concepts central to religious ideas and ghost phenomena.

Thus, these assertions make a suppositional claim about ontology in the theory of ghosts and their relation to death and the afterlife expiation in a universal manner.

Presenter(s): sriram balasubramanian

Board: #43 Uncovering the Jordan: A Flood of Data

The Jordan Creek Valley in downtown Springfield, Missouri has been occupied for millennia, but the intensity of the valley's use and modification increased exponentially beginning in the 1830s when industrial ventures were established (e.g., mills, tanneries, factories). Unchecked urbanization and industrialization in the following decades culminated in rampant pollution and a series of devastating floods. The solution to these problems was to encase the creek in a concrete box culvert (built ca. 1929-1933).

The Renew Jordan Creek project is an urban revitalization initiative aimed at recreating the historic valley's landscape adjacent to the extant box culvert. The Center for Archaeological Research (CAR) at Missouri State University has been at the forefront of the project's cultural resource management for nearly two decades. Fieldwork has revealed that the construction of the box culvert inadvertently sealed a palimpsest of occupational events throughout the valley, thus creating an exceptional preservation environment.

Here we present a preliminary overview of the results from the 2024-2025 construction monitoring, highlighting the discovery of two exceptionally well-preserved nineteenth century industrial complexes--the Jessup Tannery and the Springfield Wagon Company.

Board: #44 What the Body Carries: An Exploration of Identity, Trauma, and the Struggle for Wellness Among Queer Students in Southern California

This ethnographic study examines how identity-based trauma shapes the understandings of identity and community, and the experience of wellness and overall quality of life for queer undergraduate students studying in Southern California. By specifically focusing on how intersectional identities, including race and ethnicity, gender, and class, inform these experiences, this research aims to understand how these intersectional factors both contribute to and help heal marginalized individuals who have been informed by queer trauma.

Through a series of in-depth interviews, this study explores how queer participants navigate the cumulative effects of the abjection, pathologization, and systemic oppression and discrimination they experience due to their intersectional identities, and how this impacts their conceptualization of community and their mental, physical, emotional, and spiritual health, as well as their access to care.

In a time where anti-LGBTQ+ rhetoric and legislation has escalated throughout society, this study also works to understand how this trauma becomes internalized and embodied at levels of both the body and the psyche of younger generations of queer individuals.

Overall, this study and its findings will contribute to broader discourses in medical, cultural, and queer anthropological studies through the centering of voices who are most impacted by intersecting systems of oppression; ultimately, answering the questions: How does identity-based trauma reconfigure one's sense of community, livability, and self-worth? And what does it mean to pursue wellness in a world that routinely limits it for people living in the margins?

Presenter(s): Katie Hwang

Board: #45 Resistance Magic in 2025: From 'No Kings' to Charlie Kirk: Hexing, Healing, World-Building

The 'No Kings' march in June 2025 engaged millions to take action against the current political regime. The initial march was a successful protest on many counts. This was the first large-scale, single-day march since the Women's March in 2017, with reportedly 5 million people taking part across the US in urban and rural communities. Many activist groups united to support the march which increased the visibility and attendance. The initial action spurred many, including magical practitioners, to publicly take a more public stance against the regime and continue resisting in their own ways. This Poster will present the resistance magic that emerged due to this event.

Magic can be understood as a way to view and interact with the world, different from other modes such as 'scientific' (seeking cause and effect), 'religious' (relying on faith-based connections), or artistic (working with performative and aesthetic connections). Magical thought and action is focused on the subtle and metaphysical connections between the inner and outer world, and the personal self to the social whole. Predominantly, culture functions in the scientific mode of tangible and physical connections, therefore magic is not often discussed openly or practiced in public.

However, one effect of the No Kings march and the developing public resistance to the current regime is that some magical practitioners have retooled their practice toward resistance efforts. Magical practitioners offer a unique study because their practice involves articulating intentions and effecting changes toward a specific end. The 'No Kings' movement provided a clear and imaginative intention, with a specific end in mind.

This poster will present emergent types and methods of resistance by magical practitioners. Magical practitioners represented are diverse: from elder witches of the 1960's who have written books on revolutionary and resistance magic, to chaos magicians who have never applied their craft toward societal goals, to younger Gen Z witches who are learning their craft from TikTok, and more.

Types and samples of magical efforts include Healing (of the self, organizations), World Building (imagining and articulating solutions), Hexing/Cursing (removing, eliminating obstacles), Binding (restricting, silencing harmful efforts).

Methods of Resistance include: Teaching, Leading (Sharing rituals, spells, chants, opinion pieces), Public Actions (rituals, marches); Networking (community organizing, supporting non-magical efforts); Care-Giving (healing others physically/emotionally/spiritually) & Self Care.

The Poster may include the unfolding reactions to the assassination of Charlie Kirk, since the website Jezebel.com had recently posted the article: "We Paid Some Etsy Witches to Curse Charlie Kirk". Initial responses of magical practitioners are wide-ranging and topical to this Poster.

Board:# 46 Disability Visibility in Small Cities: The Influence of Urban Infrastructure and Design on Disability Sociality, Health, and Wellbeing

Despite the CDC's well-known claim that ¼ of US adults have some form of disability, the disabled rarely figure prominently in public life. This is especially true after the rescinding

of Executive Order 13989, removing Diversity, Equity, Inclusion, and Accessibility from NIH and other federal funding considerations. Disabled people are particularly invisibilized from public life in small cities, which often lack the resources of larger cities and the social cohesion of rural communities. In response to the recent federal funding changes, our team, which included several disabled members, set out to explore the relationship between disability visibility and the health and wellbeing of disabled people in our own small city of Bethlehem, PA. Recognizing the importance of including more disabled voices than our own, we adopted community-driven methods that fused urban design with ethnographic and social network analysis. From May-August of 2025, our team of faculty and students in Lehigh University's departments of community health, anthropology, architecture, and psychology conducted community mapping workshops and interviews with the disabled and those they depend on.

As we present in our late-breaking poster, many disabled people in the city rarely leave their housing due to fear regarding safety concerns with antiquated infrastructure and urban design.

Moreover, given the systematic attacks on accessibility in public services, they rely on few outside their immediate families, placing them at risk of personal catastrophe when even the little things go wrong. For our participants, the lack of affordable or publicly-provided services, combined with poorly funded and inconsistently applied disability accommodations in transportation, information, and service provision, thus restricted their access to and participation in public life. They turned to informal care, what we call Distributed Care Hubs, as they and their others in their social networks help each other to maintain their health and wellbeing. These were often precariously small, in some cases only related to a single caregiver who visited them at home a few times a week. In response, we have developed and present with our poster several targeted policy recommendations to help Bethlehem and other small cities reduce the precarity faced by disabled residents and create the conditions for us to improve our own lives and wellbeing.

Board: #47 Ethics of Crisis and Care: Navigating African American Sites of Resistance as an Environmental Anthropologist and Hoodoo Practitioner

The ethics of crisis and care are applicable tools used traditionally for environmental communication. These tools may also become transferable skills for anthropologists and other researchers alike. At its core, the ethics of crisis and care holds researchers accountable when addressing a collective concern that poses a risk to the environment (e.g. natural disasters, environmental degradation, and land acquisitions), and mitigating harm by honoring the Land, its Waters, Spirits, and People. The ethics of crisis and care enables the affected and interested parties to cultivate strategies to prevent further disrepair.

As an environmental anthropologist and Hoodoo practitioner, part of this work requires navigating sacred sites of resistance in a fashion that centers negotiation and reciprocity. For context, the Chesapeake Conjure Society defines Hoodoo as "a tradition, a generational heirloom that is simultaneously medicine, magic, and religion. Born on North American soil to African parents, Hoodoo is a system of survival, adaptation, resistance, and reclamation." Miller Grove and Lick Creek are prime examples of what embodies the Hoodoo tradition, and what constitutes Black resistance.

As part of the U.S. Forest Service's Sites of Civil Rights and Resistance (SCRR) program, I advised National Forest staff in their pursuit of managing, interpreting, and preserving African American heritage sites. Miller Grove (Shawnee National Forest, Illinois) and Lick Creek (Hoosier National Forest, Indiana) were pre-Civil War settlement communities founded by newly liberated Black individuals and families. The Land witnessed the construction of community dwellings, abolitionism, travelers of the Underground Railroad, and the final resting place of its stewards.

The SCRR team conducted site visits, consulted with descendant communities, pulled GIS data to avoid adverse effects on cultural resources in accordance with Section 106 and NEPA requirements, and drafted interpretive plans and community context analyses. These are multi-

year, complex project agreements that remain in-progress with two main deliverables: a virtual interpretive walking trail plan, and a sustainable trail for user safety to boost outdoor recreation and learning opportunities.

Through negotiation, we offer the Land, its Waters, Spirits, and People pathways to ensuring access for future stewards to honor, preserve, protect, and reclaim its sacredness.

Board: #48 Freedom or Fallout? Neoliberalism and Florida's Vaccine Rollback

This poster explores the intersection of public health policy, political ideology, and biopolitics through the lens of medical anthropology, focusing on Florida's recent repeal of vaccine mandates. Drawing on ethnographic theory and medical anthropology, this work situates the policy shift within broader neoliberal frameworks that prioritize individual freedom, and market logic.

The poster will examine how the dismantling of vaccine requirements reflects a neoliberal idea of personal choice over collective responsibility, often at the expense of marginalized communities—such as immune compromised individuals. It also investigates how biomedical authority is negotiated in a climate of political polarization and distrust. By focusing on public voices from both healthcare workers and vaccine-hesitant individuals, this analysis reveals how structural violence, and historical inequities shape contemporary debates around bodily autonomy, state intervention, and public trust.

This project aims to examine how health policies—driven by frameworks that focus on deregulation and privatization—can exacerbate existing inequalities and disrupts equitable access to care.

Presenter(s): Kaylee Appleton

Board: #49 From St. Louis to the Sahel: Unraveling the Braid of Racial Capitalism and Building a New Economic Architecture

Despite narratives of progress, white supremacy and its resulting racial hierarchies persist as the core logic of racial capitalism. This system, historically legitimated by Christian authority and enforced through government and markets, has positioned the African diaspora as a permanent underclass. This project exposes how this deeply entangled "braid" of religion, state, and capitalism operates both locally and globally.

The city of St. Louis illustrates the local manifestation of these dynamics, from Christian institutions and their mission-based asset accumulation to local government policy and policing that reinforces racial inequality. Simultaneously, this work examines a powerful counter-narrative emerging in West Africa. The Alliance of Sahel States (AES), and other nations like Burkina Faso under Colonel Ibrahim Traore, provide a global counterexample, as they are actively reclaiming control over their natural resources and revenue streams by expelling foreign interests. These sovereignty efforts aim to build infrastructure and economic systems outside of the interference of European banks, the IMF, and the Global North.

This research argues that reparative justice for the African diaspora requires the creation of an economic framework that operates entirely beyond existing models of capitalism, socialism, or communism. It tests the viability of a new model: diaspora-led logistics and financing networks. Potentially supported by resource-sovereign African states, these networks could channel resource wealth into infrastructure, trade, and cultural production without reliance on Western-controlled financial institutions and governments. By bridging a local U.S. case study with these global examples, this project not only contributes to scholarship on racial capitalism but also proposes a tangible, forward-looking intervention to dismantle it.

Presenter(s): Dierdre Lockette

Board: #50 Ghosts of Hurricane Ida: Resilience and Renewal in Five Finger Bayou Communities, Southeast Louisiana

In this research, we explore the Bayou communities' relationship with place, infrastructure, and nature. It highlights the long-term disruptions to local lifeways caused by hurricanes (recently Hurricane Ida) and protracted infrastructural recovery. The stories we have collected manifest emergent tensions post-natural disasters contributing towards the decline of the seafood industry, mom-and-pop businesses, crippling infrastructure, and higher home insurance prices.

Places that once played an important role in supporting a thriving rural community in coastal Louisiana are vanishing. Emerging from a collaborative process with the Five Finger Bayou community, this research centres the voices of local leaders and community members to untangle the top-down approach of resilience and focuses on the place-based narrative of resilience. The resilience of the community emboldens residents to safeguard their family land, culture, traditions- old and new- by not just staying in a place but also constantly negotiating and engaging with changes brought by natural disasters in coastal Louisiana.

The research uses visual (photo-voice), ethnographic, and collaborative research methods to explore the everyday lives and interactions of community on what exists and what's ghost, particularly how that defines their long-term choices of staying at place. By visiting places that contribute to community building and provide a sense of attachment to a place, we ask what significance it holds for an individual or a group. Some of these places are gone, and some are expected to be demolished. Community members who have stayed and expressed a deliberate choice to remain despite external pressures share their stories and lived experiences. These stories are more than just memories of loss. They are statements and reflections of resiliency and adaptation to perennial disasters, economic hardships, unsustainable homeowner insurance prices, and crippling local infrastructure such as buildings and bridges.

Presenter(s): Kashif Rustamani

Board: #51 Ghosts of the Dreamers: DACAmented Educators and the Haunting of Immigration Policy

This flash presentation examines the ghostly presence of Dreamers, undocumented immigrant students given status through an Obama-era policy, Deferred Action for Childhood Arrivals (DACA). By centering the experiences of educators who often navigated high school and college without status, and then relied on this tenuous policy for their ability to work and remain in the country, some for more than 20 years, this flash talk speaks to the urgency of immigration reform in the U.S. While interviews for this oral history project took place over the last two years, data analysis conducted in summer 2025 revealed a striking and timely finding: because no high school students and just a few college students remain eligible for DACA, an entire new generation of undocumented youth have been rendered ineligible for status, effectively transforming the category of "Dreamers" into a political ghost.

Drawing on interviews with mid-career educators who grew up undocumented, received DACA in young adulthood, and later entered teaching, I explore how the specter of their undocumented pasts continues to haunt their professional lives. Their narratives reveal how educators carry memories of fear, invisibility, and bureaucratic exclusion into their classrooms, even as they occupy positions of authority and belonging within schools. These haunting experiences remain painfully relevant for today's undocumented youth, who now face schooling and life choices without the temporary protections once afforded by DACA.

Theoretically, this study is grounded in precarity (Castro 2022) and the anthropology of policy, situating DACA as both a neoliberal fix and a form of racialized labor regulation whose absence now haunts the future of immigrant communities. Precarity here is understood as a process, condition, and ontological state: educators live with professional insecurity, grapple with the socioeconomic burdens of uncertain status, and embody the existential toll of lives suspended between belonging and exclusion. Their oral histories highlight the ways policy failure reverberates across time, producing ghostly traces that structure how individuals imagine their futures and how entire communities navigate aspirations.

This work makes two urgent contributions. First, it documents the afterlives of the Dreamer generation, showing how DACAmented educators act as both witnesses to the past and guides for youth navigating increasingly impossible futures. Second, it illustrates how policies, even when rescinded or frozen, persist as ghosts-shaping the horizon of possibility long after their material protections have eroded. As the U.S. enters a new era of immigration policy uncertainty, these narratives of haunting remind us that the past is never past. For undocumented youth currently deciding whether to stay in school, remain in the United States, or return to countries they may not remember, the ghosts of DACA continue to shape their choices and imagined futures.

Presenter(s): Chandler Miranda

Board: #52 Haunted by Care: New Ethnographic Insights into the Rural Backlash against Animal Activism in France

Over the summer of 2025, I conducted a new series of ethnographic interviews with livestock farmers in the Île-de-France region, amid a growing wave of tension in the French agricultural

sector. This poster presents some of the first analyses of this fresh fieldwork, collected at a particularly volatile moment following the passage of the Duplomb Law in May 2025 - a measure criticized for weakening protections for sustainable farming practices. In parallel, the animal rights group L214 filed legal complaints against eight pig farms, triggering intense public and media scrutiny.

In this context, farmers express a heightened sense of moral vulnerability and a deepening perception of being socially delegitimized. Through their narratives, they evoke a form of haunting: the erosion of recognition, the weight of historical memory, and the feeling that their profession is no longer understood or respected. At the same time, the activist discourse revives moral ghosts - repressed forms of violence against animals and the environment - that challenge traditional agricultural identities.

This poster argues that the current rural crisis in France cannot be reduced to a conflict of interests or ideologies. It is also a conflict of perceptions, where two competing moral imaginaries - one grounded in care, the other in accusation - generate a struggle over the meaning of farming itself.

By presenting excerpts from interviews and visual materials from the field, this poster offers an anthropological reading of the emotional, symbolic, and historical forces that haunt contemporary farming in France.

Presenter(s): Coralie Chamois

Board: #53 Judged by Numbers: How Algorithms Are Quietly Rewriting the Courts

This project investigates how algorithmic risk assessment tools are reshaping legal practice and judicial authority in U.S. criminal courts. Focusing on the Public Safety Assessment (PSA), widely used in Kentucky pretrial hearings, I examine how judges interpret and mobilize algorithmic categories of "risk" in daily courtroom life. Although the PSA is promoted as a neutral, evidence-based tool to improve fairness, its authority and effects emerge through situated practices of interpretation, negotiation, and training.

Phase 1 fieldwork, conducted in summer 2025 in central Kentucky, drew on interviews with trial judges and sustained observation of pretrial hearings. Preliminary findings suggest that judges rely on the PSA less as a directive than as a legitimating resource, invoking it when its recommendations align with professional judgment and discounting it when they do not. Yet judges repeatedly emphasized uncertainty about how the tool is constructed, how its recommendations should be weighed against other factors, and how to respond when the tool diverges from their experience. These concerns point to a broader infrastructural issue: the absence of consistent, practical training.

Judges described the training academy for new judges, and annual judicial education programs as missed opportunities to engage more deeply with the PSA. They expressed a need for ongoing education and direct channels to the tool's manufacturer, such as the ability to submit questions at the annual judicial college. These findings suggest that the effectiveness of algorithmic governance

depends not only on statistical design but also on the infrastructures of professional training, interpretation, and feedback that surround its use.

By tracing how judges make sense of the PSA in court and in their own professional development, this research highlights the gap between claims of algorithmic neutrality and the lived realities of courtroom practice. The analysis draws on New Legal Realism and the anthropology of law and technology to show that algorithms do not simply replace human judgment but reconfigure it, embedding new tensions around authority, accountability, and expertise.

Presenter(s): Danielle Nadeau

Board: #54 Radiating Gaze: Environmental Stances and Coalitions in South Korean Presidential Debates

This paper examines how coalitions are proposed and projected through environmental stance-taking in the recent South Korean presidential debates in May 2025. After going through the unlawful martial law, protests, and impeachment of the former president that was endorsed by the constitutional court's adjudication through late-2024 to early-2025, South Korea was scheduled to hold a special election to fill the presidential vacancy in June 2025. A series of three presidential debates took place, each of which was focusing on the topics of economy, society, and politics. I observe that the issues of nuclear energy and nuclear weapons appeared in every debate session, as they are concerned with industrial costs, climate change, and international relations. Under the multiparty system, the presidential debates hosted four candidates. Two of them are identified with the conservative side and the other two with the progressive side, although their stances were not identical with one another and the four showed disagreement towards all the other on a variety of topics. This paper analyzes moments of coalitions when a candidate recruits another one who shares similar eco-political stances, in order to attack a candidate from the other side. The coalitions as an emergent alignment of stances are not only performed referentially but also indexically, through patterned use of gaze and posture. Attention to gaze behavior reveals another kind of coalition that candidates attempt to project onto the imagined audience. By looking directly to the camera with a scornful facial expression when disagreeing with the immediate interlocutor, candidates in the presidential debates actively recruit a potential audience to be aligned with them and partake in the metacommentary, as part of the invisible but meaningful participants.

Presenter(s): Yeon-ju Bae

Board: #55 Rationalist Rituals: "Smoothness" as a Form of Agency in the Technolibertarian Intimate Sphere

Over the last year, technolibertarians have seen an increase in their ability to openly shape the state at the federal level in the United States. With Elon Musk's foray into governance and the advent of the Department of Government Efficiency, Americans have witnessed the values and beliefs of technolibertarians justify the rapid gutting of many of the functions of the state. My recent fieldwork in a living/working community of technolibertarians adjacent to the "rationalist" online/offline community explores the intimate life of some of these values. This poster focuses on

the value placed on "smoothness" as the sign and indicator of the "agentic" subjectivities that form the "optimal" experience of actors living in not a democracy but a "do-ocracy" (as my interlocutors say). It explicates this value through a case study of ritual practice aimed at helping these individuals recognize, attain, and prioritize experiences of smoothness in their everyday lives.

Presenter(s): Jamie Methven

Board: #56 Sanctioned Participation: Migrant Advisory Councils in Berlin

This paper examines contradictions of migrant political participation through Berlin's district-level Councils for Integration and Participation (Beiräte für Partizipation und Integration). While framed as inclusive institutions intended to incorporate migrant voices into political decision-making, these councils often reproduce exclusionary logics embedded in German migration governance. Drawing on ethnographic research conducted in summer 2024—including observations at nine council meetings across six districts and fifteen interviews with council members, district officials, and integration commissioners—I argue that the councils exemplify a mode of sanctioned participation. This concept captures how state-structured spaces of "inclusion" operate less as platforms for empowerment than as disciplinary mechanisms that condition belonging on conformity to state norms. Follow-up interviews conducted in summer 2025 trace how narratives in the participatory landscape have shifted after the fall of Syria's Assad regime in a context of increasingly restrictive migration policies and conversations about potential return.

Councils were marked by high barriers to entry, including linguistic and bureaucratic demands, and mediated structures that favored citizens and "model migrants" over asylum seekers, refugees, and perspectives critical to the state. Access to participation was often framed as contingent on prior "integration." Council dynamics revealed three key mechanisms of sanctioned participation: the selection and molding of mediators who embody state ideals; the construction of "ideal citizens" through expectations of conformity and educational interventions; and the silencing of dissenting voices, particularly evident in conversations about Palestine and Gaza. Even as councils invoked anti-discrimination and equal rights, and regardless of the individual intentions of participants, they frequently marginalized Muslim and refugee perspectives, encouraged self-censorship, and enforced political alignment with dominant state narratives.

This paper demonstrates how Berlin's councils extend state power through participatory rhetoric that is performative rather than transformative. Not merely symbolic, these councils justify exclusion under the guise of inclusion. The findings contribute to broader debates on citizenship, belonging, and the governance of migration by showing how sanctioned participation sustains structural inequalities while claiming democratic legitimacy.

Presenter(s): Juliet Kelso

Board: #57 Spectral Expertise: The Ghosts of Epistemic Violence in Corporate Environmental Science

This paper ethnographically explores the non-harmonious, haunted space of the construction, implementation and sustenance of Environmental Impact Assessments (EIA). Moving beyond their technical façade, EIAs are revealed as arenas of spectral conflict where the past haunts the present. Drawing on fieldwork with environmental professionals in Brazil, I argue the field is governed by a "corporate environmental science"-a specter that legitimizes certain knowledge while rendering others ghostly, enacting a form of epistemic violence that reverberates in broader political crises.

This specter manifests in hierarchies that privilege quantitative, "hard" sciences and marginalize qualitative social knowledge, dismissed as unscientific "activism." It appears in the ghostly labor of precarity, where consultants navigate censorship and the tyranny of billable hours. Crucially, the unheeded ghosts of the Mariana and Brumadinho dam mining collapses loom over daily practice, spectral reminders of the catastrophic costs of epistemic failure.

I contend that this internal epistemic violence within technical governance is not isolated. It actively fuels and is fueled by the external specters of ultra-right negationism and ecofascism. The systematic devaluation of reflexive, social knowledge within EIAs mirrors the political playbook of denying climate science and expert testimony. By examining how consultants become brokers mediating these haunted landscapes and your own professional subjectivities, this analysis reveals EIA praxis as a key site where the ghosts of technocratic supremacy are conjured, foretelling a future where sustainability is built on the silenced knowledges. This framework transcends its specific case study, offering a critical lens for understanding the global rise of anti-environmental politics rooted in epistemic erasure.

Presenter(s): Renata Fontoura

Board: #58 Vendedores Ambulantes: Resistance Against the Soundscape of Capital in New York City

Since November 5th, 2024, following the Trump presidency and NYC Mayor Eric Adams's ballot proposal II, legal options for street vending have been drastically curtailed and the policing of subway stations has simultaneously intensified. Though efforts towards decriminalization have been attempted, including the recent bill proposal by District 25 Councilman Shekar Krishnan, Mayor Adams espouses this systemic criminalization—a racialized, xenophobic, and class-disavowal practice, consequential to the sociopolitical manifestations of late-stage capitalism with the rise of white supremacist fascism in the United States. However, on September 10th, 2025, the New York City Council overrode Mayor Adams's veto of Councilman Krishnan's proposal. In this paper, I provide an ethnographic documentation of the labor practice of Latin-American pushcart fruit vendors [vendedores ambulantes o fruteros] that work primarily in the NYC subway system. I position this current legislative action in relation to the local acts of resistance by vendedores ambulantes.

The soundscape of the New York City subway system is a confluence of social experiences disguised within the everyday cacophony. An active contribution to this environment is a

community of Latin-American street vendors [vendedores ambulantes]—in particular, there is a subsection primarily selling fruit cups such as mangos. I observe the vendors' vocal patterns of vending as related to semantic satiation, considering such dissipation of phonemes as relevant to musicking and music ontology. The locus of sonic production is the vocal iteration of the commodity, which effloresces into semantic satiation, arriving into the aural space as a musical signifier for the act of vending. I analyze how their vocal practices act and react to the phenomenological conditions of an exploitative gig economy. Reflecting on the instances of musicking apparent in the labor practice, as well as the soundscape of the subway, I find this coalescence being ineluctable and consequential to the machinations of capitalism, which not only inform our aesthetic experience through commodification, but actively proliferate a burgeoning lumpenproletariat to further fascist hegemony—following the reformulation of Karl Marx & Friedrich Engels's neologism by Clyde Barrows. The larger scope of this paper is to document the resistance of the vendedores ambulantes against institutional subjection and to assist in the destigmatization of their labor practice.

Presenter(s): Gia Dreyer

Board:#59 Street Politics: Political Engagement in Street Culture amid the 2023 and 2025 Dutch Elections.

Media and research often state that political engagement among marginalised ethno-religious minority youth in (Western) Europe is limited. The street culture emerging from this demographic is equally labelled as apolitical, with media and (some) academics focusing on supposed characteristics such as glorifying violence, crime and drug (ab)use. The academic study of street culture has significantly nuanced this understanding, appreciating its complexities and cultural contributions, such as through hip-hop music. However, studies of political engagement within street culture remain sparse, especially when it intersects with the (equally understudied) religious identities present in street culture. My anthropological study of these religious identities in a marginalised part of Rotterdam, as part of my PhD, partially overlaps with the early 2025 and 2023 elections in the Netherlands. In 2023, the far-right and anti-Islam PVV party booked a landslide victory, followed by the first far-right led government in Western Europe since the Second World War. My fieldwork thus addresses political engagement among ethno-religious street cultural youth amid the increase of electoral success of far-right parties hostile to such demographics. My findings show a, to some, remarkable and varied political engagement in street culture, though this does not always translate into traditional patterns of political activity (e.g. voting). As such, my study begins to appreciate the political engagement of a group that is both vilified by mainstream politicians and accused of political passivity in the Netherlands and beyond.

Presenter(s): Floris Bosscher

Board:#60 Surreal Excitement and Reversed Temporality: How "Trade War" Changes Responsibility Distribution of Economic Downturn Afterwards

During my fieldwork in China, the "trade war" between the USA and China once raised the tariff up to 145%. This paper will demonstrate people's reactions to the daily renewed tariffs in China. The effects of time are mainly two: 1) At the micro level, the difference in time zone makes the "news" become old within about 2 hours. In those days, the CCTV, the most important tele-media, often reported the tariff disputes at 7:00 pm, Beijing time, which was already morning in the USA. The news was about what happened in the USA yesterday, and it will probably change soon. Many people read news in the morning, and they will see very different, but both authentic-sourced, information in the same information feed. Such temporality reinforces the shaken and turbulent feeling of temporal stability. 2) At the macro level, the economic "downturn" in China has become a thing even before the 2025 tariff issues. However, the tariff issues, especially when revealed in such a dramatic way, call back to the "trade war" since 2018, a time point before the pandemic. Consequently, the 145% tariff has become accountable for the "downturn" before the tariff itself. By analyzing the public reaction in China, it illustrates how responsibility and accountability could be distributed from the reversed temporal direction. It further challenges the naturalization of the responsibility/accountability: If actor A is accountable for (normally bad) event Y, A must have done an action X, which is temporally ahead of Y and causes Y. The social experiment of dramatic tariff performance shows how the organization of time can be non-linear, and so can responsibility distribution.

Presenter(s): Yuhao Ding

Board:#61 The Phoenix Metaphor and Collective Agency Among the Iranian

The phoenix occupies a central place in Iranian cultural imagination as a symbol of hope, endurance, resilience, and immortality. In contemporary reformist and modernist discourse, which envisions fundamental political and social transformations in Iran, this metaphor is mobilized to inspire collective perseverance: Iran, like the phoenix, eternally rises from the ashes of hardship to regenerate itself.

This paper examines how the phoenix metaphor and related symbolic resources are invoked in relation to collective agency among Iranians in the United States during and after the twelve-day conflict between Iran and Israel in June 2025. Drawing on in-depth interviews with twenty members of the Iranian diaspora, the study explores how participants articulated their experiences of collective trauma and shifting perspectives on political and social change across two temporal frames: the wartime moment and the immediate post-war aftermath.

Findings suggest three dominant orientations: (1) those who advocate for fundamental change and regard myths such as the phoenix as critical to fostering hope and agency; (2) those who resist change, dismissing symbolic narratives as ineffective, given the history of external interventions in the Middle East; and (3) those ambivalent toward change, who acknowledge the symbolic appeal of such myths but question their capacity to generate practical transformation or mobilize a collective will.

By exploring the phoenix metaphor through the lens of diasporic experiences and collective trauma, this study sheds light on how cultural symbols influence emotional resilience, and mediate complex attitudes toward Iran's social and political possibilities.

Key words:

Phoenix metaphor, Collective trauma, Hope, Resilience, Agency.

Presenter(s): Sara Sobhani

Board:#62 "We Are Not Family Anymore": Nationalism, Indigeneity, and Racialization at the Thai-Cambodian Border

In February of 2025, military tensions heightened at a temple in Surin Province in Northeast Thailand (Isaan) after a group of Cambodian visitors singing the Cambodian national anthem were reprimanded by Thai soldiers, resulting in confrontations between members of the Thai and Cambodian militaries. At the Thailand-Cambodia General Border Committee meeting held a few weeks later, Thai activist groups submitted a letter to the Supreme Commander of the Armed Forces, "urging the military to defend Thai sovereignty vigorously." In May of 2025, troops were temporarily withdrawn on both sides, with a Ministry of Defense representative stating that they "request that citizens of both nations avoid arranging symbolic actions that could have an impact on border areas." In July of 2025, armed conflict between the two countries broke out, resulting in deaths of both civilians and soldiers alike, amid the displacement of hundreds of thousands of people.

This poster investigates the relationship between citizens' "symbolic" – or rather, broadly semiotic – actions, as they negotiate fashions of speaking and forms of life in so-called border areas. Ethnographically tacking between discursive contestations of language, dress, architecture, and registers of national patrimony, I show how deep antagonisms among citizens of both countries especially unfold in provinces in Thailand with large Khmer-speaking ethnic/indigenous minorities. Political claims over national authenticity and heritage are essentially semiotic claims regarding peoples' character and disposition. Building on semiotic anthropology and affect theory, I also consider how AI-generated images reflecting these contested domains of national patrimony operate as semiotic-affective machines which concentrate and amplify nationalist fervor. This war of words and images is both pretext and justification for military violence.

Presenter(s): Montita Sowapark

Board:#63 Apparitions and specters in cultural heritage: The haunting legacy of archival politics in post-disaster contexts

The complexity of archival spaces, although not a new concern in anthropology, is reemerging as relevant to managing diverse collections in globally complex situations, especially those in countries affected by severely changing weather patterns. Cultural heritage in the form of landscapes, archaeological materials, and museum archives is often overlooked in disaster management and shifting climate priorities. In the small island setting, collections may or may not

find a permanent home where they can be curated, analyzed, and displayed to a local audience. These collections often become specters that shift secretively among the shadows of collections, rarely seeing the light of day, and remembered only by a disparate few.

Our poster follows the haunting images of a small island archaeological collection as it navigates the climate politics, shifting government permitting processes, and diplomacy of decay. Although we have been involved in a long-term research project that mitigates post-hurricane resource recovery (mangroves, pine forests, and water) through the dual lenses of citizen science and socio-hydrology, the anthropologists taking part in this interdisciplinary effort have been increasingly haunted by this unique collection. Since May 2025, the participants in this poster have become embedded in this global archival conversation. In our poster we discuss the origins of these collections, and similar types of cultural apparitions, and how they have mitigated both the ravages of mother nature and the complex discourse of modern small island politics. We also explore how interdisciplinary scholars can contribute to reframing global conversation on climate change to reimagine heritage management.

Board:#66 "Pero mi cuerpo reaccionaba": The Body as a Channel for Abjectivity Among Migrants in the Paso del Norte Region

Migration has become a central policy concern in Donald Trump's second administration. Consequently, the borderlands have been subjected to increased militarization. Migrants crossing the border have also been met with escalating prosecution. This research project is concerned with how the campaign of migrant criminalization at the US-Mexico border impacts the migrant bodily experience. Drawing from participant observation in one of the country's busiest courthouses, unstructured interviews with public defenders, and semi-structured interviews with migrants in shelters, this project argues that the body becomes a channel through which the carceral state and other economies of violence transform the migrant from agent to abject. As a theoretical framework, this project utilizes Patricia Hill Collins' concepts of the matrix of domination and controlling images for comprehending the connection between state-sponsored violence and embodied suffering. Through this theoretical framework, I provide a critical situated feminist perspective on the material circumstances of lived experience in the borderlands. First, I demonstrate that the carceral state aims to significantly limit the agency of migrants, either painting them as 'poor things' or criminals. Second, I argue that the degrees of abjectivity are embodied differently through lines of race, gender, and nationality. Third, I argue that embodied trauma is sentient; it travels across time and space alongside migrants, even after processes of deportation. Lastly, this project concludes by considering how migrants embody resilience in the face of abjectivity through memory and kinship as a practical method for futurebuilding.

Presenter(s): Pedro Lacerda

Board: #67 What's So Funny: Performing Regional Accents in Contemporary Chinese Media

In recent years, regional accents have become deliberate performance tools in Chinese media, particularly in reality shows where linguistic difficulty is converted into amusement. TV shows like *Keep Running* and *Ace vs Ace* invent the "Cantonese Guessing Game" that feature Mandarin-speaking celebrities attempting Cantonese pronunciation awkwardly. Their failed articulation and linguistic incompetence are demonstrated as a performative spectacle, generating entertainment value for audiences. With the question "What's so funny" lingering on my mind, this paper analyzes accent as a cultural semiotic, one that reflects the ongoing interplay between regional identity, class stratification, and the production of modern Chinese nationhood. How do such performances of regional accents emerge from and represent everyday language, class, and identity categories? How does entertainment shape public sensibilities about what is authentic, who is articulate, who is rural, who is modern, and what is laughable?

This study draws on Michael Herzfeld's concept of cultural intimacy to explore this contradictory dynamic where mispronunciation, considered embarrassing in public, serves as a gateway to invoking shared identity for insider audiences. These performances rely on the audience's recognition of linguistic error as shameful and familiar, allowing viewers to laugh at what embarrasses them while reaching a consensus for a shared "imagined community". From this perspective, accent humor is not merely a site of symbolic power or cultural capital, but a deeply affective practice where embarrassment, laughter, performativity, and positionality converge. Furthermore, mainstream media commodifies such performative linguistic inadequacy, complicating the intimacy and revealing how structural hierarchies of language and region are naturalized through emotionally charged, ordinary events. This analysis treats accent performance as a cultural technique of both inclusion and exclusion that reveals the affective infrastructure of national identity in contemporary China.

To investigate how performative accent influences social opinions on class, modernity, and belonging, I combine close reading of selected reality shows with online ethnography of viewer responses on main social media such as Bilibili, Weibo, and Douban, tracing how affect and regional belonging shape audience reception.

I argue that the transformation of accent from a marker of locality to the object of comedic consumption reflects broader shifts in China's post-reform era: accelerated internal migration, the collapse of rural communities amid modernization, and the rise of performative nationalism in mass media. Not all viewers find it funny, not all laughter is consent. By examining how staged moments of comedy work through symbolic asymmetry and reversely contribute to constructing cultural intimacy, this study offers insights into TV shows' banal but subtle presentation and people's reactions.

Board: #68 Anthropological Poster Title: Reproductive Freedom and The Politics of the Womb

The cultural and political landscape of motherhood has undergone a significant transformation in recent decades, challenging traditional narratives surrounding family planning, gendered

expectations, and the social responsibilities of women. While motherhood has historically been framed as both natural and socially obligatory, increasing numbers of Millennial and Generation Z women are choosing to remain childfree. This phenomenon aligns with the concept of "reproductive refusal," defined as an active and ongoing decision not to birth or raise children. Recent policy changes, particularly the Supreme Court ruling in *Dobbs v. Jackson Women's Health Organization*, alongside economic stressors such as the rising costs of childcare, have intensified the pressures and constraints shaping reproductive choices. At the same time, advances in contraceptive technologies and the growing visibility of sterilization discourse have created both opportunities and barriers for women seeking permanent reproductive autonomy. Despite the legality of sterilization in the United States, women especially those in their twenties often face resistance from medical professionals who cite concerns about youth, marital status, and presumed future regret. This study investigates the experiences of women in their twenties actively seeking voluntary sterilization, as well as the perspectives of physicians who provide or withhold these services. Through interviews with both women and medical practitioners, this research explores how social expectations, political shifts, and economic realities influence women's decisions to pursue sterilization, and how medical gatekeeping shapes the accessibility of permanent reproductive autonomy.

Board: #69 Anthropologies of Digital Health: Inequity, Biocitizenship, and the AI Clinic

Artificial Intelligence is transforming the medical landscape through the widespread adoption of wearable devices, genomic analysis, and telemedicine. These technologies promise increased precision and efficiency in healthcare, but their integration raises urgent anthropological questions about equity, surveillance, and responsibility. As health becomes increasingly algorithmic, it is important to question who benefits from these innovations, who is excluded, and how this shift reconfigures notions of care.

Building on Safiya Noble's analysis of algorithmic oppression, this poster examines how AI-enabled medical technologies reproduce structural disparities tied to race, gender, and socioeconomic status. Case studies of consumer wearables, AI-driven clinical decision tools, and direct-to-consumer genomic testing are referenced to reveal how digital health infrastructures extend forms of biocitizenship, positioning patients both as data producers and as objects of governance. These technologies shift responsibility for health management onto individuals, often under the guise of empowerment, while embedding assumptions shaped by cultural and algorithmic biases.

I argue that the promise of personalized health often masks uneven distributions of risk, access, and accountability. Drawing on Michelle Murphy, Natasha Schüll, and Deborah Lupton's work on technoscience and self-tracking technologies, I contend that the naturalization of constant monitoring obscures political dimensions of surveillance. This poster will situate digital health innovations in conversation with actor-network theory to further illuminate how patients, algorithms, and devices co-constitute sociotechnical assemblages that are far from neutral. My

findings suggest that while medical AI offers unprecedented opportunities for personalization, its deployment amplifies inequities and reframes expectations of care.

This research positions digital health within broader anthropological conversations on the politics of data. Amid current debates over AI regulation, data privacy, and health equity in 2025, anthropological perspectives can reveal hidden infrastructures of inequality, while envisioning more inclusive digital health futures.

Presenter(s): Coco Plasencia

Board: #70 Black Out Survival

The preservation of Gullah Geechee culture of the Sea Islands and Southeast US is not fairly represented within the American museum ethnology of the Smithsonian Anthropological collections. Like the diasporic movements of slave populations traceable in North American literature, the works of this community can be found in four various archives and six Smithsonian museums. From my exploration of all ethnology objects, William Pollitzer collection, & Sturtevant Archives listed under the NAA, all Gullah Geechee connections can be traced to communities of struggle and assimilation. Delineations like this presents the culture void of their literature, imaging, music, and media; at the same time, this ultimately allows anthropologists, the Smithsonian, and academics the right to capitalize on the labor, language, and lifestyle of the Gullah Geechee people. As such, this research will tell the story of the how accessible resources juxtapose autonomously cultivated stories, lineages on how their culture continues to thrive using the five-senses, and celebration of their stories from someone with adjacency to the cultures aligned.

Presenter(s): Faith Herd

Board: #71 Bodies Behind War Production: The Impact of Nuclear Weapons in Colorado

In countries where war is raging, human and nonhuman bodies are at risk; the dead and injured are counted, quantified, and reported. In home front sites, where active warfare is not taking place, but weapons hazardous to health are produced and stored, this count is often not done. Colorado's Rocky Flats Plant was such a production machine that ignored the potential life threats from the use of plutonium to create nuclear weapons triggers during the Cold War. Today, this place has been transformed into the Rocky Flats National Wildlife Refuge (RF), which activates topics in the community about the safety of bodies and the impact of the still potentially contaminated environment. Concerningly, Rocky Mountain Greenway (RMG) construction is being carried out to connect RF and two other front range wildlife refuges with Rocky Mountain National Park. Furthermore, the question arises about which bodies are significant and important: those people who live in certain areas affected by pollution; people who are outside these boundaries but believe their health has been affected by the plant; nonhuman bodies that have free access to RF. This study was conducted in the summer of 2025 using participant observation at RF and among people involved in the development of RF, as well as interviews and archival research.

The production of nuclear weapons at the RF Plant, located in the Denver metro area, has affected the bodies of humans and nonhumans both inside and outside the production area. The contamination has spread far beyond the plant's boundaries. The now-revitalized wildlife refuge influenced the continuation or emergence of several organizations/groups that share different opinions about the future of RF. Although RF has been cleaned up, some groups question the quality of the environment. Information about the health risks from the plutonium and other dangerous chemicals and their effects on human and nonhuman bodies has long been hidden from the community. Even now, the different opinions and scattered information are not easily perceived and shared. Not only has public awareness of historically classified information increased, but the construction of RMG has also sparked discussions about the impact of contamination on bodies, many of whom may not even be familiar with the history and potential risks, especially those who would accidentally enter the RF zone via RMG. Those who have worked or lived near the RF Plant or within its impact zone have been granted free healthcare by the state. However, the "impact zone" is ill-defined, as bodies beyond its boundaries have been damaged by several types of tumors. The study also focused on nonhuman bodies, whose potential health concerns have been less emphasized by the community. Nonhuman bodies are essential for promoting wildlife refuge, and they add value to this area.

Presenter(s): Laura Cipruse

Board: #72 Borders Beyond the Grave: Hauntings and Border-Making in Morocco's Cemeteries

This poster is about how black migrants from West and Central Africa experience borders and articulate their collective subjectivities while visiting and working in cemeteries in Morocco. Cemeteries are charged with meanings, imaginaries, and, expectedly, hauntings. For the living relatives of the dead, the people working in cemeteries, or the unknowing tourists, cemeteries provoke different sorts of border crossings where unsettled spirits, ghosts, and pasts and futures come haunting the present (Hertz 1928; Scheele 2006). Similarly, the literature on migration is increasingly representing cemeteries as borderscapes where the necropolitics of border regimes are intensely made visible, but also where death is in turn a driving force for the living. Death and the cemetery redefine boundaries, subjectivities, as well as senses of belonging and modes of contestation (De Leon 2015; Alonso and Nienass 2016; Kobelinsky and Furri 2022). In this poster, I argue that hauntings and the configuration of cemeteries in Morocco participate in border-making processes and in articulating collective forms of subjectivities among black migrant communities. Drawing from my own ethnographic observations in Morocco, I describe three cemetery visits, each in a different city with a separate migrant community. I explain how specific kinds of hauntings influenced the borders and collective subjectivities that my interlocutors articulated in unique yet resonating ways: For the first visit, I describe Tangier's largest muslim cemetery and how migrants who work informally as groundskeepers spoke of their anxieties and ambitions about crossing to Europe and the racism of Moroccan visitors. While haunted by the risk of crossing to Europe, they negotiate their pay with Moroccans by leveraging their work ethic as a sense of duty toward the dead, and, in doing-so, they reject the racist representations that Moroccans project on them. The second example is set in Rabat's Christian cemetery where I accompanied my co-workers, DRC

immigrants, to the burial ceremony of a community member. Passing by Mobutu's tomb and surrounded by the graves of European colonists, my interlocutors reflect ambivalently on the juxtaposition of the past ruler and colonists next to their loved ones, revealing their enduring discomfort with the past and tensions in their own sense of belonging and otherness. And finally, in Casablanca's rapidly expanding muslim cemetery, I accompanied a group of Christian Congolese migrants to a casket-viewing in the cemetery's morgue that prohibited noise and lengthy viewings. In a room uncannily decorated with a large portrait of Morocco's king facing, haunting the viewing, the performative acts of mourning also claimed and invested the space of the morgue. Although the hauntings were not always explicitly acknowledged, their acts indicated that "something" was felt. And its presence prompted them to articulate their selves and their worlds.

Presenter(s): Yzza Sedrati

Board: #74 East is East? Exploring the lived experience of frailty and wellbeing among South Asian older people living in the UK

Frailty has been conceptualised in two divergent ways: clinically, as a measurable biomedical diagnosis, and experientially, as the subjective sense of bodily and existential vulnerability. While both dimensions are interlinked, research has largely been based on White, middle-class populations in the global north, neglecting the perspectives of minority ethnic older people whose experiences of ageing are configured by migration, cultural hybridity, and structural marginalisation. In the UK, South Asian women are significantly more likely to experience frailty, and at earlier ages, than their White counterparts. Yet little is known about how frailty is lived and made meaningful in these communities.

This paper reports on a qualitative study of South Asian older adults using longitudinal biographical narrative interviews and photovoice methods to capture the dynamic interplay of illness, culture, family, and migration over the life course. I present four case studies, chosen for their representativeness, which reveal starkly gendered patterns. Women's lives in these communities were marked by constrained opportunities, including domestic abuse, and the collapse of expectations of intergenerational care, resulting in severe frailty and existential isolation in later life. By contrast, men, though not immune to loss and hardship, more often expressed transcendence through cultural bricolage, community engagement, and hybrid models of "successful ageing" that balanced South Asian and British cultural values.

To interpret these findings, I draw on two framings. First, frailty resonates with the concept of the syndemic (Singer 1996, 2009; Mendenhall 2016), where biological vulnerabilities, chronic conditions, and social inequalities interact in a negative feedback loop, producing compounded suffering across the life course. Second, I deploy Simone de Beauvoir's existential and phenomenological concept of the 'situation', understood as the totality of material, social, and symbolic givens through which a person engages the world. Framing frailty as both syndemic and situation enables us to grasp its biological, social, biographical, and ethical dimensions in interaction, while highlighting the tension between individual choice and cultural and structural constraint.

Presenter(s): Susan Pickard

Board: #73 Contention and Citizenship: Current Protests in Serbia and the Resurrection of Resistance

Most recent anti-corruption protests in Serbia started in November of 2024, immediately after the collapse of the canopy of Novi-Sad's railway station. This architectural failure resulted in 16 deaths, and sparked a powerful and heated public debate on issues of corruption, lack of transparency, absence of appropriate monitoring practices in public (and private) construction. The protests initially started in Belgrade and rapidly spread across Serbia, with near 400 towns participating. The protests are ongoing, with no sign of slowing down. The peaceful expression of civic rights has dramatically shifted over the summer months into a culmination of despair, hope, fear, oppression and violence.

Serbia has a long and complex history with civic movements that is shaped by ideas of futility and lethargy. Socio-economic transition from socialism to capitalist democracy has frequently been understood as a never ending process that is closely tied to political inertia in Serbian context. Brief and turbulent protests in 2000 that resulted in the most recent political shift in, at the time, Yugoslavia have been remembered as "the last time where we believed something can change", as framed by my informants. After that, protests and voicing of civic dissatisfaction has been sporadic, temporary and framed as "futile".

Since November 2024, the conversation shifted, and protests, led by mostly students, have cultivated an ongoing debate about public safety, health, potential for change and something I loosely frame as neoliberal mobilization of romanticized socialist ideology. The conversation is bringing out surprisingly concrete assumptions about institutional responsibility and contrasting it with frequently vague, and mostly affective dissatisfaction with the current regime, growing anticipation and fear related to public construction and a saturated need for change: whatever it may bring.

It is in this context that I did my fieldwork this summer in Serbia. I have spent 3 months having daily conversations, participating in protests and reflecting on the changing dynamic of the protests themselves. From mostly peaceful and safe gatherings, protests have evolved into passionate political activism, one that triggered an incredibly aggressive and violent response from the police. Even the grossly underreported numbers of injured citizens are reaching hundreds across Serbia. Testimonials of police beatings, treats of sexual and physical assault of those arrested are cementing the commitment of many protesters. My research closely engages with the concrete and the illusive desires of those invested in protests and I ask: In what ways are contemporary Serbian attitudes about civic and institutional responsibility paving the road to Serbian future? How do ordinary citizens in Serbia translate protest participation into everyday practices of civic engagement, skepticism, and hope? How is the memory of past protests shaping the narratives of today's?

Presenter(s): Milica Milic Kolarevic

Board: #75 Excavating Absence: Andalusi Heritage, UNESCO, and the Politics of Memory in Menorca

This poster presents findings from ethnographic research conducted during the Menorca Archaeological Project's (MAP) 2025 excavation season at Torre d'en Galmés, the largest Talayotic site on the island of Menorca, Spain. Because this is a university-led excavation that operates only during the summer, the research could not have been undertaken before the April 16 AAA deadline. My fieldwork coincided with both the 2025 dig season and Ciutadella's Sant Joan festival, which provided a rare vantage on the intersection of archaeology, heritage, identity, and tourism at a moment of heightened activity.

Since 2020, the MAP team at Torre d'en Galmés has begun excavating contexts from the medieval Andalusi period, a chapter of Menorca's history that remains strikingly underrepresented in Spanish archaeology despite nearly four centuries of Muslim presence on the island. Drawing on participant observation at the excavation, archival work, site visits across the island, and more than thirty interviews with archaeologists, heritage officials, tourists, and residents, I trace how these new discoveries are (and are not) incorporated into Menorca's heritage narratives. Museums continue to privilege Talayotic and Roman periods, and in some cases omit the Andalusi era entirely. Even when Andalusi contexts are integrated, such as necropoleis unearthed during road construction, their presentation remains uneven and partial.

Instead, heritage institutions frequently deploy nativist framings, portraying Menorcans as a resilient people continually contending with "outsiders." This narrative resonates with two contemporary pressures: first, anxieties about mass tourism, which increasingly strains the island's UNESCO biosphere reserve; and second, the prestige of Menorca's 2023 UNESCO World Heritage inscription of its Talayotic culture. At the Sant Joan festival, these tropes of endurance and belonging were dramatized for both residents and visitors, intertwining with expressions of Catalan pride and Menorca's ambivalent relationship to Catalonia. The festival thus becomes a stage where heritage politics, tourism, and regional identity converge, revealing the island's precarious negotiation between local distinctiveness and external pressures.

I argue that archaeology in Menorca operates simultaneously as a scientific practice and as a cultural process of memory-making and erasure. By foregrounding the marginalization of the Andalusi past in favor of narratives more compatible with heritage economies, this project highlights urgent questions about patrimony, tourism, and the selective narrativization of history in the twenty-first-century Mediterranean.

Presenter(s): Gabriel Plata

Board: #76 Ghostly Crossings: Neocolonial Libidinality and Gendered Encounters in Medellín

This poster examines how Medellín has become a city of ghostly crossings where transnational gender relations, libidinal economies, and urban imaginaries converge under the neocolonial production of space. Based on ethnographic research between 2023 and 2024, extended with new data in 2025 on recent transformations of the urban space, the project traces how U.S.

masculinities relocate their desires to Medellín, a city historically entangled with global narratives of sexuality and power.

With the concept of neocolonial libidinality, desire is seen as a structural force organizing unequal exchanges between North and South, foreign masculinities and local femininities, global imaginaries and everyday practices. Spectrality underscores the presence of urban stigmas and fantasies of Colombian femininity that haunt encounters in the city. These ghosts, never fully visible, orient how men and women relate, shaping possibilities of intimacy, and power.

Methodologically, the research combines participant observation, interviews, and autoethnographic reflection. Through fieldwork with sex workers, tourists, police, vendors, and local women, deepened affective challenges of inhabiting the field as both researcher and participant, drawing on my own position as a local woman entangled in these dynamics.

Findings reveal that these gendered encounters often exceed transactional logics. Most of the U.S. men who return repeatedly to Medellín seek not only sex and companionship but also the recognition they feel denied at home: the traditional position of masculinity as a locus of power and control in intimate relations is unsettled with the rise of feminist movements and shifting gender norms. In Medellín, these men pursue relationships that appear to restore that control, often framed in more conventional or patriarchal terms. Women, in turn, negotiate visibility and vulnerability: some cultivate affective ties with tourists who establish recurring visits or semi-permanent stays, others choose short and bounded encounters that minimize risk and dependency-yet even these limited engagements can yield significant economic, social, and symbolic capital. The city thus becomes a relational arena where intimacy, power, and space are constantly renegotiated under global disparities, operating as a site through which neocolonial power is reconfigured in libidinal terms.

Ultimately, what unfolds in the Global North reverberates in the Global South as neocolonial afterlives: gender asymmetries intersect with the spectral histories of Medellín's urban history, creating fertile ground for unequal intimacies to flourish under the guise of pleasure, and control. By situating Medellín as a haunted urban site, the project contributes to debates on space, gender, and colonial afterlives. The poster format allows a visual evocation of these dynamics, inviting viewers to engage with the spectral nature of these encounters through images, and ethnographic fragments.

Board: #77 Governing Encounters in Shanghai: Raccoon Dogs, Residents, Organizations and the State in China's Urban Wildlife Politics

Cities are increasingly sites of multispecies contestations. This presentation draws on ethnographic research with raccoon dogs (*Nyctereutes procyonoides*) in Shanghai to explore tensions between everyday urban encounters and conservation frameworks shaped by both official and unofficial efforts. Based on my work at an NGO for the past four years, in close collaboration with the Shanghai Forestry Station and Fudan University, I show that raccoon dogs have established

homes in over 200 residential communities in the bustling metropolis of Shanghai. They complicate urban biodiversity narratives: unlike charismatic or famous protected species such as snow leopards and pandas in western China, raccoon dogs in the east occupy an uneasy position between "wildlife" and "nuisance." While the government, biologists and NGOs in general regard raccoon dogs as symbols of ecological resilience, residents express ambivalent feelings, ranging from affection to fear. Municipal forestry authorities, meanwhile, manage raccoon dogs through fragmented governance structures-balancing state mandates with neighborhood complaints. By combining deep ethnographic description with survey data collected in 2021–2025, I show how urban wildlife governance in China is negotiated through uneven but collaborative explorations among citizens, scientists, NGOs, and the state. By tracing conflicts over management strategies, from rescue and relocation to informal (anti-)feeding practices, I highlight tensions between top-down governance and bottom-up exploration by different actors. Comparative cases from Wuhan and Nanjing, where raccoon dogs and wild boars appear, further illuminate the varied politics of multispecies cohabitation across different cities and species. This presentation situates contemporary China's urban wildlife controversies within broader anthropological debates on human–nonhuman relations, environmental governance, political ecology, and the politics of multispecies urban nature in a rapidly transforming global South.

Presenter(s): Yidi Feng

Board: #78 Murky Medicine: High Risk Pregnancy Care Post-Dobbs

In the aftermath of the Dobbs Decision, the dangers that abortion bans add to the already existing risks of pregnancy become especially amplified for people experiencing any number of complications or emergencies when abortion is determined to be the safest treatment. Interviews with providers of high-risk pregnancy care, including Maternal-Fetal-Medicine, general OB-GYN, and Complex Family Planning physicians two years after Dobbs reveal how navigating the landscape of abortion (il)legality creates a new kind of medical murkiness. Building on the growing literature around medical uncertainty (Buchbinder et al. 2024), we illustrate the real-time processes of navigating cases that are not obviously legally defensible due to bans, but could be interpreted as such. With the reduction or complete disappearance of skilled abortion providers in states with bans, high-risk pregnancy physicians and their teams find themselves at the helm of deciding which abortions are legally defensible in court (should it come to that), which ones are not, and under what conditions. Our research is an intervention into a precarious world in which providers do not consistently communicate across institutions about their responses to these issues for fear of being targeted by the state (Andaya and Mishtal 2017). Thus, they are operating in a murky field of professional standards post-Dobbs that are actively being worked out, hospital by hospital, state by state. Through the promise of confidentiality, our interviewees have entrusted us with their strategies without having to expose themselves to their hostile legislators. Thus, we contend that this data serves as an intervention into the murkiness, to help them understand how members of their community have managed to practice to the fullest extent of state law and how they have addressed the predictable chilling effect on safe obstetrics.

Board: #79 "It's all Money Laundering:" Return Migrants' Investments in Lebanon's Collapsing Economy

Lebanon's recent history is often chronicled as a series of overlapping political and economic crises, culminating in what is colloquially referred to as "the collapse." Beginning in October 2019, this collapse marks an ongoing period of rapid currency devaluation, hyperinflation, the breakdown of state services, and banks' effective confiscation of depositors' savings. As cash-dominated transactions became the norm, Lebanon was added to the global Financial Action Task Force's (FATF) "grey list" for money laundering in 2024, and to the European Union's "black list" in 2025. These measures have rendered international financial transactions increasingly costly and cumbersome. In this context, where local financial institutions mostly fail to provide credit, investment, secure cash storage, and international transfer services, return migrants to the northern city of Tripoli are striving to create alternative systems for moving, storing, and investing money.

Through preliminary ethnographic fieldwork among these returnees, this study explores their informal financial practices as they resettle in their home city, move capital across borders, purchase property, and invest in businesses and personal projects. I examine how returnees navigate a "grey zone" that mediates between formal institutions abroad and semi-legal or illegal practices in Tripoli. Additionally, I analyze how locals interpret these financial practices, often viewing returnees' investments as inherently tied to illicit activities. In the absence of formal mechanisms to regulate capital's mobility, Tripoli's residents circulate rumors and raise questions about the origins of returnees' investments, frequently suspecting connections to money laundering or other illegal activities abroad. As a result, returnees' kin, neighbors, and acquaintances often take on a vigilant role in scrutinizing these informal financial operations and questioning the morality of returnees as strangers who enter the city's social world as materially privileged investors. Starting from Tripolitans' accusations of illicit financial activities, I trouble the money laundering category as used by financial regulatory bodies. I ultimately show how deployments of money laundering tie the legitimacy of money to certain geographies rather than illicit practices.

Presenter(s): Haya Mortada

8852 SCA Business Meeting

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Marriott **Room:** Balcony M

Type: Special Event

Please join us for the annual business meeting of the Society for Cultural Anthropology. We will

share section news and updates, invite members to share their perspectives, and present the winners of this year's Bateson Prize and Cultural Horizons Prize. This will be a hybrid meeting. Please join us in person in New Orleans, or if you are not attending the annual meeting in person this year, join us virtually via this link:

<https://zoom.us/j/91071621682>

8789 Society for Anthropology in Community Colleges (SACC) Membership Meeting

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Sheraton **Room:** Oakley (4th fl)

Type: Special Event

The Society for Anthropology in Community Colleges is composed of teaching-focused anthropologists, especially those engaged with the courses that introduce students to our discipline in the first two years of college. Members include community college faculty as well as instructors at 4-year universities. We support each other in our pedagogy/andragogy, host annual national and regional meetings, and have produced several OER for introductory classes. This meeting is open to members, potential members, or anyone who may be interested in the work we are doing.

8802 Society for Latin American and Caribbean Anthropology (SLACA) Business Meeting

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Marriott **Room:** Studio 1

Type: Special Event

SLACA Business Meeting

8721 Society for Psychological Anthropology (SPA) Business Meeting

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Marriott **Room:** Studio 3

Type: Special Event

The annual business meeting of the Society for Psychological Anthropology is open to all current members as well as those interested in the society. We will discuss SPA events and achievements during the past year, provide announcements and plans for the upcoming year, and present awards. Please join us!

8526 Society for the Anthropology of Work (SAW) Business Meeting

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Marriott **Room:** Balcony L

Type: Special Event

Annual business meeting of the Society for the Anthropology of Work

8662 The Complementary and Alternative Medicine (CAM) and Integrative Medicine (IM)

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 12:45 PM

Venue: Marriott **Room:** Bonaparte

Type: Special Event

The Complementary and Alternative Medicine (CAM) and Integrative Medicine (IM) special interest group of the Society for Medical Anthropology (SMA) was organized to encourage the anthropological study of CAM and IM as emergent socio-medical phenomena having global ramifications in the 21st century. Members of this special interest group recognize that CAM/IM is a contemporary example of medical pluralism, influenced by processes of globalization and hybridization, scientization and commodification. CAM/IM is a global phenomenon and needs to be studied as such.

8797 Members of the Association of Indigenous Anthropologists Welcome Reception

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 01:15 PM

Venue: Marriott **Room:** Audubon

Type: Special Event

This is a reception for members of the Association of Indigenous Anthropologists to gathering to reconnect and welcome our new members and allies. We want to keep in tradition with an informal gathering that affords people the ability to network and engage in a more intimate setting. We look forward to seeing you there.

8741 SANA Business Meeting

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 01:15 PM

Venue: Sheraton **Room:** Edgewood AB (4th fl)

Type: Special Event

The Society for the Anthropology of North America encourages all members and friends to attend our annual business meeting. Topics to be discussed include: SANA publishing futures; Building a SANA mentoring program and other support for student and early career members; Planning the 2027 SANA Spring Meeting in Mexico City; Celebrating the 2025 SANA Book Prize; and Inaugurating new leadership. We will also open the floor for other member initiatives and concerns. Please join us!

8815 A&E Graduate Student Mentoring Workshop -Day 3

Start Date: 11/22/2025 11:45 AM **through** 11/22/2025 01:45 PM

Venue: Sheraton **Room:** Rex (8th fl)(Access vis elevator only)

Type: Special Event

Students will submit either: a dissertation proposal, dissertation chapter, or journal article for consideration. Students selected to participate in the workshop will receive feedback from an A&E member mentor and receive comments on their work before the AAA conference.

During the last and third session, we will focus on how to effectively incorporate peer reviews into academic writing and how to structure responses to reviewer comments during the peer-review process.

8680 SAE Business Meeting

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 01:45 PM

Venue: Sheraton **Room:** Crescent (4th fl)

Type: Special Event

SAE Business Meeting

Presentation of SAE Book Awards

8635 Association of Black Anthropologists (ABA) - General Body Meeting

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:00 PM

Venue: Sheraton **Room:** Waterbury (2nd fl)

Type: Special Event

ABA General Body Meeting

This is the annual meeting of the Association of Black Anthropologists (ABA). We discuss the ABA's activities, the goals and objectives of the organization, its future plans, and unveil ABA award recipients. *Open to all members (and aspiring members) of ABA.

8693 Get to know the Association for the Anthropology of Policy: An open, welcoming event

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:00 PM

Venue: Sheraton **Room:** Evergreen (4th fl)

Type: Special Event

What is the anthropology of policy? How can we use anthropological theory and methods to study policy? How can we use anthropological pedagogy to teach policy? What does it look like to be an anthropologist of policy working in a practice setting?

The Association for the Anthropology of Policy (ASAP) invites all AAA members to get to know our section members, and to help us get to know you! Please join ASAP board members, committee members, and section members including anthropology of policy students in a casual setting.

Feel free to bring a brown bag meal or snacks, arrive at whatever time you're available, and join us as we celebrate our 2025 ASAP graduate paper award recipient, share opportunities to get involved in ASAP, and start thinking about ASAP-sponsored panels AAA 2026, in St. Louis MO.

4540 "Honoring Ethnographic Relationships “After” the Field"

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** MGB Salon F/G

Type: Roundtable/Town Hall

In an era of insistent yet seemingly intractable calls for "decolonizing methodologies," we gather students and scholars of Anthropology for a roundtable discussion about the considerations, challenges, and consequences faced in representing and "writing up" field-researcher relationships "after" the field. We explore "boundary-making" as a political and epistemic problem which often reproduces dichotomized views of the public versus private through ethnographic writing (Thelen and Alber 2018). How do we resist the temptation to essentialize human relationships from the field? How do we "write up" the ethnographic research assistant? The companions of everyday life? How do we account for quasi-kin relations, which often transgress and stretch the boundaries between field and home (Braukmann et al. 2020)? We welcome discussions about experiments in writing collaboratively and creatively with and about intellectual co-producers, interlocutors, and family members. Yet we also complicate calls to "dismantle the subject/object dichotomy" (Bejarano et al. 2019) by debating the very real professional, personal, and political costs of such exposures of the self and other.

2548 A Spirited Roundtable: Comparing Anthropological and Parapsychological Notes on “Ghosts”

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Galerie 3

Type: Roundtable/Town Hall

This interdisciplinary roundtable brings together four published researchers from anthropology, psychology, sociology, and parapsychology to explore the nature and significance of ghostly experiences based on the latest studies in this domain. Drawing on insights from mixed methods—including case studies, systematic surveys, participant observations, controlled laboratory exercises, and field investigations—panelists will discuss the strengths and limitations of an interactionist (i.e., a systems or biopsychosocial) view of these phenomena, i.e., the idea that "ghostly episodes" reliably manifest to "the right people in the right settings." The profile of the "right people" seems to be thin mental boundary functioning, whereas the "right settings" often involve periods of personal or social dis-ease or environments with Gestalt features or conventional physical factors that often characterize "sacred, uncanny, or enchanted" spaces and which also can exacerbate thin boundary functioning. These models are pertinent to an anthropological understanding of the nature, meaning, functions, and potential ontological reality of ghost stories and experiences. But controversial influences rooted in parapsychology are likewise considered, such as discarnate agency and psychic-type abilities in the living. This session therefore aims to foster a mutual appreciation of social scientific and anomalistic views that underscore the intersection of belief, experience, and empirical inquiry into "ghosts."

5265 After the fire: Pyropolitics in Latin America. Part 1

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Studio 2

Type: Oral Presentation Session

Forest fires have become contentious political issues, to the extent that some writers speak of an

age of fire. Media images of fire capture public attention, sparking debates about their causes and how to best prevent them. In this two-part panel, rather than examining the causes of fires, we follow its effects to focus on the political afterlives of fire.

As an analytical framework, pyropolitics (Marder 2014; Carey 2023) examines the complex relationship between fire and political dynamics, intertwining with issues of climate and land-use change, disaster preparedness, power and property relations, and longstanding social and ethnic inequalities. We seek papers that explore how fires shape political relations in Latin America, from the chacra to the international stage. In particular, this panel invites papers that explore how fires ignite broader social unrest, fuel political polarization, persist in disturbed landscapes, or even reshape human-plant relations. We also welcome papers that critically examine the use of fire-related metaphors, which have long been prevalent in political anthropology about Latin America.

Political controversies, like fires, can flare up or fade away. Fires can also sometimes leave tangible and material, flickering, ghostly and lasting political effects. They may contribute to intensifying conflict and relations of political alterity. In this light, we ask: How do people live with the new normal of forest fires, in productive and/or destructive ways? And, what happens to politics in the wake of devastating fires, as people and groups navigate their aftermath?

Presentation(s): “Where can we go to escape it?” Pyropolitics in Mato Grosso

In Mato Grosso, the fire season means months of haze and smoke as burns flare and fade. This paper centers small-holder Brazilian farmers' experiences with fire to explore pyropolitics in the agricultural sector of Mato Grosso. From my fieldwork, I propose that forest fires, while disastrous, were not seen as exceptional events. While individual farmers may take precautions against devastating burns, none took precautions to guard against smoke exposure, shrugging, "Where can we go to escape it?" I propose that fires, large and small, are seen as unescapable. This parallels hazy uncertainties about who is to blame for fire season, as locals complain that legal framework to prosecute fires is classist and ineffective. This indeterminacy around the cause of forest fires, I argue, is a key facet of pyropolitics in Mato Grosso. While large-holder 'agro' has set the conditions for extreme burning seasons, I found that local fires reinforced individualized blame, as some people continued with burning practices that were innocuous in a healthy rainforest. This smokescreen around how to address fires creates a new normal of living with fire.

Presenter(s): Cari Tusing

Gardening without fire in the Upper Amazonia

The absence of fire in gardening is noticeable. In Upper Amazonia, in the Napo region of Ecuador, people do not talk about fire, not even in the process of building their gardens. While fire is used in other daily contexts, in forest cultivation and production, fire's absence is quite remarkable.

Amazonian gardening has been primarily known for its slash-and-burn practices. Yet among the Napu Runa people, fire practices and references for making forest gardens (chacras) are rare, and in some cases, non-existent. Conservation and organic production projects have been implemented in the last two decades in the same Napo region areas. Institutions, both national and international, have not developed policies and recommendations regarding fires in relation to their work with forest gardening projects, despite a problem with forest fires. Beyond the geographical characteristics of the Upper Amazonia (i.e. High annual rain frequency), this presentation asks to what extent the absence of fire practices and narratives is related to the political, local and global entailments of forest gardening programs in the Napo region.

Presenter(s): Nehemías Pino

Burned Phantasmagories: The Persistence of a Disaster in Quilpué, Chile

When does a fire begin and end? How does it live in the bodies and lives of those affected? What kind of revelations and relations does it trigger? In this paper, we explore how people and their infrastructures in Quilpué, central Chile —following the extreme wildfire of the summer of 2024— perpetuate both the risk perception regarding future fires and the collective memory of the disaster. Through a critical approach that focuses on infrastructure, disaster, social conjectures, and memory, this paper argues that bodily and urban infrastructures are not only marked by the immediate effects of fire, but also reconfigured by long-term dynamics of vulnerability and risk. The reconstruction of homes and public spaces, far from mitigating the danger, often reproduces it due to inadequate planning, the continuation of previous urban practices, and reliance on infrastructures that, despite being renewed, retain elements of fragility. Additionally, the paper addresses how 2024's wildfire continues to be present in the memory of those affected, who live with the traces of a traumatic event that persists both in their psyche and in the rebuilt landscape. This presence of fire, in infrastructure, in social memory, and in the ways it produces knowledge about the relations that constitute a social situation, generates a "phantasmagoria" that redefines the community's relationship with risk, space, and time, creating a perpetuation of the disaster that manifests across temporal regimes.

Fire in settler politics: joint colonization by Old Mennonites and Interculturales in Bolivia

The Lowlands of Bolivia burn annually, consuming millions of hectares of forest and grassland. In the Amazonian regions of the Santa Cruz and Beni departments, nearly ten million hectares were affected by fire in 2024, approximately 60% of which were forested. Studies indicate that large-scale monoculture plantations and campesino communities established on state-owned land are the primary drivers of these fires (Tierra 2024). Within the context of settler colonization led by

conservative Mennonites, I explore the role of fire in opening previously inaccessible land for cash-crop agriculture and establishing permanent colonies. Their presence in remote areas attracts the attention of peasant and indigenous migrants from the Highlands of Bolivia, known as Interculturales, who view the Mennonite pioneering endeavor as an opportunity to claim fiscal land. Grounded in ethnographic research, I focus on fire to draw attention to the shifting power relations between Old Mennonites and Interculturales. I highlight their interdependence and collaboration in frontier practices, challenging narratives that merely depict Mennonites as reclusive and autonomous agrarian communities. In doing so, I reflect on how fire functions as a vehicle for land occupation, territorial claims, and land use transformations.

4640 Agrarian Hauntings: The Ghosts of Agricultures Past and Agricultures Yet to Come

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Galerie 4

Type: Oral Presentation Session

Agricultural systems are at a peculiar moment today. Radical changes have unfolded recently enough to be within memory. Globally, many producers can still recall what their families' livelihoods were like before, for example, the world became majority-urban, farming became something to optimize through data, or farmland became something in which to invest rather than plant. Simultaneously, the accelerating frequency of severe weather events, warming temperatures, evolving agri-tech, and looming trade uncertainties portend more sea changes within producers' own lifespans. On one hand, the ghosts of agricultures past haunt today's rural livelihoods through remembered histories, traditions, or habits that may be newly awkward fits for contemporary conditions of production. On the other hand, anticipated near-future agricultural realities also depart starkly from today's agrarian practices. For example, crops that reliably germinate at one latitude are likely to soon falter, subsidies and open markets that support (however tenuously) rural livelihoods may soon be eliminated, and salination and changing water levels may reconfigure fishing possibilities. These anticipated ghosts haunt agrarian settings as well. This panel combines anthropology's powerful history of studying agrarian change with interdisciplinary and mixed-methods approaches to consider how these "past and future ghosts" are reconfiguring agricultural livelihoods and landscapes.

Agrarian communities around the world have long faced historic manipulations and upheavals from forces including colonization, globalized trade flows, and agricultural industrialization.

Such powerful trends are frequently framed as fundamentally remaking how humans engage with, relate to, and gain sustenance from their ecosystems. Yet agrarian practices are notoriously "sticky:" scholars have predicted the demise of peasantries for over a century and still, most food is grown by peasants. Accounting for the tenacity of agrarian communities and the contexts in which

they variously persist, adapt, or collapse has long been a particular strength of anthropological approaches. Here, we seek to put these insights into generative conversation with methods and ideas from other disciplinary approaches to understanding agricultural change and agricultural futures.

We ask: What past practices are remembered and which are forgotten? What imagined agri-futures are celebrated and which are feared? How do not only practices, but also the meanings they carry, change across mid-range time scales? How do diverse producers navigate their livelihoods in the face of such whiplash? What are the wide-ranging effects of naming certain practices 'the future of food'?

Presentation(s): Commodity Gardens: Uprooted Trees and the Reshaping of Turkey's Olivescapes

Uprooted olive trees, shaped as macro-bonsais, sitting in steel pots, are on sale in thousands in western Turkey, revealing layered transformations in the country's 'olivescapes.' These centuries-old specimens, pruned into ornamental forms for malls or poolside displays, exemplify a shift from farmland staples and family heirlooms to high-end commodities. Their altered trunks, lacerated branches, and encased roots reflect a ghostly and ghastly political economy where olive cultivation becomes entangled with extractivist dispossession, capitalist expansion, and ecological change. Approaching these olive trees as 'lively commodities,' objects whose market value stems from their vital status, I ask which aspects of life are commodified and through what processes, at this moment of transformation of olive farming in Turkey. Standing well alive but as ghosts of former agricultural practices, these trees allow analyzing the broader interplay of policy, labor, and cultural imagination in these evolving olivescapes.

Abandonment as Haunting in Olivicultural Sicily

Drawing on 10 years of ongoing research, this paper takes up the case of olivicultural landscapes on the Italian island of Sicily, and their abbandono, or abandonment. Young people in particular leave Sicily for so-called "greener pastures" in the north or abroad, seeking social and economic opportunities. Sometimes, leaving means leaving the land tended by others; other times, it means

leaving the land untended, abandoned. Abandonment became an ethnographic object: it was a register used by participants to discuss the interwoven influences and factors that compel people to leave, leaving an agricultural livelihood and a particularly situated place comprised of social and other relations between people and a whole host of non- and more-than-human entities. Abandoned agricultural landscapes are material formations marked by the ghosts of farmers past as well as by the spectre of investors present and future. Absence is rife with presence, as the absence of the next generation on the land opens the door for multiple possibilities: for investment in the form of foreign capital or expatriates seeking a new life, for a less human-controlled landscape and so the presence of lifeforms that were previously discouraged or uprooted for, in the words of some, ruin. But these are living landscapes, rife with the dynamic tensions and contradictions of life, both biological and socioeconomic, and death. I consider these tensions using the frame of abandonment as a form of haunting.

Presenter(s): Amanda Hilton

Future Ghosts on the Land: Farmer Responses to Suitability Modeling and Predicting Crop Absence

Agriculture emerges at the intersection of overlapping biophysical, technological, cultural, and political-economic forces, yet most contemporary efforts to project future agricultural systems change focus narrowly on the role of biophysical conditions. This paper presents early results from and methodological reflections on a participatory modeling project that seeks to address this weakness. The project unites "big" data science with "deep" social science to, first, project near-future crops in Ohio, Nebraska, and Georgia under anticipated climate changes, second, invite food system stakeholders to iteratively respond to their state's naive models, and third, convene a strategic convergence event where updated model projections that integrate participant feedback are employed as boundary objects to facilitate the co-creation of new imaginaries and strategies towards more desirable agricultural futures. A key research moment thus occurs when diverse farmer participants are presented with the naive model's near-future predictions for their region's cropscape; often, cherished crops are projected to become less suitable, and less-familiar crops, more suitable. The paper analyzes producers' responses to these "future ghosts" haunting their farms and regions, explores the areas of consensus and disagreement between and among producers and agricultural experts when considering these models, and reflects on the practice of bridging research disciplines.

Presenter(s): Andrea Rissing

Neglected By Whom? Utilized How? "Neglected Crops" as the Future of Food

The discourse of the "neglected and under-utilized species" (NUS) developed in the late 1970s as a response to the excesses of the Green Revolution. The NUS paradigm suggests that species that have received relatively little attention from research institutions may actually be powerful tools to help us confront some of the most pressing challenges of our time, such as malnutrition, poverty, and climate change adaptation. While this discourse remained relatively fringe in international development circles for decades, starting in the 2010s, major international organizations began

promoting NUS and investing in their "utilization." This presentation draws on the story of quinoa's transformation from bonafide NUS to global commodity to think through the complexity of promoting "forgotten" crops as the key to the future of food. For whom and what purposes should these crops be "utilized"? Who gets to decide? And how can we think about contradictions between different visions of these crops' futures? The presentation supplements discussion of ethnographic research on the quinoa boom-bust with other cases to think through different NUS trajectories.

Presenter(s): Emma McDonell

(Re)creating Louisiana Farm Traditions on Haunted Lands

Throughout rural Louisiana, smallholding Black and Creole farmers persist among large-scale, mostly white farmers who demand most state and federal resources. These farmers endure the legacy of a racial plantocracy that continues to shape how farmers gain access to agricultural knowledge, support, and relief. Within this space, some farmers have sustained their farms through familial and communal supports based in Louisiana's abundant ecosystems. Yet, recently, these farmers have noticed shifts in weather patterns disrupting their tenuous existence. Changes in rain patterns have forced many to use irrigation to maintain crops and animals. Devastating extreme weather events, such as strong winds, floods, droughts, increased ice storms, tornadoes, and more intense hurricanes threaten their annual production. Despite combined social, economic, and environmental pressures, many farmers are committed to what they consider to be their heritage as agriculturalists. For many, farming is not simply an occupation, but an identity and way of life. This heritage, however, is a mutating tradition, responding to the haunting of an oppressive past and adapting to the specter of an uncertain ecological future as farmers shift practices, produce, or land. This paper draws on interviews with smallholding farmers facing climatic shifts to understand what aspects of farming are essential to their way of life, what they change in response to past and future pressures, and what can be let go.

1892 Alternative Cosmopolitanisms in Transnational East Asia

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Studio 4

Type: Oral Presentation Session

As the world becomes more multipolar in the twenty-first century, diverse forms of transnational mobility are resurging. Alongside inter-Asian and South-South flows, new East-to-West migration trajectories are reshaping social life across borders. In this context, historically marginalized or unsettled communities are developing alternative forms of cosmopolitanism that challenge and subvert hegemonic modes of belonging, identity, and citizenship. Moving beyond the colony-

metropole dyad, this panel investigates how these alternative cosmopolitanisms emerge from and shape resurgent flows of people, discourses, labor, and media.

Drawing on fine-grained ethnographies, this panel explores diverse case studies across transnational and global East Asian contexts from the perspectives of anthropology, ethnomusicology, and environmental studies. Papers examine the marketing of cosmopolitan food and ethnic tourism in the Sino-Tibetan borderlands; shifting gender roles and moral economies among Hong Kong migrant couples in the UK; intimate labor and the emergence of a transnational Chinese-run sex industry across Kenya, Vietnam, and China; and vernacular musical appropriations of "Chineseness" in Kenyan gospel-reggae performance.

Key questions include: How do non-dominant practices of identity, kinship, and community shape alternative forms of cosmopolitanism? How do these practices challenge normative narratives of globalization and national belonging? What roles do emergent mobilities play in shaping these new forms of cosmopolitan personhood and vice versa? What roles do race, gender, and labor play in shaping these new forms of cosmopolitan personhood-and how do they emerge from them? How can ethnographic methods capture the complex lived realities of transnational mobilities, entrepreneurial strategies, and mediated imaginaries?

This panel moves beyond Euro- and elite-centric perspectives on cosmopolitanism and mobility, highlighting the grounded and improvisational forms of inter-Asian and South-South modern selfhood that arise in borderlands, diaspora, and sites of informal cultural production.

Presentation(s): New Cosmopolitan Foods, Tourism, and Dining in the Sino-Tibetan Borderlands: The Case of Salmon and Trout Farming in Shangri-La

This paper explores the trend in Southwest China of marketing transnational and cosmopolitan food products and tourism to imbue them with an ethnic Tibetan identity. The research takes up salmon farming and rural restaurants as an illustrative example of this marketing process. In doing so, I analyze the recent development of small-scale salmon farms built around tourism promotion in Southwest China's Shangri-La region located within the historical Sino-Tibetan borderlands on the margins of these two social spheres. While the production of salmon is typically associated with locales in Europe, Japan, and North America, it is foreign in China and Tibet with salmon as an introduced species and no nearby oceans, which are typically associated with the fish's identity. Due to its cosmopolitan marketing appeal among upwardly mobile Han Chinese tourists, what local farmers are cultivating should be considered Steelhead or Rainbow trout given it is not migratory in saltwater. However, from a point of exoticism and Tibet being associated with green

and healthy living, salmon production fits within the framework of the Chinese state's and corporate attempts to exoticize and market Southwest China and Tibet as locations of pristine and healthy items for touristic consumption. The research also focuses on the ways in which the locality of salmon production is being bound together and melded with its marketing as something distinctly local, ethnic, and transnational/cosmopolitan.

Presenter(s): Brendan Galipeau

Cosmopolitan Migrants: Shifting Gendered Roles and Moral Shock of Middle-Class Hong Kong Migrant Couples in the UK

This paper examines the shifting gender and moral dynamics of middle-class, heterosexual, married couples who migrated from Hong Kong to the UK for their children's education in the post-2019 era. Migration has nevertheless unsettled their gendered roles in a nuclear, urban, middle-class, and dual-income familial setting in an East Asian city; migration has thus created tensions but also new negotiating space of gendered expectations and responsibilities. Based on pilot fieldwork in London and Manchester in 2024, I found that these migrant couples observed and gossiped about other couples' changing gendered division of labor; and they framed these changes as moral shocks contingent upon migration. For example, these moral shocks include the shift of the breadwinner role from husband to wife, and the husband leaving his wife and children in public at nighttime. I juxtapose these insider framings of moral shocks with a feminist critique of patriarchal dynamics to reveal two emergent sets of entanglements between migration and gender. First, migration has created openings for the restructuring of gender, family, and economy. Second, however, the moral economy of these novel arrangements are scrutinized in a close-knitted diasporic community, which might foreclose rather than facilitate these openings. The paper explores the implications of this emergent moral economy and its backlashes for gendered understandings of cosmopolitanism forged in the transnational migration nexus.

Presenter(s): David Kwok Kwan Tsoi

Transnational Cosmopolitan Sexual Culture: Sex, Work, and Business Across Kenya, Vietnam, and China

This presentation explores the transnational sex industry across Kenya, Vietnam, and China. In 2024, Vietnamese and Chinese female sex workers (VCFSWs) were flagged by the U.S. Department of State as forced laborers in Chinese so-called sham businesses and entertainment establishments emerging in the wake of the BRI (Belt and Road Initiatives). In 2018, eight CFSWs were arrested and deported as trafficked victims by the Kenyan Immigration Department. Opening the black box of this increased international scrutiny, I investigate business operations and labor structure of Chinese nightclubs in Kenya to tell us about transnational practices of gendered and racialized labor as well as a new cosmopolitan sexual culture emerging under Chinese immigration to Kenya. Based on my 15-month multi-sited ethnographic fieldwork, I argue that these businesses are neither built on sex trafficking nor forced labor. Rather, they involve VCFSWs and Kenyan workers' daily negotiations between their cosmopolitan aspirations, cross-cultural differences, and

hierarchies of race, gender, and nationality. I contend that the burgeoning transnational sex industry reflects shifting business opportunities in non-Western economic centers with greater migratory flexibility, urban modern environment, and changing trans-local socio-economic coalitions.

Presenter(s): Xinlei SHA

Reorienting China in Kenya: The Vulgar Cosmopolitanism of Jabidii's "China (Chinku)"

This presentation examines the 2018 music video "China (Chinku)" by Kenyan gospel-reggae artist Jabidii to explore how an imagined China is vernacularized in Kenya. The track features a dancehall beat over which Jabidii delivers multilingual verses in Swahili, English, Jamaican Patois, and Mandarin. Framed as an imagined dialogue with a Chinese pastor in Nairobi, the lyrics foreground salvation as a moral imperative overriding the pursuit of wealth, material goods, and martial arts prowess. Visually, the video depicts Kenyan actors in Chinese martial arts costumes striking kung fu poses. Drawing on interviews with the artist, ethnographic research in Nairobi, and media analysis, I conceptualize "China (Chinku)" as an instance of vulgar cosmopolitanism—a mode of cultural production that appropriates and recontextualizes global symbols in exaggeration, humor, and parody to comment on local social, spiritual, and political conditions. The video does not aim for cultural authenticity but mobilizes stylized "Chineseness," circulated through informal movie halls in Kenyan settlements, as a visual and sonic resource for gospel witnessing. This illustrates how Kenyan artists engage with China not just as a geopolitical force but as a malleable cultural signifier embedded in the vernacular aesthetics of urban youth. Ultimately, this case reveals how global imaginaries are remixed through performance, asserting moral authority and local belonging amid shifting Africa-China relations.

2894 Anthropology in Action: Cultivating Civic Literacy and Social Engagement

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Studio 3

Type: Roundtable/Town Hall

In this roundtable, participants will discuss how four-field anthropology fosters an informed and engaged citizenry by integrating holistic inquiry, critical thinking, and methodological rigor into teaching, research, applied practices, and public service. The roundtable participants bring diverse perspectives both from within academia—representing different institutional statuses (e.g. adjunct, tenure track) in public and private universities that serve varied geographies/demographics— as well as K-12 education, healthcare, and policy both in the public and private sectors. Drawing on the participants' varied perspectives we will explore ways to expand anthropology's impact, highlighting how biological, cultural, linguistic, and archaeological anthropology can all contribute to civic literacy. We will address strategies for making anthropology accessible for non-majors and

interdisciplinary students, ensuring its applicability to general education and public engagement. Emphasizing anthropological praxis as transferable skills, we will explore their value in policy, business, healthcare, education, activism, and more. This roundtable will invite the audience to engage in this discussion, allowing scholars, educators, and practitioners to share insights and strategies for positioning anthropology as a foundation for the critical inquiry and social responsibility needed to foster an engaged, equitable, and democratic public sphere.

1916 Architectures of Spectrality I

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Gallier AB(4th fl)

Type: Oral Presentation Session

The discipline of anthropology, in many ways, was built on spectral grounds. It is a form of inquiry that involves itself with ghosts and asks: how do societies narrate the ineffable, and what categories of social thought cohere around the interaction between living and dead things? (Ochoa 2010; Stevenson 2014; Meyers 2021; Taussig 2025). Put differently, anthropologists have long involved themselves with-and thought with-phantasms, ghosts, hauntive obsessions, and spectral projections. Additionally, the discipline's enduring tether to the colonial requires that contemporary anthropologists continue navigating the spectral materiality of fieldwork; i.e., how the event, the aftershock, and (un/ mis)memory of violence is made apparent in physical space. This panel proposes to take up the question of the spectral, otherness, and space. We have termed this convergence "the architecture of spectrality." In doing so, we attempt to answer a simple, yet vexing question: How do we sense that we are haunted, or in the presence of ghosts-materially and in space? And, in order to recognize the ghost, must you be political, cultural, or personal kin?

By tethering our collective meditation to architectures of spectrality, we point to the conditions of (dis)appearance in hauntings. In an echo to critiques of archival power (Derrida 1994, 1996; Hartman 2008, 2019; Arondekar 2009; Stoler 2010), we consider how collective memory and its absences take shape in specific places, such as streetscapes, toponymy, memorial plaques, online spaces, and archival institutions. Etymologically, architecture involves authoritative discourse

(arkhe) and the techniques of building (tekton). Thus, the panel considers how spaces of ghostliness are constructed and by whose authority, as well as the ways space may withhold, retain or foreclose access to certain forms of memory.

Finally, the panel coheres around a practical question of writing and interpretation- which situates ethnography itself as another form of architecture. How is it even possible to put the spectral into writing on spectrality? How do we approach the spectral when faced with its obliqueness and opacities? What is the method of finding, feeling, knowing, and caring for the ghosts and phantasms that alter a place with affective density? Our presentations will demonstrate the various ways an ethnographer may become ghostlike, and thus attentive to appearances and absences in order to know or learn. In situating the ghostly as necessarily material-in its physical trace as well as its narrative recounting-our methodological meditations consider how the architecture of spectrality may reveal the sociospatial.

Presenter(s): Ana Croegaert, Field Museum, Margaux Fitoussi, University of California, Irvine, Robert Desjarlais, Sarah Lawrence College

Presentation(s): “This Garden is an Archive”

Spectral experiences gesture towards particular shapes and sets of relations that resonate in the moment of encounter. This paper explores such moments as traces of human life that are given space in Solitary Gardens, a social sculpture abolitionist project directed by artist jackie sumell. In creating and maintaining the solitary gardens, modern technologies of hierarchical separation and extraction that upheld plantation economies and generate today's prison industrial complex confront ecologies that prioritize relational connection and reciprocity through the exchange of personal story. I draw on my ongoing research with this project since 2018 and engage the gardens as an archive of storied relations that might re-shape perspectives on American modes of incarceration and their aftermath.

Presenter(s): Ana Croegaert

The Architecture of Jinn

For centuries, Jews and Muslims in Tunisia inhabited a shared moral and cosmological world—one animated by overlapping understandings of possession, exorcism, and the presence of jinn. This shared world came to an end with the mass emigration of Jews to France and Palestine-Israel in the latter half of the twentieth century. Today, fewer than a thousand Jews remain. This presentation interrogates the entanglement of spectrality, space, and alterity in postcolonial Tunisia through an ethnographic account of a Muslim photographer and his modest studio in downtown Tunis. In the near-total absence of a contemporary Jewish community, the photographer's affective and imaginative investments in Jewishness—especially the Jewish dead—reveal how absence becomes a medium of presence. In this configuration, the Jewish spectral Other is an intimate native Other. Through the photographer's relationship to the Jewish dead, we see not only an ethics of memory

but a mimetic entanglement, as the anthropologist Michael Taussig might describe it—where alterity is inhabited rather than observed, and haunting becomes a mode of intimacy rather than rupture. This paper asks: What is the relationship needed for haunting? Is otherness a condition for the haunting and, if so, who may that other be? What gives the dead purchase over the living, especially when that involvement does not fit an expected taxonomy of intimacy?

Presenter(s): Margaux Fitoussi

Ghost Walk: Filmic Specters of Walter Benjamin's Life Death

With this presentation, I discuss a film project that I am currently undertaking, on the life and death of German philosopher and writer Walter Benjamin (1892-1940). In drawing from Benjamin's writings and archival artifacts drawn from the personal and historical contours of his life, I engage with intersecting aspects of Benjamin's life through the medium of digital filmmaking, set within a palimpsestic expanse of place, memory, history, and political-cultural formations. For the purposes of the current presentation, I will show segments of a film that I am currently crafting, titled "Ghost Walk." This film focuses on the final days of Walter Benjamin in France and Spain. In tracing out Benjamin's efforts to cross the Pyrenees by foot in late September 1940 in fleeing Nazi-controlled France for safe passage through Spain, and then giving filmic thought to his final hours in Spain, I seek to show the ways in which the various landscapes, remnants, and trace formations of Benjamin's passage in this border region reflect significant spectral motifs invested in the places, architecture, and traceworks of Benjamin's life and death through interwoven strands of time and memory, actuality and virtuality, appearance and disappearance. In all, this project considers how one might invoke a sense of the spectral and ghostly reverberations through time through the prismatic medium of film. The very medium of film entails an architecture of spectrality.

2814 Bearing "freedom" in dark times

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Galerie 5

Type: Roundtable/Town Hall

Liberty girds the principles of liberalism, in the classic sense in which Enlightenment thinkers set out normative notions of rights within the context of the logic of freedom vs. tyranny. In this roundtable, we ponder concepts of liberty in the current global moment of growing authoritarianism-of illiberalism. Twenty-first century authoritarianism arrives under a banner of freedom; but how much freedom would people trade for stability, for security-whether spiritual or psychological or physical, whether national or collective or individual? Who and what would they sacrifice in the pursuit of lost greatness? As Latin/Americanists and Caribbeanists, we consider liberalism itself a cultural category, a way of knowing the world, with many vernacular variations from south to north. We know from the start, liberalism promised "freedom" only to propertied white males, as Jamaican philosopher Charles Mills reminds us. The metaphorical social contract

functions, he argues, as "an intrawhite agreement that-through European expansionism, colonialism, white settlement, slavery, apartheid, and jim crow-shapes the modern world." Indeed, we know that notions of freedom are always socially and culturally circumscribed, politically policed, legally cordoned. In this context, how to imagine freedom today? "I have met only a very few people-and most of these were not Americans-who had any real desire to be free," James Baldwin writes in *The Fire Next Time* (1963) at the height of the Cold War. "Freedom is hard to bear. It can be objected that I am speaking of political freedom in spiritual terms, but the political institutions of any nation are always menaced and are ultimately controlled by the spiritual state of that nation." This session's opening gambit is simple. But right now we believe it is crucial. Can discourses or beliefs about freedom be made into tools, or even weapons, to resist authoritarian power? What role does this word, embraced by fugitives yet proclaimed in the declarations of slaveholders, have in actual liberation?

1864 Breath of Chaos I– Plant, rhythm, fungus, animal, elemental or word dust ... oh cosmodelia.

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Maurepas (3rd fl)

Type: Oral Presentation Session

Plant pollen and fungi spores stir in the air with word and elemental dust we inhale and partake in the textures we exhale at varying rhythms, intensities, speeds and slowness. We can never tell when such a mixture suddenly overwhelms, takes over, lets something new emerge that perdures. In anthropology we often call these events "telling moments" or "serendipity", typically taking us by surprise. Artaud's "breath of chaos" is a force, a presence or an order that elaborates in a mystery or chaos beyond things; "... this sort of vital hunger, changing, opaque, whose currents sweep across the nerves, and battles with the intelligent principles of the brain. And these principles, in their turn, recharge the pulmonary breath and confer upon it all their powers" (2003[1979]:16). To reach this chaos or what he also calls the Marvelous of conscience, Artaud considers a cactus (Peyotl), to which he was initiated during his stay with the Tarahumara (Rarámuri) in Northwest Mexico, can indicate "where it is and according to which concretions of an atavistically repressed and obstructed breath the Fantastic can give rise and renew its phosphorescence and powdering in

consciousness" (ibid: 38). It would be the breath of all poetry which pushes the hand to draw or write, and the same vegetal, by indicating the right way, can diminish the chances of falling into the obscure of a sensation that leaps out. We thus wish to retrieve the ancient Greek meaning of "psyche" which refers to life or its breath, thus expanding this sort of ode to "psychedelia" in as broad a sense as possible which brings it closer to something we might rather call "cosmodelia".

Following Deleuze, sensation is vibration, and when it is in direct contact with a vital power that exceeds every domain and traverses them all, it can feel like a wave passing through us; a unity of the senses (sense as event) which can be felt like a fall or a rise. This vital power he calls rhythm, more profound than vision, hearing, etc. (Deleuze 2002[1981], p.47). "We can seek the unity of rhythm only at the point where rhythm itself plunges into chaos, into the night, at the point where the differences of level are perpetually and violently mixed" (Ibid.: 44). It is not that order is engulfed by chaos, yet chaos itself, or the power to affirm it which happens to us (Deleuze 1968). It is irrational and more powerful because of it; "a wave in the mind, a rhythm far deeper than words, that one must recapture and set working, find words to fit" (Woolf 1926 in Le Guin 2004: 1). This might modify a well anchored idea that 'Any classification is superior to chaos...' (Lévi-Strauss 1962: 24), since it brings us closer to what is going on in experience relevant for anthropology. We invite contributions done in a single breath, a wind, a performance, stretching out from a singular encounter with a "ghost", attending to rhythms without measure, or in other words to the potentials of life to renew itself.

Presentation(s): Articulating sui Conjuring (In)Security: Shamanic Registers, More-than-merely-Human Conspiracy, and Panopticonia in a Spirited Homeland

This presentation examines territorial mastery in light of the dynamics inherent to the shamanic landscape of Duha homeland. Drawing on my own experiences of more-than-merely-human spiritual enmeshment in the taiga, I portray how communication, landscape and weather are registers of Duha shamanism, and how engagement with them relates to security and insecurity. This exposition is done by outlining the following facets of a unified complex: how shamanic talk affects perceptions and actions within the shamanic landscape; the varying (un)predictability of outcomes of effects on shamanically emplaced perceptions and actions; the ontological diversity of spiritual potencies and places within Duha homeland; intercourse (or mitigation thereof) between different potencies and qualities of place; and measures taken to conjure security and thus territorial mastery in the volatile taiga under the eternal sky. Developing the concept of "panopticonia," I make several interrelated arguments: the ontological nature of places in the taiga is ambiguous and subject to change; security is enabled by place-appropriate behaviour and

communicative worship, which are facilitated by effective perception, interpretation and communicative articulation of different places and spiritual potencies; perceptions and actions within the shamanic landscape are affected by shamanic talk among humans and in conspiracy between them and nonhuman spiritual potencies...

Chaosmic Tree Thresholds - From African arboreal vitalities to Nordic larch resonance

According to the playwright and writer Antonin Artaud, certain plants can point the way to the "breath of chaos/souffle du chaos"; to a presence or order that works itself out in a mystery, beyond things, running through the nerves with its discharges and enter in struggle with the intelligent principles of the head to inspire a new breath. The philosopher Friedrich Nietzsche, for his part, considered that, in the face of the overwhelming question of "how to live", there is much to be learned from plants, which are deeply rooted in the soil without being in any way limited in their expressiveness. Suspended in the air and firmly anchored by its fibrous roots, capable, like its branches, of growing in all directions, larch, in its supple yet tenacious lightness, in and beyond my yard, offers a vanishing line that persists through the textures of this writing. The spiritual and cosmological relationship first passes through the body; a matter that contracts in the imagination, a fold upon a fold that leads elsewhere or nowhere, a sliding from one through the other in the breath, wind and rhythm of a becoming-larch whose creative potential takes shape through a kind of vital enchantment that helps navigate through the surge of the unforeseeable. How this occurred during a fieldwork course in Cameroon turned virtual due to the pandemic constitutes the thread to both ancestral and contemporary healing traditions that stem from vitalities of singular venerated arboreal presences.

Chasing the Herbal Dream: mixing, dreaming, vegetating toward cosmodelia

Emerging from ethnographic engagement in a herbal apprenticeship in eastern Canada from 2019-2022, this work explores the role of dreaming and dreams in traditional western herbalism. This herbal tradition, understood here to be broadly encompassing and syncretic, is comprised of both lay and professional practitioners who often blend some degree of esoteric, experience-based, and scientific knowledge about the use of herbal medicines. Within this ranging set of practices and philosophies, I noticed that dreams emerged in discussions, texts and apprenticeship experience as either profound opportunities to connect with medicinal plants, or, in a clinical context, as having potentially diagnostic implications. Through exploring these interactions with dreams and dreaming in my herbal apprenticeship, I hope to dig into the complicated mattering of dreams as mixture (Bergson 1911 & 1914). Here Bergson evoked the dream as based both in the sensory stimulus in which our sleeping selves are ensconced, and our own unconscious embellishments and interpretations (Bergson 1914: 23). Despite such reasoned understandings of what constitutes a dream, he also acknowledged them as a "threshold of the mystery", evoking those "secret depths

of the unconscious" (ibid 57). Here dreaming opens potentialities for vegetal interaction; after-all, just as "much of our psyche is swathed in the unconscious", so too is this "the medium of vegetal existence" (Marder 2013: 176).

Learning to Rot: Thinking with Fungi, Decomposition, Dispersal

Encounters with life are spore-like: bursting from their source, they drift through the air in all directions, until they land on a random substrate where conditions are ripe for germination. Each breath we take and each act of living brim with these diverse and invisible spores which contain endless potentialities for fractal proliferation. This paper explores the prospects of a mycelial anthropology. Thinking along with saprotrophic and mycorrhizal fungi, fungal anthropology takes on a different sort of consciousness—one in which mycorrhizal ontologies blur distinctions between the self and other, exceptional performances in relational becoming and shared agency. Fungi push us to think beyond rationality in anthropology as they confuse categories and decompose dominant narratives and knowledge gathering processes, not only rejecting the rigid, wood-like institutional structures, extractive knowledge production methodologies and colonial histories of anthropology, but literally rotting them from within. Fear not, however! For in this rich compost of disciplinary decay, there is renewal, possibility and radically interdependent transformation: an anthropology that grows mycelially with and despite the worlds it inhabits. Through a series of ethnographic vignettes of human-forest entanglements, this paper digs into the dirt of the question: what would happen if anthropology learned to rot?

Presenter(s): Marie Firth

Silky Stories : Coping with Chaos in Brazil

Silk fabric is undeniably a "living heritage" as well as a "living object": epistemologically, the question arises of how to keep the living alive. How can anthropologists rethink structures and abstractions and get as close as possible to empirical and biological realities? Are human, and non-human, metamorphoses an interesting case study in this perspective? Do the life cycle of the silkworm, the economic cycle and the growth cycle of the mulberry tree have anything to teach us about the breath of chaos? About the impermanence of life? Like the work of Anna Tsing (2015:21), this presentation focuses on "activating interspecific entanglements". Indeed, Tsing's matsutake, but also silk, lends itself particularly well to the exercise and makes salient the connection between economy and environment that is also: "the human history of wealth concentration that makes both humans and non-humans resources in which to invest" (Ibid., 37). Georges Canguilhem (1949) for his part, develops a profound reflection on the relationship between man and his environment. He sees the environment as a dynamic concept, in which the organism and its environment are in constant interaction. Canguilhem insists on the "normativity" of living beings, asserting that organisms are not passive, but actively adapt their environment to meet their needs. This anti-deterministic, perspectivist perspective underlines the importance of creativity and invention in the lives of living beings.

A post-amazonian thermal intensification: refreshing heated anthropo(s)cenic worlds through winds

Artaud's « mots-souffles » or « windy/blow-words » refer to a kind of organic and elemental excess that overflows any language. Just as plants as whole wor(l)ds exceed their reduction to pills and active alkaloids, the entire commitment of breathing and spitting into meanings decapsulates bodies, words and semiotics. A'i Cofán shamans and wind-instilled

anthropologists partake that intuition in the in-betweenness of a realm dominated or subsumed into plant pregnancies (a term inspired by Gilbert Simondon). In a world marked by different kinds of violence, drug trafficking and ecological metamorphosis, the intoxicating and cosmological powers of yajé (B. caapi), Coca (Erythroxylum coca) and

tobacco are modulated and transmitted through windy gestures, sounds and enigmatic more-than-words in order to refresh the thermalirritations of anthropo(s)cenic violences and changes. Thus, the healing/refreshing of heated territories and relations is inseparable from the healing of bodies through the expansiveness of human-plant breathing.

The wor(l)ds (in multiple dimensions) are thus somehow re-configured through wor(l)dly-breathing, translating a living cosmogony into a consuetudinary generative shamanic task. It is ultimately in the knowledge of a "science" of the plant that the A'i Cofán can continue to inhabit their wor(l)ds, despite the chronic colonial and anthropo(s)cenic transitions that they must undergo on a daily basis living in a transmutating and disintegrating jungle.

2956 Classes of '25: Everyday Formations of Socioeconomic Class in the US

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** MGB - Salon C

Type: Oral Presentation Session

From W.E.B. Du Bois to Mike Davis, American interlocutors of Marx have observed that most Americans do not speak about their relations to labor and ownership using the Marxist categories of proletariat or bourgeoisie. Yet, the ways Americans live, socialize, identify, and mobilize collectively have always been entangled with how they understand their and others' relationships to labor and ownership. Recent developments, such as the turn of more low-income Americans to the Republican Party and high-income Americans to the Democratic Party, have highlighted the necessity of improving scholarly understandings of how different Americans conceive of their socioeconomic position and mobilize politically based on class. These developments have also

highlighted the insufficiency of limited available class terminology, like "working-class" or "middle-class", to describe the multiplicity of different ways Americans experience social class.

This panel brings together five ethnographic papers describing how specific localized groups of Americans experience class in everyday life, and how these conceptions inform political action. The papers describe ethnographically how different conceptions of socioeconomic class manifest in different economic contexts and become socially legible and meaningful through speech and habitus. Papers consider 1) the vernacular categories Americans use to speak about class status 2) the different relationships to labor, e.g. manual, white-collar, or care work, or capital ownership, e.g. home, business, or asset ownership, shaping local configurations of class, 3) links between local class configurations and other social positions including race, gender, migration status, sexuality, or geographical location, 4) how local class formations become visible and meaningful through collective forms of habitus including food, fashion, architecture, and speech, and 5) how local class formations inform political action. The panel includes scholarship describing emerging class formations, e.g. Gabriela Olmos Rosas's paper on Latino migrant workers in Alaska, and scholarship describing how older class formations are transforming in the current period, e.g. Ellen Kladky's paper on white Appalachian mining communities.

The panel will collectively reflect on the following question: can we reconcile Americans' everyday experiences of class with Marxist ideas of working-class and bourgeoisie, and speak meaningfully of an American working-class and bourgeoisie? Or does the fractured picture of American classes demand a new language of labor and political action that departs fundamentally from Marxist terms?

Presentation(s): Class Amuck: Class Dissonance, Identity, and Change in Appalachia

In Appalachia, the figure of the coal miner—soot-stained, red-bandanaed, implicitly white and male—looms large over discussions of class. Despite its persistent mythos, this figure feels archaic, a relic of a time when class was a simple binary between owners and workers. Now, the compass points of class identity are scrambled as new types of work and new household financial products have upended both the structural and the social parameters of class. In light of these changes, familiar industrial class categories have transformed but not disappeared (as is sometimes assumed). Indeed, the figure of the miner as an avatar of uncomplicated working-classness increasingly fails to deliver even for miners themselves. This paper explores the sense of "class dissonance" that emerges as working West Virginians try to make sense of their classed

identity and experiences. In everyday life, people rely on taken-for-granted expectations that certain markers (like income, personal style, occupation, politics, education, and race, to name a few) will reliably cohere into recognizable categories. When they don't, it can be profoundly destabilizing, especially in a place where being working class is central to regional identity. This paper charts the contours of class dissonance to examine the relationship between class and identity as industrial class categories are reshaped by new vectors of socioeconomic stratification.

Haunted Brownfields: Class, Deindustrialization, and Post-Post-Fordism in the United States

Nineteenth-century theories of capitalism emerged via an analysis of the plight of the "industrial working class." Our contemporary moment is built on decades of economic transformation in which finance has decentered industry, while economic inequality and precarity has radically increased. These changes require rethinking how class works within current capitalism. This paper explores the remaking of class subjectivities in a former steel mill region of the industrial Midwest. Historically, Southeast Chicago was home to a patchwork of white (often Eastern-European), Mexican-American, and Black steel-working families. Class dynamics were mediated, first, by histories of racial capitalism in which steel mill management pitted groups against each other to counter unionization and, second, by the tendency suggested by Sherry Ortner to experience class relations through the lens of "those we wish to be like" and "those we seek to differentiate ourselves from." Southeast Chicago is now majority Mexican-American and what I call a "para-industrial" landscape - one in which largely automated industries operate alongside defunct toxic post-industrial brownfields. In short, it remains a landscape haunted by industry but without workers. Racial capitalism has now shifted to a national stage in which oligarch-funded right wing "populism" once again seeks to divide groups and preempt possibilities for alternative multi-racial populisms. With the decimation of local news sources, for-prof

Presenter(s): Christine Walley

Treading on Thin Ice: Latino Labor and the Fragile Promise of Prosperity in Alaska

Latino workers have migrated to Alaska driven by employment opportunities, lured by the promise of economic prosperity in the State's extractive economies. However, upon arrival in the Circumpolar North, they often encounter an unfamiliar economic landscape that presents challenges, including a mismatch between the labor skills they possess and those demanded by the local market, difficulties navigating bureaucratic systems, and misalignments between their cultural values and those of the host society. Consequently, rather than securing high-paying jobs in mainstream industries, they frequently find themselves in low-wage, entry-level, or temporary positions or turn to small business entrepreneurship within side economies, thereby perpetuating and deepening the socioeconomic class gap.

Based on extended ethnographic research including participant observation and interviews, this paper investigates open and covert narratives of work among Latino immigrants in Anchorage. It explores how they make sense of their socioeconomic positioning, how their labor relations shape

class identities, and how the resulting class formations both diverge from and intersect with mainstream conceptions of class. By examining how Latino workers navigate labor and social structures in the Circumpolar North, this study contributes to understanding the evolving dynamics of class in Alaska and reflects on the prospects for labor and class-based political mobilization within immigrant communities.

Presenter(s): Gabriela Olmos Rosas

An Island of Beauty: Liberal Aesthetics and White Class Distinction on the South Side of Chicago

My paper theorizes the relationship between white liberal political subjectivity and class distinction by highlighting the role a common aesthetic order plays in both for white upper-middle-class residents of the South Side Chicago neighborhoods of Beverly and Morgan Park. White liberal residents' efforts to make the Beverly/Morgan Park area beautiful invoke an aesthetic order that distinguishes their upper-middle-class neighborhood from "desolate" lower-income Black-majority neighborhoods to their east and the "neat" but "intolerant" lower-middle-class white-majority areas to their west. By ethnographically analyzing local aesthetic projects including historic home preservation talks and development of the local art scene, I illustrate that white liberal residents see local projects of aesthetic improvement as entangled with advancing positive moral and political qualities of open-mindedness and tolerance. I argue that being a white liberal in the contemporary US is a form of aestheticization of politics, theorized by Walter Benjamin as when politics manifest as a means of aestheticized self-expression that is indifferent to structures of power or ownership. For South Side Chicago white liberals, everyday acts of making the world beautiful combine a political project of managing hate with a class project of expressing distinction from a lower-class white other. For my interlocutors, managing the ugliness of hate requires increasing the beauty of one's material surroundings.

Presentation(s): Chronotope in Drum Corps: How Ideas of Tradition Create Gendered Tensions in Drum Corps Discourse

Since its origins in youth community bands in the early 20th century, the idea of tradition in American drum corps has been closely tied to the art form's militaristic roots. Their performances, which can be seen as a sort of military pageantry, are marked by aesthetic choices in uniform design, musical repertoire, and marching choreography. In 2016, however, the Bluecoats drum corps won their first championship since their formation in 1972 at the Drum Corps International finals by performing a show that radically diverged from drum corps' historical traditions - instead of their usual military-style jackets and shako hats, the Bluecoats performers wore tight-fitting spandex and their faces were on full display for the audience to see. This moment represented a shift in drum corps competition in which older notions of sticking to tradition and upholding the status quo of performance styles were no longer the only viable way for a corps to be successful. Since then, recent drum corps performances have embraced change and drastically altered their aesthetic choices. As one would expect, this change has been met with criticism from older alumni who feel that the valued traditions of the corps they marched with are no longer being upheld.

Changing ideas of tradition in drum corps can be seen in discourse from current and previous performers, as well as from the staff and educators who design drum corps shows. Mikhail Bakhtin's concept of the chronotope can be used to help us understand how people's language use implicates them in a specific time and place, demonstrating how they participate in a recognizable discourse. As recorded through interviews in my research, which particularly examines drum corps performers' gender identity and expression, drum corps discourse communicates the existence of a historical chronotope that reflects its rigid, hypermasculine, and militaristic roots and a modern chronotope that reflects its current push towards a more expressive and reflexive social environment where notions of gender fluidity are welcomed. Chronotopes are integral to understanding drum corps discourse because they reflect how the art form functions through the performance of tradition. As people involved in drum corps discuss tradition, they position themselves somewhere within or between the historical and modern chronotopes, which has a meaningful impact on their sense of belonging in drum corps.

Diversity Funding (in) Crisis: Reframing Collaboration & Partnerships, Reflecting on Models & Strategies to Re-Imagine Sustainable Research

Researchers in 2025 are reeling from the dissolution of USAID and cuts to many funding agencies and institutions, specifically those focusing on minority populations and diversity, equity, and inclusion. What can we learn from our own discipline's history and applied research colleagues to form a strategic response that is positive, generative, and focuses on all our stakeholders' and communities' assets?

We can begin by reflecting on where we are: Where is the support within our research institutions to prioritize and facilitate the creation of Community Based Institutional Review Boards? How can we support long-term research collaborative relationships to co-identify research priorities and jointly conduct research that shares the fruits of research with the populations studied? How can we continue to support practices where local ethnic minorities seeking to create local research

projects struggle to find academic affiliations within their communities, are rarely encouraged or sponsored to establish labs there, instead they join their community's "brain-drain", taking academic appointments across the country or world?

The US reality is that locally-focused and minority scholars typically must travel to other cities, states, or countries for advanced training. Upon completion of their credentialing, they then compete against global candidates for an opportunity to live/work close to their community of origin, opposing with futility against the many departments valuing being cosmopolitan. US academics are often geographically dislocated scholars with little to no interest, stake, or incentive from the academy to understand local histories and align with local populations' or their minorities' research priorities. With widespread cuts to federal funding and elimination of research by/for/on minority populations, or projects outside of the US, and challenges to freedoms (speech, academic), now is the time for the academy to re-imagine and strategize directly with minority communities and scholars.

2025 US minority graduate students, postdoctoral scholars, and many precarious faculty are dealing with the loss of fellowships, research grants, an uncertainty whether a career in the academy is viable. If these academic colleagues are also dismissed as stakeholders when universities and research institutions create a new course of action, let such valuation be known. US Anthropologists have faced this crisis before. Several fruitful case studies provide models of positive university-community research partnerships that inspire sustainable, diverse, and inclusive research. They include philanthropist Julius Rosenwald, the federal System of Care research program, Asset-Based Community Development, as well as African American and Indigenous Community Based Institutional Review Boards (CBIRBs). Although Anthropology is but one of many fields facing cuts, we are uniquely suited to demonstrate collaboration exemplars to the academy.

Presenter(s): Gabrielle Powell

Empowering Care: How Algorithms Influence Decision-Making of Dialysis Nurses

As healthcare increasingly embraces artificial intelligence (AI) technologies, understanding their implications for clinical practice has become crucial. The integration of these technologies has prompted significant concerns regarding their influence on decision-making among healthcare professionals. This paper explores the collaboration between dialysis nurses and algorithms, focusing on how trust in these technologies can both enhance and threaten the quality of patient care. By offering insights into the evolving dynamics between nurses and algorithmic systems, this study contributes to the ongoing discourse on the intersection of technology and patient care in hospital environments, while identifying critical factors that influence clinical decision-making.

Data was collected from three dialysis centers and two hospitals in the United Arab Emirates through immersive ethnographic observations over two months and semi-structured interviews. Additionally, roundtable discussions with senior and inpatient nurses highlighted the implications of algorithm-driven technologies in their daily practice. The study examined the impact of linking

dialysis machines to electronic medical records on nursing workload, patient interaction time, and how algorithms change the nature of care in healthcare.

Presenter(s): Albina Abzalova

Equipping the Next Generation: Designing an Anthropology Program to Empower Student Anthropologists

What promise does anthropology hold for the future amid uncertain times? How can reimagining curriculum design and methodological training better equip the next generation of ethnographers? This presentation seeks to offer insight into pedagogy in consideration of these questions. Global political, economic, and social instability has forced students to contemplate their lives beyond undergraduate education and how to best contribute, thrive, and survive. This is the environment in which I am assisting in the design of a new anthropology major at a mid-size R2 university in Southern California. The confluence of attacks on diversity, equity, and inclusion with an increasingly diverse student body inform our approach in this heady endeavor. Experimentation with following students' passions and intellectual curiosity has been key in our preliminary success in generating widespread interest in anthropology. Beyond focusing on anthropological theory, history, contemporary work, and methods, we use our authority as educators to partner with our students in research agendas of their own design. Among our students, we conduct ethnographic research with communities intersecting racial, ethnic, class, gendered, and sexual diversity as we as faculty work to develop student research skills and professionalization within the field. I argue collaborative pedagogy has allowed anthropology to take on new relevance that is responsive to undergraduate students today. Furthermore, this work argues a student-centered curriculum prioritizing their growth over maintaining departmental legacy or faculty achievement is critical in determining our discipline's demand and hopefully, our longevity for years to come.

Presenter(s): Joshua Liashenko

Is Psychedelic Integration Necessary or a Western Concept?

Psychedelic integration is becoming increasingly discussed and considered as more people participate in rituals using psychedelic substances globally. While the concept is gaining ground, earlier ethnographic evidence can offer valuable insight into the ways that these substances have been used in different settings before the wide use of the concept. In this presentation, I will discuss different ways that ayahuasca experiences are integrated in the context of shamanic tourism in numerous retreats in Peru. Alluding to a lack of socially sanctioned spaces for altered states of consciousness (ASCs) in western cultures, contemporary seekers find structure and intentionality in ayahuasca rituals specifically geared towards westerners. I argue that the way that these rituals are framed assists in the integration of participants' experiences, something that was not necessary in a more "traditional" setting. I will show that contemporary ayahuasca rituals attended by westerners are designed to be liminal, transformative, meaningful experiences that aim to heal the body through emotional modulation. This framing not only separates the ritual space as liminal, but also frames the way that the experience is conceptualized by the participants,

ultimately increasing its meaningfulness. Finally, these intentionally framed rituals assist in integrating the visionary and bodily experiences of the participants.

Presenter(s): Evgenia Fotiou

Magic and illusionism in modernity: the fakir Tahra Bey and the Mental Hygiene Service of Pernambuco, Brazil, in the 1930s

This presentation explores the debate on magic, religion, and modernity based on the work of the Mental Hygiene Service of Pernambuco, in the Northeast of Brazil, in the 1930s. The Service is known in the literature of Brazilian social sciences mainly for its mediation with the Public Security Secretariat of Pernambuco in granting operating licenses to the then-criminalized spiritualist and Afro-Brazilian religious groups in the region. In addition, some of its members actively participated in the establishment of anthropology and studies of Afro-Brazilian religions in Pernambuco, through the publication of books based on field research and the organization of the 1st Afro-Brazilian Congress in 1934. In this paper, I will address a case of public action by the Service that has not been explored in the literature on the subject: the spectacle of the fictional fakir Tahra Bey, said to have supernatural powers derived from the occult sciences. Publicly accused of charlatanism by members of the Service for his magical and so-called scientific practices, and considered an "illusionist" by physicians, the fakir made headlines in local newspapers with news and advertisements about his shows performed in the city of Recife in 1933, during a tour of Brazilian cities. In the meantime, proposals for experiments were carried out not only by physicians from the Mental Hygiene Service of Pernambuco but also by an association of professional magicians during the fakir's visit to the city of Rio de Janeiro. Based on a comparison of the physicians' positions regarding Tahra Bey's magical powers and the so-called magical practices performed in spiritualist centers and temples of Afro-Brazilian religions (groups that, in addition to mediumship and the incorporation of deities, have healing practices as a central characteristic), I discuss the place of magic in the Service's modernizing project. In particular, I am interested in the relationship between "illusionist magic" and "primitive magic," and how the Service sought to discipline social space through the separation and containment of each type of magic.

Passing, Transracial Identity, and the Embedded Other: Variation in Appropriation of African American Language and Black Gestural Embodiment

Sociologist Ann Morning (2017, 2025) argues that Jessica Krug and Rachel Dolezal, two white women camouflaging as Black women in 2020 and 2015 respectively, are utilizing two different identity formation mechanisms. On one hand Jessica Krug displays a contemporary form of passing in which white women present as members of historically marginalized groups in the US, in the case of Krug, as a Black woman. On the other hand, Rachel Dolezal views herself as a decidedly transracial Black woman (Dolezal & Reback 2017), inextricably linked to a race into which she was not born. The difference here is that when passing is uncovered, there is an admission of whiteness; which is not the case for transracial identity. In this paper, we extend this distinction to

the linguistic and gestural and ask how these nuances in identity formation may relate to language usage and kinesics.

We propose a new multileveled schemata for linguistic appropriation of African American Language (AAL) and embodiment by white women, presenting a four-way distinction: 1) passing appropriation, 2) transracial appropriation and 3) affected appropriation (i.e., voicing someone else in negative stance taking). We argue that these varying forms of appropriation have different linguistic manifestations. Finally, we contrast Krug and Dolezal language use with the white women presented in Fix 2014, who are embedded in African American communities and social networks in Ohio, but do not claim transracial identity or pass as African American.

We demonstrate that varying orientation to racial identity yields use of differentiated use of African American language and Black gestural embodiment (cf Rickford and Rickford 1976, Barrett 1999, Goodwin and Alim 2010, McCaskill et al. 2011, Blake 2019). The women we consider use these features in different ways to different ends: Jessica Krug uses selected stereotyped features of Afro-Latinx English language, prosody, and embodiment that yield a performance of Black Latinx identity that many view as inauthentic. Rachel Dolezal's use of AAL and embodied gestures associated with Blackness are rare –and when used, are subtle, aligned with topic-focused style shifts and affective stances in which she is affirming and defending her purported transracial identity. This is in contrast to white women in Ohio who use a subset of AAL features with relative consistency, albeit with instances of style-shifting to voice themselves using AAL as well affected appropriation of AAL to voice others, often with a negative stance. White women embedded in African American communities appear to use a wider range of AAL linguistic resources than either Dolezal or Krug.

The Specter of Failure: Haunting the Path to Legal Professionalism

In the lives of aspiring lawyers, failure is not a singular moment but a spectral presence that shapes and reshapes the contours of professional identity. This paper draws on ethnographic research with recent law graduates studying for the bar exam to trace how failure manifests in three key forms: the anticipatory fear of failing, the actual experience of not passing the exam, and the bureaucratic impasse of a non-transferrable score across jurisdictions. Each form of failure lingers in the lives of would-be legal professionals, haunting daily rhythms, social worlds, and imagined futures.

Theoretically, this paper is grounded in Avery Gordon's (1997) formulation of haunting as "a constituent element of modern social life," one that reveals the structures of power through their ghostly effects. These hauntings, felt in the stomach-drop of uncertainty, the recursive rewatching of bar prep videos, the silence of an unopened score report, are not only affective but political. They make visible the bar exam's role as a disciplinary apparatus that polices access to professional legitimacy and reifies existing hierarchies along lines of race, class, and geography. Drawing also on affect theory and the anthropology of the state, I examine how bar study becomes an affective labor

site where students engage in prolonged self-surveillance, internalizing responsibility for success or failure in a way that obscures the exam's structural violence.

By attending to the ghostly - what is sensed but not always seen - this paper argues that the bar exam does not merely assess legal knowledge; it produces a haunted subject: suspended between student and lawyer, legitimacy and exclusion, arrival and deferral. These not-yet-lawyers inhabit a professional purgatory shaped by absence, by what might have been, and by the felt weight of failure's possibility. In this spectral terrain, the promise of the legal profession is as much about managing proximity to failure as it is about attaining success.

Presentation(s): Angie Debo's "Expertise": Choctaw Sovereignty and Settler Historical Production in *McGirt v Oklahoma*

In the State of Oklahoma's arguments in the 2020 *McGirt v. Oklahoma* Supreme Court case, their claims regarding the disestablishment of reservations in Oklahoma was predicated largely on the work of Angie Debo. Heralded as a "pioneer" of the New American Indian history and fierce advocate for the Five Tribes, historian Angie Debo has had a lasting legacy on not only their historiography but also the material conditions in which they lived throughout 20th century Oklahoma. The subject of her doctoral dissertation that turned into her 1934 *The Rise and Fall of the Choctaw Republic*, Oklahoma Choctaws have had to engage and grapple with Debo's book and its arguments, particularly the incorrect claim that the Choctaw Nation "passed out of existence as a separate political entity" upon Oklahoma statehood. Debo's claim builds upon the famed southeastern anthropologist John R. Swanton's declaration that Choctaws were "unworthy of ethnological study," and contributed to the comparatively small body of scholarly writing on Oklahoma Choctaws. This thin scholarship stands in stark contrast to Choctaw people's robust work in engaging state political leaders and convening political conventions where they collectively decided how to handle issues like the disposition of their coal lands and developing economic development programs for individual Choctaws throughout the 20th century – the period in which the State claimed their government did not exist. This paper examines how Debo's historical

scholarship shaped the state's political power, its jurisdictional claim over contemporary Choctaw Nation, and how that claim has impacted Choctaw assertions of sovereignty around the tribal gaming compacts and other major economic development projects.

Anthropology Needs Indigenous Feminisms. Here's Why.

While some disciplines are more engaged outside of their field, anthropology tends to be inward-looking and self-referential. Consequently, it rarely engages with theoretical frameworks from outside the field; this is why I believe it is essential to incorporate Native and Indigenous studies into its dialogues: to indigenize the field of anthropology-to take what we have and reinvigorate it with Indigenous ways of knowing. The key to success here is for anthropologists to understand how to be good relatives to scholars outside our field, especially with Indigenous scholars and communities. Being a good relative is central to what Indigenous feminisms can bring to the academic table, including anthropology.

My work in anthropology critiques the conventions of cis-het white male-produced anthropology and centers the work of Indigenous women. The intersections of indigeneity and feminisms in my scholarly work and life-including the strong Native women who raised me-have shaped how I see the world and how I choose to write about my community. I employ an Indigenous feminist theoretical approach to frame my work, defined by Gearon as the "intersectional theory and practice of feminism that focuses on decolonization, and Indigenous sovereignty, and human rights for Indigenous women and their families" (Gearon 2021). Through this lens, my work, generally, seeks to (re)write and (re)right how Indigenous communities, including my own, have been presented in anthropological writings (Risling Baldy 2018). This talk will explore how to use IFs in anthropological practice through the use of relationality, belonging, and community.

Presenter(s): Kelly Fayard

Museums Haunted by the Ghosts of Archaeologists Past: The Fate of "Collected" Prehistoric Andean Artifacts in American Museums

This paper explores how American museum displays of prehistoric Andean artifacts are not only shaped but also constrained by the legacies of archaeological collecting. The "ghosts" of early archaeologists, treasure hunters, and typological collectors haunt the present-day narratives of museum exhibitions, where the immaterial ideologies of the past manifest in the tangible: the curators' display choices and the exhibition labels (or captions). Bearing in mind the important divide between artifact and artwork, this research considers the displays of two natural history museums (The American Museum of Natural History and The Field Museum) and two art museums (The Metropolitan Museum of Art and The Denver Art Museum). I argue that the actions of collecting, which were founded on notions of progress, typology, and aesthetic supremacy, continue to structure which stories can be told and which must remain silent. Through this lens, the past does not simply inform the present; it intrudes upon it. Archaeological artifacts, removed from their original contexts, become silent actors in the performance of knowledge. Their meanings are

reshaped to fit institutional missions, and their material presence is used to represent entire civilizations while simultaneously obscuring others. What was not collected remains ghostlike, detected in the gaps of displayed knowledge and the silences of certain narratives. I also consider how these practices influence public understanding of Andean prehistory. American museums often emphasize the apex achievements of dominant cultures (e.g., Inca, Moche, Nasca, and Chimú), reducing the Andean past to a succession of aesthetic and technological triumphs. In doing so, they overlook the rich cultural diversity of less "display-worthy" societies. Ultimately, this work questions how museums might break free from the hauntings of their colonial foundations. Can replicas or digital reproductions offer a path toward more inclusive storytelling? How might collaborations with descendant communities alter the ghostly presences of unrepresented pasts? These questions point toward a future in which intangible memories, practices, and traditions become tangible, reshaping museum practice and public consciousness.

Presenter(s): Jessica Smeeks

Nominal Returns: analysis of a collaborative Indigenous data sovereignty project from Mi'kma'ki

Given that state- and church-sponsored nominal records often erase, obscure, misrepresent, and denigrate Indigenous lives, is it possible to identify and disseminate information about past Indigenous experiences from such documents in ways that honor Indigenous worldviews and language? The proposed flash presentation attempts to answer this question by offering a "report-from-the-field" on a digital and transnational collaboration between the Mi'kmawey Debert Cultural Centre (MDCC) in Nova Scotia, Canada, and the Department of Anthropology and American Studies Program at William & Mary. Since 2021, faculty and graduate students from William & Mary have been collaborating with MDCC to develop MDCC's bespoke content management system by testing data management and entry protocols using nominal data from seventeenth-century baptismal records and the 1871 census of Canada. The presentation will describe how MDCC staff trained the William & Mary participants, the iterative process through which these participants helped to refine the data entry protocols, and our methods for addressing the misapprehensions, inaccuracies, silences, and erasures that plague nominal records and similar primary sources. Our critical re-examination of colonial records occurs collaboratively in dialogues between Indigenous and non-Indigenous researchers. The presentation will also discuss the benefits and drawbacks of working collaboratively in both synchronous and asynchronous remote environments. While every public-facing digital engagement project is different, this presentation may provide guidance and cautions to other scholars and institutions seeking to implement projects requiring large, diverse teams working remotely. More broadly, the presentation considers the epistemological implications of this work: By interpreting nominal records to make them accessible to multiple audiences we do not simply transpose data from a paper to digital format, we are create the data themselves.

Presenter(s): Michelle Lelièvre

The Biopolitics and Necropolitics of Human Sacrifice in the Chimú Empire (1100-1470 AD), Peru

Biopolitics and necropolitics are two frameworks that broadly consider the ways in which power imbalances emerge and are sustained in modern societies. Michel Foucault devised the term biopolitics to denote the political effects that are produced, circulated, and enacted through new forms of power that monitor and control populations (Foucault [1978] 1990). By dividing the populace into discrete categories, the state increases its power through the marginalization of certain groups. Building upon Foucault's concepts, Achille Mbembe (2003) explores the relationship between power and death, or necropolitics. This framework emphasizes that the power to determine a life's worth resides within political systems. Necropolitics is killing in the name of sovereignty by differentiating between the categories of people whose deaths are considered acceptable and whose deaths are unacceptable. Biopolitics and necropolitics are readily integrated into discussions of power in modern sociopolitical systems but also have the potential to shed light on the ways ancient empires consolidated and articulated political power through human sacrifice.

This paper discusses human sacrifice through the lens of biopolitics and necropolitics during the reign of the Chimú Empire (1100-1470 AD) in the Moche Valley on the north coast of Peru. Human sacrifice functions as a form of political theater during which the ideas and worldviews held by authority figures are communicated to spectators, participants, and the victims. The power and authority of those who govern is never assured and must be continuously justified in a manner that is tangible to the imperial subjects. Violent actions generate vivid images of coercion and demonstrate the immutable authority of those staging the event. For several centuries, hundreds of children and adolescents were systematically sacrificed by the Chimú Empire at various locations surrounding the capital city Chan Chan. Previous bioarchaeological studies revealed that victims share similar biocultural features (age, health profiles, and geographic origins). The logistics required for amassing hundreds of victims to stage these sacrificial events indicate that the Chimú wielded unprecedented forms of power to design which individuals were suitable victims for sacrifice and who should be spared.

To that end, this paper considers the ways in which human sacrifice was embedded in the imperial enterprises of the Chimú Empire through the lens of biopolitics and necropolitics. This novel approach has the potential to contribute to a growing body of literature addressing motivations for state-sanctioned violence by enabling us to consider the political effects human sacrifice in the maintenance of power in ancient societies.

Presenter(s): Rachel Witt

The Ghosts of Authenticity: Generations of Native Survivance, the Sherman Indian School, and the Afterlives of Assimilation

The enduring legacies of Native American assimilation policies continue to reverberate across generations, shaping contemporary Indigenous identities, kinship structures, and cultural expressions. Through a multigenerational lens, this paper analyzes how four generations of Paiute-Shoshone women have enacted survivance in response to, and in resistance against, the persistent legacies of assimilation. As both researcher and descendant, I approach this project as a critical Indigenous autoethnography. Through the theoretical frameworks of Critical Indigenous Theory (Moreton-Robinson 2009; Coulthard 2014) and concepts of Indigenous authenticity and cultural identity (Hokowhitu 2009; Simpson 2007), this narrative will trace how the ghosts of assimilation continue to shape lived experience, memory, and identity.

These ghosts are both metaphorical and material, residing in archival photographs, government records, obscure audio recordings, and 130 years of matrilineal memory and experience. Indigenous practices of meaning-making and survivance (Vizenor 1999) are reexamined through the intersecting lenses of persistence, refusal, and resurgence. Experiences of forced relocation to a reservation, experiences at an Indian boarding school, self-imposed language erasure, tokenization, and unconsciously reinforced whiteness will be critically examined. This project contends that archival and personal Indigenous histories should be reinterpreted not as pathologizing narratives, but as generative frameworks for engaging with Indigenous existentialism.

Presenter(s): Teresa Wilson

Towards a (Trans)American Indigeneity: Understanding Hemispheric Indigeneity as a Somatic Mode of Attention

Academics from Anglo-North America have often privileged identity (particularly a self-identification as Indigenous) to define Indigeneity. My ethnographic research with a group of male dancers of Quechua descent in the Peruvian Andes exposes the limitations of those definitions. Despite being fluent Quechua speakers and preserving traditions widely understood in Peru as Andean Indigenous, the members of the Qhapaq Qolla dance troupe of Paucartambo, Cusco – one of the most prestigious and influential in the Peruvian Andes – do not use the term "Indigenous" to identify themselves. They don't use terms like "mestizo" (often employed to hide Indigeneity), either. In a sense, Qhapaq Qolla dancers are neither "Indigenous" nor "not Indigenous." If we were to exclude groups like the Qhapaq Qolla from the scope of the concept of Indigeneity, we would be invisibilizing a vast array of (trans)American ways of knowing and being. Thus, how can we expand the concept of "Indigeneity" to include them? I propose that, in addition of understanding Indigeneity in terms of identity and experience under settler colonialism, we also understand it as an embodied way of being in the world. Based on Thomas Csordas's concept of "somatic modes of attention," I argue that the Qhapaq Qolla, shaped by Quechua values like balance and reciprocity, have developed a somatic mode of attention that prevents objectification, developing instead fluid relationships of reciprocity that are always in the process of leveling. This mode of attention engenders a specific way of being in the world, one that understands all beings as relations, and demands for balance and reciprocity. A disposition to develop fluid relationships of reciprocity with all elements of the cosmos is a constant among peoples of Indigenous descent across the

Americas and the Caribbean. Thus, I argue that this point of contact can help us develop an American (hermispheric) framework of Indigeneity.

Presenter(s): Carlos Tello Barreda

Unearthing Ethnobotanical Collections: The State of Indigenous Seed Holdings in U.S. Museums and Repositories

Indigenous communities and scholars are calling for archaeologists and museum professionals to critically assess the stewardship and potential repatriation of Indigenous-sourced agricultural seeds and ethnobotanical collections housed in museums and other institutions. Indigenous seeds and plants are not only items of cultural, personal, and religious significance, but importantly they are also nonhuman persons and relatives that retain genetic memory and can remain viable for centuries under appropriate storage conditions. The fact that many historic Indigenous seeds held in institutional repositories can be germinated and hold extractable genetic information demands investigation into the risks and potential around these seeds. This talk presents results of a survey of U.S. museums and universities to determine the prevalence of Indigenous seeds held in collections and to evaluate practices surrounding cataloguing, care, storage, and researcher and descendant community access. Results demonstrate that vast amounts of Indigenous seed stock are currently stored in museums and other institutional repositories, often due to ethnobotanical collecting in the late 19th and early 20th centuries as well as ongoing archaeological activities from the 20th century onward. These historic seeds retain their cultural and religious significance along with diverse genetic information that could facilitate the revitalization of Indigenous agriculture systems. Yet this also makes them vulnerable to appropriation and patenting by industrial agriculture corporations searching for climate-resilient seed varieties. Results of this survey demonstrate that failure to adequately steward these materials represents a significant risk for further disenfranchisement of Indigenous people from their cultural heritage. We propose pathways to enhance protections of Indigenous seeds and to the repatriation of these culturally significant materials.

Presentation(s): Atmospheric Blue: Exploring Experimental Bookmaking and Speculative Design Storytelling in Alaska

This presentation reflects on a design anthropology experiment that combines experimental bookmaking with speculative storytelling, grounded in ongoing ethnographic research. It examines how metaphors drawn from fieldwork with cold-climate housing designers can disrupt conventional thinking and open new modes of understanding and being. The work builds on deeply situated knowledge gained through observing and participating in design activities in Alaska, with a focus on housing disparities in remote Alaska Native communities.

Building on this research, the presentation includes reflections on the historical injustices in housing that motivate the work of these designers, as well as the challenges they face in developing design responses to housing insecurity. However, these narratives remain incomplete, just like many of the design projects reflected on in this research. This incompleteness arises because many of the projects and activities I observed and participated in are ongoing, set amidst multiple political, environmental, and cultural changes. In this sense, these stories represent one perspective of reality, entangled with diverse ways of knowing, creating, and becoming in the North.

Drawing on this framework, this presentation examines how combining anthropology with creative techniques from experimental bookmaking and speculative storytelling can reveal critical insights into design processes. It focuses on how this approach can enhance ongoing research practices by highlighting seemingly benign or taken-for-granted systems and forces that impact the world of cold-climate housing designers. Examples include barge networks that deliver housing supplies to remote villages and the implications of permafrost degradation on the structural integrity of homes in the region. By learning from and creatively experimenting with these perspectives, "Atmospheric Blue" demonstrates how cold climate housing design storytelling can emerge as collective, relational acts, bringing form and meaning to unseen dynamics in built and natural environments.

Brackish Hauntings: The Southern Gothic of Extinction

This paper explores the triangulation of death, extinction, and grief in coastal Georgia and Florida, in order to examine how environmental ontologies and ethics arise in landscapes with ruinous pasts and perilous futures. To do so, I engage with the Southern Gothic—a literary genre characterized by themes of hauntings and decay, the uncanny and the grotesque—as a cultural context and a narrative mode that has evolved to enfold the ecological ghosts and monsters of the modern world: radioactive waterways, epidemics of mysterious illness, proliferations of invasive species, ghostly absences of the extinct, and spiritual interpretations of changing weather patterns. This study takes seriously how the literary genre of the Southern Gothic has been wielded as resistance to the image of the idyllic, pastoral South by exposing its historic underbelly of racism and class disparity. In response, I take a historical perspective to consider how forms of resistance have been shaped by the entanglement of humans with more-than-human entities—cypress swamps, hurricanes, barrier islands, and unique fauna—resulting in identities intertwined with the

landscape's own precarity. In addition to archival and ethnographic research, I incorporate my own creative work as a poet and visual artist to contribute to the Southern Gothic as a collective voice of resistance.

Presenter(s): Caroline New

Carbon Longings: Quilombolas Between Climate Change and Financial Futures in

Amazônia

In 2022, a quilombo community of the Brazilian Amazônia decided to engage with a consultancy firm and an investment bank to produce environmental assets for large polluters interested in compensating their carbon emissions to claim themselves as morally superior corporations. The consultancy firm put in place a range of processes that aimed to translate the worlds of the quilombolas into the worlds of finance. This was rarely a straightforward process, and these interventions often created misunderstandings about the social transformation that would be generated after the arrival of the extra-ordinary financial revenues promised by the carbon project.

This paper analyses how the encounter between finance and quilombo was mediated by different promises as regard the future. I am interested in the playout of temporalities in the creation of financial value. For instance, the fact that the financial actors were operating in an uncharted territory meant that risk management became central to convince investors about the legitimacy of their financial operation. These risks had to do with assumptions of what racialized groups like quilombolas 'lacked', particularly management capacities or devices of economic governance. These assumptions were inherited from Brazil's history of colonialism and racial politics. In other words, the fact quilombolas are descendants from those who escaped cacao plantations and livestock production deeply shaped the practices and perceptions which took place in the present. To overcome the financial risks entailed by raciality, the consultancy firm and the investment bank had to predict and control what the future of quilombolas and their forests would look like. Nevertheless, quilombolas created a range of strategies to dispute their futures. Quilombolas wanted to use revenues to fulfill their immediate needs and desires. By doing so they challenged the idea of a specific expertise and form of financial planning that was necessary to create confidence in the project. This is because investors wanted to make sure that the social transformations promised by the project would not be ephemeral.

I suggest in this paper that transforming the quilombo was full of ambiguous meanings: transformation both allowed and threatened the creation of value. The playout of temporalities meant that the past, the present and the future were intrinsically linked, overlapped and in constant relation during my observation. Importantly, these conflicting temporalities became visible as, in capitalist frontiers, "speculation arises out of social difference" (Bear 2020:2). In this paper I disentangle the different temporal orientations and rationalities of this project. I show that beyond the fact that the local reality of the quilombo was affected by various financial practices, one should not ignore the dialectic dimension of this process: the quilombo deeply influenced what finance looks like in 'risky' territories.

Presenter(s): Barbara Stiubiener Abrahao

El Caleuche: Disappearance and Dispossession in Chilean Patagonia

El Caleuche is a ghost ship which haunts the archipelagoes around the island of Chiloé, Chile. It is also the nickname of a man of Chilote (from Chiloé) descent who disappeared during the Pinochet dictatorship, much farther south, in a small town in Patagonia. In this flash presentation I will explore the metaphorical possibilities of the ghost ship to think through the rumors of the disappearance of El Caleuche. His spectral presence in landscape, memory, and story suggests the unresolved circumstances of his death. Ghosts have certainly haunted experiences and studies of Southern Cone dictatorships. El Caleuche opens the possibility for thinking through the experiences of post-dictatorship rural Patagonia, where loss often takes different forms than in central Chilean cities. The details of the story bring forth dispossession, police brutality, and forced Chilean nationalism that was experienced collectively in a fervently bicultural region. Not just any ghost, El Caleuche also highlights the connection that many of the town and region's residents still feel to their Chilote heritage and their histories of placemaking across Patagonia.

Presenter(s): Page McClean

Entrepreneurialism as nation-making: The Gurage Case in Ethiopia

Once considered an underclass, Gurage people have emerged as Ethiopia's quintessential entrepreneurial class over the last seven decades. Studies on entrepreneurialism often focus on factors contributing to entrepreneurial success, such as ethnicity. This Gurage case study rethinks entrepreneurialism as nation-making, demonstrating how Gurage entrepreneurialism was essential to the formation of Ethiopia's modern economy and nation-state in the twentieth century. Based on extensive ethnohistorical research, This paper tells a story about Gurage entrepreneurialism's input to the Ethiopian nation-building project, which contributes to larger theoretical discussions about entrepreneurialism, nation-making, the state-market nexus, and threats of foreign dominance in African markets.

Presenter(s): Worku Nida

Starman Waiting in the Sky: Songwriting as Method in Outer Space Ethnography

This talk brings together two unlikely ethnographic threads: emerging innovations in outer space anthropology and the use of songwriting as method. Over the past decade, scholars including Susan Lepselter and David Valentine have centered the poetic and speculative in the anthropology of outer space, an approach which has been featured in edited collections in journals such as *Cultural Anthropology*. This creative consensus is partly because extraterrestrial anthropology challenges the limits of what humans can conceive, where ghosts of colonial pasts and celestial futures haunt one another. When outer spaces have been imagined at a broad popularized level, it has also been through creative work such as science fiction cinema and writing. I argue that ethnographic songwriting--including the groundbreaking work of Kristina Jacobsen--holds vast potential for further unfolding the anthropology of outer space, with the unique ability of song

creation and communication to transmit what Yip Harburg described as "thoughts that feel." Illustrating the importance of both talking and singing about this process, I share a song that I wrote for my next book, and how it has expanded my own thinking about contemporary outer space colonialism.

Presenter(s): Willi Lempert

Staycations and Habitus in Flux: Substitutional Leisure Practices in Pandemic Hong Kong

This study examines the transformation of Hong Kong's hotel sector during the COVID-19 pandemic through a 19-month autoethnography, tracing how staycations reconfigured urban recreation in a densely populated, globally connected Asian city. Drawing on Bourdieu's concept of habitus and perspectives on tourism and urban adaptation, it explores how pandemic-related restrictions reoriented leisure consumption and travel. These constraints converted Hong Kong's internationally oriented hotel sector into localized spaces of resilience, escape, spatial repurposing, and cultural exploration. Staycations emerged as a contingent practice shaped by healthcare policies, industry pressures, and entrenched sociocultural norms. While offering a rare, socially accepted outlet for leisure amid normalized isolation, they ultimately reflected temporary adaptations rather than lasting shifts in travel behavior.

The findings reveal three key dynamics: (a) the hotel sector's evolution into a "quarantine metropolis," (b) its role as a liminal space blurring the boundaries between home and travel, and (c) the emergence of staycations as a socially embedded, culturally significant response. Framed through the lens of habitus in flux, the study examines shifting travel behaviors and domestic tourism patterns, highlighting Hong Kong's capacity to reimagine spatial and social infrastructures under prolonged crisis and mobility constraint.

Presenter(s): Alexander Fedorov

Strange Remains

"Strange Remains" is a work of literary ethnography written as a memory and as a conversation with the dead. It is about being "haunted by worldly contacts" (Gordon 1997) and "the return of unassimilated entities" (Klima 2019). It moves between familiarity and strangeness through southern Bahia's food and flora, Candomblé, literature, love and death. The uncanny here is reconsidered as a source of pleasure or an "atmospheric attunement" (K. Stewart 2011). And staying with the disturbance, the ethnographer's associative style is akin to walking through walls, encountering "evocative objects" (Bollas 2009) from skulls, cranial cups, and edible exoskeletons, to ideas and occurrences including the resurrection of St. Sebastian, flickering lights, living with a hanged man; giving things form by speaking (to) them, and the conflict between the desire to keep the dead close and to dispatch lingering spirits, a *despacho de egun*. Embracing uncanny resonance as an expressive modality (Lepselter, 2016), the narrator conveys sensation, generates affect, and offers portals for ways of nearing material.

Presentation(s): Complicating “climate refugeeism”: Social inequalities in the age of climate change

In the Jodah border area between Sudan and South Sudan-situated within Sudan-some individuals and groups have been classified as climate refugees, despite not having crossed an international border in response to climate change or environmental disruption. Many of these individuals have remained in the villages their families have inhabited for generations. In contrast, other groups who crossed the border from South Sudan into Jodah following the severe flooding that began in 2021 were denied recognition as climate refugees. Focusing on the communities of the Jenubeen-a term referring to particular groups identified as non-Arab, non-Muslims who have been historically marginalized, racialized, and dominated by Arab-Muslim groups generally known as Shumaleen-this paper examines how climate change intensifies existing social inequalities. It further challenges assumptions that dominant groups are inherently privileged, revealing the complexities of identity, mobility, and recognition in the context of environmental displacement.

In this presentation, I argue that the embodied differences of the Jenubeen-as racialized and gendered subjects-are mobilized in their classification as climate refugees, regardless of whether they have crossed an international border. These embodied markers are not merely read as indicators of vulnerability; rather, they are rendered analogous to environmental disruptions such as flooding, drought, and other climate events. Within this framing, Jenubeen communities are constructed not only as victims of climate change but also as emblematic of climate disruption itself. Conversely, individuals presumed to belong to dominant groups-Shumaleen-who do not fit the racialized profile ascribed to the Jenubeen, are often excluded from the category of climate refugees, even when their displacement is directly linked to environmental crises. This analysis reveals how climate change deepens existing social hierarchies and challenges assumptions about power, privilege, and racialized belonging in the context of climate-induced displacement.

Sentiment analysis of guest reviews highlights potential for ecolodges to support howler monkey conservation in Belize

Ecotourism is one of the fastest growing sectors of tourism with important implications for wildlife conservation. For example, in central Belize ecolodges maintain forest patches that represent important refugia for the endangered Yucatan black howler monkey (*Alouatta pigra*). To understand the relationship between ecotourism and primate persistence, I collected 3904 online ecolodge

reviews from the 10-year period (2015-2024) for six ecolodges in the San Ignacio area of Belize. All of the ecolodges are home to one or more howler groups (Mean = 2.67; Range: 1-7).

Reviews we uploaded into R (version 4.5.0) and we conducted a sentiment analysis using the sentiment package, a subset of NLP (natural language processing). We calculated a sentiment score for each review to determine how guests felt about their overall experiences staying at the lodges. Sentiment scores range from -1 (very negative) to +1 (very positive). Most reviews came from the US ($p < 0.05$), followed by Canada, the UK and Belize and most reviews were five out of five stars ($p < 0.05$). The mean guest rating over the 10-years is 4.89 stars and the mean sentiment score is 0.28. Guest ratings and sentiment scores are slightly higher during the last five years compared to the first five years in the dataset.

Based on the sentiment analysis scores, we further analyzed the 10 highest and 10 lowest reviews (mean = 0.73, 0.01 respectively) for each lodge for content and themes to determine what visitors value, and what their complaints were. The negative reviews most commonly mentioned price, lack of air conditioning, insects inside the accommodations, and dissatisfaction with the lodge conditions. Positive reviews most commonly mentioned the friendly staff, proximity to nature, food, and wildlife. Reviews that mentioned howler monkeys had consistently high guest ratings and high sentiment scores ($N = 531$, mean 4.88 stars, mean 0.28 sentiment). In negative reviews where howler monkeys were mentioned, they were always described in positive terms.

Ecolodges must strike a balance between their desire to ensure guest satisfaction while also meeting the objectives of ecotourism (e.g., conservation of wildlife and habitats, support of local communities, education for tourists and locals, and preservation of local culture). Positive sentiment toward howler monkeys, even in otherwise negative reviews, provide evidence that ecolodges can contribute positively to howler monkey conservation in this critical habitat.

Space for the Departed: Burial, Land Scarcity, and Alternative Practices in China

-Bone-Ash Apartments

This paper examines the emergence of bone ash apartments (骨灰房)-residential units informally repurposed to store cremated remains-as spatial and moral adaptations to China's urban funeral crisis. These units are not merely practical responses to land scarcity and rising burial costs, but hybrid sites where Confucian ethics, economic pragmatism, and ritual reinvention converge. Drawing on discourse analysis of over 2,500 social media comments and interviews with urban residents, funeral practitioners, and real estate agents, I trace how bone ash apartments reconfigure boundaries between the living and the dead, sacred and secular, property and kinship.

Some embrace them as modern ancestral halls, arranging urns hierarchically and drawing curtains to simulate feng shui protections. Others accept them conditionally-so long as death remains discreetly veiled. Online discourse reveals a paradox: growing openness to ecological burials

coexists with enduring Confucian obligations of filial piety. Meanwhile, China's three-decade real estate boom has turned death into a housing question. Unlike cemetery plots, which expire after 20 years, apartments offer long-term security and resale value. Bone ash apartments thus emerge as informal extensions of the property market-commodities of grief forged in regulatory grey zones where formal governance fails and informal trust prevails.

Urban isolation further enables their spread. As traditional community rituals decline and neighbors grow estranged, ashes become less disruptive than living cohabitants. These spectral neighbors reflect, rather than threaten, the atomization of urban life. Ultimately, bone ash apartments are not cultural aberrations, but evidence of China's evolving moral economy-negotiating loss, belonging, and the right to remain in place, even after death.

The Afterlife of the Mt. Taylor “Zombie Mine” and the Continuance of Life around the Snowcapped Mountain

In May 2018, the New Mexico Mining Commission held a public hearing regarding a permit revision that would allow the Mt. Taylor Uranium Mine to change its status from "standby" to "operating." New Mexico Environmental Law Center contested the decision on behalf of two non-governmental organizations: Multicultural Alliance for a Safe Environment (MASE) and Amigos Bravos. The mine would operate under the auspices of a company called Rio Grande Resources, a subsidiary of General Atomics, on a section of private property adjacent to a state designated Traditional Cultural Property for five nominating Native American Tribes. Because the mine did not appear economically viable, the petitioners characterized it as "a classic zombie mine scenario," indicating that the mine was not quite dead and not quite alive. Rather than dwelling in the ontological politics of the mountain as a sacred entity, MASE and colleagues forcefully enunciated an economic critique of "zombie mines." Based on my experience during the hearing, I will describe the different forms of vitalizing discourse associated with both the economic lifecycle of the mine and the vital relations of the mountain. By examining the competing logics of life represented at the hearing, I aim to contribute to a tradition of research on mining in environmental anthropology.

The Interconnection of Zoroastrian Beliefs, Burial Practices, and Environmental Stewardship in the Sassanian Era

In the Sassanian period, Zoroastrian beliefs profoundly influenced burial practices, reflecting a complex interplay between religion, health, and environmental stewardship. This study delves into the unique Zoroastrian approach to death and the afterlife, particularly the ritual of exposing corpses in Dakhmas, or Towers of Silence, designed to prevent the pollution of earth, air, and water. Central to this practice was the conviction that a corpse, once the soul departed, became a source of contamination, potentially leading to disease outbreaks. The meticulous design of Dakhmas, constructed in accordance with strict religious laws, ensured that remains could be purified by nature while preserving the sanctity of the land.

Zoroastrian texts emphasize the imperative of maintaining environmental purity as a divine mandate. Rituals surrounding the treatment of the dead followed by exposure to scavengers-served not only as spiritual acts but also as practical public health measures aimed at minimizing contamination.

Moreover, the Sassanian emphasis on pollution prevention extended to broader public health policies that prioritized cleanliness and ritual purity as vital components of community well-being. By examining Sassanian burial practices through the lens of Zoroastrian beliefs, this study highlights the intricate relationships among ancient traditions, religious doctrines, and environmental management, illustrating how these elements collectively shaped health and hygiene practices of the time. Such insights deepen our understanding of ancient Iranian society and challenge contemporary perceptions of health care as a solely modern phenomenon.

Furthermore, it is evident that Zoroastrian teachings regarding the treatment of the dead were deeply intertwined with public health considerations, as the prevention of contamination was seen as essential not only for spiritual purity but also for the physical well-being of the community. In this way, the Zoroastrian approach to death reflects a sophisticated understanding of the interconnectedness of health, religion, and the environment, offering valuable lessons that resonate with modern discussions on sustainability and public health.

4271 Cosmographies of Comparison and Commensuration I: Equivalences, Proxies, Persons

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Balcony M

Type: Oral Presentation Session

Are "commensuration" and "comparison" the same, but different? How do practices of equivalence-making show up in our fieldsites and theories, and what do they accomplish? This panel centers on the "tensional" (Dewey, 1938; see Savransky, 2021) relation between rubrics of commensuration and comparison used both by social scientists and the people we work with and learn from. We pursue a wide range of questions about equivalence-making from a reflexively "cosmographic" angle. Franz Boas (1887, 140) defined "cosmography" as the science which attends to individuality, on its own terms, in order to recognize "totality in the individuality" of social life (1887, 140). Quasi-naturalistic "comparative" methods, he argued, enable the opposite, locating "individuality in the totality." By working towards a "cosmography of comparison," members of this panel seek to extend Boas's critique by revisiting longstanding but underdetermined roles that "commensuration" and "comparison" play in ethnographic theory and practice.

"Commensuration" has long been commonly deployed as a rubric across the social sciences to characterize social (and nominally "economic") processes that bring two or more entities into enumerative (and thus evaluative) relation through reference to a common "metric," where the metric in question may range from decibels to dollars. Building on the sociological work of Espeland and Stevens (1998), social scientists have more recently moved beyond scientific framings of "commensuration," approaching it instead as part of humans' everyday equipment for living.

Linguists have also conventionally framed "comparison's" grammatical categoriality with reference to paradigmatic relations between entities that share different degrees of the same gradable property (e.g., height). Comparison in these accounts is categorially and co-textually emergent, a discursive-semiotic phenomenon that inflects humans' aspirations or "navigational capacities" (Appadurai, 2004), and so helps configure the rhythms of everyday life. Anthropologists, while not fully engaging insights from formal linguistics, have nevertheless moved beyond a linguistic focus on sentence-level denotation, attending to comparison's co-textual dynamics or "social life," shedding light on how tacitly presupposed thresholds or context-sensitive "points of departure" (Sapir, 1944; see Kennedy, 2008) are ethnographically revealable through careful attention to the patterned, chain-like dynamics of everyday talk.

This panel moves beyond questions of "comparison" and "commensuration" as "impossible" (but indispensable) scientific "method[s]" (Evans-Pritchard; Candea, 2018), to more closely examine how people reflexively explore, evaluate, or otherwise enumerate and so reckon the topological "more-or-lessnesses" of life.

In this, the first part of a two-part panel, we explore these issues through topics ranging from jujitsu, rock climbing, call centers, and Indigenous healing

Presentation(s): Mediating Malleable Masculinities: Chronotopic Calibrations of Play, Danger, and Personhood in the Chimerican Jitsiverse

This paper identifies and analyzes a tension between real-time interactional, intersubjective learning practices in Chinese and American training rooms; and the 'virtual' – seemingly spatiotemporally remote – gendering of personae and icons of personhood that populate and animate the 'Chimerican jitsiverse' as a practice-based pedagogical chronotope (Bakhtin 1981, Bourdieu 1977, Wacquant 2004, Carr 2011). The study is based on participant observation, media ethnography, and analysis of instructional/pedagogical communicative events in competitive

jiujitsu settings in China and beyond. Contributing to innovative recent work on sequence organization (Kendrick et. al. 2020; Lindwal and Mondada 2025) and gender stereotypification in kinesic social life (notably in anthropologies of dance and sport [cf. Sherouse 2016 and Cohen 2021]), I study competition-oriented jiu-jitsu instruction – and its imbricated ideologies of mobility – as an intersectionally-sophisticated zone of metapragmatic and metasemantic activity (Silverstein 1976). In doing so, I hope to demonstrate the entanglement of 'human' communicative infrastructures and the not-necessarily-'human,' yet ultimately gendered, personae that populate them. This entanglement, I propose, prompts a transverse understanding of the roles of mobility, structure, and what Edward Sapir once termed 'form-feeling' in the learning process.

Presenter(s): Jay Schutte

Relational Objects

Commensuration features prominently in the practice of rock climbing as practitioners wrangle intensive magnitudes into lexical, numerical, and tangible objects in attempts to locate where or how they intersect. This paper is about the tangible objects. As climbers began to cultivate their practice away from real rock on indoor walls and in urban environments, new questions emerged around what is fake and what is real, what can be replicated and for which reasons. At first, indoor climbing mimicked the outdoor practice. Holds screwed onto walls were supposed to resemble rocks, and sometimes they were rocks. But over time, "hold-shaping" became a craft in its own right, and shapers quickly jettisoned the idea of making pretend rocks and, by extension, pretend rock climbing. Instead, they began to create intensive and affecting experiences, guided by relational objects. Shapers took a simple kind of iconism rooted in the visual and the tactile—(holds resemble rocks)—and asked what happens when we shift the presuppositions guiding the equation. What happens when what we are trying to replicate is the emotion of the endeavor, not its tangible surface? What about when what is replicated is a tensional corporeal attitude (to extend Dewey into bodies) achieved between physical objects? What about when temporality is at stake?

Cosmographies of Neutrality

The call center industry in India trains agents to sound "neutral," but what does neutral mean, for whom is it neutral, and how does one become neutrally accented? This paper draws from 18 months of ethnographic observation of the accent training and hiring industry, where accent trainers and callers are taught to identify and index neutrality with their voices for industry professionals who belong to the class of urban-educated Indian elites. Accents are the association of regularities in speech sound with social replications of personae. Due to the nature of both sound and social personae, accents are always the result of partially overlapping recognitions and need to be commensurated through repetitive processes of enregistering the connection between ideas of person and sound. This is done with a combination of negation and grading, whereby individual instances of sound are ordered relative to ideas of neutrality. This data pushes back against binary theories of markedness to show how neutrality is an emergence of partial

commensuration stemming from partially congruent thresholds of social difference. Further, upper caste and upper class aspirants are better primed to navigate industry thresholds of neutrality.

Pacific Presences & Personhood: Intensities, Gradients, and Chamorro Medicine

In Chamorro, to say "I am Lani" is to say "Lani, intensely." This grammatical structure reveals an ontological framework in which personhood is not a bounded entity, but a modulated presence—shaped by kinship, cosmology, and recognition. This essay explores how Chamorro healing practices articulate personhood as emergent within gradient matrices inclusive of plants, ancestors, kin, and Catholic icons. I propose that Chamorro healing offers a theory of personhood where intensity—not identity—is the metric of visibility. The self is not claimed; it is measured through presence, in degrees, in gradients, and in the unfolding alignment of people, plants, and ancestors. This essay proceeds through a cosmographic method attuned to the spatial, ethical, and semiotic conditions under which persons appear, vanish, or return. Drawing from auto-ethnographic fieldwork—including the preparation of manglo' matrice (a vaginal nourishment medicine), spectral refusals in the forest, and familial negotiations of mourning—I examine how personhood emerges through intensities, forming gradients shaped by multiple cosmological grounds and an intensification of presences. I ask: How is presence staged, refused, or withheld across overlapping cosmological terrains? What happens when healing is delayed, when the medicinal plant disappears, and when the dead do not return to the forest?

Presentation(s): How Tibetans Cope with Ideological Tension between Tibetan Buddhism and Chinese Marxism in Education Systems?

I am deeply interested in understanding how people behave and respond when authoritarian regimes compel them to act against their true beliefs. Academically, Alexei Yurchak's writing on the surprisingly rapid and unexpected collapse of the communist state in the Soviet Union captures this phenomenon as "the relationship of the subject to the hegemonic discourse of communist ideology and the meaning inscribed in ideological performance and representation" (Yurchak, 2003). In a similar vein, my research focuses on Tibetan Buddhist subjects under Chinese

communist rule, investigating the hegemonic communist discourse reflected in the mandatory "Ideology and Morality" curriculum taught in Chinese government-run public schools in Tibet. How do Tibetan students and teachers cope with the ideological tension between their traditional Buddhist beliefs and Chinese Marxism indoctrination program with anti-religious elements and objectives in the contemporary Tibet Autonomous Region in China?

Through years of ethnographic work in Tibet, I found out that Tibetan teenagers do not typically feel the need to reconcile the apparent ideological conflict or choose between the two belief systems. Instead, some find ways to live a calm, peaceful, and happy life without taking sides or addressing the conflict. Whether consciously or not, they adopt various socially functional strategies while embracing two opposing ideologies. For example, they use tolerance to manage intolerance, choose to avoid sensitive debates, flexibly apply contextualization to dissolve apparent conflicts, maintain belief commitment while understanding opposing views, and establish clear boundaries between personal beliefs and overt behaviors. These represent forms of practical wisdom derived from the adaptive strategies of Tibetan teenagers for coexistence in our increasingly multilateral and multi-ideological global world.

Tibetan teachers typically do not defy state ideology in public to avoid serious consequences. Instead, they remain silent or inactive during ideologically charged activities. Alternatively, they comply performatively, for example, when they attend celebrational spectacles and shout the unified proper slogans to leaders loudly and collectively, but actually make Buddhist prayers inside to Buddha sincerely. More audacious Tibetan teachers may outsource their tasks, hiring strangers online to complete ideology training, rendering their apparent obedience irrelevant to its original purpose. Furthermore, those Tibetan teachers who actively become CCP members may exploit this façade to enjoy "privileges," such as visiting Buddhist temples under the guise of "supervision." Tibetans describe these efforts as unwillingly paying taxes. I am developing their analogy and conceptualizing it as paying an ideology tax, a compulsory subscription to state ideology levied by those in power to achieve effective ruling control.

Living Frozen: Experiencing Suspension, Anxiety, and Uncertainty in China's Gaokao Repeaters

In China, repeating the gaokao(复读)-where students who fail the national college entrance examination return to high school for another year of preparation-has been a longstanding practice since the exam's reinstatement after the Cultural Revolution. It offers the promise of a second chance, but also evokes the haunting specter of failure, lingering in students' lives and leaving them suspended in a liminal state between progress and paralysis. As a socially charged experience that disrupts normative youth trajectories, gaokao repetition embodies a culturally embedded tension between aspirations for higher education and social mobility, and the systematic constraints that inhibit their realization.

This paper, combining in-depth interviews with former repeaters and observations conducted in online repeater communities, explores how young people experience gaokao repetition as a

temporality of suspension-marked by uncertainty, anxiety, and a sense of inbetweenness. I explore how these repeaters make sense of living "off-track" from an idealized trajectory of upward mobility within the education system -out of sync with age-based expectations of success. Repeating is not merely a delay-it constitutes an existential suspension, in which time is experienced as inert, unproductive, and illegible within dominant narratives of success.

Embedded in a broader sociocultural context where gaokao performance is tightly tied to moral worth and future potential, repeaters are often labeled-by themselves and others-as "losers." These self-perceptions are intensified through constant peer comparison, in a culture where familial expectations, educational ideologies, and national discourses valorize competitive individualism. Repeaters often described the repeating year as feeling "frozen in time," suspended while others moved forward. As former classmates transition into university, employment, or other adulthood milestones, repeaters are left navigating emotional dissonance, shame, and a feeling of belonging to nowhere. Living frozen thus becomes not only a disruption of the life course, but a deeply affective condition of dislocation-one that, for many does not end with admission to university, but continues to shape how they navigate higher education, often haunted by a lingering sense of being out of step.

Rather than framing repeaters as merely psychologically distressed or academically underperforming, this study foregrounds their subjective experiences of liminality and temporal suspension. It invites a broader reevaluation of how dominant regimes of success, time, and worth are constructed, naturalized, and contested in late-socialist China. By attending to the embodied and emotional dimensions of "living frozen," I argue that repeaters' narratives provide a critical lens into the affective governance of youth, the fragility of meritocratic time, and the moral stakes of educational failure.

Migrating Conceptions of Childhoods:

Contesting Spectral Conventions through Child-Led Inquiry

Children comprise nearly half of all refugees and internally displaced people globally (UNICEF, 2022). However, children's perspectives remain marginalized in migration research and policy debates (Enciso, 2011). Many theorists and policymakers – like other adults (Yoon, 2022) – have trouble "seeing and hearing" children as individuals (Kwon, 2021, p. 102). As a consequence, migration scholarship primarily focuses only on adult decision-making and mobility (Bhabha, 2009; Heidbrink, 2020). In this presentation I contend that the near-absence of children's voices often results in a seemingly singular, homogenized, and frequently inaccurate portrait of the spectral child. Taking an interdisciplinary approach, we foregrounded children's agency and transit experiences as worthwhile and necessary in their own right (Hage, 2020; Oliveira & Gallo, 2023). By engaging children as experts of their own experience, we developed more nuanced, ethical, and effective approaches to address their protection (Save the Children, 2021).

Importantly, I situate my work against the ongoing climate catastrophe because it permeates everyday lives and communities (Lee, 2013; Selby & Kagawa, 2010). Moreover, as climate impacts increasingly interact with social, economic, and political stressors to drive displacement, children will continue to comprise large proportions of cross-border movements (IPCC, 2022). Therefore, we first provided a theoretical and historical discussion of how literature about the intersections of the climate crisis and migration accounts for children.

Scholars have made significant theoretical contributions to understanding such linkages, which we detail in our paper. For instance, Hage (2020) outlined a framework for conceptualizing "climate refugees" and how environmental degradation intersects with social and economic factors to drive human (and children's) mobility. Whereas Hynie (2018) examined migration through a social determinants of health lens and highlighted the child migrant's particular vulnerabilities, McAdam (2012) theorized about the concept of "climate change displacement" and the need to recognize environmentally-induced migrants.

We draw on empirical data from one ethnographic classroom projects centered on children's sociopolitical perspectives on migration and the climate catastrophe with Venezuelan and Warao children's migration to Brazil. I use analytic snapshots to show the potential, promise, and precarity of using school spaces to disrupt spectral notions of (migrant) children. I used data from child-centered inquiries to illustrate how - through recognizing children's perspectives independently - adultist notions of childhoods might migrate away from the spectral.

Presenter(s): Gabrielle Oliveira

The Multimodal Testimonios of Latine/x Families' Experiences of Trust and Distrust in Schools

This qualitative study examined how Latine/x families from immigrant backgrounds have experienced *confianza* [trust] and *desconfianza* [distrust] in their children's schools, and the factors that contributed and shaped these experiences.

Drawing from scholarship that theorizes relational distrust in educational settings (Schultz, 2019) and critical race theory (Solórzano, 1997), we analyzed the experiences shared by eleven Latine/x mothers whose children attend the same school in a rural school district in the western U.S. We present our findings through a focal case of one family, a mother and her two sons ages 11 and 14, who shared and represented their testimonios (personal narratives of lived experiences) of trust and distrust in schools using visuals, imagery and photographs. We refer to the integration of multimodal forms of expression as resources in testimonio methodology as multimodal testimonio. Our analytical approach included multiple coding cycles that were both inductive and deductive, mapping themes and patterns from parent interviews to the focal family's multimodal testimonios.

Findings revealed that families experienced *confianza* [trust] through relationships characterized by genuine care, empathy and support beyond academics, including opportunities for *convivencia* [togetherness] that facilitated getting to know each other. These small gestures from educators, leaders and staff had a significant impact on families' experiences of *confianza* [trust]. Families' experiences of *desconfianza* [distrust] pertained to feelings of being ignored, lack of care and

support, and actions that made families feel unwanted, judged and criticized, including not following up or keeping promises. Our focal family represented their experiences through imagery and photography. For example, the mother invoked an image of a deflated balloon, which was then recreated through photography, to describe her moment of distrust to represent how her son felt after a parent-teacher conference in which the teacher criticized him for using both languages (Spanish and English) to explain his progress and grades. The mother visualized a bright tree to represent her moment of trust because she described it as a strong support where you can rest and take cover, while it protects and provides oxygen to finally breathe.

We found that the process of inviting multimodality into the family's testimonios was very generative toward deeper and more nuanced expressions of their feelings and experiences of trust and distrust in schools. We posit that in order for schools to foster and cultivate relationships of confianza with families, there needs to be better understandings of how culturally and linguistically diverse families experience (dis)trust in schools, as well as a conscious attempt to listen, repair and heal distrust.

UNDERSTANDING THE RELATIONSHIP OF THE POLITICS OF BELONGING AND HYPERVISIBILITY FOR MUSLIM COLLEGE STUDENTS IN AMERICA

This paper explores how Muslim college students negotiate belonging, citizenship, and hypervisibility within the context of an American university, with a particular focus on student engagement in student organizations such as the Muslim Student Association (MSA). Drawing on a two-year ethnographic study that included interviews and participant observation, this research uses the theoretical frameworks of the politics of belonging (Yuval-Davis, 2006; Abu el Haj, 2015) and hypervisibility (Gordon, 1997; Ahmed, 2006) to examine how Muslim students navigate inclusion and exclusion within both institutional and intra-community spaces. I ground the study in the literature on belonging and hypervisibility, arguing for an intersectional approach that connects these constructs to broader national imaginaries of citizenship. Drawing on interpretivism and constant comparative analysis, I utilize a reflexive, interpretivist methodology and a multi-level qualitative design that centers student narratives. I then provide a detailed analysis of the three findings related to my research questions – hypervisibility, surveillance, and objectification of their Muslim identity; intra-community concerns; and community building. This study examines how visible markers of Muslim identity, such as the hijab, can subject students to surveillance and position them as "failed citizens" (Anderson, 2013) within the university's imagined community. Through an analysis of the intra-community dynamics within the MSA, this study explores how hierarchies of race, gender, and religiosity reproduce broader societal exclusions, with Black Muslim and non-hijabi students frequently feeling marginalized. This study also highlights the transformative potential of MSAs as counterspaces for spiritual support, ritual practice, and political advocacy, where students cultivate transnational solidarities and reimagine belonging on their own terms. I argue that students are not only navigating systems of marginalization but also

actively reshaping institutional spaces through everyday acts of resistance, care, and leadership. This study expands existing scholarship on student belonging by theorizing belonging as a contested, intersectional, and agential process. I call for institutional accountability and investment in student-led initiatives that move beyond symbolic inclusion to create meaningful and equitable environments for marginalized communities.

“Living in America is Like Dying Every Day”: Iraqi Refugees and the Burden of Gratitude

I sat in Fatima's living room, sipping the sweet cardamom tea that she always served me. It was then that Fatima informed me that she had recently returned from the hospital after her miscarriage. In her late forties, and already a mother of five, Fatima had never expected to find herself pregnant again. However, Fatima and her husband had welcomed this news with joy once they found out. "A child is always a blessing," Fatima told me. After tearfully sharing the experience of losing the baby, she spoke of another strange experience she had at the hospital. Through the aid of an interpreter, Fatima asked her doctor if the baby might have survived had she had access to better healthcare. With a look of consternation, the doctor, who Fatima had experienced as friendly and kind until that point, said, "You have access to the best healthcare here", before walking out with a scowl on his face. Aware of her status as a recently resettled Iraqi refugee, Fatima fell silent, thanked the doctor, and spoke very little until she was released from the hospital.

Drawing on a three-year, multi-sited, multi-lingual ethnographic study conducted among recently resettled Iraqi refugees, this paper explores the ways that implicit expectations of gratitude work to further silence and subjugate refugees, ultimately denying them of their democratic rights for full inclusion into their new communities. This paper questions the "gift of freedom" (Nguyen, 2012) given to militarized refugees fleeing continuous liberal war, disguised as access to a safe haven, only to reveal itself as pathway to endless labor among the working poor in a late-stage capitalist America. Hoping to leave the ghosts of war and immediate death in their native country behind, refugees find themselves faced with "slow death" (Berlant, 2009): the daily indignities of poverty, illness, and chronic instability. Through punitive encounters with state agents tasked with their care, refugees like Fatima, Nadia, and Ahmed receive an implicit citizenship education. They quickly learn the definition of a "good" refugee: one that is grateful, obedient, and hard-working. Critique of the state and its institutions will not be tolerated, especially from Iraqi refugees, whose tenuous connections to the US complicate their positionality and belonging.

Notably, refugees are expected to integrate into a context rife with increasing anti-immigrant and nativist sentiments, evidenced by draconian policies such as the suspension of the refugee resettlement program altogether--an immense blow to refugees and all the agencies that support them--as well as a series of illegal and unconstitutional deportations in an effort to silence protest. Given this dystopian backdrop, it is critical to better understand the ways in which expectations of continual gratitude, even in the face of deep suffering, shape the lives of refugees, as well as their capacity to become true citizens of their new communities.

2531 Critical Reflexivity, Autoethnography, and Self-experimentation

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Galerie 6

Type: Roundtable/Town Hall

When Raymond Firth first used the term "autoethnography" in 1956, he was explaining a key debate between Jomo Kenyatta (first president of the independent Kenya) and Louis Leaky (Kenyan-British anthropologists) (Anderson 2006; Sherick and Julie 2017). For Firth, the heart of the debate was about representation, and who has the right to represent certain cultures and communities.

Feminist scholars (Strathern 1987; Abu-Lughod 1991; Behar 1997; McClurin 2001) pushed these debates further by providing critical analysis around the limitations of framing autoethnography through binaries of self and "other." Recent books and essays, from within the last decade have added other dimensions to the conversations. For instance, contemporary examples of critical reflexivity, autoethnography, (Bessire 2021, Ralph 2024, Garcia 2024), creative nonfiction memoir/autotheory (Huerta 2021), and fieldnote reflections (Carter 2019; Diaz 2020) bring different questions to the surface around writing styles, genre, dissemination, and access. When considering the role of self-experimentation in addition to conversations on autoethnography and interpretive anthropology, reading culture as text becomes phenomenological and embodied (Valdez forthcoming). This roundtable panel gathers scholars whose work intersects with these themes to explore the changing landscape of critical reflexivity, autoethnographic methods, and the ways in which anthropologists teach and write on these topics.

2797 Cultural Relativism of Queer Loss and Trauma: Blueboy Magazine and the Hauntology of the 1980s AIDS Crisis

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Oakley (4th fl)

Type: Oral Presentation Session

Blueboy magazine, established in 1975 by Donald Embinder, was the first nationally distributed gay men's magazine in the U.S. It was a leading source for various aspects of gay culture and featured nude male photography. After Embinder's death in 2017, Miss Tiger founded the Blueboy Archives and Cultural Arts Foundation (BACAF) to preserve the magazine for historical, educational, and research purposes.

BACAF is a vital repository of queer history and cultural preservation. It occupies a liminal space where past and present converge, inviting shared remembrance. Through its archival efforts and collection of ephemera, the Foundation explores the spectral presence of the AIDS crisis and the LGBTQIA+ community's resilience. Blueboy magazine acts as both record and relic, embodying the power of ephemera-temporary objects shaping collective memory. Personal and collective memory manifests in the echoes of those no longer here, creating a haunting, reminiscent of a spectral presence, lingering in the artifacts, media, and spaces they once inhabited.

The Reagan administration's inaction during the onset of the AIDS crisis exacerbated the gay community's suffering, allowing misinformation and stigma to proliferate. In contrast, Blueboy stood as an affirming force, providing visibility and support. The opposition between affirming queer media and mainstream narratives underscores the power of storytelling in shaping perceptions and experiences.

The production of Blueboy coincided with the emergence of the AIDS crisis, a period of profound loss and disenfranchised grief, turning the magazine into a symbol of resilience. The void extends beyond personal tragedies, encompassing unrealized futures that haunt the queer community. Through digital preservation, BACAF bridges past and present, archiving fragile materials to ensure narratives are not forgotten.

BACAF facilitates spiritual communication, weaving generations together across physical and digital realms. Channeling the memory of those lost to AIDS-evokes memory, transforms grief, and creates sacred spaces to honor, heal, and reclaim identity. By cultivating collective remembrance, BACAF offers a refuge where the living and dead reconnect through ritual and storytelling.

We explore the intricate process of connecting with spiritual energies, utilizing rememory and hauntology to reinforce community bonds. The presentation examines these processes as spectral, ethereal presences that necessitate social and political exorcisms as avenues for healing. These spiritual and energetic practices are crucial in addressing trauma. Through the collective perspectives presented, we highlight a journey that empowers the LGBTQIA+ community to confront their past and find solace in shared experiences. By engaging these haunted elements, our investigation seeks to honor memories of the deceased, confront shared histories and traumas, and foster deeper societal understanding of the AIDS epidemic.

Discussant: Miss Tiger , Symon Braun Freck

Presentation(s): Ephemera and Hauntology: Investigating the Confluence of Queer Trauma and Memory Through The Prism of Blueboy Magazine and the AIDS Crisis

Miss Tiger is a non-binary, Visual Anthropologist and Curator whose ethnographic research investigates the interplay between gender performance, sexuality, hauntology, cultural memory, and the AIDS crisis that devastated the gay community. She serves as the Curator of the Blueboy Archives and Cultural Arts Foundation, and a Curatorial Research Fellow with The Andy Warhol Foundation for the Visual Arts. Miss Tiger holds a Master of Arts in Visual Anthropology from the University of Southern California. Miss Tiger's anthropological investigation into the archives of Blueboy magazine explores the phenomenon of ephemera—items designed for temporary existence that demonstrate a potential for enduring significance. In analyzing the role of ephemera, particularly in the context of Blueboy magazine, it's crucial to recognize that such material possess their own agency and biography—enabling Blueboy to establish an identity, foster community, and act as a catalyst for the creation of a liminal space where the past coexists within the present. The magazine's production coincided with the AIDS crisis of the 1980s, thereby generating a psychic resonance that allows Blueboy to encapsulate the haunting experiences of both individual and collective trauma. This reciprocity evokes a spectrum of grief—spanning temporal and future generations, encompassing unrealized futures, rememory, and temporal disjunction, which manifest as spectral ghosts and a hauntological experience.

Presenter(s): Miss Tiger

Preserving Memory and Autonomy: Thanatechnology, Grief, and the Digital Afterlife

Symon Braun Freck is a Thanatechnologist, Filmmaker, and Entrepreneur dedicated to increasing accessibility to death care education and resources. She holds a B.A. in Thanatology and a Masters in Visual Anthropology from the University of Southern California where she conducted research on the diversity of death care professionals. Through her consulting firm, SBF Creative, and death-tech start-up, AI Death Doula, she combines film and Thanatechnology to help others find autonomy at death. Her work focuses on pre-death planning and advocacy, bringing death conversations to common spaces. The AIDS crisis left an indelible mark on the LGBTQIA+ community, creating a landscape of prolonged disenfranchised grief extending beyond individual loss. Many mourn loved ones, friends, and mentors they never met but also the cultural, artistic, and activist legacies cut short. Grief transcends death loss, encompassing the mourning of erased histories, lost futures, and a collective absence haunting generations. By examining the spectral presence of AIDS victims, Braun Freck uncovers how grief persists in ways seen and unseen, shaping memory and resilience. Braun Freck contrasts digital assets with physical relics, like Blueboy magazine, that risk a second grief if lost. Failure to digitize archives endangers cultural memory. Figures like Miss Tiger eternalize themselves and others through technology, serving as living memorials in dialogue with grief, canonizing community stories.

Presenter(s): Symon Braun Freck

Channeling Memory: Spirituality and Energetic-Based Community through Blueboy Archives and Cultural Arts Foundation

Anna Weiler is a Visual Anthropologist specializing in spirituality and cultural dimensions of energetic liminality. She holds a Masters in Visual Anthropology from the University of Southern California, where her thesis focused on occultism and community within the veil of the physical and metaphysical. At USC, she produced a documentary on occultism and spiritual-based communal spaces. She obtained her B.S. in International Relations and Global Health from the University of Maryland, with concentrations in Anthropology and feminist health practices. The Blueboy Archives and Cultural Arts Foundation serves as a psychic hub for seance and invocation. Rooted in both the LGBTQIA+ physical and digital realms, it fosters collective remembrance, providing sanctuary where the living and the departed can connect, heal, and reclaim identities through ritual, storytelling and community engagement. Lost generations who succumbed to AIDS inhabit liminal spaces of collective memory. The living yearn for familiarity and the presence of ancestors, seeking narratives and identity within the echoes of lost generations. Weiler investigates the process of channeling these spirits to evoke memory and foster community. She delves into this haunting presence and investigates the ideas of social and political exorcism as pathways to healing. Spiritual and energetic practices play vital roles in confronting trauma and creating physical and digital spaces to honor and remember AIDS victims.

Presenter(s): Anna Weiler

3231 Currency, Climate Change and a New Carbon Commons: Turning to Anthropology for Environmental Policy Solutions

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Grand Ballroom D (5th fl)

Type: Roundtable/Town Hall

This roundtable brings together a range of experts to explore and critique the grassroots policy proposal presented in Gustav Peebles & Benjamin Luzzatto's new book, *The First & Last Bank: Currency, Climate Change, and a New Carbon Commons*.

Throughout the ages, currencies have been based on all manner of objects—from tobacco leaves to salt to gold to collateralized debt obligations. The only thing that this odd assortment of objects shares is the communal belief that these objects could somehow harness and direct economic exchange—that they are, in a sense, fertile. Peebles & Luzzatto tap into the anthropology of money to propose that carbon could also be seen, in this same sense, as fertile; rather than loom as waste in our skies, carbon could instead be "drawn down" to the earth by currency users and the communally owned banks they rely on, where it could serve as a priceless foundation of new biological life. By offering a "monetary policy from below," the book asks if solid carbon could

become a sacred reserve, tying together communities in and around new, local, and fecund commons.

To craft this policy proposal, *The First & Last Bank* draws upon different strands of anthropological research and theory concerning the digital revolution, climate finance, alternatives to capitalism, mining, monetary systems, and Annette Weiner's notion of inalienable possessions. Beyond its reliance on anthropology, the book also builds on a growing tradition of collaboration between artists and anthropologists, who work together to find new tactics for reaching readers. Our roundtable will bring together anthropologists who have themselves made critical interventions in these fields, not only to probe the book's proposal, but also to further explore the broader capacity of art, anthropological theory, and ethnographic research to open up new fronts in the battle against climate change.

2777 Deterritorialization as Power and Resistance: Rethinking Migration Across Dispersed and Contested Borders

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Oral Presentation Session

"Deterritorialization" has been a term with significant political, discursive, and imagistic force, evading the fixity of meaning over time. Originating in the works of Deleuze and Guattari's (1970s-80s), where it signified an unmooring of structures, identities and meaning from fixed locations, deterritorialization gained traction with anthropologists (1990s-2000s) studying globalization and transnationalism as a phenomenon denoting the unrestricted flow of people, media and capital. In the realm of Post-Marxist political theory, deterritorialization came to describe the extension of security systems, transnational corporations, and digital infrastructure beyond sovereign boundaries.

Anthropologists studying global migration, mobilities, and refugee resettlement have attended to the multiple geographies across which bordering practices unfold, opening up new possibilities for theorizing deterritorialization. People on the move experiencing differential and layered forms of displacement, increasingly encounter bordering in multiple geographies and institutional

formations. States, in their expanding practice of bordering, operate beyond the immediate boundaries of the nation, marking bodies, communities, and spaces far from the material borders that refugees and migrants have to cross. Border regimes are increasingly moving both outward and inward, prompting anthropologists to rethink the sites where 'border spectacles' (De Genova 2013) unfold.

From offshore detention sites, to confinement in camps and detention centers, from the outsourcing of border control to neighboring states and local law enforcement to new collaborations between refugee welfare and immigration systems, to intensified security alliances between nation-states, border logics exceed geographic and institutional boundaries. This panel examines the social, political, and material worlds that migrants and refugees encounter with these dispersed border logics, examining how they impact the lives of people through practices of state-making and border control.

This panel does not limit itself to a singular definition of deterritorialization as it relates to human mobility, but instead seeks to explore the broad landscape it evokes. Papers will examine how refugees create their own fragmented nations, how states extend their deterrence apparatuses transnationally, and how policies that aim to govern mobility within and across borders activate alternative and even collective conceptions of refuge. This panel aims to explore how deterritorialization is not only a vocabulary of power, but also of resistance as cyclical, dynamic, and emergent.

Presentation(s): Governing Desire: Intimate Socialities in Australia's Transnational Migration Deterrence Campaigns

This paper examines the history, logics, and responses to Australia's public information campaigns which have aimed to deter migrants from entering its borders via sea routes, over the past two decades. It aims to further advance anthropological theorizations of migration deterrence as increasingly targeting the affective and intimate domains of prospective migrants' social worlds across multiple sites, including origin and transit countries. Today's PICs are part of a broader regime of extraterritorial migrant governmentality, focused less on telling people not to migrate and more on shaming and guilt-tripping them into staying put. As such, in recent years these campaigns have adopted an ethos of cultural sensitivity in that they target the worldviews of prospective migrants

through a culturally salient imagery. Through a confluence of government agencies, private consulting firms, and resettled refugee communities in Australia, PICs enact their power across a range of territorial and affective domains.

Based on ongoing ethnographic fieldwork with recently resettled refugees who encountered these campaigns, as well as discourse and media analysis of PICs since the early 2000s, this paper examines how PICs discursively and materially target prospective migrants' intimate social worlds through a politics of cultural competence. This paper offers another way to think about deterrence-based border policies as part of a broader regime of governing migrant desire.

Presenter(s): Helena Zeweri

Freedom of Movement? Refugee Labor and the Deterritorialization of the US Trucking Workforce

Deterritorialization and reterritorialization are central to the workings of global capitalism, where—generally speaking—the "free market" allows goods to flow across borders while the movement of people is regulated and controlled. But goods do not just move, they are moved through a complex system of logistics that, as I describe in this paper, often relies on the deterritorialized labor of migrants—and refugees—to function. Here, I give insight into Afghan Open Road, a program whereby refugees from Afghanistan who had been resettled in the United States in 2021 were supported to undertake training to receive their CDL and enter the trucking workforce. Their experiences speak to the violent deterritorialization of displacement and resettlement, as well as the ways that reterritorialization through the labor market has become both a condition of refugee resettlement and, in their words, an opportunity for "freedom." As they move through CDL training and licensing processes, it becomes apparent that the imperative to move goods within and across the United States often means exhausting and endangering the lives of people who move those goods. Seeing trucking as a "solution" to Afghan deterritorialization requires re-mapping their value and conditioning their "freedom," in terms of exchange.

Presenter(s): Georgina Ramsay

Border Externalization and Fugitive Refuge in Mediterranean Crossings

Europe's deterritorialization of its borders maintains the Mediterranean as a high-risk crossing zone. Since 2015, the EU and Italy have decreased and deemphasized state-sponsored search and rescue missions while renewing agreements with third countries to police borders and detain migrants. Today, NGO-operated vessels in the Central Mediterranean conduct a minority of overall rescues but remain in the spotlight as a target for the criminalization of migration and humanitarian aid. Since 2023, Italian authorities often send rescue ships to distant ports to disembark, amplifying the human and financial costs of these missions. To what extent, then, is a rescue ship—where people who have made long and dangerous journeys may finally obtain initial aid—a site of refuge?

I explore this question by elaborating how rescue ships occupy two contradictory positions: first, they operate as a temporary shelter carrying people to a safe port. Second, as the implementation

of restrictive policies extends rescue voyages, these spaces also function as sites of limbo, uncertainty, and continued risk. My analysis draws on fieldwork I've conducted in Sicily since 2022 and on rescue mission data collected by NGOs. I show how refuge is itself a fugitive site, fleeting and contingent on fluctuating dynamics, from the materiality of the voyage to new forms of deportability, via third-country detention centers. I consider what forms refuge takes amid the broad normalization of such practices.

Presenter(s): Eleanor Paynter

Impermanence as the Politics of Deterritoriality: Rethinking Nation in Exile

The Tibetan refugee community, under conditions of exile, must contend with shifting ways of relating to territory—from the idea of a lost homeland, to the spaces of current settlement, to uncertain sites where necessity or aspiration leads them. I explore this contention with (de)territoriality through the concept of *mithagpa* (*mi rtag pa*), or impermanence—a Buddhist philosophical notion that has entered Tibetan political and social vocabulary to express precarity, entanglement, and compassion.

Mithagpa, according to Tibetan Buddhism, is the condition of all things. As a political concept, it encapsulates the experience of refugees' lives—whether in the transitory act of living on land that cannot be claimed as one's own, or in the attachment to a territorially bound nation that cannot be returned to. Amid shifting geopolitical conditions, Tibetan refugees navigate transformations in community, politics, and their relation to land, even as attachments reemerge in other deterritorialized forms. For instance, a patchwork of settlements—functioning as a microcosm of a Tibetan nation—is continually reshaped to endure within an unstable landscape of sovereign nation-states.

In the final section, I reflect on my role as an ethnographer, whose presence is defined by comings and goings—an impermanent presence—and who continually attempts to grasp the shifting prism of the field from her own liminal position within the community.

Presenter(s): Ishani Dasgupta

Bordering and Deservingness: Haitian TPS Recipients in South Florida

Temporary Protected Status (TPS) for Haitians became a target of the second Trump administration as a status that allegedly allowed migrants to enter the U.S. illegally. Among other humanitarian legal categories, TPS appears to sit at a critical juncture in discourse on immigration about who deserves pity, who is an ideal contender for inclusion in the nation state, and who is a threat. As TPS's removal continues to be fought out in protest and court, many arguments both for and against a secure status fit within a migrant "deservingness" frame that posits TPS-recipients as law-abiding and well-behaved. The logic of deservingness creates a "moral demarcation (as opposed to a strictly legal one)" between those who merit empathy, rights, and benefits and those who do not (Holmes and Castañeda 16, 2016). The imagination of deserved protection envisions the state as a purveyor of good for the well-behaved, and an expectation that the state will help those who meet

the moral criteria. Based on interviews and ethnographic fieldwork with Haitian TPS holders in South Florida, this paper explores some of the complex ways TPS recipients have engaged state-based frames of deservingness. It examines how people have positioned themselves either strategically or through identification as deserving to stay, while simultaneously subject to surveillance and temporal governance through the status.

2647 Engaging with Contemporary China: Youth, Gender, and Popular Culture Across Online and Offline Spaces

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Studio 5

Type: Oral Presentation Session

This panel brings together five early-career scholars from diverse subfields within anthropology whose research engages with questions of gender, identity, and popular culture in contemporary China through anthropological inquiry. With a shared emphasis on their positionality as female Chinese researchers studying and living abroad, each speaker brings a unique lens to examine how gendered experiences are shaped, negotiated, and resisted in diverse cultural spaces, both offline and online in contemporary China—from ritual practices and music festival/listening, to online mourning rituals and digital matchmaking platforms.

Contemporary China offers a rich and complex landscape in which shifting gender norms, state ideologies, and popular cultural expressions intersect. This panel, however, does not define "China" solely as a nation-state bounded by physical borders. Instead, it situates China within a global context to reflect how the younger generation experiences a rapidly transforming social terrain shaped by the intersections of neoliberal consumerism, technological mediation, and enduring gender values. Drawing on anthropological methods—particularly digital ethnography and phenomenological analysis—the speakers examine sites where these dynamics intertwine, revealing spaces of affective expression, identity work, and subtle resistance. Across these domains, the panel interrogates how gender and sexuality are performed, disciplined, and reimagined under conditions of censorship, nationalism, and neoliberal transformation.

Drawing from distinct subfields within anthropology—including media studies, museum anthropology, performance studies, sociocultural anthropology and Sinophone studies—each panelist brings a unique theoretical framework and methodological approach to engage with the study of gender and popular culture in contemporary China. It explores how young people—particularly women and queer-identifying individuals—navigate the frictions between social expectations and personal agency in both online and offline spaces. Through this interdisciplinary and gendered lens, the panel highlights not only the diversity of youth cultural engagement, but also the creative, affective, and resistant ways in which gendered subjectivities are imagined, performed, and transformed amid the rapid social and political shifts of Chinese society.

Presentation(s): Queer Echoes from Taiwan: Listening, Longing, and Identity of Chinese Listeners

Drawing on ethnographic research on queer female mainlanders' engagement with Taiwanese music, this study situates their listening practices within the framework of Sinophone studies, examining how music serves as a site of affective identification and imagined queer belonging beyond China's heteronormative order. This act of listening functions as a cathartic release, helping individuals navigate the tensions between personal identity and social repression. At the same time, it reveals how Sinophone cultural production offers a counter-narrative to China's hegemonic discourse on sexuality, enabling listeners to cultivate a sense of belonging that transcends national borders.

This article has three key objectives. First, it demonstrates how Taiwanese music differs from its mainland counterpart, offering listeners aesthetic and emotional tools for resistance. Second, it explores how Sinophone music enables queer mainlanders to imagine a future beyond China, creating an alternative Sinophone world where queerness is not marginalized. Finally, it analyzes how queer mainlanders negotiate the contradictions between their emotional attachment to Taiwanese music and the political realities of their lived environment. By alternating between pleasure and constraint, they use music to express longing, seek solace, and construct a Sinophone queer identity that challenges China's cultural hegemony.

Presenter(s): Ophelia Xu

Burning Paper Money: Vibrant Necromaterials in the Ritual Practice of Contemporary China

Burning paper money has long been central to Chinese ritual practices, serving as a medium of communication between the living and the dead. In contemporary China, it has expanded beyond traditional monetary forms to include replicas of modern commodities—iPhones, Lamborghinis, and condoms—reflecting consumer culture and personal desires. These offerings illustrate how popular culture shapes the imagined afterlife, turning it into a reflection of material life. Meanwhile, the ritual has undergone gendered shifts for the young generation: once dominated by men, it now increasingly involves women in both the production and performance of the practice, reflecting broader changes in gender roles in urban China.

Drawing on interviews with ritual practitioners, onsite and digital fieldwork, and a phenomenological approach, this paper challenges conventional interpretations of burning paper money that rely on the assumption of a coherent belief system in the Anthropology of Religion. By foregrounding the materiality of paper money, this study reframes them as necromaterials—objects

that go beyond remembrance and forgetting, to engage in acts of presencing and absencing, giving and receiving. It argues that the evolving materiality of paper money is not only about imagining the netherworld, but also about articulating the desires, anxieties of everyday life, and the ever-changing social values, especially for gender, under rapid modernization and consumer culture in China.

Presenter(s): Siyang Dai

Silence Screaming: Alternative Gender Flags at Music Festivals in China

Since the emergence of music festivals in China, fans have formed a tradition of making flags, bringing them to festivals, signing them, and waving them at festivals. However, today, flags no longer solely revolve around music but also gender expressions. Numerous fans, mostly feminist and queer groups, create and carry alternative gender flags—feminist and queer flags—to festivals, constituting a unique landscape. However, given that such flags always face censorship, how do fans manage to create and carry them? What drives them to take such risks? What do such flags mean to fans themselves and official gender discourses?

Through participant observation at festivals, interviews with fans, and digital ethnography on relevant posts on social media, the study digs into how fans bypass censorship to make and display such flags and how such flags, as nonhuman media, intertwine with fans' affections and official gender discourse. First, it shows due to the blurred boundary of censorship, fans develop tactics to move between visibility and invisibility with agency. Second, it explores fans' motivation for their actions and demonstrates that such flags function as affective media that express their desire to be seen and to obtain identification. Finally, it reveals that apart from affective media, such flags serve as resistant media that breaks gender norms and engages in gender issues, challenging the patriarchal and heteronormative discourse at the official level.

Presenter(s): Xinyao Li

"In Death, on Cloud": Mourning Rituals Online in Contemporary China

When considering mourning rituals, traditional practices in China typically follow specific procedures such as burning rituals and other mourning activities. Since the 2010s, however, concerns about the environmental impact of carbon emissions from burning rituals, along with quarantine regulations during COVID-19, have led to a shift towards online mourning rituals as promoted by the Chinese government. However, the practices of online mourning rituals vary in different platforms and practices, such as postmortem marriage, personal profile creation, digital sacrifices.

In this context, several questions arise: What does it mean to die in the digital age? How does marriage in postmortem state form our identities? What does it mean to mourn someone online? And how do identities of oneself being displayed in postmortem contexts, such as gender, ethnicity, and age? This presentation will explore the representation of death in online mourning rituals using the theoretical frameworks of digital humanities and performance studies which shed light on how

identity and sexuality are constructed in online mourning rituals in Contemporary China, raising questions on the ontology and identity of death in online mourning rituals.

Presenter(s): Yejia Sun

Love in the Digital Age: Virtual Matchmaking Corners in China

Since 2004, matchmaking corners (xiangqinjiao) have emerged as a cultural phenomenon in China, where elderly parents informally gather to seek partners for their adult children. During the COVID-19 pandemic, traditional matchmaking corners found in urban parks transitioned into digital spaces. This study explores how historical matchmaking practices persist and transform in digital form, shaped by factors including feudal tradition, economic development, and state influence.

Drawing on interviews with five WeChat Official Account managers across five Chinese cities and content analysis of their platforms, this paper examines how parental involvement, gender stereotypes, materialistic criteria, and the commodification of intimacy continue to influence matchmaking practices. Findings demonstrate that these virtual matchmaking corners reflect a hybridization of public and commercial services, where psychological counseling, park activities, and matchmaking co-exist. The study also explores participant anonymity, inconsistent management, and situations where gender expectations are adjusted due to financial considerations. By tracing how virtual matchmaking platforms navigate traditional family structures and emerging digital forms, this paper offers new insight into the evolving relationship between technology, kinship, and romantic connection in contemporary China.

Presenter(s): Yuhui Li

8552 Ethnographic Field and Data Analysis Methods: One-on-one Mentoring Event

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Lafayette (41st Fl)

Type: Special Event

Many anthropology students and professionals are expected to conduct ethnographic research and implement analytical methods, yet some are not formally taught these skills, nor have an expert available with whom to consult. To help bridge this gap, the Society for Anthropological Sciences invites all students and professionals to engage directly with experts about their research and analysis questions. Mentors will be available to discuss research design, qualitative and quantitative data collection and analysis, dissemination, and career paths. Supporting session materials are posted on the SAS website (<https://www.societyforanthropologicalsciences.org/p/mentoring.html>).

4350 From "Vibes" to Vibratory Specialists

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR C2 (3rd fl)

Type: Oral Presentation Session

From "vibe checks" to "good vibes only," the colloquial use of "vibes" is at an all time high. The term is often used to describe the intangible or ineffable qualities of a person's mental or emotional state or the atmosphere of a place or environment. "Vibing" with someone indicates some kind of instantaneous connection, but when the "vibes are off" it can indicate a lack of connection or a perception of wrongness with a person, place, or environment. While some may dismiss talk about vibes as a linguistic overgeneralization, it may rather be understood as a kind of vernacular bricoleur phenomenology: A way to talk about the nascent affective, aesthetic, and cultural information that we are constantly exposed to that we are not always consciously processing. We attend to their inherent re-combinatory nature.

Many elements come together to produce a vibe: from music and décor to the way a person talks to the way all of those elements come together to remind you of previous times, places, and encounters. It becomes shorthand for a lot of different kinds of cultural information. So much so that we have designated different kinds of vibratory specialists who are highly sensitized to the work of sensing and creating vibes: DJ's, marketing and advertisers, matchmakers, restaurateurs, and realtors are all experts in curating and creating a particular type of vibe for their audience or clientele. Our panelists will explore an array of just such specialists, including tarot readers in Mumbai and Los Angeles, clothing reuse practitioners in Detroit, public data communication experts in the US, and DJs in Cabo Verde.

Presentation(s): Cultivating Vibrations: Exploring Tarot Reading Practices in a Digital Age

Tarot readers, sometimes called "sensitives," are one type of vibratory specialist: they are in the business of reading the energy or "vibes" around certain people or situations in order to offer situated moral guidance and help clients negotiate everyday aspirations and anxieties in the face of uncertainty. Drawing on ethnographic episodes from my broader dissertation research on global tarot reading practices in Los Angeles, California and Mumbai, India this paper will address two

issues: first, how did talk about "vibes" descend from 19th century discourses about science and spirituality to become so ubiquitous in the present? And second, how are tarot readers in Los Angeles using these discourses around vibration, frequency, and energy in order to cultivate a digital presence? Practitioners often need to cultivate their personal brand across social media platforms like Instagram, YouTube, and TikTok in order to gain likes, follows, and views that will hopefully translate to bookings and sales. Utilizing Ilana Gershon's concepts of "corporate personhood" I explore the pressures of self-branding and how the metaphors of corporate America spills over into contemporary digital tarot practices.

Presenter(s): Janaki Phillips

In/Vested Vibes: Clothing Reuse and Imagination in Detroit

This research details the colloquial aesthetics and terminology of a "bins" community in Detroit, centered at the pay-by-the-pound clothing reuse facility hosted by the Salvation Army. By wading through literal tons of donated clothing for their own desires and resale businesses, practitioners negotiate the "worth" of used things: Not just in terms of their brand name or condition, but also in relationship to their congealed personhood, residual affects, and conjuring capacity to transmit "a vibe". Through processing, interpreting, and transforming these goods into fresh iterations, practitioners look to old materiality to evoke new lives which propagate their DePop accounts, clothe their families, and attend to their own identity making. By reframing un/known histories in used things, they conjure seductive narratives of both imagined futures and pasts: Connecting new owners in the present. Exploring the ephemeral, creative power of donated things as part of larger chains of economic significance, we might understand how the "channeling" of vibes through used clothing facilitates imagination beyond frippery: Leading to cultivated assemblages that engender powerful, yet tangible action in sustainability practice.

Presenter(s): Eryn Talevich

"It's giving a PBS Magic School Bus vibe": Sensing and Sense-Making in Online

Encounters with Information Visualization

From jokes about "vibes-based politics" to "vibecessions," widespread commentary satirizes many young USAmericans for purportedly superficial and inaccurate sense-making practices grounded in "vibes," not "facts". In this paper, we explore how users of the social media platform Tumblr make sense of data visualizations in terms of vibes. We demonstrate that, for these young people, "vibe" functions as a local colloquialism for a semiotic phenomenon widely studied by linguistic anthropologists: indexicality. From typography to chart type, formal features of a data visualization carry echoes of previous occasions of their occurrence—and the contexts, people, and affects that marked those occasions. Moreover, assessments of a visualization's vibes mediate encounters with those visualizations—their perceived trustworthiness, validity, and authenticity. Through descriptions of visualization vibes, Tumblr users recognize how data visualizations communicate not only semantic, referential meaning but also social, indexical meaning. We thus argue that appeals to a visualization's vibe do not indicate data literacy failures but rather reflect a

sophisticated metasemiotic awareness of indexicality cultivated the intensely aesthetic and intertextual forms of interaction that characterize Tumblr. Yet by reading social meaning through the lens of vibes, these young Tumblr users conjure narratives linking people, places, and events with immutable transcendental essences.

Musical Hauntings and the Qualia of Remix: Interdiscursive Vibes of DJs in Cabo Verde

In the West African island nation of Cabo Verde, music is ubiquitous - it resonates in stores, homes, restaurants, public transportation, and textures social interactions and the soundscape of public life. While Cabo Verde has maintained a long tradition of vocalists and musicians performing, in recent years, the electronic tech scene has exploded with a proliferation of DJs sampling and remixing traditional songs. What is the vibe of these new remixes? What are the stakes of playing remixed songs instead of originals? In this paper, I examine the category of the musical "remix" to explore how rhythm distortions and instrumental layerings are an instantiation of musical haunting. Different from musical covers where a musician uses their own voice to sing someone else's song, DJs replay- and play with- the voice of another singer. Drawing on the notion of "shadow conversations" (Irvine 1996), I explore the slippages of musical authorship between the original singer and the DJ producer. Beyond professional DJs, this paper considers how everyday people - cafe workers, taxi drivers, etc. - are interpolated into a DJ subjectivity and are embedded in larger, interdiscursive networks. Utilizing the lens of vibes, this paper seeks to articulate the qualia of remix (Chumley and Harkness 2013). With attention to sonic properties, visual arts, and embodied performance, I explore the qualities that structure the experience and feeling of remixed, Cabo Verdean music.

8036 From Object to Agent: Bodies in Struggle Across Global Contexts

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Oral Presentation Session

This panel, entitled "From Object to Agent: Bodies in Struggle Across Global Contexts," explores how bodies are situated, valued, and contested across social, political, and economic landscapes. Our papers interrogate the ways in which bodies are rendered as both subjects and objects. They examine the dual processes of both the objectification of bodies by institutions and states--as, for example, by processes of technologization and commodification--and the contestation of this objectification by parallel processes of care, negotiation, and resistance.

Across contexts as varied as carceral systems, waste infrastructures, elder care, and illicit markets, bodies are entangled in processes that blur the lines between personhood and objecthood. Our collective scholarship engages with the thickness of the objectification-subjectification problematic by examining the politics of artmaking practices in Michigan prisons, the relationship between race and the "Red Market" organ trade, the "stickiness" of waste and labor in East India, the intersections of personhood and dementia care in Texas, as well as the "narrative work" of incarcerated women in South India. Through the diversity of these geographies and subjects, we think through the ways in which bodies become devalued on the basis of class, race, gender, caste, disability, and age, while also holding the potential for reclamation and subversion.

Presentation(s): "Wish You Were Here": Greeting Cards as a Mediator of Relational Violences in Prison

In this paper, I speak to the ways in which artmaking practices in prison mediate what I call the relational violences of confinement. Prisons, I will show, disrupt the capacity of the incarcerated person to relate and to be related to. To relate, within the context of this paper, refers to the incarcerated person's capacity to understand themselves and their relationships with others—particularly with those in the free world—beyond the relational logics imposed by the prison. To be related to speaks to the ways in which prisons structure how people in the free world think about and interact with people in prison. I argue that artmaking practices facilitate new ways of relating that resist the organizing capacities of the prison.

I will show the ways in which the homemade greeting card—a very particular kind of art object within the larger economy of carceral art—facilitates experiences of escape, self-fashioning, and kinship. As a tool of self-fashioning, the greeting card becomes a means by which people in prison refashion themselves as people to whom violence is done—inmates, prisoners—to people that work to countermand these violences—as artists and survivors of confinement. The greeting card becomes a way to imagine and enact modes of being that are rooted in care, agency, and survival. I show how it opens new ways of understanding how relational violences are enacted, negotiated, resisted, and experienced by people in prison and in the free world.

Sustaining Personhood in Dementia Care: Unsettling The Devaluation and Objectification of Aging Bodies

At a time when the global population is increasingly greying and bodies are reduced to their capacity for labor and productivity, addressing how aging bodies are valued and situated within the

subject/object dichotomy has become essential. This paper ethnographically engages with recognition of personhood in dementia care to explore the (de)valuation and objectification of the aging body. In the U.S., dominant cultural narratives of people with dementia as 'empty shells' or 'ghosts of their former selves' reveal the devaluation and objectification of bodies that have 'failed' to meet certain constructions of aging and personhood. Values of productivity, independence, and autonomy underlie these constructions and create a norm where older adults are active, able-bodied, and able-minded. Associated with frailty, dependence, and decline, dementia disrupts this norm and those with dementia become vulnerable to devaluation. This paper troubles this logic of valuation by examining how personhood is sustained in dementia care. Drawing on fieldwork with older adults with dementia and their caregivers in San Antonio, Texas, I show that despite the value of aging bodies being rendered to physical and cognitive ability, care that attunes to personhood unsettles processes of devaluation and objectification. Overall, this paper exemplifies how critical engagement with dementia care provides a more nuanced understanding of how the body might traverse the line between subject and object.

Objectifying Bodies: Commodification of Human Body Parts in Modern America

Contemporary scandals associated with funeral home and medical school mismanagement of deceased individuals have focused attention on the "Red Market" for human remains. An illustrative example is the recent revelation that Harvard Medical School's willed body program has been a source of body parts for the illicit trade. In this paper, we review the objectification and valuation of dead humans and their parts. We focus particularly on both the licit and illicit trade in these remains as well as the legal and enforcement structure navigated by market participants. We examine some demographic components of the online human remains trade to answer the question of whether this market represents a postmortem enslavement of disadvantaged people. This paper also examines the geographic scope of the online marketplace and asks whether the postmortem violence meted out on these remains through their commodification, objectification, and, often, display results from structural legal inequities—particularly in the United States. While modern bioarchaeology has begun to document connections between historic postmortem structural violence and disenfranchised peoples, little scholarship exists to inform whether such a connection exists with the modern dead. The human remains market data and legal analysis is used to probe this question and to examine what, if any, modern efforts should exist to protect against such activity.

Presenter(s): Ryan Seidemann

The Stickiness of Waste: Infrastructural Bodies and the Materiality of Waste Labour in an Eastern Indian City

This paper examines how waste work in an eastern Indian city renders labouring bodies both infrastructural and disposable, shaped by what I call the "stickiness" of waste—both material and social. This stickiness clings to bodies marked by caste, gender, and the burden of waste-work.

Based on ethnographic fieldwork, I show how such labour blurs the line between subject and technical object: bodies become tools, abstracted and erased in state and public imaginaries—simultaneously essential to urban life yet excluded from its rewards.

Waste—the apotheosis of the Anthropocene—is met with disgust by both citizens and the state. This disgust extends to those who labour through it. Nirmal Bandhus (waste collectors), lower-caste men, perform exhausting, precarious work with little recognition. Nirmal Sathis, lower-caste women, are recruited through developmental logics that frame them as morally trustworthy. Initially temporary data collectors, they become symbolic supervisory figures—central to civic order but bound by precarity and structural violence. As cleanliness drives circulate aesthetic discourses of progress, workers face salary delays and unreplenished gear.

The materiality of labouring bodies—aching and worn—bears the imprint of waste. Through vignettes, I trace how bodily labour and earthly matter coalesce, revealing how (de)valuation blurs the line between human and object, rendering some bodies indispensable yet invisible.

The Remembered Prison: Narrative Work and Selfhood in South India

This paper draws on fieldwork at a rehabilitation program for formerly incarcerated women in a southern Indian city. I pose a central problem: What is the relationship between narrative, experience and ethics in the aftermath of prison?

Narrative makes state institutions legible by dramatizing and explaining complex events, organizing its protagonists, and bequeathing a moral lesson (Gupta 2005, 18-19). My intervention contends with aftermath as a temporal, ethical, and narrative location where prison life is remembered, contested, and acquires an affective life in the present. Moral discourses of rehabilitation are often understood in a speculative mode, as "structuring forces of prison life and governance" that project a future return to society (Thompson 2020, 12). My work examines how formerly incarcerated women remember and recast life in prison, making it available to a moral imagination where they resist stigmatized identities and stereotypes, as a form of "narrative work" (Opsal 2011). I examine two broad categories of narrative: First, stories of corruption and resistance in prison; second, rumours around death, distress and hauntings. These stories open up an aporiac space, evoking ethical registers outside of the law and its disciplinary ends. My interlocutors, in narrating the prison and its human dramas clarify the moral stakes of their own past and present.

2606 Ghostly Memories: Landscapes and Objects Activating New Symbolic Horizons

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** MGB Salon D

Type: Oral Presentation Session

This panel interrogates how cultural objects and landscapes of memory formulate new symbolic horizons and frames of meaning that resolve problems of identity and change. It examines how objects and events are sorted and interpreted in order to create continuities in signification that draw upon the past as a resource for symbolic enactments and reconfigurations.

The collected papers deal with themes of engagement with the material world of objects and landscapes as they move through space and time. An unseen thread runs through these objects and landscapes in the form of comparative histories linking the past, present, and future in a way that leaves indelible semiotic traces, representing a potential to activate new and alternative symbolic horizons. Spectatorship -- the practice of viewing and engaging with landscapes and objects -- also involves engaging with "specters," the unexpected and often unseen traces left by the people and events that have previously crossed paths with these landscapes and objects, and the ways in which these traces make themselves known in the present.

Our presentations return to settings in Africa, France, and Eastern Europe that we have previously studied ethnographically. We strive to look beyond surface-level phenomena to interrogate what kinds of "ghosts" have informed, and continue to inform, our understanding behind the scenes. We define "ghosts" as the reflexivity, serendipity, and historicity that haunt our ethnographic settings. As we work to fit our understandings and observations into a cohesive model, questions that lie beyond the surface, periodically appear to unravel established paradigms, suggest alternative understandings, and lead in new directions. Encountering and engaging with these "ghosts" leads us to a new form of thick anthropological description. In conclusion, we argue that anthropology needs to become more "ghostly" in the sense of remaining open to the insights that can arise from these encounters.

Presentation(s): Ghosting, Haunting, and Appropriation in Circuits of African Art

Increasing concerns with the restitution of African artifacts to their places of origin emphasize the strong relationship between the spectral (spirit of the object) and spectatorship. This relationship builds on claims concerning object production and ownership as well as the provenance of objects in contemporary circuits, including private collections and distant museums. Inventories of objects and claims of ownership support processes of restoring objects to their rightful owners. While circuits of appropriation may be located in villages of origin and clans of craft makers, actual returns are mired in the ambiguities of anonymous art producers, faulty circuits of exchange, and

improbable locations of return that contribute to the ghostly history of art exchanges in the contemporary market.

This paper explores the ways in which Western museums, such as the Musée du Quai Branly and the Smithsonian's National Museum of African Art, serve as nodes of exchange for more profound re-imaginings of African art by contemporary creators who engage in what V.Y. Mudimbe has termed an act of reprise. The appeals of heritage sites such as the Cape Coast Museum in Ghana and the Île Gorée in Sénégal are examined as spectral simulacra that create new forms of aesthetic exchange, pointing toward an alternative future. This discussion concludes with an assessment of the relationship between contemporary artistic forms and the legacies of conventional African art.

The Phantasmatic return of the fetish: Reactivating Congolese nkisi sculptures in contemporary museum repatriation debates

Ongoing debates regarding the repatriation of African art from Western museums to the African continent have become a source for "memory politics" in support of Western diplomatic efforts. Just as the colonial context of conquest, administration, and ethnography served as the basis for early collecting expeditions, the postcolonial context of museum displays has led to a wide array of troubling questions regarding community ownership and belonging. This paper considers the case of Congolese nkisi iron nail sculpture as a context for social interaction. Their activation as consecrated "power figures" has been associated with the interaction between the iron nails driven into the wooden sculptural templates and that which is bundled into its hidden compartments. These compartments were filled with medicinal elements including local minerals, trees and plants, animal remains, talismans, among other sources, which are part of a still contested historical catalogue about these works. As a missing link in the survey museum, I consider how the nkisi figure has been re-consecrated as an object of exchange through the production of its market value. Its reframing bears little resemblance to the process of its creation. Instead, its present form reimagines how the museum complex re-consecrates its historical value through new horizons of ownership as valuation.

Presenter(s): Peter Bloom

Spectral Media: Ghosts, Ancestral Presences, and Mediated Communication

in Baloji's *Omen* (2023)

This paper examines Baloji's 2023 film "Omen" through the lens of spectral media theory, exploring how ghostly presences function as both narrative devices and metaphors for communication across boundaries. While superficially a story of "a family riven by superstition," I argue that "Omen" represents a sophisticated engagement with how ancestral presences manifest through media forms.

Central to my analysis is how accusations of witchcraft function as contested sites of spectral engagement. The rejection of bodies parallels broader questions about which entities are permitted

to communicate across boundaries of culture, geography, and temporality. Baloji's self-described synesthesia becomes particularly relevant, suggesting a capacity to perceive connections across sensory domains that mirrors communication with the beyond.

The paper explores family structures as haunted networks where media ancestors—from colonial photographic archives to digital platforms—continue to exert influence. The "zombie" imagery that pervades the film speaks not only to extractive histories in the DRC but to how media technologies create new forms of spectrality, where presences persist beyond their physical embodiment. By examining Baloji's transmedia approach, I demonstrate how his work collapses distinctions between spiritual mediumship and technological mediation, suggesting that all communication—whether with ghosts or through media—involves negotiating presence across absence.

In Dialogue with Ghostly Presences: Visiting Drexciya with Ayana V. Jackson in *From The Deep*

African, African-worked, and African diasporic artifacts are haunted by the legacy of the Middle Passage. "From the Deep: In the Wake of Drexciya with Ayana V. Jackson" evokes these spectral memories. Created in collaboration with curator Karen Milbourne, the exhibition opened at the Smithsonian National Museum of African Art (NMAfA) in 2023. Jackson's multimedia works engage the legend of Drexciya, a mythical undersea civilization populated by the descendants of pregnant women thrown—or those who jumped—overboard during the transatlantic passage. Drexciya was imagined by the Detroit techno duo of James Simpson and Gerald Donald in the 1990s, and Jackson significantly expands this tradition through collaborations with a range of diasporic artists, including tailors, videographers, sculptors, and sound designers. The exhibition weaves a rich tapestry of ecological concern, Afrofuturism, histories of music, the transfer of technology, and the cosmology of African water spirits. Employing what she labels an "archival impulse," Jackson deconstructs archival collections in order to challenge the "racialization and sexualization of Black bodies." Casting herself in the role of historical figures, Jackson brings the ghosts of Drexciya to life, and she invites audiences to confront and enter into dialogues with these ghostly presences. In the process, "From the Deep" inspires both a reckoning with past injustices and the imagination of more just futures.

"Prepared" Bodies and the Tripartite Self: How Spirits Inform Notions of Being in Southern Bénin

The forests, towns, and villages of southeastern Bénin are inhabited by untold numbers of spirits and deities. This paper examines how indigenous conceptions of the human body are informed by daily interactions with these spirits and divinities. More specifically, I explore how numinous presences manifest in human lives and how Béninois bodies are modified to mitigate attacks by malevolent spirits and attract the affections of benevolent ones. Goun and Fon corporealities understand the human body as the amalgamation of three interconnected selves: the physical body (agbazà), the soul (sé), and the shadow (yè). The tripartite self allows one to commune with ancestors and deities in times of need but also makes humans vulnerable to malignant spirits (yè

nya nya) and sorcerers (àzěto). As a result, Béninois embellish their bodies with various ritually-charged medicines, including powders, perfumes, soaps, scarification, and portable talismans. Power medicines, themselves created through collaboration with more-than-human agents, help people negotiate the often fraught and spirit-dense lifeworlds of southeastern Bénin. In analyzing how the omnipresence of spirits informs West African conceptions of being, this presentation provides a synopsis of the various types of numinous entities with whom Béninois communities interact and the ritual technologies used in mediating human-spirit exchanges.

Traces of the Past and Meaning-Making in Historical Tourism

Every environment where people have lived carries physical traces of the lives, activities, and worldviews of its past and present inhabitants – from markers placed there for deliberate purposes of remembering (e.g., statues, informational plaques, and memorials), to the forms of buildings and the layouts of streets, to the names of places. Some of these are deliberately emphasized and reconstructed in particular ways as evidence for stories; others persist although people may attempt to forget, ignore, or avoid them; and still others simply exist, invisible to some but holding the potential to take on significance in new and often unexpected ways.

In moving through such an environment, one encounters all of these kinds of traces, but the meaning one makes of them is informed by both cultural themes and idiosyncratic individual experiences. In this paper, I look at several sites where historical tourism takes place in formats such as guided walking tours or signage placed to direct visitors' attention to places, structures, and objects of historical interest. I compare the stories and themes emphasized in tourism materials with those that emerge in the experience and meaning-making of individual visitors (as told through public social media posts, blogs, and reviews). I also explore comparisons and contrasts between the two. How do the "ghosts" we encounter challenge and complicate, as well as reinforce, our understanding of the world?

Presenter(s): Erica Fontana

3570 Ghosts of Empire

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Galerie 2

Type: Roundtable/Town Hall

The empire has seen better times. Or so it would seem.

In the nineteenth and early twentieth century, the US had been a continent-wide empire guided by an expressly white ethno-nationalist vision of Manifest Destiny. It was expansionist, protectionist, and mercantilist; isolationist with regard to European disputes but interventionist in its own hemisphere. A different sort of empire took shape at the end of World War II, when the US emerged from the war with global military dominance and its economy accounted for half the world

industrial output. Under Pax Americana, the bipartisan consensus was liberal, internationalist, and constitutionalist. In the arsenal of imperial persuasion were not only forms of brute coercion but also various forms of soft power, the ideal of rule of law, and an outsized cultural influence. Anchored in a modern administrative state, the global policeman's internal policies were mildly redistributive -- organized labor was on a strong footing from the late 1930s until the early 1980s -- and increasingly guided by one variant or another of race-ethnic liberalism. Both parties tamped down social movements and political currents on the far right (such as Lindbergh's "America First" conservatism) and the socialist left (especially but not only the Communist Party during the McCarthy era).

These arrangements are presently being dismantled. What comes next? A diverse panel of discussants working in different venues at different stages in their careers, we will discuss aspects of a present haunted by the past, surveying military techniques, satellite states, soft power, race-ethnic imaginaries, labor organization, migration, and the role of law. Among the questions we consider: What conceptual models might be up to the challenge of the moment? How do earlier, pre-World War versions of empire inform the thinking of the contemporary right, and does the left remain trapped in later versions of Pax Americana? Do Cold War and post-Cold War frames continue to offer explanatory power under current conditions? Should we criticize today's right, which openly declares its dictatorial ambitions, with institutional logics that the left once called elitist or imperialist? Will present-day rearrangements and the evisceration of the administrative state reverse the empire's decline -- or hasten its demise?

Bertolt Brecht once said, "Build not on the good old days but on the bad new ones." Is the left trying to bust the ghosts of the past when we should be confronting the monsters of the present?

6973 Global Fascism: Anthropology at the Present Conjuncture

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR B3 (3rd fl)

Type: Roundtable/Town Hall

The rise of the far right, the intensification of authoritarian governance, and the proliferation of

increasingly militarized security states have generated urgent questions for anthropologists. As fascist movements gain momentum across the globe -- attacking migrants, waging genocidal wars, buttressing racial supremacist ideologies, dismantling democratic institutions and international legal norms, attacking higher education and free speech -- anthropologists become ever more intimately wrapped up in these developments. As our students, friends, colleagues, institutions, research sites and communities are targeted by such authoritarian regimes, it is increasingly urgent that anthropologists find ways to articulate (and build) political and intellectual anti-fascist opposition to such formations. Drawing on examples from Hindu nationalism in India and Zionism in Israel, authoritarian projects in Turkey, Hungary, the United States and elsewhere, to new formations of oligarchical techno-fascism, this round table grapples with the contours of the new global fascism. Discussion will critically examine both the genealogies of contemporary fascism (its historical continuities with colonialism, counterinsurgency, nationalism, etc.) and its ruptures (as something radically new), which demand politically engaged analysis of the present conjuncture.

7184 Haunting Echoes: Ghosts, Ancestors, and the Politics of Remembrance

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Estherwood (4th fl)

Type: Oral Presentation Session

How do the spectral remains of those lost to mass violence unsettle the certainties of state-sanctioned belonging? And in what ways do their afterlives, neither fully past nor entirely present, reshape our understanding of remembrance? This panel offers a reflective inquiry into the ancestrality of ghosts – those spirits suspended between ritual, history, and politics. At its core lies a question of transformation: how does mass violence alter not only the lives of the living, but also the political lives of the dead?

In this panel, the figure of the ghost, often imagined as untethered and disruptive, emerges as a presence that insists on reentry – into history, into kinship, into the very frameworks through which remembrance is governed. These spectral forms expose the fragility of official narratives and unsettle the social orders through which the state claims to organize grief, lineage, and belonging. Through rituals that mourn and reconfigure ties between the living and the dead, ghosts may also be perceived as ancestors – though not without friction.

Historical weight of violence calls for a rethinking of the binary between ghosts and ancestors. In this light, this panel explores how communities reimagine ancestral ties in the wake of disrupted kinship systems and burial rites. It further examines what the conditions are under which the dead are recognized, what remains at stake in the rituals.

This panel gathers four scholars whose work traverses the ritual, the legal, the clinical, and the spiritual to engage these questions. Dr. Elena Lesley examines how Cambodians have reconfigured ceremonies such as Kathen, Pchum Ben, and Bangsokol to restore relationships with the dead, while simultaneously re-inscribing hierarchies of belonging. Youjoung Kim explores how ancestor-making becomes a contested process shaped by law, gender, and ritual, where the distinction between ghost and ancestor remains fragile and politically charged. Talia Katz turns to mourning rituals at the interstice of psychiatric care and spiritual invocation, showing how repair takes form beyond the clinical after mass violence. Dr. Jorge Alonso Gamarra reads "posthumous portraits" within activist networks in Peru, where the dead are not only remembered but mobilized in the service of justice and memory.

Together, these contributions suggest that the ancestral presence of ghosts is a field in which the politics of mass violence are contested and reimagined. Through them, we are invited to reconsider foundational anthropological notions such as death, kinship, violence, and the state – not as settled categories but as sites of ongoing negotiations. Remembrance, in this sense, is not only to preserve but to confront; not only to mourn but to reconstitute the social words that violence has ruptured.

Presentation(s): Ritual Improvisation, Social Regeneration and Hierarchy in Post-Khmer Rouge Cambodia

The Cambodian genocide not only claimed the lives of roughly a quarter of the country's population, but also left huge spiritual disruption in its wake. In much of Buddhist Southeast Asia, people believe death should ideally occur at home, peacefully, surrounded by those a person loves. But during the Khmer Rouge, people often died violently and far from home. As a result, the living have often believed that victims of the Khmer Rouge remain trapped in a liminal state as ghosts, unable to transition to their next life.

This situation has led to widespread ritual improvisation in the country during the past several decades. While rituals often serve a foundational role in transforming "bad death" into "good death" (or socially regenerative death), most societies are not equipped to accommodate death on a

mass, anonymous scale. This paper examines how Cambodians have confronted this conundrum through modification of the Kathen offering ceremony, Pchum Ben festival of the dead and funerary Bangsokol ritual. It shows the mechanisms through which improvised ritual forms can help forge new, socially productive identities for the deceased while also recreating hierarchical relations that inspire loyalty to limited sources of authority.

Presenter(s): Elena Lesley

The Threshold of Mourning: Ancestral Belonging and the Afterlives of Jeju 4.3 (Sasam)

How does the South Korean state's selective recognition of victims construct the boundaries of legitimate mourning and ancestral belonging? The violence of Jeju 4.3 (1947-1954) – resulting in the deaths of approximately 30,000 islanders accused of communist associates – continued in the realm of mourning and remembrance, where official commemoration, while invoking national unity, simultaneously disavows certain deaths. Some spirits remain unclaimed, lingering at the threshold between ancestor and ghost – not only due to political rupture but also the exclusion from the ceremonial space of remembrance at the Jeju 4.3 Peace Memorial Park. This absence becomes more acute in families without male heirs, where daughters confront a Confucian family law that both constrains and compels them. Their efforts to honor the dead reveal a particular strain: the state, in privileging patrilineal ritual, paradoxically unsettles it through its regulation of claims-making for victimhood. I suggest that the process of ancestor-making emerges as a contested site, shaped by the entanglement of law, gender, and ritual. Within this unsettled terrain, the distinction between ghost and ancestor becomes porous - attesting to the living's ongoing contestation over kinship, legitimacy, and the fragile architecture of the nation.

Presenter(s): Youjoung Kim

Subjunctive Burial: Psychodrama and Healing the Bad Death

How does genocide push psychotherapists to re-imagine what liberating their patients from the agony of prolonged bereavement might look like? In 1917, Freud's seminal essay "Mourning and Melancholia," introduced a fundamental distinction between normal and pathological grieving processes. Freud eventually revised this normative claim, recognizing how the sedimentation of loss is constitutive of the self (Hollan 2022). Even so, for anthropologists who study the relationship between mass violence and ritual, a broader question endures around how everyday people grieve when violence has transfigured, if not severed, the relations between the living and the dead (Langford 2013; Kwon 2012). My talk intervenes in these debates by tracing the rise of "subjunctive burials" in the shadows of the Holocaust. The Israeli case is particularly instructive because the Holocaust appears not as abstracted event, but as part and parcel of the everyday clinical encounter and entwined with questions of poverty and migration (Zalashik 2008; Rolnik 2012). What therapeutic experiments does the Israeli therapist undertake in response to prolonged bereavement caused by mass killings that sever generational ties and disappear bodies? I concentrate on cases of Dr. Ada Abraham, one of Israel's first psychodrama therapists. Studying the

transformation of mourning rituals as they unfold at the interstices of the clinical and the spiritual offers a new way of understanding repair after mass violence.

Presenter(s): Talia Katz

The absence of their way of being": Notes on Posthumous Portraits from the 2022-2023 Peruvian Uprising

In December 2022, people from rural, Indigenous, and working-class communities across Peru joined a nationwide protest against the rise of the far-right ruling coalition that now governs the country. The demands of protestors were wide-ranging — challenging extractivism, precarious labor, and institutionalized racism — but many called specifically for the creation of a plurinational state and the dismantling of the project of statecraft established during Alberto Fujimori's dictatorship (1990–2000), amid the internal armed conflict (1980–2000). In turn, government officials falsely accused protesters of ties to "narco-terrorist groups" and responded with armed repression, leaving hundreds injured and claiming at least 50 lives by April 2023, deaths which preliminary independent investigations have identified as potential extrajudicial executions. This presentation examines the image-making practices of independent photojournalists documenting the aftermath of these executions among the families of the deceased, focusing on portraits that convey the enduring presence of the dead among the living. By approaching one of these images as a "posthumous portrait" and attending to aspects of its intimate life within a network of activists that includes photojournalists and the loved ones of those killed by the state, this presentation explores the attunements that enable the dead participate in, rather than merely serve as objects of, this emerging politics of memory.

Presenter(s): Jorge Alonso Gamarra

3306 Haunting Root and Branch: Future Memory, Colonial Specters, And Imperial Ghosts Among Ethnographers In Plant Studies - Part 1

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** MGB - Salon A

Type: Oral Presentation Session

This two-part session focuses on how plant studies ethnographers attend to hauntings - colonial, imperial, intimate, and otherwise. In it, our participants address how plant-human relations, and our studies of them, hold the potential to unsettle quotidian temporalities of nationalism, settler colonialism, and empire. Panelists consider how plants and relations with them call our attention to the conditions of possibility of that growth, the soil, and the ways they burst their borders.

Plants topple notions of purity and control within the enclosure of the garden (Shotwell 2016; Subramaniam 2016, 2024), and spectralize past relations and future possibilities. With plants, we

consider temporalities and impacts of imperial-colonial ghostliness. As lively beings and symbols of "life itself," plants are commonly conjured into the present tense. Might we also conceive of plants – and discourses surrounding plants – as time machines? They may transport the reader to the origin stories of nation-states, highlighting what Ann Laura Stoler calls "the durabilities of imperial formations" (2016: 17, 25); stories often sanitized by the genocidal process of colonization. They might also attune us to the planetary afterlives of enslavement "in the wake" of transAtlantic enslaver ships (Sharpe 2016: 22), as these relations manifest in the subtle as well as not so subtle soils of the plot, plantation, forest, field, swamp, desert, and garden (see also McKittrick 2013; Wynter 1971).

Critical plant studies ethnographers in this double panel ask: what kinds of memory can a currently living plant – or, in the archival sense, the *idea* of a plant – hold for people enacting social relations with reference to specific or imagined pasts? What are the theoretical frames ethnographers often take for granted as the most useful way to analyze plant-human relations? We provoke our colleagues to consider how the frames of economic botany, folk medicine, "magic" practices, and the notion of a settler-colonial and imperial "center" haunt our ability to see what is actually in front of us ethnographically. What kind of ethnographic work can be produced with and alongside plants? Do the frames of economic botany, folk medicine, etc., foreclose other possibilities? Ethnographic work with plants is haunted by the specter of capital, the wake of enslavement, and the mind-muting force of the "settler public sphere" (Lalu 2009) and "settler common sense" (Rifkin 2014; 2017), all the while planthropologists try to reach escape velocity on the available narratives.

Presentation(s): Citrus Cultivation in Imperial Ruins: An Inquiry into Finike Oranges in Southern Turkey

Attending to the botanical properties of crops and capturing their "plantiness" (Head & Atchison, 2016) in shaping resource politics (Fleming, 2017), this paper discusses socio-ecological encounters shaping small-scale orange production in southern Turkey's Finike. Oranges in Finike have been known as "Finike oranges," a name once referring to Finike yerlisi ("Finike native"), the most-produced orange variety until the 1970s. The paper follows Finike yerlisi from the Turkish War of Independence into the Cold War, tracing its interactions with the country's first citrus scientists, whose environmental imaginaries were entangled with cosmopolitan citrus assemblages and articulated within national scientism. It explores these assemblages through ethnographic and

archival research at the Antalya Citrus Station in Turkey and the Citrus Experiment Station in Riverside CA, revealing their entanglements across Finike's ecologies. Outlining the hauntings of Finike yerlisi, and using a feminist-anticolonial analytic (Murphy, 2020; Liboiron, 2021; Subramaniam, 2024), the paper highlights continuities and ruptures across supply chains and environmental imaginaries, and Turkey's developmentalist projects in relation to the U.S. citrus agroindustry during the Cold War. Emphasizing the political and analytical utility of plant ethnography, it argues that Finike oranges today reproduce colonial inequities in food systems and offer ways to address them.

American Trees in Korean Forests: Spectral Ecologies of Reforestation in Times of Geopolitical and Ecological Transition

In the wake of massive deforestation driven by Japanese colonial extraction and the Korean War, the pitch pine (*Pinus rigida*) emerged as a botanical witness to the imperial and nationalist histories of forest regeneration in South Korea. Originating from the U.S. East Coast, the pitch pine's journey across the Pacific reflects shifting imperial networks from its initial introduction by Japanese colonial foresters (pre-1945) to its extensive embrace by Korean forestry programs as an "American" pine considered superior to Korean pines under U.S. imperial influences (1950s and 1960s). Recent climatic and environmental changes, however, threaten the pitch pine forests already in decline due to

ecological succession. Drawing on archival research and ethnographic fieldwork with forest scientists, this paper explores how the American pine interrupts linear histories and postcolonial teleologies, holding within its morphologies and soils the ghostly presence of botanical dispersal, ecological degradation, and remediation. By attending to these arboreal specters in archives and forests, I argue that the pitch pine reveals the durabilities of imperial powers that still haunt forest landscapes. I also suggest that the shifting bio(geo)graphy of the pitch pine offers a critical vantage point on the intersection of imperial encounters, scientific forestry, and ecological remedies, while serving as a living

repository of forest futures in times of geopolitical and ecological transition.

Liminal Vision: Autoethnography, Cyanotype, and Indigo as Ethnographic Methods of Haunting

As a visual artist and anthropologist, my practice engages with alternative photography and autoethnography as tools for investigating spectral traces and material absences. This research examines haunting as an ethnographic condition, exploring liminal temporalities and the unseen. It considers how epilepsy, cyanotypes, and indigo cultivation could intersect – each contributing as mediums of rupture, imprinting and lingering absence. Through autoethnography, I reflect from experience how epilepsy is an embodied haunting—an unpredictable rupture of time and spectral perception. Seizures are interruptions of presence—consciousness lost and regained, like

hauntings that leave resonances rather than fixed events. Postictal states further emphasise this temporal residue of absence.

To engage and interpret temporal instability, I use cyanotype printing—a light-sensitive process mirroring my epileptic experience. Cyanotype enables us to record the ghost of an object, not the object itself. Historically used to document plants, it preserves spectral imprints as original subjects decay. The process inverts presence and absence, revealing what lingers beyond original subjects. As a time-based medium, cyanotype captures fleeting moments—mirroring the liminality of epileptic states and photography. This research asks how seizures and artistic practice rupture time and engage with the spectral.

Presenter(s): Kenneth Chau

A Paranoid Plant Science: Exorcising Past Lives to Re-member Plant Futures.

This paper is an ethnographic study of the sciences of plant neurobiology, cognition and behavior (PNCB). Through stories of the struggles of scientists risking their careers on the possibility that plants can think, remember, and communicate with humans and non-human selves, I explore the possibility of PNCB scientists—and their greater scientific nervous system—as haunted by the ghosts of their colonial pasts (Subramaniam, 2015). From within the language of debates surrounding the emergence of the PNCB sciences, it becomes possible to trace hauntings of their racialized and gendered pasts, in which the fears and dismissals of the animate lives of plants are oft relegated to practices of 'pseudo-science,' 'oriental mysticism,' and 'witchcraft.' I refer to this phenomena as a "paranoia of the paranormal" and work to show how such "paranormal" categories are deeply scientific, working to authorize the boundaries of scientific pasts and continuing to haunt and distribute the power of present scientific boundary production to some and not others. I conclude with a transformative ethnographic encounter, in which a scientist details a somatic release of those oppressive relations which had long limited her career as a woman in science. Together with her students, this scientist and I explore some remedies for re-membering a future plant science, in which the ghosts of its past are actively transforming the phenomenal politics of who plants and their scientists might become.

Presenter(s): Kristi Onzik

Chasing Origins: Plant Medicines at the Heart of U.S. Empire's Narrative

Situated in the heart of American empire, the Benjamin Rush Medicinal Garden at the College of Physicians of Philadelphia was first proposed in 1787 by College co-founder Rush himself. When he suggested a "botanic garden," he was thinking with a place that didn't exist and with a way of practicing medicine that was only just becoming legible as specifically American. "His" garden continued only as an idea until 1911, when a plot of land donated adjacent to the College's new home made room for plants. Embedded in Lenape haki-nik in the dual reality of the "wake" of slavery (Sharpe 2021) and the formation of a "settler public sphere" (Lalu 2009) this garden has emerged unevenly among 20th century American settler aspirations to "multiculturalism," "diversity," and being "a nation of immigrants."

The Rush Medicine Garden, therefore, offers an incisive site from which to tendril an analysis of plants, gardens, and unfolding settler colonial imaginaries. Examining the institutional and interpersonal labor (historical and current) involved, we argue that the material incursions of plants, archival documents, and oral histories can unsettle grand narratives, reorienting settler senses in the institution, the garden, and the broader settler city "of Brotherly Love." The stories that are told, and those that are forgotten, about plants, people, place, and formations of the garden, serve as an aperture onto the machinations of nation and empire, between paving stones and moist dirt.

6994 Haunting environments in and beyond the Mediterranean: Restoring human and more-than-human relationalities

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Studio 10

Type: Oral Presentation Session

In the face of top-down global political shift towards territorial claims and extraction policies contrasted by ongoing grassroots claims to the "rights to the city" or "rights to 'nature'", the past continues to haunt environments across urban and "green" (often considered near-to-intact) areas of the Mediterranean. Sacred sites and areas of cultural and biocultural heritage (Maffi 2007; Virtanen 2019), often located in historic urban spaces or seemingly "untouched" landscapes, embody this call for a reconciliation of historical legacies with contemporary challenges, echoed as a world of "polycrisis" (Henig & Knight 2023).

These sites are located either in near-to- uninhabited "antroposcenic landscapes" (Mattles 2017), such as wetlands whose legacies do not document intrusive extractive management, or in urban areas where specific visions of the city invoke various pasts inscribed in streets, buildings, and public squares (Hertzfeld 2009; Navaro-Yashin 2009). As these sites are variously affected by the neoliberal policies -such as extractive economies, large-scale infrastructural and/or urban redevelopment projects, unregulated markets, and mass tourism-efforts at preserving existing natural and urban formations are often framed in relation to various pasts-such as invocations of and longings for "untouched nature" or of "the ideal Mediterranean urban space." Across these different environments in various sites, stretching from the Mediterranean to the Atlantic, Pacific and back, we notice echoes of the planetary emergencies that bring into play the realm of human and more-than-human relations.

This panel aims to explore the emotional, sensory and spiritual relationships, knowledge and care practices that human and more-than-human, grow, nurture, maintain or neglect in specific environments around sacred places and biocultural and cultural heritage sites in the

Mediterranean and beyond. We will examine the relationships between biodiversity habitats and sacred landscapes, heritage and urban sites, and ask how they are changing amidst today's accelerating polycrisis and territorial disputes.

Discussant: Smoki Musaraj, Ohio University, Department of Sociology & Anthropology, Natasa Gregoric Bon

Presentation(s): Ecologies of care in anthropogenic environments

The political shift towards a neoliberal market economy in Southeast Europe after 1990 has led to extensive infrastructural interventions and other extractive activities. These threaten many anthropogenic (Mattles 2017) and protected habitats, including the Vjosa-Narta wetlands and the Prespa Lakes in Albania. People recognise these sparsely populated areas as sacred landscapes as they are believed to embody spiritual connections to various non-human realms. The presentation explores the emotional, sensory, and spiritual relationships, knowledge, and care practices that people experience in these areas. It examines the relationship between biodiversity habitats and sacred landscapes and how these are changing amidst accelerating climate and environmental challenges. How do people living in or near these areas perceive these changes and uncertainties? And how do they cope with various infrastructural interventions(eg. construction of international airport in the heart of the wetlands)to which these areas are exposed, despite their official status as National Parks, following recent amendments to the Law on Protected Areas? These new amendments allow "some interventions" which, according to current political rhetoric, tend to promote tourism development in the country. In response, local communities are calling for environmental justice by awakening affective landscapes of the past that inspire their efforts to restore ecologies of care for the future.

Presenter(s): Natasa Gregoric Bon

Reclaiming Marseille through Urban and Maritime Practices and Materialities

Moving through protests, artistic performances, and street talk, this paper reflects on claims to the "right to the city" in present-day Marseille. I look more specifically at two sets of human and non-human relationalities invoked in these claims: The first set consists of the annual commemorations of the 2018 buildings' collapse in Noailles, a neighborhood inhabited by migrants, artists, and working-class residents. In protests and artistic projects, claims to the right to the city are expressed in the language of material objects (such as the chains of condemned apartments), public spaces, and cultural heritage narratives that continue to haunt the spaces and imaginaries

of Noailles. These material forms constitute "affective spaces and melancholic objects" (Navaro-Yashin 2008); they embody remnants of the social relations and the sense of belonging that the (unwanted) evacuated residents of Noailles seek to restore. The second set of spatial materialities involves the sea, which is continuously incorporated in daily practices such as city walks, beach trips, and sea-gazing. Through these practices, residents underscore their deep connection to the natural-urban environment, a relationality that rests at the heart of the imaginary of Marseille as a quintessential Mediterranean city. Thinking through these combined materialities, I reflect on a Mediterranean urbanism articulated through affective practices that enact relationalities between humans and nonhumans.

Presenter(s): Smoki Musaraj

Talking Summertime Blues: Conversations about the Social Effects of Out-Migration in an Unsettled City

This paper explores seasonal rhythms of out-migration as described by long-time Tirana residents. Grounded in the real social history of a country where half the resident population emigrated between 1990 and 2010, the account draws from conversations with interlocutors who came of age in Tirana in the early 2000s and chose to remain, even as waves of emigration continued. Most studies of Albanian migration focus on the stories of those who leave—their experiences of displacement and the remittances they send back. This paper shifts the lens to the experiences of those who stay, attending to the practicalities of getting by in an environment where the future remains uncertain and the pressure to leave persists. The image of an unsettled city offers one way to capture the shifting and often disquieting experience of life in a place where redevelopment at any cost exacerbates the social effects of economic precarity and out-migration. In my effort to understand the city as my interlocutors experienced it, I came to see Tirana as shaped as much by the absence of departed friends as by their cyclical returns—especially in summer, when returning immigrant-visitors reanimate old ties and disrupt established rhythms. In this sense, Tirana in summer is a site of transformation and a haunted landscape, where the social effects of departure and return permeate everyday life.

5651 Hope, Waiting, and Ethnographies of the ‘Not Yet’ from a Global Middle East

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Grand Ballroom E (5th fl)

Type: Roundtable/Town Hall

"I am going to marry her," boasts a 19-year-old man living in Gaza. When? I ask. "After the war." More than four-hundred days after Israel's 2023 ceaseless bombardment and blockade of Gaza had begun, he was anticipating its end. An end that would mark the beginning of the next chapter of his

life. He waits, with hope for an end, to genocide. This roundtable considers "hope" and "waiting" as categories of analysis for everyday life in the Global Middle East—a transnational geography that accommodates the global circulation of people, ideas, and goods from this region. It explores what everyday actors in this global geography are "waiting for" or "waiting on", whether this waiting is active or passive, shedding light on their power and control over possibilities. It examines the temporal politics and poetics of waiting in a region that contends with authoritarianism, colonial violence, migration, and neoliberalism. Waiting in these contexts leads many to depression and hopelessness and also to creativity and innovation. This roundtable asks how people across this region (and its diasporas) experience and manage waiting and hope differently. Waiting, for some, hinges on the hope for better social, political, legal, and economic conditions. But what happens when waiting leads to perpetual deterioration of all of these conditions for everyday actors who are the subjects of neoliberal structural and institutional forces? What can one hope for? Can one organize around a politics of hope under such conditions? What does a consciousness of that which has not yet arrived look like for those waiting for a better future just beyond reach?

4016 In Excess: Ghosts, Accidents and the Forces Beyond the Plan

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR C1 (3rd fl)

Type: Oral Presentation Session

Bureaucratic systems, urban and development plans, and other attempts to project order upon space, place and sociality not only allow for the projection of power but also reveal the limits of what we can and cannot control. There are indeed forces in excess of our calculations.

Here, we attend to the forces that demand recognition, but by alternative means. For Lauren Berlant (2016), the "glitch" is the moment when infrastructure fails and, in failing, becomes visible. We build upon this to ask what else also emerges when plans fail, when what cracks open allows something else to be visible. Here, we see not counter-plans along rationalized lines, but points of rupture that signal the possibilities for things outside of modernist rationality. These could be the entreaties of individuals paradoxically silenced by the very institutional mechanisms that are there to give them voice, or an enchanted geography of a city built with modernist ideals of efficient movement and production. "Haunting" here is not necessarily trauma, but rather a glitch, a response by a being ghosted – that being that resists transformation into the anonymity of numbers, trajectories and flows.

For Lisa Stevenson (2014), death comes with assimilation, and ghostliness lies in persistence. In the glitches in the system, the bumps on the road, the unearthing of what has been buried in the new plan, there are traces of what cannot be assimilated demand our attention.

Here, we approach new horizons in the anthropology of ghostliness and hauntedness. Together, we explore the potential of thinking through the tension between human projects of control and those who trouble it, and how those who speak through spaces of silence, death, and accident teach us differently about how we systemize our relation to others and to the world.

Presentation(s): The Haunting of Phrakhanong: Humanity, Ghosts and Heritage in Bangkok's Urban Frontier

Underlying cityscapes memorializing the grand tragedies and victories of militaristic and political conquest, are the everyday experiences of life and death, love and loss. Drawing upon Benjamin's (2012) notion of the Parisian arcades as a ruin, where the remnants of a past way of being re-emerge to call into question a present order (see also Taneja 2017), here I explore in depth the microhistory of Phrakhanong canal in Bangkok, and what the canal, and its ghost, reveals.

Phrakhanong is best known for its ghost – Ya Nak, the mother spirit who laid waste to the community after she died alone in childbirth while her husband was conscripted for a distant war, an event that earned her status as Bangkok's most popular ghost. But she is venerated, too. And within her shrine are images of a riparian life: a tree trunk that floated down the river and whose spirit, too, became integrated into the shrine; a boat dredged from the canal, its wood blackened with time. Even her name, "grandmother otter," suggests the river. Her devotees call upon her not only for assistance in childbirth and love, but also in opposition to Thailand's ruling military. These ruins, and the spirit veneration that sustains and creates them, present a profound critique of hegemonic ideas of progress and order, but also, as a concretion of ruined things that is constantly being updated and added to, a new perspective on pastness (Gordillo 2014, Morris 2000) and its power to uphold – or subvert – power.

Presenter(s): Andrew Johnson

The Sleep of the Undead: Resignation Syndrome and the Excess of Governance

Bureaucratic infrastructures claim to master life through recognition and regulation, yet they generate their own excess—those who remain unassimilable. This paper examines resignation syndrome (RS) among unaccompanied refugee children in Sweden as a manifestation of this

haunting. RS, in which children withdraw into a coma-like state following asylum rejection, is not merely a medical anomaly but a symptom of governance itself. These children do not simply resign; they are withdrawn—trapped within a system that first demands their visibility and then negates it. Drawing on Bataille's excess, Laplanche's enigmatic signifier, and Fanon and Marriott's work on abjection and petrification, I explore how RS reveals the psychopolitical logic of asylum regimes. These children's withdrawal is not an absence but an excess—an unbearable remainder that cannot be fully assimilated into the bureaucratic order. Rather than passive victims, they materialize the contradictions of a system that seeks to render them invisible yet cannot escape their presence. Their catatonia is not only a reaction to trauma but the lingering imprint of a world that exceeds governance, exposing the failures of recognition itself.

Presenter(s): Farid Zareie

Subversions of the flow: the production of the weird as asymmetric history in Chile

Most renditions of traumatic or spectral history assume that time rolls into a present that demands retribution. But there are asymmetries which contest this linear reading. With regards to narratives of the Chilean military coup of 1973 and subsequent dictatorship, asymmetries in the historical narrative can be produced from spectral technologies. These are not simply interruptions, but subversions of historical linearity. They produce an "excess" of history that can only be seen as "weird" in that they contradict the order of things in absurd ways. Thacker describes "weird media" as that which defies its imperative as communicational, leading to an impasse in signification. In this paper I will describe two cases of weird media. The first is the case of a man who used a Ouija board to communicate to Pinochet, while he was alive, to identify the dictator's eventual impunity. The second is the time-tricking element of the paranormal instrumentation that generates electronic voice phenomena, in this case, in places of torture and imprisonment. I will argue that the white noise spewed out into these spaces confounds layers of time and coalesces fragments of voices that are historically dissonant. In both examples, time is the element of subversion in that it does not behave as one expects. Instead of looking at the notion of the uncanny, which is symptomatic of a secular retreat (Fisher 2016), I propose instead the idea of the weird with regards to interruptions-in-the-system.

Presenter(s): Diana Espirito Santo

How to Not Disappear Completely: Affective Infrastructures and Ghostly Excess in Contemporary Okinawa

This presentation analyzes experiences with spirits among Okinawan shamans (yuta), focusing on affective correspondences with non-humans in the environment. I argue that certain environments function as affective infrastructures, facilitating the emergence of spirit and ghost worlds even as urbanization attempts to erase their histories. Okinawa's landscapes are layered with violence—from the colonial annexation of the Ryūkyū Kingdom to the devastation of the Battle of Okinawa and ongoing U.S. military occupation. These histories persist not only in memory but in haunted geographies, where certain sites oscillate between the sacred and the ghostly. Based on

ethnographic fieldwork with yuta and spiritual healers, this paper examines how these practitioners attune to invisible forces that trouble human projects of mastery. Their enskilled bodies navigate the environment, encountering spirits of the dead, gods emerging from the land, and unexpected messages that exceed human planning. These affective infrastructures disrupt official histories, demanding engagement through ritual and embodied practice. In dialogue with anthropological debates on perception, haunting, and affect, this presentation rethinks ghostly excess as an alternative configuration of human and non-human relations, revealing how invisible forces shape and transform discourse beyond material and human control.

Presenter(s): Andrea De Antoni

Grounding Truths

Drawing from ongoing art-anthropology work in the transdisciplinary project "Agroforestry Futures," and my 2025 exhibition "Grounding Truth," this paper explores the tensions between control and excess, abstract data and embodied knowledge, through the concept of turbid images. The exhibition reimagines the politics of landscape planning and invites multi-perspectival understanding: in a data-driven world where planning and modelling may yield multiple 'truths' that drive future imaginaries, I am curious about systems and visualisations that generate diverse narratives and how revealing these can expose the limits of human control. I will explore how 'turbid' images, characterised by complexity and evoking the material nature of their production, can embody 'forces' of embodied knowledge and aesthetic decisions that evade and deny. Through anarchival practices (involving bodywork, breathwork, film and collage) this paper examines artistic research-responses and interventions into representational and knowledge systems. By questioning established norms, this research advocates for a re-theorisation of knowledge production that accommodates complexity, excess, and the spectral nature of knowledge itself, suggesting new pathways for addressing environmental and social challenges bent on envisioning the future.

Presenter(s): Jen Clarke

8356 Inequity Pre- and Post-Mortem, An Interdisciplinary Panel on Necroviolence

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR D3 (3rd fl)

Type: Conversation/Debate

While the adage goes, "we are all equal in death," necroviolence reveals this is not true. We experience structural and symbolic violences both before and after our deaths, affecting our corporeal treatment, reputation, and perpetual care (or lack thereof). Research displays contradictions that in fact, people may become most vulnerable after death as they lose agency in their passing.

This panel brings together interdisciplinary scholars and professionals studying various death topics to show how inequality persists beyond life and affects history and memory of the deceased. The panelists hope to open a conversation of how various injustices may better inform future care for all, and how necroviolence must be addressed with a critical eye to protecting the most vulnerable.

2535 Law, Power, and Justice: Engaging the Book, "Moral Autopsy: Truths, Secrets, and the Judicial Afterlives of Communist Secret Service Archives"

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Orpheus (8th fl) (access via elevator only)

Type: Roundtable/Town Hall

This panel takes the form of a conversation around Saygun Gökarıksel's new book, "Moral Autopsy: Truths, Secrets, and the Judicial Afterlives of Communist Secret Service Archives" (Cambridge University Press, Law and Society series). The panelists, from different geographical locations (e.g., Asia, Middle East, Eastern Europe, Americas) and through a variety of theoretical lenses, will engage the book, reflecting on the themes of law, power, and justice at this current global moment, often characterized as the crisis of liberal democracy and international law and the surge of populist and ultra-right. In particular, the panel will address the problem of rightwing authoritarian appropriation of the discourses, institutions, and practices identified with transitional justice such as truth and memory practices, public transparency and anti-corruption projects, and verification of civil servants.

Situated in the long aftermath of the fall of state socialism in Poland, "Moral Autopsy" offers a critical ethnographic study of the transitional justice form called "lustration," widely employed in postsocialist Eastern Europe, but also in "post-war" contexts such as the US occupation of Iraq in 2000s. Polish lustration officially refers to the public exposing and banning of the people identified as secret communist agents (spies) from public office by using communist secret service archives as its chief source of evidence and truth. Yet, lustration's social-political life extends far beyond its formal legal-institutional domain, mired in sensational media revelations and expansive suspicions of "collaboration" with the former regime. Through close study of court trials, biographies, media, films, and plays concerning judges, academics, journalists, activists, and artists who were accused of being communist spies, "Moral autopsy" shows how this transitional justice process, which was introduced in late 1990s to create public transparency and trust and build liberal democracy, has become appropriated by rightwing populist groups to bolster nationalist sovereignty politics of secrecy and moral purification. Instead of conceiving this rightwing appropriation as simply a case

of pathological "abuse" of otherwise morally good instruments, "Moral Autopsy" invites us to interrogate the binary of liberalism and authoritarianism, war and peace, and the redemptive notions of transparency and truth-telling underpinning global transitional justice. Gökarıksel highlights the importance of critically attending to what he calls the moral autopsy mode of knowing, examining, and judging that informs postsocialist transitional justice projects concerning communism and its specters. Ultimately, the book calls for envisioning social transformation and justice beyond Eurocentric liberal teleologies of transition, capitalist nation-state epistemology and prerogatives of property and security, and the judicialization of history and politics,

3861 Life after Death: The Political Afterlife of Racialized Infrastructure in the United States

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Studio 9

Type: Oral Presentation Session

Despite the 'death' of overtly discriminatory policy measures and racialized government-backed development projects, immaterial racialized ideologies live on through the deliberate and strategic infrastructural inequities created, establishing racialized geographies for nearly every racial and ethnic group within the United States. The apparitions of racialized intent not only show up in the physicality of inequitable city landscapes and racial covenants inked on still circulating housing deeds, but they haunt contemporary generations still, economically, socially, and politically. Dragging down property values, impairing health, and denying strategic access to jobs, hospitals, and stores, the multi-generational impact of dead policies and developments plays out, shapes, and haunts the everyday lives of descendants still today. This panel dives deeply into the afterlife of racialized policies and intentional infrastructural inequities that still shapes the geographic realities of Black, Hispanic, and Native Americans today. Beyond the physicality of racialized landscapes, these presentations analyze the ways in which historic policies and geographies carry over into modern-day inequities. From the loss of generational wealth to the inaccessibility of education and the stymieing inter-generational impacts of historical trauma. This panel interrogates the ways in which dead policies and infrastructures live on to haunt present generations through intentionally deepening class divisions, widening the inaccessibility of homeownership opportunities, and the strategic removal of community promoting green spaces. To worsen matters, racialized geographies that once offered the bare minimum of housing opportunities threaten to displace the very residents corralled into these disinvested landscapes in the first place, as the purposeful political

and infrastructural neglect presents a cheap new market opportunity. For others, the effects of infrastructural neglect can be felt within their very lungs and heard in their children's raspy breaths.

Utilizing the metaphor of Ghosts and Hauntings, this panel investigates the legacy and manifestations of Proposition 13's racial impact in California's parks and schools, the post WWII Servicemen's Readjustment Act's hand in the disproportionate rise of white homeownership and generational wealth compared to Black Veteran families, and the impacts of redlining had on Latino activism, which is now being commodified and sold as gentrification threatens to displace them from the very places once deemed a financial 'risk'. Furthermore, this presentation examines the political afterlife of the Native American reservation system and boarding schools and the ways in which these systems have cast Native Americans as unseen and unrecognized ghosts within the education systems today and the ways in which political environmental decisions of the past pose health risks today for marginalized communities.

Presentation(s): Alluvial Fans of Remembrance: Sediments of the Past Informing Future in Racialized Neighborhood Services in Los Angeles, CA.

Manifestations of the 1978 Proposition 13 in California, mandated a roll back to 1976 property tax rates has lingered as a racially unjust legacy. In challenging literature through the use of deconstructing binary geography ideologies, and examining, rethinking space throughout time, this presentation explores the reorganization of vital services targeted to groups of the subaltern in those families with children. An evolving result is due to the defunding of services like parks and school institutions relied upon by marginalized groups from these communities. The afterlife illuminates a physical world of racialized geographies on top of redlined communities with an ever expanding division between classes of rich and poor neighborhoods. Alluvial fans are used as a metaphor to highlight the enacted state legislation as residual sediments compounded by the backlash against rising property taxes.

How the Theft of Black Home Ownership Haunts the Present: The Costs of Redlining , Racialized Policies and Stolen Generational Wealth

U.S. Racial Ideologies and the devaluation of black bodies, specifically borne from the 1940-1960, has left a geographic imprint on the US landscape, haunting homeownership rates in the United States still today. This presentation demonstrates how key, now 'dead', policy measures and practices from the 1940-1960s still haunt black homeownership rates today. Despite the official political 'death' of redlining policies, housing discrimination, and segregated housing tracks, the

legacy of racialized housing access lives on, not through overt policy measures, but through the loss of generational wealth, strategic school placements, and urban/suburban infrastructure divides grounded in 1940-1960 racialized policies. From the denial of deserving black veterans' Veteran Administration loans and reduced 'GI Bill' Benefits, to the rejection of home improvement loans from redlining policies, black homeownership was hard to obtain while white suburbs flourished. Over time urban renewal projects, inequitable highway infrastructure, and realtor instigated episodes of 'white flight', further diminished the value of property where Blacks were able to buy. The result is the compounding impacts of these 60-year-old-plus racialized policies continue to haunt black homeownership rates today, particularly through the loss of generational wealth and life opportunities.

Rearranging and Re-representing Nature: Ghosts and Hauntings within the Environmental Restoration of the Salton Sea in Southeastern California

The Salton Sea, California's largest lake, is shrinking. The consequences of allowing the Salton Sea to decline reverberate within and beyond the lake. They circulate within the lake causing habitat collapse and algae growth. The receding shoreline blows fine particulate dust, fortified with decades of agricultural chemicals, into the homes and lungs of nearby communities. Both short- and long-term restoration efforts at the Salton Sea remain sites of debate between scientists, policymakers, activists, and residents. Meanwhile, local communities have largely been left to deal with emerging environmental health issues on their own. Using the concepts of ghosts and hauntings, this presentation discusses these frictions within the restoration of the Salton Sea that circulate around the ghosts of past environmental management paradigms and the hauntings of an imagined future. While eerie, these hauntings offer direction and assist in building coalition within and between communities. These ghosts and hauntings call into question the meaning and use of the words restoration, toxicity, and community engagement and highlight the importance of slow research within communities experiencing injustice.

7640 Making Media of Value in Transnational Turkey, Greece, and Germany

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Oak Alley (4th fl)

Type: Oral Presentation Session

Papers in this panel draw on related work in semiotic anthropology and the anthropology of value to explore how social objects function as "media of value" (Graeber 2001; Munn 1986; Turner 1968) and "semiotic media of representation" (Turner 1968) through which people and institutions imagine, create, communicate, and contest social values.

Each paper analyzes a given object – the saz (a musical instrument central to Alevi ritual), the Muslim call to prayer in a German city, an encrypted messaging app and counterterrorism investigations in Turkey, art NGOs and cultural policy in Greece, and the documentation of genealogical claims to Iberian ancestry among members of Turkey's Sephardic community – whose mobilization and circulation as both objects and signs are analyzed to offer ethnographic accounts of the "social life of cultural value" (Agha 2024). And each paper describes how the semiotic properties and processes associated with its chosen object of investigation manifest within historically-conditioned "representational economies" (Keane 2003) and are shaped both by the things people and institutions do with objects and the meanings they ascribe to them.

Among major questions to be explored are the dialectal and processual relationship between commodified and cultural forms of value; competing processes of valorization and devalorization; and the interrelated forms of material and ideological work that is involved into making things into objects of value and media of social action (Gal and Irvine 2019; Graber 2023; Keane 2003; Kockelman 2006).

Presentation(s): Pedagogies of Iconization: Making the Alevi Saz a “Stringed Qur’an” in Contemporary Turkey

The saz, a long-necked lute, is central to the rituals of Alevis, a messianic Sufi community comprising Turkey's largest non-Sunni-Muslim religious group. As is typical of musical instruments in religious devotional contexts, the saz is invested with multiple overlapping iconicities.

Based on thirty months of ethnographic fieldwork with Alevi reformists and participation in their musical assemblies, I examine three ways in which they manage the saz's sacred status: through prohibitions against playing in certain venues like bars and discretion against playing whenever affects associated with these venues are present, regardless of the setting; through explicit pedagogy regarding the saz's function in Alevi ritual; and through carefully curated and circumscribed public performances of Alevi rituals that reinforce new associations of the saz with the sacred and human divinity. Drawing upon the concept of iconization developed in linguistic anthropology, I argue that the spiritual power of the saz as a sacred, sounding icon is dependent upon Alevi reformists' communicative work to stabilize and manage its indexical values—the associations the saz animates as a result of previous contexts of performance. This pedagogy of iconization focused on the "stringed Qur'an" is a primary *modus operandi* of the current Alevi reform movement.

Presenter(s): Alex Kreger

Noisy Oaths: Cologne's Central Mosque and the Sonic Limits of Transparency

Cologne's DITIB Central Mosque is pioneering on several fronts. As a large, architecturally distinct glass and concrete structure on one of Cologne's busiest intersections and the German headquarters of DITIB, the Turkish government's Directorate of Religious Affairs, the 2017 mosque claims a public face for German Islam even as it is maligned as a symbol of Turkish state overreach. Since 2022, the Central Mosque has also taken on a pioneering public voice in coordination with the Cologne city government through public Islamic call to prayer, or *ezan*. In this paper, I examine the urban *ezan* as site of semiotic contestation. While the *ezan* in Cologne might symbolize Muslim piety and belonging, German secular liberal tolerance and freedom of religion, or an attack on European identity and values, it is regulated through the legal framework of noise abatement and thus located seemingly outside semiosis. Drawing on intensive fieldwork, I ask what these different semiotic registers teach us about the contours of Islamic distinction under secular liberal governance. I argue that categorizing the *ezan* as noise amounts to a secularist suspension of the Islamic oath that reveals the sonic limits of architectural and ideological transparency deployed by the DITIB Central Mosque.

Presenter(s): Erol Koymen

Evidencing Terror: Counterforensics, digital traces, and the Semiotics of the War on Terror in Turkey

Since the 2016 attempted coup in Turkey, more than 215,000 people have been investigated for allegedly using ByLock, an encrypted-message app. According to government officials and courts, the app was used exclusively by Fethullah Gülen's network, which the Turkish state classifies as a terrorist organization. Legal experts transformed ByLock data into vehicles of suspicion that could "testify" to past and future terrorism actions. They did so by combining counterterror doctrine and cultural narratives with digital and legal practices, including data extraction, analysis, legal writing, and courtroom confrontations. I call these practices evidencing terror, a technolegal method that, in setting up suspicion as an element of digital evidence, wields an extensive visceral and political force that suspends people's civil rights. The paper elicits how jurists and digital forensics examiners have reconfigured the unknowability of digital traces as indexical signs of a new terrorism threat and its esoteric nature. The paper draws on 30 months of fieldwork in Istanbul and Ankara, conducted from 2018 to 2022, during which I followed digital artifacts from the moment they were extracted from different types of databases (phones, servers, surveillance systems) to their use in courts and media outlets.

Presenter(s): Onur Arslan

Curating Distinction: Signs, Aesthetics, and Representational Economies of Sephardic Ancestry

In 2015, five hundred years after the Catholic Inquisition, the Spanish and Portuguese governments extended citizenship to Jews worldwide, contingent on their ability to provide evidence of Sephardic ancestry. While the offer sparked reconciliation for many, it also raised questions about how to prove a 500-year-old connection to medieval Iberia—especially for heterodox groups, families with histories of religious conversion, or those without conventional archival ties. For these applicants, indexes of ethnoreligious ancestry were often scattered or submerged, appearing in unusual forms, such as oral testimonies, cemetery records, traces of heritage languages (like Ladino), or even family recipes. This paper examines how individuals from the Selanikli (also known as Sabbateans or Dönme)—a heterodox Jewish-Muslim community in Turkey—mobilized their Spanish and Portuguese ancestries through unusual records often in creative curations. I analyze the semiotic labor involved in curating ancestry and ethnoreligious difference. Doing so, I locate the "representational economies" (Keane 2003) within which objects such as wine, piano, or portraits operate as semiotic media of representation (Turner 1968), indexing intertwined social histories of Ottoman cosmopolitanism, ethnoreligious difference, and European taste. These curated forms of ancestry illuminate how value is not simply inherited, but actively materialized and mediated across generations.

Presenter(s): Idil Ozkan

Political Economies of "Doing Good": Arts and Culture Policy in Greece for a Europe in Crisis

This paper situates Athenian non-profit arts and culture work in a fractally complex, transdisciplinary, and internationally networked discursive space oriented toward the doing of social good and societal change. Drawing on ethnography conducted at the Greek European Capital of Culture in 2023, it focuses on cultural democracy, a prevalent though not-yet hegemonic

arts discourse regarding the crucial role of art and culture in mitigating the 'poly-crisis' (Morin 1993) threatening the European Union (EU) by producing meaningful collectivities through citizen participation and facilitation of a common social project. This paper draws on semiotic approaches to ideological work (eg. Gal and Irvine 2019) and political epistemics (Glaeser 2011) to reflect first on how art becomes understood as a cultural category of communication and viable channel for social intervention in the context of pan-regional arts advocacy in the EU. It contextualizes and tracks fraught elaborations of the cultural category of "art for the public good" in Greece as situated at an uneasy nexus of emergent local, national, regional, and global ideologies of action and of representation.

3493 Meeting at the crossroads: Multi-Disciplinary approaches to identity formation in Southeastern Mesoamerica. Part 1

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Rhythms I (2nd fl)

Type: Oral Presentation Session

Southeastern Mesoamerica-encompassing eastern Guatemala, El Salvador, and western Honduras-has long been viewed as peripheral to both the Maya heartland and broader Mesoamerica. Scholarly approaches have often focused on delineating Maya and non-Maya spheres, while research has remained constrained-both conceptually and practically-by modern national boundaries and disciplinary silos. Recent anthropological work, however, underscores the region's complexity and its ongoing importance in shaping social identities within a multi-ethnic borderland.

Historically at a crossroads of migration, exchange, and political influence, Southeastern Mesoamerica has experienced the arrival of diverse groups-from Lowland Maya and Nahuatl-speaking populations to modern-day ladinos. As these communities became established, local populations variously resisted, reinterpreted, or adapted to incoming peoples and their ideologies. Far from being marginal, this region offers compelling examples of how identities were-and continue to be-negotiated through interaction with broader social, economic, and political forces.

This session brings together Cultural Anthropologists, Archaeologists, Physical Anthropologists, Linguists, and Ethnohistorians to explore identity formation in this dynamic region. By fostering interdisciplinary dialogue, we aim to challenge the national and conceptual boundaries that have historically fragmented scholarship on Southeastern Mesoamerica. Ultimately, we seek to position this region as a critical locus for understanding the formation of social identities in frontier and borderland contexts. We further hope that insights generated through this collaborative discussion will contribute meaningfully to broader anthropological debates on identity, interaction, and

cultural transformation.

Presentation(s): The Creolization of Ch'orti'; Ghosts of the Classic Mayan Past

The two Eastern Ch'olan languages, Ch'orti' and Ch'olti', were both intimately involved in the Classic Maya culture of AD 250-900, each with its own role to play. While the direct ancestor of the now-extinct Ch'olti' was probably an elite Ch'olan language variety closely associated with the hieroglyphs, the direct ancestor of Ch'orti' was most likely the language variety spoken by the commoners, i.e. the merchants, farmers, potters, and shopkeepers who supported the elite and traded with foreigners in the area. Mayan loanwords into non-Mayan languages to the southeast, especially Xinkan, provide evidence of language contact. Ch'orti' borrowed an important 3rd person prefix a- from Xinkan that eventually led to the innovation of a third set of person markers, helping to distinguish Ch'orti' from Ch'olti'. Other evidence of extensive outside language contact with Ch'orti' is seen in the loss of tense/aspect markers on the verbs, regularity in verb forms, and the development of serial verbs. Such simplification features are typical of creoles and of errors during second language learning, suggesting that Ch'orti' was the lingua franca of the Classic Mayan world, the Ch'olan language variety being learned by outsiders to gain access to the elite Classic culture.

Presenter(s): Robin Quizar

Paleogenomic insights into Classic Copan

Copán, located at the southeastern edge of the Classic Maya world, was a key urban centre that connected regions of Central and South America. In 426/427 CE, a royal dynasty was founded there, lasting nearly four centuries. While the city is well-documented through archaeological and historical sources, little is known about the genetic makeup of its ancient inhabitants. In this study, we present genomic data from Classic Copán, including a possible royal family member and a person buried in a sacrificial context. Our findings reveal that the people of Classic Copán form a distinct genetic cluster closely related to the Late Archaic population from Belize, as well as Terminal Classic Maya from Chichén Itzá, Colonial-era Maya from Campeche, and modern Maya groups in Mexico. Tracing ancestry to the Late Archaic Belize population, we also detect genetic contributions from highland Mexico beginning in the Early-to-Middle Classic period, highlighting the importance of gene flow in shaping the Classic Maya civilization.

Presenter(s): Shigeki Nakagome

A Clash of Political Cultures and Values: Applying the concept of Schismogenesis to the Classic Maya and their neighbors in Western Honduras

Schismogenesis refers to a process of the formation of social division or differentiation through inter or intragroup interaction. It was first proposed by Gregory Bateson to describe the emergence of escalating tensions within the Iatmul of New Guinea and later adopted and modified by David Graeber, who used it to describe emerging differences and culture clashes between Californian and Pacific northwestern groups, where fundamentally different social structures emerged between these groups despite their close contact. In this paper, we explore how the concept of Schismogenesis can be productively applied to describe cultural clashes and changes tied to the arrival of Lowland Maya peoples in western Honduras in the Early Classic. We suggest that lowland social hierarchies where power was amassed and wealth and status were conspicuously displayed by divine lords at the top of a social hierarchy were fundamentally different than long-standing local practices where power may have been more decentralized and wealth was not as conspicuously consumed. This paper examines examples of mounting tensions between the emergent Copan Regime and surrounding non-Maya groups with special attention to the Cucuyagua, Sensenti, and El Paraiso Valleys, where we conducted previous excavations.

The Ties that Bind: Defining Indigeneity through Borrowed Ritual among the Ch'orti' Maya

After a century of slowly losing the majority of community-wide ritual practice among the Ch'orti' Maya of Guatemala, a surprising resurgence of interest in such ceremonialism has recently occurred. In this paper, I first track the systematic stifling of native religious practices by first describing what we know about earlier ceremonialism and then discussing the myriad of ways much of Ch'orti' traditional ritual has been coerced into disuse. I then examine the various social and political motivators for "recapturing" aspects of past ritual performance among some revitalization groups today as a way to build social solidarity and, in their view, 'indigeneity'. Additionally, I show that some of the most prominent forms of these rituals are in fact borrowed from a number of Highland Maya groups. Thus, rather than being a renewal of dying or lost practices, key parts of outside ceremonialism from other groups have been incorporated into social and political movements. This brings to the fore the question of the relevance of ritual 'authenticity' in this type of revitalization effort.

7128 Mourning and Possibility: Exploring Hauntings in Care, Movement Building and Ethnography

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** St. Charles (41st Fl)

Type: Oral Presentation Session

What are the material conditions that render grief and grieving possible (or impossible)? And what might particular acts of mourning render possible? This panel explores grief through distinct vantage points, exploring deeply intimate relations of grief encountered in the contexts of ethnographic research, care work, social movement activism, and kin loss. In the face of devastating loss, what is the role of grief in meaning-making and movement- building? How does grief both inspire and haunt practices of resistance and care, including in carrying out ethnographic work? Through a focus on grief, this panel also inquires into the broader question: what is the role of feeling in collective action?

Presentations draw from U.S.-based fieldwork across rural and urban settings. Ethnographic data from a residential drug treatment facility in northeast Ohio depicts experiences of interrupted grief constrained by institutional barriers to collective mourning that compound suffering. Along the Kansas River, unhoused residents mourn the tent city community that developed and the unprecedented sweep that followed. How might their repeated retelling and remembering demonstrate resistance to a state project of dispossession? Across health care spaces in Los Angeles and New York City, providers responsible for delivering care to people who use drugs perceive death differently, variably accepting death as a possibility to collectively contend with– as in harm reduction settings– versus something to be warded off, at the expense of more humane kinds of care for the living. In another context, facilitating mental health peer support to U.S.-based student protestors of Palestinian genocide, running grief groups for Black women, and coordinating crisis hotline services for survivors of sexual assault and domestic violence, raises questions about surviving one loss while bracing for another.

Anthropologists often occupy multiple positionalities, as ethnographers and simultaneously as care providers, community organizers, and advocates. This panel explores the methodological implications of grief for these intersecting roles. Multiple presentations explore the experience of caring for the grieving while grieving.

Presentation(s): “I’ve got to move on”: Grief and Mourning in Collateral Afterworlds of the Drug Overdose Crisis

The mass loss of life in the United States "overdose crisis" has left many in grief. This grief is shaped by stigma and marginalization associated with drug use as institutions may invoke "care" to perpetuate structural violence (e.g., drug-induced homicide prosecutions framed as care for bereaved families). Meanwhile, people who use drugs are overwhelmed by the scale of loss of life in their communities. They are often exposed to competing discourses about drug overdose death embedded in health, social services, and criminal legal institutions. In this presentation, I examine lived experiences of grief and mourning overdose death drawing on a 20-month ethnography of clients' experiences of residential drug treatment in Northeast Ohio. I explore treatment clients' experiences of interrupted grief and mourning: situations in which they are unable to process their grief and collectively mourn overdose deaths due to institutional barriers. I analyze their bereavement as occurring in a collateral afterworld (Wool and Livingston, 2017) in which sociality is strained by the politicization of life but endures nonetheless. As clients attempted to grieve and mourn with others, they struggled against institutional discourses and policies that obstructed these practices, compounding their suffering. I close by considering possibilities for living, grieving, and mourning otherwise via care practices that center harm reduction principles and practices of solidarity and collective action.

Presenter(s): Allison Schlosser

“They’ll always talk about Tent City:” Grief, Memory, and the Scars of Home on the Kansas River

In April 2020 the city of Topeka in Northeast Kansas deployed police and sanitation departments to destroy Tent City and displace its approximately 70 residents in one of its first largescale "sweeps" of unhoused people in recent memory. Started in 2018, Tent City, Kansas was a community along the Kansas River that growing numbers of displaced unhoused people called home. As in most homeless sweeps in the contemporary U.S., residents lost most of their personal possessions – family photos, cherished heirlooms, and important personal documents and identification – and were left to pick up the pieces. Many of Tent City's former residents rebuilt community and home near its original site only to face escalating state violence and displacement in the wake of *Grants Pass v. Johnson*, a June 2024 Supreme Court ruling that legalized the criminalization of homelessness nationwide. The people still living along the Kansas river remember Tent City as a tight-knit community and place of refuge for those displaced by worsening economic and housing inequality, and to this day grieve its loss and its aftermath. Based on recent dissertation work in the understudied Midwest, this paper examines how grieving loss, remembering community, and confronting the scars of home built on the Kansas river signifies resistance to contemporary state projects of violent erasure of unhoused people, and represents continued possibilities of meaningful life created in spite of precarity and dispossession.

Presenter(s): Daniel Kennedy

“Tending to Loss: The care work of, and in, grief”

This presentation examines the unique challenges of surviving and responding to loss in this political moment under immense structural oppression. As a community healer, I am contending with experiences of grief that are marked by compounded and traumatic loss. I encounter these experiences when facilitating grief groups for Black women, providing mental health peer support to student protestors of the Palestinian genocide, and coordinating crisis hotline services for survivors of sexual assault and domestic violence.

Amongst each of these groups, grieving people are asking themselves and their providers, "what is grief?" "How do I survive an initial loss while bracing for another?" And "where will this grief take me?" I provide this grief and care work, while navigating my own experiences of grief related to the untimely death of my father.

I will explore what it means to care for the grieving while grieving.

Presenter(s): Akua Agyen

Hauntings in healthcare: exploring conceptual frameworks of carcerality and liberation among the addiction workforce

In healthcare, practitioners are often haunted by the ghosts of their patients. In the midst of unbelievable death from the ongoing overdose crisis, grief among drug users and the people who work with drug users is understudied and underappreciated.

This paper explores bereavement in different addiction workforces, exploring the role of grief in conceptualizing care and advocacy for patients. Drawing from work in New York City and Los Angeles, I use the experience of working as a psychiatrist in traditional allopathic healthcare settings (inpatient hospitals, emergency rooms and outpatient clinics) and in harm reduction settings (syringe exchanges, safe consumption sites, and homeless outreach teams) to ask how bereavement informs discourses of care for people who use drugs. Bereavement in allopathic healthcare ultimately reinforces carceral approaches to "care" through an emphasis on monitoring, surveillance and coercive treatment. Death is to be avoided, even at the expense of warding off patients themselves. In comparison, grief in the harm reduction workforce is tied to action, with the processing of mourning reinforcing commitment to promoting alternative care systems. I explore how fear of death informs tension between harm reduction and allopathic care and end with a discussion on how bereavement impacts burnout in both care systems.

Between loss and grief: chasms, foreclosure and possibilities of ethnography and care

What does grief bring into or siphon out of ethnography? This presentation is a meditation on the deaths of two interlocutors who made up a romantic couple in their 30s and who died within two months of one another. Perhaps it was grief following their deaths that made their inclusion in a dissertation untenable. Despite repeated attempts to revisit the "data," which consisted of field notes, audio recordings, an autopsy report, a poem written by their shared doctor, something got in the way of meaning-making and storytelling. Was it a sense of urgency to the task of writing on a deadline that led to their erasure? Was it a sense of total lostness with respect to where to begin or end? Was it respect, or perhaps disrespect? Grief? They did most things together. They visited the doctor together and shared one appointment slot. Program and outreach policies during the COVID-19 pandemic were bent for them so that they could stay housed together. She died of a sudden accidental overdose shortly after fentanyl arrived in their town; he died a slow death related to complications from injection drug use that ultimately caused his heart to fail. Shortly afterward, my dad died. Drawing on Rosado (2014) I explore how felt loss can break one's heart open to visceral understandings, and writing can be a healing endeavor. I also inquire into the differences between loss and grief, asking what sensorial and political distances transform a difference in degree into a difference in kind.

Presenter(s): Lauren Textor

"Good Grief"? Ontological (In)security, (Ac)complicity, and Methods of Grief across Geographies of Care

How do we as ethnographers remain present with interlocutors in the face of loss, while contending with social and physical distance and our own grief (Speed 2021)? What sorts of institutional reactions foreclose possibilities of mourning and what potentialities exist for collectivising affective responses to transform them into solidaristic action? Tracing a "topography of grief" (Mitchell-Eaton 2019) across two divergent field sites, this talk probes resonances between how we and interlocutors navigate threats to ontological security (Giddens 1991) and grieve subsequent lost senses of safety. Within residential care facilities in Los Angeles, social abandonment and austerity budgets have meant that more residents die unexpectedly in places meant to sustain life. Institutional silence on the matter leaves residents in the dark, afraid of who's next, and feeling haunted by the presence of deceased friends whose spirits have not been properly attended to. Meanwhile, as narco-conflicts spread into new territories in Chiapas, Mexico, encroaching violence upends rooted practices of communal life and care. Navigating displacement and lost futures, community health workers seek emotional and material support from their NGO employer, only to find that institutional "listening sessions" can be as careless as silence. As ethnographers, we reflect on grief's co-production of distance/proximity as we attempt care with interlocutors under circumstances of unevenly experienced loss.

2569 Murders and Ghosts: State Cruelty and the Haunting of History

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Studio 8

Type: Oral Presentation Session

The modern state is fundamentally cruel. Its cruel banality is exercised in surveillance, torture, capital punishment, and warfare, all of which is regularly supplemented by extra-judicial killings, vigilantism, and paramilitary violence--the constitutive outside of the liberal state. What Walter Benjamin called the founding violence of the modern state articulates itself in the necropolitical arrangements of the 20th century and beyond. Murder, we propose, is a signature form of state cruelty, a unique kind of mediated violence where mediation includes mass media and everyday linguistic and semiotic practices. Cruelty survives and thrives as much through mediatized spectacles as through gossip, rumor, storytelling, and political rhetoric. How, then, is the modern state implicated in or reliant on murder? In what ways do past hauntings help invent and/or confront state enemies that are made killable? How and when does state violence, frequently disguised or hidden, gain visibility and how do these revelations consolidate or threaten the state's sovereign power to kill? And finally, how does a messy entanglement of state, media, and the "people" dictate the way we consider state cruelty as either political violence or cultural phenomena? Our panel meditates on these questions by sharing insights into the state's role in naming, enabling, and adjudicating extrajudicial deaths, sensationalized murders, serial killing, and the death penalty. Offering ethnographic understanding of informal censorship in reporting street murders in Mexico, spectacularized murders and the right-wing in India, the politics of naming the dead in the Philippines, emerging infrastructures of knowledge around serial killing in Kenya and Rwanda, and public secrecy around the death penalty in Bangladesh, this panel intervenes in anthropological conversations on mediation and its role in shaping the cruel intimacy of murder and the modern state.

Presentation(s): The Popular Censor: Murder Reporting and Sovereign Indeterminacy in Mexico City's Press Linchamientos

When someone is murdered in the streets of Mexico City, crowds tend to gather, often as volatile mixes of strangers, forensic experts, spies from local gangs, family members of the victim, police, soldiers, and, of course, media workers. This paper explores outbreaks of violence at these scenes. It focuses on a particularly ambiguous and interpretively provocative form of violence: acts of censorship against media workers that appear as spontaneous acts of popular violence. It's

common for family, gangs, neighbors, or some combination thereof to attack journalists at murder scenes, often as a means of disputing the forms and conditions of their representation. But it is also common for police, hoping to avoid politically incendiary media coverage, to incite crowds to attack journalists. These are disputes over how murder is represented that, in their mode of disputation, produce an indistinction between the state, organized crime, and "the people". These are also situations where genres like "the nightly news"—sociolinguistic infrastructures that authorize murder's circulation and make it intelligible—are failing to authoritatively ground certain communicative gestures, like pointing a camera at a body. By closely reading one such situation from my fieldwork, I examine: (1) how representations of murder are disputed and negotiated, (2) what happens when our genres for representing murder break down situationally and (3) the sovereign indistinction that seems to

Investigating Murder in Central and East Africa

Anthropologists of violence have found much to discuss and understand in African contexts. Studies of wartime killings, bodily disfigurements, and rape have helped people to see the dense symbolic meanings in even heinous acts, as well as how people struggle to heal and repair their societies. Careful investigations have also looked at how people use invisible forces (witchcraft) to kill, and how and why alleged users of witchcraft are killed. And yet the topic of murder – the premeditated killing of a person by another – has been relatively neglected. Drawing from my research in the Central African Republic, Rwanda, and South Sudan, this paper highlights some of the ways that murder has been affecting public life to show that this issue warrants greater attention. People in South Sudan have endured war for decades, but many feel that the violence that affects them the most is not battles, but murder, which causes even greater upheaval and heartache. In infamous cases in Rwanda and Kenya, serial killers have recently targeted women, and especially sex workers, sometimes seemingly with state security officers' complicity (or worse). While African police forces have generally had limited institutional investigative capacity, some are now prioritizing it. The Rwanda Forensic Institute is one of the continent's first dedicated DNA processing facilities (previously, all samples had to be sent to Europe, at great expense). Expectations about what it is possible to know are therefor

"That Executioner Life": Mediating Cruelty in Bangladesh

In June 2024, the New York Times published an unusual feature story. More an obituary, it offered a snapshot of the life of a Bangladeshi hangman, Shahjahan Bhuiya. Bhuiya had gained celebrity after his release from prison as a man who claimed to have executed 60 prisoners on behalf of the Bangladeshi state, but more important, as an author of a much-talked-about autobiography. Among those he had hanged were the killers of the first prime minister, Sheikh Mujib and those convicted for collaboration and crimes against humanity during the war of independence. Both groups were deemed long-standing threats to Mujib's daughter Sheikh Hasina's political ambitions. Bhuiya's

autobiography detailed the last living moments of these killers and collaborators while their ghosts hovered over the unfolding political drama in Bangladesh. A popular uprising toppled Hasina's government only a few weeks after Bhuyia's death in 2024. Among other revelations that followed was the 'discovery' of secret torture cells long rumored to hold opposition activists and so-called Islamist terrorists. As egregious crimes of the past regime came into view through a highly mediatized official tour of the secret prison, Bhuyia's autobiography homed in on the public secret of ritualized murder. Reading his remembrances against the recent revelations, this paper ruminates on how publicity and secrecy at once make up the modern state and the media that help make and unmake its cruel banality.

In the Naming Of: Killing, Specificity, and the Known Subject

The name, in particular the act of naming, is intrinsically attached to death, especially in the context of killing. Critical to the wide-ranging practices of evidence making, attribution, and an ethical reckoning of death, naming and anonymity are often key to how killing is semiotically made and unmade. Naming has its own logics: of specificity, of coherent personhood, and the promise of tracking the self and body across multiple publics, bureaucracies, and state technologies. At the same time, it is bound to logics of violence as well as its repairs, and is central both to the practice of protection and of threat. Naming also brings with it its own asymmetries in who gets to name and be named, and who does not. This paper highlights the multiple tenors and semiotic resonances of naming within the act and the circulation of killing in the Philippines. It does so amidst a recent history in which killing has been dramatically foregrounded in the Philippines, and in which the fraying of ethical norms in and of death have been profoundly marked by mass mediation and the nature of spectacle. Within this space, in which the right to kill is openly implemented and adjudicated, how might we think about how those killed come to be known?

Murder Raj: The Killing of Madhumita Shukla

On May 9, 2003, two gunmen rang the bell of a house in Lucknow's Paper Mill Colony. As 24-year-old Madhumita Shukla opened the door, she was shot and killed at close range. Shukla was seven months pregnant, and the father—hardly a closely guarded secret in Lucknow's elite circles—was the Uttar Pradesh politician, Amarmani Tripathi. Tripathi and his wife, Madhumani, were convicted of the murder and sentenced to life imprisonment but then released, in 2023, on orders from the Hindutva strongman, Yogi Adityanath. Activists and family members protested the release, but the Supreme Court, in 2025, dismissed their plea. Shukla was one of many victims of political impunity, and this paper explores her murder to develop an argument for understanding 21st century right-wing rule in India as a murder raj: government through the deployment of murder as a weapon against press freedom and towards the production of political terror through the circulation of near mythical stories about violent death and the consequences of resistance to right-wing (often male) power. Shukla was an artist—a kavetri, or poetess—like many other victims of high-profile state

killings and this paper explores how and to what effect the murder raj operates specifically through the extinguishing of writers and writing.

3518 Narratives of Care: Medical Professionals and Their Lived Experiences during the COVID-19 Pandemic

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Riverview 1 (41st Fl)

Type: Roundtable/Town Hall

This roundtable addresses how healthcare workers in the United States experienced the COVID-19 pandemic and how it shaped their outlook on care, trust, and the state of medical and public health expertise both during and after the crisis. All of the roundtable participants have conducted research related to the pandemic or medical expertise more generally. Contributors to the roundtable will address pandemic illness, death and dying, care, moral injury, and narrating loss through the perspectives of physicians, nurses, and other healthcare professionals. We will also consider the methodological implications of gathering testimonies from healthcare workers, posing the question of what analyzing these narratives might tell us about studying "life's ends" (Hawkins and Dawson 2018) ethnographically.

From ICU nurses and ER doctors to nursing home workers and hospice staff, at the beginning of the pandemic healthcare workers across the United States were celebrated as heroes and praised for their selfless dedication to fighting the virus and valiantly trying to save their patients. Within months, many were experiencing burnout and moral injury from the sheer number of cases. Utilizing media coverage, in-depth interviews, and healthcare workers' own publications on the pandemic, we can see how testimonies bring to light the struggles of becoming a proxy witness to death by giving dying COVID patients their last rites or being the last person they see. These narratives also shed light on how healthcare workers narrate the uncertainty of the COVID-19 virus, which brought drastic changes to how medical professionals practice and care for patients. With such narratives in mind, this roundtable explores the strains of care and experiences of moral injury amid shifting public discourse of mis/disinformation during the pandemic, and, more recently, as part of a federal healthcare system predicated on questioning, if not explicitly undermining, accepted public health and medical expertise.

Finally, we will consider the role of testimony in studying pandemic from the perspectives of healthcare professionals. This entails thinking through how to analyze (1) narratives that touch on a growing medical mistrust, isolation from the social world, moral injury, and sacrifice; and (2) the methodology of personal interviews aimed at probing the significance of experiences felt in the hospital setting during the initial stages of the COVID-19 pandemic. How might listening to these narratives offer a means to care for the dead through the stories of the living?

2948 No Rest For the Revenant-: Conjuring Ethnographic Ghosts and Reckoning With The Haunting

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR A1 & A2 (3rd fl)

Type: Oral Presentation Session

Who do we summon when we do this work, and what are the stakes of our invocations?

Anthropology has long engaged with spirit worlds and hauntings, but as we navigate uncertainty in the present and the shrinking horizon of the future (Petryna 2022), the past returns with force- sometimes as critique, sometimes as corrective, sometimes as uncanny apparition. This panel explores the spectral nature of ethnographic and academic inquiry, asking how past presences- people, places, and objects-linger in what we do and how we do it.

At its core, academic inquiry is an act of conjuring. Through citational practices, we align ourselves with and pay tribute to 'ghosts'-intellectual ancestors who haunt our field sites and structure our thinking. Yet, as we engage with these inheritances, we must also ask "whether the pasts that [we] actively create in the present could or should endure into the future" (Harrison 2015, 33). This demands reckoning with what and whom we summon, and whether we are listening to voices calling for justice or keeping ghosts alive that long to be set free.

This panel engages hauntings in multiple registers: the lingering presence of anthropological forebears whose legacies we must confront; the afterlives of colonial and plantation violence that shape the landscapes we study; and the uncanny ways the past presses forward through time. From the revival of colonial-era commodities to the phantoms of early anthropologists who still haunt our field sites, we interrogate how anthropology both conjures and conserves its own history.

What are the risks of holding captive the spirits of our forebears, along with the ghastly imperial and racial violences that shaped their work and intellectual priorities? What methodological and analytical tensions arise through sustained engagement with these entities? Are we honoring, or are we binding? And if we release the weary-if we let them rest-what then?

Presentation(s): Dancing with Her Shadow: Katherine Dunham's Legacy in Caribbeanist Anthropology

This paper examines Katherine Dunham's fieldwork in Martinique during the mid-1930s, a brief yet under-analyzed moment in her ethnographic trajectory. While Dunham remains a foundational figure in the study of Black dance, diaspora, and embodied knowledge, and her anthropological legacy is one cherished by Black feminist ethnographers, her work invites critical reassessment to fully engage with its complexities, limitations, and evolving interpretations. Conducted amid the interwar period's racial and colonial tensions and framed by the Herskovitsian model of African survivals, Dunham's Caribbean research sought to uncover the form and function of so-called "primitive dance." Letters and essays from her brief stay in Martinique reveal distinct methodological and ideological challenges, influenced by her perception of the island's "amalgamated" French Antillean cultural landscape. Drawing on archival sources and contemporary anthropological perspectives, this paper contextualizes the obstacles Dunham faced in accessing and interpreting Martinican dance traditions. In dialogue with my research on recent dance heritage revivals in Martinique, this paper interrogates the intellectual priorities that shaped Dunham's work, revealing how imperial dynamics impacting the region at that time influenced her ethnographic approach. It also urges us to consider the intellectual legacies that we inherit and transform by situating them in our political present and imagined futures.

Presenter(s): Camee Maddox-Wingfield

The Ghosts of the Other

Academic anthropology is a critical conversation, based on engagements with the work of one's peers, one's disciplinary ancestors, and one's research participants. In this context, Social Anthropology has critically interrogated the spectre of 'the other' in ethnographic fieldwork; its impact on how people are represented; and the way that knowledge is produced. However, the discipline has accorded less attention to the role that 'the other' might play in our engagements with academic disciplinary ancestors. An exploration of this topic raises three questions: first, what does it mean to engage with the ghosts of colleagues whose identities, values and experiences are fundamentally different from one our own? Second, what limits are there on our ability to understand, and speak to those ghosts? Third, must an ancestor be somebody with whom we feel affinity? Building upon my work on Mixed-Race Thought, and the decolonisation of knowledge, this

paper explores the place of dissonance, indeterminacy, and contradiction in the anthropological endeavour.

Presenter(s): Andrew Sanchez

L'Île des Revenants? Haunting, Return, and the Future of Ethnographic Engagement in the French Caribbean

Often called L'Île des Revenants ("The Island of Returnees"), Martinique is a place that calls people back. And yet, for anthropologists working in the non-sovereign French Caribbean, return is rarely the norm. Unlike other regions where scholars cultivate sustained, career-long engagements, Martinique often sees one-project ethnographic visitors whose presence lingers more in citation than in ongoing relationships with the site. Why these ephemeral ethnographic encounters? Are they shaped by the shifting theoretical and political concerns that guide ethnographic inquiry? Or do they reflect a disciplinary reluctance to return to spaces where the political stakes are less easily legible within dominant anthropological frameworks? My research on a coffee heritage project in Martinique examines revival to foreground the lingering presence of colonial pasts in Caribbean visions of the future. But alongside these hauntings, I encountered another kind of ghostly presence: those who have worked in the region and moved on. In this paper, I reflect on an ethnographic record shaped more by departure than return, particularly for the next generation of scholars. Rather than a dirge, I consider how return—both ethnographic and historical—reshapes the futures that can be studied, imagined, and theorized. How might revisiting a field site not only transform what we know about its past and ethnographic present but also expand what scholars can ask of it in the future?

Presenter(s): Alyssa A. L. James

The Specters In-Between: Self and Place, Departure and Return

This paper considers nonlinear narrative forms in ethnographic interviews and the ways historical events are experienced in-between multiple places. Taking inspiration from anthropologists that have theorized the many places of "the field" and thinking between places (Jackson 2013, Povinelli 2006), this paper will explore the implications of stepping in and out of fieldwork and conducting ethnographic life-history interviews between family and acquaintances in Antigua and Gorée and Saint-Louis islands in Senegal. I would like to consider how stepping in and out of place as both researcher and theorizing travel experiences of interviewees conjures specters. Building on the anthropological interventions of multi-sited fieldwork, this paper will consider what we carry with us when we step in and out of place and in and out of the field. I consider how historical moments, like independence, ripple between these three islands through the narrative form of articulating 'gaps' in events and memories, read as pauses or changes in perspectives on significant historical markers experienced from afar. An examination of what lingers between our constant oscillation, making sense of events from different spaces, may offer alternative threads of connection between islands shaped by slavery and colonial violence.

Presenter(s): Hakimah Abdul-Fattah

Black Anthropology in Revanchist Times: Notes on Ethnographic Opacity

This paper reflects on a few key political crises facing the West at this moment: climate disaster, authoritarianism, and the global revanchism of those who consider themselves to be "White." Gathering in New Orleans provides an opportunity to consider how Hurricane Katrina's events continue to be revelatory. The hurricane itself, the man-made disaster that continues to unfold, the authoritarian violence summoned immediately after the storm, and the revanchist, market driven "recovery" imposed upon local communities presage the world that we currently inhabit. The violence thrust upon Black communities across southern Louisiana in 2005 has now become the condition of possibility for everyone except the most elite within our societies. Despite the identity crises that will render Western liberalism inert, and the real tragedies that our communities will face – Black people will survive, and there will be key political and cultural affordances for Black life and autonomy at this juncture. This paper argues that Black anthropologists should reconsider how we surrender the intricacies and intimacies of Black worldmaking into an apparatus that displaces Black thought and sublimates radical Black worldmaking. Using insights from 10 years of ethnographic fieldwork along the US Gulf Coast, this paper considers a few ways that our methodologies, our primary audiences, our political alliances, and our institutional fidelities should be transformed in the face of these crises.

4561 On the Ruins of Liberalism: Ethnographies of Far-Right Regime Building, Part 1

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Grand Ballroom A-C (5th fl)

Type: Oral Presentation Session

"This storm is what we call progress," Walter Benjamin wrote during the final days of the interwar liberal era, shortly before taking his own life in fear of the Nazis. Drawing on Benjamin's evocative image of relentless historical destruction as a continuous catastrophe rather than a lost utopia, this panel examines whether we are witnessing a similar transformation today. Specifically, we explore how the ghost of liberalism functions as a legacy upon which far-right regimes build, an ideology with which they contend, and an epistemic context that shapes the work of anthropologists studying these regimes. As more political leaders invoke the monstrosity of liberalism to construct far-right regimes, we seek to understand how this imaginary fuses material and ideological foundations into cohesive, hegemonic systems. Rather than treating liberalism as the normative baseline, we aim to interrogate the failures of the liberal order and ask whether right-wing regime-building should also be understood as a form of revolutionary politics. This moment of urgency demands an analysis that bridges the political, economic, and epistemic dimensions of far-right regime-building, moving beyond reductive binaries and normative assumptions. To this end, this panel brings together contributions that examine transnational networks of think tanks, national

and cultural infrastructures, academic institutions, and grassroots political practices. How can ethnography help illuminate the economic and epistemic foundations of these emerging regimes? What methodological and ethical challenges confront anthropologists trained in liberal institutions as they conduct fieldwork in anti-liberal contexts? What is the future of ethnographic inquiry in a far-right epistemic hegemony? Ultimately, this panel explores the implications of the next stage of the continuous catastrophe, the dawning post-liberal era, for anthropology as a public voice.

Presentation(s): Unremarkable Contention: The Muted Presence of the Far Right in Refugee Reception Locations

The paper brings together ethnographic insights from multiple locations of refugee reception on the European periphery (Ceuta, Melilla, Lampedusa, Trieste, Evros, Greek islands, Cyprus) to explore the political contestations that give rise to far right nativist claims at the heart of European governance. It posits the seeming absence of apocalyptic manifestations of anti-liberalism in these locations against the effervescent affects that attend the rise and normalisation of the far right on a global theatre. How do anti-liberal intuitions play out in contexts that are at once plagued by the "border spectacle" (de Genova, 2016) and consigned to forging peace across agonistic lines on a daily basis? By straddling the small and grand scales between ethnographic fields and political pronouncements, the paper traces the non-spectacular ways in which the Benjaminian storm currently unfolding at the seats of power is lulled into the mundane of places neglected and spectacularised. Thus, the paper works towards an understanding of the far right in contexts where it appears not to be as visible as we might expect and consequently, also seeks to initiate a discussion around epistemologies of far right normalisation relevant beyond anthropology.

Presenter(s): Olga Demetriou

The Specter Unveiled: Reclaiming the Decolonial Claim from Illiberalism

A key aspect of far-right regime building in Hungary is the twisting of the liberal fantasy: illiberal Hungary, under Viktor Orbán, is presented as the true "end of history," with a political model of a white, homogeneous middle class clinging to traditional values and an epistemic culture rooted in Romanticism. In its political form, illiberalism breathes life into a racist authoritarian ideology that cloaks white supremacy under the guise of decolonialism, while Budapest has evolved into a ghost train of far-right thinkers from around the world. They depict Western liberal democracies as doomed to decline—succumbing to secularization, individualism, and the disintegration of ethnic homogeneity. Together, they claim to represent a decolonial front against colonial neoliberalism.

How does the illiberal claim to decolonialism manifest in Hungary's public sphere? What intellectual and political legacies sustain it? By critically examining illiberalism's claim to decolonialism, I reveal that while both movements share a critique of capitalism and a Romantic lineage, illiberalism ultimately resurrects the very liberal colonialism it professes to oppose. Rather than nurturing a true plurality of epistemic regimes, it merely replays the fantasy of a linear "end of history," reproducing its specter while relying on neoliberal structures. At the same time, it seeks to purge the coexistence of multiple worldviews—an act that would be the true essence of decolonialism.

Presenter(s): Annastiina Kallius

Kholivar vs. Civil Turn-Taking: The Specter of Liberal Proceduralism and Russia's Illiberal Turn

How did everyday practices of public interaction become relevant for anti-liberal regime building in Russia? Drawing on ethnographic research with Siberian political and civic activists throughout the 2010s, this paper returns to a time when the Putin regime first mobilized anti-liberal sentiment through both street-level and mediatized activism. During this period, a process of contrastive co-constitution between activist groups divided former anti-Putin allies along culture war lines, with growing tensions around civic issues, reactionary legislation, and Russia's takeover of Crimea. Through detailed analysis of a 2013 civic activist meeting in Novosibirsk, I demonstrate how participants strategically deployed and contested communicative styles associated with "liberal" versus "authentically Russian" political subjectivities, revealing how interactional practices become sites for negotiating competing hegemonic projects. Drawing on longer-term engagement with Russian urban activists, I explore how illiberalism's coherence might have emerged 'from below,' at state peripheries, rather than through centrally positioned agents of ideological production. This analysis illuminates how ordinary Russian activists' understandings of liberal and anti-liberal values helped prop up the foundations of today's blindly militant regime, offering crucial insights into how emerging illiberal ideologies build upon the discursive remnants of liberal orders.

Presenter(s): Maria Sidorkina

Haunting Ghosts of Liberalism: From Critique to Becoming the (Authoritarian) State

After the fall of the Soviet Union, the liberal critique seemed to have turned the former socialist states in eastern Europe into a blossoming democratic landscape of NGOs. Based on my long-term ethnographic engagement in the region in this talk, I offer a perspective on how these liberal ideas and critique of civil societies can end up becoming an integral part of the (authoritarian) regime. I follow the rise of a Roman Catholic charity that started with a critique of gaps in state care for the most marginalized citizens. Representing an emergent civil actor, the NGO received and receives international support. However, the critical stance towards the state increasingly faded when the organization merged with the state in Hungary. Describing this development has two aims. First, when liberal ideas fail to improve the situation of the most marginalized citizens, new patron-client relations sometimes seem to be the only or even preferred option. This presents a situation in which both, the local residents but also researchers, might feel stuck, practically and theoretically

haunted by the ghost of liberalism. The only sign of hope I have to offer is to demonstrate how these developments are always fluid and open. Avoiding an all too simple logic and totalizing interpretation, I secondly offer an analysis of the changing role of critique of the state in this process.

Presenter(s): Tatjana Thelen

The Political Ecology of the Far Right in the Brazilian Amazon: anti-Indigenous Agenda, Victimization, and Nostalgia

This presentation examines the political ecology of the far right in the Brazilian Amazon, focusing on anti-Indigenous agendas, victimization narratives, and nostalgia for the military-era (1964–1988) policies that promoted deforestation. Drawing on ethnographic research in the Lower Tapajós and analysis of public statements and government actions, it explores how far-right politics, agribusiness, and land dispossession intersect through legal and rhetorical strategies. The first part analyzes a 2014 judicial ruling that denied Indigenous identity and territorial claims in the Maró region. Though later annulled, the decision resurfaced in 2019 when the judge responsible was honored by the local government, foreshadowing Bolsonaro's "zero demarcation" policy. The second part examines how this legal framework enabled environmental degradation under Bolsonaro, reinforcing authoritarian governance through anti-Indigenous and anti-environmental policies justified by narratives of assimilation and national progress. This presentation invites discussion on contemporary environmental struggles in a post-liberal era, drawing on Benjamin's concept of progress as a storm to reflect on ongoing ecological destruction and the ghostly persistence of Brazil's military dictatorship in the country's environmental politics.

1089 Part I: Specters in the Sepulcher

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** MGB Salon E

Type: Executive Oral Presentation Session

Historian Arlette Farge (2013, 46) has argued that the archive is a "sepulcher," where one encounters "silhouettes of the past, be they faltering or sublime." Here, we take a broad definition of "archive" to include traditional archival documents, collections, archaeological record, ethnographic fieldnotes, and even the body itself. Following the "archive as sepulcher," we ask: what are the implications for our studies and our results when we encounter ghostly absences buried in these spaces?

Ghosts in anthropology have taken many forms, with "haunting" often metaphorically gesturing toward absence, longing, and troubled, violent, or unsettled pasts. They can also take the form of our recognition of what is missing, the loss of materials and knowledge unwittingly perpetuated by praxis, time, and historical forces. In our work, we encounter absences and the ghostly impressions

they suggest in many ways. In collections and archives, we often open an empty box, note a missing document, see a space left blank on a form, or encounter a missing page from field notes or diaries. There is also the pause, the self-censoring involved, when asking ourselves, "should I write that experience down?" Whether such absences become a dead end, a frustration, or an obsession, they are often left out of our studies, never mentioned in the "materials and methods." Writing on agnotology, Proctor (2008, 3) tells us, "Ignorance can be made and unmade, and science can be complicit in either process."

In this session, we invite contributors to re-presence these absences and impressions. Welcoming scholars from across the subdisciplines, we ask that they interrogate the ways that the absences we encounter in the archive--that sepulcher where "silhouettes of the past" live--shape anthropological knowledge, or the lack thereof, even as they are rarely discussed in official publications or presentations. In other words, we will consider the double haunting of archival ghosts: first encountered as absence in our fieldwork, and second as present absences that continue to haunt anthropological knowledge even as we participate in removal of their work.

Presentation(s): Morgue Afterlives: The Ragged Edge of Wrist Tags and the Fuzzy Boundaries of an Anatomical Collection

The Huntington Anatomical Collection (1893-1921) is comprised of the remains of immigrants and U.S.-born persons who died in New York City. They were subsequently dissected by medical students and curated in a comparative collection by the doctor for whom they are named. As a documented collection, each set of skeletal remains is recorded with demographic data, including name, age, assigned sex, nativity, and assigned race. This documentation imparted "value" in the eyes of its curators, making their bodies legible to comparative methods since its original formation.

The structural and direct violence of curation has been well-outlined. Here, I turn to process of documentation, which started from hospital and morgue records. For many individuals in the collection, the wrist tag, accompanying the body to the college for dissection, has been preserved. The tags are so closely associated with the bodies they marked that they are referred to as "wrist tags" after the part to which they were attached. The tags demonstrate that persons are not simply materially present in the collection as bone, but also through paper and ink. However, in turning the tags over, and considering the "reverse" side, we find that some tags were made from scraps of others' morgue records; fragments of persons whose skeletal remains are not part of the collection

are nevertheless also present. Bringing forward their presence troubles the boundaries of the collection and our engagements with it.

Presenter(s): Alanna Warner-Smith

Afterlives In and Out of the Archives: Making and Unmaking Recognition in Anthropology

In recent decades, archivists and anthropologists have worked to uncover the contributions of women, local and unpaid collaborators, and assistants in the building of anthropological knowledge and practice, while critiquing and disassembling previously honored "ancestors," or preeminent anthropologists of the past, at times even considering what repatriation or destruction of disciplinary archival records might look like.

This talk examines how the structure of archival collections, which are often built around the institution or primary researcher as record-producer, contributes to the erasure of local knowledge-keepers, research and field assistants, and administrative colleagues. Through discussion of research into the women of the Bureau of American Ethnology (BAE) and the Department of Anthropology at the Smithsonian, including the development of staff lists, scouring of administrative records, and review of #thankstotyping-style acknowledgements of women's labor, we particularly attend to how women in archival, administrative, assistant, and student or volunteer roles continue to serve as the invisible "glass shoulders" on which other researchers' careers are made.

Drawing on archivists' experiences of appraisal, processing, and description, alongside fragments of poetry, prose, administrative, and other trace records of women as ghost scholars, we picture how the presence—and absence or erasure—of women can be made more visible in the anthropology archive.

Presenter(s): Celia Emmelhainz

Writing from the Archive of Silent Arias

American novelist and critic Cynthia Ozick recently declared the act of letter writing dead. "Dead as a doornail. Dead as the dodo. Dead as the hundreds of generations who had no other way to convey ideas and emotions over distances of land and longing." In this paper, I embrace the creative potential of writing from the archive of letters at Yale's Beinecke Rare Book and Manuscript Library. Taking up the personal correspondence of the deceased, I meditate on their haunting meanings. The letters of the dead index scenes of longing, anger, and agony unfolding then—still, unfolding now. What rights do these dead letter writers have to their feelings and privacy? The original recipients are now dead too. By what ethics do we attend to this archive of past lives? Lives captured and cemented—yet absent, made one-dimensional. I am drawn to the letters that came to the archive by chance or accident, without their writer's knowledge or consent. Their words lurking. Little timebombs. As Ozick writes: "Letters, fragile shafts of paper and ink, can have the operatic force of stirring things up, making mischief, leaking lava, compelling notice, all the while

hiding under an imposture. The writer of letters, these silent arias, can be present though simultaneously fully absent."

Presenter(s): Lucy Mulroney

Drawing Out Silence: Archival Summonings through Illustration

Illustration, be it manifested through hastily made field sketches or carefully constructed images, highlight one way that documents present a "kind of knowing that is all wrapped with showing, and showing wrapped with knowing" (Gitelman 2014: 1). A critical consideration is that the relationship between showing and knowing is iterative. Drawing, re-drawing, and appraisal all involve acts of framing, and such processes add dynamism to how we traditionally conceive of archives. This paper reports on a facet of a broadly scoped and decades-long project to document Alaska's historic gold mining landscapes. Archaeological fieldwork centered on the detailed measurement of sites where ore from the underground was crushed and refined to recover valued metals. The field maps generated through this work formed the basis for developing illustrative reconstructions of several gold processing mills. This paper details the ways that the drawing process came to interrogate the very data recorded, re-engaging with noted and un-noted field observations, and re-directing illustrations to include experiences felt and stored by the body. The illustrations that have resulted from this re-engagement seek to give voice to the complex, subjective, and multi-sensory experiences of archaeological fieldwork.

Presenter(s): Paul White

Naming and Forgetting: Agnotology in the Storage Room

This is a story about how names are forgotten, and then recreated. It is about how silence works its way into the historical record through actions in the moment, and then later, a second time, through actions by the researchers. In this paper, I examine how the label on the box containing two poorly preserved and commingled sets of skeletal remains dictated an entire research program, all predicated on an assumption. The 1928 Hurricane Victims 1 and 2 Belle Glade have no paper trail, no documented history, and very little biological information that can contribute to their identification. But through the conventional practices of naming, they have assumed an identity. The story of these remains is the story of the layers of choices and assumptions in the storage room. Such actions "haunt" the materials with which we work, invisible though they may be. They have the potential to both elucidate real aspects of history, as well as further silence other aspects of it. Researchers have termed this agnotology, and it is a key idea for this exploration. "Ignorance can be the flipside of memory, what we don't know because we have forgotten, parts of which can be restored by historical inquiries but most of which is forever lost. (And we often cannot say which.) Ignorance can be made or unmade, and science can be complicit in either process," (Proctor 2008: 3). The process of forgetting and losing--and naming and remembering--is central to the story of Hurricane Victims 1 and 2.

Sectarianism in Archaeology's Archives

Academic, government, and public circles doggedly reify sectarianism as "the" principle of the Middle East—i.e., social worlds are transhistorically segregated and explained by sect (Makdisi 2017; 2019). This is despite social historians demonstrating sectarianism's historical contingency as process, discourse, and practice. Archaeology, I argue, is among circles that subtly reify sectarianism. This reification is directly related to imperial practices that racialized, Orientalized, and sectarianized Levantine landscapes. These claims are based on my reading of various forms of archival evidence: Ottoman and Euro-colonial imperial/military maps that identify Levantine cemeteries (ca. 1840–1930), archaeological publications discussing Levantine cemeteries (ca. 1921–2021), and site records of an excavated component of a cemetery near the port of Beirut, Lebanon (ca. 1730–1930).

Here, sectarianism in the archives more broadly and archaeology's sectarianist politics of knowledge specifically are taken as effects of what Ann Stoler (2016, 322) calls "imperial duress" that "more than 'haunt[s].'" They register sectarianism's capacity to facilitate forgetting other-than and more-than sectarianist worlds, as well as to enfold lives, deaths, and relations, such that multiple temporalities and spatialities of violence coendure. Ultimately, I call for a revision of the workings of archaeological knowledge, along with the politics and milieus that sustain it.

7724 Persistent Hauntings: The Complexities of Institutionalizing Racial Justice Projects in Education

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Riverview II (41st Fl)

Type: Oral Presentation Session

Objectives

Current assaults on minoritized communities, from the forced deportations of im/migrants to the dismantling of diversity, equity, and inclusion (DEI) across and beyond educational institutions, are part and parcel of dynamic attitudes towards people of color within the US. Yet, even in more progressive times, anthropological approaches to educational research have exposed deep tensions in everyday implementations of policies, programs, and pedagogies towards racial and linguistic equity for multiply minoritized communities. This panel traces tensions that arise in processes of codifying justice-oriented movements in schools.

Overview

Five papers underscore the myriad challenges educators, including teachers, parents, school and district leaders face on the ground. The first highlights experiences of teachers implementing the Ethnic Studies mandate in Connecticut to demonstrate how teacher practices may center the

content without the ethos of a movement rooted in Civil Rights era activism. The second centers the experiences of teachers who teach newcomer youth in California to reveal the complexities of designing and implementing Ethnic Studies curriculum and pedagogies that respond to the diverse needs of students as California's K-12 Ethnic Studies mandate goes into effect. The third traces experiences of district and school leaders as well as parents to figure how efforts to expand bilingual schooling, particular dual language immersion, for multilingual learners in California becomes misaligned with an underfunded district's DEI efforts. The fourth showcases how multiracial school administrators and staff attempt to actualize DEI at school in various manners within a progressive, multicultural, and high-income area to reflect and challenge its status as a "progressive" community. Lastly, the fifth showcases how district leaders in predominantly White school districts frame talking about race and racism in different manners than those in districts with fewer White students, suggesting how certain forms of race-talk becomes cultural capital in everyday efforts to actualize racial equity.

Significance

Through five cases across three states, this panel brings together variegated perspectives on how educational stakeholders like teachers, district and school leaders as well as parents experience implementations of justice-oriented movements and programs like ethnic studies, bilingual schooling, or DEI. As such, this panel highlights confluences and contradictions in addressing issues of race, racism, and educational inequities in and beyond classrooms for minoritized students and their communities. We ask: how do the ghosts of race essentialism, racial capitalism, and Whiteness (re)appear in even the most well-intentioned attempts to achieve racial and linguistic equity? What can be done to confront these ghosts?

Structure

This panel consists of 15 minute presentations of five papers, followed by 15 minutes of Q&A.

Presentation(s): Ethnic Studies Without Ethnic Studies Pedagogy?: Implications of Mandating the Teaching of Ethnic Studies

As of 2022-23, Connecticut requires high schools to offer a Black and Latine Studies course. Drawing on data collected as part of a larger ethnographic study, this paper analyzes the perspectives and pedagogical approaches of Black and Latine Studies teachers, and highlights the possibilities and limitations of mandating the teaching of ethnic studies (ES). I build on literature on ethnic studies education (e.g. Bonilla et al., 2021; Cabrera, et al., 2013), and particularly the

concept of ethnic studies pedagogy, which emphasizes that ES should be centered on three components: access, relevance, and community (Tintiangco-Cubales et al., 2015).

I argue that when ES courses are mandated, teachers' pedagogical approaches vary. Specifically, I highlight how some ES educators support the course and curriculum, but teach without engaging in ethnic studies pedagogy. They focus primarily on the course content and skills development, without necessarily centering cultural relevance, community, and activism. However, I also argue that a state mandate for ES education creates space for teachers to embody ethnic studies pedagogy, and for students to engage in critical, transformative, and community centered learning. As Connecticut and other states begin requiring ES education, it is important to consider how to ensure high quality ES education. The findings underscore the need to recruit and train ES teachers in ethnic studies pedagogy, particularly when ES courses are required.

Ethnic Studies teachers as policymakers: Imagining Ethnic Studies for multilingual newcomer immigrant youth in California

This paper examines the experiences of Ethnic Studies (ES) teachers serving a growing but overlooked group: multilingual, recently-arrived immigrant and asylum-seeking youth ("newcomers"). Most scholarship has focused on U.S.-born youth of color, not examining the experiences of newcomers whose relationships with the U.S. racial order are distinct from those who have grown up here (Bajaj et al., 2017). In light of the new K-12 ES mandate in California, we examine how teachers serving newcomers in three Bay Area schools make sense of and prepare to enact ES.

Our analysis draws upon Castagno & McCarty's (2017) anthropology of education policy framework to examine how educators make and "do" policy through their day-to-day teaching. We draw on ethnographic data from a curriculum co-design collaborative with six teachers of newcomers. Data sources include interviews, fieldnotes and videorecordings, and participant-produced artifacts.

We find that teachers highlighted the community-specific nuances of ES pedagogy, one that must attune to the needs of newly arrived immigrant youth. Thus, they reflected a more expansive understanding of ES than the official state policy. Teachers also raised the complexities of teaching race and racism to students who are not as familiar with dominant US racial logics, as well as how to teach language and content simultaneously. These findings reveal that teachers' sensemaking challenged the policy mandate's assumptions about race and migration.

Contours of equity: Asian Americanness and Mandarin bilingual schooling

California has taken steps to educate multilingual learners towards a global world through initiatives like Global California 2030, and the 2016 repeal of Prop 227 that had all but banned

bilingual education in public schools. In hand, dual language immersion (DLI) programs have proliferated, leading to charges of the "gentrification" of bilingual schooling by more affluent, often White communities. Thus, scholars have appealed to the need to recenter the needs of heritage language speakers and equitably expand access to DLI for diverse and minoritized communities.

This paper traces how goals of "expanding access" to DLI and "equitably serving heritage language speakers" becomes misaligned on the ground through the case of a Mandarin-English DLI (MEDLI) in an underfunded urban school district. Amidst segregated educational opportunities, the needs of Asian American heritage language learners become relationally positioned against that of "high need" Black and Brown communities; thus, serving diverse student populations equitably often comes to be articulated in conflicting manners for diverse parents, school and district leaders. Drawing on thematic analysis of ethnographic data and interviews I trace the contours and misalignments of pursuing racial and linguistic equity amidst uneven schooling opportunities, who is left out of considerations of DEI and how. This paper bridges across Asian American studies, race and language studies, and the political economy of education.

Presenter(s): CATHERINE PARK

Educational Opportunity For "All": When Progressive Communities Adopt DEI School Policies

After 2020's social uprisings made plain the social and moral failings of civil rights era-policies to actualize the promise of racial equality, many schools and communities rushed to formalize a re-commitment to students and communities of Color by adopting diversity, equity, and inclusion (DEI) policies and practices. Just 5 years later, a backlash intensified by the second Trump presidency has many organizations retracting the DEI efforts they put in place just years before, or even withdrawing other forms of support previously earmarked for minoritized students. This paper asks how a progressive, multicultural, and high-wealth community in Los Angeles negotiated its commitment to DEI through its schooling institutions in the window between these two historical moments. I here draw on ethnographic research collected in schools and school district spaces in this community between 2022 and 2024 to consider the various, at times contradictory ways that multiracial school administrators and staff made sense of the charge to actualize DEI at school. In keeping with scholarship on racial capitalism and critical geography, this paper further asks how the DEI policymaking in this study may reflect or challenge the specific racial formations in the community that support the community's sense of itself as a "progressive place."

Presenter(s): Gabrielle Hernandez

Race-Talk as a Form of Cultural Capital in High-Income, Predominantly White School Districts

What can be learned from the public statements that school districts made describing commitments to racial equity in response to Minneapolis police officers' murder of George Floyd and global calls for racial justice in summer 2020? In predominantly White high-income school districts, leaders expressed shock at evidence of racial violence and framed race-talk as necessary both for addressing the discomfort caused by learning about racism and to prepare students for leadership roles in "diverse" and "global" settings in their futures, thus rejecting longstanding White

norms of color-blindness and racial ignorance. By contrast, statements from similarly high-income districts with fewer White students also promote race-talk but describe these conversations as supporting racially marginalized students' immediate socioemotional needs, rather than as something needed for (White) students' future success. The findings suggest that comfort talking about race and racism may be emerging as a form of cultural capital for affluent White students, which I call race-conscious refinement: ease discussing racism beyond "diversity happy talk" as a mark of distinction that serves students' future advancement. The study raises critical questions about how the "racial contract" may be shifting to accommodate new, sophisticated mechanisms that uphold elite White dominance.

4680 Predatory Politics: The Wily Animal-Human Relationships of Hunting and Fishing, Part Two—Land

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Bacchus

Type: Oral Presentation Session

Experiences of hunting and fishing across diverse cultural contexts have been central to the analysis of human environmental relationships in environmental anthropology. Hunting and fishing have been investigated as generative social spaces of place-making, environmental perception, and relationship formation. But these practices have also been critical sites of colonial and state interventions that aim to shape and regulate relationships between humans and their material environment. These efforts to regulate hunting and fishing-and the embodied relational practices that join the lives, and deaths, of humans and non-humans- also work to reshape the relational worlds of indigenous and socially marginalized communities in the colonial and postcolonial world.

Yet the complex socioecological life of hunting and fishing seems to consistently exceed, and often undermine, efforts of state control or regulation. These two linked panels explore ethnographic accounts of human relationships with animals that are cunning, wily, or tricky-relationships that challenge notions of human agency and that resist the bounded categories of colonial and postcolonial life. Part two explores unruly relationships on land, ranging from culling raccoons in the Bay Island of Honduras to hunting "exotics" in Texas, trophy hunting for cunning jaguars in Belize and "Man-Nature" encounters in southern Africa. In each of these contexts panelists foreground the ways in which hunting creates human-nonhuman social assemblages that unsettle the boundaries of fundamental anthropological categories: the human, gender, race and citizenship, among others.

Presentation(s): Grieving the Land Crab: Ecological Loss, Conservation, and the Politics of Killability in the Caribbean

This project explores the near-total disappearance—and recent return—of the blue land crab on Utila, the smallest of Honduras' Bay Islands, where ecological loss has provoked profound grief. The decline of this culturally significant species was linked to invasive raccoons, whose introduction disrupted the island's delicate ecosystem. A recent culling program successfully reduced raccoon populations, leading to a resurgence of the crab, return of the whale shark, and an unexpected shift in conservation sentiment: the principal trapper has become a local hero, and hunting raccoons has emerged as both a sanctioned and unsanctioned practice. Drawing on political ecology, political ontology, and decolonizing methodologies captured in "rubber boots" methods offered by Anderson, Bubandt and Cypher (2023), this paper interrogates the colonial and neoliberal histories embedded in conservation policy, asking: In what contexts are certain species deemed killable, and why? How can colonial, postcolonial, and colonizing species – human and nonhuman – unsettle and rework understandings about and experiences with hunting practices? Who and what can hunt in protected places, and how do these practices reshape notions of belonging for the many identities represented among island residents, including their non-human residents.

Flourishing in Limbo: Hunting, Conservation, and the Wild Lives of Texas Exotics

Scimitar-horned oryx and axis deer—just two of more than one hundred species of hoofed mammals from Africa and Asia introduced to the Texas Hill Country over the past century. Classified as neither game nor native wildlife, Texas "exotics" occupy a political-legal limbo that resists state regulation outside of public lands. Roaming across the vast matrix of private ranches dominating 97% of the Texas landscape, the lives of these animals are governed almost exclusively by hunters and landowners—or by no one at all. Yet far from peripheral, Texas exotics are central to a lucrative hunting economy that has long shaped the region's political ecology. In the "exotic wildlife capital of North America," they are cultural icons, valuable commodities, conservation symbols, invasive pests, and agents of ecological change. This multiplicity emerges from their place within a dynamic multispecies assemblage linking people, nonhumans, and material infrastructures in relations that co-produce shifting ecologies and political frictions throughout the privatized landscape of Texas. This paper draws on multispecies ethnographic research to examine how such tensions unfold through everyday practices in the exotic wildlife industry. By contrasting animals like the locally extinct scimitar-horned oryx with the prolific axis deer, it reveals the

unstable logics of care, commodification, and control that structure human-animal relations in a landscape shaped by the pursuit of huntable life.

Presenter(s): Alexandra Holdbrook

Tigah Camp: Unruly Multispecies Assemblages, Race and Gender in a Belizean Trophy Jaguar Hunting Camp

Tigah Camp, as Belizeans call it in Kriol, was a trophy jaguar hunting camp near the Afro-Caribbean Belizean Creole village of Crooked Tree that ran for about ten years in the 1960s. The dense concentrations of jaguars and unpredictable flooding make the multispecies assemblage of Tigah Camp unruly. Landscapes like this elude capital, thus allowing Black(ened) self-determined communities to develop. But the jaguars also attracted wealthy white men for trophy hunting. In the 1960s, Tigah Camp brought together Afro-Caribbean peoples living 'otherwise' with white hunting entrepreneurs and ultra-wealthy trophy hunters. In this paper, I combine ethnographic and historical research to show the historical development of jaguar hunting in Belize and the emergence of this jaguar trophy hunting camp. These multispecies encounters emerged from and reinforced global white supremacy while, at the same time, their manifestation in Belize provided openings that challenged white domination. In addition, these unruly assemblages fostered forms of shared masculinity across lines of race and cultivated a cunning cleverness that spanned across lines of race and species. In making these arguments, I aim to contribute to scholarship that shows how multispecies assemblages are always already racialized and gendered and how the specificities of place shape socioecological possibility.

Presenter(s): Melissa Johnson

African Wildlife Conservation & the Specter of Man-Nature Encounters

Forty years ago, Donna Haraway theorized interactions between settlers and African wildlife as Man-Nature encounters. In the early 20th century, Theodore Roosevelt embarked on a 11-month hunt through colonized East Africa, then lauded as the "greatest safari in history." Carl Akeley later taxidermized the skulls, bones, and skin of the hunted wildlife for exhibition in the U.S. Museum of Natural History. The curated displays positioned "white Man" as the evolutionary pinnacle and African wildlife (and people) as his primitive past. Thus, for museum visitors, the encounter foretold an embodied sense of evolutionary hierarchy wherein African wildlife became settler heritage to be protected and sustained for settler futures.

We reconsider the specters of Man-Nature encounters in the early 21st century based on what we have learned from men who have hunted, and those who have been surveilled, in southern African national parks. Drawing from an analysis of archived correspondence, interviews, and online conservation media, we examine two patterns. In the first, foreign visitors encounter African wildlife on African lands reliant on African labor. In the second, tourists become the trackers of rural African men suspected of hunting illegally in national parks. In both cases, wildlife conservation sustains settler futures with African wildlife at the expense of rural African futures. We reflect on the predatory implications of Man-Nature encounters gaining ground today.

3536 Regrets: Ghosts of the Past, Spectres of the Future

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Bonaparte

Type: Roundtable/Town Hall

In times of political turbulence, tragedy, and despair-and likewise in "everyday" and even hopeful times and lives-regret is a moral sentiment and normative claim that often lurks in the background, sometimes foregrounded through haunting thoughts, warnings, or laments, acting like figurative and literal ghosts of our past, future, or present (non-)actions and imaginings. This roundtable invites participants to consider the multiple ways in which "regrets" are mobilized in fieldwork, anthropological theory, and beyond, asking: how might we build on the work of moral philosophers and a smattering of anthropologists who have theorized regret as the moral experience of feeling responsible for past actions (B. Williams 1981), even when the regretful individual could not have influenced that which happened (Kuan 2017)? In what ways might regrets shed light on the banality of evil (Arendt 1963), or perhaps open up a future otherwise and allow subjects to "reinhabit" the past that might have been (Throop 2018), or even spur people to new (or old) politics or (de)colonizing moves? What might be the affordances of approaching regrets as structures of feeling (R. Williams 1976) or sideshadowing narrative genres that may be muted or only gestured to (Shohet 2021; 2023)? How are regrets tied to an idea of a life well-lived or to notions of an afterlife or anticipated future anterior? How are claims of having "(no) regrets" politicized, and what fresh insights do they offer in our studies of self, subjectivity, society, and other collectives? When and in what forms do haunting regrets figure in our own and interlocutors' life course? What sorts of ghosts do regrets conjure or slay, and how?

4730 Reproductive Justice in the U.S. South: critical analysis and possibilities

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** MGB - Salon B

Type: Oral Presentation Session

This panel examines the barriers, inequalities, contradictions and possibilities involved with reproduction in the U.S. South. While there have always been severe legal restrictions on reproductive autonomy in this region, states with conservative administrations have used the overturning of Roe vs. Wade to further restrict and criminalize important forms of healthcare including, but not limited to, abortion. Southern states have long emphasized the value of authoritative knowledge and the medicalization of birth-including limiting the role of doulas and midwives in prenatal care and delivery-and have relatively high rates of C-section and other interventions alongside higher maternal and infant mortality. Particularly striking are the disparities in outcomes between people racially coded as white and people of color. Finally, there is limited public discourse around reproduction including in the form of sex and reproductive education and acknowledgement of pelvic health and pain.

Likely because of this institutionalized hostility to reproductive autonomy, the South is also characterized by vibrant movements to decolonize pregnancy and birth. These include efforts by radical birth workers, non-profit and activist organizations and alternative healthcare organizations, among others, and involve efforts to provide alternatives to the medical industrial complex and associated birth models. The papers in this session will explore some of these efforts in Tennessee and Mississippi and the possibilities around radical transformation of reproductive justice and autonomy.

Papers in this session will discuss anthropological research across the reproductive cycle, from contraceptive decisions, pregnancy, and birth to post-partum care, covering topics of LARC (Long-Acting Reversible Contraception), pelvic floor physical therapy, breastfeeding, and reclaiming birth joy. As a collective, the papers focus on reproductive experiences and desires and center questions of autonomy, reproductive rights, and well-being. What forces lead to the valuation of some forms of contraception over others? How do Black birthworkers counter dominant narratives of trauma? What factors shape motivations, experiences, and outcomes for pelvic care? How can the embodied, intuitive practices of hands-on pelvic floor physical therapy offer a foundation for reimagining pregnancy and birth care? How does the fragmented and technocratic nature of biomedicine shape whether prenatal providers prepare mothers with "high risk" pregnancies for breastfeeding?

Presentation(s): Preparing for Birth: pregnancy care at the intersection of obstetric medicine and hands-on intervaginal pelvic floor physical therapy

In western biomedicine, pregnancy and birth are often viewed as medicalized events in need of surveillance and routine intervention. Davis-Floyd (1987) identifies this as the technocratic model of birth, where the body is viewed as a machine and biomedical interventions are justified. Pelvic floor physical therapy (PFPT) has supported post-partum recovery, but some studies suggest antenatal PFPT may shorten labor. This paper presents a case study of PFPT during pregnancy and considers its impacts on labor and birth. By supporting pregnant people who seek obstetric care and plan to give birth in a hospital, PFPT rests at the intersection of technocratic models and humanistic, holistic approaches to birth. In the Pelvic Care Pregnancy Program, licensed pelvic floor physical therapists work with OB/GYN practices to provide care throughout pregnancy and post-partum recovery. Therapists conduct an initial assessment followed by regular sessions to provide pelvic anatomy education, hands-on intervaginal pelvic floor release work, breathwork practices, and biofeedback. Drawing on interviews with physical therapists, OB/GYN doctors, and pregnant people (pre- and post-partum), this paper considers the potential of PFPT to disrupt authoritative approaches to pregnancy and birth and challenge patterns of what Davis (2019) has called "stratified reproduction." As an embodied, intuitive practice, can hands-on PFPT offer a framework for reimagining pregnancy and birth care?

Birth and Pelvic Care in Two Cities: Motivations, Reactions, and Outcomes for Pelvic Care during Pregnancy in the Southern United States

Whether it is the topic of conversation at lunch or bible study, pregnant people in the mid-South are learning about the potential benefits of pelvic care during pregnancy, birth, and postpartum. This research explores this emerging practice through the lens of patients, physical therapists, and physicians in two mid-south cities with different social, cultural and economic contexts. The ethnographic accounts from both cities cite diverse motivations, reactions to, and outcomes for pelvic care during pregnancy. One therapist, who has worked in both cities, referred to one as the "Wild West" and the other as "on the coming edge" of pelvic care. Further, the location for therapy may influence what pregnancy approaches are considered authoritative. One clinic advertises "state-of-the-art" technology, and another favors a more "holistic" or "natural" model of care. Finally, therapists report limited variation in racial identity in pelvic care in one city relative to the other. A deeper exploration of the influences of space and place reveals overlapping and opposing notions of birth care in the Southern U.S. In this comparative case study, we seek to further understand the factors that shape motivations, experiences, and outcomes for pelvic care, and consider the implications for reproductive justice and autonomy. Brigitte Jordan (1993) emphasizes, "birth everywhere is culturally marked and shaped," and so, too, is pelvic floor therapy for pregnancy, birth, and postpartum.

Joyful Eyes Below the Belt: A Visual Ethnography of Black Childbirth

Black mothers' birth stories are often coated in struggle and reveal culturally unresponsive health care systems. Anthropological discourse has increasingly examined how obstetric racism and structural violence impact the quality of care and outcomes for marginalized women. While contemporary maternal health literature has explored the work of Black non-biomedical caregivers like Doulas and Certified Professional Midwives, more can be done to explore the range of black women's experiences (e.g. Davis, 2018). Lindsey Stewart's offering of joy as a method of decentering suffering in Black American women's experiences supports an inquiry into how Black birthworkers and Black pregnant mothers decenter racism through their kinship and othermothering (2016; Abdullah 2019). I investigate the childbirth experiences that Black women have with Black birthworkers. I ask, why do narratives of trauma dominate maternal health literature, despite the presence of empowering birth stories? Drawing on a photo exhibit co-produced with participants, the paper explores the visual representations of care offered by Midsouth Bipoc Birthworkers, the ways these images challenge dominant narratives, resist institutional violence, and reclaim joy in birth. By exploring Black maternal health through semiformal interviews, including photo elicitation and participant observation, this paper attends to the important often-overlooked themes of birthwork, womanist theology, and healing-centered narratives.

Presenter(s): Amareé Austin

Priming the Pump: How do clinicians prepare a mother with a “high risk” pregnancy to breastfeed her baby in the event of a possible NICU admission?

Biomedical literature has established a mother's own milk to be the optimum nutrition for her infant, with numerous health benefits that extend throughout both the mother's and child's life, in addition to the deep emotional bonding that often occurs in breastfeeding. The breastfeeding relationship becomes particularly precarious in the event of a NICU admission, which almost invariably involves the separation of mother and infant, but it is in these situations that the health and bonding benefits of breastfeeding can be even more dramatic. While the logistical challenges are great, it is often still possible for a mother to breastfeed directly or express her own breastmilk for her NICU infant.

Considering that some pregnancies are more likely to result in a NICU admission, there is an opportunity for prenatal care clinicians and birth workers to prepare mothers ahead of time to provide their own breastmilk to their babies, even in complicated circumstances, if that is something that the mother wishes to do.

Drawing on interviews with prenatal clinicians, birth workers, and mothers of NICU infants and using a framework that considers biopower, racial capitalism, and the fragmented and technocratic

nature of biomedicine, I explore the ways that prenatal providers do or do not prepare mothers with "high risk" pregnancies for breastfeeding.

Presenter(s): Sally Zebrick

Factors in Contraceptive Decision Making

At a time when reproductive freedoms such as abortion services are increasingly restricted in the United States, equitable contraceptive access is more vital than ever to achievement of reproductive goals. This study seeks to explore how unseen economic and socio-cultural forces do or do not direct individual decision-making regarding specific contraceptive methods. Increasingly, many U.S. nonprofits have turned toward LARC as a more "effective method" to provide to low-income communities of color in recent years, rather than supplying people with short-acting methods such as the pill, condoms, patch, etc. By analyzing in-depth interviews with employees, clients, and partnering physicians of a not-for-profit organization which solely offers LARC to low-income communities (the majority of which are Hispanic or Black), I examine the subtle and less subtle forces that assign value to certain methods of birth control over others. Do individuals feel comfortable with their decision to use LARC, and what socio-cultural factors (including race/ethnicity, stigma, familiarity, history in countries of origin, level of sexual health education, etc.) shape this choice? This study contributes to a growing body of work on LARC usage, and sheds further light on the complex nature of cross-cultural contraceptive decision-making among residents of a diverse city in the mid-south.

3226 Skulls Who Talk Back: Recuperating Justice, Ghosts, and Thresholds

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Grand Couteau (5th fl)

Type: Roundtable/Town Hall

Going back and forth between the past and present; space and time; life and death; ghosts and the thresholds from which they emerge haunt anthropology. This position of being "in-between" or in transition, what Victor Turner describes as liminality, is frequently likened to death and often seeks transformation (Turner 1969). Whether these liminal spaces are social, environmental, medical, infrastructural, or affective, they produce a moment that troubles temporality and attends to the psychic. Ghosts haunt these spaces of "in-between," often as memories, remnants of empire, histories of violence and racism, secrets, and those who are not yet born or dead. The presence of a ghost is more than horror, and "investigating it can lead to that dense site where history and subjectivity make social life" (Gordon 2008, 8). By bringing together scholars concerned with sovereignty and protest in Pakistan; border governance in post-Brexit Northern Ireland; affect and relationality in prison; lithium extraction in Chile; and Black Womanhood and medical racism; this

roundtable seeks to be in conversation with Derrida's understanding of hauntology, the figure of the ghost, and the foreboding importance of the threshold where "this logic of haunting would not be merely larger and more powerful than an ontology or a thinking of Being..." (1994, 5).

In moments and at sites of trauma, in the face of injustice, how do skulls call (or cry) for their vengeance? How do we respond as conversations with these ghosts are ultimately conversations about justice, engaging the threshold, supporting their haunting and the "something-to-be-done" that emerges as a reckoning with our present (Derrida 1994; Gordon 2008, 183). Together we seek to address what is produced by haunting and how it impacts futures by asking the following questions: can haunting be recuperative? Can justice be found for the specters that haunt us? Is naming the thresholds from where most ghosts derive enough? Can people who were never considered human still be ghosts? If so, who, what, and how do they haunt? By posing these questions, we seek to think through the impact thresholds and ghosts may have on conceptions of justice, and how working with haunting may challenge our ideas of the past, present, and whether Derrida's hope for a better future is still possible.

Presentation(s): Between Myth and Memory: North Indian Pilgrimage as Discursive Space

The North Indian town of Allahabad is perhaps best known for hosting the Kumbh Mela, a twelve-yearly pilgrimage-fair often said to be the "largest gathering of humans on earth", and whose latest iteration concluded earlier this year. While the event has received much scholarly and media

attention in the past, the focus has typically tended to be on the extreme (though admittedly photogenic) acts of bodily mortification practiced by ascetics, the hundreds of millions of pilgrims who converge at the event, or the infrastructural challenge of erecting and dismantling the "ephemeral megacity" which houses them every twelve years. In addition to these 12-yearly visitors, however, the city also hosts a rather more ordinary constituency of pilgrims every year: householders who camp with local pilgrimage priests, often taking arduous vows-including celibacy, severe dietary restrictions, and exacting regimes of prayer and fasting-to live as ascetics for the duration of their month-long stay. While commonsense descriptions of pilgrimage priests as 'swindler-middlemen' preying on hapless pilgrims abound, this paper attempts to show, based on 18-months of fieldwork conducted between 2018 and 2025 over multiple iterations of the event, first, that taking pilgrims' ritual traditions seriously-as projects, say, of self-fashioning-affords a richer conceptual frame within which to view these interactions; second, that this 'periodic asceticism' challenges the seemingly-settled picture of the ascetic as existing apart from society; and finally, the role of pilgrimage itself as a discursive space, and the centrality of memory to questions of asceticism, in Hinduism and beyond.

Presenter(s): Kunal Joshi

DIY the Rituals: Performativity in Thien Hau Temple, Los Angeles

This study examines how the flexibility of popular religion enables participants at the Los Angeles Thien Hau Temple to design and perform their own rituals, a phenomenon I term "DIY rituals." Through my fieldwork, I observed participants challenging ritual conventions and employing bodily and speech acts to construct new ritual practices, achieving religious efficacy through these personalized approaches. Theoretically, this research engages with Judith Butler's concept of performativity and Roy Rappaport's theory of ritual enactment, demonstrating how repeated bodily and speech acts challenge and reshape conventions.

By analyzing participants' discourse, I reveal how they achieve religious efficacy through their speech acts, performing identities-some as believers seeking blessings, others as petitioners emphasizing their suffering. By examining cases of ritual innovation and resistance, this paper highlights the agency within religious practices, dialoguing with Clifford Geertz's scholarship on religion providing meaning to sufferings. It also expands on Mayfair Yang's studies on popular religion and grassroots agency, illustrating how performativity intersects with conventional frameworks to sustain or challenge the conventions. This research contributes to broader discussions of religion, ritual, and performativity by showcasing how participants' improvisational practices enrich the cultural and spiritual landscapes of diasporic Chinese communities. It also underscores the transformative potential of ritual flexibility in navigating displacement.

Presenter(s): Genn Ruan

Epistemology of Spirit: Black Baptist Women and "God's Work" in Los Angeles

This paper draws on fieldwork with Black Baptists in Los Angeles to examine the relationship between women's labor and their engagement with the Spirit. I utilize the Spirit as a subject, a real

actor whose presence is knowable, and also as a theoretical framework, an epistemology of spirit structured through a particular way of being in the world. I locate this discussion of the Spirit within ethnographic spaces of gendered labor that emerged in the midst of the COVID Pandemic and came to be understood within churchwomen's narratives of doing "God's work." In particular, I focus on their labor of bridging the physical and virtual space of the church, and the ways in which these women conjured the Spirit to forge meaningful bonds as they shaped an alternative space of social organization. I argue that being "filled" or "touched" by the Spirit becomes a performative practice of otherwise knowledge production, and the ways in which women labor to ground this relationality in spirit ultimately provides other ways of thinking and being.

Presenter(s): Monique Azzara

Ghosts of Imperialism: Alternative Spirituality as Resistance and Cultural Reclamation

This study explores the "ghosts" of cultural erasure and spiritual disconnection caused by Western imperialism, focusing on how contemporary spiritual practices serve as pathways to reclaim ancestral identities and rebuild community bonds. Through a comprehensive literature review along with qualitative interviews with pagan Americans disenchanted by mainstream American Christianity, this research examines how pre-colonial spiritual traditions help restore lost cultural roots. Drawing on phenomenology and decolonization theories, the study investigates how these practices not only heal cultural wounds but also foster resistance against ongoing cultural erosion. The concept of "ghost cultures" - lost traditions reconstructed through myth and memory - is central to this work. By analyzing the intersection of spiritual practices with decolonization efforts, the paper highlights how these practices can challenge cultural appropriation and empower marginalized communities. Ultimately, this research offers insights into the transformative potential of spirituality in decolonizing the Western mind, promoting community resilience, and reimagining identity in the face of colonial legacies.

Presenter(s): Meghan Blust

Mapping an Islamic Black Radical Tradition: Racial Geographies of Muslim Aid

A year after its founding in 1963, the Federation of Student Islamic Societies - one of the oldest Muslim organizations in the UK - sponsored one of El-Hajj Malik El-Shabaaz's final foreign tours. The trip included events in Manchester, London, and the famous Oxford Union debate in which Shabaaz took the affirmative of the motion, "Extremism in the defense of Liberty is no vice; moderation in the pursuit of Justice is no virtue." Two decades later, FOSIS would sponsor the trip that would inspire a young doctor to found what is today the world's largest Western-based Muslim NGO, Islamic Relief. As a UK based development organization, with the institutional constraints of Islamophobia and white supremacy that that entails, I examine how members of the organization navigate the pulls of moderation and liberation. Drawing from ethnographic research with Islamic Relief in the U.S., South Africa, and Mali, I map what I call practices of an Islamic Black Radical Tradition. In this presentation I emphasize the latter, the ways Muslims have organized otherwise, refusing the institutional constraints of white supremacy to show up for and with their communities in the name

of self-determination and mutual aid. I theorize Blackness from anti-racist activists traditions in the U.K. and South Africa, a blackness that is not defined by pigment, but, in the words of Steve Biko of the Black Consciousness Movement in South Africa, "those who are by law or tradition politically, economically and socially discriminated against as a group." These anti-racist traditions are examples of what Stuart Hall has recognized as the ways "racist interpellations can become themselves the sites and stake in the ideological struggle, occupied and redefined to become the elementary forms of an oppositional formation."

Panjtan Jo Bagh: A Garden Outside History

"There's no history here, this place is outside history, it belongs to Maula Ali – I have beheld him [dīdār kīya hai] here" said a malang – a transgressive Sufi mystic – at a garden in rural Sindh, Pakistan as I tried to enquire about the administrative and property aspects of this garden. Panjtan Jo Bagh – the Garden of Panjtan – lies on a hillside in the Kai valley in Sindh, its lush terraces watered by a hot spring near the top of the hill. Panjtan translates to "five bodies", and denotes the Ahl al-Bayt, the five family members at the core of Shi'i cosmology – Prophet Muhammad, his daughter Fatima, his son-in-law Ali who was the first Shi'i Imam, and Fatima and Ali's sons Hassan and Hussain – the second and third Shi'i Imams. Hassan was poisoned, while Hussain's martyrdom at Karbala animates annual mourning across the Muslim world for over a millennium. The violence unleashed upon the Prophet's progeny, and the stark injustice of it is often the prism through which worldly injustice and political cruelty are refracted and understood.

Amongst my subaltern interlocutors, most of whom identified themselves at some intersection of Shi'ism and Faqiri, an antinomian Sufi tradition of holy poverty, appeals for justice and salvation are directed towards Panjtan and other Sufi saints. "Maula Ali and Imam Hussain will return with their forces, battle the unjust government of Pakistan and all these landlords and thus era of suffering will end" the malang continued. Another malang confirmed this and showed me a printed card that identified him as part of "Hussaini Forces", an army of humans, jinns, and fairies with whom Imam Hussain is believed to return to redeem the world and set it right.

In the midst of massive state surveillance and control over land and the movement of people, Panjtan Jo Bagh is one of the few places where people in Faqiri can gather, sing, talk, and consume intoxicants with abandon. They speak of Panjtan coming to the garden after the events of Karbala, the many sightings of Maula Ali here, repeated visits from long-dead saints, as well as the presence of fairies. It is also one of the fourteen stops on the annual Faqiri pilgrimage on-foot pilgrimage. Drawing on my ethnography of this pilgrimage, as well as separate trips to the garden, this paper asks what it means to be "outside history" and contend with narratives that defy rationalized notions of time and space and invoke the agency of non-humans. I call on Marisol de la Cadena's notion of the "eventful ahistorical" to think of the world as imagined and inhabited in Panjtan Jo Bagh, and the otherwheres and elsewhere, to borrow from Elizabeth Povinelli and Anand Taneja, it offers. In the midst of severe state repression, religious nationalism, and bleak futures in Pakistan,

perhaps the excesses of the world called into being within the subaltern Shi'i Faqiri community at Panjtan Jo Bagh ask us to expand our narrow notions of "reality" and "history".

Presenter(s): Khadeeja Majoka

Reclaiming What Was Lost: Christian Yoga and the Ghosts of "Ancient" Spiritual Practice

The ghost stories told about religious practice over time animate understandings of tradition within modernity. This flash presentation will give a snapshot of my current research among Christian practitioners of yoga in British Columbia, Canada by exploring how narratives around "ancient" spiritual practice animate how modern postural yoga, despite being rooted in another tradition, gets taken up as a Christian discipline. According to these narratives, not only does yoga facilitate healthy Christian spirituality in a modern pluralistic society, but it is also a way of reclaiming aspects of embodied spirituality that are seen as fundamental to earlier Christianity but lost over time. Not to mention that yoga has its own lingering ghosts-remnants of its entanglements with Hinduism that must be "exorcised" in order for the practice to be reimagined as part of a Christian spiritual lineage. Drawing from my ethnographic research, I will briefly consider how the reclamation of "tradition" is an orienting force for Christian yoga practitioners in response to both the challenges and opportunities posed by the forces of secularization and pluralism in contemporary Canada.

Presenter(s): Leah Mernaugh

The Stable Conflict of Thorned Flesh: Fracture and 'Side-B' Baptist Sexuality

This paper explores how celibate gay Baptists in Texas understand their sexual identity in relation to their faith and connection to God. Drawing on long-term ethnographic fieldwork with both progressive and conservative Baptist churches in Texas, I argue that many "Side B" gay Baptist men (who believe being gay is not inherently wrong, but acting on it is) live out what Joel Robbins (2007) has called a "stable conflict" in their identity: a permanent, unresolved moral contradiction that does not erode a stable sense of self, but constitutes it instead. Rather than seeing themselves as torn between two irreconcilable halves – their sexuality and their Baptist faith – Side B practitioners understand their sexuality as part of the way God made them, yet a sin nonetheless: a "thorn in the flesh" (2 Cor. 12:7) that must be borne and endured. Through the story of one such man, an interlocutor I call Mark, I argue that this theologized notion of "thorned flesh" provides a way of inhabiting a morally and spiritually contradictory identity without the expectation of resolution. Celibacy here is not seen as a cure or a temporary compromise, but as spiritual praxis that affirms both God's love and the inherent brokenness of the self, while also emphasising the nobility of Christian suffering. I argue that what appears as internal fragmentation is in fact a generative ethical form, one that challenges linear models of spiritual growth and binary models of competing, internal identities. For these believers, to be gay and Baptist is not to live in between two selves, but to live through the enduring work of managing that contradiction.

Presentation(s): "Diagnostic Trajectories: The Validation of Pain in Women and the history of women's sexual health in Peru"

This research delves into women's experiences navigating the medical diagnostic process in Perú. In this work, I investigate how gender biases and preconceived notions about the female body influence diagnosis, treatment, and, ultimately, the validation of women's pain. On one hand, it is an exploration about how women must often "unlearn" their bodies-which is a process that involves challenging culturally ingrained ideas and medical stereotypes that have historically undermined their experiences of pain. Women may start to question whether the pain they experience is indeed "normal" or if it should be taken seriously. On the other, this research aims to understand how medical professionals learn to approach female bodies and the dilemmas they face in diagnosing and treating women's pain. For these purposes, while having interviews with women I also trace the development of women's health care services in Perú from the early 20th century to present. I focus on how policies, medical education and healthcare access for women have evolved over time, particularly to reproductive health and gynecology. In doing so, I try to understand why some women's narratives about their health are often silenced or dismissed within the Peruvian medical system.

'You knew that Friday was coming': the critical nature of community of practice in a peer-health coaching intervention for spinal cord injury

Jean Lave and Etienne Wenger have argued that 'communities of practice' (CoP) are everywhere in daily life and that engagement in them allows for 'situated learning', or knowledge acquisition within a communal, non-formal (i.e. non-classroom) setting. The concept now extends into activism and the promulgation of social movements, but the recipe for creating such a community is vague and ephemeral. In the development of the peer-health coaching program SCI&U we observed the organic growth of a CoP. In this paper we explore perspectives shared by peer-health coaches (PHCs) on the development, value, and role of the community created while learning and practicing coaching for individuals living with spinal cord injury (SCI).

SCI&U is an online health self-management program developed by and for people living with SCI using a peer-health coaching model to promote health, well-being, and enhanced quality of life for people living with SCI. The data discussed here result from the feasibility phase of the program which ran for two years from 2020 (during the Covid-19 pandemic). Unlike peer mentoring, peer health coaches have both lived experience and professional training. The eight PHCs received training and certification in techniques of coaching such as motivational interviewing, brief action planning, and mental health first aid, and were paid for their time. In total they coached 60 community-living individuals with SCI from across Canada.

The design of the intervention focused on the dyadic relationship of coach and participant; however the coaches met as a group on-screen, every Friday, for trouble-shooting and sharing of experiences. At the program's conclusion we conducted in-depth interviews with all eight PHCs. Analysis of these interviews, along with reflections by researchers who attended 'Friday debriefs' revealed the crucial importance of the dynamic community that developed through these meetings. Learning about coaching occurred through the formal training sessions, but the "camaraderie" and "shared experience" of the 'Friday debriefs' became ongoing and powerful modes of maintaining and expanding coaching expertise. Said one coach, "The discussions are totally amazing and inclusive...they're a good meeting, we learn a lot but they're also fun. It's like you've got this group of people that you're working with that have become more than colleagues and we've only ever met each other online."

We conclude that Lave and Wenger's articulation of CoP and more broadly of situated learning constitute what one member of the team dubs the 'special sauce' that makes the practice of peer-health coaching beneficial both for coaches and for the coaching participants. SCI&U may be considered a case study for the juxtaposition of formal learning with an organic, unexpectedly essential community both of and for the practice of peer-health coaching.

The University of Toronto granted ethics approval.

Ethical Negotiations in Hospital Pastoral Care Consults

Hospital chaplains work between disparate ontological spaces, providing spiritual support and counsel while also navigating the constraints and concerns of an interdisciplinary medical team. They are translators between spiritual and medical worlds, gaining a unique perspective on end of life care as they support people in multilayered and ambiguous ways which are often difficult to adjudicate as "effective." This stands in marked contrast to the technocratic focus on efficacy and metrics present in mainstream clinical medicine.

This presentation draws on preliminary results from fieldwork conducted in and around hospitals in Los Angeles County. Using pastoral care consults as a point of entry, it investigates how complex questions of suffering, dis/ability, and quality of life are negotiated within the care team, as well as

within the patient's family. This research seeks to understand how chaplains support people making difficult decisions regarding the cessation of curative treatments or the withdrawal of life support. At the same time, it explores how chaplains balance spiritual beliefs and priorities with the highly regulated space of the hospital, constructing their work as meaningful and legible within hospital bureaucracy.

Presenter(s): Megan Grabill

Ghostly Technologies: AI, Telehealth, and the Ethereal Illusion of Access

This paper critically examines the role of AI-driven telehealth solutions in addressing healthcare accessibility, with a specific focus on virtual chatbots. While such technologies are often marketed as remedies for systemic inequalities in healthcare access, they frequently reconfigure existing disparities and introduce new ones. AI chatbots embody a form of technosolutionism, in which deeply social and historical issues—such as healthcare discrimination, stigma, and economic barriers—are imagined as solvable through technological intervention. I explore these dynamics by combining long-term ethnographic fieldwork with an analysis of Albert, a virtual chatbot launched by Gilead Sciences as part of its corporate social responsibility initiative in Turkey. Designed to provide information about HIV, Albert holds the potential to offer relief in a country where access to accurate and stigma-free HIV-related information remains severely limited. However, in practice, the chatbot fails to provide any substantive material or emotional support for people living with HIV. This case raises crucial ethical and political questions: What does it mean for a pharmaceutical giant to withhold PrEP—a proven HIV-prevention method—from the Turkish market due to financial disinterest, while simultaneously offering a chatbot under the guise of corporate care? By situating this case within broader debates on the neoliberalization of care and digital health governance, I interrogate the notion of the "spectral technology," i.e. how AI chatbots simulate care without truly offering it, or how corporate interventions in healthcare create an illusion of support while withholding material resources. Through this analysis, I challenge the assumption that AI-driven telehealth solutions offer a genuine pathway to health equity, arguing instead that they reinforce the very disparities they claim to solve. Digital health tools like Albert ultimately serve as a means for corporations to claim ethical responsibility while evading material obligations.

Presenter(s): H. Atuk

Making Health Equity a Reality: The Role of Health Insurance Navigators in Expanding Healthcare Access for Immigrant Communities in Washington State

In December 2022, the U.S. Department of Health and Human Services approved a State Innovation Waiver under section 1332 of the Affordable Care Act (ACA), allowing Washington State to provide health and dental insurance coverage to all its residents, regardless of immigration status, from 2024 to 2028. The goal of the Section 1332 waiver is to decrease the number of uninsured, minimize the cost burden of healthcare on individuals and the government, improve health outcomes, and address health disparities. Health insurance navigators, who help people select, enroll, and use health insurance coverage, are charged with implementing this policy

change. Their contributions to improving access to health insurance for marginalized communities are often undervalued, even ignored, but will be crucial to ensuring migrant, refugee, and undocumented individuals are able to enroll for health insurance. This project presents key insights gained from over 30 interviews with navigators working in public health departments, community-based organizations, non-profit hospitals, and health clinics across the state, as well as, policymakers and activists focused on expanding healthcare access for immigrant communities. Using semi-structured interviews with insurance navigators, I explored their responsibilities and tasks, the process of enrolling immigrant communities for health insurance, and the training and resources that support navigators. Additionally, I analyzed official documents used for the section 1332 waiver application to examine the motivations and narratives used to justify this insurance access expansion. My research shows how navigators deal with punitive immigration policies, xenophobic political rhetoric, financial uncertainty, cybersecurity concerns, staffing inadequacies, and high demand. This project advances our understanding of the systemic constraints, decision-making processes, and navigators' discretionary power, relationships, and unique skills that immediately shape access to and use of healthcare and will inform policies that aim to codify health equity for immigrant communities.

Presenter(s): Cyril Clement

Who is afraid of decoloniality? On the implications of (urban) health research otherwise

This article examines the practice of knowledge coproduction from a decolonial perspective, emphasizing meaningful engagement and collaboration rather than superficial or extractive interactions. Grounded in a thorough exploration of decolonial theory, it investigates the political, methodological, theoretical, and practical implications of genuinely incorporating decolonial frameworks in research. Drawing from an international research project, the discussion outlines innovative approaches to budgeting, management structures, theoretical foundations, methodologies, and dissemination strategies and outlines the implications of assuming a decolonial approach in (urban) health research beyond merely rhetorical references to the approach. The paper highlights the role and importance of community-based researchers to decolonize knowledge production and discusses different models of collaboration, identifies common challenges, and reflects on adaptable approaches tailored to the unique characteristics of social movements, community organizations, and individual or collective mandates. The experiences presented highlight both the transformative potential and the persistent complexities of developing decolonial approaches in (urban) health research as these efforts challenge traditional hierarchies, radicalize reflexivity, and reshape the formats and flows of research communication.

Presentation(s): Challenges and Opportunities for Libraries as Centers of Discourse in Rural America

Public libraries in the US are sites of social upheaval, and the need for political action has grown exponentially for them in recent times. Campaigns for book bans have nearly tripled in the last two years, and boycotts and adverse legislation have moved to eliminate library functions and criminalize librarians. Since 2023, three states have completely left the American Library Association, a nonprofit organization that has provided funding and training opportunities for libraries across the country since 1876. Several additional states have introduced or passed legislation that make library materials subject to "obscene material" laws, and could result in librarians who offer any material deemed "obscene" to face up to 10 years of incarceration. Furthermore, an executive order issued in March of 2025 called for the Institute of Museum and Library Services, the national library funding organization, to be "eliminated to the maximum extent consistent with applicable law." The purpose of these legislative moves is to police the identities of the LGBTQ+ community, women, and minorities. In rural settings, the impacts of these policies are even more detrimental, since mass-media is limited to the most accessible spheres for generally the lowest income sources. Libraries have the power to contradict the controlled mass-media discourse used by political actors who call for erasure of certain social structures to eliminate rights in ways that fit their agendas. The existence and support of public libraries represents everyday protest to campaigns of misinformation and disenfranchisement, as well as attacks on intellectual freedom and community engagement. Libraries represent the unextraordinary political involvement of daily life and hidden pathways of resistance.

Haunted Hospitality: Ghost Tours, Memory, and Meaning at The Elms Hotel

This flash presentation explores ghost tours at The Elms Hotel and Spa in Excelsior Springs, Missouri, as a site where cultural memory, historical narrative, and economic enterprise intersect.

Through ethnographic case study, interviews, and literature analysis, this research examines how haunted hospitality becomes a space where the supernatural is not only experienced but commodified.

The Elms Hotel-rich in regional lore, historical upheaval, and repeated renovation-serves as both a literal and symbolic vessel for stories of hauntings. Guests and staff describe apparitions including a Prohibition-era gambler and a woman searching for her child. These narratives, repeated on guided ghost tours, function not just as spooky entertainment, but as living folklore: expressions of cultural anxiety, historical trauma, and the preservation of memory. The tours contribute to what scholars like Eaton (2019) and Hanks (2015) describe as a modern myth-making process, where interactive experiences and local legend blend to authenticate supernatural claims and foster shared cultural memory.

Framed through the anthropological lens of dark tourism-travel to sites associated with death, tragedy, or the macabre (Lennon and Foley, 2000)-The Elms exemplifies the dual nature of ghost tourism as both heritage and commerce. Echoing findings from Houran et al. (2020) and Mathe-Soulek et al. (2016), the hotel leverages its haunted status to attract niche tourists and enhance its brand, while also raising ethical questions about the commodification of loss and the boundaries between authenticity and performance.

Paranormal narratives at The Elms offer a way for communities to process the past, shape identity, and connect with place-what Hanks (2015) calls a "re-articulation of heritage." At the same time, ghost tours navigate tensions between preservation and spectacle, remembrance and tourism. The dark tourism frame highlights how haunted spaces become arenas where memory, morality, and marketability are negotiated.

Ultimately, The Elms Hotel shows how the past continues to "haunt" the present-through spectral storytelling, economic structures, and cultural longing. Ghost tours offer a compelling anthropological lens into how people experience, perform, and sell memory in an age of haunted heritage.

Imagining a World of Abundance from the Ground Up

This paper interrogates the notion of abundance and the different ways a society of abundance is envisioned. On the one hand I look at abundance through the recently published book *Abundance* (2025) by Ezra Klein and Derek Thompson, which sets out a political agenda of a society of more production and consumption. "Abundance" as a political agenda has also gained traction with urban political constituencies in groups like Abundance New York, which advocate for more housing, public transit, and public space. This advocacy is done in a language that, while calling for certain policy changes, eschews political labels, rather focusing on technocratic aspects of urban governance. I compare this notion of and path towards abundance with the work of local activists who provide "mutual aid"-engaging in acts of direct distribution of aid to various communities (newly arrived migrants, homeless, food insecure residents, and more) in New York City. For these

groups, distribution becomes protest by providing direct aid when the government refuses or is actively harming these populations. In this paper I compare the rhetoric, actions, and political stances of these two radically different notions of abundance to analyze the politics of distribution and its possible futures in NYC.

Immigrant Rights Advocacy: Ghosts of the Past, Demons of the Future

How have unexamined race and nationality privilege hampered US citizen volunteers' efforts to support Central American migrant workers facing immigration harassment and deportation, and how have these same volunteers, by becoming more aware of their race and nationality privilege, become better advocates for migrant workers? In this flash presentation I will describe how a Central New York immigration advocacy group struggled and succeeded in identifying and challenging their race and nationality privilege in order to better assist Central American migrant workers in surviving in a highly repressive immigration climate.

Presenter(s): Margaret Wehrer

Knowledges, care, and settler-colonialism: A CBPR study at an Indigenous-serving school

In settler-colonial contexts, the navigation of multiple systems of knowledge is inevitable and laden with legacies of exploitation and hegemony (Fanon and Markmann 1968). This holds true for systems of medical knowledge, as individuals draw on diverse medical dialogues to define social identity, leverage power, and enact social change (Crandon-Malamud 1993). These actors navigate overlapping knowledge/power systems, creating new assemblages of care, healing, and agency within unequal landscapes. This presentation shares findings from a community-based participatory research (CBPR) study conducted between July 2023 and May 2025 at an Indigenous-serving school in the Southwest United States. It examines the school's Wellness programs and how both Indigenous and Western knowledge systems are utilized by staff in their Wellness work. Drawing on interviews with Indigenous and non-Indigenous actors, this paper argues that staff engage Indigenous knowledge in varied ways to interpret the past and shape the future through Wellness programming. Indigenous knowledge is employed to resist and repair historical and ongoing settler-colonial realities while also manifesting more hopeful futures for students through cultural empowerment and education. Staff positionality influences their temporal orientations: non-Native staff often emphasize restitution, while Native staff foreground cultural resurgence. Yet within the settler-colonial present, Western wellness knowledge is also viewed as essential- linked to economic success and biomedical health by both Indigenous and non-Indigenous staff. The value of these knowledges for staff is primarily relational- enabling them to 'care better' for students by simultaneously disrupting systemic inequality and aligning with Western notions of opportunity. This throughline highlights how care itself can operate as a tool of resistance and restitution within settler-colonial contexts, shaped by the knowledges of both settler and survivor.

Talking Across the Void: Remote Interpretation and Crisis in Migrant Detention

This flash presentation examines the exceedingly important, challenging, and ultimately undervalued labor of remote interpreters, in particular those offering services for im/migrants held in detention facilities in the U.S. The work of such interpreters-accurately described by scholars as forms of "invisible labor" (Kunreuther and Rao 2023)-is also increasingly under attack, made evident in part through things like programmatic funding cuts and shifts in policy. Institutional denials of access to both interpretation and translation services have deep impacts on detainees' abilities to navigate complex carceral and legal processes, each engendering isolation in different ways. Reaching, or rather speaking, across the multiple boundaries that set incarcerated individuals apart from connections and resources, remote interpreters are themselves otherworldly; their continued presence in these spaces, spectral or otherwise, is crucial.

Transgressing Borders: Japanese Americans and their Inheritance of Empire

This paper explores how diaspora communities reshape reckonings with imperial violence, focusing on how Japanese Americans navigate their position between Japan and the U.S. to claim or deny historical responsibility to the comfort women issue. Confronting Japan's "history problem" with its imperialism, Japanese American identity-based groups have drawn from their collective memory of wartime incarceration to claim victimhood within the U.S.--asserting distance from Japan, and kinship with comfort women. In response, Japanese Americans have faced mounting pressures from Japan to remember their shared bloodline--and silence their activism. Navigating different boundaries of belonging that activate or suppress their implication in Japan's imperial legacy, Japanese Americans shift memory politics to negotiate victim/perpetrator labels across generations and geographies.

While scholars of memory studies have explored the intergenerational transmission of victimhood, less attention has been given to the perpetrator's side. Although these studies imply that perpetrator labels would also be passed down by bloodline, this paper explicates the competing categories of belonging that define diasporic subjects--like gender, class, and nationality--and redraw their lineages of responsibility. Weaving in historical shifts in Japanese American experiences into analyses of interviews with key players in Japanese American identity-based groups, this paper reveals that the rise of Asian American identity enabled Japanese Americans to evade responsibility for Japan's imperial legacy by claiming racialized victimhood within the U.S.

This paper interrogates the transnational dimensions of Japanese American history, which is often studied as a subcategory of U.S. history. Through following Japanese Americans' entanglement in both Japan's imperial legacy and U.S. wartime incarceration, this paper unravels victim-perpetrator binaries drawn from studying the two histories separately. Between two empires seeking to write out their histories of imperial violence, Japanese Americans' rearticulations of belonging to both illuminate contradictions within the amnesic hegemonies they occupy.

Vying for Black California Gold: Black Angelenos struggle for ecological and social protection against Los Angeles's most haunted industry

Although California maintains an external facade as an environmentally conscious and politically liberal state, and Los Angeles, more specifically, is promoted via Hollywood and social media as a scenic beach city lined with a laid-back atmosphere, something more sinister lies beneath the surface. The truth remains that Los Angeles is a city built on oil, or "Black Gold." Among the state's most marginalized residents, it does not take long to notice the hauntings of industries past (and present). This paper examines the relationship of Black Los Angeles residents to one of the state's most formidable industries, oil drilling, to better understand how the history and present relationship impacts Black placemaking and the built environment in the city.

South Los Angeles is home to the Inglewood Oil Field, which operates on over 1000 acres of land in the heart of Los Angeles, and is the largest active urban oil field in the country. Right next door to the Inglewood Oil Field lies Kenneth Hahn State Recreation Area, a sprawling green space and one of the largest parks in LA County, built on top of and adjacent to portions of the Inglewood Oil Field after an environmental disaster made land available for repurposing in the 1960s. Both of these locations are situated right in the middle of one of Los Angeles's last remaining predominantly Black neighborhoods, colloquially referred to as the Black Beverly Hills. The juxtaposition between wellness, environmental consciousness, and community recreation is confounded by the visible resource extraction looming around the edges of the park.

Building on 10 months of ethnographic fieldwork, interviews, and participant observation with a Black women-led non-profit organization in South Los Angeles, this paper asks, how does the history and relationship between the Inglewood Oil Field and Kenneth Hahn State Recreation Area impact the way Black residents navigate the built environment to this day? Further, how is the ongoing campaign against neighborhood oil drilling in Los Angeles informed by a Black sense of place? How could it benefit from a deeper attention to the conditions and knowledge of the city's Black residents? By unpacking the relationship between these competing forms of ecological and social resource extraction, the findings demonstrate lessons to be learned from centering Black spatial and ecological epistemologies in an analysis of one of Los Angeles's most haunting industries.

Written in Invisible Ink: Restoring Wabanaki Treaty Rights in the Maine Constitution

In 1875, the State of Maine voted to redact several sections of its Constitution from official printed copies, with the intent that they remain in "full force." The omitted text--Article X, Section 5--includes the Articles of Separation from Massachusetts upon Maine's 1820 statehood. Notably, this section stipulates Maine's inherited treaty obligations from Massachusetts to the Indigenous peoples within its newly formed boundaries. For nearly 150 years, these treaty obligations have remained obscured, rendered "invisible ink" in the Maine Constitution. However, over the last decade Wabanaki activists and allies have advocated for the restoration of the redacted treaty language. This paper follows the grassroots campaign to make this obscured text matter in the present. It highlights the material consequences of textual erasure and (re)presence, made particularly meaningful in the Maine Constitution--the living document guiding the relationship between the State of Maine and Wabanaki Nations. Ultimately, I demonstrate how the absence of Article X, Section 5 has enlivened state-wide discourse on truth, memory, and history, with potential implications for Wabanaki sovereignty.

3619 Specters of Technology

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR A3 (3rd fl)

Type: Roundtable/Town Hall

Technologies haunt. They materially embody past beliefs and aspirations and, through their everyday use, propagate them into the future. Anthropologists and STS scholars theorizing technology have long examined this looping effect between future, past, and present in technological innovation (Brown 2003, Jasanoff and Kim 2009, Massumi, Rajan 2006). AI, as just one example, is the very definition of a haunting: past actions and decisions are used to train digital decision making and image and text generation systems. In academia, AI looms as a threat. It locks the present and future of intellectual life into the patterns of the past, whether they are harmful or not. And it threatens to deskill both faculty and students by incentivizing work that reduces to the lowest common denominator of thought and cultural production.

Against the backdrop of a resurgent global right wing agenda, this chrono-epistemological muddle looks more sinister. No longer are we only considering that pharmaceutical companies might be wasting insurance company and tax payer money developing marginally effective drugs for "lifestyle" diseases, as STS and medical anthropologists worried about in the 2010s (Rajan 2006, Dumit 2012). Now anthropologists also look on with horror at the beginning of the second Trump presidential administration, as technofascist Silicon Valley overlords throw Nazi salutes and resurrect 19th century anthropology to subjugate women and people of color through digital surveillance and the computerized collapse of the international liberal order. In this roundtable, we aim to perform an exorcism by which scholars surface the hauntings from their ethnographic encounters with technologies that can aid in our critical examination of the present moment.

We invite both anthropologists of technology as well as anthropologists who suddenly feel they have no choice but to reckon with technology to contribute to this conversation. In particular, we are interested in collisions of scholarship, pedagogy, and life that do not always take center stage in our published research. For example, with the stakes so high, can we move beyond dispassionate commentary on what we see in our field sites to examine how we personally grapple with student use of generative AI in their homework assignments or new incursions of digital surveillance on our campuses? How are such technologies shifting our pedagogical roles and responsibilities? What new opportunities or limitations do they place on how we teach our field and where we do our research? And how will we fight back against new, technologically-facilitated limitations on free inquiry, free assembly, and community support?

3470 Spectral speech: The voices of political pasts in contemporary discourse (Part 1)

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR D2 (3rd fl)

Type: Oral Presentation Session

From the echoes of long-dead leaders in populist rhetoric to revived ideologies in today's policy debates, language becomes a conduit for haunting. This panel explores how past ideologies and figures persist in contemporary speech to reveal how the past remains embedded in the present. Registers of speech gain social value through repeated associations with identities and histories (Agha, 2007), enabling political actors to evoke legitimacy, nostalgia, or resistance. In discourse, the past is made present--historical movements shape ideological landscapes, and speakers invoke past figures to justify, resist, or reshape power structures.

Political ghosts manifest in many ways. Leaders may appropriate the voices of long-gone figures to legitimize agendas, or revive the rhetoric of past regimes to maintain ideological continuity. Whether explicitly cited or subtly embedded, historical ideologies shape public debates by reinforcing or challenging dominant narratives. This panel brings together scholars to examine how political legacies animate language and how historical ideas influence governance, protest movements, and public memory.

We ask: How do political actors invoke historical figures or ideologies to gain legitimacy? How do citizens, activists, and marginalized communities engage with or reframe these hauntings in their speech? How does past political discourse shape public consciousness and action? In line with the

politics of communicability (Briggs & Mantini-Briggs, 2003), we consider how discourse circulates and acquires authority across publics and historical moments. Using ethnographic and discourse-analytic approaches, our papers examine political speech in contexts including post-authoritarian societies, ongoing colonial struggles, and nations grappling with racial and economic injustice.

This panel sees ghosts as both disruptive and productive. Political language is imbued with past struggles, injustices, and aspirations. Legacies are not just echoes but active forces shaping present realities. In an era of rising nationalism, renewed conspiracy theories, and struggles over memory, recognizing the ghostly in speech helps us engage with the unfinished work of justice and transformation. Building on work in legal discourse and memory (Hirsch, 2006), the ideological circulation of speech (Schieffelin, 2007), and studies of voice, entextualization, and cross-chronotopic alignment (Perrino & Lempert, 2007), we examine how language resurrects, distorts, and reconfigures political pasts.

By focusing on discourse's role in political ideologies, this panel contributes to broader conversations about anthropology's role in contemporary crises. We consider how anthropologists might intervene in these hauntings-challenging the revival of oppressive pasts or amplifying voices whose struggles remain unfinished. Ghosts reflect our fears and hopes and show how the past refuses to be buried-still speaking through the voices of the living.

Presentation(s): Failing to Make the Past Present: Patriotism, National Historiography, and the Impasse of Popular Sovereignty in Jordan

Between 2011 and 2016, Jordan witnessed a large wave of protests against corruption with a focus on naming particular officials as responsible for the miseries of the People. However, as the movement directed its accusations of corruption towards the King, disagreements ensued between its members, and it quickly disintegrated. This paper attends to the impasse activists faced as they tried to invoke a national collective "we" by drawing on a nativist pre-state past against the figure of the stranger King. I argue that the activists' inability to conjure a viable sense of patriotism and popular sovereignty had to do with the way their past has been enfolded into the national historiography of Jordan which bound any sense of their Jordanianness to the modern state and hence to the monarchy. Conceptually, the paper calls for paying attention to the narrative frame, both cognitive and practical, within which the populist performance takes place rather than the performative event itself.

Presenter(s): Yazan Doughan

The Haitian Invasion: Haitian Creole, Blackness, and other objects as semiotic threats

From 1822 to 1844 the island of Hispaniola was under the sole control of the Haitian government. Over the course of two centuries, this 22-year period has been seized by the Dominican political elite and constructed as a harrowing period that has the potential to repeat itself at any moment. Now occupying a prominent role in the Dominican consciousness, the Haitian Invasion forms part of anti-Haitian discourse that interdiscursively circulates the gamut of communicative spheres. If the "invasion" is a tangible threat, what or who becomes invasive? Drawing on ethnographic research in the Dominican Republic, including interviews with Haitians living in Santo Domingo, this paper investigates how certain signs associated with Haitian-ness have become stigmatized and impermissible. Undergirded by Peircean semiotics, I explore indexical and iconic links that attach social qualities to languages, racialized features, and other objects. In doing so, I consider processes of sign mediation in which Dominican perceiving subjects (Rosa & Flores, 2017) interpret and ascribe value to signs. Finally, I pay close attention to ideologies that construe Haitian Creole and Haitian identity as semiotic threats in Dominican public space.

Presenter(s): Benjamin Puterbaugh

Archives, settler voices, and Indigenous refusal: The role of the archive in disempowering settler voices and narratives of the American mythos

Audra Simpson describes Indigenous refusal as "having one's political sovereignty acknowledged and upheld" and questioning the legitimacy of entities vested with the power of recognition. Refusal is a powerful political act that denies settler authority in the recognition of Indigenous cultures as sovereign, distinct, and legitimate. Refusal disrupts nationalistic narratives that serve the settler state through discursive dispossession; refusal presupposes and prioritizes the power and legitimacy of Indigenous histories and voices. Indigenous refusal contributes a valuable perspective on the power of recognition as well as an actionable strategy for asserting agency through positionalities that are systemically denied a voice.

This paper positions refusal as a frame of analysis for projects of historical and linguistic reclamation that draw heavily from archive records produced by settler researchers and missionaries. One example is the Myaamia Center, an initiative of the Miami Tribe of Oklahoma housed within Miami University in Oxford, Ohio. The Center supplements cultural and linguistic revitalization work done by the Miami Tribe by hosting linguists who access archive records with the goal of repatriating historical and linguistic knowledge, which I argue is an example of refusing the authority of settler voices in shaping contemporary experience. Ethnographic examples examine the role of the archive in projects of refusal among Anishinaabe consultants in Ontario, Canada

Futures past and the evictability of voice: Roma protest and displacement in Miskolc, Hungary

This paper examines neo-pharrajimos—a contemporary formation of anti-Roma ideology—as a polemical force (Stewart, 1988) that fragments Roma life in Hungary through the racialized denial of futurity. Drawing from protest events in Miskolc and the narrative of a Roma family displaced across Hungary and Canada, I theorize neo-pharrajimos as the entangled material and temporal unmaking of Roma life. Coined from the Romani word pharrajimos ("fragmentation"), which also names the Roma Holocaust, neo-pharrajimos marks the afterlife of racial governance that silences, displaces, and erases through bureaucratic illiberalism and right-wing extremism.

I center protest banners used by Roma activists as chronotopic and polemical artifacts whose illocutionary force—asserting belonging and permanence—was denied by institutions. These denials transform speech into futures past (Koselleck, 2004): once-possible futures rendered obsolete by the state's refusal to hear. The banners, like demolished homes, are residues of counter-conduct (Foucault, 2009) that haunt national narratives of belonging and progress.

Neo-pharrajimos is a spectral, dialogically (Bakhtin, 1982) constituted process structuring exclusion through mundane practices—eviction notices, housing policies, self-governance schemes—that fragment Roma lives and temporality. I argue that Roma protest materializes counter-temporalities that challenge state erasures and insist on futures still possible, though relentlessly foreclosed.

2574 Spirits, Stories, and the Affective Power of Place in Tourism

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR B1 (3rd fl)

Type: Oral Presentation Session

This session, held in conjunction with "Ghosts of the Past, Spirit of Place, and the Politics of Memory," offers a cross-disciplinary exploration of how "ghosts"—understood as traces, metaphors, or spiritual presences—shape contemporary engagements with heritage and tourism landscapes.

The papers presented bring together empirical ethnographic research and theoretical reflection, conceptualising "ghosts" as figures of memory that embody the legacies of difficult pasts and their continued presence in the contemporary moment. The session focuses particularly on the emotional and political dynamics surrounding heritage sites and cultural landscapes in the context of tourism development. It investigates how places become "haunted" by both human and more-than-human presences and how tourism practices give rise to new narratives and forms of heritage-making.

Finally, the session takes the concept of the "spirit of place" as a key framework for examining the tensions between the particular and the universal in tourism practices, challenging conventional categories such as heritage tourism or dark tourism.

Presentation(s): A Counterculture in Mourning: Legacy Cannabis Tourism as Heritage Protection

Voters began legalizing recreational cannabis use in states starting in 2010, reenergizing discussion on national policy reform and the potential of a fully legal market. For many long-term and multi-generational cultivators in California, the business and lifestyle of cannabis are enmeshed, so in an attempt to avoid being squeezed out of the legal market, they, looking to legitimize and get credit for their efforts in breeding, cultivating, and advocacy, work to identify and protect their heritage practices and sites, and build their brand as "legacy."

This paper addresses the precarity of the quasi-legal cannabis market in California, where, since 2018, the high cost of regulatory requirements, including excessive taxation, limits how many cultivators can reasonably participate in it, and the movement toward heritage branding to offset their exclusion. With dwindling returns, cultivators are hopeful to expand beyond the product itself to tourism development. This is especially important in the rural areas of the state that are home to countercultures and where most illicit cannabis was historically grown, and which are now significantly impacted by the financial and political challenges of regulation.

Many there mourn the deaths of both their lifestyle and their community elders. In developing tourism ventures, they focus on relaying to visitors their deep connection to cannabis and the heritage of cultivation in the region, the spirits and stories of their past.

Haunted Heritage, Spectral Luxury: Memory, Tourism, and Artistic Rebranding of the Mediterranean Prison-Island

Tourism landscapes are often haunted by the ghosts of difficult pasts, where absence, silence, and selective remembrance shape contemporary place-making. This paper examines the transformation of fortress Mamula, a former WWII concentration camp in Montenegro, into a luxury island-resort, revealing the spectral entanglements between commodified heritage and contested memory. While marketed as an exclusive retreat, Mamula remains an unsettled site, where traces of carcerality persist, annual commemorations disrupt curated leisure, and the ethics of remembrance unfold in real-time.

The goal is to examine Mamula as a haunted landscape, where the spectral presence of past suffering lingers despite efforts to engineer a seamless luxury tourism experience. Drawing on ethnographic fieldwork, participatory observation of annual commemorations on the island, and interviews with stakeholders, this study interrogates how absence, silence, and spectral traces are mobilized within Mamula's tourism narrative, asking: How does the island's luxury reinvention accommodate—or suppress—the ghosts of its past? Can artistic interventions serve as ethical mediators in the repurposing of difficult heritage? And how do memory activists, tourists, and hospitality industries negotiate their competing claims to place? Ultimately, Mamula's spectral landscape reveals how the spirit of place is strategically curated, contested, and reimagined within the shifting terrain of remembrance and consumption.

The Ghosts of Fieldwork: Ethnographic Reflections on Coping with Difficult Heritage Sites

The Gulag Museum. The Chernobyl Exclusion Zone. Kriesty. Stalin's Bunker.

These are just a few examples of difficult heritage sites from the former Soviet Union that have deeply influenced my memory. Paradoxically, these places, marked by suffering and death, both directly and as metonyms of the trauma of totalitarianism, are now part of the tourism map. At the same time, they are subjects of the revision of meanings arising from the current geopolitical situation. Withdrawn over the years from fieldwork, my fieldnotes represent nothing but uncertain memory. These are places that continue to haunt me, even after many years. What they share is the impossibility of return, of confronting the spirit of the place after so many years. They evoke dissonant emotions due to their politicization—they are mine, yet so foreign and inaccessible.

In this paper, I want to ask the question: can/should invoking the ghosts of place be treated as a form of self-therapy and an important part of working through ethnographers' subjectivity? Are we paying enough attention to this in the search for new research fields? Does the impossibility of return pain us?

This presentation aims to engage once again in the discussion of the ethnographer's self-positioning and fieldwork. It will attempt to grapple simultaneously with the cartography of memory in anthropology and critical heritage theory.

8212 Structural Determinants of Health in Border Colonias: Policy, Access, and Outcomes

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Regent

Type: Roundtable/Town Hall

Colonias along the U.S.-Mexico border exemplify how borderland communities endure systemic

health inequities while fostering resilience in the face of layered marginalization. These unincorporated settlements, predominantly home to Latino populations, are often excluded from municipal infrastructure and investment, resulting in persistent barriers to healthcare access. With over 1,300 colonias located in the Rio Grande Valley of South Texas alone, the region is central to national conversations about public health disparities in the borderlands.

This roundtable brings together researchers who live and work in the Rio Grande Valley with these borderland communities. We will discuss how our research and teaching experiences have led us to examine and document how structural determinants of health, such as affordability, transportation, language access, and immigration status, interact with broader policy regimes, from zoning and land-use laws to healthcare eligibility and enforcement mechanisms. Through ethnographic interviews, policy analysis, and spatial analysis, our research traces how residents navigate fragmented systems of care while confronting overlapping legal and institutional barriers. Special attention is given to how health outcomes are influenced not only by healthcare policy, but by immigration enforcement, educational access, and housing law.

By grounding public health disparities in the legal and political structures that perpetuate them, our roundtable calls for cross-sectoral solutions rooted in equity, accountability, and community voice. The Rio Grande Valley offers a critical lens to assess how institutions respond, or fail to respond, to community health needs in border spaces, and how residents adapt in the absence of adequate care. In doing so, our research contributes to a multidisciplinary public health framework rooted in place, equity, and systemic accountability.

4160 Summoning and Haunting: The Afterlives of Empire

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR C3 (3rd fl)

Type: Roundtable/Town Hall

In mainstream culture, ghosts are often portrayed as unwelcome visitors from the world of the dead infiltrating that of the living. Anthropological, philosophical, and psychoanalytic scholarship, however, suggests that ghosts should be understood as a symptom of modernity. In this framework, ghosts reflect the legacy of unresolved violence that has received little attention or acknowledgment. Haunting then becomes a way to confront this repressed history and expose the harm inflicted by oppressive structures of power on individuals and communities. Ghosts that haunt are those uprooted, dispossessed, silenced, and left unburied by imperialism. Summoning

ghosts or spirits, on the other hand, is a wilful act, signalling a different relationship to the past. In this roundtable, we explore haunting and summoning as two distinct modalities of engaging with history. Both modalities help address the absences and silences that Michel-Rolph Trouillot identified as inherent to the production of history.

Moreover, concepts like decay, debris, rot, ruin, and ruination have come to dominate the anthropological imagination of our current world. While these concepts reveal the legacies and durabilities of empires, they metaphorically foreground the temporality of inanimate objects. Ghosts, by contrast, complicate the temporal boundaries between the living and the dead. As such, haunting and summoning breathe life into what was once presumed lifeless, peripheral, and ahistorical. Ghost as analytic, therefore, allows us to engage with multiple imperial afterlives from the liminal space between life and death, including enslavement, environmental collapse, settler colonialism, colonialism, and neoliberalism to name a few. As Avery Gordon notes, haunting "is not about a return to the past, "but rather, "a reckoning with its repression in the present." In this roundtable, we aim to examine how haunting and summoning lay bare the ongoing afterlives of empire and offer new ways of relating to history in the present.

8525 The Concept of Reclamation of Black Identities and Black Heritage in the Americas is Influenced by Politics, Culture, and Memory

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR D1 (3rd fl)

Type: Roundtable/Town Hall

This roundtable explores collaborative efforts to reclaim Black heritage, identity, and space in the Americas through anthropological methods grounded in critical heritage studies and community-engaged research. Across various contexts - from rural towns to plantation sites, diasporic landscapes, and grassroots cultural spaces - participants examine how Black communities are resisting historical erasure and reframing dominant narratives through oral histories, ecological practices, and participatory heritage initiatives. In each case, communities challenge ways their stories have been silenced or made spectral within state-sanctioned heritage narratives, instead asserting living connections to place, tradition, and identity. These collaborations underscore how anthropology can support efforts to reimagine space and belonging, whether through reinterpreting presidential sites alongside descendant communities, using ethnography to amplify

underrepresented Black neighborhoods in the U.S., or confronting the exclusions embedded in tourism-driven heritage discourse in the diaspora. Together, we ask: How can anthropologists work with communities to challenge dominant frameworks and co-create more just and inclusive representations of heritage? What ethical, methodological, and political considerations arise when engaging in acts of repair and memory work? And how might these practices reshape the role of anthropology in sustaining culturally grounded futures? This roundtable contributes to ongoing conversations about decolonizing heritage and anthropology by centering Black voices, histories, and ways of knowing in scholarship and practice.

3302 The Specter of “Disruption”: The Haunted and Haunting Political Economy of Venture Capitalism and Startup Entrepreneurship

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Studio 6

Type: Oral Presentation Session

The trope of disruption posits a radical overture to the future, but ethnography reveals that seeming innovations often perpetuate prior ideologies and hierarchies, haunted, as it were, by the past. Over the past few decades, the Silicon Valley model of venture capital (VC) investment and cultures of startup entrepreneurship has become embedded in state governance and business practices worldwide. At a political moment when prominent figures in venture techno-capitalism are taking center stage in global politics and governance, and as ghosts of wars past--both hot and Cold--come knocking, this panel critically reflects on a central question: what do technologies of disruption--be they financial, governmental, technoscientific or otherwise--perpetuate, and how? Under the guise of "disruption," what phantoms of the past still walk among us?

Taking seriously the theme of the conference, we draw from global field sites of tech hubs in Rwanda, the United States, Finland, and China to offer perspectives on how attempts at disruptive change and innovation do not simply shake off historical and political burdens, but instead resurrect and perpetuate them in new spectral forms. For example: how does Rwanda's history of genocide cast a shadow on the state's efforts to "leapfrog" these pasts and technologically transcend legacy systems still haunted by decades of colonial rule and ongoing resource extraction? How do histories of westward expansion and Fordist expectations of suburban domesticity among Silicon Valley's middle class quietly perpetuate inequality in the tech industry

and beyond? How does Finnish startup culture attempt to recuperate from the effects of "techlash" criticism to recast itself as a progressive force in society, capable of inheriting the legacy of the declining welfare state? And finally, how does Deng Xiaoping's legacy reverberate from the afterlife, fueling the VC-driven policy landscape in China? By looking at how the past haunts our present, we not only seek to decipher "old stories in new software," but also to reflect on how specters of VC-driven speculation may haunt our collective futures.

Presentation(s): "Creating the Perfect Cosmos for Startups": Myth-Making, Genocidal Hauntings and ICT Ambitions in the New Rwanda

Under President Paul Kagame's leadership, Rwanda is set to become a regional ICT leader by 2050 (Vision 2050). The Government of Rwanda's (GoR) techno-utopic projects represent an ontological break between the country's present and its genocidal history, termed the 'New Rwanda'.

Encouraged by strong governmental will, bilateral donors, philanthropists and universities are now funding accelerators and incubators for the country's urban youth. In such programs, prospective founders are taught to devise impact-based, technoscientific devices that disrupt legacy systems and promise a digital, temporal leap toward the GoR's socio-economic targets. Growth charts, business plan exercise sheets and lean canvas methodologies help concretize these future projections. Yet, founders do not exist in a purely linear, future-oriented time-space. This paper will illustrate the heterochrony (cf. Bear) of multiple representations and experiences of time lived by the post-1994 generation in Kigali. Whilst enduring anxiety-inducing cycles of economic boom and bust, founders must equally contend with the affective spectre of past violence and ongoing regional insecurity. Techno-cynicism co-existed with techno-optimism as young founders increasingly came to express ambivalence towards their role in crafting the future of Rwanda, the country's generational divides, and the continuing expansive power of the Rwandan state.

Silicon Suburbia: The Fordist Domesticity Haunting Silicon Valley's Flexible Economy

Silicon Valley has often served as an exemplar of the post-Fordist flexible economy, both in championing new corporate practices and in enabling a broader adoption of flexibilization through the production of new technologies. As anthropologists have highlighted how the economic and social are co-constituted, depictions of industry actors as dedicated to new entrepreneurial subjectivities and risk taking behaviors reinforce this idea of new forms of capitalist practice that reconfigure social and domestic life. And yet, Silicon Valley has continually reproduced structural inequalities, revealing continuities with socialities past rather than new horizons of possibility. This

paper interrogates how cross-generational hauntings shape the expansionary impulses of Silicon Valley, engaging with the suburban infrastructure that birthed the industry and the Fordist middle class practices of the tech workforce. By ethnographically tracing how risk averse aspirations for stable domestic life undergird flexible economic scale projects, I show how the industry's global growth is reproduced through local familial attachments to more modest economic growth. As workplace subjectivities are shaped by newer economic models as well as familial practices grounded in histories of westward expansion, this paper illustrates how future-focused regimes of flexible accumulation in Silicon Valley are facilitated by domestic contexts that stretch back across generations.

Shareholder Primacy Resurrected: How Finnish Startup Professionals' Aspirations to a More Progressive Capitalism Sustain the Need for Investor Returns

In 2021 the Finnish startup conference Slush declared an "entrepreneurial renaissance"—a response to "techlash" critiques that sought to reorient startups around inclusivity, equality and sustainability, and to reject the pursuit of shareholder value above all else. This agenda reflected the values of many startup professionals, who identify strongly with the idea of Finland as a liberal and progressive society. In their view, businesses can realize progressive values by solving social and environmental problems, and sustain the beleaguered welfare state by creating economic growth. Based on my ethnography of the founders, investors and other professionals of the Helsinki startup ecosystem, however, I show how this progressive agenda rarely anticipates any need to compromise on profits. Instead, values like sustainability or diversity are discovered to in fact enhance profitability, seemingly transcending the conflict between progressive values and shareholder value. This paper examines how in seeking to empower a better capitalism, startup professionals end up returning to the shareholder value they disavowed as an end in itself—resurrecting it instead as foundational for the agency required to achieve progressive goals. Creating returns for investors is thus naturalised as a necessity for which there are no alternatives, but which simultaneously appears as that which makes alternatives possible.

Ghosts in the “Machine that is Learning”: Disruptions and Continuities in Modern China’s Scientific Governance

China's business-to-government (B2G) market brings venture capital investors, startup entrepreneurs, and local governments together to fulfill central state national mandates. Participants in these ventures describe their partnerships as nodes in a policy-generating algorithmic assemblage, for, as entrepreneurs and government officials alike rhetorically asked, "what is our nation but a machine that is learning?" As an ethnographer of these assemblages, I interrogate my interlocutors' claims that making policy through an analogy with machine learning is a continuation of the experimental philosophy Deng espoused during China's 1990s reforms. Considering a longer purview, I highlight consequential historical changes in China's scientific

governance. In particular, drawing on Arunabh Ghosh's work on the early Chinese socialist state's approach to state-building under Mao Zedong, I highlight how the current VC-driven policy landscape in China drastically departs from Mao's disdain of "bourgeois statistics." Reconsidering rhetorics of continuity and disruption, this paper explores a paradox: although the ghosts of leaders past paved the way for contradiction of CCP orthodoxy, contemporary forms of Chinese adaptive governance nonetheless align with broader historical patterns that reinforced China's one-party rule.

5571 Too Late, Too Soon, Too Much, Not Enough: Ethnographic Ethics and Exigencies in Time

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Nottoway (4th fl)

Type: Oral Presentation Session

Anthropological work is realized at the precarious juncture between fidelity and harm, characterized by a sense of risk that becomes all the more acute when dealing with literal matters of life and death. In these papers, we consider how anthropologists, interlocutors, and institutions alike negotiate care as a practice and promise in relation to various temporal conditions. How do bureaucratic logics and their temporalities relate the dead to the deadline? How might we understand translation-in medical research and care, across languages and even lifetimes-through the impasses and incommensurabilities it navigates? How do toxic matter and mythologies inflect our imagination of a world that is variously out of time and timeless? Through these lines of inquiry, we attend to the affective, ecological, economic, medical, and technopolitical stakes of how we understand and act in moments of antecedence, urgency, belatedness, and posthumousness.

Presentation(s): Conservation or Revolution?: On Fidelity and Posthumous Publication

The Brazilian philosopher Ruy Fausto's final essay, "Conservative Revolution and Neoliberalism," is prefaced by the following words: "there is no sort of substantial change whatsoever that alters its theses, format, or even its style." It first appeared online in [i]Revista Rosa[/i], the leftist "intervention organ" that Fausto co-founded, in the months following his death, and [i]Rosa[/i]

would publish it twice more: as its first printed special issue in January 2022 and online in my English translation in May 2025.

In this example, textual interventions had been construed as largely self-effacing and thereby "reasonable," insofar as the text strives to remain, to quote from elsewhere in the preface, "near identical to what we found." At the same time, they are nonetheless still interventions; they work to reconstitute the text, not only in terms of its interface and language but also its ability to be read and to act in the various political moments of its republications. In this paper, I read the published and unpublished iterations of this essay in constellation, which is to say through their interrelations and, as shaped by the historical, political, and affective impasses of posthumousness, irreconcilabilities. In doing so, I advance an understanding of fidelity—especially to the dead—as something that is not merely maintained but is itself realized through the interventive work of editing, translating, and other practices of publication.

Between Promise and Prognosis: Temporalities of Care at the National Institutes of Health

In translational research, time is both a structuring force and a source of ethical rupture. Drawing on ethnographic fieldwork at the National Institutes of Health, this paper examines the moral and affective labor of managing hope and uncertainty in rare disease research. Following the case of a young patient with an undiagnosed osteolytic condition, I explore how clinicians navigate disjunctures between institutional timelines, therapeutic imaginaries, and the lived urgency of suffering. Despite efforts to temper expectations, the patient's belief in the NIH as a site of last resort—and the team's affective investment—produces a cycle of rising and deferred hope, with each new test reinscribing the possibility of cure. Genetic counselors find themselves caught between bureaucratic boundaries and relational responsibilities, often assuming unacknowledged burdens of psychosocial care. This case highlights the "too much" of ethical attachment and the "not enough" of institutional capacity to care for the psychosocial. I argue that temporality in clinical care is not only about prognosis or delay, but also about ethical exigency: the ongoing need to respond, recalibrate, and hold space when resolution is not forthcoming. In doing so, I call for greater ethnographic attention to the layered, recursive timelines of care and the everyday negotiations through which clinicians attempt—and often fail—to ethically inhabit the space between promise and reality.

Between [i]Savage Mind[/i] and [i]Wild Thought[/i]: Myth, Exigencies, and Atemporality in Trumpism

In this paper, I argue that, in a moment when the reemergence of Trumpism feels particularly exigent, anthropologists must not only attend to its urgencies—that is, the temporalities it produces—but also its atemporal qualities. To this end, I first explore the tension between the two English titles of Lévi-Strauss's [i]La Pensée sauvage[/i]: "Savage Mind" and "Wild Thought." Though the former is often deemed an unfortunate mistranslation—and the latter lauded as an inclusive correction—I claim that the tension between them is actually helpful for a (neo)structuralist

analysis of contemporary western movements like Trumpism. I take seriously the idea that all human societies (especially imperial ones) are not only capable of "wild thought" but also possess a latent capacity for more savage forms of bricolage. Trumpism is a contemporary form of savage bricolage that consolidates its power in an atemporal politico-religious myth: the return to a country that never was. If one considers Lévi-Strauss's notion of myth as a meta-language functioning in the realm of the unconscious—and therefore operating in an atemporal realm untouched by both Enlightenment notions of reason and the historicity of facts—it becomes clear that liberalism's attempts to "fact check" Trumpian ideals are futile. Instead, I argue, the only means of political resistance is a "militant Lévi-Straussianism" that prioritizes the generation of new myths capable of moving people at an unconscious level.

No Birds, No Metaphor: Industrial Forestry, Pesticide Use, and White Supremacy in Rural Oregon

This paper uses the analytics of scale, fire, and spray to understand the history of pesticides and herbicides as methods of both industrial forestry and white supremacist war-making in rural Oregon. In its argumentation, it uses the imprecision of poetics to illustrate what Vincanne Adams has called the swirl effect of pesticides—especially when applied aerially—on civilian populations, animals, and the environment. Rooted in the materiality of these chemicals and their afterlives, it examines how what is thought to be possible is formed by the rhythms of their imprecise presence. By thinking with Deleuze and Guattari's rhizome, it interrogates the ways in which living with industrial forestry becomes a contemporary exegesis of Peter Sloterdijk's idea of a "terror from the air" in forming conspiracy and anxieties around truth, public health, and what to do about it all.

6421 Transmission, Assimilation, and Resilience: The Journeyed Lens of the “Haunting” Past for Educational Anthropologists

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Grand Chenier (5th fl)

Type: Roundtable/Town Hall

First coined by Cavalli-Sforza and Feldman (1981; 1982) in Biology, Cultural Transmission disseminates cultural traits, norms, beliefs that build socialization, imitation, and social learning (Bisin & Verdier, 2005; Coleman, 1988) passed down through generations. Thus ripple historical precedent, or echoes that leave marks, structurally, foundationally, communally, and in praxis. These "haunting" ideas and practices of power permeate in the transmission of modes of being under the legacies of "ghosts" of various forms of a colonized past. This roundtable asks participants to discuss how these intergenerational echoes shape their work in exploring cultural

practices, resilience in pedagogical practices, racism, and punitive policies that resonate today. The roundtable will focus on a set of questions pertaining to:

- How is cultural transmission echoed in your work as educational anthropologists, and/or scholars?
- What are some of the echoes of the past you see directly impacting your work directly or indirectly?
- What are some visions for the future? How can we learn from your work in respect to the current socio political climate?

These questions will be explored by participants as they offer their reflections on their research and experiences in the following contexts:

Jair Munoz PhD and Emiliano Villarreal PhD discuss the threefold echoes of zero tolerance policies- - i.e., the drug war, the school to prison nexus, and crimmigration--as discursive and cultural practices that permeate and are normalized beyond schools.

Adrian Aragonés MA considers digital literacies in a majority minority economically disadvantaged community in the U.S., Mexico border, as 5th graders make sense of literacies via the echoed past of their community, their identity, and the interpretative practices of content creation in two languages.

Laura Mendoza considers the contexts of emergent bilinguals who are cross-border, using Anzaldúa's concept of "in-betweenness" to gain a better understanding of how cultural transmission and translanguaging is echoed in educational work and research.

David Saavedra discusses echoed "ghosts" of racialization among young people in the rural south by focusing on the case of Mr. Cabrera, a teacher falsely accused of inappropriate behavior. He suggests that these discursive practices stem from past echoes relating to systems of racial domination in the American South.

Shiv Desai contemplates wounded healing and critical critical hope as culturally responsive spaces that reject echoed criminalized iterations of power dynamics that produce cultural transmissions that aim to criminalize democratic social activism. He advocates for counter-storytelling that can foster cultural healing, agency and democratic resilience.

3926 Unraveling the Tensions that Haunt Queer and Trans South Asia

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Galerie 1

Type: Roundtable/Town Hall

Writing and studying queer and trans life-worlds in South Asia reveals tapestries of tensions, slippages, and incommensurabilities. As queer anthropologists trained in North America and working in South Asia, we move within the registers and orientations of "theory," which, haunted by its own histories from the Global North, "orient[s] what objects, processes, and relations 'count' as queer within queer studies," (Amin 2016). Yet, laboring to address the specificities of the region, we find moments of (mis)translation, (il)legibility, and (in)authenticity as particularly generative sites for theorizing within and beyond "queer."

We are paralleled by the experiences of our interlocutors, who, in their negotiations of the global in the local, ponder over encounter and change and "accent" their styles of queerness (Khubchandani 2020). These adaptations, in "dubbing" identities for instance (Boellstorff 2005), are refractions of broader rapid and globalizing shifts in gendered expectations of labor in the region, which in turn generate new gendered subjectivities and "symbolic resources" (Vijayakumar 2013) available to create affordances. This roundtable seeks to explore these questions of adaptation from the position of incommensurability, not only within the realms of gender or sexuality, but also of region and area, rural and urban, digital and analog.

In thinking through how these tensions are embodied by queer and trans South Asians, we also seek to address the temporal as entangled with the spatial, whereby peoples, spaces, or communities have a pall of "backwardness," and thus not legible as properly "autological" (Povinelli 2006; Ramberg 2014). Alongside this, the queer and trans South Asian figure, imagined both as overflowing with history and also as devoid of any (Arondekar 2009), must also contend with the socio-political forces which seek to render them as inconceivable and foreign elements within postcolonial nations.

This roundtable explores the snarled relationship between queerness, time and space which gives rise to such paradoxes, tracing the looping, cyclical flows of desires and meanings that travel across transhistorical circuits. By posing these questions, this roundtable asks what it means for (queer) anthropologists to venture into the past to understand queer/trans presents while embarking on (mis)translations across queer regions. Our roundtable curates this conversation from the South Asian subcontinent, by sharing thoughts from Assam and Uttar Pradesh in India, Karachi in Pakistan, and from Sri Lanka. We hope to perform avenues for comparison and connection in the hopes of creating viable methodologies for generating from shared tensions.

3929 Well-Being, Stigma, and Gendered Bodily Hauntings

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Marriott **Room:** Studio 7

Type: Oral Presentation Session

Drawing on the conceptual metaphors of hauntings and specters (Blanco and Peeren 2013), haunting as an affective state (Good, Chiovenda, and Rahimi 2022), and ideas of bodies as relational (Blackman and Venn 2010), this panel provides an in-depth look at the ways women's and men's gendered experiences of social and bodily marginalization as a consequence of unwanted childlessness due to infertility, reproduction due to war-time rape, domestic violence, intergenerational trauma, caregiving, and wellness, and incarceration and criminal legal system impacts are shaped by hauntings and specters of the past. The panel examines how the manifestation of these specters in the present offer opportunities to act on inequities that intersect in their lives. Drawing on cases from Vietnam, East Timor, Bosnia-Herzegovina, Democratic Republic of Congo, and the US, the papers on this panel examine how the navigation of gendered social inequities is informed and shaped by the intersection of complex pasts with the present.

Troubling and haunting experiences affecting people's well-being may be located deep in their own life, or as part of processes of rebirth, or the consequences of karmic relationships or other-worldly spirits. These and other processes may materialize as insults to their well-being, health, and dignity, as haunting remnants of violence and historical trauma for some, or manifestations of multiple past lives in the present for others. The panel asks: How do women and men navigate stigma surrounding socio-bodily circumstances not of their own making? How do they contend with structural, generational, and gendered social hierarchies in managing a present infused with memory and specters of their own past or past lives of others? How does the struggle to contend with specters of the past present opportunities for orienting toward the future? How do bodily scars, bodily pain, troubling bodily processes, emotional wounds, and traumatic memories haunt some people's everyday lives in a culturally situated manner, which may reinforce the persistence of their suffering? This panel will also examine how these material and immaterial specters may point to cultural and social conditions that present harm to people and stir them to embark on a journey of becoming that has the potential to transform their own and societal challenges. Haunting effects may become a source of inspiration for some to reinterpret their past and present experiences in ways that support their own dignity, remedy their situation and improve their well-being, and lead others collectively to a place of hope.

Presentation(s): Hauntings of Domestic Violence in Northern Vietnam

Domestic violence haunts many women in societies globally and in diverse ways in their everyday experience and as a lifelong experience for some (Bloom 2023). Drawing on the concept of "haunting" as an affective experience (Good, Chiovenda, & Rahimi 2022), I analyze ways some women in northern Vietnam are beset by the habitual violence their husband visits upon them and by troubling memories of domestic violence that materialize as scars or other remains of harms on their bodies, or manifest immaterially, notably as emotional distress and/or fear. Women in abusive marriages and other Vietnamese people may perceive the women's suffering to stem from their husband's violence in the recent or distant past, or from past lives of a woman and her abusive husband, reflecting ideas of rebirth. I assess how women carry the burden of memories of domestic violence physically, emotionally, and, for some, spiritually, both when the violence has the potential to reoccur and when it has ended. Still, haunting is always formative, not fixed, even as it is culturally and socially informed, and can be reflected upon creatively, leading to novel interpretations and narratives. Haunting can effect new interpretations of the violence that lead to more positive futures, such as motivating some Vietnamese women to achieve a sense of justice and well-being by changing their responses to the violence, helping other women abused by their husband, and/or influencing others to help the women.

Presenter(s): Lynn Kwiatkowski

Spectral Memories/Harsh Realities: Navigating the Stigma of Conflict-Related Sexual Violence in Global Perspective

In many postconflict countries, women survivors of conflict-related sexual violence juggle multiple priorities in the long postconflict present. Many may need medical attention and psychological services to move towards healing. It can be challenging to complete schooling, earn a living, and provide for their families. In this paper, I focus on the stigma that women face in East Timor, Bosnia-Herzegovina, and Democratic Republic of Congo due to giving birth to children after they were raped during torture, detention, or forced to marry soldiers or rebels during periods of conflict and war. Part of a bigger project about women's activism after war, this paper focuses on the blaming of survivors by their families and communities. I unpack the ways women survivors face blame for their own rape, even decades after it occurred. This stigma can take the form of complete social shunning or more subtle forms of discrimination. Not only must these women process the awful things that have happened to them, but they must also raise their children in hostile, judgmental settings, even after peace accords have been signed. As years pass, the trauma of rape becomes a spectral memory whereas the continued hardship and censure of community life becomes an almost unbearable reality. Some of these women, however, are beginning to find freedom from ghosts and present-day sexist prejudice in the long postconflict present thanks to solidarity among survivors and the support of their own children.

Presenter(s): Serena Cosgrove

Specters, Spirits, and Karma: Navigating Uncertainty and Stigma Amongst Women with Unwanted Childlessness in Vietnam

Women facing infertility in Vietnam live in a present state of uncertainty intertwined with longing for a child-full future, concerns about what might be causing their unwanted childless, and others' perceptions and stigmatization of their childlessness. This paper explores how women make sense of a multiplicity of possible causes of their childlessness, which is intertwined with spirits, karma, and fate in a space where daily life is infused with a spirit world that comingles deceased relatives and past lives with present forms of morality and behavior vested in bodies in which reproduction is absent; and the practices women employ to mitigate potential negative contributing factors. What is the experience of infertility in a space that is inhabited by spirits and moral choices made in previous lives? Drawing on the idea of inter-relationality (Blackburn and Venn 2010), how do these women navigate uncertainty that involves the potential relationality of their body to spectral others? I argue that mitigating uncertainty in the present can necessitate addressing unseen possible influences of the surrounding spirit world. I explore Buddhist ideas about karma and attracting good spirits for conception; realigning out-of-balance elements; concerns about occupations that may attract malevolent spirits; prayer and pilgrimage to attract good luck; and the constant specter of ancestors and their unknown deeds that may shape the present unwanted childlessness.

Presenter(s): Melissa Pashigian

Caring for Intergenerational Trauma

How might intergenerational relations coexist as sites of structural trauma and healing? Building upon previous field work, I engage recent medical anthropology and Asian American scholarship on unwellness and chronic living to explore care. I draw on examples of caregiving practices and medicinal foods in response to haunting generational narratives. Such forms of deep care may illuminate therapeutic practices across the life cycle for solidarity and compassion in such contexts. My research queries how such approaches may facilitate insights onto recovery, even thriving.

Presenter(s): Nancy Chen

5602 What is Psychological Anthropology's Enduring Value for Anthropology and Psychology?

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR B2 (3rd fl)

Type: Roundtable/Town Hall

Given over a century of rampant anti-psychologizing sentiment in social and cultural anthropology and an anemic concern with global social, cultural, and historical variability in the psychological

sciences, it is surprising that psychological anthropology is flourishing a century after its founding. Meetings of psychological anthropologists are well-attended and filled with crucial new research contributions. Its leading journal, *Ethos*, has published four complete quarterly issues of high-value scholarship for five decades. Premier academic publishers continue to publish essential volumes, such as the soon-to-be-published *Cambridge Handbook of Psychological Anthropology* (Cambridge University Press, 2025). These observations lead us to ask in this panel, "What is the secret to psychological anthropology's enduring value for anthropology and psychology?" This roundtable invites participants to speak to this question. In addition to reflecting on their own research contributions and expertise in the field, roundtable panelists are also invited to consider Robert Levine's provocative answer that psychological anthropology's project to include psychological and psychiatric topics in anthropology and evidence from all world cultures in the psychological sciences is necessary for these disciplines to create a valid understanding of the human condition. Moreover, Levine claimed that psychological anthropology radically challenges conventional thought in the social and biomedical sciences. Despite occasionally withering criticism, psychological anthropology endures because it retains these necessary and radical features. If so, panelists should also consider exciting new interventions for the future.

6447 Digital Anteriorities: Remnants and Revenants in Digital Infrastructures

Start Date: 11/22/2025 12:45 PM **through** 11/22/2025 02:15 PM

Venue: Sheraton **Room:** Southdown (4th fl)

Type: Oral Presentation Session

Ones and Zeroes. Clarity and precision. The promise of digitization has long been systematicity: the leveling of all kinds of content into bits and bytes, the banishing of uncertainty, the transformation of unwieldy information into searchable, (ac)countable, disinterested forms. Digital infrastructures also traffic in fantasies of orderly ex-nihilo worlds. Scholars of digital infrastructures, however, have consistently drawn our attention to the ghosts in these machines. Legacies of colonial policing are built into biometric systems (Cole 2001); racial difference is reconstituted out of anonymity online (Nakamura 2010); virtually gated communities mimic those in the physical world (Chun 2016); "ghost work" sustains our digital everyday (Grey and Suri 2019).

Today, as the environmental costs of computation are mounting, poorly-understood AI tools proliferate, data deluges confound, and government data vanishes unceremoniously, the project of confronting the excessive and the aberrant, the uncanny and the unsettling within digital systems

seems especially pressing. This panel, proposing "digital anteriorities" as contrast and complement to "digital afterlives," asks questions about that which can be obfuscated, buried or disappeared by the digital, and that which refuses to retreat. In turn, we examine the ghosts that the digital generates, paying particular attention to what upsets and unsettles otherwise orderly infrastructures. From the revivifying of once-dead robots to the uncanny return of "real people" behind de-identified data, panelists will each speak to a ghost that appears in their research, and engage in a discussion that seeks to make contact with more.

Presentation(s): "Auditory hallucinations": Debility and insensibility in mental healthcare AI data work

In machine learning (ML) research, a hallucination refers to an AI model output that is unreasonable with respect to the data the model was trained on. Critical AI and disability studies scholars have critiqued this usage for its ableist connotations; it adds to the long list of ML concepts haunted by pathologizing metaphors of disability and eugenicist imaginaries (Benjamin 2024). Building from these critiques, I provide an alternative examination of the ML hallucination as an artifact of exploitative labor relations. Namely, I suggest that the bureaucratic protocols surrounding "data work"—the undervalued human labor necessary to processing and curating ML training datasets (Miceli and Posada 2022)—often create hallucinatory conditions for workers by constricting what they can share about how their jobs make them feel.

I draw from fieldwork in an ML lab building technologies to algorithmically triage people seeking mental healthcare resources. As they establish the standard of what counts as an adequately disabled expression of distress, data workers become complicit in sharpening novel techniques of algorithmic abandonment, leading to moral-psychic injuries that must be kept secret and individualized. In such contexts, the hallucination might offer an anti-ableist account of harm by shoring up the ways that institutional infrastructures, and the very metrics of disability data workers must concretize, render data workers' own distress illegitimate and insensible.

Presenter(s): Beth Semel

Hainting the Algorithm: Conjure Work and Digital Revenants

The algorithmic ordinary teems with haints—peculiar Black ghosts that limn presence and absence, technic and magic. Part of a larger project on the "computational hex," this presentation summons Black conjure traditions and the digital hauntings produced through algorithmic systems to explore some of the ways each operates through hidden mechanisms of influence, temporal distortion, and absent presences.

Drawing from fieldwork notes, experiments with generative AI, and autoethnographic encounters with TikTok's bewitching "For You" page, I trace how digital systems possess—capturing attention, inducing desire, and manipulating time in ways that echo Black conjure. These algorithmic possession states are undeniably manipulations, and they are also potential sites of communion, where the engagement with digital platforms might be reconceived as ritual encounters with ancestral knowledge systems.

I call my method "glitchcraft," a reconfiguring of the relationship between Black magical traditions and computational processes, positioning the glitch not as mere error but as a site where these systems' repressed histories and logics become momentarily visible. Rather than approaching algorithmic engagement through frameworks of resistance or survival, I propose understanding certain digital practices as forms of libation and offering—ritual acts that honor enflashed and digital ancestors while creating new possibilities for connection.

Presenter(s): Shaka McGlotten

Behind Closed Doors: Data Protection and the Unhappy Data Subject

Architectural treatises about old Scandinavian homes sometimes describe unusually elaborate doorways. Mortuary doors, for example, were occasionally built as special exits to remove a corpse from the home. As the funerary procession passed out of sight, the opening was bricked over to ensure that the ghost would never make their way back. Elaborately decorated bridal doors were thrown open to welcome a new wife to her marital home. After she passed through, the door was sealed lest the bride and her happiness should attempt escape. The silhouettes of these closed openings remained visible as reminders of their power to protect the sanctity of the family home against the ever-present threat of gender and sexuality out of bounds.

Long before firewalls, encryption keys, and patient portals, doors and locks have served as potent metaphors of privacy and its limits. Drawing on ethnographic fieldwork with data experts in Sweden, this paper considers digital infrastructure in relation to older imaginaries of domestic space as a way of understanding the appeal of anonymization—despite widespread acknowledgement of its technical shortcomings—as a solution to the legal problems of personal data. As with the ghostly traces of magical doors, the identifiable data subject—like the home-loving ghost or the unhappy bride—persists in a risk of reidentification and the uncanny return of the "real person behind the data" and their insatiable demands for both recognition and protection.

Presenter(s): Alison Cool

Unsteady Foundations: Digital Residues in India's Aadhaar Database

It might be safe to say that urban, middle-class Indians are becoming increasingly familiar with biometric identity verification at venues ranging from gyms and housing complexes to airports and banks. Aadhaar, India's national biometric identification system, serves as India's primary biometric ID infrastructure. One of the chief mandates of Aadhaar was to "get rid of ghosts" in existing government welfare systems by linking live bodies to their bodily impressions. And yet,

Aadhaar is itself a locus of many hauntings. Aadhaar, as a "clean" new "foundation" is infrastructure that recalls exacting colonial modes of enumeration; in turn, Aadhaar haunts every new biometric identification enterprise in India and indeed other national ID programs adopting biometrics. Furthermore, until recently, Aadhaar had no mechanism to register deaths in its database, affording those enrolled seeming digital immortality. This paper examines the residues and infra-identities that haunt biometric identification infrastructures, teasing and taunting, revealing the unsteadiness of biometric foundations.

Presenter(s): Vijayanka Nair

Unfinished Business: Revenants and Reminders on a Fiber-Optic Frontier

Subsea fiber-optic cables, often described as the "backbone of the internet," carry the lion's share of international signal traffic. Carved into coastlines and dragged across the sea floor, they materially draw continents into connection, instantiating the global internet as we know it today. This talk investigates one ongoing effort to extend this network into the Arctic, asking how the arrival of digital infrastructure encounters the Northwest Passage as haunted frontier. An object of deadly fascination for explorers throughout the age of empire, the Passage today is figured as finally knowable by an international consortium preparing to lay fiber-optics along the infamous route. At the same time, the practical work of laying a cable here surfaces apparitions and revenants: shadowy seabeds are brought into view for the first time by cable route surveys; scientific priorities jostle with state interests as surveillance functions are built into fiber-optic lines; and echoes of the last Cold War reverberate through cables designed around anticipated attacks. Through the cable and the subsea space being organized around it, I probe what haunting (vs. better-documented affects like anticipation, awe, and apprehension) brings to light in large-scale infrastructural projects, and how an ethnography oriented toward ghost hunting might bridge the gap between a cable touted as cutting-edge, and a passage teeming with shipwrecks, dead men, and outdated dreams.

8666 Medical Anthropology Students Association (MASA)

Start Date: 11/22/2025 01:00 PM **through** 11/22/2025 02:30 PM

Venue: Marriott **Room:** Napoleon (41st Fl)

Type: Special Event

MASA: Medical Anthropology Student Association

mission statement

We are an international group of graduate and undergraduate students, some beginning our studies, some already working in the field. We exist as a body in order to create the supportive bonds that will enable us to assist each other through the long process of training, conducting field work, writing, and succeeding in the job market. Through Special Events, bulletin boards, and

student directed projects, we help provide each other with the resources needed to engage with this discipline, develop areas of concentration, generate theoretical innovations, write strong proposals, fund and complete our dissertation work, and successfully enter careers in medical anthropology.

We reject the notion that the graduate process must be a solitary endeavor; instead, we join together as a group to find and use the resources we need to complete our training with our health and sanity intact. We welcome all students who share our passion for the study and improvement of human life through the lens of health and social justice, and we lay the groundwork for the next generation of medical anthropology.

9079 Lunch Workshop: Collaborative Interdisciplinary Ethnography: Building a Community of Practice

Start Date: 11/22/2025 01:00 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Armstrong BR (8th fl) (access via elevator only)

Type: Special Event

This workshop aims to bring together anthropologists and other researchers working on collaborative interdisciplinary projects that combine ethnography with other methods and data, in order to begin building a "community of practice." During this session, attendees will learn from brief presentations by colleagues already engaged in interdisciplinary ethnographic work, followed by an open roundtable discussion to share experiences, ideas, challenges, and opportunities for collaboration. We will discuss strategies for integrating ethnography with quantitative methods, digital tools, policy analysis, design thinking, and other frameworks to deepen understanding and research impact. The workshop's goal is to spark the formation of an ongoing community of practice—a network for sharing resources, developing collaborative ethnography projects, and advancing interdisciplinary anthropological scholarship.

8855 Community Environmental Justice Documentary and Discussion with Regional Activists- offsite

Start Date: 11/22/2025 01:30 PM **through** 11/22/2025 04:00 PM

Venue: Offsite

Type: Special Event

The Anthropology & Environment Society and regional community activists present a discussion about environmental justice challenges and action in Louisiana and beyond. Discussion and Q&A will focus on the ways environmental harm and injustice, both past and present, are inseparable and how communities are demanding and creating change to protect waterways, landscapes, and seascapes that matter most to them.

The event includes discussion about the documentary film *Harm in the Water*--A Kendall Moore Production and *Black in Marine Science* Films Production with support from BlueGAP. The film "delves into the critical issue of water pollution affecting Black communities along the Mississippi River, " and is the winner, Best Documentary, Essence Film Festival 2025.

Dialogue at the event builds on and intersects with Environmental Justice walking tour event co-hosted by A&E in 2024 in Tampa, Florida and connects leaders who participated last year with regional leaders in the AAA 2025 meeting site in New Orleans, Louisiana. Event will be held offsite at the Treme Market Branch, bringing anthropologists, activists, filmmakers, and artists together in conversation in a community venue and sustaining conversations begun with community engaged events at last year's AAA meetings.

8763 APLA Graduate Student Speed Mentoring

Start Date: 11/22/2025 02:15 PM **through** 11/22/2025 04:15 PM

Venue: Marriott **Room:** Lafayette (41st Fl)

Type: Special Event

The APLA Speed mentoring event allows students and early-career faculty to meet multiple mentors in a short time. The event gathers together mentees who are planning their graduate or post-graduate career steps in and outside of academia with mentors who are experienced researchers or established faculty members. Mentees will have the chance to meet senior colleagues outside of the mentees' immediate circle, and will also have the chance to learn about variations in institutional and sub-disciplinary practice. In addition to offering guidance on fieldwork, writing, networking, and publishing, the event will provide support in navigating the current challenges of the job market and the growing precariousness of academic careers. The goal is to inspire, encourage, and share ideas in a judgment-free, supportive context that acknowledges and responds to today's realities.

4497 "Monsters at the crossroads: resisting the future through ghost-work"

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** MGB Salon F/G

Type: Oral Presentation Session

In certain fantasy-horror, the inanimate takes on life, subjectivity, personhood. These can be robots, cyborgs, monsters and spirits. But it also takes away life, de-animates and objectifies. Kakoudaki (2018) speaks of conceptual cycles of subjectification and objectification. Monsters, evil spirits and horror transgress the classifications of moral and conceptual order, and in so doing, reify it in loops of recognition and non-recognition or alienness, inside and out and in-between, human and inhuman(e). In some art- or horror-fiction, the monsters are in a permanent nameless limbo or

incompleteness. And in some Japanese horror films media can mediate only too well, allowing ghosts to transfer from the screen to the world of the real (Thacker 2015).

But in a context where the experience of history is not uniform, where it is sedimented at different velocities (Koselleck 2018) and often not in synch with the world, experience and the horizons of expectation become discontinuous. Monsters emerge and/or are made from these discontinuities, whether they are the spectral or hauntological aspects of state terror, or the darkneses of sudden social or political contingencies whose effects provoke horror. In this panel we ask: can we think of a monsterology that actively arises from the conflict between temporal flows, and from the disjunctions between expectations, cosmologies, communities? To what extent can these discontinuities be harnessed? How can we conceive of ghosting discontinuities as active divergencies that resist the past predictability to make a different future possible? How do people rally ghosts or monsters in animating or de-animating their futures, and how are these cycles subjected to the power-agency of the monsters themselves? Can we speak of ghost-work?

Presentation(s): Acclimatizing Local Territorial Spirits to Ethnic Others: A Spectral Disjunction Between Cosmologies in Southwest China

Is it possible to acclimatize local territorial spirits to new sacrifices? Entering into sacrificial contracts with "land spirits" or "mountain spirits" is common among the Nuosu, a Tibeto-Burman group of Southwest China. However, a unique spectral disjunction has arisen between the cosmologies of the animistic Nuosu and the Premi, a group that blends animism with Buddhism. Over the past 170 years, many Nuosu displaced ethnic others, and especially Premi, when migrating to the western Liangshan mountains. Yet with new lands came a newfound custodianship over local territorial spirits that may grant or forsake every dream and wish—leaving many Nuosu apprehensive about whether these spirits have acclimated to Nuosu sacrificial contracts and the Chinese state-mandated renewable energy technologies plowed into their territories. I consider how Nuosu navigate the spectral disjunction that their adopted territorial spirits may perceive between their sacrifices and landscapes, old and new.

Presenter(s): Katherine Swancutt

Conversion and ghost work: Differential enactments of ghostly apparitions in Ifugao

This paper emerges from an encounter with a monster related by an interlocutor in Ifugao, the Philippines. Waking up and seeing a monster hovering over his bed, the interlocutor found himself confused and unable to decide what to do: relate to the monster as a spirit and organize a

sacrificial ritual to appease it or take the monster to be a demonic apparition and have the Pentecostal pastor pray for deliverance. Using this case as a starting point for thinking about monstrosity and ghostly other-than-human beings at a time when people in Ifugao oscillate between taking part in animistic and Pentecostal religious practices, the paper discusses conversion as a form of ghost-work, i.e. a way of

'ghosting' spiritual alternatives. Conversion to Pentecostalism does not involve the total eradication of traditional spirits, but rather a continuous and practice of keeping them at bay while acknowledging their ever-present haunting presence. Approaching the monster encountered by the interlocutor through its ontological openness, the paper aims to show how the ghosts become different as ontic figures as they become swept up in different cosmologies – animist and Pentecostalist – whose temporal flows are disjunct and provide significantly different futures.

Presenter(s): Jon Henrik Ziegler Remme

“Religion” as an obstacle: the hauntings of the Afro-Cuban polytheistic cosmos.

Afro-Cuban religiosity is presented in two ethnographic contexts, Cuba and Spain, considering the ubiquity and multiplicity of its "demons", who haunt and are haunted by everyday life. The comparative approach between the two contexts examines the possibility of analyzing them not simply in their capacity to transform Afro-Cuban religious praxis, but also in the potentiality of the latter to transform the former, that is, the contexts themselves. Deities and spirits of the dead of the Afro-Cuban cosmos constitute the person's "path" (camino), and their presence is more accentuated as obstacles. If and when these obstacles are surpassed, hardly a common thing, then paradoxically the entities disappear as an explicit religious praxis. I argue that their ubiquity and strong presence as haunting obstacles is a vital element of such a potentiality, and that this delivers a blow to the category of "religion", understood as the instantiation of "divine presence" and the absence of obstacles.

Presenter(s): Anastasios Panagiotopoulos

"That Pylon Reminds Me of an Effigy": Nuosu-Yi Ghost-Work and Energy Infrastructure in Liangshan, Southwest China

The cosmology of the Nuosu-Yi, who inhabit the Liangshan area of Southwest China, treats ghosts and spirits as entities that exist in the past, present, and future. From the 1960s–1970s, alongside its chaotic political excesses and spectral presence in Nuosu-Yi life, the Chinese state built a massive infrastructural project through Liangshan: the Cheng-Kun Railway, which made travel convenient but disrupted the Nuosu-Yi environment. Similarly, China's recent energy transition has led to a flurry of dam-building and forests of solar panels or wind turbines, forcing graves and territorial spirits to relocate. Many Nuosu-Yi have learned to welcome green energy while attributing ghostly appearances and agency to its infrastructures. The state harnesses this "ghost-work," built on a mosaic of resistance and acceptance, for its environmental-political needs by "speaking with

(Nuosu-Yi) names," in hopes that Nuosu-Yi will reconcile this new development with their open-ended cosmology.

“Disappeared” and “apparitions”: the production of spectrality in post-dictatorship Argentina

In many countries, authoritarian regimes made it a policy to 'disappear' - that is, to hide the bodies of those they murdered. In the countries of the Southern Cone of Latin America, and in particular in Argentina, where this work focuses, it constituted a systematic and massive methodology during the last military dictatorship (1976-1983). Hiding dead bodies, in addition to hiding evidence of the commission of the crime, had lasting effects on structural aspects of the culture as the ways of conceiving the boundaries between life and death, between the times and spaces reserved for one domain and the other. Existence, times, and spaces were profoundly blurred, giving rise to liminal figures capable of engendering haunting beings and places, and lasting terror. This contribution aims to analyze from an ethnographic perspective the 'appearance' of ghosts, spirits, and wandering souls in the spaces where repression took place in Argentina. Furthermore, it proposes to reflect on the methodological and ethical-political challenges implicit in ethnographic work of this kind.

Presenter(s): Mariana Eva Tello

Troubling art-work: ghosts, monsters, apparitions of loss, trauma, care and re-birth

Artworks, and artifices including texts, are apparitions that carry ghosts and monsters while also evoking them. How might un-finishing these things, looking closely at their hauntings, challenge the ghosts and monsters that are carried? This talk will discuss the work of four women artists whose works unravel the solidity of the finished thing to make things whole, to allow re-birth. To care. Artist and psychoanalyst, Bracha L. Ettinger transforms trauma into empathy, through paintings, collages, drawings and writings. By working with Gazans in Palestine she carries into the field the Angel of Carriance, of carrying others, of care and inter-correspondence. Artist and author, Riva Lehrer reveals the Golem monster haunting her self and re-births this into a crip-queer aesthetic to call out societal hegemonies through aesthetic representation and visibility. Artist, Amy Sillman celebrates the clarity of un-finishing by revealing editing, erasure, and failure. She challenges singular truths through seriality, iteration, multiplicity, allowing the ghosts of not-knowing in her paintings and drawings to peek through its layers. While artist, Joan Jonas constructs affective informative installations around human and non-human loss and fragility. How can facing ghosts and monsters, traumas and doubts of the past and present change the future? How can un-finishing art-works inform scholarly practices? What is our monster-slaying or monster-making ghost-work?

4297 "The Making of History in a Time of World Order Instability"

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Estherwood (4th fl)

Type: Oral Presentation Session

This is a session devoted to the ethnographic documentation of the making of history with a focus, in the words of Stephane Palmié and Charles Stewart, on "the principles, whether ideological, cosmological, or scientific - call them broadly cultural - that underpin practices of inquiry into the past, as well as the forms and modes in which the past is represented to others" in the specific context of world order instability, varying among economic liberalism, decolonial nation-building, and neo-imperialism. In this context, anthropologists cannot assume that the making of history represents grass-roots folk nationalism. History making practices can in some case mobilize the official nationalist sentiments of new states; in other cases history making practices mobilize alternative perspectives -- even if not necessary anti-state perspectives. As more and more literature highlights variations in colonial practice and in decolonial ideologies, we see that the valences of history making practices call for careful inquiry into world order matrices.

Presentation(s): The Making of History and the Question of World Order

The anthropology of history arose in early 20th century structural functionalism. British oriented structural functionalists were seeing the role history-making played in the reproduction of acephalous societies within the empire. With decolonization came history making as integral to the building of ostensibly independent nations within a so-called capitalist/socialist world system. Today a burgeoning literature – John Darwin, Jane Burbank and Frederick Cooper, Lydia Walker, questions whether the liberal nation-based order represents the default setting: economic and political liberalism, decolonization to the end of ostensibly equal nations, empires and tributaries, each is actively employed these days depending on the circumstances. On the one hand, studying the making of history requires carefully exploring the world order or world orders it engages, and, on the other, perhaps the making of history can reveal new insights into world ordering today.

The Making of Populist Histories in the U.S. Mexico Borderlands

Drawing on various strands of a long and complex history of Spanish, Mexican, and American imperial control/influence, Indigenous resistance and resilience, and long-term patterns of movement, working-class people in the U.S.-Mexico borderlands fashion populist histories of belonging, doing so often in dialogue with dominant political discourses. These populist perspectives often defy contemporary political expectations regarding identity. In this paper I explore some aspects of how these histories are being constructed today. I explore institutional platforms for the making of history, some of the broad historical themes that are often addressed, and how such populist histories mobilize messages about earlier eras as contemporary people negotiate the uncertainties of the present. The paper bridges an ethnographic approach to populism in the U.S. Mexico borderlands with the literatures on the making of history and the linguistic anthropology of voice, message, and narrative.

Presenter(s): Kaitlin Lewis

Spanish Nation-Building and Alternative Histories of New Mexico

In 2015, Spain ratified a law providing a special path to citizenship for descendants of Jewish victims of the Inquisition. Several hundred New Mexicans soon discovered that they might qualify through their conquistador ancestors who colonized New Mexico on behalf of the Spanish Crown. Painting this ancestry as genealogically Jewish required putting forth a historical perspective that contradicts hegemonic accounts of New Mexico and of Spain. Now, their ancestors who took on the mission of spreading Catholicism and extending the reach of an empire that had ostensibly eliminated its Jewish population were reframed as descendants of Jews or secretly Jewish themselves. And yet, this alternative account was directly correlated with efforts to claim reparative Spanish citizenship in alignment with a Spanish nation-building project. This paper thus presents an ethnographic case in which history making practices can simultaneously mobilize and challenge official nationalist accounts.

Presenter(s): Sarah Leiter

Making History in Sindh, Pakistan and Decolonial Nationalism

This paper examines how Shia singers in Sindh, Pakistan, reinterpret the poetry of the eighteenth-century Sufi poet Shah Abdul Latif Bhittai to resist exclusionary nationalist narratives within a Sunni-majority state. Situating this case within broader debates on decolonization and nationalism (Ayres 2009; Chatterjee 1986, 1993), I highlight the contradictions of postcolonial nation-building, where efforts to decolonize through nationalism often reproduce exclusionary practices that marginalize minority communities. Engaging with scholarship on the making of history (Palmié and Stewart 2016; Sahlin 1985), I further explore how historical narratives are actively reworked by marginalized groups as tools for recognition and resistance. For Shia communities in Sindh, direct

confrontation with the state is often untenable; instead, they turn to cultural and historical reinterpretation as a strategic form of resistance.

Presenter(s): Muhammad Abro

5493 AFA State of the Field Roundtable: “Stop Gender!” Weaponizing Representations of Gender Ideology in Authoritarian Times

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Grand Ballroom E (5th fl)

Type: Roundtable/Town Hall

Throughout the world, right wing and authoritarian movements rely on weaponized narratives about gender difference to justify their political projects. New technological tools, social media, populist movements and mainstream media are all sites that seek to regulate and even "eliminate" gender. Shifting political economic regimes rely on naturalized representations of gender difference to justify cuts to social safety nets. Feminist anthropology has a long history of analyzing the effects of these narratives. This roundtable brings together feminist anthropologists working in Africa, Europe, South Asia, and Latin America to reflect on how gender is deployed, weaponized, and imagined in contexts of authoritarian and populist politics. Asking how right wing movements and leaders theorize gender, and how social movements respond, our panelists share insights from research on reproductive violence, attacks on trans* rights and bodies, language and censorship, pronatalism, tensions between women's rights and anti-homosexuality movements, religious devotion and masculinity, and more. These themes are at the heart of the global rise of right wing populism and related political movements, which fiercely defend visions of gender hierarchy linked to naturalized elisions between gender difference, political belonging, and national identity. These histories shape contemporary efforts to control discourses surrounding the origins, diversity, and social effects of gender difference--including, in some cases, efforts to "stop" gender by stopping scholarly and political discussions of gender as a historically and socially contingent category. Thinking with our panelists, the roundtable invites reflections why and how emergent politics centers gender as a threat, and also how feminist and broad coalition social movements are responding in contexts where naming gender poses threats, and where large scale data are now used to mine content for references to gender and other forms of difference.

5365 After the fire: Pyropolitics in Latin America. Part 2

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Studio 2

Type: Oral Presentation Session

Forest fires have become contentious political issues, to the extent that some writers speak of an age of fire. Media images of fire capture public attention, sparking debates about their causes and how to best prevent them. In this two-part panel, rather than examining the causes of fires, we follow its effects to focus on the political afterlives of fire.

As an analytical framework, pyropolitics (Marder 2014; Carey 2023) examines the complex relationship between fire and political dynamics, intertwining with issues of climate and land-use change, disaster preparedness, power and property relations, and longstanding social and ethnic inequalities. We seek papers that explore how fires shape political relations in Latin America, from the chacra to the international stage. In particular, this panel invites papers that explore how fires ignite broader social unrest, fuel political polarization, persist in disturbed landscapes, or even reshape human-plant relations. We also welcome papers that critically examine the use of fire-related metaphors, which have long been prevalent in political anthropology about Latin America.

Political controversies, like fires, can flare up or fade away. Fires can also sometimes leave tangible and material, flickering, ghostly and lasting political effects. They may contribute to intensifying conflict and relations of political alterity. In this light, we ask: How do people live with the new normal of forest fires, in productive and/or destructive ways? And, what happens to politics in the wake of devastating fires, as people and groups navigate their aftermath?

Presentation(s): True/False Heroes: Pyropolitics in the Afterlife of Forest Fires in Viña del Mar, Chile

In February 2024, the outskirts of Viña del Mar, in central Chile, witnessed the deadliest forest fires in the country's history. The disaster claimed 138 lives and affected at least 15,000 people, adding to the tragic toll of rising forest fires in the region. Yet another shocking development emerged a few months later: an investigation led to the arrest of seven individuals, including a volunteer firefighter and a forestry brigade member, suspected of orchestrating the fires. Based on fieldwork conducted with victims, community organizations, and state agents, this paper delves into pyropolitics—namely, the broader political processes, power dynamics, and social struggles that emerge from forest fires and continue to unfold in their afterlife. It does so by focusing specifically on the narratives of victims around what constitutes a 'hero,' and whether that figure is categorized as a

'true hero' or a 'false hero'. False heroes—such as the arrested firefighter and brigade member—were initially seen as public servants driven by noble intentions. Their unmasking, however, reveals not only their violent actions but also the broader role of state institutions in harming marginalized communities. In contrast, true heroes emerge from within these communities, as neighbors come together in acts of resistance to demand housing solutions and an overall fair reconstruction.

Presenter(s): Fernanda Gallegos

Making it Burn: Fire Techniques and the Government of Life in the Brazilian Savanna

The presentation will explore distinct strategies for engaging with wildfires and controlled burns in the Brazilian savanna (Cerrado), as well as their effects on the treatment of human and non-human alterities. Drawing on ethnographic fieldwork carried out in collaboration with environmental managers, fire brigades, and quilombola communities from Jalapão, I examine in detail the emergence of integrated fire management in Brazil and the role of local knowledge within this environmental policy, which was enacted as federal law in 2024. The presentation argues that fire management techniques not only offer specific ways of addressing pyric phenomena but also give form to ecological systems and political institutions for governing life forms. The shift from a disciplinary power focused on fire suppression to what we might call a new pyropolitics opens the way for conflicts grounded in divergent conceptions of regime, health, and environmental disease. These disputes foreground the contrast between environmental conservation efforts and the commitments of local communities to their valued forms of life. Showing it, I aim to outline a critical perspective on fire management programs that moves beyond both pyrophobic and pyrophilic positions, toward a critique of the forms of life enabled by particular fire assemblages.

Presenter(s): Guilherme Fagundes

Ghostly Invasions: Political Theologies of Fire in Post-Coup Bolivia

In 2019, uncontrolled wildfires in Bolivia became a key political issue for the nation's non-Indigenous far-right, fueling the outrage of a broad oppositional movement that ousted former President Evo Morales. The national and regional media have blamed migrants in the region for recent megafires, painting them as ghostly invaders caught up in illegal land trafficking. Yet, alongside amplifying racialized divisions, recent megafires in Bolivia are also giving way to emerging alliances across environmentalists, bureaucrats, politicians, and other-than-humans—above all Chiquitos ancestors associated with the region's famous carved masks. In the face of far-right challenges, Indigenous and migrant communities are involved in a range of projects that aim to renew attachments to land, place, and other-than-humans in ways that contest the erasures of ecological terra nullius—that is, efforts to make land available not only for capital but also for climate mitigation efforts that are often out of local hands. Paying attention to these alliances invites a less deterministic account of environmental disagreements, unseating familiar divisions between science and religion, Indigenous and mestizo, affect and reason. I ask what futures of conservation are opened up by taking seriously interlocutors' insistence on guarding "life"—not just "environment"—against converging political, atmospheric, and ontological harms.

Presenter(s): Mareike Winchell

In the eyes of satellites: aesthetics of fire and political alterity in Brazil

Based on fieldwork at the Instituto Nacional de Pesquisas Espaciais (INPE) and other public institutions in Brazil, this paper describes the uses of remote sensing imaginary in the monitoring of and making of policy about forest fires in the Amazon. At INPE, scientists translate the visual data received from satellites into maps of fire hotspots and statistics describing the number of fires and rates of deforestation. These data management practices create a bounded class of phenomena - forest fires - that becomes the object of policy development and which opposed political factions can mobilize around. The paper is interested of the aesthetics of data use and what this means for the form politics take in a country haunted by political polarization. Zooming in on the drafting of a National Policy for the Integrated Management of Fire and President Lula da Silva's pledge to create national reunification and achieving Net Zero deforestation in the Brazilian Amazon by 2030, the paper shows how political alterity has an aesthetic dimension. The concept of political alterity is developed to describe the ontological disagreements involved in creating forest fires as a bounded political phenomenon and its relation to the proliferation of radical otherness in Brazil. In this sense, the political uses of fire imaginary is not only metaphorical, but their aesthetics have real consequences for political life.

Presenter(s): Stine Kroijer

2476 An Elephant in the Room: Positionalities and Hegemonies around the Anthropology of East Asia

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Studio 4

Type: Oral Presentation Session

This panel addresses an issue that has received little attention in East Asian anthropology: the positionalities of researchers and what constitutes "sophisticated" thinking in anthropology. Reflexivity has been valued in anthropological fieldwork, where the impact of researchers' identities on data collection and output has been discussed. However, we propose a more drastic mode of decolonization: what kind of thinking is considered "sophisticated" (Mihara 2025) and the urgency of getting rid of it. To succeed in Anglophone academia, East Asian scholars must unlearn what they experienced as "native" and internalize the Western gaze that functions as the discipline's master narrative. To engage in Anglophone scholarship, one's ability to speak and write English might count as more important than one's fluency in the languages used in fieldwork. Scholarship written in Chinese, Japanese, Korean, and other languages is rarely cited in the dominant English-language journals/books in Japanese anthropology. Citing these non-English thoughts requires a significant amount of explanation or is ignored. Researchers should think about intersectionality and the politics of writing: Who writes about Asia for whom and for what, and what voices and perspectives are neglected/silenced?

All presenters, once trained in the UK/North American institutions as international students, will share their experiences of unlearning their vernacular experiences and perspectives and adapting to master narratives. Topics include Japanese education, anime, medical anthropology in Korea and Japan, communal well-being of Yap in Micronesia and Yami in Taiwan. Altogether, this panel will address the linguistic/political/theoretical/methodological challenges and possibilities of decolonizing anthropology in East Asia.

Discussant: Kunisuke Hirano

Presentation(s): Writing Japanese education: Enumeration in the process of dissertation writing

This presentation analyzes which topics and discourses are privileged and prioritized when writing about different cultures. Based on the presenter's own experience of writing a dissertation on alternative education in contemporary Japan as an U.S. institution, Hirano discusses the lack of reference to Japanese scholarship in the field of anthropology and how this has implications for the development of anthropology of Japan. While English scholarship on Japan could offer broader perspectives that are more easily referenced in interdisciplinary contexts, the lack of in-depth understanding of theories and materials written in Japanese could widen the gap between scholarship written in English and other languages. While English-language scholarship on Japanese education offers larger pictures and shifts in Japanese education, the lack of recent legal updates and changing admission systems may contribute to the reproduction of essentialized, outdated figures of education and society in Japan. To overcome this, the presenter suggests more equal dialogue between Japanese-speaking scholars and English-speaking counterparts. There may be many advantages and contributions of the current anthropology of Japan in the Anglophone academy, such as a different analysis of Japan than in the Japanophone academy, but it still privileges certain etic perspectives and cannot overcome the dichotomies of 'us', the Anglophone audience, and 'them', the Japanese, as the ultimate other.

Presenter(s): Kunisuke Hirano

The anthropology of the Anglophone researchers on Japanese animation, or some remarks on anime Orientalism

The presenter (Ryotaro Mihara) outlines how Orientalism (as proposed by Edwards Said) is surprisingly still prevalent, yet is counterintuitively underexamined in the field of Anglophone studies on Japanese animation (anime). For more than two decades, anime has been a popular subject for research and teaching in Anglophone higher education institutions. However,

mainstream Anglophone anime researchers have rarely recognised Orientalism's impact on the ways in which they make intellectual sense of anime. The presenter shares his ethno-autobiographical reflection on his liminal academic career, which has developed in the interstices between Anglophone and Japanophone academia – especially his recent experience of facing a backlash after publishing, in English, the very academic peer-reviewed paper that highlighted Orientalism in Anglophone anime studies. He thus demonstrates how the current Orientalist condition of Anglophone anime studies (i.e. anime Orientalism) dangerously distorts our understanding of anime on a global scale. The issues that the presenter intends to cover include: canonisation (e.g. of specific Anglophone texts on anime, at the expense of anime itself); hegemony (e.g. of English, which deprecates the intellectual capacity of Japanese writings on anime); and rhetoric (e.g. that the field colonialistically encourages the involved academics to internalise in developing their cognisance of anime).

To Listen Between the Worlds: Asymmetry, Care, and the Promise of Diversity

Since Ribeiro and Escobar's call for "world anthropologies" and Trouillot's critique of the "savage slot," anthropologists have increasingly confronted the "world system" of knowledge production (Kuwayama 2004). This paper revisits this issue not through a geopolitical critique of disciplinary hierarchies, but through the intimate labor of ethnographic listening: who listens, to whom, and from what position. Drawing on two field encounters—one with a Yapese woman in Micronesia, the other with a Yami man in Taiwan—I examine how their efforts to defend communal well-being were misrecognized, even humiliated, for not conforming to conventional norms and unsettling intercultural expectations. As an ethnographer from Taiwan trained in Anglophone academic traditions, I have carried the ambivalent task of mediating between dominant epistemologies and vernacular realities. By contrasting these two episodes, I highlight ethnographic listening and being together (Biehl et al. 2020) as a craft shaped by asymmetries yet capable of sustaining ethical attunement. In doing so, I argue that listening and accompanying can serve as modest, situated interventions in the pluriversal project of diversity—a shared, if uneven, commitment to epistemic difference. Listening, then, is a form of care, a relational practice that resists extractive knowledge paradigms and gestures toward more reciprocal and plural ways of understanding.

Writing as a Creating/Translating a World: Conducting Fieldwork in One's Home Country and Writing in a Second Language

Writing is a political action. Those who write necessarily position themselves in a certain context and reveal, either explicitly or implicitly, how they relate to the world, both through and in their writing. Writing ethnography about one's home country in a second language sharply accentuates the anthropologist's triple liminality: being situated between insider and outsider of the field; between the field-world and the academic discourse; and between the author's desire and the readers' expectation. This presentation reflects on the translational labor and affective negotiations

entailed in conducting fieldwork "at home" in South Korea while writing an ethnography in English for a presumed North American academic audience. Drawing on specific examples, I explore how I, as a native anthropologist, navigated the expectations of ethnographic exoticism projected by an Anglophone readership, what kinds of creative and epistemological gains emerged from writing between two linguistic and cultural regimes, and what form of epistemic disobedience was possible in writing the ethnography.

Doing Medical Anthropology in/of East Asia: Reflections of a Japanese-/English-speaking Anthropologist on the Politics of Language

Anthropologies of medicine in Japan have contributed to questioning the universality of Western biomedicine and "science," due to Japan's "success" in modernization as a "non-Western other" (Kitanaka 2018). Against this background, this paper examines the politics of language in doing medical anthropology in/of East Asia, with a specific focus on Japan. I explore how I have navigated the Anglophone and Japanese-speaking communities of medical anthropologists as a UK-trained Japanese-/English-speaking "native" anthropologist based in Japan. I compare the scholarship that both communities engage with and contribute to, and scholarly works that are largely ignored by either community. I also examine the roles that the languages as well as the translations used in the process of knowledge production and dissemination have played. Finally, I suggest a need to recontextualize the status of English and Japanese languages in East Asia in attempts to decolonize anthropologies of/in East Asia. English has become a language franca in the emerging networks of medical anthropologists of/in East Asia, symbolizing the hegemony of English language in a "global periphery." Whilst promoting engagement with Japanese-language scholarship is essential to challenging the hegemony of English in the "academic world system," scholars should also be mindful of the colonial legacies of the Japanese Empire -and the hegemony of the Japanese language within- in East Asia (Kubota et al 2024).

3895 Analyzing the Intangible in Tourism: Spiritual and Spectral Presences of Intangible Cultural Heritage

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR B1 (3rd fl)

Type: Oral Presentation Session

The sensory experiences, performances, and emotions of tourism experiences, like ghosts, can seem ephemeral or fleeting, yet also similar to ghosts, their impacts on people continue into the future through memories and lived experiences. In the case of intangible cultural heritage that is featured in tourism or involved in large-scale temporary events, this ephemeral or fleeting nature can seem even more heightened in comparison to monumental tangible cultural heritage. However,

performing arts, oral traditions, handicrafts, cuisines and other forms of cultural knowledge are skills and lived experiences "that are embodied in people" (Logan 2007, 33). Moreover, participants serve not just as mediums or conduits (Kirshenblatt-Gimblett 2004). Just as ghosts are not merely passive, not without volition, neither are the performers and creators of heritage, which is both transmitted and transformed in response to changing social and physical contexts. Hence in a metaphorical sense, intangible heritage can be spiritual and spectral in nature, creating a sensation within and outside of oneself and, through engagement, individuals can transform the immaterial into a powerful commodity or medium of negotiation, contestation, and power. In addition, literal spirits, ghosts, and ancestors can also play a role in the touristic transformations of intangible heritage, expressing approval and disapproval of new tourism enterprises in a myriad of ways and influencing the transmission of this cultural knowledge. This two part panel investigates both the metaphorical and literal ghosts and spirits of tourism. This first session focuses on the spiritual experiences and spectral presences of intangible heritage tourism production, while the other session expands the focus to more metaphorical "ghosts" of tourism. To explore how tourism and intangible heritage intersect with spiritual landscapes, this session brings together case studies from India, Cambodia, Brazil, and West Africa (Benin, Nigeria, Togo). These work together to demonstrate how the ghostly world can impact tourism production, how the spirits can speak through and to tourism producers and visitors to enact personal and social transformation. They explore reciprocal human/spirit interactions and the exchange of knowledge about the spirit world. Many examine the power of pilgrimage to create multi-sensory shared experience. Through these papers, we can see how this spiritual landscape allows for the reclamation of power and for elements of wonder and the spiritual to come to life.

Presentation(s): (In)Tangibility, Incredible India, and Specters of the Colonial

As a program and catchphrase of India's Ministry of Tourism, "Incredible India" frequently appears in India's international branding of tourism experiences. The phrase has become so ubiquitous that

even within India it is taken up into local discourses. Drawing from ethnographic and archival research on India's cultural engagement of international publics, this paper traces elements of the tangible and intangible in Incredible India's programs and promotional materials and considers the uptake of this phrase in local non-tourist settings. Doing so reveals two interrelated aspects of the life of "Incredible India" as it circulates international and domestic publics. First, a common pattern of branding India as an affectual space of wonder, spirituality, and incredulity emerges from comparing the Ministry of Tourism's present-day uptake of tangible and intangible heritage with nineteenth and early twentieth century colonial representations of India in the global realm. Second, while Incredible India may conjure specters of the colonial and a cultural intimacy with the Oriental, local communities' repurposing of this phrase works towards reclamation of elements of wonder and the spiritual that are authentically lived and important to everyday life and traditions in India. I argue that this constellation complicates the stakes of rendering heritage tangible or intangible in the branding of India to prospective tourists abroad.

Presenter(s): Nicole Cox

Pilgrimage: Conjuring Ghosts in Heritage Tourism

A pilgrimage, by its very nature, is a conversation with ghosts. Whether it's the more than 400,000 hikers who walked the Santiago de Compostela to the shrine of St. James every year or the nearly 300,000 fans who visit the National Baseball Hall of Fame in Cooperstown NY, pilgrims commune with long dead saints and heroes. Drawing on autoethnographic research on Buddhist pilgrimage in northern India, this paper interrogates the ways

Buddhist pilgrimage tourism re/produces spiritual narratives of time and place, promises personal transformation (Salazar 2018), attempts to foster *communitas* in liminality (Turner, 1978), and navigates contested space (Eade & Sallnow, 1991). Carving out opportunities for heritage tourism through Buddhist pilgrimage conjures specters of the past set against challenges of contemporary tourism—the expansive Hindu divine, the sacred dead

in Varanasi, Buddha spirit under the Bodhi tree, ghosts of 10th century Nalanda Buddhist scholars and monks and 12th century Muslim invaders, alongside crowded World Heritage sites, imposing tourist buses, inadequate infrastructure, a begging economy, and environmental pollution.

Stones as witnesses: the transformation of the Brazilian religious semiotic landscape through Igreja Universal's Templo de Salomao

In 2010, the Universal Church of the Kingdom of God (UCKG) began the construction one of its most ambitious projects to date: a replica of the First Temple of Jerusalem, the Templo de Salomão, in São Paulo. The Brazilian media quickly filled with commentary on its cost and eccentricity. A focal point was the use of around 40,000 Jerusalem stones imported from Hebron (West Bank). UCKG leader Bishop Macedo defended the purchase, claiming the stones "from Israel" bore witness to the miracles of Jesus and made the Holy Land accessible to those unable to travel there. These stones became multisensory testimony of UCKG's growing presence in Brazil's evangelical religiouscape. This emerging religiouscape offers new forms of in situ pilgrimage, allowing practitioners to experience the Holy Land locally. At the same time, UCKG asserts itself as a religious authority—building pilgrimage sites while managing symbolic resources such as the intertextual gap between the imagined Holy Land and its actualization in Sao Paulo. Practitioners and visitors are, then, turned into co-witnesses, alongside the stones, of the "miracles of Jesus"—not the least of them the rapid rise of UCKG and Pentecostalism in Brazil, embodied in grandiose architectural projects.

Presenter(s): Marian Gabani Gimenez

Spirits Have No Borders: Diasporic Presence and Religious Tourism from Bénin to Nigeria

Since the 1990s, religious festivals have brought together practitioners of African and African-inspired religions, repairing relationships damaged by the trans-Atlantic slave trade. Scholars have shown how these events drive tourist pilgrims from the Diaspora to Africa, allowing trans-Atlantic exchanges of knowledge about shared spirits and divinities. Less attention has gone to how such festivals repair colonial-era separations within Africa. In this talk, I focus on one event and the spirit who haunts it: the annual Ọ̀rányàn Festival of Nigeria, which honors Ọ̀rányàn, the deified founder of the precolonial Ọ̀yọ Empire that once spread across what is now Nigeria, Bénin, and Togo. Drawing from my ethnographic participation in a delegation from Bénin to Nigeria for the festival, I show how both sides negotiate the nature of Ọ̀rányàn himself—and with it, the nature of the Ọ̀yọ Empire that the divinity's veneration refigures. On one side, Nigerian Yorùbá present Ọ̀rányàn as a symbol of a hypermasculine warrior past, today best represented by Ọ̀rányàn's descendant, the Emperor of Ọ̀yọ. On the other, Beninese Yorùbá draw from oral histories to promote Ọ̀rányàn as a gender-bending, cosmopolitan peacemaker who is still present and active in the religious life of ìpòbẹ, Bénin. Ultimately, I show how tourist pilgrimage yields political advantage for both sides, in the form of reclaimed subjects for the current Emperor of Ọ̀yọ, and resuscitated royal cachet for monarchs in Bénin.

Unsettled Spirits: Possessions and Hauntings in Cambodia's Dance Tourism Industry

Toes curved upward, knees bent, and back arched, Srey Nit slowly emerged from the back of the Mini Theater at the Cambodian Cultural Village in Siem Reap. Srey Nit had been selected to perform the role of the lead Apsara at a 2012 dance festival in honor of UNESCO's recognition of Classical Cambodian Dance as a representative of the Intangible Heritage of Humanity. As she danced, tears

began to stream down her face uncontrollably. She continued to dance, but the tears didn't stop for hours. Rumors spread that she had been possessed by an ancestor of the dance and was not in control of her body—something that she confirmed in a 2023 interview as we discussed the impacts that spirits of different types were having on the tourism industry. The spiritual landscape in Southeast Asia is varied and complex. Spirits remain active players in the social and political realm. They can offer support and guidance, and they can serve as a means of resistance. This paper examines how Cambodia's spiritual landscape is enmeshed in the dance tourism industry by contrasting two types of spiritual influence. The first is Srey Nit's case of possession by an ancestor aiming to transmit cultural knowledge. The second is a case of unsettled vengeful spirits who engaged in a series of possessions and hauntings at a Chinese produced dance show that some believe resulted in a 2018 theater fire. These cases offer insight into the complex power dynamics at play in the development of tourism in Siem Reap.

3321 Architectures of Spectrality II

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Gallier AB(4th fl)

Type: Oral Presentation Session

The discipline of anthropology, in many ways, was built on spectral grounds. It is a form of inquiry that involves itself with ghosts and asks: how do societies narrate the ineffable, and what categories of social thought cohere around the interaction between living and dead things? (Ochoa 2010; Stevenson 2014; Meyers 2021; Taussig 2025). Put differently, anthropologists have long involved themselves with-and thought with-phantasms, ghosts, hauntive obsessions, and spectral projections. Additionally, the discipline's enduring tether to the colonial requires that contemporary anthropologists continue navigating the spectral materiality of fieldwork; i.e., how the event, the aftershock, and (un/ mis)memory of violence is made apparent in physical space. This panel proposes to take up the question of the spectral, otherness, and space. We have termed this convergence "the architecture of spectrality." In doing so, we attempt to answer a simple, yet vexing question: How do we sense that we are haunted, or in the presence of ghosts-materially and in space? And, in order to recognize the ghost, must you be political, cultural, or personal kin?

By tethering our collective meditation to architectures of spectrality, we point to the conditions of (dis)appearance in hauntings. In an echo to critiques of archival power (Derrida 1994, 1996; Hartman 2008, 2019; Arondekar 2009; Stoler 2010), we consider how collective memory and its absences take shape in specific places, such as streetscapes, toponymy, memorial plaques, online spaces, and archival institutions. Etymologically, architecture involves authoritative discourse (arkhe) and the techniques of building (tekton). Thus, the panel considers how spaces of ghostliness are constructed and by whose authority, as well as the ways space may withhold, retain or foreclose access to certain forms of memory.

Finally, the panel coheres around a practical question of writing and interpretation- which situates ethnography itself as another form of architecture. How is it even possible to put the spectral into writing on spectrality? How do we approach the spectral when faced with its obliqueness and opacities? What is the method of finding, feeling, knowing, and caring for the ghosts and phantasms that alter a place with affective density? Our presentations will demonstrate the various ways an ethnographer may become ghostlike, and thus attentive to appearances and absences in order to know or learn. In situating the ghostly as necessarily material-in its physical trace as well as its narrative recounting-our methodological meditations consider how the architecture of spectrality may reveal the sociospatial.

Presentation(s): “Every time it rains, the world ends”

In 2020, COVID-19 arrived as a familiar disaster to displaced Uitoto families living in Bogotá, Colombia. The catastrophic loss of kin to the virus and to the violence of state-funded healthcare was compounded by an economic crisis driven by the city's lockdown measures. Cut off from the informal cash labour that sustains them, several dozen Uitoto families were evicted from their already tenuous housing situations and found themselves out on the street at the same moment as their presence on the street was criminalized. Mobilizing a mutual aid network including elders, ancestral spirits, and plant beings, those families founded a new settlement in a place where they do not legally exist, and where material conditions routinely erase their presence and their tenuous but flourishing lives. This paper explores the ethics of a spectral architecture in a migrant space of never-ending-world-ending. Sustaining lives in a place that does not exist, in the confluence of routinized historical erasures, and in oblique relation to the kin and ecologies that make the world make sense, this Uitoto settlement offers a window into a mode of ethical relation to our shared horizons of perpetual provisionality.

Presenter(s): Amy Leia McLachlan

Reverberations: Violent returns across time in downtown Bogotá

This paper performs the layered rhythms of violence inscribed unto place. Taking downtown Bogotá as its fieldsite, this work is concerned with the haunting dimensions of violence, namely the way terror seeps into a place, and appears to invite further violent happenings. Elliptical returns, cyclical relays that seem to engulf everything into its vortex. Moving from 10th Avenue to 14th, from 6th street to 12th, this narrative driven paper tracks the way this shrunken place-world has, across centuries, been host to insurmountable levels of violence and of the dispossessed who seem to end up here, out of all places. Asylums, colonial lynching sites, drug-markets controlled by criminal governance, military bases, underground labyrinths, mass graves, sacred churches, all stand here

or leave their traces. What gathers is an accrued density, a spectral and cumulative intensity where the past cannot be surpassed, forging forms of violence that at their core, are atmospheric

Presenter(s): Andrés Romero

The Tennessee Valley Authority: A Ghost Story

In 1933, journalist and ethnographer James Agee published an article for *Fortune* magazine titled "The Tennessee Valley Authority." The Tennessee Valley Authority (TVA) was an unprecedented enterprise of infrastructural might that promised to electrify the poor, rural South. In his article, Agee described the Tennessee Valley as "a laboratory for a great experiment" at an industrial and social scale. Or as Agee wrote, the TVA "involves human beings." This presentation thinks with rivers as social architecture. It draws on the Appalachian tradition of ghost stories and hauntings to consider the unique relationship that emerges between a public-works project and the human beings that have lived alongside rivers. Specifically, the paper considers the "geological haunting" of the Paint Rock River, which is managed by the TVA. For example: the river is named after the town of Paint Rock, which itself alludes to the indigenous Cherokee moniker given to the limestone bluffs of lower Appalachia—white-streaked, like bleeding watercolors, the bluffs look "painted." Those bluffs stand like an affective tombstone, where American ghosts layer like geological sediment. For example, the town of Paint Rock is where the Scottsboro Boys were arrested; displacement, indigeneity, and racial violence layer on top of one another. This paper draws on personal and historical ghosts to argue for exhuming the specificity of place, and unearthing multivalent racial and political spatial histories.

Presenter(s): Natalie Reinhart

Architecture of Positions

This presentation begins in the Paris Police Archive, in a surveillance registry dated in the second half of the 19th century. Focused geographically on the working-class streets of the 18th arrondissement, the police log holders describe various women suspected of undeclared sex work. The descriptions, often laced in the misogynistic and racist gaze of the surveying officer, note physical descriptors, a monstrous neck, a crooked smile, "Jewish" written with a pencil under a name, traces of syphilis hidden under maquillage. Elements of what would eventually become the standard of Bertillonage and anthropometrics take shape in such logs. The abject of sex work appeared as a strategic site to experiment the modern power of monitoring, representing, classifying; linking together the now crucial categories of otherness: territory-physiognomy-morality. This paper is interested in the technologies of perception and capture through which these archived biographies took form. It moves between archival vaults, Toulouse-Lautrec paintings, Christer Stromhølm's photographs, and encounters in and with past and contemporary (North-)African Parisian streetscape, to formulate a queer idiom of remembering; one that conjures unexpected companions. By attempting critical fabulation, the writing engages an architecture of spectrality wherein the positions of colonial, racial and sexual others, although unevenly distributed through time and space, nonetheless resonate through one another.

Presentation(s): A Book for My Great-grandmother – or Weaving Candomblé Histories

bell hooks once said: "The burden of proof weighs heavily on the hearts of those who do not have written documentation, who rely only on oral testimony passed from generation to generation" (1991:193). Even when we do have documents, they do not seem enough. How do we write history despite this burden? In the last few years, I have been working on a biography about our great-grandmother, Agripina de Souza – Oba Deyi, filha de santo (daughter-of-saint) of Mother Anninha dos Santos – Oba Biyi, two important Candomblé leaders in Brazil, both connected to the terreiro (place of worship) Axé Opô Afonjá, inaugurated in 1910. This is a collective project that came to me as a spiritual task and involves my community, the Ilê Axé Aganju Ixolá – a Candomblé terreiro located in Rio de Janeiro, Brazil. The project was started many years ago by one of our ancestors, Father João dos Santos – Tobi Obá, initiated in Candomblé by Mother Agripina, in 1959, who for decades maintained a disorganized archive related to her. This presentation will explore aspects of the investigation of these documents and the writing process of the book, regarding its challenges. How to write a linear history when our ways of storytelling are cyclical? How do we write with our ancestors in a world dominated by a type of historiography that values the "written proof"? How do we manage conflicts regarding different versions of history? How to cope with the personal fears of being in charge of such a big task?

Presenter(s): Karine Narahara

Black Love Matters: Discourses around Black Romance in Online Literary Spaces

For the first time since its inception, in 2024 the New York Times bestseller list had two black romances on its list; Kennedy Ryan's *This Could Be Us* and Tia Williams' *A Love Song for Ricki Wilde*. Amid the rise of social media spaces dedicated to books, the literary world is taking notice of the impact these spaces have on bestseller lists and on the popularity of certain books over others. Additionally, this has enlightened readers to the power they have in determining the fates of books thus, we see the emergence of 'bookfluencers'; social media influencers who provide book-related content. This paper explores the discourses led by bookfluencers around the black romance genre

in online literary spaces that have emerged on TikTok and Instagram. In general, the mainstream and romance publishing world are heavily dominated by white-authored books centring white characters. In recent years, the emergence of social media sub-cultures such as bookstagram (Book community on Instagram) and BookTok (Book community on TikTok) have further heightened the dominance of whiteness in bookish and literary spaces. However, these spaces have also provided platforms for black people and people of colour to forge their niches where non-white readers and authors control the narrative around blackness.

Using netnography, that is, internet ethnography, this paper delves into the perspectives and experiences of black readers and readers of color around black romance. The ways through which black romance serves as a medium for social commentary and for demystifying stereotypes about black love and blackness are revealed. The findings also depict how literature can help to bridge cultural gaps.

Presenter(s): Abena Karikari

Gaming Beyond Death: Black Grieving and Restoration through League of Legends

Video games and death have often gone hand in hand. Rarely has there been a game in which you are not expected to die repeatedly as you slowly progress through its levels or narratives. But death within video games can, at times, be a much more visceral experience. For Black players, in particular, video games can often serve as a harsh reminder that Black bodies are often more valued in death than they are alive. However, video games have also functioned as restoration sites for Black players, providing opportunities to grieve and form intimate relationships within their communities. But how do Black players respond to this duality? How do they find room to grieve when games often benefit from portraying Black death? This chapter engages the juxtaposition of life and death faced by Black players by discussing the experience of a Black player named Dragonite, who found a way to grieve loss using the game League of Legends. In doing so, this chapter demonstrates how Black players retool online games, often steeped in racism, into sites of Black repair and jubilation.

Presenter(s): Akil Fletcher

Ghosts of the Diaspora and Africa: Race in West African Vodun

This presentation examines how West African Vodun is being used by both Afro-diasporic tourists to Benin and Beninese nationals as a means of processing and rectifying the history of Transatlantic slavery. The Beninese state has spent the past thirty years promoting African indigenous religions as something crucial to Benin's history and national identity. This trend began with the democratization processes of the 1990s, which enabled Benin to become one of most democratically stable countries in West Africa, and encouraged President Nicephore Soglo to invest in tourism. During this time, the Ouidah 92 festival expanded to include the Door of No Return monument built by UNESCO on the beach in Ouidah-to commemorate the last view of Africa those enslaved in Dahomey would have had before being sent to the Americas. These heritage-based monuments, built to commemorate slavery and promote the culture of Vodun, are

meant to draw in an Afro-diasporic market of tourism (among other global markets). Benin's current President, Patrice Talon, has continued this decades-long trend of commemorating history. In this talk, the presenter analyzes the ways Afro-diasporic visitors and Beninese work together to incorporate the diaspora within West African Vodun practice as a means of making peace with a turbulent past. The presenter uses excerpts from fieldwork in southern Benin towards this aim.

Presenter(s): Sarah Reynolds

Healing from the Earth: How Black farmers utilize land and food sovereignty to restore health amid racial injustice

Traditional definitions and perspectives of well-being that incorporate physical, mental, emotional, and spiritual states of being are returning to the collective consciousness (hooks, 1996). The COVID-19 pandemic revealed once again the Black population's heightened vulnerability to mental and physical illness rooted in the history of violence, discrimination, and poverty in the United States (CDC, 2020). The byproducts of these long-existing racial inequities in this country, since slavery in the early colonial period, create and self-perpetuate barriers to all forms of well-being. For this reason, groups within the Black community have actively refused to entirely rely on industry by supplying and resourcing ancestral practices to sustain their health as well as coordinating grassroots and mutual aid organizing efforts (Lewis, 2011). One group that has historically advocated for land access and food sovereignty as a means of holistically addressing health disparities is Black farmers.

In this paper, I expanded on existing scholarship to explore how Black farmers have deployed their knowledge and skills to cultivate healing with the Earth and incite growing food as an act of resistance against systemic oppression. This developed a longitudinal ethnographic study that examined how Black farmers use their material and intangible assets to advocate for their communities while providing access to land, fresh foods, and plant medicine. Through the theoretical and practical frameworks of Ecowomanism and Reproductive Justice, I analyzed their historical and modern day advocacy, beliefs, and practices in relationship to the well-being of Black communities. The first stage of the research revealed that agriculture can provide a pathway to bodily and economic autonomy for Black people, thereby fostering collective liberation efforts. Later, I executed ethnographic fieldwork where I lived and/or worked with 4 Black women who farm or steward land to support my preliminary findings. This paper now includes an analysis of this fieldwork and recommendations for the future of this study.

Presentation(s): Anti-Blackness in the queer global city: London and the ruse of anti-racism

"Wondering, how can London gays be so racist in the most multicultural city of the world? I'm having a hard time wrapping my head around it, Jengu." (Florent 32)

As the most diverse city in the world, London is frequently touted as being multicultural, queer friendly, anti-racist and welcoming. Yet, as the quote above, taken from a conversation with Chatgpt, from my interlocutor Florent, a Black French man living in London, reveals, London, and particularly the queer element of the city, is in fact a city ripe with anti-Blackness and exclusionary practices which underscores the enduring legacies of slavery and colonialism. Indeed, as anthropologist John Eade (2000: 1) has averred "[p]opular images of a thriving, multicultural city – the capital of a 'Cool Britannia' – conceal a more complex social world shaped by the traces of empire". In this Flash Presentation I introduce Florent who embodies the hopes and dreams of many Black Europeans and Black British people who move to supposedly diverse cities such as London in search of queer friendly spaces and a place where they can be themselves and find community. Florent's story – and many of my interlocutors like him – however reveals the ever-present legacy of slavery and colonialism which haunts them in the present. Through Florent I show how the myth of the UK and London being a post-racial society is not only that, a myth, but that it also sets people like Florent up for failure as they come to London seeing it as a safe haven, but end up experiencing the city as a queer city rife with anti-Blackness.

Between Harlem and Haiti: From Culture Concept to Folk Style in Zora Neale Hurston & Suzanne Comhaire-Sylvain

This flash presentation makes a case for a comparative reading of contemporaries Zora Neale Hurston (1891-1960) and Suzanne Comhaire-Sylvain (1898-1975), both anthropologists of the Black diaspora in the Americas with an interest in folk literature. Hurston and Comhaire-Sylvain were both active from the Harlem Renaissance (and the Haitian literary mouvement indigéniste) through the era of global decolonization. Using, as Cheryl Walls puts it, the "perspective of the 'folk'" - absorbed during fieldwork in the U.S. South, Haiti, and Jamaica - Hurston strategically suggests that vernacular Black identity rests on the ability (in Brent Hayes Edwards's gloss) "to negotiate the condition of diaspora." Comhaire-Sylvain performs a comparable role in Haiti, translating the literary motives of her father (Georges Sylvain) and brother (Normil Sylvain), both poets and protagonists in Haitian literary indigénisme, into her studies of transatlantic diasporic forms of identity. Both thinkers, I argue, borrow in calculated ways from the romantic Boasian anthropological discourse of cultural continuities or "survivals" and "retentions" from Africa in the Americas. Yet, with a distinctly literary bias, both also signal in their work that the racialized

anthropological motives of romanticized "folk" culture could be repurposed not just to confirm authenticity, but to democratize cultural originality, which Hurston succinctly and memorably redefined as "the modification of ideas." Tracing their redeployment of the culture concept, my presentation identifies a shift in European romanticism's influential theories about culture and language at the moment when they are transformed by these two early Black anthropologists.

Ghosts of Liberation: Situating the Past and Its Heroes in Contemporary Politics and Action

From the Brothers, the Combahee River Collective, and the other warriors of Black activism and liberation, the seeds of social change and contemporary politics in Albany NY were planted. Activists attempted to materialize better conditions for Black and poor residents of New York's capital city. While the legacies remain strong and the stories told, the contemporary struggles illustrate the long road still ahead. This paper examines the activism and community organizing in conjunction and respect to the ghosts of the past sixty years, whose work set the stage for the current wages of change. Nonetheless, while efforts persist, the push for revolutionary and structurally significant change seems to be lacking or at least indicative of changing political rules, as well as the game of socioeconomic progression, resulting in plans like Project 2025 and the policies of a second Trump Administration. These structures of power summon their own ghosts: those of Jim Crow and the centuries of lacking social, economic, and political capital.

Presenter(s): Ramon Lee

Haunts of Black Figures and White Gaze: The Archaeology of Racial Verisimilitude in Nineteenth Century, New York.

This paper critically examines how racial capitalism continues to shape the construction of local heritage in the northeastern United States, particularly through the lens of historic visual culture. Focusing on the prolific nineteenth-century genre paintings of William Sidney Mount, I explore how depictions of Black individuals as jovial musicians have been embedded into regional heritage narratives in coastal New York. While Mount's works are widely celebrated and frequently used by local heritage organizations to interpret the past, these imagined scenes obscure the historical realities of labor exploitation, social marginalization, and racial inequality that characterized the lives of Black residents in the region.

Drawing on archaeological evidence and archival documentation from communities such as Setauket, Long Island, this paper demonstrates that the lives of Black individuals in the nineteenth century were defined less by music and merriment than by survival within systems of racialized labor. Anthropology provides a critical lens through which we can expose these contradictions, illuminating how dominant historical narratives are constructed not only through omission but also through aestheticization.

In the current landscape of heritage preservation, public institutions continue to privilege nostalgic imagery over material evidence, reinforcing sanitized versions of the past that exclude marginalized

voices. This paper argues for a more accountable and inclusive approach to heritage, making one that challenges the authority of artistic representations in shaping collective memory and confronts the unresolved injustices that persist in our cultural narratives.

By reframing these artistic "ghosts" as active agents in the ongoing negotiation of identity, memory, and power, this work contributes to broader conversations about decolonizing heritage, confronting racial injustice, and reimagining the ethical responsibilities of public history.

Identity at the Intersection: New Pathways Through Poetry

Identity at the Intersection: New Pathways Through Poetry is an essay that examines a new interpretation of The New Negro Movement. Coined by philosopher Alain Locke in the early 20th century to characterize African American Life and Culture, I argue that the poetry of contemporary African American poets is a continuum of this cultural phenomena. In this essay, I will illustrate how the New Negro Movement has survived through cotemporary poetry, evidenced in the poetry of several writers.

In his day, Locke was most interested in how African American writers addressed issues of race consciousness, activism, and leadership and I will examine these same themes. From a contemporary, socio-cultural lens, my essay will illustrate how African American poets use their voices in a political climate not dissimilar from the writers of the New Negro Movement, beginning in 1925. I created a course, Rhyme & Reason: African American Poets in Dialogue with Notions of Slavery, Identity and Existence, and in it, I teach about the significance of the New Negro Movement and its relevance in our current social – political landscape.

Identity at the Intersection: New Pathways Through Poetry will not only provide readers with how contemporary poetry mirrors similar issues of the New Negro Movement, but will also provide classroom activities and tools to be used while having difficult conversations. In effect, meeting people where there are, at the intersection of difference.

Keywords: New Negro Movement. Cultural Congruence. Literacy Studies. Race Consciousness.

“An Almost Unheard of Thing”: Spectatorship, Belonging and Ghosts of the Color Line at the Penn Relays Carnival

This paper is a historical ethnographic meditation that takes the annual pilgrimage to Franklin Field in Philadelphia, USA for the Penn Relays Carnival as its compass. As one of the largest events in terms of spectatorship (over 110,000 spectators in the span of 4 days), and oldest (first held in 1895), the Penn Relays Carnival presents a unique opportunity to better understand: how the technological innovations of modernity, fueled by the structures of racial capitalism, have transformed physical, affective and political movement culture.

This paper will give give context to the modern phenomenon by focusing on the creation and foundation of the Penn Relays Carnival. Franklin Field is built on a potter's field, and constructed simultaneously as the Penn Museum. This historical grounding then gives context to the life of an early though forgotten figure of the Carnival: Dr. John Baxter Taylor Jr (1882-1908). Taylor Jr. was the first African-American man to win an Olympic gold medal in the London 1908 Olympics. I trace Taylor's record breaking performances at the Penn Relays Carnival at the secondary and collegiate levels as foreshadowing of his Olympic performance. Taylor's athletic career is tragically cut short at the age of 26 by typhoid pneumonia, and his death sets forth a decades-long search for the next "World's Fastest Quarter Miler." I contextualize Taylor's accomplishments on "demonic grounds" (McKittrick 2006) as shaping early twentieth century athletics; furthermore, his life and legacy asks readers and practitioners to (re)consider our relationship to the project of anthropology by taking seriously the consequence of spectacular performance and hypervisibility on Black life.

"Two lil Cuff": On Gendering Domestic Violence & Ethical Conundrums in the Field

In the Guyanese community, enculturation, "the process by which a child learns his culture" (Kottak, 2025, p. 20), includes songs, stories, proverbs, cultural performances, and even physical discipline. A crucial aspect of enculturation is the strategies for gendering, which shape and reinforce gender roles, gender stereotypes, gender values, and gender activities. Among Guyanese of African descent (hereafter, African Guyanese), the complex of gender values is overtly and covertly demonstrated during kweh-kweh, a pre-wedding ritual that emerged during Slavery (Gibson, 2011). During kweh-kweh, the future bride and groom, their nations (relatives and supporters), and the larger community perform music, dance, food preparations, and diverse ritual activities to reinforce African-centered ethnic values. The crux of these ethnic values is centered on matrimony, which is inherently gendered. Amidst the jollification at kweh-kweh, the magnitude of gendered values is displayed for the entire community's participation and assessment (Richards-Greaves, 2020). In many instances, these gender values reference, normalize, and even reinforce domestic violence, particularly against women. For instance, proverbs like "Married gat teet, e bite like crab" and "Teeth and tongue must bite" inform the community that there will be disharmony in marriage, which may include physical violence. This paper draws on two decades of transnational and comparative ethnographic research among African Guyanese in Guyana and the United States. It examines the role of the kweh-kweh ritual in shaping gender values and reinforcing views on domestic violence in the African Guyanese community. It specifically investigates the dialectical relationship between kweh-kweh ritual performances and African Guyanese gender values.

6422 Beneath the Shroud: H(a)unting Mediums, Messages, and Matters

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Beuregard

Type: Oral Presentation Session

"It's those things lurking at the background of attention, things that we took for granted at the time, which now evoke the past most powerfully." - Mark Fisher, *Ghosts of My Life*

How can varied ethnographic writings uncover everyday, erased ghosts of our pasts, presents, and futures? This panel responds to McLuhan's aphorism that the medium is the message and Mark Fisher's idea that our lives are haunted by 'lost futures', seeking to locate those hauntings in the im/material. Tracing cultural and affectual resonances produced by and expressed through ashes, books, ethnofiction, and interactive art, panelists adopt interdisciplinary approaches to highlight moments when form becomes content. Pulling back the shroud, panelists find and argue how forms, their dynamism, and debris matter in examinations of materiality, temporality, absence, and the emotive work of ethnography. Ash Wednesday's ritual application of ashes renders both the ashes and the human body meaningful in forward- and backwards-looking signification. The aesthetic and archival practice of book collecting speaks to a constant re-encountering and re-making of the past, thereby perpetually changing the emotive ties. Ethnofiction, where the "literary and lived" converge, presents thrilling possibilities for writing emotions into and enlivening ethnographic accounts. Interactive art draws attention to engagement as intertwined with resonance, temporality, and materiality, particularly salient amid discourses about Queerness as an identity of diminishing futures. Like the medium in a seance, these media interactionally and materially make present what is not there.

Presentation(s): You Are the Message: Affect and the Books We Hold Onto

Many are involved in a practice of collecting, curating, and preserving materials; this archival work consists of a constant re-encountering of objects in spaces that matter to us. When famed media scholar Marshall McLuhan wrote that "the medium is the message," to what extent was he considering the affective ties individuals create with their writings, and eventually, books? One must consider what becomes of the material that houses writings once it has been encountered a first time, and then again and again—the message cannot possibly be static. In this sense, the commodity fetishism that follows the archival abandonment of one's print materials may be

negated by the choice to return to what is enshrined by the materiality. Inspired by the conception of affect as "contained and emitted through the solidity, presence, visibility and tangibility of objects," this paper argues that print material must then be responsible for inscribing history, and in some ways, reinterpreting our unique relationships to the past, and what our print will mean to us in the future (Frykman and Frykman, 2016).

Presenter(s): Aïsha Philippe

Heart matters: writing emotions into ethnography

What do we do with emotional ghosts and residues that pervade human encounters? Emotions give texture to our experiences and stories. Yet, anthropologists are trained to separate emotions from observations in crafting ethnographies. Collecting narratives of 'water' from Hong Kong people, I find that love, loss, pride, and sadness are facts of interlocutors' lives, imbued in how they ride waves of changing futures. As a translator, I struggle to resist feelings from flooding my pen. This paper explores how new ways of writing in emotions can enrich and thicken ethnographic descriptions. Particularly, I focus on how ethnofiction – a genre of "narrative(s) nurtured or inspired by lived experience, unfettered from the bonds of the precisely observed" (Falcone, 2020) – can account for sentimental nuances of cultural histories. In *The Songs of Solanda*, anthropologist H. Arlo Nimmo voices, "When at last I tried my hand at fiction, I was able to speak from my reservoir of experiences and to delve into the missing dimensions of my years in the field" (Nimmo, 1994). Tying this to my research, I examine ethnofiction's potential and limits in producing emotionally complex work and the importance of writing emotions out of ethnographic shadows to bring intricacies of our worlds to light.

Presenter(s): Esther Tinhoy Fan

Ashes to Ashes: A Material Semiotic Reading of Ash Wednesday

The application of ashes in the sign of a cross in the Catholic celebration of Ash Wednesday is an act of writing, broadly understood: the gestural creation of a meaningful visual sign on a surface. This produces a text in the medium of ash-on-living-human-body. These texts are mobile, and quickly decay. The ashes imprecisely index the "dust" which the priest reminds recipients they are, while the ashes' origins in palms used in prior rituals adds a further layer of signifying complexity. The mark itself may be understood externally as a marker of identity, and within the in-group as a reminder of sin and death; it gestures forward, to death, and backwards, to a longstanding tradition. I read this text using a material-semiotic approach, attempting to track when and how participants in the orchestration of Ash Wednesday render the ashes meaningful, and in particular, how the past and future are made present in the repetition of the ritual.

Presenter(s): Carl Lewandowski

Textures of Temporality: Interactive Art and Ethnographic Engagement

Jack Halberstam's *In a Queer Time and Place* and Lee Edelman's *No Future: Queer Theory and the Death Drive* are two of many works invested in ideas of Queer time and temporality. Looking at

interactive art through an ethnographic lens, I aim to draw attention to how the process of engagement—in both reception and production—brings to the surface important considerations of resonance, temporality, and materiality in light of literature that positions Queerness as an identity of diminishing futures. Pulling from Félix González-Torres's "Untitled" (Portrait of Ross in L.A.), Ria Brodell's "Butch Heroes," and my own work, this presentation centers the embodied experience as critical to producing ethnographic texture, calling for expansion in multimodal ethnography.

8275 Birds, Monkeys, and Whales: Bridging Nature-Human Divides through Deliberate Interaction

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR D1 (3rd fl)

Type: Roundtable/Town Hall

All around us there are ghosts, species that occur on the fringe - the fringe of our cities, the fringe of where light can no longer penetrate the deep sea, the fringe of human busyness that fails to note our own backyards, and for many, the fringe of survival. And yet, interactions between humans and these animals continue to occur, often deliberate and with important consequences for all involved. As human and other animals' worlds intersect through habitat reduction, invasive species, urbanization, tourism and research, the relationships between species are more entangled than ever, and require closer examination. Our interdisciplinary roundtable focuses on deliberate human relationships with species that exist on these fringes. These encounters foster relationships between humans and animals and serve to challenge peoples' ideas about nature. Through a multispecies lens, our work asks what the implications of these relationships and their continued re-negotiation have for species' survival, our survival, and the expansion of anthropological inquiry into a human-animal realm. By integrating our own ethnographic and species research involving different human-animal interactions, we can explore the creation and breaking down of the nature-culture binary. Our work has taken us to the open Pacific Ocean where passengers aboard whale watching vessels encounter a whole host of species, familiar and unfamiliar, the suburbs of San Antonio, Texas where backyard birds bridge the gap between an abstract, inaccessible nature and residents' daily lives, ecolodges in central-western Belize where tourists encounter wildlife of various desirability from the endangered Yucatán black howler monkeys (*Alouatta pigra*) to butterflies to scorpions, and various fieldschool locations abroad and in the United States where future scientists are trained to study these animals and their interactions. In the Pacific, whale watchers peer down at northern right whale dolphins (*Lissodelphis borealis*) bow-riding their vessel, the dolphins in turn gaze upward - mutual observation that challenges anthropocentric distinctions of watcher and watched. In Texas, residents experience their backyards as nature for the first time through breeding birds and delight even in species derided by natural scientists as invasive and by others as pests such as house sparrows (*Passer domesticus*). In Belize, ecotourists expect a jungle experience and delight at

encountering some wildlife, while other animals are seen as unsavory and unwelcome. In Thailand, students attending a field school are experiencing fieldwork for the first time and experiencing a relationship with their macaque (*Macaca sp.*) study subjects like never before. It is our hope that in bringing attention to these species, the fringe will cease to be so and these ghosts might become a bridge to form the human-animal realm.

1974 Breath of Chaos II – Plant, rhythm, fungus, animal, elemental or word dust ... oh cosmodelia.

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Maurepas (3rd fl)

Type: Oral Presentation Session

Plant pollen and fungi spores stir in the air with word and elemental dust we inhale and partake in the textures we exhale at varying rhythms, intensities, speeds and slowness. We can never tell when such a mixture suddenly overwhelms, takes over, lets something new emerge that perdures. In anthropology we often call these events "telling moments" or "serendipity", typically taking us by surprise. Artaud's "breath of chaos" is a force, a presence or an order that elaborates in a mystery or chaos beyond things; "... this sort of vital hunger, changing, opaque, whose currents sweep across the nerves, and battles with the intelligent principles of the brain. And these principles, in their turn, recharge the pulmonary breath and confer upon it all their powers" (2003[1979]:16). To reach this chaos or what he also calls the Marvelous of conscience, Artaud considers a cactus (Peyotl), to which he was initiated during his stay with the Tarahumara (Rarámuri) in Northwest Mexico, can indicate "where it is and according to which concretions of an atavistically repressed and obstructed breath the Fantastic can give rise and renew its phosphorescence and powdering in consciousness" (ibid: 38). It would be the breath of all poetry which pushes the hand to draw or write, and the same vegetal, by indicating the right way, can diminish the chances of falling into the obscure of a sensation that leaps out. We thus wish to retrieve the ancient Greek meaning of "psyche" which refers to life or its breath, thus expanding this sort of ode to "psychedelia" in as broad a sense as possible which brings it closer to something we might rather call "cosmodelia".

Following Deleuze, sensation is vibration, and when it is in direct contact with a vital power that exceeds every domain and traverses them all, it can feel like a wave passing through us; a unity of the senses (sense as event) which can be felt like a fall or a rise. This vital power he calls rhythm, more profound than vision, hearing, etc. (Deleuze 2002[1981], p.47). "We can seek the unity of rhythm only at the point where rhythm itself plunges into chaos, into the night, at the point where

the differences of level are perpetually and violently mixed" (Ibid.: 44). It is not that order is engulfed by chaos, yet chaos itself, or the power to affirm it which happens to us (Deleuze 1968). It is irrational and more powerful because of it; "a wave in the mind, a rhythm far deeper than words, that one must recapture and set working, find words to fit" (Woolf 1926 in Le Guin 2004: 1). This might modify a well anchored idea that 'Any classification is superior to chaos...' (Lévi-Strauss 1962: 24), since it brings us closer to what is going on in experience relevant for anthropology. We invite contributions done in a single breath, a wind, a performance, stretching out from a singular encounter with a "ghost", attending to rhythms without measure, or in other words to the potentials of life to renew itself.

Presentation(s): Everything the body gives' : Capoeira Angola as a site where embodied chaos generates new

horizons

Waves crash on the shoreline in Southern Bahia. The beat of a conga gives the bass for the bateria. A capoeira roda forms on the beach. The players bow, readying themselves for the game. The master sets the rhythm with a slow, friendly song. The players know it. Their bodies know it. Capoeira embodies the breath of chaos as per Artaud—an emergent form of consciousness and life-making that defies linear histories, generating unpredictable relations through movement and play. Drawing on the sand, the players dance to the music, fully attuned to their opponent, moving and being moved. The sensation elates a joyful attention to the environment. Experienced players shift their positions, angling to unbalance their opponent. The power of rhythm is embodied in this martial art, which, as the first master and philosopher of Capoeira Angola, Mestre Pastinha, said, is everything the mouth eats, everything the body gives. As a Capoeirista and a PhD student in Anthropology, I explore how life emerges unpredictably through this ancestral dance. This work engages Capoeira as both a lived practice and a site of theoretical inquiry into rhythm, resistance, and emergence; a site where embodied chaos generates alternative futures and reconfigures the horizons of possibility.

Presenter(s): Paulo Barreiro Sanjines

Breathing the life flows through chaos: reconfiguring the effectiveness of five-finger breathing in Mental Health First Aid

This paper discusses the use of five-finger breathing to soothe the so-called hyperventilation in panic attacks at a community mental health charity in Southeast England. When a service user

broke out into choking, trembling, and shaking, a volunteer encouraged him to breathe in and out through the up-and-down movement of her index finger. The moving finger as the 'intercorporeal hinge' (Csordas 2008) went along the contour of the palm and coordinated the attention and breath of everyone in presence. While the ups and downs of the fingertip choreographed the rhythm of breaths, the emergence and resolution of the crisis, actualising the peaks and lows of life, composed the 'sonorous sensations' (Laplante 2020) of breathing.

Moving away from the neuropsychological explanations of breath interventions, this paper presents a sensory-aesthetic analysis of the embodied practice (Ingold 2020) of five-finger breathing. Drawing on a medical anthropological interpretation of Samuel Beckett (1969)'s 30-second play, 'Breath', I suggest that the practice is intrinsically effective because it alleviates suffering and enables possibilities to reconfigure the implications and impacts of chaos in illness conditions. Instead of projecting chaos as an unforeseeable misfortune, the practice makes it an ineluctable prompt that evokes the creation of temporal, orientational anchors, assisting the body and self to navigate the life flows.

Presenter(s): Yuxin Peng

Emotion, Movement, the Wave, and Being Carried Away by the Trame: An Alternative Therapeutic Practice Inspired by Western Alchemy

What is this emotional "energy" that tramists speak of? Assimilation, direction, redirection, and accumulation—borrows from the vocabulary of electricity, or from thermal energy. In this way, the Trame draws upon fundamental physics to conceptualise the management of emotion, treating it as energy in its most rudimentary sense. Informed by the thermodynamics of energy, emotion sits at the very core of tramists' representations of the body. Yet, emotion through etymology has two possible Latin roots: *emovere*, from popular Latin, meaning "to shake" or "to stir up," and *motio*, from classical Latin, meaning simply "to move." Together, they suggest an essential dynamic: to set in motion—or, more precisely, of being moved. "Immobility, but not immobilism," they might say. The aim is not resistance but a yielding that remains intact: like a rock struck by a bolt of lightning—shattering upon impact, whereas a more conductive material might channel the energy without being broken by it. The lexicon of waves and currents of the tramists—the rolling swell of the sea, the propagation of movement, the vessel that rides the tide—we uncover a further layer of meaning in the metaphors employed by tramists. The ship, its captain, and its course all serve as images of navigation—guidance, governance, direction. It is through this interplay of borrowed language and metaphor that tramists articulate what it means to skilfully conduct a Trame.

Presenter(s): Misha Schroetter

Sensing Place: Subterranean Soundings and the Vibratory Life of Tundra Ecologies

In the subarctic Yukon, where black spruce thins into dwarf birch and alpine sedge, I've been attuning to the subtle vibratory worlds of mosses, lichens, and tundra soils. These organisms do not call out but remain layered, spongy, and responsive. They are sensitive to subtle shifts in moisture,

temperature, and atmospheric alchemies of distant places; they store water, insulate soils, and buffer ground against change. My work traces how sound travels through their porous bodies. Through sensory fieldwork—deep listening, contact mic recording, breath pacing, and slow movement—I engage with these ecologies as more than backdrop: they are participants in the unfolding dynamics of climate and time. These soundings are not data points, but encounters—momentary alignments between body, weather, and terrain. Listening becomes a way to register shifting relations between atmosphere and ground, between sensing and being sensed. I draw attention to the overlooked and underfoot and ask what it means to dwell with a landscape. These are not simply sites of study, but sites of relation—where sound, touch, and movement open ways of knowing attuned to slowness, fragility, and persistence. Listening-with becomes a method to register the ephemeral as much as the enduring, the barely perceptible tensions that mark a landscape in transformation.

With deep gratitude I acknowledge that this work takes place on the Traditional Territory of the Tr'ondëk Hwëch'in First Nation

Presenter(s): Maria Michails

Anthropological Awakening: From Chaos to Consciousness of the modes and worlds of Inhabiting?

The anthropological endeavor sometimes emerges from an unprecedented relationship with one's living environment, a sudden surge of awareness, or an eruption from chaos, thus revealing a new mode and world of existence. The realities of "inhabiting" and the "ecumene," where human existence unfold, remain in fleeting relations, constantly being reshaped. Such a dynamic sketches an ethnographic trajectory. As Roseline Lambert (2020) points out, there are "various places to inhabit when conducting ethnography." From this perspective, Bruno Latour's (2007) call to change society to remake sociology becomes an invitation to transform one's habitat to reinvent anthropology. How can the transition from one mode and world of inhabiting to another, induce an anthropological awakening? Does awakening or renewing one's perspective on the ecumene signify an exit from chaos toward a pre-existing or perpetually transformed order? How is the anthropologist's sensoriality engaged in apprehending his world?

Through a reflexive return and introspective reflection, this study examines my interest in trance in vodun in Benin within a familiar environment that suddenly provoked in me a new questioning. It explores that precise moment when the self-evident gives way to inquiry, when reality becomes problematic. It examines the experience of chaos and sheds light on the multiple forms of connecting to one's own ecumene, that oscillates between disappearance and reappearance, depending on one's gaze

Presentation(s): A Tale of Two Readings: What Historical Marginalia Reveals and Conceals

The Tinker Swiss Cottage Museum in Rockford, Illinois, houses an extensive collection of over 800 books owned by the Tinker family (1836-1942), many of which contain marginalia-notes, underlining, drawings, and other markings left by their original readers. These annotations serve as a bridge between past and present, offering a unique lens into the personal thoughts, intellectual engagements, and historical consciousness of the Tinker family and their broader social world. This presentation examines how marginalia function as historical artifacts, revealing previously unrecorded narratives about life at the Cottage, regional events in Rockford, and shifting cultural and political ideologies of the 19th and early 20th centuries.

Applying an interdisciplinary approach grounded in material culture studies, historical anthropology, and literary analysis, this research explores how these handwritten traces complicate and enrich our understanding of Victorian life. The concept of the "anthropology of absence" is useful in the examination of not only the content of these annotations but also what is omitted or left unsaid. By engaging with these marginal notes, we uncover the intellectual and social networks that shaped the Tinker family's world, ultimately repositioning the museum's book collection as an active participant in constructing local historical narratives. This study highlights the potential of marginalia as ghostly remnants of the past, whispering stories that might otherwise remain unheard.

Presenter(s): Abigail Buchanan

Digital Lives, Physical Impacts: Community and Capital in Video Games

Video games have become a globally prevalent part of life and a form of emergent culture. My research examines video game culture to ask how players, creators and others in gaming interact with video games in ways that challenge hegemonic narratives regarding race and gender. For example, prior research or general news might tell us that video games are a space of play dominated by white masculinity. In asking how gamers challenge those narratives, I seek to offer analysis and discussion of how gamers have built their own understandings of community. I show how gamers have developed communities through and around forms of social, cultural, and economic capital that are deeply rooted in their identity of what it means to be a gamer. Furthermore, I show that despite stemming from forms of capital, these communities of digital life do not need to have the same uncaring or oppressive nature as capitalism, under which I and the

gamer-interlocutors I work with physically exist. I show that these communities support diverse representation in digital play and physical presence, while also providing care to the self and to each other in ways that have tangible impacts. Data for this research has been collected as part of ongoing dissertation work involving digital and physical participant observation, narrative analysis, surveys, and interviews.

Presenter(s): Jonathan Muller

Ghosts of the Art World: Independent Artists and the Struggle for Visibility Beyond Institutional Frameworks

This ethnography explores Golden Belt Arts, a collaborative art space in Durham, North Carolina, where independent artists create and showcase their work without the representation of galleries, agencies, or corporate sponsorship. Through five months of participant observation and in-depth interviews, this study examines how these "ghosts" of the art world navigate creative expression, financial sustainability, and public visibility outside the dominant circuits of the commercial art market. Unlike artists in global art capitals like New York City, who often operate within established networks of galleries and collectors, these independent creators work at the margins, forging alternative paths to recognition and economic survival. By centering artists who are both present in and invisible to the broader art economy, this study challenges traditional hierarchies of artistic legitimacy and offers insights into the complexities of sustaining a creative practice beyond institutional frameworks.

Presenter(s): Jiantong Zhang

Photographic preservation of the San Marcos City Cemetery: Documenting historic grave markers in Central Texas

Historical cemeteries provide invaluable information about the cultural landscapes of the past. Historians, archaeologists, and genealogists rely on cemeteries and their materials to conduct research that benefits the descendants of interred individuals. Graveyards create a link between the people of the past and the people of the modern day, a visual bridge that unites communities across centuries. The San Marcos City Cemetery serves Hays County, Texas in the same way. San Martians are connected to their cultural heritage and the people who once shared it through the continued preservation of their graveyards and cemeteries. In the digital age, photography has proven to be an immeasurably useful tool in preserving cultural materials, and cemeteries are no different. Systematic photographic records of cemeteries can preserve their anthropological data even if they are damaged by natural factors like weathering and erosion, or by sociopolitical factors.

While surveys have been undertaken in this graveyard before by Hays County residents to record the tombstones' inscriptions (Walling, 1986), no complete photographic record of the cemetery's markers has been made. This presentation will cover recent digital documentation efforts of the San Marcos City Cemetery's history grave markers and explore their potential for further inquiry into the fields of art history, archaeology, and visual anthropology. It is the presenter's hope that opening a dialogue about grave marker preservation and its role in connecting communities with their

cultural heritage will inspire a reexamination of the significance of cemeteries for their communities in the broader professional anthropological community.

Publication Trends in Forensic Biohistory: Spectacular Subjects and Contested Bodies

Over the last two decades there seems to have been an increase in what can be called historical forensic cases in popular media, cases in which specialists were called on to provide a positive identification of an historical personage, characterize some facet of their life or death, or using past remains to characterize aspects of an historical incident. These have ranged from the internationally sensational (Richard III) to the regionally relevant (Pedro de Corpa, a martyred priest from Georgia). This type of work has been called forensic biohistory, and over the last decade we have attempted to explore and define the nature of forensic biohistory as a framework for engaging past bodies. Here we briefly characterize forensic biohistory and present evidence that publication on these cases has grown dramatically over the last 50 years, with publications doubling roughly each decade since the 1990s. We offer reasons to account for this increase, and suggest that it is in part attributable to the use of specular subjects and contested bodies in popular and social media to attract attention in an online information economy.

Silenced Provenance: Luristan Bronzes and Knowledge Production at the Museum of Anthropology

This project traces the provenance of nine Luristan bronzes held at the Museum of Anthropology, University of British Columbia, examining how these Iron Age objects made their way from western Iran into a Canadian museum collection. Luristan bronzes, celebrated for their intricate designs yet shadowed by a history of looting and unprovenanced trade, embody the complex entanglement of colonial and imperial archaeology, fragmentary documentation and the art market. Often acquired with little or no contextual information, these objects raise important questions about the ethics of collecting and the responsibilities of institutions that house them. Drawing on acquisition records, institutional correspondence, and archival research, this study follows the journeys of these nine objects and considers how decisions about collecting were made, recorded, and legitimized. Using a "trace ethnography" approach, the research explores how museums construct authority and knowledge through practices such as acquisition, classification, and display. By revisiting these processes, the project seeks not only to recover lost or obscured histories, but also to highlight the silences and gaps that continue to shape our understanding of such collections today. Ultimately, this work contributes to broader conversations around decolonizing museums, emphasizing the importance of transparency, accountability, and critical reflection in how institutions engage with the cultural heritage in their care.

Presentation(s): A Tainted Opportunity: How Palestinian Jerusalemite Development Workers Navigate the Occupation

What does it mean for a Palestinian to work for an Israeli development project? Based on ethnographic research conducted in Jerusalem, this paper introduces the analytical framework of a tainted opportunity to describe how Palestinian workers understand and navigate their roles within Israeli-led development schemes directed at East Jerusalem communities.

In light of Israel's Occupation, resulting in an ongoing catastrophe for the Palestinian people, my interlocutors navigate work as a channel for doing and undoing of political realities. A tainted opportunity, as I define it in my research, is a consciously constructed, calculated engagement with an uncomfortable, but meaningful, task. It is about seizing of action potential despite deterring conditions, while utilising a platform that is viewed by my Palestinian interlocutors as morally-stained, polluted, or impure. For my interlocutors, taking a tainted opportunity means existing despite the coercive challenges attached to acting from within such a compromised position. In this paper, I explore ethnographically the ways in which Palestinian workers realise a tainted opportunity beyond compromise, and define through it their role and responsibilities towards a transformative moment shaping their collective future.

To make sense of the development project as a tainted opportunity, my interlocutors creatively imbue their daily labour with political meaning. Through these creative acts, they challenge, stretch, and renegotiate the boundaries between East Jerusalem's Palestinian communities and the Israeli occupying state. Viewing Palestinian workers' role through the lens of a tainted opportunity, allows for challenging the binary discourse in critical Palestinian scholarship, which constructs and analyses Palestinians as either collaborators or resisters. Cross-thinking political, economic, and psychological subjectivities, this paper considers how socio-economic and political transformations emerge through the practices of those actively involved in shaping them. As an anthropological lens, a tainted opportunity, complicates the dichotomies of agency versus victimhood, and altruism versus selfishness, often limiting our understanding of development actors.

'Working for the Occupation,' my interlocutors are often judged for enabling, producing, maintaining, or normalising the development apparatus, widely viewed as colonial. Yet their conscious decision to take such a tainted opportunity does not reflect surrender, but a more complicated understanding of their positionality. From their brokerage position, and in their very

being, they not only challenge the logic of the development platform, but also participate in re-forming the transformative moment imposed on their people.

An intersection of the internal conflict of the Western zeitgeist and Anthropology: disappearing Barbudans through globalisation and profit.

The Prime Minister of Great Britain Harold Macmillan's "Winds of Change" speech, delivered to both houses of Parliament in Cape Town, South Africa, on 3 February 1960, represented for many and continues to represent a seminal point at which Europe and the Colonial Masters finally acknowledged and accepted the inevitability of decolonisation. However, the question for two siblings from a tiny island in the Leeward Islands that were colonial subjects without the protection of citizens was: Are these Trade Winds or Hurricane-force winds?

Macmillan's speech was a masterful detailing of a future as seen by the oppressor for the Barbudan brother and sister who tasked themselves, twelve years later, with the authorship of the Barbuda Local Government Act, especially as his speech elegantly outlined the basis on which identity, trade, politics, and governance was to be based for the newly independent peoples of the African continent going forward-and by extension, the diaspora. The enticing element of this speech was the adaptation of a sentence from Edmund Burke's "eternal society."

The 2017 category 5 Hurricane, Irma, blew through Barbuda and swept away "the presence of partnership not only between those who are living, but between those who are living, those who are dead, and those who are to be born." not only changing the governance and shared identity of the Barbudan people, but also giving space for others to initiate historical revisionism and negationism. Edward Said cautioned that knowledge is about human society, historical knowledge; therefore, the interpretation of this knowledge, who is interpreting, how the interpretation is conducted, for whom and in what historical moment that interpretation occurs. In short, change came to Barbuda not as a result of revolt against political oppression, but instead by globalists, opportunists and neocolonialists that rode in on the tail of a hurricane that effectively wiped out that which was, and that which was to be.

Key words: Barbuda, "Winds of Change", globalisation, historical revisionism, historical negationism, neocolonialist, Edmund Burke, identity, governance, Edward W. Said

Anthropology of Diplomacy

Anthropology of Diplomacy

This paper emphasizes the importance of an anthropological perspective in diplomatic practice and in the study of international relations. Anthropologists facilitate cross-cultural understanding and promote interculturality. Doesn't this suggest a connection with diplomacy, which has long held a universal character and is not confined to a purely Western context? Some anthropologists

have explored this idea (Magnarella, 1983; Eguiguren, 1987; Latour, 2007; De Vienne & Nahum, 2013; Neumann, 2020).

An anthropological approach to international relations is especially relevant in a globalized world where states and cultures coexist-sometimes uneasily-and where ethnic issues are increasingly significant. We must also consider the role anthropology can play in diplomacy, as both fields share a strong interest in understanding other cultures and in mediation and negotiation.

I will examine the concept of diplomatic culture, which initially developed among states and their representatives, as well as with international organizations, but has since expanded to include multinational corporations, NGOs, non-state actors, and others. In defining what diplomatic culture entails, it is essential to include the ethnography of multilateralism and to promote the idea of an anthropological diplomacy-an approach that is urgently needed in today's fragmented and complex international system.

Avenging the Ghosts of Empire: Transnational Student Mobility in the Post-Colonial Plural Society of Malaysia

This paper analyzes the transnational mobility of non-elite, middle-class international students from the Global South to the post-colonial plural society of Malaysia. While Malaysia actively promotes itself as an international education hub by hosting branch campuses of leading Western universities, this ethnographic study highlights the underexplored significance of Asian international universities in improving access, facilitating social mobility and fostering professional development. The three case study institutions examined partner with an international Islamic organization, a Chinese research university, and a private Indian university. These institutions offer affordable international education that is sensitive to non-western intellectual heritages and ethno-religious consciousness, while proactively cultivating ties with national and regional economic networks and opportunities.

Malaysia is a post-colonial modern nation-state that emerged from the "plural society" context (Furnivall, 1948). Its multiethnic social construction—a legacy of the British Empire long considered a baggage for social cohesion—now serves as a strategic asset for strengthening international outreach in the era of globalization. International students' accounts of their migratory trajectories and aspirations illustrate that Asian international universities are becoming as instruments of grassroots globalization (Appadurai 2001), challenging dominant, elite-driven narratives of international education. These institutions may also promote equity in global student mobility, which continues to be characterized not only by rapid expansion but also by uneven development across different regions of the world.

Presenter(s): Mayumi Ishikawa

Diplomacy Under Pressure: Narrating Elected States' Performance on the UN Security Council

This paper examines how elected member states of the United Nations Security Council (UNSC) narrate their own performance and navigate both formal and informal pathways to influence before, during, and after their tenure. Securing a non-permanent seat on the UNSC is widely regarded as a major diplomatic achievement, often justified by promises of increased international recognition, status enhancement, and the ability to shape global governance. However, while elected members invest significant political, diplomatic, and economic resources in their campaigns, their actual ability to influence the Council's agenda remains constrained by institutional structures, working procedures, and the dominance of the permanent members. Drawing on existing literature and empirical cases, this study explores how elected states conceptualize and measure a "successful" term, balancing their aspirations for impact with the practical realities of UNSC decision-making. It examines the strategies states employ to navigate the Council's power dynamics, advance national priorities, and contribute to international peace and security. Additionally, it considers how serving on the Council can generate long-term benefits, including enhanced diplomatic competencies and increased credibility in multilateral settings. By analyzing the interplay between expectations, structural limitations, and available pathways to influence, this paper provides new insights into the role and agency of elected members within the UNSC and the extent to which they can leave a lasting imprint on its decision-making processes.

Sojourners Seeking Themselves: Identities and Experiences of Pakistani Women Doctoral Students in the United States

In recent decades, the number of women pursuing higher education abroad has increased, with the United States remaining the most preferred destination (Blackburn, 2023; Forbush & Foucault-Welles, 2016; Stewart-Rozema & Pratts, 2022). However, while this scenario appears mutually beneficial for both the U.S. and these women students, it fails to capture the complexity of their academic journeys and the myriad challenges and opportunities they encounter, which vary based on their cultural, religious, and socioeconomic backgrounds and countries of origin.

Since the early 2000s, Pakistan Higher Education Commission (HEC) has aligned its vision with the global agenda of empowering women through education to contribute to national economic prosperity and modernization. As a result, Pakistani women are encouraged to pursue higher education programs (Rockinson-Szapkiw et al., 2017). They arrive in the U.S. with academic, cultural, and religious capital, along with a sense of privilege and responsibility, only to be met with various adjustment challenges and prevalent mindsets about Muslim women from the Global South. This context underscores the need to explore the tensions between the aspirations of these students and their lived experiences, shaped by their cultural and social capital, the colonial history embedded in their Pakistani identities and local mindsets.

This study, therefore, examines the academic journeys of six Pakistani, women, Muslim doctoral students studying in the U.S. to accentuate how they perceive their identities in the current context,

what coping mechanisms they employ, and how they envision their futures considering their present circumstances. It uses two frameworks to analyze their stories, aiming to uncover the institutional narratives that hinder or support their success, as micro (personal) experiences and macro (institutional) narratives are inseparable (Souto-Manning, 2014). The first framework is Anzaldúa's borderlands theory, which posits that borderlands exist not only at the margins of physical borders but also at the intersections of cultures, races, and socioeconomic classes (Anzaldúa, 1987). These students experience the in-betweenness of their old and new locations, identities, norms, privileges, and challenges, and the aspirations they bring with them versus their actual experiences. The second is Crenshaw's intersectionality theory, which recognizes that people's lives are deeply rooted in 'multiple interconnected social categories' embedded within normative structural inequalities (Crenshaw, 1991). The interplay of social markers like race, religion, nationality, academics, and gender shapes discrimination and privilege in participants' lives. Rich narrative data (Anderson, 2000) from videos, artifact elicitation, and interviews can inform policies by revealing how students in similar situations mobilize empowerment, resilience, and identity in the US.

Subjective Spaces and Religious Charisma: A Historical Anthropological Study of Transnational Paiwan during the Third Taiwan Strait Crisis

This paper traces the migration history and adaptive practices of Paiwan migrants from Taiwan to Belize, Central America, with particular attention to a migration wave that began before the 1995 Third Taiwan Strait Crisis. The Paiwan, one of Taiwan's Indigenous peoples, sought new economic, social, and religious opportunities abroad. Belize emerged as a distinctive destination shaped by local colonial histories and contemporary geopolitical dynamics. Over the past three decades, the Paiwan community in Belize has negotiated the challenges of cultural preservation, religious transformation, and social integration within a multiethnic environment. This research draws upon ethnographic fieldwork conducted in both Taiwan and Belize, including participant observation, interviews, and archival research, to examine how the Paiwan community has navigated processes of belonging and identity-making in diaspora. A central institution in this migration experience is establishing a Paiwan Christian church, which serves as a place of worship and a space for cultural continuity, social cohesion, and cross-cultural engagement. While rooted in Paiwan spiritual traditions, this church has been reshaped by Belizean Christian practices, resulting in a dynamic religious hybridity that reflects both adaptation and resilience. Through religious gatherings, language classes, community events, and shared agricultural activities, the Paiwan church has functioned as a nexus for community building and a platform for engaging with local Maya populations. Agricultural collaboration and shared cultural practices have fostered mutual respect and created opportunities for intercultural learning, challenging assumptions of Indigenous isolation and revealing the agency of Indigenous migrants in shaping their diasporic experiences.

This study argues that the Paiwan migration to Belize offers a significant case for understanding how Indigenous transnationalism operates within the interconnected histories of settler

colonialism, Christian evangelism, and global migration. It highlights how migration reshapes Indigenous identity and place-making strategies, with the Paiwan community developing a unique sense of belonging that draws simultaneously from their ancestral roots and new social environment. The research underscores the resilience and adaptability of Indigenous communities in diaspora, illustrating how cultural negotiation, religious transformation, and intercultural alliances contribute to sustaining Indigenous identities in transnational contexts. By situating the Paiwan experience within broader anthropological debates on indigeneity, migration, religious syncretism, and diaspora, this paper contributes to a growing body of scholarship on Indigenous mobility and transnational belonging. It calls attention to how Indigenous migrants actively engage in processes of cultural exchange, religious innovation, and community formation beyond national boundaries.

Vale la pena: Tracing Migrant and Non-migrant Youth's Aspirations across Colombia and the United States

This work adds to the growing literature on migrant youth and transnationalism within the field of anthropology of education. This project focuses on the experiences of adolescent youth (15 - 25 years old) who live in and migrate from Lomas Verdes, Colombia, to Cold Coast, Massachusetts*. Tracing circulating ideas of success and opportunity across borders, I examine how young people develop aspirations around work, school, and migration.

To do this, I draw on 3 months of fieldwork from an ongoing ethnographic project in Cold Coast, Massachusetts, and Lomas Verdes, Colombia, two communities connected by migration since the 1970s. There are currently 20,000 residents of Lomas Verdes and 6,000 people from Lomas Verdes living in Cold Coast. In 2021, driven by the COVID-19 pandemic, the number of young people migrating to Cold Coast increased. From this, data focuses on the work, school, and migration experiences of young people from Lomas Verdes who (1) stay in Lomas Verdes (2) migrate to Cold Coast. This study uses semi-structured interviews and participant observations in schools to answer the question: How do migrant and non-migrant youth develop their work, school, and migratory aspirations?

Within the development of aspirations, I focus on young people's meaning-making. Young people across Cold Coast and Lomas Verdes maintain and change their aspirations in response to the people, institutions, and opportunities around them (Appadurai 2004). Reflecting the AAA theme of Ghosts, youth's meaning-making is shaped by lingering aspirations from prior generations and the ghosts of paths not taken. I focus on how youth locate aspirations in Lomas Verdes or Cold Coast and draw on scholars of migration and anthropology of education (Nichols 2023; Canizales 2024; Bellino 2017; Dyrness 2012) to compare how migrant and non-migrant youth in Lomas Verdes create and change their aspirations to work, study, and migrate.

1881 Cultivating Space for the Experimental

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR A3 (3rd fl)

Type: Roundtable/Town Hall

The recently formed Experiential Ethnography Studio at Washington University in St. Louis joins a rich and growing tradition of experimental ethnography labs and collectives across universities. In 2021, a number of anthropologists involved in these spaces organized the panel "Critical Research Spaces," which led to the formation of the EMERGE Matrix for Ethnographic Collaboration and Practice. This roundtable aims to continue the spirit of this conversation and ongoing collaborative effort to consider: How do we maintain physical and intellectual space for experimental, sensory, and collaborative ethnographic practice? Where do the experimental, the sensory, and the collaborative productively overlap, and where are they in tension? How do we cultivate these methodologies and their sensibilities in ourselves and scholars at every stage of their careers? How have our efforts resonated with our research communities, and how can we push our collaborations further? Drawing from experience in spaces including the Collaborative + Experimental Ethnography Lab, the Ethnographic Design Collaborative, the Bureau for Experimental Ethnography, University of Toronto's Ethnography Lab, USC's Ethnography Studio, the Concordia Ethnography Lab, and the Laboratory of Speculative Ethnology, this roundtable seeks to offer a frank conversation about the pragmatic dimensions of building and growing experimental labs. At the same time, we will collectively explore the dreams and motivations that compel us to continue interrogating the history of the discipline and push the boundaries of ethnographic practice. We hope this conversation will facilitate continued collaboration among our collectives and inspire others to begin exploring building analogous spaces at their institutions.

3452 Displacement, Captivity, and Plantation Hegemony in North America

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Studio 9

Type: Oral Presentation Session

Plantations are not relics of the past, and the effects of plantation labor regimes extend far beyond any particular crop, region, or nation and even beyond their origins in the agrarian world. Plantation societies organize social life around profit-based institutions of commodity production and political, territorial, and military control over land and human labor, imposing state-race orders with planetary and devastating effects. In the current context of intensifying international conflict over who will control transnational flows of migrant labor and capital, combined with employer uncertainty about looming labor shortages and the tentative rise of worker militancy, we ask: What are the legacies, continuities, and emerging expressions of North American plantation economies? As migrant laborers are being simultaneously captured and shunned, who will do the hyper-exploited work in the diverse fields of the North American plantation system, and how will that labor be managed? What mechanisms do today's plantation capitalists use to order, divide, define, and deploy their labor forces? How do workers confront and disobey these mechanisms of control? How do employers shop around and mix different workforces, including undocumented, citizen, and temporary contract 'guest' laborers, as they seek additional profit and advantage?

In this panel, we will examine the history, present, and possible futures of North American plantation capitalism, drawing on frameworks of analysis and praxis from the Black radical tradition and Mesoamerican traditions of struggle against the fincas and haciendas. We will explore how multi-sited ethnographic and multidisciplinary research can support anthropological praxis- that is, both our understanding of how transnational labor management is evolving in real-time and the efforts of workers and organizers to resist exploitation. We go beyond conceptual borders and methodological nationalism and bridge theoretical discussions about plantations, large estates, factories in the fields, haciendas, fincas, agromaquilas, and campos agrícolas, as well as the adjacent industries such as landscaping, meatpacking, and even services and construction, where plantation logics continue to organize life and labor. The session comprises interdisciplinary papers that approach these questions through lenses of environmental justice, critical agrarian studies, Black radicalism, Marxism, feminist theory, abolitionist perspectives, and other critical

approaches. The participants are a group of scholars from diverse fields, geographic regions, and career stages.

Presentation(s): “We Wouldn’t Survive Without Them”: The Rhetoric of Crisis in the Dairy Industry’s Push for a Year-Round Guest Worker Program

The Idaho Dairy Industry has been leading the charge to expand the H-2A visa program to include year-round employment. Idaho dairy generates over \$10 billion in total sales each year. It's an industry that currently relies heavily on undocumented workers. Drawing upon fears of mass deportation of undocumented laborers, the dairy industry seeks to capitalize on the moment to lobby for a year-round visa program. If a year-round visa program is established, then to what extent does the industry seek to maintain a plantation-style regime? This paper aims to explore how the dairy industry seeks to order, divide, define, and deploy their labor forces. Through media discourse analysis, I explore how the dairy industry seeks to develop a different workforce, and document how they discuss the ways in which they frame the argument that temporary contract 'guest' laborers will lead to greater profit and advantage. I draw upon local and national media reports to explore the language utilized in their quest for a year-round guest-worker visa, with attention to language of fear and imminent collapse of the dairy industry, paralleling language used to justify slavery in the American South.

Ghost Workers in Canada: Mexican SAWP workers and translational bureaucratic inscription

This paper explores how actions taken by Mexican and Canadian state bureaucracies shape the lives of Mexican men hired in the Canadian Seasonal Agricultural Worker Program (SAWP) during the intervals between farm work seasons. These actions influence their perceptions of aging once they no longer travel to Canada and appear as "goths" for both states. The paper emphasizes the importance of pensions as a critical component of the social wage, highlighting their role in the broader context of social reproduction for these international farm workers as they enter old age.

Presenter(s): Etni Zoe Castell Roldan

The Rise (and Fall?) of the Central American Ghost Visas: Spectral Plantation Capitalism and the State in 21st Century Captive Labor Programs

Beginning with a 2019 deal between the Trump White House and the Guatemalan Giammattei administration, and accelerating through the Biden (US), Lopez Obrador (Mexican) and Arevalo

(Guatemalan) administrations, promises of expanding Central Americans' access to H2 temporary contract labor programs were a central part of multilateral projects to contain, capture, and control migrant workers traveling and laboring in the North American migrant corridor. However, the number and pathways of these visas were often vague and contradictory- revealing fundamental contradictions between the role of private employers and state actors in the management of US captive labor programs. I explore the rise and (possible) fall of what I call the Central American "ghost" visas, based on analysis of public statements about the program, visits with H2 workers in the United States, and interviews with NGO's and recruiters struggling for influence over the H2 expansion in Guatemala.

Presenter(s): Tristan Call

In the Name of Farmworkers. The Emerging Agrarian Nonprofit Industrial Complex in Mexico

The expansion of transnational chains of agricultural commodities and laborers between the US and Mexico has brought numerous changes to the recruitment, labor, and living conditions of Mexico's migrant farmworker population. As both the state and private industry promote market "self-regulation," a plethora of certification programs marking food a "fair" and "ethically" produced have flourished. In this process, new actors have emerged between plantations and distributors. These actors, from NGOs to corporate-sponsored academic research projects, are part of what Hernandez-Leon and Sandoval call the "emerging migration industry and infrastructure paradigm." In this paradigm, actors claiming to represent farmworkers closely collaborate with corporations to guide labor relations and recruitment processes. A notable absence are the farmworkers and their organizations. Who speaks for migrant farmworkers? Lacking effective unions and political representation, a middle sector claims to represent their interests and guide private and public policy. Based on two research projects in agro-industrial enclaves of northwestern Mexico (San Quintin and Hermosillo), this paper discusses how the corporate hegemony is not only seeking control of the mobility and daily lives of workers but also the research and activist agendas in Mexico with detrimental effects on migrant farmworkers.

Co-author(s): James Daria

The Rise of the H-2A Visa Program in the Pacific Northwest: The Manufacturing of a Labor Shortage and Displacement of Local Farmworker Communities

The H-2A Visa Program has been expanding fast across the US, and in Washington state, it has grown by over 1,000% in the last three years alone. Currently, H-2A migrant workers represent 30% of the agricultural workforce in the state. I explore the key drivers and actors that are driving the fast expansion of the H-2A visa program across the state of Washington, with a particular focus on the role of grower associations, labor contractors, and labor recruiters, in creating the web of migration and labor regimes that is manipulating the agricultural labor market to manufacture a labor shortage that is displacing local farmworkers across the state. I build on scholar Mai Ngai (2004) work that argues that guest workers are "imported colonialism" an agrarian proletariat that is

created as subordinated "racialized foreign bodies" to work as captive laborers in the United States, as a regulated and restricted measure to restrict and control Mexican male bodies entering and leaving the United States. In order to build a controlled labor force as they forcibly displace organized and unionized local farmworkers from the agricultural labor market. I explore the manipulation tactics of the labor market by these actors to track and map the displacement of local farmworkers who are being displaced and replaced by the H-2A visa program.

Presenter(s): Rosa Navarro

4631 Ethnographic Lack: Studying Ghosts, Lacunae, and Absences

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR C3 (3rd fl)

Type: Roundtable/Town Hall

In Jonathan Lethem's satirical science fiction novel *As She Climbed Across the Table* (1997), a group of physicists become obsessed with understanding the nature of an empty presence accidentally created by a particle collider, naming it Lack. One of the physicists even falls in love with Lack, to the dismay of her anthropologist boyfriend who struggles to understand the attraction of the invisible lacuna. His predicament is deeply relatable to many of us whose ethnographic research involves objects of study that are absent, that no longer exist or perhaps may never exist, but are nonetheless profoundly significant to our interlocutors, whether because of their absences, despite their absence, or both. This raises an essential question: how do we study things that are not there and to what consequences?

This roundtable explores the methodological and conceptual challenges of studying absences, ghosts, and lacks-the immaterial forces and the spectral (non-)presences that shape social worlds. Whether in the form of missing actors, haunting acts, unmet desires, broken promises, vanished histories, or lost futures, the absent often exerts a profound influence on the lives of those we study. Drawing on ethnographic work that grapples with non-presence, we consider how a "lack" (Biehl 2013; Das 2007) can become a structuring force, shaping practices, subjectivities, and imaginaries. From manifestations of abandonment in communities disproportionately impacted by the carceral system to the social and political fallout of failed infrastructure development, the irreplaceability of lost cultural heritage, the speculative promises of technological fixes that will never come, the unknown victims and unidentified perpetrators of wildlife crime, and the absent referents haunting grocery store shelves, this panel bridges projects across North America, Eurasia, and Africa to ask how anthropologists can attend to what is not there while avoiding the trap of reifying absence.

Participants will reflect on the affordances of studying lack as a lens for exploring the limits of visibility and materiality in ethnography. Inspired by Avery Gordon's (2008) *Ghostly Matters* and Ann Laura Stoler's (2009) work on the colonial traces that continue to haunt the present, we ask: How

do we document and analyze the immaterial without collapsing it into metaphor? What methodological and theoretical tools needed to trace the outlines of absence and its social impacts? And how does attending to lack in all its various forms challenge or expand the ontological boundaries of ethnographic knowledge?

4979 Experimental Science of Body Habitation

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Southdown (4th fl)

Type: Oral Presentation Session

What could it mean to be "at home" in the body? Is there a limit in the body's capacity to respond to the solicitations of the world (Merleau-Ponty, 2012), to dwell in the environment with others (Ingold, 2000), to sediment the habitus of collective dispositions (Bourdieu, 1990; Mauss, 1973), or to carve out a place in social and cultural life? This panel aims to explore the concept of habitation beyond phenomenological and practice-based paradigms of the body, through leaky paths and processes that escape capture and containment. We attend to moments when the body becomes the only way of engaging with that which (in)habits it, a form of somatic experimentation with both the material and symbolic. What type of experiments are possible with the things that pass through bodies as they simultaneously pass through sites of habitation?

In the experiments that we explore, the body is "not a located thing but a path of access, a being-in-the-world" (Leder, 1990). It enables the passage of things in space and time: of disease, toxicity, memory, spirits. Freud articulates these concerns through the uncanny (*unheimlich*) – what was once familiar (*heimlich*), which has become strange and frightening (Freud, 1917). While the word *heimlich* carries resonances of the home, dwelling, familiarity, and warmth; it also has a second class of meanings. Namely, the *unheimlich*, that which is secretive, concealed, untrustworthy, and dangerous. Amidst the habitability of home, subjective life passes into an ambiguity, becoming indistinguishable from the uncanny, what De Certeau describes in terms of the uninhabitable dimensions of the body (De Certeau, 1998). Fanon speaks of these dimensions of the body through the "atmospheric violence" that one breathes in, sedimenting "under the skin" (Fanon, 1963). The corporeal schema gives way to the symbolic fixedness and immobility of bodies intruded upon by uncanny forms, rendering them uninhabitable and unrecognizable. Such bodily intrusions open sites of experimentation with modes of passage that reconfigure the way bodies inhabit space and time.

Papers in this panel will explore the tension implicit in the concept of habitation, whereby one's placement in social and symbolic life may also suggest a "feeling of estrangement" (Ahmed, 2017) and foreclosure from the self and others. Estrangements that might be produced under the authority of the hospital, laboratory, psych ward, family home, and factory. We draw from De Certeau's "experimental science," as a mode of reinhabiting the uninhabitable body by witnessing its emergence as both familiar and unfamiliar (De Certeau, 1998). Beyond a universal being-in-the-world (Heidegger, 1962; Merleau-Ponty, 2012), we approach body habitation as an uncanny passage where life and death, placement and displacement, presence and absence, parasite and host, and ghost and home become indistinguishably entangled.

Presentation(s): Creeping Fat and the Uncanny Gut: Living as a microbial g(host)

Crohn's disease (CD) is an inflammatory bowel disease (IBD). Chronic inflammation erodes the bowel, risking perforation. As the inside/outside threshold of the gut collapses, fecal bacteria gravely flood the body. Severe CD is characterized by a mysterious phenomenon called "creeping fat." Finger-like projections from abdominal tissue wrap around gut lesions, causing obstructions as the gut narrows. Creeping fat remains enigmatic because it cannot be clearly distinguished through medical imaging nor directly experienced. A recent microbial theory posits creeping fat as a harmful and protective consequence of gut perforation. It prevents fecal flooding of the host at the expense of bowel obstruction. Amidst creeping leaks and obstructions, some with IBD feel the gut is haunted by ghosts. In the same breath, gut ripples are described as bacterial blooms and phantoms of surgical resection. Based on ethnographic fieldwork in New York City, this paper explores the convergence of microbial host and the ghosts of haunted guts through the metabolic processes and experiences of people living with CD. How does subjective life persist when the gut is possessed of more than the body's relational capacity can maintain? This paper is about uncanny habitability at the limits of the metabolizable – in the space between gut perforation and obstruction. In the wake of perforation, creeping fat is how people with living CD inhabit a g(host)ly body in the gaps of a narrowing gut.

"Every Night is Nine Night": Madness, Duppy Possession, & British Colonial Occupation

This talk explores the case of 400 Black Jamaicans in a psychiatric hospital in Kingston, Jamaica, referred to as "social cases." Although formally discharged, they remain there due to family abandonment, migration, or death. About one-third attribute their madness to possession by "duppy," the spirits of the dead. After Jamaica was taken by the British Empire, the first psychiatric asylum, the "Asylum for Deserted Negroes," was established but later destroyed in a storm, releasing the spirits of deceased slaves into society. The Kingston Lunatic Asylum, the second facility, detained both enslaved and recently freed Black Jamaicans, whom colonial authorities viewed as a lunatic threat. Around this time, Obeah, a significant spiritual practice, was criminalized due to its ties to slave uprisings, leading to a decline in the "Nine Night" ritual that planted the dead in the earth. Consequently, Obeah is now referred to as an "evil African sorcery" and duppy possession has become more prevalent. The uncanniness between the Asylum for Deserted Negroes and the 400 social cases reveals how the Black body is perpetually displaced and inhabited by colonial and spiritual forces. This talk examines how the dispossessed are possessed by duppy and become mad, highlighting the enduring impact of British colonialism in Jamaica today.

Haunting Housing: Middle-Class Intrusions into the Sex Worker's Space and Her Return

This talk grapples with the liquidity or fragility of place that chronically conditions the sex worker's life and body in Seoul, South Korea, or more specifically, the crisis of housing which links the sex worker and middle-class citizen to become mutually haunted by the possibility and actuality of each other's penetration into one's "safe space." Many sex workers in Seoul live in either the brothels they work at or half-basement studios which easily get flooded and are covered with mold. However, to meet the pressing demand for more middle-class housing, the Seoul city government has been displacing the urban poor, with an anticipation to eradicate all slums and red light districts by 2028. To purge sex workers, the police, public health workers, and even nearby apartment residents persistently barge into sex workers' ambiguous home-work spaces, harassing them and charging them with petty fines until they move out. Due to such invasions, I argue, a survival strategy of the sex worker has become one of infiltrating into middle-class spaces, in ways that are opaque and constantly on the move. The increasing form of offi-sex work happens through short-term leasing rooms in office-tels, which are commercial complexes that many middle-class Koreans live in, with stores, offices, and housing mixed on each floor. Such sex work has become a new source of the middle-class citizen's panic and anxiety – the prostitute might share their very house, unknowingly and undistinguishably.

The (A)visuality of Interior Worlds

This paper draws from ethnographic fieldwork in biomedical laboratories that research human immunity. It investigates how biomedical research produces what Lippit calls an "impossible interiority" (2005), a paradoxical perspective that results from attempts to turn the elusive,

ambiguous experience of the visceral body into a sensible and operable object of experimentation. Following modern conceptions of, and aspirations for, transparency, the biomedical technologies employed in the study of inner bodily systems exemplify how this perspective is intimately connected with the desire to make visible an experience that is not. Against these technologies, the phenomenological experience of interiority emphasizes the “avisuality” (ibid.) of the inner body and its microbial worlds, which are ultimately only accessible through the “qualitative reduction” of interoceptive perception (Leder 1990). Through examples of scientific experiments observed during ethnographic research, the paper shows how, despite biomedicine’s desire to make the interior of the body visible, it only contributes to emphasizing its avisuality, pointing to its always elusive visualization. Using pictures and ethnographic descriptions, it ultimately suggests that scientific experiments with interiority are always thought experiments for they require scientists to continuously engage with an idea of the inner body that reinforces its status as an imagined visibility – not invisible, but visible somewhere else.

The Double Bind of Toxicity in a Factory Town

The environment of factory towns is toxic. Smoke billowing from chimneys and toxic sludge in drains signals jobs and opportunities for residents. But like ghosts, industrial toxic waste passes unseen, unheard, and untasted through bodies and the built and unbuilt environment, accumulating towards permanent toxicity or disaster. Nasrath Colony is a Catholic neighborhood in Bhai Pheru, a factory town south of Lahore city, in Pakistan. Since the late 1990s, the groundwater in this area has been unfit to drink, causing acute skeletal fluorosis and brittle bones among children and adults. In this paper I trace degrees of toxic exposure in caste-based separation. The residents of Nasrath Colony belong to various castes but their social status as a religious minority relegates them collectively to lower caste status within larger Pakistani society. This means most of them work sanitation and solid waste management jobs considered unclean and demeaning. Caste-centered practices and beliefs are rooted in symbolic ideas of purity and impurity. Using the sanitation infrastructure of the neighborhood as an ethnographic subject, this paper traces the neighborhood's leaky system of symbolic estrangement – between neighbors and the rest of the town. Conceptually, toxicity reveals the impossibility of absolute states like purity and impurity, and draws attention to the spillage, seepage and slippage that remains unsensed till they cross a threshold.

2629 Futurity as a Method? The Pursuit of Alternative Futures in China Today

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Galerie 5

Type: Roundtable/Town Hall

A specter is haunting China: the specter of futurity. This roundtable approaches futurity as an ethnographic lens, through which we examine how people interpret time, hope, and modernity. Drawing inspiration from hauntology (Derrida 1994; Gordon 2008), and Mark Fisher's (2009) trenchant critique of capitalist realism, participants interrogate how alternative futures are imagined and pursued amidst the haunting presence of unfulfilled futures. In doing so, we explore how futurity can serve as an entry point for understanding the coexistence of nostalgia and development in Chinese society.

China today is a site of excess for future-oriented discourses, whether through state-led visions like the "China Dream" or corporate promises of high-tech cosmopolitanism (Chong 2020; Yang 2023). These grand narratives coexist with plural political imaginations and ordinary practices of pursuing the good life (Lin and Yuan 2023), manifested in emergent forms of livelihood, and reinterpretations of development, responsibility, and political futures. Meanwhile, the shifting promises about the future also linger around. Unfulfilled futurities have not disappeared, but rather, like specters, they continue to be resurrected in current visions and actions. These hauntological phenomena challenge the linear understanding of time and invite us to reconsider temporality as a space where pasts and futures intertwine dynamically.

This roundtable convenes emerging scholars to investigate how individuals and communities negotiate alternative futures within the constraints of the dominant diagram of modernity, beyond "common futures" (Valentine and Hassoun 2019: 252–254). We ask: How do people imagine futures in a society featured by rapid transformations? Can futurity become not only a lens but also a method for studying China? Ultimately, this discussion encourages us to reconsider the relationship between the future and the past and to reflect on how actively engaging with futurity may alter our understanding of development. This connection spans not only from the past to the future but also from the future back to the past.

2765 Ghosting Gender: Transgressive and Dissident Bodies Amid the New Culture Wars

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Regent

Type: Oral Presentation Session

Transgender people and other transgressive and dissident bodies are at the center of new culture wars in the U.S. and transnationally. This is at once a novel phenomenon in its specificity, and an iteration of how gender has often emerged as a site of contestation in moments of cultural and political change. As Judith Butler argues, the transnational "anti-gender ideology movement" constructs gender dissidence as a "phantasm" that threatens the nation itself, and thus seeks to eradicate it (Butler 2024). We are in a moment of intensified public scrutiny of gender dissidence such that in many places, calls to limit trans access to rights, to public spaces, and indeed to living have gained political traction. But we are also in a moment of trans thriving in which increasing numbers of people are coming to see themselves as or align themselves in solidarity with trans, non-binary, and other historically and culturally defined extra-binary ways of living and doing gender. This panel asks – why are transgressive and dissident ways of doing gender a "phantasm" that haunts the nation, how are gender creative people responding to that threat, and how can anthropology grapple with these shifting contemporary dynamics of power, oppression and liberation?

In a moment where gender is being fundamentally upended, anthropologists are in an especially good position to account for, theorize, and be in solidarity with people at the forefront of transforming what gender is, how it should matter, and the work it does in the world in terms of our relations with others, our bodily autonomies, our collective political possibilities, and even our language. We aim to build an international research agenda for an anthropology of transgressive and dissident genders that is in conversation with longstanding anthropological engagements with gender and power, recent calls to broaden approaches to the discipline in ways that emphasize decolonizing epistemologies and community-engaged research, and historically and ethnographically informed trans studies scholarship across the humanities and social sciences.

Presentation(s): Missing the Gender Revolution: Brazilian Trans and Travesti Epistemic Insurgencies Amid Anthropological Silences

When trans and travesti Brazilians read the Anglophone scholarship produced about them, they do not see themselves reflected back. Travestis, in particular, have long been regarded as fascinating and exotic creatures by anthropologists doing fieldwork in Brazil, and ethnographies have mostly focused on their lives as sex workers, on their bodily transformations, and on their gender performances (Kulick 1998; Lino e Silva 2022). What is missing from these accounts is the emergence of travestis as political subjects, a process that began in the 1980s as travestis began to organize to protest police violence, and which has culminated in a powerful social movement that elected two travestis to the National Congress in 2022. Anthropologists from the Global North have been "missing the revolution" (Starn 1991) in Brazilian trans and travesti activism because they continuously pigeonhole travestis into the role of the "transgender native" (Towle and Morgan 2002), and thus fall into the trap of portraying them as ahistorical and apolitical subjects. Today, trans and travesti activists are at the forefront of combatting "anti-gender ideology" discourses (Butler 2024), producing their own counter-epistemologies that haunt the prevailing national ideologies. The paper outlines how trans and travesti epistemic insurgencies have questioned the silences of scholarly inquiry, and explores how they can reframe trans studies in the Global North.

Extralegal Sex/Gender: Transness, Surveillance and the Police Violence in Turkey

This paper examines the creative and constructive tensions between Turkish police and surveillance aimed at defining and regulating sex/gender transgression, on the one hand, and trans people's persistent everyday negotiations and strategies in response to these efforts, on the other. I focus on the narratives of trans women in Istanbul, recounting their past and present encounters with police violence between 1960 and 2020. By examining the disciplinary, regulatory, and punitive interventions into trans women's lives, bodies, and sexual practices, I seek to show how sex/gender transgression, especially transness, has persistently served as a critical extralegal site through which the state produces, enacts, reshapes, and reimagines its security regime. I employ the concept of extralegality to analyze the sexualized and gendered dimensions of security and the penal capacities of the police, which often operate within an ambiguous zone between legality and

illegality. Yet, trans women are far from passive recipients or victims in the extralegal space. Not only police officers but also trans individuals actively contest the porous boundaries between the legal and the illegal through their interactions with surveillance and security technologies. Through continuous engagement with the processes of surveillance and securitization, trans women compel the police to develop new legal and extralegal strategies of control and regulation—shaping the police institution itself.

Arts of Survival, Arts of Repair: Negotiating Fascism's Gaze Past and Present

This paper draws on my ethnographic research with trans survivors of military dictatorship (1976-83) and police violence in Argentina. During dictatorship, over 30,000 people were disappeared for their leftist politics and passed through more than five hundred concentration camps. Some of these camps were not so clandestine: they were partially housed inside existing police stations and highly visible to other detainees, highlighting the ways that concentrational and carceral power and surveillance practices overlapped. These other detainees included trans women who were targeted by vagrancy and misdemeanor codes. Their spectacularity rendered them exceptional yet paradoxically their disappearance went unremarked and unrecognized.

Working at the nexus of ethnography and visual culture studies, this talk surfaces trans women's sensory acts of survival and resistance to authoritarianism. To do so, I turn to trans women's shared experiences of carceral photography and studio portraiture, considering how trans women developed visual and embodied tactics that produced creative interference to authoritarianism's gaze. In doing so, I argue that trans women's reflections on their experiences of carceral photography and their negotiations of studio portraiture surface a submerged infrastructure of state surveillance while revealing the centrality of sexual violence against trans women to Argentina's national desires and its fascist projects of state transformation past and present.

Presenter(s): Cole Rizki

Ritualized Hormone Replacement Therapy: Transgender Religious Movements and American Alchemy

The trans-specific angle towards religious studies and the anthropology of new religious movements elucidates a particular facet that has been cast in shadow: that religious trans people exist, and our alchemical abilities are more important than ever. Building upon ritual studies and the anthropology of transness, I will paint a picture of transgender alternative religiosity in America in the 21st century as a strategy for survival and community. Alternative religions are on the rise, and some of these alternative religions do not center a core authority figure to fill their God-shaped hole. These practices draw on potent cultural symbols that are used subversively in relation to hegemonic American Christianity. These practices center around the practitioner as opposed to values placed upon them by a religious authority. Trans spirituality is one way to work the alchemy of transness on not just the body, but the soul. There are also behaviors specific to the trans experience that can be ritualized. In terms of the relational elements of trans ritual, there is an

emphasis on interdependence, care, and collaborative mapping of gender. Through an autoethnographic lens, alongside demonstrations based on religious trans figures, I seek to illustrate the value that anthropology has in understanding transgender religiosity for both trans and cisgender people, and the value of trans inquiry to the field of anthropology.

Presenter(s): Judas Cote

Kineassthetics: The Popozuda, big booty politics, and other ghosts of (hyper)femme resistance in Brazil

This paper interrogates the "kineassthetics" of the Popozuda as emergent forms of 'hyper-femme' resistance. The popozuda, or big booty femme, has been a feature of common parlance and in Brazilian cultural production since Valesca Popozuda, lead singer of the baile funk group Gaiola das Popozudas popularized this term in Rio de Janeiro's early 2000's. This paper asks very broadly, what are the contemporary cultural symbolics and politics of this charged "big booty" hyper femme form? How has non-normative gender and deviant sexuality become imbricated, politicized and embodied as big booty politics? How do these practices ghost the nation and act as a phantasm (Butler 2024) that poses threats to the status quo? Queering – on all its registers - destabilizes categories toward the collective and self-realization and following bell hooks, practices of queering are not about having sex so much as they are about emergent selfhoods "at odds with everything around it." In what ways is this semiotic deployed as non-normative femme resistance? How have trans artists like Urias shaped these critical dialogues and amplified big booty politics in Brazilian culture wars and beyond? And lastly, how has the global rise of the "BBL"(Brazilian butt lift) and its necro-capital import shaped notions of (hyper)femme sexuality and resistance?

Presenter(s): Lucia Cantero

Algorithmic Exorcisms: Anti-Gender Ideology and Phantasmatic Social Media

This paper focuses on the current "anti-gender ideology movement" as it courses within algorithmic social media systems to highlight the ways that engagement-prizing algorithms are fuelling anti-trans and hate-based movements via so-called 'virality.' Working from Butler's (2024) theory of "gender" as a haunting "phantasm," this paper asks what happens if we think of current social media technologies as phantasmatic machines, working on some levels to amplify and profit from the anxiety, fear, and hatred which constitutes the anti-gender movement, while simultaneously serving as key sites for queer and trans activists. Drawing from my online ethnographic fieldwork of queer and trans social media activists, this paper argues for critical attention to ever-changing social media algorithmic systems and to the ways affect constitutes and circulates social media (Sampson et. al. 2018; Ahmed 2014). From Julio Torres's 2024 surrealist TV series *Fantasmas*, in which 'The Algorithm' appears as a phantasmic yet embodied character played by trans actor Dominique Jackson, to Dylan Mulvaney's 2023 Bud Light endorsement which began as a short Instagram video by the trans social media personality and ended in a cartoonish national boycott marked by videos of men shooting automatic weapons into cases of Bud Light beer, this paper

stays with the hyper-visible and contradictory mediation of trans and nonbinary people online and in popular culture.

Presenter(s): Elliott Tilleczek

4932 Ghosts and Other Unpredictable Others

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Galerie 1

Type: Roundtable/Town Hall

Ghosts and the dead more generally are often seen as minor members of the spiritual pantheon. They are more likely the subjects of scary stories than deep veneration. They are beings who were once human, usually, rather than enduring and mighty spirits who create. Ghosts and the dead are also more populous than mighty gods and one might reasonably wonder whether the implicit social rules that govern them differ from those that seem to govern the way gods are imagined and known.

This session explores the way humans experience relationships with these once-human spirits. Because we are persuaded that there are human choices that allow people to experience gods and the dead as interacting, we bring together anthropologists who write about ghosts and talking with dead with anthropologist who study how robots become human like, and how humans become non-human animals. What are the rules that monitor the boundaries between humans and non-human others? Are they stable across cultural worlds? How do people build these relationships and what do those relationships do for them? When do they fear them; when do they want them; how do they reach out and maintain them? At the heart of these discussions is the question of how the social ordering of the senses allow us to grasp the world in unexpected ways.

Thailand is a country of many ghosts, and we have two scholars (Felicity Aulino, Julia Cassaniti) who have examined the karmic constraints on the way the dead and other spirits become real to the human, and the role these ghosts play in healing and health. John Dulin took part of an intensive comparison of the supernatural across five countries; his focus was Ghana, where ghosts and spirits are greatly important. Elizabeth Fein studies the way humans become animals (as "furries") and Kelsey Clough examines the way plastic, mechanical robots come to feel alive. Abou Farman has explored the way the dead remain alive to the living, and the way they also escape the living's reach. For him the question of how the senses shift as we reach out is central. Tanya Marie Luhrmann has been trying to figure out whether there are common rules that govern our relationships with spirits for many years.

This session aims to shed light on the broader implications of human encounters with the supernatural and unseen, leaning into the diversity of experiences and cultural contexts, to see how individuals use the supernatural to negotiate and reshape their realities and to explore the nuanced interplay between human doings and agency, the mind, and what are perceived as supernatural

phenomena.

8220 Ghosts in the Halls: The Liminality of Adjunct Faculty in Academia

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Bacchus

Type: Oral Presentation Session

Ghosts are liminal figures, both spatially and culturally. They haunt spaces that exist outside of the normal flow of time and space—areas that are in-between, where the rules of the physical and spiritual world seem to bend.

Ghosts also symbolize the threshold between life and death, the known and the unknown, the natural and the supernatural, viable and unviable. In the United States, they are often depicted as the spirits of individuals who have unfinished business or unresolved emotions. Their haunting presence suggests that they are in an in-between state.

Part-time faculty are also liminal figures, and in the same ways. We haunt the halls of academia, not quite able to move into the light because we have unfinished business. We are unmoored, floating around in the ether, trying to find a home, the tangibility of a permanent place. Ghosts often become symbols of unresolved transitions or emotional stagnation, tying them to the emotional and psychological spaces between different stages of life. Contingency in academic employment thrusts adjuncts into a similar in-between existence.

Ghosts serve as powerful symbols of transition, unknowing, and unresolved tension. Like ghosts, adjunct faculty occupy a threshold, challenging the certainty of a stable existence that is supposed to come with an advanced degree. Investigating a culture's belief in the supernatural allows anthropologists a better understanding of psychological and cultural relationships with death, trauma, and the future. Interrogating academia's dependence on contingent employment through an anthropological lens may provide an analogous insight into the death of tenure-track positions, the trauma of unstable employment, and even the future of higher education.

Presentation(s): Here Lies the Dream of an Academic: Didn't Publish, So I Perished

Adjunct faculty live and work within a perpetually liminal existence as temporary instructors, hired on a contract basis, typically without the benefits or security of tenure-track positions. We are transient, existing in a state of constant movement. We are the ghostly figures that wander the hallways of academia, both seen and unseen, present yet not truly belonging. We are hired for a semester, sometimes a year, with no promise that our contract will be renewed. We are also haunted by our impermanence. A job that could be secure one semester is at risk the next. The ghost of tenure lingers, a promise that seems forever out of reach for many of us. We can teach for years, even decades, without ever securing a permanent position. The longer we linger in this state, the more we feel like specters—like professionals without professional status. Owen Davies writes, "ghosts reflect the cultures that produce them" ("Ghosts," in *The Routledge companion to death and dying*). In this essay I will explore this existence through the lens of personal experience, examining the challenges of adjunct life, which, to many, is a life marked by impermanence and ambiguity. More deeply, I will examine the broader cultural context that has fostered (and festered in) this ghostly existence, analyzing the cultures of individual departments, institutions, and even the state of higher learning. What does the increasing dependence on contingent faculty reflect about academic culture?

Presenter(s): Aubrey Thamann

Hidden Faculty: An Auto-ethnography Exploring the Tenuous Existence in Academia

The social complexities of being an adjunct professor contribute to a life of uncertainty and of deference. One exists in a social system in which various players have different access to power, economic means, and social status. If you are at the bottom of the hierarchy, you must learn to navigate in the world described so well in, *The Unbearable Lightness of Anthropology* (Roseberry 1996). The distinctions between full-time and part-time faculty are particularly problematic in a discipline that often stresses its protection of the downtrodden and ill-treated. It is difficult to acknowledge that a few have the very power, prestige, and other benefits that a co-worker lacks and which, because of these, is put in a position that can be exploited. The move of an adjunct into a "non-person" as suggested by Erving Goffmann makes it easier for those in positions of power to escape some of the more unappealing circumstances of the adjunct's life such as low pay, large workloads, and overall insecurity. In turn, the adjunct feels ephemeral for a variety of reasons including the very tangible need to have another form of employment. Being a limited term lecturer for over a decade has given me insights into the compromises I have made to maintain a connection to the department and the reasons why I have done so. I want to explore what has contributed to the position that I and many others are in throughout the United States.

There and Back Again: The Various Journeys of an Anthropologist in Academia

The journey to and through the labyrinthine halls of academia can be a long, twisted, and frightening path for some academics. As long as that journey may be for specific individuals, an exit from the halls of academia can occur quite rapidly. Yet, in some instances, people may even find themselves stumbling back into the collegiate campuses that at one point so dominated their identities. The harrowing experiences of the 2020 COVID-19 pandemic affected working people in myriad different ways (professionally and personally), and the lives of academics are no exception. However, out of the ashes of this horrific global event, many stories of reinvention and strength have begun to sprout. The following paper recounts my own haunting experiences as an archaeologist who (briefly) exited academia for various personal and professional reasons, only to find myself drawn back, albeit in a much different role and with a renewed sense of identity. Examining the broader impacts of the pandemic on academic careers, this study highlights how scholars navigate institutional exits and reentries while reshaping their professional identities. Through reflection and analysis, this case contributes to discussions on career fluidity, resilience, and the evolving landscape of academic labor within anthropology.

A Report from the Trenches: Academic Precarity and the Ghosts of Tenure

This presentation offers a report from the trenches of academic precarity. As a long-serving contingent faculty member working across Canadian institutions, I reflect on the affective, temporal, and institutional weight of existing within a system that relies on my labor but refuses to grant permanence or recognition. Adjunct life haunts the academy—we are visible yet excluded, overworked yet undervalued, intellectually present yet institutionally dislocated. Drawing on my personal experience and theoretical work, I argue that adjuncts occupy a spectral space that is not unlike haunting. Our presence disturbs the idealized flow of academic life. We pass through hallways without offices, hold office hours in libraries or cafés, and perform the rituals of collegiality without the protections of employment security. Our time is fractured—writing and publishing have become luxury acts, and conference attendance is a logistical impossibility. This presentation situates the adjunct condition within the emotional geographies of academic life. Through personal narrative, cultural metaphor, and institutional critique, I explore what it means to labor within the university while being denied its most basic promises. Ultimately, I ask whether haunting, as a metaphor, might help us name not only the trauma of exclusion but also the persistence of presence—and the possibility of solidarity among those who refuse to disappear.

2909 Ghosts of Democracies Past and Otherwise

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Galerie 2

Type: Oral Presentation Session

Decades after the Global Sixties and post-Cold War democratization, democracy appears to be in crisis at a global scale. The rise of authoritarianism, racial intolerance, and a host of other social forces seem to threaten democracy at its very core in seemingly unprecedented ways. Considering this, a return to scholarly engagement with politics is called for by examining the political potentialities of the otherwise in the present moment (Postero & Elinoff 2019). An otherwise indicates a relation of difference, a difference from something that is, a difference from a particular reality (Povinelli 2016). Democracy is conventionally defined as Liberal Representational Democracy through which countries delegate democratic decision-making to appointed or elected government office members who act on their constituents' behalf in making policies, administering public affairs, and interpreting laws. However, debates regarding the dilemmas of self-governance are often hampered due to the multiple, competing understandings of democracy. Considering democracy's open-ended construction, anthropologists have demonstrated the need to scale down analysis to the level of everyday life to examine where, when and through whom democracy is exercised (Paley 2001; Nugent 2008).

Hailing from various disciplines and institutional backgrounds, and inspired by the creative potential of the spectral in the 2025 conference theme, presenters in this panel will explore how the past haunts the present, and immaterial worlds otherwise shape democratic politics today: The afterlives of Argentina's dirty war in collective historical memory amidst far-right omnibus cuts; The specters of Civil War-era incarceration and settler-colonial land relations in the contemporary United States; The ghosts of mass protest and a failed constitution in Chile; and an Algeria haunted by martyrs and the future democracy for which they died.

Participants will offer a range of perspectives on the ways in which the otherwise haunts the hegemonic order of things and thereby opens the potential for change. By bringing together scholars working in diverse geographic areas and methodologies, this panel aims to address three interrelated questions:

- 1.) What are the afterlives of past democratic movements, and how do they endure in present day spaces of struggle?
- 2.) Through which methods can scholars engage with the strategies employed to re-imagine more just worlds?
- 3.) To what extent do these immaterial worlds- real or imagined- impact how larger shifts are understood and refashioned into critiques and disagreements with the present order of things?

Presentation(s): The Militante and the Motosierra: The Ghost of New Left Militancy amidst Milei's Assault on Memory Spaces in Argentina

During the era of the Dirty War military junta (1976-83), upwards of 800 clandestine detention, torture, and extermination sites operated in Argentina. Of those, 40 have now been converted in to Sitios y Espacios de la Memoria (Memory Spaces), including seven under federal government administration. Since June 2024, 28 of the 65 federal workers at these sites have been laid off due to Far Right President Javier Milei's wave of omnibus cuts. The cuts have left some of the buildings in disrepair and have halted archival research. They have especially targeted educational programming at the spaces, including public school collaborations and outreach. The cuts are part of a broader attempt to erase history through deprivation of resources. While Milei and members of his government publicly downplay the Dirty War-era state-sanctioned violence and even sympathize with the dictatorship, the cuts aim to make long-term interventions in collective historical memory regarding this dark past. This paper explores the afterlife of disappeared militants in the current struggle for the preservation of these spaces of collective historical memory. The erasure of these historical spaces not only obfuscates the legacy of state sanctioned violence, but the politics and vision of the people who were detained, tortured, and executed there. They were people who fought for a world directly opposed to the high modernist fascist projects we are witnessing in Argentina (and the United States) today.

Black White Gold Mountain: Lithium and the Specter of Colonial Land Relations in the Green Energy Economy

With climate change an ever more urgent concern, corporations, states, and environmental movements are engaging in cultural production to paint electric vehicles as economically viable, environmentally responsible, and socially just. Behind this facade is the specter of colonial land relations maintained through legal and physical infrastructure. The batteries that power electric vehicles have motivated a rapid expansion of lithium mining across various geographies where it desecrates sacred lands, produces toxic waste, drains desert waters, and destroys ecological life. This presentation focuses on the Thacker Pass Lithium Mine in northern Nevada, which has received the largest federal investment in the U.S. to date and sparked intense resistance with a lawsuit and a sustained protest camp. Here and across much of the western U.S., the legacy of settler colonial expansion is enshrined in the Mining Law of 1872, which still governs mineral extraction on public lands. Meanwhile, electric vehicles accommodate and perpetuate the petroculture of highways and suburbs built for oil-powered transport. Tracing these colonial land relations distinguishes between large-scale yet superficial technological shifts and radical structural transformation, exposes the limits of state-based policy, calls for global solidarity against mineral extraction, and demonstrates that we must create "a world where many worlds fit," as the Zapatistas propose, to heal this fevered Earth.

Presenter(s): Jessica Ng

From the American South to Guantanamo: Refugees, National Threats, and Incarceration

The US has historically denied—and continues to deny—equal protection rights to African Americans, and prisons emerge as the primary institution that unequivocally received them once deprived of such rights. We cannot fully understand the shortcomings of the Fourteenth Amendment and the construction of Black citizenship without looking at how enslaved people who sought refuge became federal prisoners during the American Civil War. This presentation focuses on experiences of refugees from slavery under Union captivity, when the US military expanded the power of military tribunals to control freedmen and white rebels. These tribunals were revived at moments when US legal systems and civil law constrained the federal government's ability to prosecute and persecute racialized persons and "enemies of the state" outside US boundaries. In 2006, the Military Commission Act gave the president absolute power to decide who counts as an enemy of the state and to imprison them indefinitely. When Haitians fled to the U.S. in the early 1990s, they were imprisoned in Guantanamo Bay, where U.S. constitutional laws do not apply and where, to this day, Muslim men remain imprisoned without charge or trial. As the President of the United States threatens to incarcerate asylum seekers and migrants at Guantanamo, the specter of Civil War-era incarceration rears its ugly head, and we are reminded that the line between refugee and national threat is drawn along racial categories.

Presenter(s): Samantha de Vera

The Ultimate Witness: Martyrs, Futurity, and the Specters of Democracy in Algeria

Many Algerians today refer to themselves as the "people of a million and a half martyrs" (sha'ab million wa nisf shahīd), indexing their kinship with people who sacrificed their lives before and during the War of Independence (1954-1962). These martyrs have become the foundation of national identity and play a central role in postcolonial politics. In Arabic, the word martyr (al-shahīd) literally translates as the "ultimate witness," suggesting a deep (though sometimes hidden) relationship between (past) martyrs and (present) witnesses (shāhid) of various social injustices. In this paper, I argue that martyrdom signifies the act of sacrificing oneself for the community to secure a place in the afterlife and also represents an act of futurity. But what sense of future and "futures past" do the martyrs' deaths embody? Engaging with martyr images in contemporary urban Algeria, I examine the agency of the dead and their claims on the present and future. Drawing on Derrida (2011)—a native Algerian—who posits that specters "[precede] from the future" (p. XIX), I explore the complex temporality of martyrs that is enacted in postcolonial Algeria through their role as ongoing witnesses to present struggles and as specters of a future democracy for which they died, yet which has never materialized. The act of witnessing, I argue, structures a temporal experience that entangles perpetrators, victims, onlookers, past, present, future, and afterlife in complex coeval relationships.

Presenter(s): Stephanie Love

The Specter of the Plurinational State of Chile: An Otherwise Democracy in the October Protests and failed constitution re-writing process (2019-2023)

What can the 2019-2023 Chilean "Social Explosion" and failed constitutional re-writing process tell us about global democracy today? Constitutions often express the most advanced ideals of their time and serve as a referent for marginalized groups who envision a better world, often projected into an imagined democratic future. Chile's Estallido Social led to a two-year constitutional re-writing process, which sought to replace the 1981 Constitution from the Pinochet Dictatorship (1973-1990). The 2022 constitution proposed replacing Chile's neoliberal economic system with a plurinational state obliged to broadly guarantee Indigenous rights, social welfare, environmental protections, feminist principles, and LGBT rights through democratic practices derived from human dignity rather than the political charter itself. Policymakers and social scientists have often emphasized how the exit referendum revealed a popular rejection of progressive politics, an enduring Chilean nationalism, and tacit support for extractivist and settler colonial projects. In contrast, this paper analyzes how the ideals and institutions in the proposed constitution reflected three decades of global protests and enunciated a model of governance and democracy that could be emulated worldwide. Without serving as a basis of authority for the Chilean settler-colonial state, the "Plurinational State of Chile" is a specter of an "otherwise" democracy haunting the hegemonic order of things.

3423 Ghosts of Reason: Anthropology's Enlightenment Conundrum

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Studio 7

Type: Roundtable/Town Hall

A specter is haunting anthropology-the specter of Enlightenment. If modernity, reason, science, myth, and religion have long preoccupied anthropologists, Enlightenment has kept to the shadows. Perhaps because, as Singh (2015) put it, "for postcolonials it is often assumed that the only permissible attitude to [...] Enlightenment is one of skepticism." Anthropologists don't seem to know what to do with the term.

On one hand, our questions, axioms, and tools can be traced back to Montaigne, Rousseau, and Kant. As Khan (2021) suggests, if Kant asked, "What Is Enlightenment" by questioning whether the "figure of the human was knowable," anthropologists further this line of inquiry by asking "whether we can [presume] the same human or reason across all contexts." On the other hand, anthropologists know well that "what seemed like Enlightenment [in] the eighteenth century... turned out to be a parochial self-consciousness of [...] the mission civilisatrice" (Sahlins 1999) In this vein, Viveiros de Castro (2014) and de la Cadena (2018) encourage ethnographers to let indigenous lifeways radically transform Western thought, not to extend the rational progress of les philosophes. But by "Letting Anthropology Burn," (Jobson 2020) how do we tell immolation qua exorcism from blazing rite of rebirth?

Anthropologists' ambivalence toward myth-busting as moral good seems to reflect Horkheimer and Adorno's Dialectic of Enlightenment: "Myth is already enlightenment, and enlightenment reverts to mythology." This tension crystalizes in the revelatory thaumaturgy of anthropologists like Fuentes (2012) ("Busting Myths about Human Nature") or Graeber and Wengrow (2021), whose Dawn of Everything smokes out the ghosts of Rousseau. While few anthropologists would balk at the impulse to "bust" harmful myths, doubt lurks: isn't taking myth seriously what anthropologists do best?

Of course, if this ambivalence suffuses our orientations to ethnography, then it also shapes our objects. Thus, while some have drawn on canonical theorists of modernity to show how Enlightenment logics produce environmental degradation, social atomization, economic precarity, biopolitical capture, panoptic securitization etc. (Edmonds 2010, Gershon 2017, Livingston 2019, Collier 2011), others have revealed Enlightenment as a myth itself, showing how enchantment remains immanent to social worlds (Turner 1969, Ong 1987, Taussig 1999, Mazzarella 2017). To paraphrase Latour (1991), they argue "We Have Never Been Enlightened."

This panel probes anthropology's Enlightenment legacy as an "interface of revelation and concealment" (Meyer and Pels 2003). Bringing together conversations on environmental destruction, racial capitalism, and the "disenchantment of the world" (Weber 1912), we ask how to mediate these antinomies. If the past is indeed "continued as destruction of the past" (Horkheimer and Adorno 1944), how do we live well with the ghosts of Enlightenment?

3471 Haunted Ethics: Memory and Marginality in Modern Medical Care

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR C1 (3rd fl)

Type: Oral Presentation Session

Anthropologists have deeply theorized how clinics become halls and harbors of sociohistorical memory and meaning, both in the construction of what, or who, is remembered and in the imposition of the question, why remember anyway? (Good 2015, Kilroy-Marac 2019, Strassler & Stoler 2000). In this panel, we seek to explore the hauntological implications of these memories, posing how clinical experiences, especially for those of socially marginalized identities, form a social and embodied experience of "quantum dis/continuity" (Barad 2010). Writing from a variety of

medical contexts, panelists approach the question of hauntings from their own unique angles, all united by their focus on demonstrating the ways in which historical medical abuses and the temporal displacement of memory (Good 2020) deeply influence the ways in which marginalized groups experience care and biomedical interventions. Haunting, as a theoretical framework, allows for a robust exploration of the tension between what practitioners view as good science and what patients may view as a new enactment of historical power structures, especially when those power structures are thought of as over and done with (Gordon 2008). Thinking with haunting through the lens of ethical practice emphasizes the importance of affective affordances in clinical care, a kind of orientation that aligns with the call of Kleinman and Wilkinson (2016: 18) to view care practices through an analytic of "critical humanism" where suffering and discontent create a ground of mutuality between service provider and user from which humanistic care practices can exist.

Presentation(s): Ghosts of Violence Past: Health Law and Care in Post-Conflict Guatemala

My talk will examine medical hauntings as visible through the material-discursive dimensions of health laws and Maya women's embodied experiences of care within Guatemalan clinics in the aftermath of the 1996 Peace Accords. I will explore these hauntings as they move through La Ley de Salud Popular Tradicional (The Traditional Health System Law), a law that sought to integrate biomedical and Maya ecologies of knowledge and care into the national health system. Building from the work of Charles and Clara Mantini-Briggs, I argue that these hauntings render Maya comadronas (midwives) and women incommunicable within biomedical global and national health systems, reinforcing the continuity of the ghosts of violence past. I will show the embodied and material impacts of incommunicability on how Maya women experience care, and how comadronas (midwives) are transforming the ghosts of violence to create safe spaces for Maya women's healthcare, shape policy, and assert cultural sovereignty.

Presenter(s): Kelsey Armeni

Queerly Ethereal: Trans Mental Health Care and Liminal Grief

How do you grieve for a life your ghost couldn't live? This question, circular though it may seem, colors many conversations had between mental health providers and transgender patients who, in the context of my research, are often receiving services as a mandatory prerequisite to receiving gender affirming care. My talk will explore the implications of mental health models of grieving as they are deployed in mental health care for transgender individuals in the United States. Using the theoretical frameworks of Alison Kafer and Isabelle Stengers, I will explore the problematic

cosmopolitical framework of psychotherapy that compels a person to grieve for a life that they may not or do not want to live and, as a result, abandons the trans person in therapy in a liminal space of having no past or future. This liminal abandonment invokes strong questions and concerns about mental health care, where consumers of mental health care services describe the experience of care as deeply othering, even bordering on violence. I argue that this abandonment is emblematic of the social impossibility of trans life that Eric Stanley (2011) poses, consistently relegated to a place of political and social death. Finally, I will illustrate how the imposition of grieving as integral to the process of trans identity forms a troublesome framework of selfhood, as the clinical 'line' between what is 'self' and what is 'disorder' becomes blurry.

Presenter(s): Conor Lanning

Expecting Singularity; Imposition, Anticipation, and Plural Selves in Clinical Space

Medical frameworks that grant access to gender-affirming care locate capacities of self-knowledge and consent within the singular self. As follows, plural persons in America, including those diagnosed with Dissociative Identity Disorder, are often deemed unable to consent to gender-affirming treatment. My paper will explore how plural persons must grapple with the clinical expectation that they undergo therapeutic treatment fusing their many autonomous selves into a singular sense of self, inextricable from the historical imposition of fusion treatment onto community elders. These stories, giving weight to the clinical record, haunt plurals who actively resist selves normalization in the course of gender transition, shaping their anticipatory concealment and construction of selves narrative when accessing care. Attending to these hauntings and their impositions reveal how plural selfhood disrupts medical expectations of transgender identity as simple, consistent, and conflict-free.

Presenter(s): Silver Mckie

Fresh Hauntings, Familiar Ghosts: Promises and Pitfalls in Genomics Research

Biobanking is a prominent component in modern genomics and precision medicine research, one that straddles the line between lab and clinic when patients are recruited by their doctor and presume that clinically actionable results will be returned to them. In the interest of building more inclusive and ethically engaged genomics research, focus groups were conducted with historically underrepresented participants in a Colorado biobank. I draw upon this focus group data, as well as autoethnographic data from working in the research facility linked to this biobank, to explore culturally situated anxieties about biobank participation and genomics research more broadly. An issue I aim to highlight here is that participants and providers have a temporal mismatch in how they experience the biobanking process. I argue that providers focus on the present and future potentials to prevent/cure/alleviate, while participants must contend with the ghosts of ancestors and relatives who have been abused by the medical system, as well as the new and ongoing hauntings that are created through the inherent uncertainty of discovering predispositions within their genome. I will demonstrate how these hauntings call attention to the ways in which past abusive medical practices still make their impacts felt today (Gordon 2008) and how the promises

of personalized medicine are not viewed as universally beneficial nor universally accessible by populations that researchers hope might benefit from them.

Presenter(s): Lucas Rozell

3268 Haunted by Anthropology's Spectres: Navigating Black Student Life in Precarious Times

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Orpheus (8th fl) (access via elevator only)

Type: Roundtable/Town Hall

As Black Anthropology students, our encounters with the discipline's ghosts are unceasing. We wrestle with feelings of frustration and grief from studying a discipline that has played a crucial role in codifying racist scripts and myths. Yet, at the same time we have found refuge and armaments from the works and mentorship of our Black, Indigenous Feminist, fugitive, trickster forebears that have long ago begun illuminating pathways towards liberation (Hurstun, 1942; McClaurin, 2001; Harrison, 1999; Tuhiwai Smith, 1999). Nevertheless, the haunting persists as we parse through hidden curricula and navigate the entangled choreographies of institutional bureaucracy, sourcing funding, conducting fieldwork, trying to publish, and ultimately trying to find a job.

This roundtable seeks to center the experiences and voices of Anthropology students across the African Diaspora by creating a space for us to collectively reckon with the unique challenges arising from our politically, socially, environmentally, and economically tumultuous present. We are actively bearing witness to and feeling the effects of global climate catastrophe and the Anti-Blackness underpinning escalating assaults on our public institutions, civil rights, and futures. Indeed, we are all too familiar with the enduring legacies of slavery, colonization, and displacement, and at the same time we are also aware that we are living archives of survival-our very being as disruptive to normativity as the spectres that haunt us all.

Through this roundtable we engage in ceremonious convocation with ghosts as we refuse erasure, complicity, and silence. Together, we will hold space to express ourselves and our experiences freely while honoring and co-imagining radically alternative methodologies, practices, and praxis. What does it mean to be Black and studying Anthropology right now? What are the conditions of this moment encouraging us to embrace? Where can we look to envision a different future? Just as ghosts demand accountability and witnessing, we look to create a space for collective reckoning, remembering, and future-building.

2631 Haunted by the Market: New Risks and New Gambles Amid Financial Uncertainty, Part 1

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Studio 6

Type: Oral Presentation Session

The current climate of global financial uncertainty, manifested through market instabilities, currency devaluations, and shifting regulatory regimes, poses a new and intersecting set of financial challenges. Many have turned to risky behaviors, from buying lottery tickets and online gambling platforms to investing in cryptocurrencies and stocks, as a way to make money and sustain their livelihoods. The lines between risky activities such as gambling and investments have increasingly blurred. Gambling has spilled out of the casino and into transnational digital spheres, operating in legal gray zones and suspended in regulatory ambiguity. Therefore, this panel interrogates the production and reproduction of these political economies of risk while centering the lived experiences of those navigating volatile markets.

As betting platforms, crypto exchanges, and investment apps operate across jurisdictions, national regulators struggle to enforce policies designed for a world where gambling, speculating, and investing are more clearly demarcated. While policies governing gambling often claim to balance public health concerns, economic priorities, and consumer protection, they frequently produce contradictions that expose the tensions in how risk is framed and managed. For instance, the regulation of gambling is not just about preventing harm or ensuring fair play because it is also about defining what forms of gambling are deemed legitimate and which are considered reckless or illicit. The rise of online gambling and speculative markets further complicates these distinctions. Additionally, corporate actors, from financial institutions to multinational gambling firms, shape these regulatory landscapes through self-regulation, corporate social responsibility initiatives, and lobbying efforts that redefine speculation and gambling as either a public good or a social risk (Cassidy 2020). At the same time, state interests in generating revenue from both gambling and financial speculation often lead to policies that are fragmented, contradictory, or selectively enforced (Hassan 2025).

Our panel asks: What roles do states and corporations play in creating the conditions of possibility for these gambles or investment practices through regulations? Importantly, this panel dissects the dynamics of risk-taking, class-making, and moral economies of popular investment practices through ethnographic research from diverse locations and perspectives, including Turkey, Kenya, Vietnam, the UK, and Thailand. We open emotional, ethical, and spatio-temporal dimensions, asking: How do elements of hope, anticipation, and aspiration structure financial decision-making, and how are these acts embedded in histories of economic precarity or opportunity?

Presentation(s): Gambling, Speculation, and the Governance of Uncertainty in Turkey

This paper explores how regulatory ambiguity shapes the moral and material economies of gambling and speculative finance in contemporary Turkey. Drawing on long-term ethnographic fieldwork in Istanbul, I examine how state-regulated games of chance, such as the national lottery and sports betting, are discursively and legally differentiated from gambling. This ambiguity is further heightened by the rise of cryptocurrencies, which occupy unstable positions between money, assets, and gambling. I argue that the Turkish state simultaneously enables and disavows these practices: on one hand, it promotes state-regulated betting platforms as legitimate revenue-generating tools while, on the other, it criminalizes unauthorized gambling. Through this selective governance, the state reconfigures the boundary between legal speculation and illegal risk-taking, often along class and moral lines. I situate these practices within broader global shifts in financial governance, where distinctions between investing, gambling, and gaming are increasingly unstable. By interrogating the affective, moral, and temporal logics that underpin these speculative engagements, I show how research participants imagine futures and recalibrate aspirations within volatile political-economic landscapes. Ultimately, this paper contributes to ongoing debates about how risk is managed, regulated, and lived in times of financial uncertainty and how speculation becomes a livelihood and a mode of political critique.

Presenter(s): Wesam Hassan

Games on Tap: the social impact of Mobile Phone gambling in Kenya

This paper examines the rise of mobile phone-based gambling in Kenya as a lens into the blurred boundaries between investment, speculation, and predation in contemporary financial landscapes. Drawing on ethnographic research conducted in Nairobi and online, I explore how mobile money platforms like M-Pesa—originally celebrated for promoting financial inclusion—have become conduits for digital gambling targeting young adults. These platforms exploit existing cultural affinities for football and emergent desires for economic mobility, embedding risk-taking practices into daily life under the guise of leisure and opportunity. Through unsolicited SMS promotions, tactile phone interfaces, and algorithmically-driven games like Aviator, gambling companies produce a compelling ecosystem of addiction and aspiration. Inspired by theories of

"predatory inclusion" (Yamatta-Taylor 2019) and drawing on Geertz's "deep play" and Schull's "Addiction by Design," I argue that mobile gambling in Kenya reveals the intimate entanglement of risk, masculinity, and economic precarity. State regulatory responses remain contradictory—both punitive and revenue-seeking—highlighting the fragmented governance of speculative financial practices. Ultimately, this paper situates digital gambling as a transnational political economy of risk, where the boundaries between play, profit, and harm are persistently contested and ethically fraught.

Presenter(s): Farah Qureshi

Mystic Mathness: “Scanning Numbers” (Soi Cầu) in Vietnamese Underground Lottery-Betting

The Vietnamese lottery game encompasses two contrasting yet interrelated modes. In the state lottery (xổ số kiến thiết), players buy state-issued lottery tickets and win money if their ticket numbers match prize results. Yet, many players also engage in an illegal offshoot of this official game: betting on the last two digits of lottery prize numbers. This paper focuses on this underground lottery (lô đề), which gives players more room to exercise their agency and promises higher returns. One strategy for identifying which numbers to bet on is soi cầu ("scanning numbers"). Soi cầu instructions abound online, particularly in YouTube videos where self-proclaimed analysts demonstrate how to identify bet-worthy numbers through numerical operations on past lottery results. I suggest that soi cầu entails the "performance of mathness," the charismatic demonstration of the strategy's math-like character that obscures the arbitrariness of its underlying numerical manipulations and lends it an air of legitimacy. This mathematical construction also integrates Vietnamese cosmological imaginaries of elemental dynamics and number symbolism. By examining the interplay between math-like rationality and mysticism in soi cầu, this paper foregrounds the trans-capacities of numbers and people's creative "numerical sense-making" (Guyer et al. 2010) in navigating the uncertain possibilities of life.

Presenter(s): Linh Dang

Chance work and the work of chance

In the face of known limits and drudgery that wage work so often provides people turn to the unknown – in this turn, extractive mechanisms are at play. Drawing on ethnographic material from the cryptocurrency sector and placing them within a broader historical arc, this article makes visible an unaccounted-for extractive mechanism that is increasingly apparent in contemporary times. More specifically, by historically constituting the activities of amateur cryptocurrency traders within a broader historical socioeconomic chance landscape, I highlight cryptocurrencies as part of the work Londoners have been doing to rework the limits of wage work since the 17th century. Working against common assumptions and seductive metaphors, I argue that chance-taking requires work - what I call 'chance work' - and is the way by which people who intimately feel the limits of wages pursue capital. The term 'work of chance' is used to draw attention to the work chance does in people's lives, economy, and society. Through deploying these two terms, particular attention is paid to how emerging startup and tech cities, that are so often valorized by politicians

as the harbingers of brighter futures, are benefiting from the chance work amateur crypto traders are involved.

Presenter(s): yathukulan yogarajah

More than Mania: Making Money and Meaning through Crypto in Thailand

Crypto's ubiquity in Thailand from 2020 to 2022 is often dismissed by explanations of mania ("her"), its popularity flattened into a singular desire for people to get rich quickly. However, this framing misses out on the specific, highly particularized ways Thai consumers made sense of crypto. Through long-term ethnographic fieldwork, I spoke with a diverse range of people, including consumers, the founders of companies, state officials, artists, product managers, and academics in Thailand. This deeply heterogeneous set of people repeatedly highlighted how Thai actors associated crypto with other locally familiar practices and media, namely stocks, gold, lottery tickets, and amulets. Each of these social categories is associated with more than just making money, but with a specific valence of wealth that I will call "fortune," in the capacious sense of the term that entangles luck, wealth, and social status. This paper focuses on how fortune's speed and deservedness are mediated through actors fluidly moving between these social categories. They fuse testimony-based storytelling, trading strategies, and forms of gambling as they chart their pursuits of fortune. Not only do Thai consumers make sense of crypto, but in doing so, reshape shifting financial and technological landscapes of risk, investment, and possibility.

5179 Haunting Narratives and Practices in Institutional Spaces

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Studio 10

Type: Oral Presentation Session

This panel explores how contemporary institutional settings - such as schools, daycare centers, NGOs, nursing homes, and hospitals - are shaped by the lingering presence of past images, practices, and narratives. Drawing on Avery Gordon's concept of ghostly matters (1997), we examine how spectral traces - both ephemeral and visceral - continue to shape the ways care is enacted, experienced, and understood within these institutions. As Gordon writes, "The ghost is not simply a dead or missing person, but a social figure... a dense site where history and subjectivity make social life" (p. x). Viewing ghosts as generative social figures, this panel investigates how past imaginaries, and institutional histories manifest in contemporary care practices - sometimes as constraining forces that reinforce entrenched traditions, at other times as openings for critical reflection and transformation.

Our point of departure is that ghosts in the form of past images, practices, and narratives, with the potential to disrupt and critique current professional norms and everyday routines, persist in

architectural designs, linger in nostalgic imaginaries of the "good old days", or are woven into institutional narratives of past scandals, harmful practices, and bygone golden eras (Armstrong, 2010; Derrida, 1994; Gammeltoft, 2014; Nielsen & Rytter, 2019). At the same time these hauntings are not only constraining but generative, opening for new possibilities for reimagining care. As Lisa Stevenson (2014) suggests, the past does not simply disappear but lingers in images and narratives that hold us in their grip, shaping affective and ethical orientations toward care. Ghostly matters may thus offer creative engagement with the past, preserve valuable intergenerational knowledge, and serve as reminders of collective wisdom and care (Gammeltoft, 2021; Louw, 2022).

Thus we examine ghostly matters as generative social figures that shape the present as both constraints and catalysts for new modes of care. We invite presentations that explore questions such as:

- How do past events, scandals, or care paradigms haunt contemporary welfare institutions?
- What physical remnants of outdated care paradigms persist in the architectural design or everyday routines of care settings?
- How do professional norms, imaginaries, or training practices carry forward assumptions rooted in the past, often in invisible or "spectral" ways?
- What ethical dilemmas arise from confronting these ghosts, and how might attending to their presence reimagine contemporary care practices?
- How might the concept of ghostly matters provide new perspectives for research methodologies in welfare settings?

Presentation(s): "It Wasn't Like This in the Old Days": The Haunted Ethics of a Danish Care Crisis

Nordic welfare states are celebrated for their extensive elder care coverage, but scholars argue that these societies are now facing a care crisis due to increased privatization, New Public Management strategies, and the growing use of technology (Hansen et al., 2023). Denmark is no exception.

Based on 11 months of ethnographic fieldwork in a nursing home and homecare unit in Copenhagen, this paper examines how the experiences, imaginaries, and expectations that people in need of care, their families, and care workers have of the Danish welfare state shape narratives of disappointment and crisis in elder care. Drawing on Roitman (2013), I argue that crisis narratives invoke an implicit norm, revealing an axiological problem: Danish elder care is failing to meet its

own standard of qualified and dignified care. Using Derrida's concept of Hauntology (1994), I contend that this norm is a ghost—there is no fixed point of origin for Danish elder care or the welfare state, as both exist in a perpetual state of becoming. Through Zigon's concept of Dwelling (2018), I examine how this ethical-spectral dimension of the care crisis expresses a desire to create better conditions in elder care. Drawing on ethnographic vignettes and interviews with individuals involved in elder care, this paper contributes a moral anthropological perspective to the care crisis literature, shedding light on its overlooked ethical dimensions and its transformative potential for elder care.

Ephemeral Care: Parents' Experiences Navigating Healthcare in a Welfare State

Following its transfer from Novo Nordisk to the Capital Region of Denmark, Scandinavia's largest diabetes hospital, Steno Diabetes Center Copenhagen (SDCC), moved to newly constructed facilities. The hospital would now treat over 11,000 children and adults in addition to conducting world class research. Entering the new SDCC space, one is assured of receiving the best care the Danish public healthcare system has to offer. But this state-of-the-art hospital, like others in Denmark, is haunted by the practices and policies of the other sections of Denmark's welfare state. While public hospitals like SDCC are operated on a regional basis, certain healthcare services are provided through the municipalities, empowered to exercise discretion over which services they offer and to whom. This translates into an unpredictable variability in the treatment available to children with chronic conditions, determined largely by their address. Healthcare equipment, financial coverage, and institutional support are readily available to some families and ephemeral apparitions to others. How do parents to children with T1D and other chronic conditions navigate this "postcode lottery" in their attempt to secure access to the care that they know is available? Based on both autoethnographic and ethnographic material from a study on fathers as caregivers, this text explores the experiences of parents to children with chronic conditions as they navigate the Danish healthcare system.

Shrinking Presence and Professional Belonging: Intergenerational Rifts and Everyday Practices in a Danish Public School.

Based on fieldwork in a Danish primary school, this paper explores how shifts in institutional practices and societal norms regarding childcare and education affect an older teacher. Building on Hartmuth Rosa's (2013) concept of the 'contraction of the present', describing the diminishing time span in which one's expectations for actions and one's knowledge and experiences align in a rapidly accelerating world, I propose the term 'shrinking presence' to highlight how such shifts leave older teachers chronologically out of place, rendering them increasingly irrelevant and 'invisible' in daily professional life. Drawing on anthropological research on belonging and possibility, and ethnographic fieldwork accompanying an older teacher in her daily work life, the paper unfolds the ways in which the teacher mitigates and withstands this intergenerationally driven 'shrinking' of her

professional presence and virtues through small everyday routines. I argue, that while these seemingly unnoticeable practices are shaped by intergenerational 'rifts' that position older and younger teachers in distinct roles, with the younger generation holding a systemic advantage (Rosa, 2013), they also serve as enactments of professional belonging, helping her find her footing in an institutional environment dominated by a 'generation now' (Ingold, 2023). Together, these dynamics reveal how both subtle actions and generational divides shape professional identities in institutional settings.

Presenter(s): Nina Kramp

Visitors in the Hospital

In the UK, the NHS is regularly talked about with nationalistic pride, and despite it having been on the precipice of collapse for decades, is vigorously defended. But the reality is that increasing pressures on resources has meant much of the public's loyalty to it is shaped by ideas of how the NHS once was. Hospitals are places of vulnerability where people face uncertainty. This makes them particularly susceptible to the influence of small inconsequential things around them while they sit and wait for a consultation. A clock on the wall that needs a new battery, piles of tired dog-eared magazines on a table: The sense of the past seeping into the present via things that should not be there. Untidy and sometimes even dirty, they are not merely signs of a health service increasingly under pressure, but quiet institutional hauntings of other people having been there, in similar situations, and feeling similar things (Gordon 1997). Drawing on observations at UK hospitals, this paper will describe how these traces of the past shape the present. The very same signs of a tired and crumbling healthcare system are also small signals from the many other people, reminders of how things were, and assertions that what feels uniquely personal, and individual is, at the same time, something very public and shared. And crucially, because these conflicting meanings remain ambiguous, they serve as lively contributors to people's experiences of illness and the sense of care they receive.

"We Didn't Have Homeless People in Yugoslavia": The Ghost of Socialism in Contemporary Slovenian Homeless Care and Welfare.

Homelessness and housing precarity continue to rise in Slovenia, yet the state has been slow to respond, lacking strong political will. In reaction, NGOs have stepped in to provide care services. Recently, government attention has increased, leading to more funding for NGOs and state welfare services. As a result, NGOs have expanded their role in housing, healthcare, mental health, addiction support, and other welfare programs, forming a new institutional network of state and non-state care providers. However, this contemporary institutional arrangement is haunted by the spectre of Socialism and Slovenia's post-socialist reintegration into the global capitalist system. This paper explores how these historical legacies influence contemporary care and welfare delivery. Drawing on ethnographic fieldwork at a local NGO in Ljubljana, I examine how Yugoslavia's social housing policies and post-independence privatisation continue to shape housing provision

today. Additionally, psychiatric institutions established under socialism constrain the shift to community-based care, creating service gaps. Nostalgic imaginaries of Yugoslavia, reflected in statements like "We didn't have homeless people in Yugoslavia," critique contemporary welfare failures. Such sentiments highlight how ghosts of the old system remain not only as memories of the "good old days" but are mobilised as critiques of contemporary society and the failures of care and welfare services.

3308 Haunting Root and Branch: Future Memory, Colonial Specters, And Imperial Ghosts Among Ethnographers In Plant Studies - Part 2

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** MGB - Salon A

Type: Oral Presentation Session

This two-part session focuses on how plant studies ethnographers attend to hauntings - colonial, imperial, intimate, and otherwise. In it, our participants address how plant-human relations, and our studies of them, hold the potential to unsettle quotidian temporalities of nationalism, settler colonialism, and empire. Panelists consider how plants and relations with them call our attention to the conditions of possibility of that growth, the soil, and the ways they burst their borders.

Plants topple notions of purity and control within the enclosure of the garden (Shotwell 2016; Subramaniam 2016, 2024), and spectralize past relations and future possibilities. With plants, we consider temporalities and impacts of imperial-colonial ghostliness. As lively beings and symbols of "life itself," plants are commonly conjured into the present tense. Might we also conceive of plants – and discourses surrounding plants – as time machines? They may transport the reader to the origin stories of nation-states, highlighting what Ann Laura Stoler calls "the durabilities of imperial formations" (2016: 17, 25); stories often sanitized by the genocidal process of colonization. They might also attune us to the planetary afterlives of enslavement "in the wake" of transAtlantic enslaver ships (Sharpe 2016: 22), as these relations manifest in the subtle as well as not so subtle soils of the plot, plantation, forest, field, swamp, desert, and garden (see also McKittrick 2013; Wynter 1971).

Critical plant studies ethnographers in this double panel ask: what kinds of memory can a currently living plant – or, in the archival sense, the **idea** of a plant – hold for people enacting social relations with reference to specific or imagined pasts? What are the theoretical frames ethnographers often take for granted as the most useful way to analyze plant-human relations? We provoke our colleagues to consider how the frames of economic botany, folk medicine, "magic" practices, and the notion of a settler-colonial and imperial "center" haunt our ability to see what is actually in front of us ethnographically. What kind of ethnographic work can be produced with and

alongside plants? Do the frames of economic botany, folk medicine, etc., foreclose other possibilities? Ethnographic work with plants is haunted by the specter of capital, the wake of enslavement, and the mind-muting force of the "settler public sphere" (Lalu 2009) and "settler common sense" (Rifkin 2014; 2017), all the while planthropologists try to reach escape velocity on the available narratives.

Discussant: Jessica Caporusso, York University, Department of Anthropology

Presentation(s): Seeding Alternative Temporalities

In preparation for futures clouded by anxieties over precarious future resources, plant breeders use seeds preserved in inter/national collections to create future crops. These collections harken back to empire-landscaping projects from the Columbian Exchange, plantation economies, and settler colonialism (Casid 2004; Schiebinger 2004). Adams et al. (2009) articulate how anticipation drives material planning efforts for a sense of preparedness through "abduction," the fluid movements across and between past, present, and future. Through these logics, plant explorers, ethnobotanists, and salvage ethnographers of the late 19th and early 20th centuries collected plants and knowledge (Blackhawk & Wilner 2018). Importantly, these practices also reveal underlying sentiments that Indigenous People(s) and the seeds and environments they cared for were declining and would inevitably "disappear" (Curry 2022; Bonneuil 2019).

Just as seeds hold memories of adaptation, generations of agrarian practices, care relations, and colonial violence (Fullilove 2024; Gan 2017; Nazarea 1998; White 2019); they also carry reproductive material of interest to technoscience. In this paper ask how grammars of salvage, creation, loss, and disaster permeate plant breeding and seed growing (Cromer 2022). How do infrastructures of preservation and (re)production reverberate across space and time? In what ways do seeds and their relations already create ruptures in technoscientific temporalities?

Fields of Haunting: Plant Relations as Wake Work in Cambodia's Transforming Indigenous Landscapes

This paper explores how Bunong Indigenous swidden fields in Cambodia become sites of haunting—spaces imbued with traces of past agricultural practices while being reshaped through state intervention and Indigenous resistance. Drawing on ethnographic fieldwork since 2010, I examine how Bunong farmers engage in 'wake work' (Sharpe 2016) by reimagining agricultural worlds after much of their land was allocated to rubber plantations.

As the state advances "modernization," Bunong farmers shift from rotational swidden cultivation to permanent agroforestry systems. They integrate rubber—a plant central to corporate land colonization—into diverse plots that contrast with monoculture plantations. These systems reflect both adaptation and resistance to dominant development narratives. By strategically planting rubber alongside other species, Bunong farmers redefine their integration into systems of appropriation and dispossession.

I argue these transformed fields act as temporal portals linking past, present, and future. Ceremonial practices invoking rice spirits persist under young rubber trees and planting strategies preserve cultural memory amidst agricultural transformation. Methodologically, I juxtapose insights from formal spaces with those derived from fields, revealing distinct epistemologies. While bureaucratic processes stall Indigenous claims, plants narrate stories of resistance and cultural persistence that complicate notions of linear progress and state control.

Presenter(s): Esther Leemann

The Quest for Microbial Efficiency: Plantation Logics in Emerging Agribusiness Value Chains

Industrial agriculture's shift towards soil health has given rise to a new class of products—biologicals—which encompasses a group of microbial supplements that aim to boost nutrient availability in soil and uptake by crop plants. Based on fieldwork in southern Ontario with commodity crop farmers, biologicals producers, and agricultural retailers, I explore how biologicals are being introduced into agribusiness value chains. Specifically, I focus on how discourses of efficiency, yield, and return on investment, as well as metaphors of plants and soil as factories or labouring bodies, structure agribusiness marketing and farmers' perceptions of biologicals, to explore how biologicals are future-making project haunted by settler-colonial, imperial legacies of plantations. I argue that the overarching focus on efficiency gestures towards a desire for what I call metabolic discipline—an extension of plantation logics of simplification, optimization, and extraction (Wynter 1971, McKittrick 2013, Barua 2024), intimately tied to racialized exploitation on Canadian farms, as the predominantly Mexican and Caribbean temporary farm workers are subjected to "slavery-like conditions." Thus, I argue that agribusiness producers replicate and extend plantation strategies of monocultural simplification and metabolic optimization towards commodifiable productivity on a microbial level, folding microbes into existing disciplinary matrices and industrialized temporalities.

Presenter(s): Cameron Butler

The Creation of a Medicinal Garden: Emergent Uses of Land Stewardship with the Dartmouth Organic Farm

This paper explores the various stakeholders that imagine an organic farm and allow for the creation of a garden to reside within it. By analyzing the farm's history, cultural significance, and the ongoing land operations, this study examines how the land itself serves as a site of colonial memory. The research considers the plants that grow within the farm's current function as well as the forgotten waste from past projects and how they reinforce, haunt, and challenge settler colonial

structures. The ethnographic work I conduct will be alongside the plants in my garden, the fields planted by the Dartmouth Sustainability Office, and the wild herbs that grow between these spaces. This paper is looking to observe the ways in which the plants afford themselves to different understandings of plant use and plant perspective, as well as the relevance of decision making surrounding land practices. Observing the entangled interactions within the garden and the surrounding farm, this research aims to expose the various ways plants contest the ghosts of default attunements to plants. To answer these questions, my research will explore the comparison of maps, images, and text that depict the aesthetic of the farm landscape throughout recorded time. I will also be using the ethnographic experience of planning, planting, and sitting with the gardened section of the farm, regardless if the garden lies dormant or is actively growing.

Presenter(s): erin kelly

From Botanic Gardens to Contemporary Biofuels: Colonial Spectres in Mauritian Agribusiness

Hailed as one of the world's oldest "living laboratories," Mauritius has long been entangled with colonial botany and agricultural entrepreneurship. Since its founding in the 1730s, the island's Jardin de Pamplemousses botanic garden and Station Agronomique sought to unearth "nature's knowledge" to harness it for human benefit (Grove 1995). This mandate nurtured a colonial vision of botanic gardens as proper loci of plant conservation and experimental propagation in relief to folk knowledges about plants. While the Jardin's prominence as a site of knowledge-making has since waned, its legacy endures via recent agropreneurial efforts to cultivate new uses for colonial crops. Sugarcane biofuel development, for instance, emphasizes a colonial mechanistic understanding of plants' "natural" ability to propagate and is built on centuries' old expertise gleaned in the garden. Such assumptions stress not only how vegetal knowledge is generated, but also underscore how current agribusiness island imaginaries (Gugganig 2021) are haunted by the spectre of colonial biotechnology (Storey 2017). The Jardin is thus a fertile site to query how knowledge about plants traffics between past, present, and future imaginaries, all while contesting whose expertise matters. Using ethnographic insights, I question colonial botany's enduring influence on biotechnology, arguing that attending to how the colony and garden co-cultivate each other may help us attune to plant stories otherwise overlooked.

4385 Haunting/ed: Ghost and Monster Stories as Critical Historiography

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Balcony L

Type: Oral Presentation Session

To be haunted in the name of a will to heal is to allow the ghost to help you imagine what was lost that never even existed" (Gordon 2008, 57).

Monster, a word of Latin origin ("warn"). Ghost, a word of Germanic origin ("spirit, soul" in Old English). For many anthropologists, ghosts, monsters, and other supernatural beings animate our ethnographic stories and haunt encounters in the field. These creatures present themselves as powerful beings through which our interlocutors articulate their deepest desires, traumas, and hopes for the future. They pinpoint a myriad of gendered, racialized, and classed inequities as well as insecurities about home, the nation, and the planet (Musharbash and Gershon 2023). These beings are a reminder that the spectral and the monstrous can enrich our understanding of human experience in its most profound and disturbing forms. Taking seriously Jeffrey Jerome Cohen's contention that "monstrosity challenges a coherent or totalizing concept of history" (Cohen 1996, x) this panel considers questions related to constructions of anthropological time, space, and the "monstrous other." In interrogating how the intertwining of the "real" and the "unreal" challenges conventional epistemologies and historiographies and opens up new avenues for wrestling with collective trauma, anxieties, violence, insecurity, and the quest for a desirable, livable, and dignified life this panel asks: How can ethnographers confront the invisible forces shaping lives, those that present themselves as an absence while being a seething presence of something (Gordon 2008)? What histories of violence, insecurity, power, and resistance lurk in their creases? How do ghostly and monstrous beings challenge us to engage changing conceptions of what the archive can look like and the place of historical imagination? How can we, as scholar-learners, think of ghost/monster stories as critical historiographies that are multisensory, just like life itself, revealing ways of being that have been previously misrecognized or mis-told? And, how can we draw on a critical historiography of monstrosity to know/imagine otherwise? In positioning ghosts and monsters as worthy interlocutors, this panel calls for monstrous and ghostly stories. Panelists will also consider the performative as both an ethnographic knowing-analytic tool as well as a medium for sharing the ethnographic work.

Presentation(s): No Monsters Here, Just a War, a Mother, and Her Dead-Alive Kid

In the fall of 2020 Armenia and Azerbaijan, two South Caucasus neighbors fought a 44-day war over Nagorno-Karabakh, a disputed territory that had changed hands and seen earlier skirmishes and wars. Thousands of young people were killed. Enraged by the incompetence and irresponsibility of the state that sent their children to be killed in a war it could not afford fighting, many families

protested in front of government buildings and in places where they would encounter government officials in Armenia. To get back at the current government, their political rivals manipulated the pain of losing a child by funding some parents to confront the government. Mothers of hundreds of those killed turned to assisted reproductive technologies provided for free by the state to have new babies. Could they be practicing distributive reproductive justice in the absence of any state-level infrastructural support for sustaining life, while it supports birth? In this presentation-performance, I listen to the wartime and postwar stories of Armenian mothers and the monsters that haunt them or lurk in their stories and dreams. I draw on feminist praxis, to share the revelations of these monster stories by creating affective resonances between these grieving-related mothers, the ethnographer, and the listener to touch and feel the (un)familiar people in (un)familiar places deeply and with care as I rehearse a livable life from what's left, to feel anew, oriented toward sustaining life.

Presenter(s): Nelli Sargsyan

Phantom Cowboys: Cosplaying Settler Archetypes into the Climate Crisis

This paper will offer a cultural history of the Texas cowboy and the oil industry from 19th century settler travelogues to Friday Night Lights to my own ethnographic research in Houston and across Texas from 2018-2020. The figure of the cowboy reoccurred in my fieldwork though very few people that I interviewed in the oil and gas industry had worked in cattle ranching. In the oil industry, business men and their families continue to go to Colorado in the summer to escape the Texas heat and play cowboy in nicer weather. The figure of the Texas cowboy has been central to projects of dispossession and extraction and now looms in the consciousness of the climate concerned as a monster who can't just keep it in the ground. Are these monsters real? Is their monstrosity what is obstructing climate action? What other modes of engagement might disarm these ongoing and destructive projects perpetuated through cosplay? Which ghosts may emerge hiding behind the cowboy who may feed on being seen as monstrous? In Houston, men in big trucks and thick belts whispered about climate change, race and Bill Clinton to outsiders like me. In other settings they may have spoken loud and clear. Who are these simultaneously bombastic and frightened engineers and businessmen and why are they playing cowboy?

Presenter(s): Nataya Friedan

Blackheart Man: Monstrosity, the Marvelous Real, and Crime in Jamaica

Crime in Jamaica has steadily escalated since the nation gained independence from Britain in 1962 and the severity of the country's crime problem is typically made legible through a series of increasing crime rates—metrics of the real. These data and rates serve to statistically capture the morbid effects of the crime phenomena. Still, in everyday talk, crime is grappled with outside such metrics. It is consistently bemoaned as a "monster," to be tamed and controlled. In this paper, I take seriously the cultural signification of crime as a monster in Jamaica. I offer a reading of the Jamaican "crime monster" through the figure of the Blackheart Man, the protagonist of one of Jamaica's most bloodcurdling myths. In centering the anthropophagic Blackheart Man through the

storytelling soundscapes of reggae, I interrogate the temporalities of racialization, violence, and fear tethered to the Blackheart Man's monster body. I suggest that both the Blackheart Man and contemporary crime monster perfectly embody what the Cuban novelist Alejo Carpentier called "lo real maravilloso." In reading the Blackheart Man as a dynamic force through which to make sense of crime and make it legible beyond metrics of the real, this paper invites us to contend with an alternate historicity of crime in Jamaica. That is, one open to taking a mythology of monstrosity and an epistemology of the "marvelous real" as critical modes through which to understand what it means to live in a high-crime country.

Presenter(s): Kimberley McKinson

Monstrous Excess and Ghostly Pains: Reckoning with the Opioid Crisis in the Gulf Coast

This paper analyzes the opioid crisis in the U.S. Gulf Coast through a lens of monstrous excess and ghostly reckonings, examining the interplay between profit, pain, and care. I begin with a critical analysis of the television series, *The Fall of the House of Usher*, a gothic allegory of a pharmaceutical family dynasty's self-destruction. The series renders visible the horror of corporate greed and familial decay, echoing the legacy of the Sackler family—owners of Purdue Pharma, the company that developed and aggressively marketed OxyContin while downplaying its addictive potential. Moving beyond the fictional, I turn to ethnographic engagement with community clinics and private foundation-supported initiatives in Galveston, Texas, addressing the crisis's lingering "ghosts"—the enduring consequences of overdose deaths. These projects, serving the uninsured, attempt to channel these ghosts into improved care for the living and hopes for future healthcare possibilities. Through a multi-sited narrative encompassing television, institutional ethnography, and public health crisis analysis, I trace how the monstrous architectures of the opioid crisis came to be, and their lingering effects on care and capital. This paper asks: how can ethnographers confront these apparitions—not merely as metaphors, but as material traces of violence, disavowal, and complicity—embedded within archives, clinics, and community programs?

Presenter(s): Jessica Olivares

The Refugee Trafficker and the Monstrous Haunting of Europe's Asylum Regime

This paper interrogates the figure of the "refugee trafficker" as a monstrous specter born of contemporary Mediterranean migration. Drawing on Derrida's hauntology, it treats this figure as a ghost haunting Europe's borders, lingering as an unsettling reminder of an unresolved claim to colonial reparations. Informed by ethnographic research into the Glauco trial (Italy, 2016–2021), the paper analyzes how the courtroom upheld rigid binaries between victim and perpetrator, despite testimonies revealing that many accused traffickers were themselves coerced migrants. Legal anthropology and critical race theory help illuminate how the law produces this monstrosity—the refugee trafficker as both scapegoat and mirror of Europe's asylum contradictions. Building on Tendayi Achiume's formulation of migration as decolonization, the paper argues that the refugee trafficker becomes a cipher for unresolved colonial debts. These haunt the present in the form of punitive asylum regimes that criminalize mobility while denying historical responsibility. The state's

disavowal of its own complicity – in creating lethal migration corridors – externalizes guilt onto the phantom of the trafficker. Ultimately, the paper asks what monsters are born of such disavowals, and how they reflect the haunted ethical landscape of European border security.

5278 Hauntology for Hire : Real Talk on 'What's Next' for Practitioners with the Living Legends of Business Anthropology

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Grand Couteau (5th fl)

Type: Roundtable/Town Hall

Mid-career anthropologists and senior practitioners in industry often find themselves haunted by unmet career expectations, vanishing job opportunities, and the ever-present question: What's next? This roundtable brings together the GOATs, the OGs, the recognized leaders of business anthropology from UX & tech, marketing and advertising, and organizational consultants. We ask them to share their hard-earned lessons on navigating shifting job landscapes, securing fulfilling work, and stepping into leadership. How do we move beyond the ghostly presence of past career ideals to build a future that is both financially and intellectually rewarding? With candid advice and real talk, we'll explore strategies for staying relevant, finding meaningful work, and shaping the next generation of anthropological leadership within industry and within the discipline.

7761 How Law Matters Now: Considering legal anthropology's critical empirics for these troubled times.

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR B3 (3rd fl)

Type: Roundtable/Town Hall

Among the noisy recriminations and finger-pointing following the outcome of the 2024 US presidential election, one could already hear the susurrus of an even deeper foreboding about the

future of the rule of law in a world where democracy, and the norms operationalizing it, no longer seem as inviolable as they once were. Ironically, Euro-American political and legal theory and scholarship tells us that harmony between liberal democracy and the rule of law is not as obvious as commonly thought. Democratic republicanism and the rule of law operate in tension with one another, and it is as much in the maintenance of the aporia between the two, as it is the specific and material form of their imperfect overcoming in different times and places that constitutes much of the topography of Western liberal legal orders since the mid-20th century. Thus whether couched as the "juridification of politics," the "sovereign exception," or "lawfare," diagnosing what the consequences of rising authoritarianism holds for the liberal rule of law, or governance and its effects more generally, requires something more than simply discerning the political dimensions of law or the legal dimensions of politics.

Armed with these insights, and the critical theories that inform them, now is the time to ask anew, both figuratively and literally, how law matters. The current crisis begs a return to inquiry that asks after the ways in which law emerges in the everyday lives of those caught up with it. If law, at least in the liberal traditions currently in crisis (traditions which also inescapably inform law's theorizing in "western" social science), generates its authority and force by joining norm-to-fact, ideality-to-materiality, we can ask whether it demands a mode of investigation whose method can account for both its humanistic and empiricist dimensions. Can such an approach escape its grounding in liberalism? Must it? In this roundtable anthropologists of law at various career stages and locations in the academy will discuss whether anthropology offers just such an approach, and whether its commitments to the critical hermeneutic and empirical dimensions of ethnographic investigation provides a fruitful vantage from which to map law's unfolding emanations in and with our political present. It will also consider the limits of that vantage, and what is gained or lost when we look back to law with methods that are almost-but-not-quite the very ones that are both objects of critique and subjects in crisis at the very same time.

3555 Human Ecology: An Interdisciplinary Journal at 53

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** St. Charles (41st Fl)

Type: Oral Presentation Session

Since Pete Vayda founded Human Ecology: An Interdisciplinary Journal in 1972, it has become a pivotal publishing venue for social and natural scientists spanning traditional disciplinary boundaries of the social and natural sciences. Now published by Springer Nature, last year the journal received nearly 500 submissions, and over the past five years, we have received submissions from 121 countries across the globe (62% of all countries). In 2024, long-time Editor-

in-Chief Daniel Bates retired after 50 years of service to the journal, making this an ideal time to celebrate of Human Ecology's contribution to understandings of the complex, integrated, and unpredictable interactions that occur between humans and their environment. Consequently, we would like to invite you to join a panel of esteemed scholars, including former editor-in-chief Dan Bates, who have published some of the most important, impactful, and creative articles in Human Ecology to present their impactful work and to more generally reflect on paths forward for the interdisciplinary field of human ecology. Of course, we expect that the spirit of Pete Vayda will oversee proceedings with his always insightful and often critical eye.

Presentation(s): A review of publishing trends and patterns in Human Ecology, 1972-2024

Since its inception in 1972, the journal Human Ecology. An Interdisciplinary Journal published 2,422 articles (an average of 48.44 per year). Using NVivo 15 software, I perform qualitative, objective content analysis to systematically examine and interpret publishing patterns and identify themes and meanings within the body of the published articles. Subsequently, I quantify the results to reveal publishing trends related to, but not limited to, human adaptive strategies, environmental impacts and hazards, human-wildlife conflicts, risk management and risk mitigation, public health, climate change, biodiversity, ecological services, gender issues, and geographical coverage. I aim to identify possible gaps in published research that need attention, provide insights into the underlying attitudes and perspectives expressed within a particular topical context, and sketch pathways for the future journal's publishing policies.

Presenter(s): Ludomir Lozny

Water Insecurity & Human Ecology

Abstract: Water insecurity will be a major challenge in the coming century. Climate change is expected to destroy water systems, displace populations, and intensify water inequalities. But the work of many human ecologists—and my own, starting with Cochabamba's Water War—reveals that water crises are already happening in places where political and economic systems produce severe water insecurity for humans, even when water supplies overall are sufficient or even abundant. My research takes as its starting point the assumption that communities now surviving water insecurity have much to teach the world about how to confront future climate challenges. Building from my early fieldwork in Bolivia and later cross-cultural work, I argue one missing key to solving water insecurity is hidden in the social infrastructure all around us. I discuss findings that

illustrate how we can leverage social infrastructure—informal economies, social networks, and cultural norms—to address water insecurity under climate change.

Presenter(s): Amber Wutich

Adaptive Self-Organization in Swidden Agriculture

Swidden agriculture (pejoratively, "slash-and-burn" or "shifting agriculture") has long been a focus of human ecological research across diverse societies, past and present. It has features in many articles in *Human Ecology*, including two special issues (2009 and 2013). Yet, it remains highly contested in scientific discourse, intensifying conflicts between planners and Indigenous communities—tensions further exacerbated by the accelerating climate crisis. In this talk, I present findings from nearly two decades of NSF-funded fieldwork in two Q'eqchi' Maya villages in southern Belize, where swidden (known locally as "milpa") cultivation has deep historical roots. Using an adaptive self-organization framework, I integrate household surveys, ethnographically informed agent-based models, and global-scale remote sensing analysis to demonstrate how customary cultural practices, social norms, and household-level land use decisions drive diverse swidden disturbance patterns, including the emergence of sustainability. I argue that a complex systems perspective offers valuable insights into how small-scale, informal societies achieve sustainability without top-down environmental management.

Western Science Astray in the Wilds of Knowledge Coproduction

Human ecology is an inherently collaborative field of study and practice and there is a lot of "co-production of knowledge" involved. I contrast two experiences: an international study of Mexican fishing cooperatives funded by NSF and a National Academy study of the co-production of environmental knowledge involving indigenous communities. Both posed immense challenges working within the framework of western science. The latter study was aborted in the spring of 2024, raising major questions about what "co-production" means and ultimately the authority and power to answer those questions, where peer review and other processes of western science are at play.

Tracking Changes in Environmental Anthropology through Natural Language Process and Sentiment Analysis

In several periods since its inception in the 19th century, anthropology has seen rapid changes its theoretical and methodological approaches. For instance, within environmental anthropology, concepts such as "environmental justice" or "environmental racism" are relatively new phenomena that express increasingly moral models for research agendas. Yet, studies of such shifts in academic fields remain largely qualitative reflections. Natural language processing (NLP) can bring greater precision to the study of such academic transformations. NLP's sentiment analysis can quantitatively analyze the degree to which environmental anthropology has begun to use moral

judgements and affective reasoning within its research. These trends will be compared to the broader field of anthropology and other sub disciplines.

2996 Inhabitations: Materializing Past, Presence, and Future in the Near and Built Environment

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Studio 1

Type: Oral Presentation Session

"Inhabitation" describes both the act of dwelling in a space or place, and the state of being possessed or influenced by other beings or forces. This dual sense of the term provides an apt entrée into anthropological work on the ways we (as people, as anthropologists) inhabit the near and built environment, from bodies and clothing to the objects we use, consume, and discard, to the structures and buildings we occupy. To be human is to animate and incorporate the material world through our actions, stories, and social relations. Inhabitation evokes the ways that objects and spaces move us and make tangible our pasts: our former selves, and the lives and works of others. There are times when inhabitations by others are marked explicitly, and other moments when these influences go unrecognized. The historical aspect of inhabitation suggests the well-worn grooves of the habitual, but acts in the present are also oriented towards the future, in the form of making plans, setting expectations, and looking ahead with anticipation, hope, or anxiety. Collectively, the papers in this panel interrogate the notion of inhabitation ethnographically, through close attention to the relationships we develop with time and the tangible in acts of dwelling, movement, and material engagements. Through a range of diverse study locations, presenters consider the social, cultural, and emotional forces of inhabitation: from the fraught relationships articulated by slow fashion practitioners vis-à-vis their collections of almost discarded clothing; to the ways architectural educators and students envision or warn of futures in their talk, drawings, models, and buildings; to the entanglement of past and present in the spiritual and social inhabitations of African fertility figurines; to designers and anthropologists grappling with the "ghostly" presence of past gestures in an augmented reality system meant to teach handcraft; and to the ways former and current residents in memory-care nursing homes "haunt" these "other-than-home" places. Together, these papers speak to the entanglement of past, present, and future in the ways we inhabit and animate the material world, a world which also invites certain actions while

foreclosing others.

Presentation(s): Almost Discarded Clothes: Value, Ethics, and Consumer Practice in Slow Fashion

This paper examines the presence, persistence, and perceptions about almost discarded clothes. By this I mean the wayward piles, folded stacks and forgotten totes full of clothing that lurk, inhabit, and at times haunt the trunks, closets, foyers, basements and guest rooms of slow fashion practitioners. During my ethnographic fieldwork, which included 60 wardrobe interviews with consumers, producers, industry professionals and enthusiasts of slow fashion, I encountered almost discarded clothing on a consistent, if not constant, basis. Despite their near universality in the collections of clothes for most contemporary consumers, the very presence of almost discarded clothing departs from the idealized representation of a slow or sustainable fashion consumer, where terms like minimalist and mindful are used to denote a specter of appropriate consumption practice. This paper shares stories of clothes that do not fit anymore, clothes with painful memories attached to them, and clothes with no buyer despite their perceived economic value. I examine the 'mysterious power' of these commodities. Thinking with anthropological theory on value and consumerism, I show how almost discarded clothes in the slow fashion context absorb and retain affective, political, moral, and economic relations to show how my interlocutors rationalize, avoid, and negotiate these clothes within their slow fashion practices.

Presenter(s): Jimil Ataman

A Bride, a Dump Site, and “Bad Creative”: Phantom Voices and Materialized Decisions

Situated in an ethnography of architecture education, this paper considers the talk of architects and others during a building's "site selection" (an early stage of design wherein the setting of a structure is determined through considering multiple locations). Through focusing on talk recorded as participants "walked" potential sites, the paper explores how such evanescent talk is consequential, as decisions about site influence a building's material trajectory and the actions of those who design and make it. Here, the talk was captured as participants explored features of the land that might impact the form and function of the potential structure, with participants' talk conjuring visions of phantom buildings, hypothetical construction, and inhabitation by imagined humans. As well as revealing such future-focused fictions, the talk, when revisited several years after the project's completion, also revealed a prophecy that was ignored at the time: that the location selected could lead to an untenable building. Accordingly, the paper considers both the negotiations between immateriality and materiality that occur through architecture-based talk, wherein ephemeral conversations leave physical traces through judgments made concerning a

building; and also, how iterative engagements with data can disturb established narratives of a building's biography and haunt perceptions of the structure's apparent inevitability.

Entangled Realms: African Fertility Figurines as Spiritual and Material Agents

African fertility figurines, such as Ghana's Akua'ba and Cameroon's Namji figurines, go beyond materiality to embody supernatural entanglements between the living and ancestral spirits. Drawing on Ian Hodder's material entanglement theory and LeRon Shults' spiritual entanglement, this study examines how these objects act as active agents, mediating cultural identities, societal norms, and metaphysical realms. These figurines exemplify the co-constitution of spiritual and material worlds. They enforce obligations to bear children while offering hope for conception, thus haunting present-day reproductive practices with the demands of the past. As inhabited entities, the figurines transcend passive symbolism, becoming active vessels through which spirits assert their presence. Their material forms are not merely symbolic but corporeal anchors for spiritual inhabitation, enabling ongoing dialogue between generations. This inhabitation emphasizes their role in sustaining cultural memory and resisting erasure, as ancestral voices persist through ritual engagement. By inhabiting these objects, spirits shape social realities, rendering the past palpable in negotiations of fertility, identity, and belonging. The figurines' enduring use, even amid "failure," reflects communities' adaptive negotiations with these inhabited legacies, offering insights into how spectral presences animate material culture.

Four "Other-than-Home" Hauntings of Memory Care

This paper reflects on how memory-care spaces in nursing homes can be haunted by the former selves of the residents, as they experience locations that reference "other-than-home" places. Memory-care spaces house residents with, e.g., dementia, and are often geared towards being home-like. However, the requirement to house communally, to monitor health status, deliver care, and welcome visitors can result in the design of spaces that evoke unintended inhabitations. This paper draws on ethnographies across ten years and four countries to explore the experiences of those who dwell within spaces that are meant to evoke supposedly-familiar schools, hotels, shopping malls and hospitals. In the ten locations studied, these other-than-home spaces can propel already-confused residents to experience circumstances that compound their disorientation. This presentation focuses on four instances of memory care "hauntings" and their effects on residents. In particular are considered Canadian First Nations residents who experience the visual and structural reminders of a school location as a return to the residential schools of their past; farmers who believe they're perpetually on holiday at a hotel; homemakers who are stuck searching for stores that don't exist; and other residents who believe they've broken a bone or

are in a mental ward at a hospital. Reflecting on these other-than-home hauntings offers reminders of how spaces have unexpected powers to disturb and disempower.

Presenter(s): Megan Strickfaden

Ghosts in the Machine? Traces of Gesture and the Social in Design for Augmented Reality

Philosopher Gilbert Ryle's critique of mind-body dualism assails the notion that the mind inhabits the body like a "ghost in the machine." Drawing on ethnography of design practice in a collaborative project on handcraft and augmented reality (AR), we consider Ryle's critique in relation to anthropological and STS explorations of embodied knowledge. The discussion focuses on the development and uses of a headset-worn AR tool designed to teach beadweaving. Our ethnography follows Canadian, American, and Nigerian anthropologists, architects, and human-computer-interaction (HCI) researchers as they learn, document, represent, and experience the gestural and material choreography of analog and digital beadweaving. Like Ryle, we insist on embodied, orchestrated systems of making that integrate ideas, drawings, code, materials, the senses, and the social. We also find "ghosts in the machine" to be a useful entry point for analyzing design dilemmas like standardization, representation, and access. Here, "ghosts" refers to the presence or absence of diverse hands and gestures "captured" by sensors, skeletal models of position in place and time that simplify rich movement, and the phantom presence of digital hands stitching in AR space. This project raises possibilities that "ghosts," or the AR traces of gestures, might extend their presence into the lives of others. But we also caution that digital data and phantom gestures may dematerialize or thin our shared social experiences.

6945 Intimate Affects: Embodiment, Time, and the Everyday

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Oral Presentation Session

This panel turns attention to the intimate affects, emotions, and sensibilities that permeate everyday life, indexing other ways of being in and inhabiting the contemporary conjuncture of political, economic, and consumer subjectivity often termed the neoliberal. Building on scholarship that locate regimes of sense and sensibility as provisional formations of state and market always open to challenge (Ranciere 2013), the papers in this panel are interested in how feelings, emotions, and the senses are experienced, expressed, reflected upon, and embodied in everyday contexts (Amrute 2020; Govindrajana 2021; Awal 2025). Love, sacrifice, disgust, and joy reside in the body through practices, relations, and histories of contact as much as they are ambiguous, elusive, shifting, and slippery (Massumi 1995; Ahmed 2004; Berlant 2011). Intimate

affects flow from and adhere to certain formations of state, society, kinship, gender, religion, class and race as much as they undo and exceed attempts of categorization and fixing. Therefore, we are interested in the embodiment and expression of intimate affects as modes of being and relating that reveal the complex negotiations through which individuals and groups situate themselves in the world, neither in conformance with nor resisting of dominant discourses, structures, and processes. Intimate affects we argue, reveal an ethnographic otherwise, a set of sensory and embodied feelings, moods, dispositions, and reflections that gesture towards new openings, possibilities, and futures not captured by binaries of past and present, subject and object, or structure and agency. Transversing time, space, concept, substance, and subject, intimate affects serve as a lens through which everyday interactions and contexts become a critical archive for addressing questions of the political, the economic, the spatial, and the subjective today.

Presentation(s): The Intimacy of Brideprice: Money and Love Among Rural Migrants in Shanghai

Rural-to-urban migrants in Shanghai often aspire to romantic love but frequently marry partners from their hometown through matchmaking. The brideprice—a transfer of money from the groom to the bride's family—plays a central role in these marriage arrangements. The brideprice violates the modern ethical and affective sensibility of love promoted by the socialist state and urban elites, triggering constant anxiety. Based on fieldwork with rural-to-urban migrants in Shanghai, this paper explores how the ritualized transfer of money could mark an ethical and affective space of sacrifice in which the boundary between money and love is reconfigured.

Quotidian Affections: Sacrificial Time through the Material and Spiritual

This paper is concerned with the emergence of aesthetic forms—choreographies, aural and visual expressions, rhythms and rituals—through the distribution of the sensible across materials, media, time. Through an ethnography of spiritual practitioners who cross between Ghana, the US, and Japan, I situate daily gestures in the tension between ritual and the quotidian, asking how race and colonial histories are indexed within African spiritual traditions across multiple, global locales. I focus on the relations between embodied experiences, historical conditions, and the capacity of pain, and ritualized forms of sacrifice, to call into question linear conceptualization of time and life. Inheriting anthropological reflections on liminality, this contribution dwells on the articulation of a language of spirits through the conjunction of mundane flow of signs over Internet spaces with lived histories of violence, generational impasse, racial calculus. It draws attention toward the carving of a space that is both ceremonial and ethnographic, a space where the progression of modern, neoliberal time fades to non-linear temporalities inflected by events that invoke a past that is not past—events that keep acting upon the present as violence deflects futures through the quotidian.

How do sacrifice, violence and pain figure, then, in the codified registers of traditions kept at bay by modern "epistemological disregard"? What is the cosmological significance of such intimate affects?

Presenter(s): Angelantonio Grossi

Between Disgust and Disdain: Making and Trading Halal Meat in Mumbai

In Mumbai, as with much of North India, Hindu Nationalist articulations position the sights, sounds, and smells of Muslim food, bodies, and ritual as vectors of disgust and repulsion. In this imaginary Muslim practices of butchering index the Muslim-as-other, to be rectified through anti-cow slaughter legislation and meat industry modernization. The matter is not one of meat per se, but rather of the place, space, and sensory forms of meat consumption and trade considered amenable to the properly Hindu and modern Indian nation. For Muslim butchers, however, the slaughter of animals and the trade of meat, is an obligatory ritual, a necessary practice, and a livelihood activity that is often treated with intra-Muslim caste disdain, placing them firmly but precariously within the spaces and occupations of the city. So, where disgust serves as a powerful caste-laden vector of sanitation, expiation, and critique, disdain registers as a complex force of distinction and difference. Moving beyond arguments that position disgust as a natural bodily response or as a historically mediated structure, this paper attends to the way disgust and disdain are embodied and reflected on by butchers and others in meat market interactions in Mumbai. Inhabiting a space and sense between conviction and reflection, disgust and disdain reveal a world where the value and affordances of ritual, state ideology, and economic aspiration are mediated and contested.

Presenter(s): Shaheed Tayob

4610 KEYWORDS IN THE ANTHROPOLOGY OF "MENTAL HEALTH": TOWARDS A RELATIONAL MAPPING

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR B2 (3rd fl)

Type: Roundtable/Town Hall

Concepts, like words themselves, are meaningful only in patterned relation to other concepts (Whorf 1956, Carruthers 2023). Yet as certain concepts traverse social worlds - becoming simultaneously technical terms in academia, politics, and media and incorporated into the vernacular - their relational patterning varies, turning them into "boundary objects" (Star and Griesemer 1989); i.e., entities that vary in meaning across heterogeneous social worlds while remaining sufficiently stable to allow communication and translation across them. With psychiatric discourse and talk of "mental health" and "well-being" ascendant globally, this roundtable takes six such boundary objects as keywords to map their relational meanings and disciplinary trajectories. Each opening onto a constellation of interrelated concepts, the terms DISTRESS, FLOURISHING,

PREVENTION, COMMUNITY, CARE, and RECOVERY carry implicit relations - semantic oppositions, affinities, echoes, limits, potentialities - as they are mobilized and implemented across diverse domains of mental health research, practice, and everyday talk.

This roundtable aims to bring conceptual clarity to this discourse by mapping relational entanglements and asking: How is each keyword - technical or vernacular - related to and distinct from other terms? How is each used to capture aspects of the same concept? What disciplines dominate in its investigation and how can they come into conversation? Participants will discuss each of the six keywords in relation to the others and to concepts and contexts beyond, drawing on their own research and wider collaborations. Ultimately, the roundtable seeks to imagine space for comparative and interdisciplinary work based on these terms, across fieldsites and intellectual communities.

7884 Legal Phantoms: Executive Action and the Haunting Failures of Immigration Reform

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR D3 (3rd fl)

Type: Conversation/Debate

This conversation with the authors of the book, *Legal Phantoms: Executive Action and the Haunting Failures of Immigration Reform* (Stanford, 2024) discusses the current historical moment of immigration-related executive actions. This interdisciplinary book, co-authored by legal scholars Jennifer Chacón, Stephen Lee, and Sameer Ashar and anthropologist Susan Bibler Coutin, provides important historical background about the impacts of a very different set of executive actions, namely Obama-era measures that were designed to provide temporary relief to undocumented immigrants living in the United States. The 2012 Deferred Action for Childhood Arrivals (DACA) program was supposed to be a stepping stone, a policy innovation announced by the White House designed to put pressure on Congress for a broader, lasting set of legislative changes. Those changes never materialized, and the people who hoped to benefit from them were instead forced to

navigate a tense and contradictory policy landscape ever since, haunted by these unfulfilled promises. Legal Phantoms tells their story. After Congress failed to pass a comprehensive immigration bill in 2013, President Obama pivoted in 2014 to supplementing DACA with a deferred action program (known as DAPA) for the parents of citizens and lawful permanent residents and a DACA expansion (DACA+) in 2014. But challenges from Republican-led states prevented even these programs from going into effect.

Many of the people who are today targeted for deportation could have potentially obtained temporary relief and work authorization had the Obama-era forms of executive relief gone forward. This conversation explores these extraordinary policy pivots, examining how failed immigration-reform efforts continue to haunt not only those who had hoped to benefit, but their families, communities, and the country in which they have made an uneasy home. The conversation will also discuss how impacted groups seek their own paths forward through uncharted legal territory with creativity and resistance.

2398 Los Fantasmas del Pasado Inform Our Work for the Future: Community Education in Indigenous Guatemala

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Oakley (4th fl)

Type: Interview

Copal AA La Esperanza is a Maya community in northern Guatemala. The community was formed near the end of the internal armed conflict (IAC) in 1995 when 86 refugee families returned to Guatemala after living more than a decade in Mexico. That first year, at the community's invitation, the first author worked as a human rights observer in Copal AA. Comprised of Q'anjob'al, Q'eqchi', and Mam families, the community is multilingual and multiethnic, and has committed itself to environmental and cultural sustainability. At its founding, the community established bylaws that foregrounded these commitments. They banned the use of slash and burn agriculture, chemical pesticides and fertilizers, and the sale of packaged food due to their negative effects on Mother Earth and people's health. This live interview with members of the community's education committee will focus on the ways Copal AA uses education to preserve community knowledge and to prepare their youth to advocate for their future.

In 2007 Copal AA developed the region's only middle school to keep adolescents from having to leave the community to continue their education. The curricula at Instituto Básico Nuevo Amanecer (IBNA) emphasizes sustainable agriculture practices, Maya spirituality and leadership, and historical memory through intergenerational community knowledge building (Briseno, 2015;

Rubin, 2016). Having survived the IAC and more than a decade in refuge, the community leverages education to pass on their lived experiences of oppression and resistance to the community's youth. Understanding their decades-long struggle for self-determination, they assert, is essential in preparing the youth to confront the contemporary challenges of climate change and extractive capitalism (Batz, 2024) that threaten the community. While clearly grounded in community elder knowledge and Maya cosmology, the school also embraces Freirian approaches to popular education (Freire, 1993) to engage students in analyses of their material reality in order to take action. Since 2007 for example, the community has been a leader in a regional movement resisting the Xalalá Dam, a massive hydroelectric project that would negatively impact nearly 60 indigenous communities. Students have played an active role in this resistance, writing and performing plays and using the arts to educate other communities about the dam.

This project draws on more than six years of ethnographic data including semi-structured interviews, archival photos, and participant observation to document how Copal AA uses education to promote sustainability and self-determination. Community members consistently locate IBNA at the center of the community's efforts to preserve historical memory and advocate for its future. When asked about the theme of "ghosts," the school's principal shared the following, "Los fantasmas del pasado informan nuestro trabajo para el futuro/the ghosts of the past inform our work for the future."

8197 MAROONS, INDIANS & OTHERS: Ghost-hunting Black, Native and Latino Cultural Exchanges in Outlaw Geographies

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** MGB - Salon C

Type: Oral Presentation Session

Our session looks at the apparitions of past alliances, fellow citizens, fellow slaves, maroons, and servants building community, creating kinship, and exchanging culture outside the bounds of settler colonial racial capitalism, that live today in unique geographic zones, practices and people. We are interested in present day endurances in the United States of elements of what could be called maroon culture: intercultural exchange and interracial community building among oppressed peoples at the ecological margins of colonized lands. In the historiography and popular culture of Latin America, the identification of the cultural and kinship blending of African, Indigenous and European peoples is often framed as central to national identity formations. In the US, racial determinism, longstanding segregation, and the siloing of Black versus Latino versus

Native Studies has until recently left little room for the interactional perspective that could inform truly intersectional work on the richness of these exchanges. We present a range of ethnographic, person-centered and personal encounters that focus on people in places of abandonment and devaluation often transformed into sites of value, community-building, and mutual aid. They provide still-not-fully-revealed geographical locations for the generation of cultural practices, families and lineages, and political subjectivities undergoing revaluation and renaissance today. They are generative, for example, of the challenge of Black Indian identity to the extant landscape of cultural centers, social service, and museum representations disturbed or disrupted by the histories represented by real live people claiming the fullness of their ancestries. The ghosts of Africans resisting slavery, and native people resisting Removal, inform conflict in Pembroke Township, Illinois, where Mexican people are fulfilling their dreams of return to the rancho, alongside Black farmers rebuilding Black to the Land sustainability. Today more scholars are seeing and imagining maroon legacies in activist occupations that defy urban displacement, challenge the carceral state, or affirm Palestinian solidarity, sites defined by cross-cultural inclusion, defying and denaturalizing property ownership, and mutual aid. These erased histories of people making place in hostile heartlands haunt our ongoing struggles for racial justice, and inter- and intraracial reconciliation and repair, and speak to contemporary efforts to restore these historical alliances.

Presentation(s): The Ghostly Relevance of Native America to Black Anthropology: Allies, Citizens, Maroons, and Slaves

What is the relevance of Native America to Black Anthropology? To explore this question, this paper takes a person-centered ethnographic approach to the apparitions of alliances, fellow citizens, fellow slaves, maroons, and servants that have shaped the nature of African and Native American interactions examined by Black anthropologists within the present-day boundaries of the United States. The relevance of Native America to Black anthropology must be understood according to the contacts, interactions, and shared identities formed between individuals within communities and their interpretations of these interactions evident in what the people said, did, and embodied over time, and the implications these interactions hold for hemispheric investigation of the phenomenon. In this paper, I argue that the racial determinism that haunts notions of African and Native American interactions must be deconstructed if how scholars have, and continue to, study the cultural exchanges and experiences these interactions represent are to be understood.

Black and Indian in Chicago

As Executive Director of what was then the Mitchell Museum of the American Indian in Evanston Illinois two decades ago, I had a meeting with a person from Chicago who identified himself as Black/Cherokee, who related to me a story of mixed identity and discrimination fostered by settler colonialism that is too often left out of in the "story" of America. It is a story of marginalized peoples learning lessons well to marginalize other peoples. These divisions and barriers have too long impaired relationships and alliances between BIPOC. He related that a few years earlier he had retraced by foot the Trail of Tears from Georgia to Oklahoma. He shared newspaper clippings documenting his journey. As I got to know him, I was invited and introduced to a Black/Indian organization in the metro Chicago area unaffiliated with the "official" American Indian Center of Chicago. I attended several social gatherings of the group whose mixed identity was very strong. My understanding was that they had been at some point rebuffed by the Chicago AIC and so formed their own organization to be an umbrella for community. My query is why this has happened and if there is a possibility for reconciliation.

Maroons in the Shadow of Chicago: Cultural Exchanges and Interracial Legacies in Northeastern Illinois

I examine the intersecting Indigenous, Black and Latino histories that haunt the present residence and culture of the riverine wetlands and Illinois Dunes of Kankakee County just 50 miles south of Chicago. I trace here elements of maroon culture: intercultural exchange and interracial community building among oppressed peoples at the ecological margins of colonized lands. This is Potawatomi land, and of their mixed Métis descendants, whose presence, artifacts, and extant land claims endured far beyond the Indian Removal Era, as well as home to Black farmers with origins in the Underground Railroad. Today Latinos will be the plurality of the City of Kankakee by 2030, and hundreds now live in the new ranchos of Pembroke Township, the first and last historically Black farming community of Illinois. I combine historical and archival research with participant observation and oral histories of residents in a project rooted in the ongoing challenges of Blackness, indigeneity, and the mixed-race heritages of Latinos to the US racial system. This vibrant ecological zone, framed as wasteland by capitalism, racialized as a landscape of abandonment,

has long meant refuge for marginalized people, and is now becoming a site for the re-fulfillment of betrayed American dreams. An unprecedented new dialogue emerges repositioning Black and Latino residents and reactivating the ghosts of historical memory.

Lincoln Park, Chicago as a Cross-Generational Land Site of Marronage and Revolutionary Activity

In observance of the 1903 Chicago centennial anniversary, representatives from the Winnebago, Chippewa, Pottawatomi, Sac and Fox, Menominee, and Ottawa tribes gathered in Lincoln Park to erect an encampment replicating an Indian village which existed a century before with a wish to "live as did his [sic] ancestors in the years before Chicago was born" (Clark 1903). Last Spring, the quad of the DePaul University Lincoln Park campus served as a site of one of many encampments constructed on college campuses across the US in solidarity with the Palestinians in Gaza victimized by an Israeli genocidal agenda with the support of the US and its allies. This paper draws from archival research on the 1903 Lincoln Park Indian encampment and data collected from a Teach-In & Talk-Back with DePaul students who were involved in the 2024 student encampment to discuss the history of marronage they are connected to, and to reflect on their work to establish a temporary community around collective values. I aim to trace this history and highlight the ways that African American and Indigenous political thought and praxis have activated and mobilized stewards, residents, and students of the Lincoln Park neighborhood across history while providing commentary, through the recent examples of student activism, on strategic and stylistic forms of contemporary marronage.

7113 Materialities of the Dead: Haunted Landscapes, Stories, and Dreams of Decolonizing Ethnographic Present

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Riverview 1 (41st Fl)

Type: Oral Presentation Session

We are concerned with the vast, infinite, and infinitesimal dead that populate the world. Countless in number, these dead are atomically imbricated with our reality. They suffuse what we call the "world of living" as the very matter of bodies. The atomic, immanent, constitutive place of the dead in terms of "haunting," and in fact "absent present" is one way we conceive of the dead in this panel. In suffusing landscapes and their features, both "living" (animate) and "dead" (inanimate), these dead underlie the personas of mountains, rivers, and sprawling trees. At more personal scales, these dead propel memory and storytelling, and as such we understand these dead under the terms of "the ancestral."

As "the ancestral"-ancestral influence, ancestral force, ancestral authority-to which we pay homage are found in myriad locales. They are found in the impacts of conquest and exploitation, as reminders of the never-completed tasks of decolonizing, whether it be of lands or epistemologies. They are found embedded in landscapes as ancestors that speak as otherwise unfathomable floods and tectonic movements. They sprawl on the surface of these landscapes, bursting from surface soil promising fate-shaping transformations. And they may silence or erase physical forms and social knowledge, as well as enhance these. We see them lending molecular, immanent, energy to social life in many forms, including, most importantly, stories.

The stories in this panel foreground are various. The Swayambhu Stories channel the charisma of digital media to exorcise ancestral spirits who have radically foreclosed the ways that Buddhism is known. Other stories take the form of ancestral emanations in the life of the ethnographer proper, healed through digital communications that give newly vital understandings to the term "haunting." They are stories that undergird a fractal healing-harming apparatus Cuban-Kongo praise. And they are the stories that reiterate the sovereignty of mountain ancestors in Andean approaches to intervening in cataclysmic "anthroposcenic" vistas. The discipline of anthropology has a long history of engagement with the realm of spirits, in our case the spirits that order the lives of our interlocutors and of our discipline itself.

We are conscious that there is no social theory without ancestral apparition. Each of the papers that comprise this panel engage with genealogies of interpretation enlivened by ancestral invocation, homage, and overwriting. As such, ghostly ancestors resonate in the sense of the uncanny that permeates the quotidian, including the everydayness of lands, ethnographic and archival data. The dead that interest us remind us of things that have been forgotten and of those who have come before. They generate insights into a world and into cultures that, even in a state of constant transformation, can't quite escape their pasts.

Presentation(s): Ghostly Absences and Digital Embodiment: Rematerializing Buddhism Thru Swayamba

For over a century, Buddhism has been haunted by hungry ghosts who have deformed and distorted popular knowledge. Anthropology has been well protected from their impact by the powerful disciplinary practice of ethnographic fieldwork. Yet the image of Buddhism as a dematerialized, disembodied, rational philosophy that the apical ancestors of Buddhist Studies unleashed dominates the Euro-American public sphere today. And it erases the history, presence, knowledge, and labor (affective, artistic, ethical, kinship-based, political, ritual, sweat equity, etc.) of living Buddhist caretaker communities, along with the objects, practices, and spaces they maintain. Against this, the Swayambhu Stories project seeks to channel the charisma of digital technologies to relocate and re-materialize what colonial sensibilities have disappeared. The Swayambhu Mahachaitya (stupa) in Kathmandu, Nepal is one of the most important Buddhist temples in the Himalayan region and a UNESCO-recognized World Heritage site. Rooted in an ethnographic collaboration between an anthropologist, Nepali cultural heritage activists, and diverse stakeholder communities associated with the shrine, Swayambhu Stories helps Himalayan Buddhists tell their own stories of Buddhism and/in their communities and makes locally curated religio-cultural knowledge publicly available in an immersive digital landscape. This paper reflects on the complexities of relationality, epistemology, and mediation in this work.

Healing the Ethnographer: A'uwe (Xavante)Ancestral Communication via Dreams and Whatsapp

In December 2023, I suffered a serious accident in the field. For three weeks in critical condition and moved from ICU to ICU, I received WhatsApp communications from community members. Essential to the healing process, these often came from the spirit world, from 'ró, the spirit-infused landscape where the accident happened. Ancestors channeled messages through dreams to A'uwe elders who conveyed them to me via new media. In a health crisis marked by proximity (accident site) and distance (as I was moved further and further away for treatment), the ancestors and those who communicated on their behalf enabled care across scales in ways that were fundamentally linked to the material world. Dreams as a source of healing and affective ties are possible only with a vibrant and intact 'ró, which dreamers access through bodily preparation and its engagement. Their broader scaled communication depends, in turn, on data sent by WhatsApp and the infrastructures of encoding and decoding dreams across distance. I reflect on the mechanisms by which A'uwe spirit forces enter into and affect the world of the living. Their presence propels cultural continuity in times of change, memory manifested through storytelling and made material through sound, embodiment, movement, and now digital encoding. This case illustrates ways that

A'uwe past and future are constantly present, grounded in a spiritually infused landscape that can dynamically expand to embrace kin and others both near and far.

Presenter(s): Laura Graham

When Haunted Landscapes Speak: Decolonizing Earth Praxis in Northern Peru

In the Northern Peruvian Andes, prestigious ancestors become haunted landscapes or apu with material presence and agency, both living and dead. Here, apu lakes and mountains share in the consciousness of animals, plants, and stones and respond to their surroundings from the perspective of multiple beings. Apus participate actively in the world of living, shaping earth praxis and local perceptions of climate change. I analyze how the apu ancestor lakes and mountains I encountered in las Huaringas express pain and anger and act out revenge in the form of earthquakes, mudslides, and torrential rains when they are exploited; and how they possessed two shamans to articulate how they would destroy humanity with climate change. Climate change expresses the refusal of haunted landscapes to be reduced to objects of exploitation, rocking the foundations of non-indigenous thought. Through this metaphysical refusal, haunted landscapes challenge the ontological distinction between culture and nature, subject and object, and matter and spirit that are normalized by capitalist extractivism and settler colonialism. As climate change and extractive industries wreak havoc around the world, contributing to environmental devastation and structural violence, apu envision material futures that involve returning to a past without humans, ruled by earth ethics. The dead and their multiple pasts are never gone, they return materialized as haunted landscapes to reshape the present and the future.

Atomic and Molecular Potentials of the Dead in Cuban-Kongo Materiality

Cuban-Kongo praise, known colloquially as Palo, understands reality as suffused by an immeasurable mass of the dead. The number of the dead that comprise this mass is infinite, but the dead themselves are best thought of as infinitesimal. Atom-like in how they underlie matter, they in fact constitute it. Thus, the anonymous, infinitesimal dead are the very basis of matter. This paper explores how Palo healers seek out these infinitesimal dead to effect works of healing and harming to transform the lives of their clients. Preferred forms of access include roots, stones, and other varieties of vegetal and mineral matter. Propitious forms resemble simbi, these being BaKongo materializations of the anonymous dead that can be expertly handled by healers. These materialized dead must be ethically sourced, including being properly addressed in verse and song. In this paper I will connect ethnographic scenes of the handling of healing materials to Palo understandings of efficacy through what I will call "simbi physics." This will be an account of materiality true to Palo ethics, while offering a novel understanding matter to those unfamiliar with Cuban Kongo praise.

7539 Materializing Spectres: Pathways through Memory and Power

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Studio 3

Type: Oral Presentation Session

In Pathways of Memory and Power: Ethnography and History Among an Andean People (1998)

Thomas Abercrombie conjures the way that rituals of libation open up pathways of memory, syncretizing time and belief as he walks with and beside Aymara ancestors and landscapes in Santa Barbara de Culta, Bolivia. These pathways are haunted and haunt. They interpellate history as the present in the past and the past in the present; they follow the ethnographer and the individuals who "walk" them; and they materialize social memory.

This panel, co-sponsored by SLACA and SAR, revisits Abercrombie's seminal work on the intersections of ethnography, history, memory, and reflexivity—activating pathways with and through spectres, ghosts, and hauntings. Bringing together the Anthropology of Latin America, the Anthropology of Europe, and the Anthropology of Religion, the panel provokes a cross-disciplinary conversation around the politics of "the spectral" as a constitutive dimension of fieldwork.

Recently, and perhaps provoked by Avery Gordon's *Ghostly Matters* and the *Sociological Imagination* (2008), an anthropological literature on "haunting" has burgeoned. In 2021, a series in *Anthropology News* amalgamated essays extending the phenomenon and thematic of haunting beyond forensic anthropology. In practice, anthropologists are and have always been haunted by the pasts of the places and social worlds they engage. Adding to literatures on hauntology and spectralities (Gordon 2008, Klima 2019, Hollan 2019, Good et al. 2022), as well as ruination (Stoller 2013, Tsing 2015, Gamberi and Calzana 2025), this panel draws from Abercrombie's careful attention to the intersections of history and ethnography to chart a pathway through the spectral that foregrounds reflexivity. It asks: what can we learn from listening to ghosts? How do we learn to listen to ghosts? What are the stakes of not listening?

Presentation(s): Mediated Stories and Memories of Intimate Violence: Haunted Pathways to an Ordinary Ethics in the Bolivian Andes

Violence and faith are mutually constituted in embodied encounters and shape the contours of peoples' lives in specific cultural and historical landscapes and in the dialogues through which we develop ethnography. Drawing on feminist decolonial frameworks and analyses of stance in

linguistic anthropology, this paper analyzes narratives of violent encounter that haunt both the discourses of faithful pilgrims and those who claim no belief in the miraculous Mama Adelita, a Bolivian vernacular saint. Specifically, I trace the intertwined stories that emerge in a conversation between myself, a middle-aged Andean woman, Fidelia, and her adult daughter in Sucre, Bolivia, where I've conducted ethnographic research since 1995. Prompted by a question about the history of Mama Adelita's emergence as a santo (Sp., saint), Fidelia recounts her memories of the events that occurred in 1996 in the aftermath of the discovery of the brutal murder Adela Cardenas by her ex-husband. She also layers the stories of other femicides into her narrative, the details of which circulated in the Bolivian print and broadcast media at the time of our conversation in 2022. Attending to the intimate violence that haunts the intertexts of participants in the conversation, as well as the places of encounter and pilgrimage, I show how cautionary advice is offered (and ignored) and an ordinary ethics of human and more-than-human persons is jointly constructed even among those of uncertain faith.

Presenter(s): Krista Van Vleet

Embodied Ghosts of Phantom Lynchings: Legal Hauntologies and Lay Morals in El Alto, Bolivia

This paper defines "hanging puppets" (representations of lynched bodies which hang from lampposts to deter thieves) as figures produced by interstitial legal geographies. Beginning with the use of "hanging puppets" in a peri-urban neighbourhood as both a deterrent to, critique of, and index of insecurity; and as figures produced by the interstices of postcolonial legal geographies, this paper examines the material, temporal, spatial, and hauntological fabrication of subjectivities through both formal and informal legal practices in a neighbourhood of El Alto, Bolivia. Taking these figures--and the discourses and practices which incite them and they, in turn, incite-- seriously as commentaries, critiques, and interventions in Bolivian inter-legality, I develop a situated reading of these spectral presences and the ghosts they materialise as law in a hauntological key.

Presenter(s): Martyn Wemyss

Killing as Method: Venatic Memory, Sacred Stags, and Anti-Elitism in Highland New Jersey

Central to Tom Abercrombie's work is a recognition of the productivity of partial understandings in an intercultural Andean landscape in which ritual both re-enacts and transforms the mythic accounts and intersecting genres that gird indigenous history and memory. Sacrifice is essential to this process. This paper focuses on state-sponsored culling programs in New Jersey through which non-indigenous hunters compete for access to public lands to reduce deer populations that threaten forest ecosystems. These land-poor and mostly working class hunters must meet quotas and follow strict rules as part of what many dub "killing, rather than hunting." Tasked with protecting the processes that reproduce a nature defined around public conservation rather than wildlife management through death, and therefore understood as antithetical to hunters' ways of life, hunters have co-produced with state officials a series of narratives and rituals essential to their collective identity and the politics presented as sustaining it. Spectral beings and fleeting apparitions, as well as killing and sacrifice, are basic to these accounts and their ritual

composition. This paper examines the resonant, embodied practices, and associated accounts of presence and absence and conservation and extinction that bind humans and non-humans in the production of tradition and group boundaries in a United States in which politics often turn on the identification of putative elites and their forms of knowledge.

Presenter(s): John Collins

Ends, Beginnings, and the Spaces in between: A Counter-Cartography of Conjured Ghosts and Spectral Landscapes

Celebrated by both anthropologists and historians, Thomas Abercrombie's Pathways of Memory and Power activates "pathways" as routes through which the past becomes present via engagements with ritual, landscape, and narrative. Using this conceptualization as a guide, this paper unpacks my own experience navigating cross-generational silence and bodily absence in contemporary Spain, where the unearthing of mass graves produced by Franco's fascist experiment are radically altering the contours of history and memory. Positing that long-term fieldwork is a conglomeration of endings, beginnings, and returns, I describe how the ritual of mass grave exhumations alter how memory activists, forensic experts, and victims' kin—as well as the anthropologists following this phenomenon—understand and experience the ground on which they stand, ground that has grown heavy with human remains. Exploring forensic and archival experts' changing perspectives on and sensorial experiences with local landscapes, I use the concept of counter-cartographies to explore how tracing fieldwork pathways is also an exercise in conjuring ghosts and making present that which has been made to disappear. Here, "the field" is not a single place nor a singular landscape, but rather a place in-between where time, memory, and narrative overlap. As a result, I argue, unearthing and returning make the specters of the past important presences in the production of new forms of knowledge, historical and otherwise.

4892 Meeting at the crossroads: Multi-Disciplinary approaches to identity formation in Southeastern Mesoamerica. Part 2

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Rhythms I (2nd fl)

Type: Oral Presentation Session

Southeastern Mesoamerica-encompassing eastern Guatemala, El Salvador, and western Honduras-has long been viewed as peripheral to both the Maya heartland and broader Mesoamerica. Scholarly approaches have often focused on delineating Maya and non-Maya spheres, while research has remained constrained-both conceptually and practically-by modern national boundaries and disciplinary silos. Recent anthropological work, however, underscores the

region's complexity and its ongoing importance in shaping social identities within a multi-ethnic borderland.

Historically at a crossroads of migration, exchange, and political influence, Southeastern Mesoamerica has experienced the arrival of diverse groups—from Lowland Maya and Nahuatl-speaking populations to modern-day ladinos. As these communities became established, local populations variously resisted, reinterpreted, or adapted to incoming peoples and their ideologies. Far from being marginal, this region offers compelling examples of how identities were—and continue to be—negotiated through interaction with broader social, economic, and political forces.

This session brings together Cultural Anthropologists, Archaeologists, Physical Anthropologists, Linguists, and Ethnohistorians to explore identity formation in this dynamic region. By fostering interdisciplinary dialogue, we aim to challenge the national and conceptual boundaries that have historically fragmented scholarship on Southeastern Mesoamerica. Ultimately, we seek to position this region as a critical locus for understanding the formation of social identities in frontier and borderland contexts. We further hope that insights generated through this collaborative discussion will contribute meaningfully to broader anthropological debates on identity, interaction, and cultural transformation.

Presentation(s): Multi-layered isotopic proveniencing in the Southern Coast of Guatemala

Isotopic proveniencing from human remains has become an everyday practice in bioarchaeological studies. A combined approach of strontium and oxygen was proposed more recently and has been considered the best method, offering the highest resolution of proveniencing. However, Suzuki and his colleagues (2024) pointed out that the combination also has limitations. The authors focused on the sites on the Guatemalan Pacific Coast and discussed that they shared the same local range with Teotihuacan, both strontium and oxygen. Although their cultural interaction is one of the most interesting topics in Mesoamerican archaeology, the human movements between Teotihuacan and the Pacific Coast cannot be assessed based on the current standard method of isotopic proveniencing. This talk introduces our preliminary results about generating a multi-layered isoscape that combines four or five reference baselines $^{87}\text{Sr}/^{86}\text{Sr}$, $^{206}\text{Pb}/^{204}\text{Pb}$, $^{207}\text{Pb}/^{204}\text{Pb}$, $^{208}\text{Pb}/^{204}\text{Pb}$, and $^{143}\text{Nd}/^{144}\text{Nd}$, to trace origins of skeletal individuals with the highest resolutions.

Presenter(s): Shintaro Suzuki

Evidence of Acculturation during the Postclassic and Colonial Periods in the “Ch’orti’ Area”

What other scholars and I refer to as “the Ch’orti’ region” has long been a zone of intercultural contact and blending. This is evidenced via all four subfields of anthropology. Here I address language and culture. Linguistically, historical place names, colonial reports of languages spoken in particular communities, colonial lexicons, and contemporary Ch’orti’ language support an amalgamation of Ch’orti’ Maya, Lenca, Nahuatl, Xinca, and other influences. The Spanish referred to the ancestral language of modern Ch’orti’ as *apay* and *apayac*, but also documented the language spoken in the same communities as *alaguilac*. The roots of *alaguilac* are still debated. Culture is more difficult to identify in colonial documents, but the Ch’orti’- and Pipil Nahuatl-speakers blended some traditions in El Salvador and eastern Guatemala, and at the northern reaches of the Ch’orti’ territory we see signs of mixing from other groups. This historical information has largely been inaccessible to contemporary Ch’orti’s, and they welcome any information as they try to consolidate their group identity. Regarding indigenous rights, this data matters little, as blended traditions are to be expected of any group on the planet, although claiming “Maya-ness” has advantages outside the realm of legal rights.

Presenter(s): Brent Metz

Complexity of local and regional cultures in the southeastern Maya frontier: Revisiting

Chalchuapa and San Andres, El Salvador

This paper examines the complexity of local and regional cultures in the southeastern Maya frontier, specially Chalchuapa and San Andres, both located in El Salvador. Chalchuapa and San Andres have been recognized as important regional centers since the early 20th century. However, the relationships between these centers remain unclear because of the lack of comparative data, even though both sites were long-lived centers that existed from the Preclassic to Postclassic periods. This study provides the different trajectories of social processes at both sites with growing archaeological evidence, and reveals both similarities and differences in material culture over time. Consequently, the data show that Chalchuapa and San Andres shared several cultural components, practices, technologies, and beliefs. However, their political power may have been limited in small scale, such as at the valley level. Additionally, each site had its own cultural preferences, social negotiations, and different connections with the Gulf of Mexico, Central Highlands of Mexico, Maya Lowlands and Highlands, and even intermediate areas during different time periods. These data suggest that both centers were more complex than previously thought and should be considered important actors in both the local and broader cultural historic context of the Maya region and beyond.

Presenter(s): Akira Ichikawa

Ch’orti’ Sociolinguistics: The View from Guatemala

Indigenous languages, particularly the small ones, are usually deemed homogenous. Ch'orti' (Maya), spoken by ca. 16 thousand people in Southeastern Guatemala, is no exception. However, recent fieldwork has shed light upon markers and identifiers defining various sociolects. Analyzing speech patterns across geographic locations, age, gender, and educational level, this paper provides a first glimpse into the sociolinguistics of Ch'orti'. The data comes from interviews over the last four years in the municipalities of Jocotán and Olopa, in Chiquimula, Guatemala. During this time, the project has benefitted from constant collaboration with local speakers who guide the interviews and analysis. Our research promises to illuminate recent developments in Ch'orti' and insights into the history of Ch'olan languages and the constantly changing landscape of the region. In the process, it also legitimizes local identities by showcasing their linguistic varieties.

7736 New Books Conversation: Reworking Citizenship Race, Gender, and Kinship in South Africa

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Galerie 6

Type: Roundtable/Town Hall

Join us for a roundtable discussion about a new book that speaks to African studies, feminist anthropology, and economic anthropology.

In scenes reminiscent of the apartheid era, 2021 saw South Africa's streets filled with mass protests. While the country is lauded for its peaceful transition to democracy with citizenship for all, those previously disenfranchised, particularly women, remain outraged by their continued poverty and marginalization. As one black woman protester told a reporter, reflecting on the end of apartheid: "We didn't get freedom. We only got democracy." What obligations do states have to support their citizens? What meaning does citizenship itself hold?

Blending archival and ethnographic methods, Brady G'sell tracks how historic resistance to racial and gendered marginalization in South Africa animate present-day contentions that regardless of voting rights, without jobs to support their families, the poor majority remain excluded from the nation. Through long-term fieldwork with impoverished black African, Indian, and coloured (mixed race) women living in the city of Durban, she reveals women's everyday efforts to rework political institutions that exclude them. Informed by her interlocutors, G'sell retheorizes citizenship as not solely tied to individual rights, but dependent on the security of social (often kin) relations. She forwards the concept of relational citizenship as a means to reimagine political belonging amidst a world of declining wage labor and eroding state-citizen covenants.

4589 On the Ruins of Liberalism: Ethnographies of Far-Right Regime Building, Part 2

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Grand Ballroom A-C (5th fl)

Type: Oral Presentation Session

"This storm is what we call progress," Walter Benjamin wrote during the final days of the interwar liberal era, shortly before taking his own life in fear of the Nazis. Drawing on Benjamin's evocative image of relentless historical destruction as a continuous catastrophe rather than a lost utopia, this panel examines whether we are witnessing a similar transformation today. Specifically, we explore how the ghost of liberalism functions as a legacy upon which far-right regimes build, an ideology with which they contend, and an epistemic context that shapes the work of anthropologists studying these regimes. As more political leaders invoke the monstrosity of liberalism to construct far-right regimes, we seek to understand how this imaginary fuses material and ideological foundations into cohesive, hegemonic systems. Rather than treating liberalism as the normative baseline, we aim to interrogate the failures of the liberal order and ask whether right-wing regime-building should also be understood as a form of revolutionary politics. This moment of urgency demands an analysis that bridges the political, economic, and epistemic dimensions of far-right regime-building, moving beyond reductive binaries and normative assumptions. To this end, this panel brings together contributions that examine transnational networks of think tanks, national and cultural infrastructures, academic institutions, and grassroots political practices. How can ethnography help illuminate the economic and epistemic foundations of these emerging regimes? What methodological and ethical challenges confront anthropologists trained in liberal institutions as they conduct fieldwork in anti-liberal contexts? What is the future of ethnographic inquiry in a far-right epistemic hegemony? Ultimately, this panel explores the implications of the next stage of the continuous catastrophe, the dawning post-liberal era, for anthropology as a public voice.

Presentation(s): Totalitarian Ghosts in Camera Obscura

Iterations of fascism are never identical. Nevertheless, they emerge from common ghosts which reverse the narrations of past and present events. This paper examines the haunting pedagogy on

which the contemporary far-right is built. Drawing on Benjamin, Arendt, and Derrida, we focus on the camera obscura effect that overturns our judgment by inverting our understanding of the world. We present a case study demonstrating how the left and the right recall classic works of philosophy, political theory, theology, or literature to frame totalitarianism in opposite ways. We provide a close analysis of a free, on-line course on dystopian fiction offered by a conservative Christian college that operates as one of the think-tanks of the current American administration. We examine how the course itself promotes a right-wing agenda by re-narrating the past in ways similar to the Ministry of Truth in Orwell's 1984, one of the novels it covers. The course instructor is disturbed that the Party in Orwell "repeals the idea that the past is known," but his analysis mimics current events that engage in re-narrating the past, which his own institution promotes. This includes the creation of new right-wing Congressional investigative Committees of January 6th and academic Commissions disputing the history of enslavement in North America.

Dark Ethics: Methodological Precarity and Fieldwork with the Far Right

Reflexively considering the ethics of fieldwork with far-right communities, drawing out issues of access, critique, and representation, I ask a pressing methodological question: In this increasing time of political chaos and violence, how might social scientists, who do qualitative in-person fieldwork, avoid unethical frameworks while also bracing against methodological (and even personal) precarity? While ethnographic research always brings with it ethical considerations, working with communities like those Susan Harding termed the "repugnant others" and Agnieszka Pasieka called "the unlikeable others" brings with it a different set of challenges, restrictions, and collaborations that play out in interactions with interlocutors even well after fieldwork has been completed, especially when they "read what we write." Taking my cue from Sherry Ortner's "dark anthropology" and extending Lene Faust and Simone Pfeifer's conversation about "dark ethnography," I suggest that "dark ethics" can provide a resistant framework for those of us who work with far-right populations. Tactical but not covert, "dark ethics" resists liberal assumptions about what counts as the moral figure, acknowledging the subjective postures of anthropologists and their interlocutors, while interrogating the epistemic regime conditions that complicate data gathering and feasible public scholarship.

Presenter(s): Sarah Riccardi-Swartz

Beyond Liberal Haunts: For a Militant Anthropology in Times of Far-Right Resurgence

This paper invites anthropologists to reassess the meaning of engaged anthropology at a time when far-right politics are becoming increasingly mainstream globally. The resurgence of far-right regime building globally offers an urgent opportunity for anthropologists to revisit debates surrounding the promises of public anthropology, activist scholarship, and politically-engaged research. How should anthropologists respond to an increasingly post-liberal political context? In what ways can anthropology pursue research in solidarity with those targeted by far-right regime building? And

what spectres of liberalism hinder anthropology's ability to react adequately to today's resurgent fascism? The paper draws from research work conducted in collaboration with a community organization monitoring and countering far-right movements in Canada, reflecting on the cooperation, dilemmas, and frustrations between activists, community organizers, and academics in creating a research framework that can adequately confront growing far-right movements. In doing so, I consider how liberal legacies haunt the research methods and ethics of contemporary anthropology, hindering militant research agendas while simultaneously feeding far-right actors. Ultimately, the paper argues that, in an era when research can either help or hinder the far right, anthropologists must move beyond revisiting liberal haunts, and instead embrace a militant anthropology poised for activist intervention.

3547 Part II: Specters in the Sepulcher

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** MGB Salon E

Type: Oral Presentation Session

Historian Arlette Farge (2013, 46) has argued that the archive is a "sepulcher," where one encounters "silhouettes of the past, be they faltering or sublime." Here, we take a broad definition of "archive" to include traditional archival documents, collections, archaeological record, ethnographic fieldnotes, and even the body itself. Following the "archive as sepulcher," we ask: what are the implications for our studies and our results when we encounter ghostly absences buried in these spaces?

Ghosts in anthropology have taken many forms, with "haunting" often metaphorically gesturing toward absence, longing, and troubled, violent, or unsettled pasts. They can also take the form of our recognition of what is missing, the loss of materials and knowledge unwittingly perpetuated by praxis, time, and historical forces. In our work, we encounter absences and the ghostly impressions they suggest in many ways. In collections and archives, we often open an empty box, note a missing document, see a space left blank on a form, or encounter a missing page from fieldnotes or diaries. There is also the pause, the self-censoring involved, when asking ourselves, "should I write that experience down?" Whether such absences become a dead end, a frustration, or an obsession, they are often left out of our studies, never mentioned in the "materials and methods." Writing on agnotology, Proctor (2008, 3) tells us, "Ignorance can be made and unmade, and science can be complicit in either process."

In this session, we invite contributors to re-presence these absences and impressions. Welcoming scholars from across the subdisciplines, we ask that they interrogate the ways that the absences we encounter in the archive--that sepulcher where "silhouettes of the past" live--shape anthropological knowledge, or the lack thereof, even as they are rarely discussed in official publications or presentations. In other words, we will consider the double haunting of archival ghosts: first encountered as absence in our fieldwork, and second as present absences that

continue to haunt anthropological knowledge even as we participate in removal of their work.

Presentation(s): Playgrounds in Wastelands: A Ghost Story

It was the peak of Sunday puja and the shakti was high; a buzz in the mandir, electric. The air thick with smoke, a toxic blue haze—biproductions of incense, cigarettes, and camphor burning—animated a dimension typically unseen. In defiance of gravity, the langued haze swirled as new plumes entered the dance; each, the residue of petitions for help or gratitude for blessings received. Since 2017, I have been sifting through some of these ashes, traces scattered widely amidst the "imperial debris" (Stoler 2013). From South India to British Guiana in the nineteenth century, indentured laborers carried the goddess, Mariamman, to the plantation's edge. Following independence in 1966, Indo-Guyanese immigrants took flight, bringing revitalized traditions to North American cities. For two decades now, the goddess has come to sit in a barren industrial park on the outskirts of Brampton, Ontario—a landscape typically deemed lifeless and uninhabitable. In the ruins of capitalism, there are bound to be ghosts; some familiar, others uncanny. I reflect on one of these encounters during my ethnographic fieldwork there, a flashbulb moment that I just can't shake. Perhaps it was a dream, or maybe an apocalyptic vision like T. S. Eliot (1922) foretold in *The Waste Lands*, shattered by modernity. In this presentation, I step cautiously onto "demonic ground," unmapping landscapes of erasure to reconsider what "livingness" might feel like and mean (McKittrick 2006, 2021).

Presenter(s): Shannon Novak

A Tale of Tailings: The Long-term Afterlives of Industrial Waste and Its Haunting Absences

We are living through an era that has been described as "the apotheosis of waste", a globe brimming with greenhouse gasses, mountains of tailings, lagoons of pig-shit, and acres of cancerous sludge. The massive scale and persistence of industrial waste has transformed the air, water, and soil that we live on, and remade the very way we produce and reproduce social life. How can archaeology, a discipline that tends to view persistent waste as a fragmentary trace for the purposes of historical reconstruction, attend to the massive quantity of anthropogenic waste in a manner that is appropriate to the scale of our current climatic crisis? Drawing from excavations of a 1930s mining community that lived downwind of lead tailings, this paper explores the theoretical

potential of 'tailings' as a metaphor for the affective and effective afterlives of industrial waste: their biophysical harms, their ecological affordances, and the uncertainties they carry with them.

Finding Absence: Tracing the Unknown Origins of Human Skeletal Remains in Historic Period San Juan, Puerto Rico

A popular trail in Old San Juan, Puerto Rico, leads to an unmarked burial ground, a forgotten annex of the Cementerio Santa Maria Magdalena de Pazzi. Consulting the literature and the local archives supported that this area had been used to bury those who had perished during the cholera epidemic of 1855-1856. During the last few years we have worked towards the recovery of the primary and secondary inhumations in the area; tens of thousands of human bone fragments have been recovered so far, but the cholera mass grave remains unfound. In this paper, I grapple with the absence of the cholera mass grave and the unexpected recovery of skeletal remains of unknown origin. The primary and secondary inhumations on top of the cholera burial grounds are absent from the archives, records, and memory. By examining the inverse relationship between the archival and archaeological records at this site, we can approach a better understanding of the mortuary practices in 19th and 20th-century San Juan. This found absence is not trivial, however, but inherently tied to the physical and social body of the individuals, as well as community approaches to the living and the dead. Here, only by acknowledging and reflecting on these absences in the archives and living memory can we pursue a more nuanced understanding of the relationship between social identity, disease, and mortuary practices, which would have been otherwise overlooked.

Presenter(s): Jose Marrero Rosado

Embodied Archives: Bone Collecting and Armenian Prosthetic Memory in Dayr al-Zur, Syria

Armenians grapple physically and emotionally with the bones of their ancestors in the unmarked killing fields of Dayr al-Zur, Syria where approximately half a million people were murdered during World War I. Reconstructing official church and unofficial pilgrimages to these sites over the last century demands a mix of archival and ethnographic methods to "re-presence" the gaps left within a mutilated, post-genocide and post-Syrian war archive. Centering the writings and experiences of the survivor community is an antidote to the violent production of state archives curated for the purposes of genocide denial. The paper embraces disciplinary heresies to speak back to archival absences and re-imagine what an archive can be within the historian's craft. In my telling, it is the "embodied archives" that matter most, including affective experiences of loss, mourning, and prosthetic memory (embodied post-memory experiences and acts). In this sense, this work steps back from the concept of the archive as a sepulcher, in Arlette Farge's formulation, to consider the broader excavation of bones as a post-genocide archive. In doing so, I consider Armenian bone collecting within a larger history of ancient reliquaries and religious practices that are unconsciously, at times, replicated in vernacular rituals of remembrance.

Into the Unknown: Lingering with Ambiguity on the US-Mexico Border

In her "Field Guide to Getting Lost" (2005), Rebecca Solnit wrote of the distinction between artists' and scientists' encounters with the unknown: "[scientists] transform the unknown into the known, haul it in like fishermen; artists get you out to sea" (5). Her call was not to eliminate science, but to linger with being lost as a productive theory of social change. Building from my fieldwork with records and searches for missing undocumented migrants in south Texas, the goal of this paper is to explore ways of framing experiences with missing and unresolved cases beyond attempting to order them. Previously, transforming the unknown into tangible data—names, numbers, stories—has been the province of the social scientists and community advocates observing the violent effects of US migration policies, including those that result in migrants' disappearances, injuries, and deaths in transit. We have worked with the idea that this hard data provides the foundation for demands of policy change and accountability—especially when the state denies these harms, and certainly any culpability for them. But, this ongoing effort has proven disappointing as a basis for change. Moving between theory, archive, and experience, I explore ways of advocating for change that instead build from the vast and haunted unknowns that pervade the border spaces where I work.

8044 Rethinking Justice Beyond the Human: More-than-human Entanglements in South Korea

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Studio 5

Type: Oral Presentation Session

This panel brings together ethnographic research on the entangled lives of humans and nonhumans in South Korea to explore the spectral traces, resistances, and alliances that shape environmental activism in the face of state-led developmentalism. Drawing on the concept of multispecies justice (Chao 2022, Chao, Bolender, and Kirskey 2022), we examine how trees, birds, rocks, soil, and seeds emerge not merely as passive elements of the environment, but as active agents that contest the social, historical, and ecological consequences of militarism, urbanization, and capitalist extraction.

Across forests, farms, streams, and sacred geological formations, the papers trace how nonhumans are invoked, remembered, and mobilized—often as ghosts of a repressed past or visions of alternative futures. From the vilification of "introduced" trees on Jeju Island to agroecological seed practices that restore sovereignty and soil kinship, and from endangered birds surviving in urbanized waterscapes to coral reefs and rocks resisting militarized violence, these multispecies assemblages disrupt dominant narratives of national progress and ecological modernization.

Together, the panel explores how the struggle for justice in South Korea increasingly requires attunement to haunted landscapes and wounded life forms, where ghosts of colonialism, war, and industrialism linger in more-than-human bodies and terrains. By placing nonhuman life at the center of analysis, this panel foregrounds a politics of care, memory, and resistance that challenges the logics of human exceptionalism and developmentalist futures.

Presentation(s): Contesting Roots: “Native” and “Introduced” Trees in Jeju’s Environmental Activism

This essay explores the contested ecological and political terrain surrounding native and introduced trees in environmental activism on Jeju Island, South Korea. Through an ethnographic lens, it examines how scientists, environmentalists, bureaucrats, and residents frame arboreal identities in response to shifting climate concerns, aesthetic values, and nationalistic ideals. Species like “Japanese” cedar (samnamu or suginang) and “Japanese” cypress (p’yŏnbaengnamu or hinoki), once promoted for economic and ecological reasons, are now viewed as threats to biodiversity and ecological authenticity. In contrast, native trees such as oaks, camellia, and red thorn are celebrated in restoration efforts as part of a rewilding agenda.

The essay shows how trees become symbols in debates over environmental purity, national belonging, and island identity. Introduced trees are often racialized in discourses that echo colonial histories and anxieties about cultural and ecological dilution. Meanwhile, restoring native forests invokes an imagined harmonious past. These categories are not neutral or purely scientific but shaped by memory, affect, and competing visions of Jeju's future. Ultimately, this contestation reveals broader tensions in environmentalism between conservation and change, indigeneity and mobility, and how ecological narratives are mobilized to reinscribe boundaries under the guise of care.

Entangled Seed, Soil, and Sovereignty: Korean Women Peasants' Agroecology Activisms as Multispecies Care and Resistance

Hyojeong Kim (Assistant Professor, Myongji University)

In response to the climate crisis, women peasants' movements in Korea have cultivated an emergent ecopolitics by reconfiguring their entangled, co-constitutive relationships with soil, land, seeds, crops, and the broader more-than-human world. This paper examines these agroecological practices not merely as ecological alternatives but as multispecies acts of care, kinship, and

resistance, foregrounding an ethics of reciprocal survival. Through embodied practices of sensing, cultivating, and remembering, women peasants engage in interspecies relationality with vegetal life, microbial ecologies, and animate landscapes.

Focusing on the development of Indigenous seed and food sovereignty movements since the mid-2000s, this study situates these efforts within a broader resistance to global extractivist and industrial agricultural and food systems. It emphasizes how women peasants cultivate not only crops but relational ecologies, where nonhuman beings are recognized as active agency in shared lifeworlds.

Drawing on critical ecofeminism, new materialist feminism and multispecies ethnography, this paper explores how women peasants enact a politics of becoming-with dissolving boundaries between human and nonhuman through situated practices of multispecies alliance, resilience, and transformative care in the face of ecological precarity.

Presenter(s): Hyojeong Kim

Apartment Ecologies: Human-nonhuman Relations from Apartment Complexes and Streams

Due to the growing concerns over the climate crisis, South Korean (hereafter Korea) municipalities have made concerted efforts to become "ecological cities." This transformation has been prominent around large apartment complexes, producing waterfront landscapes that stage residents' interaction with "nature" as part of a spectacularized urban design.

As the most prominent housing type in Korea, apartments have represented upward class mobility and the middle-class lifestyle for the past fifty years. Government visions for the "ecological city" are inextricable from the real estate-driven political economy, which is dependent upon the apartment-centered housing market, middle-class family values, and urban planning schemes. Within this context, stream activists have engaged with these urban streams as

the sites to protect the habitats of nonhuman species since the early 2000s.

This paper explores the contested landscape of the "apartment ecologies," where streams and apartment complexes converge and produce urban natural landscapes within densely populated human neighborhoods. Based on my ethnographic research conducted in Seoul, this paper focuses on the relationships that stream activists have cultivated with long-billed plovers, a second-grade endangered bird species in Korea, and examines how their more-than-human relations emerge through the sociocultural politics of apartment life and the conservation efforts surrounding stream ecological processes.

Presenter(s): Juwon Lee

More-than-human Solidarity Against Militarism and Neoliberal Developmentalism in South Korea

This paper explores more-than-human solidarity against ecological destruction, imperialist military expansion, and anthropocentric neoliberal developmentalism on Jeju Island, South Korea. I focus on how human and non-human beings form the common front of an environmental movement:

natives call on non-natives to collaborate by providing corporeal evidence of the climate crisis, and these others respond by migrating to the island. It is the story of an open-ended assemblage of multispecies beings, that is, South Korean and foreign protesters, endangered species such as soft corals and migratory mandarin ducks, and Gurumbi, a large and flat trachyandesite rock. The rock was once home to hundreds of species and operated as an open-air temple for the island's indigenous people. Thirteen years ago, the South Korean government dynamited it to build a naval base that often hosts destroyers equipped with U.S. combat systems for military training. Far from being forgotten, however, Gurumbi is at the heart of this multispecies alliance. For example, the protesters have performed a 108-prostration ritual, shouting "Rise up Gurumbi!" and "We are Gurumbi!" in front of the naval base every morning for thirteen years. This paper shows how this collective of human and non-human living and non-living beings demonstrates the resilience of the entangled lives of haunted bodies, spirits, and ghosts of the island, wounded, polluted, and/or wrecked by militarism and neoliberalism. I argue that this

Presentation(s): Formations of feminist "thalaimurai": intergenerationality, memory and care in Tamil political life

Based on ethnographic work with feminist collectives in Tamil Nadu, this talk attends to the intermediations between embodied, intimate feminist solidarities and the construction of feminist memory in intergenerational political spaces. The twin concepts of "generation" and "genealogy" have been central to anthropological theorizing, evident in the discipline's foundations in studies of kinship and biological descent. Beyond this oeuvre, two lines of enquiry have emerged: identification of cohorts based either on patterns of consumption (of commodities, labor, services) signaling shifts in political economy (eg. Gen Z or Millennials), or critical events that index a temporal juncture (eg. postwar generation). Departing from either conception, this talk builds on Tamil feminists' contextual use of thalaimurai (generations) in political life as marking transformations in activist imaginaries and shifting conceptions of the political. Their use of thalaimurai refrains from presuming an apriori relationality between generations (through kinship),

to instead posit political relationships as requiring care labor, in this case, through the work of memory.

In tracking feminists' use of thalaimurai this talk demonstrates an intermediation at play, where the mediated object – memory – also serves as the mediating device. On the one hand, embodied feminist friendships and intimacies mediate the construction of memory, that feminists perform as a form of care for themselves and their histories. On the other, memory-work mediates the formation of new relationalities between generations, thus raising important questions for what political inheritance could mean for feminists in postcolonial South Asia.

From Radio to Internet: The Communication Shift for the Mebêngôkre-Kayapó

This study examines how communication practices have transformed within a Mebêngôkre-Kayapó community, an Indigenous group from the Brazilian Amazon, following the introduction of internet connectivity in 2020. Focusing on the shift from radio communication to WhatsApp, it explores the impacts of digital media on cultural and social practices. Based on multi-sited ethnography and community interviews, the findings reveal both the benefits and challenges associated with internet use, including enhanced connectivity and emerging cultural dilemmas. While digital communication strengthens logistical organization and family ties, it also raises concerns about cultural preservation amid growing external influences. The study further highlights the community's interest in cyber awareness education and potential future collaborations.

Machines for the Movement: AI Chatbots, Alt-Tech Platforms, and the Discursive Production of White Nationalism

In 2024, the alt-tech platform Gab—which bills itself as a champion of "free speech"—unveiled Gab AI. This AI, they argued, would offer an "uncensored" alternative to the increasingly popular ChatGPT, Claude, and Gemini models. As a bit of a gimmick to get the program off the ground, Gab AI offered chatbots based on historical figures, so a user could get an "uncensored" take on current events and politics from the likes of Henry Ford, Theodore Roosevelt, or George Orwell. Users could also chat with fictional people representing cultural archetypes, like "Charlotte" the tradwife, "Dakota" the trans rights activist, and "America First Zoomer." This presentation considers work a colleague and I did over the past year engaging with these chatbots in an attempt to test their capacity for radicalization in white supremacist discourses. Over a series of interviews with multiple historical and fictional AI "agents," we pushed the limits of what the bots would tell us, slowly asking more directed questions about white nationalist talking points like Great Replacement Theory or conspiracy theories about racial IQ discrepancies. What we found was that the AI in its current form was rudimentary in its ability to radicalize in a way that passed the "Turing test" but that it was very effective at working specific white nationalist talking points and discursive constructions like "racial realism" into conversation. The work—still ongoing—has led to more questions than answers: is this the future of radicalization? How will (and how do) overt white

nationalist organizations use these systems for their ends? How are AI systems in more mainstream venues influenced in the process? And of note to anthropology more broadly, how do we conceive of ethnographic discussions and interviews with non-human entities, especially considering the increasing prevalence of AI technologies in our lives?

Mongol Shobhajatra: An Archival Research and Visual Taxonomy Analysis of its evolution

Mangal Shobhajatra is an urban rally organizationally started in 1989 to celebrate Bengali's new year by manifesting an unprecedented visual identity conceptualized, organized and executed by the students from the 1986-87 cohort of the Institute of Fine Arts (IFA), University of Dhaka. They cooperated with their academic peers and some eminent cultural personalities. Although the rally was initially titled Ananda Shobhajatra (Joyful Procession), as soon as the second year the name was changed to Mongol Shobhajatra (Procession of Blessings). This rally has continued for the last 34 years in a similar ambiance - yet with an expanded urban scale and participation. Using archival research, taxonomic study and visual research methodologies, the authors investigated the evolution of the news and images dedicated to the Bengali New Year on the front pages of daily newspapers from 1989–2018.

ONCE UPON A TOWN: THE POWER OF ORIGIN STORIES IN MEDIA, HISTORY, HERITAGE, IDENTITY AND POLITICAL ECONOMY IN ST. PETERSBURG, FLORIDA

In 1939, Zora Neale Hurston wrote, in *Moses: Man of the Mountain*, "The present was an egg laid by the past that had the future inside its shell." (Hurston 1939: 193) Today, the complicated media landscape in St. Petersburg can be viewed as just such an egg. The deep erosion of trust in media and challenges faced by local media producers lie at the end of a long, often unacknowledged, chain of complex local history. In St. Petersburg, the headline issues of 2024 can be traced back to seeds planted in dominant media narratives as early as 1914. In that way, Hurston's egg – past, present and future together - represents a social dominion defined by dominant, and socially privileged, historic narrative storytelling.

This discussion, drawn from my 2025 Ph.D. dissertation, examines how the ghost of narratives past are constructed and how they shape everyday human realities in the present. The effort applies theoretical principals from media practice theory, narrative theory and heritage studies. That effort better contextualizes media practice today by putting it in conversation with the powerful social functions of dominant media narratives in historical formations of inclusion and exclusion, identity, and political economy, with specificity, on a local level. With that context, the project then collaborates with local media producers in the present to better understand how they are defining and achieving success. Themes from those local media producers were identified heuristically and explored.

By engaging perspectives from lived experiences of independent local media producers the project considered how they are adapting career identities in a present moment that is concretely and specifically defined historically by narratively privileged storytelling, rapidly advancing media technology and current political debated centered on the city's longitudinal commitment to a local political economy dedicated to tourism, baseball and leisure.

The Ghosts of Sonic Activism: Sounds that populate the researcher's body

"No borders! No nations! Stop deportations!" – I noticed that this slogan kept playing in my head more than a week after the demonstration against pushbacks in February 2022 in Athens, Greece. Since then, the teenage activists from the Ritsona refugee camp in Athens have been shouting it in my head with very firm voices and no intention of giving up. Their voices still sometimes reappear in my head almost three years after I did that part of the fieldwork in Athens.

Sonic collectives keep living in such singular ghosts. In this case, this is the collective of activists who fight against pushbacks, that is, horrendous human rights violations at the Greek borders. The ghostly sounds share the spaces of our bodies, of media, buildings, demonstrators, and passers-by. What does this cohabitation invoke in my self-perception as a researcher and activist? Sonic memories of the migration research, what are they calling for?

My contribution will invite the listeners to exploration and reflection about the sounds that populate our bodies after demonstrations, that come to us in our dreams, that make us unthink our knowledge production. The presentation will be based on ten brief conversations about ghostly slogans with decolonial anti-imperialist researchers and will respond to the following questions: If we think about the slogans and other rhythmical ghosts that populate and build our body, what would come to our mind? How do these sonic imprints of our ethnographies define our politics?

Presentation(s): Alma-Grad: Mobilizing Kinship for Care, Welfare, and Development in Kyrgyzstan

After the collapse of the Soviet Union in 1991, residents of Alma, a village in the former Soviet republic of Kyrgyzstan, were faced with many new challenges. Economic crisis and the elimination of welfare supports forced an entire generation to become labour migrants in Russia. Those 'left behind' – grandparents and children – were sustained by migrants' remittances and charitable activities, but at a cost. As villagers at home and in the Alma diaspora built upon existing kinship structures to create new practices of charity and mutual aid on the lines of Islamic teaching, both migrants and the left behind suffered from the 'dark side of kinship' that the crisis revealed. Migration is destructive of both the nuclear family and wider village life, but it provides an opportunity for lineages to be mobilized for collective social action that is both local and translocal. For this research the author interviewed many people in both Alma and its Moscow-based diaspora. Their experiences of creative response to adversity are at the heart of this talk: those responses created a 'moral economy of migration' that became territorialized as kinship was de-territorialized. This implies that all 'good' things become associated with the village, and with 'home', and 'culture'. All 'bad' things happen only outside the village, in Russia.

This presents a novel argument concerning kinship in present-day Central Asia. In the countries of that post-Soviet region, kinship matters because it can be mobilized in contexts of crisis. In situations of economic crisis and social upheaval, such as the erosion of welfare systems, systemic financial crises, COVID-19, and migration, kinship plays a positive role, one it enjoys when networks of care and support gain crucial importance. This role is equally visible, and equally important, when the focus turns to housebuilding, religious aid, or to community organization in the village diaspora. Migrants still regard kinship ties, moral norms, and village life as elements of a personal ideal for which they must strive – and in striving for this ideal, they contribute to the reproduction of their home village, and to the development of its infrastructure and charity. The migratory context also contributes to a strengthening and enriching of translocal lineage networks. This same kinship system that has such a positive role also has another, darker, and negative aspect, one to which this book also draws attention: the dark side of kinship.

From Shelf to Self: How Collectibles Contribute to Nerd Identity and Belongingness

For nerds, collectibles are more than material possessions. They reflect a person's identity, passion, and community. For many, collectibles carry deep personal significance and can represent cherished memories, favorite characters, and moments from beloved franchises. This interdisciplinary study explores the cultural significance, psychological motivations, and social dynamics of collecting within the historically marginalized nerd community. It utilizes a mixed-methods approach and draws on a survey of 485 participants, statistical analysis, in-depth interviews, ethnographic observations at Collect-a-Con in Los Angeles, and a literature review.

Interview responses emphasized common feelings of joy, nostalgia, and pride, with some participants relating their collections to social connections and others viewing them as a therapeutic outlet. The interview responses align with survey data, as 88.5% of participants

reported nostalgia as influencing their collecting habits, and 94.4% prioritized the sentimental value of their collections over monetary worth.

A series of Chi-Square Tests of Independence examined relationships between self-identification as a nerd, collecting behaviors, and perceptions of collecting. One of the most substantial findings in this study is the large association between forming connections through collecting and the frequency of collecting habits, $\chi^2(4, [i]N[/i] = 485) = 87.634, [i]p[/i] < .001, [i]V[/i] = .425. The results indicate that those who build relationships through collecting are significantly more likely to engage in collecting regularly (McCain et al., 2015).$

The study further finds that belongingness through collecting is moderately associated with self-validation and the belief that collectibles reflect identity and interests, suggesting that collecting is both a social and psychological experience (Gabriel, 2015).

Moreover, ethnographic observations at Collect-a-Con in Los Angeles demonstrated how collecting fosters relationships. Attendees waited in line for autographs from celebrity guests, exchanging contact information with other fans while waiting. Collectors proudly shared their new collectibles with other attendees and formed bonds through these shared interests. The event provided a safe space for identity expression, reflecting Tocci's (2013) idea that nerds comfortably display their identities among like-minded peers. These ethnographic observations stress the role of community in the collecting experience and its connection to nerd identity (Gabriel, 2015; Spaid, 2018).

This extensive interdisciplinary study shows the motives and complex nature of collecting as a hobby. Collecting encourages a shared cultural space where nerds can express themselves, connect with like-minded peers, and reinforce their place within the nerd community. Collecting allows nerds to find solace, affirmation, fulfillment, and connection through their cherished possessions and fandoms.

Ghosts in the World of Academia

Ghosts in the World of Academia builds on Maria Todorova's 2010 assertion: "A specter haunts the world of Academia: a study of Post-Communist nostalgia." Today, 15 years later, the concept of post-communist/post-socialist nostalgia has become deeply embedded in academic discourse. While early scholars such as Svetlana Boym, Maya Nadkarni, and Olga Shevchenko provided nuanced interpretations, the term is now often applied uncritically as a catch-all for any positive recollection of the state-socialist period. Labeled negatively – either as a populist political tool or as sentimental longing for a past best left behind – this framing not only dismisses feelings of regret for the former political and economic system but also entire narratives about that part of the past.

A similar pattern emerges in Western neoliberal societies, where nostalgia is frequently framed as a reactionary sentiment that political actors can exploit, invoking a return to the nation's past greatness and strength.

A particularly intriguing comparison arises when examining ethnographic research findings from both the "East" and the "West," especially in relation to the crucial identity-related themes of work and employment.

Our own study, conducted between 2017 and 2021, combined semi-structured ethnographic interviews with over 250 older individuals from the socialist Yugoslav workforce and survey questionnaires from more than 200 students across various disciplines. By centering on work and employment, we analyzed not only how individuals articulate their past experiences but also what their expectations for the future are. While we deliberately avoided the term nostalgia, we found that participants distanced themselves from it nonetheless, mirroring tendencies observed in Western studies, where the term has also acquired negative connotations in public discourse.

More importantly, however, this comparison highlights a striking similarity in respondents' perspectives. In both the "East" and the "West," their reflections frequently reference the past era of industrialization, high employment rates, and relative job security – grounded not in abstract longing but in concrete lived experiences. It is precisely these tangible memories, along with the data on work and employment embedded within them, that necessitate a critical reassessment of how the term nostalgia is applied in contemporary academic discourse.

Look Who's Walking: Diversifying Walking Methodologies from the Ground Up

Walking together is a seemingly unassuming and common way to socialize in public space. We tend to take it for granted. At the same time, its particular manner of performance embodies context-specific norms of interaction and identity. Embracing both its universal and situated characteristics, walking together has emerged as a valuable research method in anthropological fieldwork. So-called walking interviews, go-alongs, and other forms of peripatetic participation hold the promise of sharing the view ahead and seeing the world through the eyes of another.

This paper explores the possibilities and limits of walking together as a research method. Considering the history of walking and its phenomenological underpinnings, I first outline how existing walking methodologies are predominantly shaped by a European, male-centered, able-bodied tradition. Confronting these exclusive ideals with insights from critical phenomenology and findings from my own fieldwork in Makhanda, South Africa, I then seek to challenge, diversify, and complicate the prevailing picture of walking methodologies.

Building on my long-term fieldwork in Makhanda on foot, I unpack how walking together is shaped by power relations, bodily capacities, and infrastructures that constrain or enable different forms of movement. By foregrounding the experiences of those marginalized within dominant walking traditions—such as disabled pedestrians, racialized walkers, and gender-nonconforming individuals—I argue for a more expansive and situated understanding of peripatetic methods. What does it mean to walk together when the very act of walking is structured by histories of exclusion? How might we develop methodologies that attend to the frictions, negotiations, and interruptions that characterize walking in diverse social landscapes? This paper contributes to a growing

conversation about decolonizing research methods by reimagining walking not as a neutral or universal practice, but as a site of epistemic and political inequalities.

Nostalgic Imaginaries: How Constructed Memories of Indigenous Canadian Rangers Shapes Current Military Dialogue Around Arctic Sovereignty.

With their signature red sweaters and bright red .308 bolt action rifles, Canadian Rangers have become an established military presence in some of Canada's most remote regions. Located in almost 70 communities across the Northwest Territories, Nunavut, the Yukon and Atlin, BC, Canadian Rangers in 1 CRPG are viewed as a critical part of the arctic defense strategy. Due to their geographical location and the unique living conditions, most Canadian Ranger patrols are comprised of Indigenous personnel living in these communities. Ranger patrols are administered by Ranger Instructors, non-northern regular force soldiers posted to the north.

While Rangers are applauded for using skills accrued from generations of living on the land to do their work, the constant narrative that Ranger skills are deteriorating plague the group. Not only does this narrative perpetuate the racist ideology that there is a correct way to be Indigenous, marking contemporary Rangers as being "less than", but it implies that in the face of rapidly shifting political, economic and ecological pressures placed on arctic security, Rangers are not up for the challenge of arctic protection.

This paper will examine how these assumptions affect the operational role Rangers are taking as arctic and northern military operations are becoming more and more common. In doing this, this paper asks: How are racist and colonial ideas about how Rangers should act manufactured by ideologized memories of the past? How does this set unrealistic standards that force Rangers to fail living up to the expectations set up by their non-Indigenous leadership? What effect will this have on the military's assumed ability to "protect" the arctic? To answer these questions, this paper will center ethnographic data from Ranger Instructors speaking about their assumed imagination about past Rangers gathered from 3 years of fieldwork working and living alongside Rangers and Ranger Instructors in the north.

The Bell Witch, Jim Crow, and the Haunting of African American History

For nearly 200 years, the legend of the Bell Witch has been a fixture in the literature, folklore, and popular culture of the United States. While there are significant variations in the legend, it centers on the God-fearing Bell family who, in the early 1800s, suffered supernatural torments by a ghostly entity that called itself a "witch." As legends go, it has a bit of everything: frightening phenomena like poltergeist activity and disembodied voices, a love story, a murder, and even a cameo by President Andrew Jackson. It is therefore no surprise that the story of the Bell Witch has been told and retold countless times-in newspapers, folklore collections, live theatre, TV, film, and even in Playboy magazine.

It is an undeniably entertaining tale. One essential reason for its popularity, however, has been entirely overlooked. This is because most popular tellings have entirely erased the history of slavery from the legend. The Bells are not remembered as the enslavers they were, nor is it remembered that the witch's favorite victims were the African Americans over whom the Bells claimed ownership.

This paper argues that when placed in its appropriate historical context, the nineteenth and twentieth century American South, it becomes evident that the popularization of the Bell Witch legend served as a mechanism of white supremacy. It illustrates how the telling and re-telling of ghost stories both reflected and perpetuated the atmosphere of racialized terror that permeated the region for generations. Drawing on the scholarship of folklorists, anthropologists, and historians, this paper offers an interdisciplinary analysis of the social and cultural power of the supernatural.

The many lives of recorded magnetic tape. Grassroots cultural preservation and selective memory in Argentina's independent music scenes.

In Argentina, a country that has been immersed in a steep economic crisis for the last decade, independent record labels have turned to cassette tapes to document the significance of the songs and albums produced within their niche local music scenes. The return to neoliberal policies has made spaces of independent music production feel evermore ephemeral and volatile, and the materialities of cassettes (magnetic tape, inserts, plastic cases and stickers) have been an affordable and symbolically-dense medium to preserve contemporary cultural work in community-oriented ways. Lately, the scarcity of virgin (non-recorded) cassette tapes—and the high costs of importing them—has pushed labels to record local music onto old commercial cassettes remnants from the reign of the format many decades ago. In this presentation, I examine the past and present lives of those re-recorded cassettes. What can we learn from a cassette of a little-known hardcore punk band from the outskirts of Buenos Aires in a case with an embossed Sony Music logo that used to store Madonna's greatest hits? How can these old forgotten tapes, ghosts of the unfulfilled promises of Argentina's drastic turn to neoliberalism in the nineties help contemporary music-makers construct spaces to shelter from market-driven logics of memory today? In what ways does a return to the past and a re-writing of history help grassroots cultural brokers rework unequal power relations of global capitalism to narrate contemporary experiences of cultural resistance? Building on several years of ethnographic work with cassette labels in Argentina, I examine the grassroots practices of cultural preservation that re-recorded cassettes enable. I study how magnetic tape enable independent labels to develop a kind of community-aimed "selective memory" (McMurray 2017) that works against the logics of a "phonographic regime" (Bohlman & McMurray 2017) shaped by ideals of realism and the epistemological pillars of European modernity. A close look at the many lives of recorded magnetic tape discloses changing regimes of value (Appadurai 1988; Myers 2002) and circuits of exchange, where the same materialities which once attested to robust music industries with large networks of operation now

nurture collective frameworks of memory against widespread individualizing contexts of music circulation and storage.

Presentation(s): "Looking for happiness in retirement life:" Learning to speak at the University for Aged in Contemporary China

This presentation focuses on a group of older, retired people (mostly female) who went to a University for Aged (laonian daxue) in Chengdu, China. More specifically, they are those who seek to improve their Putonghua ("common speech," the Mandarin lingua franca) speaking by taking classes there. When being asked why they still chose to study after retirement, most of them had answers that are emotional, and can be as simple as the idea that taking classes makes one happy.

With learning standard speech on the one hand, these people worked to reduce their (regional) dialect-influenced accent, on the other. I'm interested in exploring how these people who are more or less marginalized (in terms of their age, region, gender, and health condition, etc.) in Chinese society draw on, or internalize this idea of "standard speech" in pursuit of a happier life.

From rural to urban, from margin to center, and from local to cosmopolitan (and many times also in opposite directions), it is usually a story that happens when life collapses. When things go out of place, when people leave, and when a future once thought to be "guaranteed" now breaks silently, what choices do individuals make? How do they anchor themselves onto something - something different, or something nostalgic? To improve one's Putonghua speaking can open up a space in post-socialist Chinese society, not just for social mobility, but for my interlocutors more importantly, the peace of mind in face of loss, anxiety, and sadness. My research is mainly based on the interview/oral history data, and some data from the class recordings at Chengdu University for Aged.

If There's No Men Here, Why Are We All So Tired: Unbalanced Queer Care Networks in Iasi, Romania

This paper examines how queer subjects in Iasi, Romania negotiate uneven care labor through semiotic processes that both enable and constrain belonging. Drawing on ethnographic fieldwork with a queer community in this postsocialist city, I trace how linguistic practices mediate social differentiation within queer social networks. Rather than presuming that "chosen family" is inherently egalitarian (Weston 1991), I show how care becomes an ambivalent terrain of moral evaluation, desire, and disidentification.

I focus on three emergent queer personae – the Gossips, the Ambivalents, and the Flexers– whose orientations toward relational labor and spatial belonging materialize through distinct semiotic practices. The Gossips, largely queer women and nonbinary individuals, have dense and multiplex social networks with strong social ties. They are the primary organizers of events and activism for the queer community. They are in part defined by their rejection of heteronormative dynamics: through metapragmatic discourse at events like a "Decentering Men Picnic" about who gives and receives care, they bring up feminist critiques, constructing women as ethical subjects who "do the work" while men benefit without reciprocating. But when these same speakers describe their exhaustion supporting Ambivalents and Flexers, they recycle the very tropes they deploy against men, revealing a fractally recursive (Gal & Irvine 2019) structure of care imbalance. These discourses are not merely descriptive; they index and reproduce social asymmetries within queer formations.

Ambivalents inhabit a tense position between attachment to local queer life and aspiration for the West, where they see their desires as fully achievable. Their linguistic practices reflect this in code-switching, citation of American queer media, and sociophonetic features borrowed from English. Flexers, in contrast, disidentify with Romania altogether. Their performances of cosmopolitanism and queer adjacency circulate through lexical borrowing, English-mediated slang, and stylistic distancing from other queer people in Iasi. While they seldom claim queerness explicitly, they are legible through semiotic links to global queer imaginaries.

Through close attention to how participants narrate care – who gives it, who gets it, and who refuses it – I show how metapragmatic discourse becomes a central means of managing moral and

affective life in queer Iași. Participants don't just describe care relations; they evaluate them, orient to them, and position themselves and others through them. These narratives hinge on fine-grained distinctions: who is "needy," who is "too much," who is on the "unreciprocated" end of a dynamic, or who is "doing the most." I argue that care emerges as a key semiotic terrain through which these queer subjects calibrate their identities and relational obligations, reproducing hierarchies even as they attempt to resist them.

Presenter(s): Anna-Marie Sprenger

Magic, History, and Enregisterment of Soul-Calling in Nuosu Contemporary Singing

The ongoing scholarly attention to the intersection of vocally mediated communicative registers with affect and history as an object of anthropological study highlights verbal/chanted/sung genres as a fertile site for producing place, personhood and history (Feld and Basso 1996; Harkness 2013; Mueggler 2017; Samuels 2004). This paper explores the ways in which Nuosu Yi popular music artists from Southwest China construct a genealogy of interactional texts (Silverstein 2005) in their contemporary songwriting and singing practices, using a ritually powerful chanted soul-calling register known as *yyrkut* (ꉨꉨ) (Bender 2005). As a ritualized genre for healing and safeguarding purposes in traditional settings, *yyrkut* is chanted primarily by the officiating ritual specialists, but also invites lay participants to converge and produce vocalizations in the ritual domain, highlighting the prosodic production of voice and charm in the enregistered process of renewing relationships with non- or semi-human others (i.e., ancestors, spirits of the dead, ghosts, nature spirits). Drawing on Peirce's semiotics of the intersecting trichotomies with an analytical focus on the rhematic configuration of signs (Gal and Irvine 2019; Harkness 2022), I examine how the creative use of *yyrkut* vernacular forms in popular songs becomes an object of its perceived effects, anchored in Nuosu historical consciousness.

Textual Democracy: Liberal Pluralism and Democratic Practice in Taiwan's Reading Groups

This paper explores the relationship between social reading practices and democratic politics through an ethnographic study of a Taipei-area reading group called "The No Rules Book Club". Focusing primarily on books in the self-help genre, this group of readers meets weekly to interpret texts and learn from them how to live well. In the process, readers are called upon to imagine their past, present and possible future selves in ways that are amenable to the kinds of self-transformation the books describe. In practice, this group imagination requires complex social-semiotic labor through which readers locate the described world in relation to the world of their experience, often bridging disparate contexts and unfamiliar registers.

Rather than seeking unity of worldview or consensus of interpretation, these readers use the presumed stability of the text to expose and calibrate differences between readers themselves—differences of gender, education, religious belief, and personality, to name just a few. Within the idealized space of the reading group, multiple perspectives are understood as not as contradictory, but as reciprocally enriching, leading to a fuller understanding than could be attained on one's own.

But the reality of the reading groups I attended was often fraught with conflict and exclusion, as is the reality of Taiwanese democratic politics upon which they seem to allegorically draw.

Using linguistic and semiotic analysis of the reading practices in use in Taiwanese reading groups, this paper asks: what kind of pluralism is necessary for democratic practice? To what degree must people share understandings of the truth to do politics together?

What Comes First? Language and Identity in the Disabled Community

Language is one of the most salient mediating factors of both public and personal identity construction. The linguistic conventions used to label individuals and groups in the modern day are laden with linguistic lineages that include the social indices of otherization and oppression. This paper analyzes the role of language in the identity construction of disabled people on both the individual and institutional levels, focusing on the ongoing debate over the efficacy of "person-first" and "identity first" language use regarding the disabled community. By situating this debate within a larger historical framework, this research aims to reveal the historical effects of language use and the change in linguistic constructions on the public and private perceptions of the disabled community.

"Did you see what she posted?": Multimodal Gossip and the Ethics of Exposure in Digitally Mediated Youth Interaction

This presentation draws on ethnographic fieldwork with high school youth in Mostar, Bosnia and Herzegovina, to explore gossip as a multimodal and transitional communicative practice. In the context of a society marked by post-war fragmentation and deep-seated ethnonational divisions, youth increasingly move between local cultural frameworks and more cosmopolitan settings, such as international high schools like the United World College (UWC) in Mostar. These transitions are not just geographic or institutional, but deeply social and semiotic-producing moments of heightened ambiguity, shifting peer norms, and redefined boundaries of belonging.

Building on my framework of Digitally Mediated Face-to-Face (DM-FTF) interaction, I analyze how gossip-often dismissed as trivial or marginal-is in fact a key site where youth negotiate social knowledge, moral frameworks, and shifting interpersonal alignments. Far from being limited to verbal exchanges, gossip among youth is deeply multimodal: it involves whispered side comments, exchanged glances, covertly shown screenshots, the forwarding of messages, and references to past posts or deleted stories. These fragments circulate not only in digital space, but within and through face-to-face encounters, generating what I call layered participation frameworks-where speakers, overhearers, and digital audiences coalesce across communicative modes.

In one ethnographic episode, three teenage girls discuss a peer's sudden relationship status change by combining snippets of social media posts, emoji interpretations, and in-person observations. A screenshot functions not just as evidence, but as a pivot in conversation-inviting

judgment, humor, and subtle recalibrations of group alignment. These interactions, often happening in semi-public school settings, fold together multiple temporalities (the "before UWC," "now," and "what comes next"), revealing gossip's role as a transitional practice. In this setting, gossip becomes a way to navigate the moral and social disorientation of shifting between Mostar's local norms and UWC's more international, liberal culture.

This flash presentation thus offers both a methodological and theoretical contribution. Methodologically, it builds on DM-FTF as a way to account for the semiotic density of contemporary youth interaction, where smartphones and social media artifacts are not separate from conversation but integrated into its very structure. Theoretically, it repositions gossip as a form of ethical labor through which youth engage with shifting chronotopes of identity, accountability, and visibility. In a world where screens and speech are increasingly entangled, gossip offers a window into how youth learn to make sense of each other-and of themselves-across rapidly shifting social terrains.

Type: Executive Oral Presentation Session

Reproductive health(care) is haunted by many specters.

To be haunted, Gordon asserts, is to encounter a presence that seethes with the urgency of its meddling in the realities we take for granted, even as it appears to not be there at all (2008). In her construction of haunting as a multi-temporal intervention on the present, the ghost-a social figure through which something lost, abandoned, or hidden insists upon its own reality by challenging ours-is a clue. Following this clue, obeying the urgent pointing of a specter, leads us to subjugated ways of knowing where the affective blends with the political to reveal a haunting we may not even have words for yet. Medical anthropologists of reproduction have long followed the lead of many such insistent and impatient phantoms, directing us to excavate forgotten histories, name that which has been suppressed, and cross temporal boundaries through ethnographic acts that weave together the uncanny present with memory, engaging unquiet ghosts in a "politics of memory, of inheritance, and of generations" (Derrida 1994) while invoking another aphorism: that "all politics [including those of our most seething ghosts] are reproductive politics" (Briggs 2017).

Haunting's core is emotion, affect, and feeling-a sense of the uncanny that links trauma from the past into present anxieties of the future. A ghost transgresses our fragile ordering of the years and drags events and the memories of feeling they evoke(d) into disquieting new frames. In this moment, where many of the "transformational recognitions" (Gordon 2008) engendered by ghostly

projects and their politics-projects of racial justice, queer rights, reproductive freedoms, resistance movements against colonialism and genocide-have been met by reactionary assemblages using old forms of violence in new mediums, the traumatic past doesn't only conjure our mourned and subjugated ghosts, but presences that might seek something closer to possession than recognition. For many, the emotions that mark our current hauntings trend towards fear, panic, and an expectant grief, not for spirits from the past, but for the future hauntings we anticipate.

Scholars on this panel are speaking with seething presences-eugenics, colonialism, genocide--to consider the role of the specter in our present and immediate futures. Central to our work are questions that speak to the responsibilities inherent in it: How do we manage the boundaries between past, present, and future for public audiences and communities in a way that honors our ever-persistent ghosts without allowing them to possess us? As activists, scholars, and public intellectuals, how do we allow seething presences to speak through us without being overdetermined--possessed--by the past-futures they describe? In this panel, participants reflect on the ways that being haunted is necessary to the work of justice-seeking for past, present, and future ghosts.

Presentation(s): The Specter of Population: From a "Small, Happy Family" to a "Smart Life"

The Malthusian specter of population explosion left a history of state-sponsored population control as well as international development programs that spread an ideology of the small family. The slogan "a small family is a happy family" was promulgated in low-income countries around the world. As fertility rates dropped and critics decried the focus on the procreation of brown families in low-income countries over the overconsumption of high-income countries, messages of fertility reduction needed new packaging. In Nepal, a recent multi-year campaign produced idealized images of the "smart life" of "smart couples:" happy, middle-class families engaged in rationalistic family planning to delay and space their offspring. Contraception promised satisfaction through capitalism and economic mobility, or optimistic attachment (Berlant 2011; Murphy 2017). The historical refashioning of a discourse that promoted a small family to one that promoted a smart life is illustrative of a global trend in which a message of fewer births is repackaged as spacing. At stake is whether new discourses of improving household wealth and empowering women remain haunted by the lingering specter of eugenic targeting of marginalized groups to limit procreation. Anthropologists work to disentangle projects that support reproductive health from this legacy. And now, as many projects abruptly disappear, they must stand with (TallBear 2014) communities as they struggle to replace services that vanish.

Presenter(s): Jan Brunson

Eidolonic Visitants: Birth Tourism, Reproductive Racial Capitalism, and “Sticky” Eugenics

Projects of population-shaping rely on fabricated apparitions--eidolons, specters of the idealized responsible reproducer whose decisions serve the eugenic goals of their countries, and revenants of eugenics projects, irresponsible reproducers, who serve as a foil to eugenic goals in discourse and policy. In Yucatan, where eugenic logics permeate local reproductive landscapes, im/migration is high, and a birth tourism economy serving USians and Global North citizens—eidolons--has flourished, exploring the tensions between the figures of eidolon and revenant offers a means of understanding the stickiness of labels of ir/responsible reproduction to race and class. As eidolonic visitants enter a budding economy of guides, legal services, and healthcare that commoditizes their own reproduction as a tool for accessing citizenship and property in Mexico, they do so in a context where Mexican women must contend with the eugenic ghosts that haunt their kin-making decisions while enduring denigrating rhetoric that makes a revenant of their reproduction. Tracing these specters reveals how they are illustrative of the internal contradictions of reproductive racial capitalism: capital demands a regenerating underclass of cheap labor, while the racist logics that enable capitalism stifle the reproduction of that same underclass, resulting in a paradox: responsible reproduction is an always already unachievable goal, whose promotion perpetuates the racial projects that support capitalism.

Presenter(s): Sarah Williams

Reproducing Ableism: Eugenic Legacies in the Age of Preimplantation Genetic Testing

Since its introduction in 1990, preimplantation genetic testing (PGT) has become routinely used to test embryos grown in vitro for thousands of single-gene disorders, chromosomal abnormalities, and structural chromosomal rearrangements. At least half of all embryos created through in vitro fertilization (IVF) in the United States today undergo PGT. Technologies of preimplantation and prenatal genetic testing are inextricably entangled in histories of eugenics, reproductive coercion, and genetic discrimination. As disability rights scholars argue, their use often reifies cultural understandings of the kinds of lives that are worth reproducing, an ideology steeped in ableism. Yet, they also remain integral to pregnant peoples', including disabled pregnant peoples', exercise of reproductive autonomy. This talk examines the structures of ableism that haunt contemporary practices of preimplantation genetic testing in the U.S. IVF industry, shifting the problematics of PGT away from individual patient "choice" and toward biomedical practice. Drawing on fifteen months of ethnographic research within IVF labs conducted in 2022 and 2023, I chart how biomedical logics, expert practices, and modes of financialization normalize the use of PGT in ways that obscure its eugenic origins. Finally, I look to feminist crip theory for a way to both interrogate the harmful legacies of ableism and eugenics within infertility medicine, while making space for patients' voices.

Presenter(s): Manon Lefevre

The Specter of the Lady with the Lamp: Nightingale and Colonial Hauntings in Tanzanian Nurse-Midwifery

In order to radically reimagine and re-world (Ndlovu-Gatsheni 2023) maternity care globally, we must grapple with the ghosts of our pasts and futures. In Tanzanian midwifery, Florence Nightingale's grip on nurses is both a guiding light and a suffocating stranglehold. Nightingale's legacy is mixed, colored by racism and her alignment with a colonial, patriarchal institution, while also continuing to provide an avenue to recognition and fulfillment for many (primarily) women in Tanzania through the profession she helped to start. Yet, invocations of Nightingale's legacy render invisible the contributions and innovations of Tanzanian nurse leaders and tie nurse-midwives to an institution (and history) that often places them at odds with the very women they are meant to care for. Racist, colonial, patriarchal ghosts condense in the form of Nightingale, and their hauntings foreclose futures just as they re-instantiate oppositional relations of care and power hierarchies. Based on archival and ethnographic work in maternity care settings in Tanzania since 2009, I use nurse midwives' narratives to argue that our radical imaginaries for maternity care must start with facing that which haunts us and freeing ourselves from ghostly possession of our futures. Using their own critiques, insights, and experiences, nurse midwives can point the way toward a more just and healthier version of the future.

Presenter(s): Adrienne Strong

Eugenic Apparitions: Polygenic Testing and the Temporal Politics of the New Right

Proponents of novel polygenic embryonic testing frame it as a cutting-edge expansion of reproductive choice and distance it from eugenics. Yet as scholars have long examined, the logics underpinning such technologies—risk calculation, optimization, and the promise of improved genetic futures—echo eugenic aspirations to govern life at the level of heredity (Rose 2001; Rapp 2004; Valdez 2022; Weinbaum 2019). This paper reconsiders the spectrality of eugenics in light of polygenic testing and the biotechnology sector's temporal politics. While biotech firms present polygenic testing as individual choice, neoreactionaries in adjacent social and financial networks position genetic technology as an instrument of elite stewardship and a defense against civilizational decline, conjuring ghosts of eugenics past. Drawing on ethnographic research in tech-right spaces and a biotech company, this paper explores how eugenics is shifting from a disavowed past into a latent political present. Exploring what truths this unwelcome apparition reveals, this paper asks if liberal eugenics in the biotech sector is giving way to a new biopolitical project where eugenics, rather than a denied specter or circumvented taboo, becomes a politically and technologically viable future enabled by elite governance, techno-authoritarianism, and secession. How do we reckon with haunting when some ghosts are not merely lingering but actively seeking new infrastructures and sovereignties for their return?

Presenter(s): Googie Karrass

Knowing Bodies: Hauntings and Futurities in Midwifery Pedagogy

Black and Indigenous midwives, the backbones of midwifery, were once at the forefront of U.S. maternity care. The afterlife of racist campaigns to eradicate midwifery led to Black and Indigenous midwives making up less than a tenth of the midwifery workforce, a demographic reversal

intensified by the institutional erasure and ahistoricization of traditional knowledges and practices in standardized midwifery pedagogy. In California, Black and Indigenous student midwives contend with racialized maternal death crises, financial barriers, and sociopolitical exclusion in their paths to becoming practitioners. How do these student midwives envision and cultivate healing and spaces of belonging amidst everyday manifestations of erasure? Disentangling (re)configurations of alterity and racial orderings in contemporary midwifery, this work blurs delineations of spectral and material manifestations of racial capitalism through the borderland of the body. Thinking with the embodied experiences of practitioners, this research approaches residual and emergent ways of knowing the body and birth via vernacular theorizing and structures of feeling, exploring ancestral connections as living blueprints for otherwise being in everyday life. Developed from the scholar-practitioner perspective, a methodological offering of 'thinking like a midwife' engages pressures of efficacy and hauntings of indeterminacy in channeling collaborative narratives as aspiring conduits for collective knowledge.

Presenter(s): Simona Spiegel

7117 Spectral speech: The voices of political pasts in contemporary discourse (Part 2)

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR D2 (3rd fl)

Type: Oral Presentation Session

From the echoes of long-dead leaders in populist rhetoric to revived ideologies in today's policy debates, language becomes a conduit for haunting. This panel explores how past ideologies and figures persist in contemporary speech to reveal how the past remains embedded in the present. Registers of speech gain social value through repeated associations with identities and histories (Agha, 2007), enabling political actors to evoke legitimacy, nostalgia, or resistance. In discourse, the past is made present--historical movements shape ideological landscapes, and speakers invoke past figures to justify, resist, or reshape power structures.

Political ghosts manifest in many ways. Leaders may appropriate the voices of long-gone figures to legitimize agendas, or revive the rhetoric of past regimes to maintain ideological continuity. Whether explicitly cited or subtly embedded, historical ideologies shape public debates by reinforcing or challenging dominant narratives. This panel brings together scholars to examine how political legacies animate language and how historical ideas influence governance, protest movements, and public memory.

We ask: How do political actors invoke historical figures or ideologies to gain legitimacy? How do citizens, activists, and marginalized communities engage with or reframe these hauntings in their speech? How does past political discourse shape public consciousness and action? In line with the politics of communicability (Briggs & Mantini-Briggs, 2003), we consider how discourse circulates and acquires authority across publics and historical moments. Using ethnographic and discourse-

analytic approaches, our papers examine political speech in contexts including post-authoritarian societies, ongoing colonial struggles, and nations grappling with racial and economic injustice.

This panel sees ghosts as both disruptive and productive. Political language is imbued with past struggles, injustices, and aspirations. Legacies are not just echoes but active forces shaping present realities. In an era of rising nationalism, renewed conspiracy theories, and struggles over memory, recognizing the ghostly in speech helps us engage with the unfinished work of justice and transformation. Building on work in legal discourse and memory (Hirsch, 2006), the ideological circulation of speech (Schieffelin, 2007), and studies of voice, entextualization, and cross-chronotopic alignment (Perrino & Lempert, 2007), we examine how language resurrects, distorts, and reconfigures political pasts.

By focusing on discourse's role in political ideologies, this panel contributes to broader conversations about anthropology's role in contemporary crises. We consider how anthropologists might intervene in these hauntings-challenging the revival of oppressive pasts or amplifying voices whose struggles remain unfinished. Ghosts reflect our fears and hopes and show how the past refuses to be buried-still speaking through the voices of the living.

Presentation(s): Reframing the Present with the Past: Discursive Heritage Work Among Immigrants from the Former Yugoslavia

This article investigates the sociolinguistic dimensions of heritage work among immigrants from the former Yugoslavia, focusing on elements of micro-contextual discourse. It explores how these immigrants from a nation that is now dissolved engage with their cultural heritage through everyday interactions embedded within non-heritage environments, reframing the present with the past. These frequently ephemeral interactions allow these individuals to assert control over their cultural identities and maintain a sense of belonging without relying on larger heritage institutions. My analysis focuses on the scalar viewpoints, rechronotopizations, polycentricity, and boundary negotiations that are exhibited in discourse, illuminating how discursive practices facilitate the democratization of heritage. By applying these concepts to culturally salient linguistic features, I argue that discursive heritage practices support the preservation of hybrid identities and frequently occur in a chronotopic sense. This research contributes to emerging sociolinguistic scholarship

regarding how language plays a crucial role in heritage maintenance, identity negotiation, and in-betweenness within immigrant communities.

Presenter(s): Marina Gotovina

Multiple chronotopes of Portuguese national identity in celebrations of Aristides de Sousa Mendes

Previous work has addressed the multiple chronotopes of Portuguese identity in verbal art and performance. This paper discusses how the chronotopes of Portuguese empire and Salazarist dictatorial regime emerge or "haunt" current Portuguese celebrations of Aristides de Sousa Mendes. Sousa Mendes was Portuguese consul in Bordeaux when France fell to the Nazis in 1940. He illegally issued thousands of visas to refugees seeking to escape through Portugal, the only remaining exit from Europe. Until the mid-1980s, ASM was considered a criminal in Portugal. Since 2010, there has been a dramatic reversal, and he is now celebrated as a national and international hero. The president of Portugal uttered the following upon ASM's 2019 induction into the national Pantheon: "ASM changed the history of Portugal and projected Portugal into the universe...Portugal, curving towards his moral personality, eternally grateful, today and forever, remembers and honors him." The president links the story of ASM with the currently reinvented destiny of Portugal on national and international scales as a humanitarian leader. Current celebrations of ASM sometimes treat him as the final triumph over fascism, sometimes as embodiment of a timeless "real" Portugal, and sometimes as a sign of Portuguese (post-imperial) grandeur. I examine how participants shift among and laminate these multiple chronotopes.

Don't lose "Community Control:" Sharing narratives of the United States sign language interpreting profession in Hanoi, Vietnam

When foreign deaf activists and interpreter trainers meet with Vietnamese deaf leaders they often share a warning; don't lose "community control" over the field of sign language interpreting as it professionalizes. These international actors invoke a historical narrative rooted in the United States that frames the passage of the Americans with Disability Act and subsequent demand for interpreting in mainstream K-12 education as a critical turning point where the deaf community lost control over sign language interpreting. This narrative has been (re)produced through personal testimony, interpreting studies literature and conferences (e.g. Cokely 2005). But what are the afterlives of such narratives in the Vietnamese context? Moreover, what does "deaf community" and "control" come to mean to local actors? Bringing together deaf and disability studies attention to the ways disability histories travel (Instagad and White 2007, Friedner and Kusters 2015), with linguistic anthropology's attention to the narrative process of re-entextualization (Agah 2005, Perrino & Lempert 2007), this talk traces the way such narratives are recontextualized and taken up for local projects in Hanoi, Vietnam.

Presenter(s): Aron Marie

Spectral Regimes at the Baltic Borderlands: Chronotopic Imaginaries, Political Orders, and Linguistic Circulations in Contemporary Lithuania

In the Baltic region historical configurations of competing political orders contribute to a circulation of divergent chronotopes and political imaginaries. I argue that at the times of crisis, individuals invoke specters of past political regimes in order to navigate rapidly shifting socio-political contexts. This paper builds on scholarship of chronotopes (Wirtz 2016; Koven 2013; Perrino 2011) and interdiscursivity (Agha and Wortham 2005) to examine how individuals invoke and reinterpret past political orders, creating new possibilities for social action and contributing to new patterns of social exclusion in the process. I particularly consider how the Russia-Ukraine War, increased immigration to Lithuania, and the changing EU-US relationship have prompted anxieties about Lithuania's sovereignty and engendered novel reconceptualizations of history. I draw on my fieldwork and interviews in Lithuania and analyze discourses in Lithuanian media, as well as in Belarusian and Russian diasporic media. As individuals invoke and engage with specters of the Soviet regime, the Russian Empire, the Grand Duchy of Lithuania, and other historical regimes, these imperial hauntings shape the contours of political debates, engender novel socio-political alignments, and create new social divisions. This paper contributes to the scholarship on circulations and interdiscursivity by tracing how individuals voice, reinterpret, and contest spectral political regimes.

The specter's double: Scrutinizing a young leader's speech for sincerity in Burkina Faso

For more than 30 years Thomas Sankara's memory lived with the thick transparency of a ghost in Burkina Faso as his alleged killer elaborated democratic dictatorship in the era of political and economic liberalization, and as an increasingly complex "security" situation plays out since the 2014 "popular insurrection" that ousted Blaise Compaoré. Assassinated while realizing an ambitious revolution, Sankara continues to represent the possibilities for a self-determined, African development for a great many Burkinabè and for people across the continent. The second military coup of 2022 brought Ibrahim Traoré to the helm of the state, a figure who bears biographical, ideological, and intentional likeness to Sankara. The widespread support of an apparent majority of Burkinabè for Traoré's presidency and government rests importantly on the resonance of Traoré's person and projects with those of Sankara. However, Traoré's popular legitimacy is not a matter of nostalgia or haunting alone. In this paper I study how Burkinabè discuss Traoré's perceived sincerity as a criterion for supporting his political project, and locate it within the Sahel's *longue-durée* history. Drawing on interview data from more than 14 months of ethnographic fieldwork in Burkina Faso and discourse data from the weekly news debate of the country's leading private television station, I use semiotic discourse analysis to illuminate the political wager that Burkinabè see themselves making with Traoré's leadership.

Stages of Memory: Black Spanish Racial Politics

If the past exists within the present, how is historical memory marshaled by Black Spanish artist/activists to confront systems of exclusion? This paper traces the politics of historical memory and erasure within projects of colonial reckoning in Spain. It investigates Black Spanish artists/activists' roles in shaping raciolinguistic ideological landscapes and the contours of public memory. It explores the semiotic resources that are available to them owing to complex biographical trajectories and ties to Spain's ex-colonies spanning continents (Feliciano-Santos 2023). Colonial iconographies and racial caricatures permeate Spanish media and visual culture. Activist/artists strategically deploy discursive forms in their stagings, set designs, speeches and protests. Advertisements for colacao, songs and refrains depicting "el negrito from Africa tropical," are stark reminders of how discourse can evoke colonial imaginaries thereby reinscribing certain racial hierarchies. Drawing on ethnographic data collected in Madrid and Barcelona, I explore activist/artists' efforts to challenge Eurocentric fantasies that belie local racial anxieties (Shohat 2018). Examining theater productions and activist campaigns, I illustrate how artists/activists tap into hauntings of coloniality and anti-blackness to facilitate anti-racism work. By developing interdiscursive practices (Cavanaugh 2004), activists ultimately implicate multiple audiences in racial consciousness work.

2506 Suspicion, Conspiracy Theory, and Authority

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Riverview II (41st Fl)

Type: Oral Presentation Session

Suspicion can be understood as a style of thought, a way of making motivated connections between disparate things as part of everyday, pathological, and rarefied modes of making sense of the world. As scholars like Sedgwick (2002) and Masco and Wedeen (2024) have noted, there are many elective affinities between (pathological) suspicion and critical modes of theorizing the world, and the way we draw this line is central to the formation of disciplines and our place in them. Ricoeur (1965) notably claimed that modern critical thought, as inaugurated by Marx, Nietzsche, and Freud, was categorically "suspicious", and that a fundamental quality of this thought consists of the interpretive acrobatics that follow from its characteristic rejection of authority and given senses of meaning. Indeed, one of the main markers of intellectual virtuosity--and the establishment of theoretical authority--consists of connection-making between disparate spheres, and the critical revelation of truth behind appearances: activities one might dub "suspicious," or, in some cases, apophenic (Lepselter 2015). And yet, as many have argued (Postone 1980, Hofstadter 1964), the suspicious machinations of conspiracy theory so often serve to displace awareness of the structural realities of domination, redirecting attention to a realm of overly personalized and particular agencies and threats. What specific qualities of suspicious discourse make it critical or a mere disguise for impersonal domination? What makes it virtuosically creative or pathological; connective or displacing; world-making (Shulman, 2024) or world-breaking? What makes it modern and secular (Agrama 2023)?

The papers on this panel examine such distinctions ethnographically, parsing them through the interactional nitty-gritty of situated connection making, self-framing, critique, affirmation and the needs that subtend them. Berman's paper analyzes the limits and possibilities of political transformation in the paranoid atmosphere of post-genocide Rwanda, a context in which subject formation is conditioned by the imagined potential of particular individuals to commit apocalyptic violence. Elshaikh's paper analyzes the phenomenology of suspicion in experimentation in both so-called "pathological science" and its normal counterparts. McConnell's paper examines how the widespread suspicion and rumors that often arise in the splintered epistemological conditions of geographical backwaters can foster forms of resistance among residents to industrial ventures and state restoration projects. Finally, Wibberly's paper asks how right-wing militias at the U.S./Mexico border construct conspiratorial narratives and mobilize sense-making projects toward their own aspirations for state authority.

Presentation(s): "It's Because he has Ideology": Good Subjects, Suspicious Subjects, and Identity Formation in Post-Genocide Rwanda

This paper explores the ways in which Rwandan youth navigate an ethno-moral economy of threat produced in the wake of the 1994 genocide against the Tutsi. Over the past three decades, Rwanda's ruling party, the Tutsi-led Rwandan Patriotic Front (RPF) has led a series of reforms intended to eradicate ethnicity and build a unified "Rwandan" identity. Central to these reforms is the legal prohibition of "genocide ideology," a neologism elaborated by the RPF to describe the beliefs and practices intended to result in the extermination of a particular group. However, although "genocide ideology" is legally defined on ethnically neutral terms, in practice the state treats genocide ideology as an entity which may only be possessed by Hutu. In this way, the state's persecution of genocide ideology has undercut the national unity project by inscribing an ethno-moral hierarchy into public consciousness which frames Tutsi as inherent victims of violence and Hutu as potential carriers of this violence. Building on over two and a half years of fieldwork, I interrogate the ways in which Rwandans born after 1994 simultaneously trouble and reproduce this hierarchy in their efforts to move beyond the past. Drawing on studies which explore how state-authored orientations towards suspicion shape political atmospheres and subject formation (Bubandt 2014, Seigel 2005), I analyze how youthful engagements with the question of who "has ideology" engender novel orientations and possibilities.

Epistemological ruins: conspiracy theory and rumor in Imperial Valley's Salton Sea environmental crisis and Lithium Valley development project

In this paper, I explore the ways that environmental threat is being both conceived of and navigated in the small desert town of Bombay Beach, California, as well as the surrounding highly irrigated desert agricultural region of Imperial Valley. In particular, I trace the epistemological ruptures that arise in a highly polluted rural area dominated by big agriculture, weapons testing, and industry that are meant to primarily serve people in distant metropolises rather than local communities, resulting in conspiracy theories, rumors, citizen science, and other forms of vernacular sense-making about environmental conditions that are not otherwise readily knowable to those living amidst them. I explore this in particular in relation to two things: 1. the Salton Sea evaporation crisis, in which an enormous local lake that has been pumped full of agricultural chemical runoff for the past century is now rapidly evaporating, uncovering a lakebed full of toxic sediment, and 2. a proposed multi-company lithium extraction development project that has been hotly debated by local residents since 2021. I trace the networks of different branches of local government, non-profits, "green" companies and "social entrepreneurs," and informal gatherings of locals, and think about how knowledge about the regional environment—often vital to taking action for public health—spreads, distorts, is kept secret, and is generated in unofficial ways.

Presenter(s): Reed McConnell

Pathological belief and suspicion

This paper focuses on the concept of "pathological science" and anxieties that scientists working at the margins of scientific fields have about being or being perceived as pathological. It analyzes the modes of reasoning one has to embody in relation to one's own perceptions and how those perceptions are calibrated to others' perceptions and the paranoid modes of reading one's own or others' apprehensions that characterize experimentation in these cases. Pathological science, as described by the chemist and Nobel Laureate Irving Langmuir (Langmuir 1989), refers to experimental research that begins as sincere, credible, and competent scientific inquiry but becomes skewed by subjective effects, wishful thinking, or self-deception. It often involves ambiguous signals, weak intensities, threshold effects, or irreproducible results; these results, rather than being discarded, are defended with increasingly elaborate explanations and apparatuses. To avoid pathological science and restore the epistemic virtue of objectivity, one then has to become constitutionally suspicious of oneself, to actively hunt and reduce noise. But falling into pathological science often involves its own suspicious readings of phenomena, too. Suspicion becomes an epistemic virtue of skepticism, which cuts both ways and is difficult to contain before it, too, becomes pathological. Indeed, the concept and its selective application are themselves objects of suspicion.

Presenter(s): Eman Elshaikh

Viral Vigilantism: Suspicion, Security, and Sense-making at the U.S./Mexico Border

Vigilantism at the U.S./Mexico border traces its roots to the historic frontier, where civilians played key roles in both the colonization of the Arizona Territory and the Mexican-American War. As a historical phenomenon, vigilante violence served state goals without official state sanction. The

first Trump presidency saw a resurgence of right-wing militia activity in southern Arizona propelled by QAnon and its attendant conspiratorial worlds. Armed as much with cameras as with guns, the current cast of border vigilantes invest in the production and circulation of narratives about threatening borderland figures, such as the terrorist, the drug smuggler, and the child trafficker. Thus, as a second Trump term re-animates the border as a media object, conspiracies once considered "fringe" have gained popular traction through newly intimate relationships between border militias, state security programs (U.S. Border Patrol), and mainstream electoral politics. Fantasies of deputization mobilize militia media towards the goal of state-authorized vigilante violence. This paper interrogates the narrative strategies of vigilante media projects: How do militia actors draw connections, collect evidence, and imagine figures of threat? How does suspicion concretize into the conspiratorial architecture of border security? In what ways does vigilante sense-making mirror state security and surveillance projects, and how do figures of threat circulate between them?

3876 The Book's Spectral Futures: Academic Writing in the Age of Public Anthropology

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Edgewood AB (4th fl)

Type: Roundtable/Town Hall

At a moment when academia is under political assault, what uses can we make of the book? What is the role of the ethnographic monograph in addressing and educating a wider public? This roundtable pairs an editor and an author from four prominent university presses (Duke, California, Texas, Minnesota). They will each pose and answer a range of questions about the future of book publishing for cultural anthropologists.

These questions begin with how to engage audiences at a time when most Americans have little confidence or trust in universities and are reading fewer books every year. It is not unusual to encounter college freshmen who were never assigned to read a whole book in high school. As well, fundamental aspects of human sociality are being drastically reconfigured by various digital devices and platforms. How do we write for audiences with decreasing attention spans, glutted by cyberspace "content" and increasingly driven to social isolation and distraction? How do we educate through writing even as public scholarship is being defunded and undermined. What knowledge claims are we making, in contrast to perpetuating traditions of "critique?"

As organizer, I'm drawn to this question by my own work and my responsibilities with Wenner-Gren, where we are thinking hard about what it will take for anthropology to thrive and survive in these difficult times. My writing has evolved but so has my thinking about our responsibilities when it comes to our readers and the communities impacted by our work. Participants in this roundtable will assess and discuss whether we are writing the best books we can at this perilous moment. Do

we need to write differently? Are we failing the book medium in our current approaches? Are we not fully imaging and pursuing its many affordances and possibilities? The answers to these questions hinge on whether people will read the books we write. Do we assign ethnographies in the classroom? Do we write ethnographies that journalists will find interesting enough to report on? But the answers also turn on how we think through what our audiences need to know. How are we using the ethnographic monograph to convey the insights of cultural analysis to people who are increasingly disinclined to read?

7120 The Many Specters of Food and Aid: Learning from the Past and Present to Feed the Future

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Grand Ballroom D (5th fl)

Type: Oral Presentation Session

The work of growing, producing and sharing food is intertwined with landscapes, family histories, labor systems, and political configurations at multiple scales. Indeed, these are not only techniques of the living but instead involve negotiations, resources, and social dynamics among both living and long deceased people, ideas, technologies and embodiments. This panel will explore how the futures of feeding and being fed are shaped by environmental histories, migration patterns, the plight and precarity of food workers, and the death of federal agencies. Collectively, our papers consider what anthropology has to offer the study of food futures in both the US and global context and what continues to haunt us as scholars seeking to understand the interwoven challenges within food and humanitarian aid systems.

Presentation(s): Apparitions in the Landscape: Drought and the Future of Food

Nearly a quarter of the world's population is experiencing drought conditions. Meanwhile, agricultural regions across the globe are facing historic drought levels. Posing significant threats to food and water insecurity, and exacerbated by climatic events, drought conditions intensify the risk

of environmental displacement and necessitate human mobility. In the arid, borderland regions of the U.S. Southwest and the central Mediterranean, drought represents both a defining aspect of everyday life and an "interminable event" (Sharpe 2016). Displaced and migrant populations moving through these lands are haunted by drought conditions that persist into the present as native populations grapple with the histories of resource extraction and land dispossession that have produced and continue to exacerbate drought. This paper explores the politics of drought and their implications for the future of food through ongoing collaborative research conducted in both regions, specifically southern Arizona and Sicily.

Presenter(s): Megan Carney

The Phantom Essential Worker: Food Worker Organizing During and After the COVID-19 Pandemic

The COVID-19 pandemic introduced a phrase into our shared lexicon: the essential worker. However, it goes without saying that frontline workers in the food system were essential long before the onset of the pandemic, as the exploitation of workers is hard wired into our food system. For food and farm workers, even a global pandemic did not translate into a day off, but instead exposed them to more danger and discomfort. Meanwhile, domestic food labor--the unpaid work of the food system--increased, leading to the exhaustion of parents and other caregivers. Simultaneously, new forms of worker organizing appeared on the national stage and the visibility of front-line worker vulnerability, and the related economic downturn, led to increasing political support of unions in the United States (DiNatale and West 2022).

Despite the fact that essential workers remain indispensable to our collective wellbeing, they are very rarely recognized or compensated enough for putting their bodies and lives on the line. And, even though the COVID-19 pandemic brought greater attention to their needs and contributions, this attention has not resulted in enduring improvements for their daily lives or a more just food system. This paper discusses how, despite a growing awareness of essential workers, the US food system is still beset by deep labor inequalities which are likely to only worsen within the current political environment.

Presenter(s): Teresa Mares

Cooking with Ghosts: Thinking Memory, Archive and Ephemora With My Grandma's Cast Iron and Dad's Whisk

Inspired by the narrative of Roxanne Masters in the Heirloom Gardens Oral History Project, this project explores the role of recipes and kitchen tools in the various ways people remember and honor the dead as they determine what values from their ancestors to carry forth into the future. Through Master's memories of her father's recipes and the ways in which the meals she ate as a child connected her to ancestors in Jamaica, I am able to find words for the experience of cooking with my father and grandmother's ghosts through their recipes and cooking tools. In this talk I use these embodied experiences to think through ways of knowing the past, different hierarchies of knowledge, and practices of knowledge maintenance that continue to uphold counterhegemonic narratives across generations.

Presenter(s): Hanna Garth

American Animal Slaughter and the Production of Human Disappearance

The typical American slaughterhouse maintains a one hundred percent annual turnover rate. Every year, the equivalent of a factory's entire workforce is either fired or quits. This absenteeism is, surprisingly, a managed, desired, and explicit corporate project. This paper examines the ghostly presence of ex-workers in American meat systems, arguing that since the 1980s the political power of American slaughterhouses has been predicated on the ongoing production of human disappearance. From using the punishingly fast pace of animal dis-assembly work to deter unionization and worker power, to nascent waves of automation technology for animal slaughter, it suggests that every slice of a knife has historically served a double-function: to kill pigs and encourage orderly human absence. My contention is that anthropological and political theory needs to focus not only on currently active workers improving their conditions of livelihood, but also the movement and aspirations of quitters who strive — sometimes haltingly — to realize lives tangential to industrial meat. If corporations assure their dominance by churning through both pigs and people, this paper explores the possibilities and limits of politically organizing ex-workers for the non-reformist interruption of American industrial meat.

Presenter(s): Alex Blanchette

2756 The Spectrality of Borders: The Image of the Frontier and its Phantoms

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Studio 8

Type: Oral Presentation Session

This panel aims to reconsider the anthropology of the "frontier" and "borderlands" as an image by focusing on its qualities of "spectrality" (Weinstock 2004) made manifest as a spatial, phenomenological, and imaginal condition. At a moment when border-crossings, deportations, and renewed imperial ambitions consume public attention in the United States and around the world, this panel brings together the anthropological endeavors to understand the politics at the margins of the state (Das and Poole 2004) while taking seriously the spectral images, imaginations, and phantoms of inequity, division, and historical legacy, or as Byron Good recently put it, "the anthropology of being haunted" (Good, Chiovenda, and Rahimi 2022). How might renewed attention to the "spectrality" of boundary spaces and interstitial states reorient and destabilize our notions of time and being?

Anthropological scholarship on borders has often focused on Euro-American concerns over borders as policed and produced by technologies of the state (Balibar 2002; Fassin 2011; Green 2013), and more recently, as imagined realms of humanitarianism (Walters 2011; Rozakou 2020). Yet, the multiplicity of the "invisible" margins and the implications of the frontier as an image

continue to invite explorations of the "border as method" (Mezzadra and Neilson 2013), particularly to probe the nonlinear time-space of those who live within the precarity of borderlands (Heo and Kormina 2019; Sur 2021). How do the contemporary lived experiences of those at the peripheries far beyond global attention speak to the "spectral" nature of the margins? What does it mean for these varying images of frontiers to encounter the phantoms of historical injustices and specters of anticipated "war yet to come" (Akar 2018)?

In response to these questions, the presenters explore how frontiers are suspended between a doubleness within the seen and unseen, lived and imagined, as a haunting presence within a spectrality of delineations. Chris Chan examines the archipelagic maritime borders in the Taiwan Strait and the ways in which islanders and artists attempt to "exorcise" the spectral environment of both its marine waste and political specters of war through art production. Centering on a village, a border stone and territorial spirit, Justin Weinstock considers traces of the Jahai indigenous people's historical memory and territorial claims that continue to haunt the Thai-Malaysian borderline and national histories that seek to exclude and overwrite them. Aleksandra Simonova explores double citizenship in Crimea and asks how citizenship correlates with identity and whether having two passports make people servants of two states more vulnerable? James Meador analyzes eighteenth century Russian-Qing border archives in order to theorize the tenuous multi-generational peace between early modern Russian and Chinese imperial states, one permanently haunted by the specter of an impossible war.

Presentation(s): Environmental Exorcism: Sea borders and its Specters in the Taiwan Strait

The littoral coasts in the Taiwan Strait exist in a spectral condition: both haunted by ghosts and also littered with "ghost nets" and a spectrum of other material anthropogenic waste washed back up ashore. This paper examines the archipelagic maritime borders in the Taiwan Strait and the ways in which islanders and visiting artists contend with the ghosts of political and lived material conditions through an aspiration to "exorcise" the spectral milieu. Through an investigation of the remediated afterlives ghost nets washed ashore, I ask, how do different images of spectrality take on material forms as environment refuse and, likewise, become mirrored by homologous social imaginations of political and existential crises mediated through state-sponsored public contemporary art production? This paper examines the ways in which Taiwanese environmental artists working at the confluence of politically-disputed waters remake macro-environmental conditions beyond their control by turning plastic marine waste back into "revitalized" lifeworlds. By recasting ecological waste as environmental media for imagination and creative production, this

paper takes an ethnographic approach to understanding the relations between environmental "deathscapes" and their intricate relations with aspirations for new life by Taiwanese islanders and artists and, moreover, seeks to unmoor our understandings of what it means to coexist in a world with increasingly "spectral" environments.

Presenter(s): Chris Cristóbal Chan

What the Border Never Held: a Jahai Hauntology of the Thai-Malaysian Borderland

This paper conjures the historical memory and territorial claims of the Jahai indigenous people that continue to haunt the Thai-Malaysian border and national histories that exclude and overwrite them. I begin with a myth of an ancestor who unrolls the Jahai lifeworld like an expansive mat, weaving the Jahai into an ecology of reciprocal obligations with the land and its other inhabitants. This unbounded cosmology stands in tension with their forest's 1909 partitioning by the border, which Jahai later experienced as a rupture in everyday life through upheavals and displacements wrought by the Cold War's "Malayan Emergencies" (1948-1960; 1968-1989). Though Malaysia's difficult birth marked a violent reordering of space-time, its historical and geographical closure remains unsettled by memories Jahai hold that linger in the landscape, just beyond the perceptible. Ethnographically attending to three such spectral presences – a submerged border stone, a withering territorial spirit, and an evacuated forest village – I explore how the Jahai articulate a hauntology – a lived theory on how the past, though silenced, persists. Cast as a people without history, living in excess of national territorial bounds, unassimilable to development plans, labor markets, or universalizing religion, Jahai themselves emerge as a phantom – forestalling a national future that refuses to make space for them.

Presenter(s): Justin Weinstock

Citizenship and passports in Crimea: navigating war, identity, and borders between Russia and Ukraine

In this paper, I explore the double citizenship that emerged in Crimea after 2014 and transformed after 2022. The question of citizenship and crossing borders between Russia and Ukraine have been crucial for local Crimeans. After the annexation in 2014, they found themselves in a complicated situation when they had to get Russian documents to reaffirm their social and political existence under the new Russian government. However, the Russian documents issued in Crimea have been banned in many other countries and, unsurprisingly, have not been accepted by Ukraine, which still considers Crimeans its citizens. Similarly, most of the European countries have not only imposed rounds of sanctions on Russian banks, businesspeople, and politicians involved in Crimea but also have banned regular Crimeans from entering Europe and the US. Adaptation measures of Crimeans after that usually involved saving their Ukrainian documents and choosing between those and the Russian ones depending on the occasion and the task to fulfill. After the extended periods of fieldwork between 2014 and 2021 and online research after 2022, I explore the question: How does citizenship correlate to identity? Does having both passports give additional levels of freedom from the nation states or, to the contrary, make people servants of two states, vulnerable to each?

Or did they find themselves under obligation to choose a nation-state of their allegiances and be loyal to it?

Presenter(s): Aleksandra Simonova

Way of Life (Derogatory) : Finding Modus Vivendi in Early Modern Sino-Russian Diplomatic Crisis

How did Russia and Qing China avoid going to war with each other for almost two centuries?

From 1689 to 1858, the two empires maintained an uneasy peace that weathered a series of deep diplomatic crises. This paper examines the first and worst of these crises in order to theorize the long Sino-Russian peace it punctuated. It does so by critically engaging political theories of modus vivendi ('mode of living')—a situational coincidence of interests rather than a more durable alignment born of shared values or commitments. Through rejecting the concept of interests that grounds most theories of modus vivendi, I propose its reconstruction through a broader notion of socially mediated historical possibility informed by social semiotics and phenomenology. I apply this theoretical framework to Russian and Manchu language primary sources produced by Russian and Qing border officials in the decade of crisis that began following the Qing genocide of the Dzungar Mongols (1755-1765). Without the common threat of Dzungar invasion to bind the two empires' elites together, the specter of war between the two imperial states threatened to become reality. This paper argues that this specter was stabilized as a deferred possibility to create a new modus vivendi, a process replicated in successive generations' crises.

7583 The Wîhtikow and other Nêhiyaw Stories: Revealing the Incommensurability of Plains Cree Culture and the Spirituality in Ethnographic Texts

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Grand Chenier (5th fl)

Type: Oral Presentation Session

Known as the windigo or the wetigo/wetiko, the Wîhtikow is an entity in Nêhiyawak culture that has been misunderstood by popular culture, much like many other spiritual or supernatural entities of the Plains Cree People. The Wîhtikow is often referred to as "the cannibal" or "undead phantom" through a series of oral narratives and ethnographic texts that share the entity's story. Yet, there is much more to the early ethnographic texts than could have been known without understanding Nêhiyawêwin, the Plains Cree Language, and ontological points of view. Come and listen to the stories of the Nêhiyawak Nation of Alberta, Canada, as we examine what these stories tell us about the fate of our current society as told by the Ancient Ones who walked the land before us. In this oral presentation discussion, we examine the incommensurability of early ethnographic texts of anthropologists Alanson Skinner and David Mandelbaum as we tell the Nêhiyawak versions to

better understand what is spiritual and what is supernatural/metaphysical.

Presentation(s): Teachings from the Spirit World: Understanding Nêhiyawak Legal Traditions through Storytelling

Within the stories of the Nêhiyawak People lies the ability to understand the traditional governance of how one is to act. The story of the "Wîhtikow and rolling head" do just that. In this oral presentation, I will share the stories of the Wîhtikow and what it represents to the Plains Cree Nation but also how it shares the aspects of what happens when we do not follow the teachings of Plains Cree traditional law and what does it mean for society as a whole within the means of consumerism and capitalism. The stories of the Wîhtikow are one of many that will be shared but the underlying message tells us about what is truth and responsibility from a Plains Cree point of view.

Peruvian tales of caring: Connecting with the heart and spirit as a methodology of learning to Nêhiyawak Teachings

Prophecies, legends, and ceremonies allow people to connect with their spirits in a way that Western knowledge does not understand. According to many Indigenous Nations, including the Nêhiyawak Nation, the Prophecy of the Eagle and the Condor, it is said that they soon will dance together through the knowledge and culture of Turtle Island (North America) and Abya Yala (Latin America), come together to build a better present and future. More especially, Peruvian stories of the good ways of living advise us always to respect the Pachamama and maintain the connection between time, space, and ancestry. This way, we will be grounded and critical of teaching, learning, and sharing knowledge. Through this nation-nation oral presentation, we will share how the stories of the Indigenous Peoples inform us and what it means to learn between cultures and nations.

Presenter(s): Marieliv Flores Villalobos

"They brought other beings from the old world": Understanding Ghosts and Spirits from a Metis-Cree Perspective

The distinction between the Old World and the New World is a common theme in colonial history. However, for many Indigenous Nations, there was a belief that the arrival of Europeans on Turtle Island introduced other beings, leading to both spiritual and physical conflicts. In this presentation,

I will explore the Metis-Cree narratives regarding ghosts and spirits and their significance within Indigenous cultures in Alberta. What were the assumptions and beliefs held by Indigenous peoples and what notions were brought from Europe? By recounting stories passed down through Indigenous families, I aim to illustrate how Elders in Maskwacîs, Alberta, assert that "they brought other beings from the Old World."

Presenter(s): Sharaya Hill

Ahcahk and Death Ceremonies

Long before colonization in the Americas, the Nêhiyawak have held detailed understandings of life, death and the spirit's journey. Oral histories of our ancestors frequently speak of our ancestors living to be well over a hundred years old. When they felt the time was right, they would often prepare for and participate in Death Ceremonies that would guide their Ahcahk (spirit) into the afterlife. By drawing on Cree knowledge, oral narratives and community teachings, I aim to explore how our Ahcahk and the Death ceremonies allowed the Nêhiyawak to move to the afterlife with little resistance. Unlike colonial ideals that render death as final, Nêhiyawak understandings offer an alternative paradigm wherein death is a relational process prepared for through ceremony, kinship, and spiritual knowledge. By engaging with Nêhiyawak cosmologies, I explore how Indigenous Knowledge might influence anthropological perspectives around Western understandings of death.

3290 Toward an Anthropology of the Contraption

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR C2 (3rd fl)

Type: Oral Presentation Session

"Technology" has a long and problematized relationship with progress, efficiency, and efficacy. Sleek trains rushing through the countryside, the blinding reach of the electrical grid, or the instantaneous messages of networked communication are its shiny avatars. Contraptions, by contrast, are technical devices that barely work. They seem too complex, too circuitous, too labor intensive. They are frequently ad hoc-as unrepeatable and unreliable as Rube Goldberg's fantastical machines. They push the received wisdom about technology's defining features to the limit. Like the aesthetic "gimmick" theorized by Sianne Ngai, the contraption is a category charged with normative judgment. Contraptions may work, but they don't work right. While the contraption is commonly associated with vernacular or retrograde alternatives to high technology, many "high tech" devices reveal a contraption-like character on close inspection: AI chatbots, internet protocols, and helicopters come to seem both over- and under-engineered the more attention is paid to them. Venkatesh Rao takes the helicopter as a paradigm for his own contraption theory, seeing in the contraption a wild and productive technical alterity-a way out of hegemonic engineering practices that pursue clean and obvious logics. Contraptions may fit more comfortably

with anthropological theories of technology like Alfred Gell's, which sees in all technology a kind of "roundaboutness" that is brought to the foreground in the apparent complexity of the contraption.

This session invites anthropologists of technology and technique to think with the figure of the contraption: What alternatives to popular and anthropological ideas about technology do these complicated and unruly objects offer? What is it about the present moment that pushes the contraption back into public thought? How does the normativity of contraption judgments manifest in everyday life? How do people come to perceive and evaluate technical complexity in social life? Work in this area may draw on theories of gimmicks, hacks, kludges, workarounds, tricks, bricolage, and other complex or informal technical activities.

Presentation(s): Mimicking a Human Hand: High-Tech Prosthetics as Contraption

High-tech hand prostheses capture the imagination of a nondisabled public and the hype of a nondisabled media. The well-meaning comment of "you wouldn't believe what they can do with technology these days" is often repeated by family and a sympathetic public to the newly limb-shorn—a statement which reveals a lay belief that technological progression is an inherent good and that it will cure disability. In my interviews with American prosthesis-users and at industry conferences, hand-mimicking prostheses are considered the future of the prosthetics industry. This is despite high damage and maintenance rates and economic barriers to accessing the devices. For users and industry professionals, the meaning of the prosthesis resides not only in the function that it provides to the wearer, but also the fact that high-tech hand prosthetics, and their aesthetic, work to communicate a distance from disability. The imaginary of these devices comfort the non- and newly-disabled, even as its promise fails to be upheld. This paper discusses the high-tech hand prosthesis and how its reality as contraption, dongle, and a technology of enchantment coincides with transhuman visions for the future, metaeugenics, and gestures towards a hovering spectre of physical and institutional violence.

Agents of Faith: Building Contraptions in San Francisco's AI Industry

Generative AI's industry leaders have proclaimed 2025 the year of "AI agents." Whereas chatbots simulate conversations with humans, AI agents interact with their environment to achieve user-defined goals. Developers and investors portray these agents as autonomous, making decisions to reach their objectives without human assistance. My fieldwork at hackathons and a startup reveals a different reality, however: today's AI agents are unwieldy and unreliable, demanding constant human oversight and intervention. Yet rather than discourage proponents, these shortcomings

seem, if anything, to strengthen their faith in AI's future. This contradictory effect, I argue, comes from AI agents' capacities not as technologies but as contraptions. Such devices exist less to perform a function than to perform a demonstration. By building AI agents, proponents seek to prove the possibility of a technological future and measure the industry's progress toward it. And by exploring AI agents' powers and limits, proponents hope to experience this future prematurely and prepare themselves for its arrival. Using AI agents as a case study, this paper shows how building contraptions may enable the stabilization of generative AI—an industry whose promised achievements vastly exceed current capabilities. More broadly, it explores the role of contraptions in technological development.

Presenter(s): Spencer Kaplan

Make-Do Cyberpunk and the Politics of Improvised Contraptions

This paper explores how cultural producers in Brazil have politically engaged with improvised contraptions as forms of both creative expression and political action. Based on long-term fieldwork with artists and activists, it examines how socially embedded idioms and practices of improvisation have served as an inspiration to amplify marginalized forms of tech-making, foregrounding the overlooked knowledges and skills they entail. Reworking scrap materials and recycled devices into what I call a "make-do cyberpunk" aesthetic, these actors approach improvisation not only as a response to constraints but also as a "recombinatory framework" – a method for reassembling materials, concepts, histories, and relations. In doing so, they present improvised contraptions as a means to "decolonize mentalities" in a context haunted by the specter of colonialism and the deep inequalities it left as a legacy. Drawing on artworks, interviews, and participant observation in educational workshops, I discuss the politics of improvised contraptions as a way of challenging dominant ideas about design and innovation amid social and environmental precarity, while also attending to the pitfalls and contradictions of such projects.

Presenter(s): Liliana Gil

Mouse Jigglers and the Aesthetics of Contraptions

Many computer workers find their activity monitored by managers through a variety of workplace surveillance technologies. In response to this surveillance, some workers use devices called "mouse jigglers," which physically manipulate their computers' mice to keep the machine active while they pursue other goals, like caring for children, eating, going to the bathroom, or playing video games. This paper uses the mouse jigglers as a figure through which to theorize a nascent anthropology of the contraption, drawing on data from an ongoing study of the users and producers of these devices, as well as online discourse about them. Mouse jigglers are technically simple devices, usually rotating disks set beneath a mouse's optical sensor; yet, to many online commenters, they seem absurdly complex in use, reflecting an excessive amount of effort expended toward a very minor goal. The "contraption" label often indexes a skepticism about technical activity per se: contraptions seem to be precarious achievements, only barely functional, like a mouse jigglers leaving a worker vulnerable to surveillance through every channel aside from

computer wakefulness. Examining contraptions directs us toward the aesthetics of complexity and functionality—to how technical qualities are apprehended and evaluated in social contexts.

Presenter(s): Nick Seaver

Contraptioning the University

This talk considers administrative contraptions in the university: ways to use existing institutional structures for unexpected, even subversive, ends. For instance, what if a feminist anthropologist hijacked an engineering school's system for winning national engineering competitions and gifting free student labor to tenured professors to create a student-centered feminist laboratory? Drawing from Black studies conceptions of fugitivity and feminist exhortations to "stay with the trouble", this paper explores the ethical, reputational, and practical possibilities of such a recuperative move. As these frameworks remind us, however, repurposing is not an innocent gesture. It is always political but not necessarily activism. The stakes are raised further by the presumptive endpoint of engineering education, the crafting of high-skilled workers bound to certain types of high-pay but hierarchical employment by narrow technical training and high levels of student debt. By contraptioning the university to introduce feminist engineers to ways to do science otherwise, perhaps we can sustain it just a little bit longer.

2698 Truths and Apparitions about Anthropological “Collaboration”: Lessons from Indigenous-Led and Indigenous-Academic Projects

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR A1 & A2 (3rd fl)

Type: Oral Presentation Session

It is questionable whether decolonizing methodologies can truly be achieved by anthropologists, given our scientific goals and histories. Yet as Tuhiwai Smith, Harrison, and others remind us, the communities we hope to understand, study, and live among have been working to decolonize our methodologies long before anthropologists came to embrace these goals. This panel asks anthropological collaborators, interlocutors, and subjects to help us do and redefine the charge of anthropology. Responding to calls for broader forms of knowledge production (Keane, Khupe, and Seehawer 2017; Tuhiwai Smith 2021), we ask how anthropologists can collaborate in - and not claim - the work of our partners. How can the analysis, reporting, or academic support of decolonial efforts best avoid the specter of our own cooptive and post-colonial nature? The panel takes up cases from the decolonization of communications infrastructure, the preservation of unique knowledge of environment and community-centered living, and critical study of 'misfit' projects. We necessarily grapple with voice, authorship, and forms of data and method that

populate these collaborations. And we will consider the frailties and dangers of our own collusions.

Presentation(s): Reimagining ethnography: Colonial hauntings and “misfit” projects

The rise of participatory and collaborative methods is providing an essential challenge to the timeworn and damaging power imbalances that have too often defined anthropological work with Indigenous communities. Yet as ethnographers support and participate in this shift, our profession continues to privilege single-authored books, researcher-driven analyses, and other components of past practices. New ethnographic possibilities also continue to proliferate, especially at intersections of anthropology and science/technology studies (STS). Many do not fit fully or neatly into either prominent past conventions or emerging research modes. In this paper I draw examples from such “misfit” projects to consider how colonial hauntings figure in efforts to envision and enact alternative futures for ethnographic work with, by and for Indigenous peoples. To help assess these examples, I make use of the distinctive yet overlapping insights from two anthropologists working with Indigenous issues and STS: Kim Tallbear's nuanced articulation of research methods for “standing with” Indigenous communities in North America, and Emma Kowal's searching examination of ghosts that permeate shifting efforts to represent Indigeneity in Australian museums, clinics, and laboratories.

Presenter(s): Erica Prussing

Anti-imperial struggles from/in Abiyala: The role of native and non-native anthropologists in decolonial agendas

A team of anthropologists and Mapuche artist Francisco Huichaqueo worked in a collaborative-art project with migrant women from Abiyala, many of them with fading memories of their Indigenous grandparents and others claiming a mestizo identity linked to nationalism. We co-labor with Francisco's artistic ideas to create an installation that brought to life the women's most heartfelt memories from their territories. The anthropologist team consisted of Catalina, a Mapuche PhD doctoral student and Francisco's partner, and Camilo and César, two Colombian mestizos. While Catalina struggles with the collapse of personal and professional interactions and the communal and historical meanings of her research given her investment in advancing Mapuche's political goals, Camilo and César have also been involved for decades in different social movements and political organizing, both in Colombia and in the United States, that could be label as “anti-colonial” or “de-colonial.” Hence, neither the face of these anthropologists nor their methods follow Eurocentric/U.S. centric legacies of “settler” sentiment. For us, anthropological collaborations start

from a place of involvement as members of different subaltern communities in which, depending on the task at hand, we bring different tools that have made us who we are and put them at the service of the larger political goal.

Presenter(s): Andres Tapía

Community participatory action research as a decolonial anthropological strategy in the Ecuadorian Amazon

Indigenous peoples face increasing challenges to achieve autonomy and self-determination as a result of the immersion of contemporary society in an increasingly globalizing world that restricts the community principles and values of the organizational systems of the indigenous movement throughout Abya Yala. In the face of this, research strategies that do not take into account the realities and particularities of the communities become one more form of scientific extractivism. This extractivism is viewed by the grassroots representatives of the communes, communities and peoples as just one more threat just as extractivist agents or companies of all kinds are. In contrast, community participatory action research, where organizations actively participate in the design and execution of the study, adopts a different position from the traditional one within anthropology, social sciences and communication. In this paper we present an evaluation of the impact of community communication and indigenous radio as participatory action research tools in the central Amazon of Pastaza, after studies developed jointly with Amazonian community media between 2022 and 2025. We discuss this type of participatory strategies as a contribution to research and the generation of scientific information that enjoys the legitimacy of the actors involved, and how that legitimacy was achieved.

Presenter(s): Ana Cristina Benavides

Anti-imperial struggles from/in Abiyala: The role of native and non-native anthropologists in decolonial agendas

We (a team of three anthropologists) and Mapuche artist Francisco Huichaqueo worked in a collaborative-art project with migrant women from Abiyala, many of them with fading memories of their Indigenous grandparents and others claiming a mestizo identity linked to nationalism. We brought a Participatory Action Research (PAR) approach to co-labor with Francisco's artistic ideas in a way that emotions, memories and art could result in an installation that brought to life the women's most heartfelt memories from their territories. The "we" in this process, however, consisted of Catalina, a Mapuche PhD doctoral student and Francisco's partner, and Camilo and César, two Colombian mestizos who despite having lost connections over generations with their Indigenous or Afro-diasporic ancestry are supporting Indigenous Amazonian elders in their efforts to recuperate ancestral knowledge. While Catalina struggles with the collapse of personal and professional interactions since Francisco and other members from her community are her "research subjects," as well as the communal and historical meanings of her research given her investment in advancing Mapuche's political goals, Camilo and César have also been involved for decades in different social movements and political organizing, both in Colombia and in the United

States, that could be label as "anti-colonial" or "de-colonial." Hence, neither the face of these anthropologists nor their methods follow Eurocentric/U.S. centric legacies o

7547 Un-making the Expert: Affective Dimensions of Emergent Expertise in South Asia

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Oral Presentation Session

How do we understand expert-knowledge making as a place where "experts" personal hopes and sentiments interact with public affects regarding socio-political changes in South Asia? Scholars of expertise have urged us to focus on the hopes, affect, and sentiments as crucial for expert knowledge-making (Boyer 2005). However, public affects surrounding expert knowledge cannot be untangled from the hopes, affects, and aspirations of the purported "experts" ranging from climate scientists, sustainability specialists, and technical experts to medical practitioners. This becomes particularly salient in South Asia where public affects surrounding cataclysmic tumults of change in the form of climate catastrophes, paradoxical market trends, authoritarianism, and revolts are always marred with public discourses of "mis-management". In a time of dispersal of responsibility through neoliberal modes of governance, expertise is vastly distributed and contested. Rather than focusing on "who is an expert", this panel focuses on how people assume expert positionality and how they are engaged in the work of expert knowledge-making– situating their sentiments and expert knowledge-making within public affects. How does this approach help us understand the role public discourses of mis-management have on the work of expert knowledge-making and its sentimentalities? Therefore, this panel aims to investigate the affective worlds of climate scientists, sustainability experts, legal professionals medical practitioners as emerging within public affects to eventually shape the expertise to tackle the changing terrain of South Asian socio-political and environmental changes.

Therefore this panel asks:

What affective worlds is expert knowledge-making in?

How are the public affects surrounding socio-political events made legible through news, protests, revolts, digested, reproduced, or contested by experts in their daily work of expert knowledge-making?

What affective registers must be present for collaborations and contentions over expert knowledge?

What possibilities of governance emerge from South Asia with such expert formation?

How do public affects and everyday expertise together shape governance in the midst of climate catastrophes, public health emergencies, paradoxical market trends, authoritarianism?

We aim to investigate forms of expertise emerging in relation to the public affects shaped by climate change processes, changes in market economies, and governance regimes. We invite papers focusing on the making of expert knowledge in relation to the affective lives of individuals and the public affects emerging from these social and political processes.

Presentation(s): The problem of 'intention' in the adjudication of blasphemy in Pakistan

Since the 1990s, the proliferation of blasphemy accusations and related violence in Pakistan has placed unprecedented pressure on the very laws which adjudicate its punishment. The empowerment of anti-blasphemy related populist groups has rendered blasphemy highly available for settling a broader range of disputes, situating traditional legal institutions in an ambivalent position both as infrastructures of punishment and as sites of protection from mob violence. The evidentiary procedures central to the law, meanwhile, make it practically impossible to defend and acquit persons accused. Drawing upon archival evidence and ethnographic fieldwork in Lahore in 2024 with lawyers attempting nonetheless to defend clients from blasphemy accusations, in this paper, I investigate how the 'insanity plea' has enabled the acquittal of defendants, even as the blasphemy law itself explicitly rejects 'intentionality'. Focusing on an acquittal which sought to argue how 'dreams and visions' cannot constitute sufficient evidence of blasphemy, I suggest how secularizing medico-legal discourses are instrumentalized in the management of contentious religious publics.

Presenter(s): Abdullah Ali Jawad

Comprehending Cryospheric Connectivities: Glacier Science and The Karakoram Anomaly

This project examines glaciers as a space of encounter between technoscientific research and Indigenous knowledge in the Karakoram Mountains situated in Pakistan. Glaciologists and climatologists heavily research these glaciers because of their anomalous growth and surge (Hewitt 2005) patterns as opposed to other glaciers of the world. Scientists make use of on-ground sensors and other data collection devices to record patterns. The project, using an STS approach, attempts to highlight the unexpected affects and potentialities that these sensors and reports acquire in Karakoram glaciers using Eleana Kim's framework (2016) about rogue materials embedded within societies. It also delineates how alternative modes of knowledge disrupt the dominance of climatological knowledge about glaciers. The project will demonstrate points of

convergence and divergence between local knowledge about glaciers and scientific expertise to emphasize the limitations of technoscience by employing a Latourian framework. Through an exploration of local practices around glacial ice and glacier stories (Cruikshank 2005), it will trace local practices in the face of hegemonic technoscientific research. These acts include reorienting scientific objects and materials like sensors for unlikely uses and affects. In doing so, the paper also questions the limits of STS and its inadequacy in understanding alternative knowledge systems.

Presenter(s): Ihsan Arsalan

Technocratic Dreams, Desert Disruptions: Making and Unmaking Energy Expertise in Pakistan

In Pakistan's Thar Desert, coal infrastructures are rapidly expanding under the China-Pakistan Economic Corridor (CPEC), despite global pressure for decarbonization. This paper examines how expert knowledge surrounding these projects is forged, justified, and contested amid climate crisis and widespread discourses of environmental mismanagement. Based on ethnographic research with engineers, policymakers, activists, and Thari villagers, I explore the affective dimensions of expertise—how it is shaped by sentiments of urgency, nationalism, and developmental aspiration.

State and technical actors frame coal as a sovereign imperative central to economic survival. Yet these claims co-exist with public affects of uncertainty, ecological anxiety, and disenchantment, especially among communities displaced by mining and power generation. Expertise here involves emotional labor and political imagination, negotiating tensions between economic growth and environmental responsibility.

Meanwhile, Indigenous Thari communities resist dispossession through protest, legal action, and alternative ecological visions. Their engagement challenges state-led narratives of energy sovereignty and redefines what counts as expert knowledge. This paper contributes to debates on infrastructure and expertise by showing how knowledge is produced through affective entanglements and contested futures in the Global South.

Presenter(s): Zahid Ali

Insurgent Care and Affective Expertise: Governing Loss and Survival in Occupied Kashmir

This paper examines the affective dimensions of emergent expertise in Indian-administered Kashmir, a region shaped by decades of military occupation, enforced disappearances, and conflict-induced disabilities. It traces how public affects—mourning, anger, endurance—intersect with grassroots practices of survival and care cultivated by families of the disappeared, rights activists, medical practitioners, and humanitarian workers.

Building on feminist theories of care and insurgent politics, the paper explores how enforced disappearances produce spectral forms of life, compelling surviving kin, particularly half-widows and half-mothers, into precarious roles of memory work and advocacy. Simultaneously, the use of pellet guns generates new forms of embodied injury that call forth alternative infrastructures of care amid the collapse of state accountability. The paper thus argues that expertise in Kashmir

emerges not through institutional credentials but through affective labour, insurgent care, and collective practices of tending to loss, injury, and uncertain futures. Rather than viewing expertise as a stabilised domain, this paper situates it within the fragile, contested, and affectively charged work of survival. In doing so, it offers an alternate epistemology of care forged through feminist politics of endurance at the occupied and wounded margins of South Asia.

Presenter(s): Zara Bakshi

Curating a Good Helper: How Expertise Is Felt, Framed, and Sold in Pakistan's Domestic Labor Market

In this paper I aim to examine emerging forms of "expertise" in the realm of domestic labor brokerage in urban Pakistan, where agencies present themselves as professional intermediaries that vet, train, and place domestic workers in upper- and middle-class households. Positioned as a neoliberal solution to the perceived risks of informal hiring, these agencies seek to replace kinship and word-of-mouth-based recruitment with processes that appear more regulated and secure. Their claim to expertise does not rest on technical credentials alone. Instead, it is anchored in the management of trust. They are offering a promise of a particular kind of imagined worker who is disciplined, loyal, and morally upright. These assurances respond to broader concerns around domestic safety, household management, and classed social boundaries, especially in urban contexts saturated with narratives of misconduct and insecurity. Drawing on research on labor agencies and domestic worker organizations, this paper looks at how different modes of labor mediation give rise to conflicting ideas about what counts as value, care, and credibility. Agencies recast domestic work as something that needs professional oversight. In doing so, they rely on stories about trust, risk, and compatibility that influence how employers evaluate workers and how workers come to see their own labor in increasingly transactional terms.

Presenter(s): Anam Khan

6395 Vernaculars of the Common: Ethnographic studies of collaborative social, technical and environmental research

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Nottoway (4th fl)

Type: Oral Presentation Session

The common(s) has returned to the debate about new forms of collective governance of social, technical and environmental practices. This return follows a resurgence in the context of social movements concerning the "common" Lauren Berlant equated with "nonsovereign ways of being in common," representing an important theoretical departure from canonical studies on the governance of common-pool resources (Ostrom 1992; Dardot and Laval 2012; Berlant 2016). To

problematize the liberal opposition between the private and the public, this new body of scholarship on the "common" has opened up possibilities for examining infrastructures for political, economic, and ecological relations under the register of mutual support and care. This problematization has been particularly important for the meta-study of technopolitical and ecological projects that point to alternatives to neoliberal and illiberal forms of governance. In this panel, we discuss a wide range of collaborative social, technical, and environmental projects that point to the common as an alternative approach to collective organization. We debate the contribution of ethnographic studies of what we call the "vernaculars of the common," that is, the contextually-dependent practices of "commoning" ("placing something in common") that take on different social forms and assume different language practices across political locations in moments of politico-institutional-environmental collapse. In particular, we discuss the contributions that ethnographic research can bring for the technopolitical, scientific, and philosophical studies of the common(s) by identifying emergent practices of commoning that are not identified as such. Across multi-sited ethnographic contributions to this panel, we ask the following questions: what are the configurations of the common(s) in contemporary social, technical and environmental research? What vernaculars do the common(s) manifest? In what ways might socio-technical and environmental action disrupt normative orders of algorithmic governance and open up temporary zones of commoning? How do we mobilize ethnographic methods and sensibilities to identify the common(s) in its proliferating hybrids between private/public forms?

Presentation(s): Citizen Science or Platform Science? Assessing the complex interplay between Andean potato commercialization and agrobiodiversity conservation

This paper explores how Wiki Papa and VarScout, two citizen science platforms, engage with potato agrobiodiversity conservation in the Andes. Wiki Papa, as a curated digital archive of native potato varieties, and VarScout, as an app that enables on-the-ground data collection from farming fields and households, aim to engage farmers, students, researchers and extension workers in collective data stewardship practices. These platforms reflect emergent practices of "commoning", where the conservation of Andean potatoes becomes a shared responsibility. However, recent discussions about incorporating e-commerce into Wiki Papa to link small-scale farmers directly with urban consumers present challenges to community driven stewardship practices that citizen science initiatives promote. Drawing on qualitative research, including interviews and participant observation with key stakeholders, this paper examines the relationship between native potato commercialization and citizen science data practices via Wiki Papa and Varscout. It reveals that integrating e-commerce into these platforms poses challenges to conservation related to market-driven standardization and socio-economic inequalities. By shedding light on the tensions between economic growth and the preservation of food heritage, this paper contributes to discussions on

the role of citizen science in conservation, collective data stewardship practices, and the commoditization of the commons.

Presenter(s): Sebastian Zarate

In Search of a Digital Commons: Strategies for Sharing Socioenvironmental Data by Scientific Non-Governmental Organizations in the Brazilian Amazon

Scientific Non-Governmental Organizations (NGOs) operating in the Brazilian Amazon play a central role in the region's territorial governance. Particularly regarding deforestation, these organizations are key actors in the collection and processing of socioenvironmental data, in the verification of governmental reports, and in the sharing of a wide variety of datasets. Beneath their seemingly technical character lie particular notions about the power of data in decision-making processes, as well as understandings of what counts as knowledge and how such knowledge should be governed. Based on interviews with data managers and other members of three organizations working in the Brazilian Amazon (MapBiomas, IPAM, and Imazon), along with document analysis, this paper discusses how scientific data become objects of technical and political interest in the region. Drawing on insights from Science and Technology Studies (STS), this article explores how the technical challenges of managing large-scale geospatial data affect how these organizations imagine their role in reducing deforestation. At the same time, it shows how the environmental monitoring and control mechanisms of the Action Plan for the Prevention and Control of Deforestation in the Legal Amazon (PPCDAm) point to a form of knowledge governance marked by the tension between the centralizing force of government agencies and the decentralizing force of NGO networked landscape.

Place, memory, and situated inquiry through Open Educational Resource authorship in Bangalore, India

Foundational ethnographic work explored ontological connections between peoples and specific locales, such as "senses of place" with historical perspectives conveyed through memory and social relations, crucial for identity and community orientation. The conceptualization of place has expanded more recently, moving from geographically bounded sites to encompass these fluid, layered, and mediated realities. This paper addresses these shifts as they pertain to learning communities in Ann Arbor, Michigan and Bangalore, India. In each site I ask how do students of sustainability in engineering articulate meaning and relationships through situated narratives of sustainability-oriented technology projects? How do they mediate local attachments and contested spatial realities of migration for economic or social mobility? Drawing from the literature on "Third Spaces" as well as classroom ethnography, I argue that understanding student experience demands examining place-making, situated practices of technology development, and the power dynamics of knowledge creation. Interpreting lived experience becomes crucial for understanding how place is known and communicated, and how it can expand ways of understanding digital

development. Traditional pedagogical practices reproduce hierarchical narratives and practices, while digital technologies remediate these processes, offering new avenues of articulating experience and expertise.

3689 Violence in the Postcolonial City: Exploring Infrastructures, Mobilities and Threatened Lives

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Galerie 4

Type: Oral Presentation Session

Urban infrastructures are material structures or networks that allow for the circulation of capital, goods, services, people, and information. The importance of infrastructures in permitting the flows upon which everyday life depends makes them both an object of power, but also vulnerable to stoppages and delays. Although the link between infrastructures and different forms of social and structural violence have been widely studied, most of these studies tend to focus on the role of infrastructures in reproducing social inequalities, or on the struggle over the control of infrastructures by different (political) actors. Less attention has been paid to the way that people's everyday experiences, narratives, and affects related to violence and criminality shape the circulation of a variety of objects, bodies and information. Aiming to address this question, this panel looks at violence through the analytical and methodological lens of infrastructures. Rather than studying the harm produced by infrastructures, or conflicts over the control of these, we propose to look at the ways everyday violence is inscribed onto infrastructural networks. The papers in this panel explore a variety of infrastructures that are complexly entangled with violent processes; water systems in the Colombian Pacific, oil pipes and mobilities infrastructure in Mexico, urban geographies in Turkey, railways in Mongolia, and streets and housing in the Colombian Andes. Our contributions explore the "coloniality of infrastructures", thinking of infrastructures as material and epistemic sedimentations of regimes of power. We understand that the rhythms and forms of urban violence reflect the legacies of colonial, modernist and neoliberal urban planning and extractivism. Empirically, this means that we seek to understand how a diversity of actors operating at different scales enhance, respond to, appropriate, and resist narratives and practices of violence in order to facilitate or block infrastructural flows. Our panel evinces the ways in which the materiality of everyday life in cities is affected by concerns related to safety, security, and danger.

Presentation(s): Topographies of Childhood: Criminalization, Justice, and Violence in the Urban Architecture of Turkish Authoritarianism

Since coming to power in 2002, Turkey's authoritarian Justice and Development Party (JDP) has increasingly resorted to criminal prosecutions and mass incarceration as tools to contain social unrest and political opposition—a process that various scholars aptly describe as "lawfare." Key to Turkey's lawfare is the separation of "innocent"—notably, Turkish—children deemed worthy of social protection, from other racialized children—Kurdish, Syrian, and Roma—who are marked as threats to security and order. This division is reinforced by the compartmentalization of urban space into multiple zones of exception, which become incongruent zones of governance as well as living spaces in which children make sense and use of law, space, violence, and childhood ideologies in distinct ways in their daily repertoires. Drawing on two years of ethnographic research in Antep, a multiethnic southeastern city along Turkey's border to Syria, this paper explores how children develop vernacular understandings of justice that cut across the legal-punitive infrastructure of the authoritarian regime, and activate or challenge various forms of violence structuring their daily lives. Specifically, it examines how children construct networks of care and survival that traverse fragmented urban geographies, thereby reconfiguring the terms of everyday life under authoritarian governance.

(Infra)Structural violence. State and Water Supply in the Port City of Buenaventura, Colombia

This paper examines the interweaving and overlapping of the phenomena of violence and water infrastructures in the port city of Buenaventura, in southwestern Colombia. This city is marked by high rates of violence, poverty and inequality. Further, the infrastructure systems for the allocation of public goods such as water and electricity are highly precarious. By addressing the ways in which the state deprives larger parts of the population from water as a public good, this paper argues that the Colombian state inflicts 'infrastructural violence' on the marginalized population of Buenaventura. At the same time, it analyzes the ways in which everyday crime threatens and alters the improvised material practices deployed by the population to store water. Furthermore, this paper scrutinizes the mechanisms used by social movements and 'ordinary people' to cope with 'infrastructural violence'. Based on extensive fieldwork material gathered between 2018 and 2020, this research contributes research on infrastructure, urban poverty, and violence.

Presenter(s): Felipe Fernández

Para-Law of the Land: Social Cleansing and Sovereign Rule in Colombia's Urban Margins

Every year, thousands of people in poor neighborhoods in Colombia are the targets of social cleansing campaigns: efforts by neo-paramilitary groups, and neighbors to establish a species of security through the killing of those deemed threats to the social order. Social cleanses are announced through pamphlets that identify those threatened by name in lists posted in streets, stores, and homes of the neighborhoods. This paper examines how social cleansing campaigns – particularly the pamphlets that announce them – define the geography of a poor neighborhood

outside of Bogotá. I explore how the distribution of the pamphlets in space circumscribes a jurisdiction of governance by describing the sorts of activities, persons, and relationships that are permissible under its parallel law. In describing some acts as punishable with death, and certain people as expendable, social cleanses also prop certain groups as legitimate purveyors of order and their activities, such as drug trafficking, extortion, forced displacement, and murder, as appropriate to their role. Social cleansing campaigns establish a novel sovereign bargain borne from the state's strategic retrenchment in urban margins, the enduring failure of peace accords and subsequent proliferation of armed actors who inherit wartime resources, strategies, and discourses, and the general population's willingness to enjoy their apparent protection and their desire to take their place among the unthreatened.

Urban mobility infrastructures and violence in the urban periphery:
predatory accumulation regime.

The crisis of violence in contemporary Mexico has become perhaps the main concern in public life. At the metropolitan scale, the multifarious predatory crimes produce a widespread insecurity which shapes and affects the urban experiences embedded in people's quotidian life. In Mexico City, the criminal violence located within the mobility infrastructures is particularly relevant because it informs some strategies that people deploy to cope with the relentless fears, raising at once possibilities and constraints on how they experience and signify their "right to the city". But the public transportation system, specially in the urban periphery, encompasses other forms of structural or "slow violence": overcrowding and unappropriated conditions of buses and vans, long-time distances and most expensive travels, and exploitative labor relations that reveal another facet of the predatory accumulation regime that governs the mobility in Mexico City. I examine in this paper how these different types of violence converge, making the urban mobility infrastructures a product as well as a fundamental basis for certain accumulation regime whose violent elements reproduce the social and territorial inequalities. I suggest that urban mobility infrastructures comprise the material objects and networks that move millions of people every day and, fundamentally, the social interactions expressed through both collaborative and predatory exchanges that together sustain and defy this regime.

The Infrastructure of Subordination: Mongolian and Russian Relations from Post-Soviet to Putinized

This paper documents the infrastructure configuring Mongolia's relationship to Russia as a subordinate "younger brother." Since the hegemonic supermajority of the Mongolian People's Party starting in 2016, the MPP's presidential victory in 2021, the COVID-19 crisis, and the Russian invasion of Ukraine in 2022, Mongolia has become further entangled with Russia politically, socially, and economically and more distanced from the rest of the world. The paper concerns developments in movements of people and things across the border, along the Russian-majority owned Trans-Mongolian railway, and through centers of accumulation including the Mongolian

capital, Mongolia's two industrialized cities, and the monastery of Amarbayasglant first established in northern Mongolia in the early 18th Century.

5449 Weaving Worlds: Agrifood Practices, Community Livelihoods, and Territorial Ecologies across the Neotropics

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Sheraton **Room:** Oak Alley (4th fl)

Type: Oral Presentation Session

This panel asks: How do Indigenous peoples and local communities (IPLCs) adapt, sustain, or transform their knowledge and socio-ecological relationships amidst challenges posed by colonialism, modernization, extraction, and globalization? Tropical forests worldwide are undergoing rapid socioecological change, impacting biodiversity, local livelihoods, languages, and knowledge systems. IPLCs are navigating profound changes in their relationships with land, food, and knowledge. With a focus on agriculture and land-use change, this panel explores the dynamic entanglements between livelihoods, agroecology, and environmental change in Latin America, where historical continuities meet contemporary pressures and possibilities.

Bringing together ethnographic insights from the rainforests of the Amazon and Panama, the panel traces how Indigenous and local actors are inheriting and innovating ancestral practices in response to socioecological transformations. From chagras (agroforestry plots) that nourish bodies, memories, and ecologies, to the everyday ecological creativity of swidden reactivating anticolonial pasts, to recipe revitalization as tools of autonomy and transformation, these cases trace the ways agrifood systems, cultural landscapes, and rural lifeways become vessels for memory, resistance, and the making of Indigenous and local futures.

We broadly ask: what roles do multispecies relations, gender, knowledge transmission, and land-access play in these socioecological transformations? How might community-rooted practices of stewardship and development offer alternative visions for sustainable, just, and culturally meaningful futures? Through grounded case studies and interdisciplinary methods and dialogue, this panel offers an invitation to rethink agricultural development, forest-use, and community livelihoods not merely as technical or economic domains, but as relational, place-based, and culturally embedded fields of practice. In doing so, this panel contributes to broader anthropological conversations on tropical socioecologies and livelihoods, food sovereignty, Indigenous autonomy, and cultural resilience.

Presentation(s): Agroforestry, livelihoods and knowledge: the dynamic role of chagras in a shifting Amazonian landscape

This work documents the knowledge, relationships, and farming strategies cultivated within chagras, small-scale agroforestry plots, and explores how these systems both influence and reflect broader socioecological dynamics. Chagras provide food, non-timber forest products, cash from market sales, and preserve agrobiodiversity and ancestral knowledge. As Puerto Nariño, Amazonas, Colombia entered the global market economy, livelihood strategies changed, resulting in shifting engagement with chagras and the ancestral knowledge that they store, cultivate, and transfer. Preliminary fieldwork has utilized semi-structured interviews, chagra workdays, and "art and herbaria" workshops. Initial results highlight notable shifts in livelihoods and chagra engagement, which impacts food security, biodiversity, language, and knowledge transference. Future fieldwork will utilize interviews, botanical sampling, participatory mapping, and herbarium archival work to explore the impacts of the market, tourism, and climate change on the chagras and the socioecological dynamics that they foster. This research aims to document the knowledge and more-than-human relationships that are cultivated in chagras, and to support community efforts to adapt and utilize ancestral knowledge in pursuit of healthy, culturally relevant, and stable food systems. This work also supports Indigenous territorial governance as policymakers attempt to synergize biodiversity and agricultural production.

Presenter(s): Aoife Pitts

Presentation(s): Exploring local perceptions of and motivations for community-led reforestation in Ecuadorian transition landscapes

Society has moved on from a unidimensional perception of the relationship between nature and people, which emphasises nature being for people, towards a multi-layered, interdependent, bi-directional approach, which focuses on the interrelationship between nature and people. Nature-based Solutions research can help develop an understanding of these ideas. This ethnographic, socio-ecological study, carried out in partnership with Indigenous Peoples of Kichwa identity in Tena, Ecuador, employed structured interviews and aimed to understand if and how community-led reforestation and chakras (a local term for a small-scale ancestrally underpinned agro-farming system), a Nature-based Solution for Climate Change Adaptation is enhancing ecosystem health, and how ancestral knowledge plays a part in efforts. Key aspects of ecosystems, including their most valued constituent species and those particularly relevant to climate change, nature's contributions to people, and how individuals foresee climate change adaptation transpiring in the future, were also explored. Participants shared in-depth knowledge about chakra management, changing weather patterns proving detrimental to crops, and mechanisms by which people are

collaborating with NGOs to tackle the challenges faced. This research is supported by ecological health assessments of species composition and microclimate in reforested areas, enabling a broad picture to be developed.

Presenter(s): Katie Lois Hutchinson

Improvising Ngäbe Futures: agroecological creativity in Indigenous Panama

This paper traces how Ngäbe campesino farmers Indigenous to western Panama rework their agroecological practices in response to climate change and environmental disruption. As extreme heat, unpredictable rains, and new pathogens ramify through the patchy swidden landscape they cultivate, tearing at the fabric of human and more-than-human life, these farmers continue to experiment in myriad ways to weather the changes. Here, I detail some of these ecological improvisations, which following Raka Sen (2021) we may consider forms of "everyday adaptation," while drawing out the commitment to multispecies flourishing that shapes such creative efforts to remain in place. Focusing on two staple crops, I also point to how, in this place, such creativity reactivates long histories of adaptation to reinhabit a shattered world in the wake of colonial devastation. Yet, even as climate and environmental change impinge upon Ngäbe life, these same territories are threatened by extractive capital, which would render them a sacrifice zone for open-pit mining and hydroelectric dams legitimized through a discourse of poverty and lack which vaciates the future of campesino farming. Following the work of my collaborators in a grassroots Ngäbe environmental organization, I trace not only how ecological experimentation unfolds in everyday life, but also how this work is explicitly counterposed to such discourses of poverty, as a dynamic form of knowledge articulating a distinctly Ngäbe future.

Presenter(s): Perry Maddox

Taste of Tikuna: Indigenous Food Reawakening in the Colombian Amazon

This research aims to identify key parameters for redesigning Amazonian agrifood systems from an Indigenous perspective. Focusing on the bottom-up structure, this research analyses the Saberes y Sabores Ticuna, a woman-led community-based organization in the Colombian Amazon. Drawing on participant observation, semi-structured interviews, focus groups, cooking workshops, and secondary data analysis, the research examines how Tikuna women revive and innovate traditional recipes as acts of care, resistance, and cultural continuity. Framed by the Tikuna concept of Meechi Torü Maú (good living), their agrifood practices—from the chagra (farmland) to the cuisine—constitute a reweaving of human–nonhuman relations, grounded in Indigenous autonomy and collective wellbeing. The recipes that carry stories, the chagra breathing with memory, the pottery shaped through generations, and a forest whispering with spirit continue to guide everyday food practices. These elements are not symbolic remnants, but dynamic agents in shaping Tikuna agrifood system transformation. Bridging ethnographic insight with transdisciplinary analysis, this research positions this indigenous-led practice as both a response to and a reconfiguration of agrifood systems haunted by colonialism and modernization. This research contributes to

anthropological debates on food sovereignty and indigenous autonomy, while calling for policies that support holistic, locally grounded transitions in Latin America.

Presenter(s): Youyi Xie

Social Landscapes: Smallholders' social-ecological responses to industrial monoculture expansion in the Amazon

This study seeks to document and support locally devised strategies to maintain control over the land by smallholder colonist farmers in the Curuá-Una region, an agricultural frontier in Pará state, Brazilian Amazon. I also consider how these processes affect the ecology of the larger landscape through time (e.g., through increased landscape connectivity). Through the integration of ethnography (participant observation, semi-structured interviews, and informal interviews) and geospatial analysis (sketch mapping and remote sensing), I assess how colonists have historically responded to an encroaching and destructive agro-extractive front. Since the implementation of industrial farming in the region, colonists have lost access to land through land purchases, land grabbing, and "chemical displacement." Traditional swidden manioc cultivation was replaced with soybean/maize monocultures, radically reducing access to land, biodiversity, and jobs. While some colonists leased their land to soybean growers, others organized themselves in associations to occupy a new, forested, government-owned frontier. Despite challenges with poor infrastructure and environmental policing, colonists have accessed land and kept their rural lifeways while producing a multitude of foods and conserving forests. This study seeks to produce relevant information for policymakers tackling the important yet sensitive links between biodiversity conservation, food production, and rural development.

Presenter(s): Bruno Ubiali

Sociobiodiversity in the Amazonian Plantationocene: a multispecies perspective on land-territory

In the Brazilian Amazon, the large-scale plantation mode of agro-industrial production has gained prominence since soy was introduced in the early 2000s, dispossessing traditional peoples and communities of their lands and destroying associated biodiversity. This process is captured in the notion of the plantationocene. Yet traditional peoples and communities maintain productive activities despite pressure from agribusiness, mobilizing traditional knowledge (agroecology and agroforestry) and cultivating various relationships with plants, animals, and non-humans: multi-species relations. Sociobiodiversity is a concept formulated as a public policy that aims to develop market products that value traditional knowledge and the agrobiodiversity present on the lands and territories of farmer collectives. In this presentation my aim is to deepen theoretically notions of plantationocene, multispecies and sociobiodiversity with the ethnographic data I already have collected in an Amazonian +10 project in the Santarem region.

4084 Why Work? Doing the Anthropology of Work (Part One)

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** Galerie 3

Type: Roundtable/Town Hall

From flint knapping to child tending, rocket science to hamburger flipping, few questions are more central to anthropology than what constitutes work and who can be said to do it. As the energetic fulcrum of economic production and social reproduction, human and more-than-human labor animates and destabilizes narratives of class, race, gender, and citizenship that rely on demographic measures of income and inequality. In cataclysmic times such as now, when across myriad walks of life intergenerational worlds of work and social mobility confront sudden or slow ends, structural metrics rather than storied accounts appear as kaleidoscopic images of technological change and historical inevitability. Yet as ethnographers of work can attest, models of sector-dependent labor rarely map neatly onto our interlocutors' experience of work-paid and unpaid; past, present, and aspirational-let alone determine their assessment of its rewards. Not only are institutionalized paradigms of work "not working" for many today, they raise personal and professional questions for those of us doing the work of anthropology.

In honor of the work of Kathryn M. Dudley, recipient of the Society for the Anthropology of Work's 2025 Arensberg Award, this roundtable brings together an intergenerational group of ethnographers whose doctoral studies of various kinds of work were supervised by Prof. Dudley. Panelists will reflect on how Dudley's incisive questions as a mentor shaped their diverse fieldwork experiences and career trajectories, putting a spotlight on the work of mentorship itself, and how such generative mentorship has shaped research of the precarious worlds of work that we navigate alongside our interlocutors. As researchers, policy analysts, writers, and educators, we reflect on what our collective labors tell us about how current and nascent cultures of work are affectively transmitted and materialized in practice. Amidst the uncertainties of this late liberal age, we take stock of the analytics of labor that best speak to the challenges of making a living and making a life, and what, at the end of the day, may constitute the why of our life's work.

This session will conclude with the presentation of the 2025 Conrad M. Arensberg Award to Kathryn Dudley.

4966 “Ghosted: Race, Health, and the Haunting of Medical and Public Health Systems”

Start Date: 11/22/2025 02:30 PM **through** 11/22/2025 04:00 PM

Venue: Marriott **Room:** MGB - Salon B

Type: Oral Presentation Session

This panel will present papers that explore the spectral dimensions of health inequities—the ways that Black communities and other underrepresented groups are systematically erased, ignored, and made invisible within medical and public health systems. Taking inspiration from New Orleans, a city where the past refuses to stay buried, presenters interrogate how racialized histories of medical neglect, exploitation, and exclusion haunt contemporary health outcomes.

Across the landscape of public health, ghosts appear in missing data, medical neglect, and absent histories. Health disparities are too often explained as statistical anomalies, while the structural forces that shape these inequalities remain obscured. Black patients and communities are routinely "ghosted" by medical professionals and public health institutions, whether through the failure to take their symptoms seriously, the denial of life-saving care, or the historical refusal to document their suffering. The absence of data itself is a form of violence, perpetuating cycles of exclusion and neglect. Panel participants explore this by engaging ethnographic theory, methodology, and research in the US, Canada, and abroad.

This panel assembles scholars whose papers will produce discussion while seeking to address the following questions:

- How do missing, absent, or distorted data shape racialized health disparities?
- In what ways do medical and public health institutions "ghost" Black and other marginalized communities through systemic neglect, misdiagnosis, or dismissal?
- How does the erasure of Black health histories continue to haunt contemporary public health?
- How can we theorize haunting and ghosts as analytical tools for understanding health injustice?
- What are the epistemological and methodological challenges of researching what has been deliberately erased?
- How do Black and other marginalized communities resist their own erasure and engage in health activism as a form of counter-haunting?

Presentation(s): “Wheelchair City”: The “Ghosting” of Disabled Gunshot Survivors in New Orleans

In 1992, a cover story in the local newspaper referred to New Orleans as "Wheelchair City", named for the increasing number of residents with spinal cord injuries as a result of gun violence. Over the next few decades, these numbers continued to grow, and while important medical programs have been developed to help survivors manage their immediate trauma, gunshot survivors are still vastly underserved and underrepresented. As such, they represent an element of Black health histories and Black disability history in the U.S. that is at risk of erasure and misrepresentation in the medical and cultural archive.

This paper examines the "ghosting" of disabled gunshot survivors within two distinct but connected domains of social and political life: statistical enumeration of neighborhood gun violence, and the epistemic violence of the erasure of Black disability know-how, or what Black disability scholars call "crip wisdom". Through examining a social network of several gunshot survivors who are committed to New Orleans street parading traditions, I argue that the "wheelchair city" must be understood as more than just a product of trauma and violence, but also as a space of reclamation and power.

Presenter(s): Daniella Santoro

Neglecting Community Concerns about Water Contamination in a Neocolonial Enclave: A Case Study from Southwest Guatemala

When community leaders from several Indigenous and Mestizo communities noticed an increase in human skin illnesses and chronic kidney disease, alarming numbers of dead fish in local rivers, and persistent bad odors in the environment, they suspected they could all be related to water contamination from new agribusiness coming to their region. Over the past 15 years, they have asked for interventions from government institutions, universities, and international organizations, but their requests have gone unanswered. Drawing on 2 years of ethnographic research, I present the competing and overlapping explanations put forward by leaders from affected communities; by environmental, health, and workers' rights activists; by bureaucrats from public health, environmental, human rights, and agriculture institutions; and by academics and experts in medicine, epidemiology, agriculture, and environmental sciences. Findings show a map of discourses that shed light on some explanations while obscuring others, unveiling social, economic, political, and institutional relations that shape the social production of knowledge about health problems. The net result is that communities' concerns have been ignored, erased, and made invisible. While these discourses reproduce social relations with roots in the country's colonial and postcolonial past, they are also shaped by the country's place in the contemporary global economy, and by the neocolonial regimes that prevail in global health research.

Presenter(s): Alejandro Cerón

Hauntings and Historical Presence of HIV Response for Black Communities in Canada: 'Showing up' in Archival Representations of Risk and AIDS Activism

Four decades of HIV/AIDS in Canada and Black communities still feel its disproportionate effects of race. My paper examines past, present and future dynamics of structural racism shaping community experiences of HIV service access in Toronto. Recalling encounters with the public health archive, I engage how this material and cultural space harbours (counter-)hauntings of Black health, disease, and activism that socially and clinically emerge in these services. Immersive review of surveillance data, reports, speeches, and other textual fragments cohered a major narrative of the city's 'early' AIDS crisis and its public health response. The archival 'master-narrative' animates racial data as an epistemic form of violence and almost exclusively constructs Black populations as 'HIV-endemic'. This term is mobilized to pathologize risk as inherent to Black bodies and geographies. Its anti-Black logic continues to haunt the contemporary institutionalization of clinical policies and practices structuring pervasive experiences of racism in service access. I dually conceptualize the public health archive as a repository of 'ghostly matters', providing a glimpse into local Black AIDS activism. Influenced by Avery Gordon's approach to history, haunting, and crisis, I explain how the spectre of past Black activist tradition 'shows up' in unconventional ways to trouble past-present 'HIV-endemic' discourse and urge a (re)new(ed) HIV response to healthy futures of Canada's Black communities.

Presenter(s): Tola Mbulaheni

Signs of Exclusion: Deaf Immigrants, Language Access, and Health

This paper examines how deaf immigrants experience and navigate spectral dimensions of health inequities in the US medical system. Deaf communities are systematically marginalized in the medical system, particularly deaf immigrant communities with inadequate language access. American Sign Language (ASL) is among hundreds of sign languages across the world and deaf immigrants in the US may use a different sign language or may not have had access to signing in their country of origin. Standard ASL/English interpreters, at times, provide insufficient language access to this population. Ethnographic fieldwork in New England and the Mid-South, explores how intersections of racial/xenophobic ideologies about immigrants and ableist ideologies about deaf people amplify barriers to healthcare. Inadequate language access, compounded by ableism and xenophobia, renders deaf immigrants invisible in medical spaces, echoing broader patterns of exclusion seen in other marginalized groups. This paper examines how deaf immigrants negotiate constraints and mobilize options of different languages and modalities to navigate fundamentally exclusionary healthcare processes and spaces. It argues that deaf immigrants' collaborative and creative strategies of language practices challenges exclusions and explores how such practices can be understood as forms of resistance, offering new ways to theorize health justice as a counter-haunting to erase marginalized voices in the medical system.

8809 Culture@Large: Spectral City—Walking New Orleans through Slavery's Present Pasts with Rashauna Johnson

Start Date: 11/22/2025 04:00 PM **through** 11/22/2025 05:00 PM

Venue: Sheraton **Room:** Orpheus (8th fl) (access via elevator only)

Type: Special Event

New Orleans was a critical hub for the global circulation of slaves and became a metropolis with an explosion of slave population, who claimed one third of the city's population in the early nineteenth century. Society for Cultural Anthropology presents its flagship event, Culture@Large, to trace the lasting legacies of slavery etched onto the urban landscapes of New Orleans and to reflect upon geographies of unfreedom, which have shaped the city and beyond. This event consists of a lecture (open to public) and walking tour of New Orleans (for registered participants).

Rashauna Johnson, Associate Professor of History at the University of Chicago and the award-winning author of *Slavery's Metropolis: Unfree Labor in New Orleans during the Age of Revolution* (Cambridge University Press, 2016), will deliver a lecture entitled "Where Sidewalks Talk: New Orleans and Global Geographies of Unfreedom" at the AAA conference venue. Professor Johnson will then lead a walking tour of New Orleans.

9053 De-exceptionalizing US Universities: DEI and Narratives from the Margins

Start Date: 11/22/2025 04:15 PM **through** 11/22/2025 05:45 PM

Venue: Marriott **Room:** Galerie 5

Type: Late-Breaking Roundtable/Town Hall

Since the January 2025 inauguration of the new administration in the US, the dismantling of higher education has struck universities in myriad ways that extend far beyond undoing DEI (Diversity, Equity, and Inclusion) initiatives. Prominent are the ways academic freedom is being curtailed and reprimanded. The emergence of this punitive and even penal regime, especially in a space that is historically upheld as the bastion of radical and experimental thinking, has been met with shock and disbelief amongst academics.

As the dismantling of higher education accelerates with alarming speed, this late-breaking session seeks to move beyond prevailing reactions of shock to delve deeper into this seemingly new regime with critical urgency. We ask if this is indeed novel? And, if so, to whom? Like the wider society, and the nation-state, the US university is also a microcosm of a White hegemonic system simultaneously embedded in neoliberal priorities, whose current upheaval sends shockwaves through international academic networks. In centering the experiences of faculty of color, this panel explores how this academic upheaval in the US in fact has a deeper and a hidden trajectory of marginalization. Rather than focusing solely on shock and repression, we draw from the rich repertoire of resistance that has long existed within these institutional spaces, examining how marginalized communities have cultivated alternative imaginaries of what universities could be and developed forms of knowledge production that challenge dominant paradigms.

Based on an engagement with these narratives, the panel has two goals. First, to decenter Whiteness as the overarching context of the university in ideology and praxis. Second, to critically examine how DEI, as important as it is as an institutional tool, continues to operate in ways that foreground Whiteness. In doing so, we consider what transformative possibilities emerge when we center the wisdom and strategies developed by those who have always existed at the margins of academic institutions.

9014 In Decency and In Order: The New Orleans Cultural Repatriation Committee and the Effort to Bring Home the "New Orleans Nineteen"

Start Date: 11/22/2025 04:15 PM **through** 11/22/2025 05:45 PM

Venue: Marriott **Room:** Galerie 5

Type: Late-Breaking Roundtable/Town Hall

On Saturday, May 31, 2025, the remains of nineteen Black New Orleanians were laid to rest at the New Orleans Katrina Memorial following a ceremony at Dillard University. Their skulls had been part of a medical research collection at the University of Leipzig, Germany, amassed in the late-nineteenth century as part of a large collection of crania by Dr. Emil Ludwig Schmidt for pseudoscientific research on race. The event marked the culmination of a 2 year-long effort

involving staff at Leipzig, professionals in archaeology, anthropology, and the law from the City and area universities, and a local cultural committee that grappled with how to bring home these 19 individuals "in decency and in order", in a way that honored their humanity while also recognizing the racism and violence in which skull collections like this were accumulated. This represented one of the first times that a crania collection like this was repatriated to a community of origin in the United States outside of cases involving Indigenous remains. This special town hall brings together members of the cultural committee to reflect on the process, its significance, and its implications for the future.

8554 This Business meeting - Interlocutor event about new careers celebrating new books, research and our Christine Fry Student Travel Award winner.

Start Date: 11/22/2025 04:15 PM **through** 11/22/2025 05:45 PM

Venue: Marriott **Room:** Lafayette (41st Fl)

Type: Special Event

This Business meeting of the interest group on aging and the life course and Interlocutor event celebrates new books, research within the focus of our group. It also celebrates and honors our 2025 Christine Fry Student Travel Award winner. It will also include an interlocutor discussion of building careers with a focus on aging and the life course in non-traditional academic and non-academic settings. This will include medical schools (Aaron Seamon), the State Department (Phil Kao) and an engineering school (Caitrin Lynch); and building multi-disciplinary research centers (Jean Schensul).

8777 New Orleans Cocktail Culture and Heritage: A Visit to The Sazerac House- offsite

Start Date: 11/22/2025 04:15 PM **through** 11/22/2025 06:00 PM

Venue: Offsite **Room:** Skip

Type: Special Event

Come explore the "spirited" heritage of New Orleans via this self-guided tour of the Sazerac House! The complimentary tour of the legends and lore of New Orleans cocktail culture features three floors of exhibits. Visitors explore the heart of the production process from grain to rye spirits,

experience the flavors of a variety of spirits, and examine the "New Orleans Heritage" in the last century through the lens of the cocktail.

This is a self-guided tour with a 28-guest capacity (sign-up details TBA). Visitors who are 21 and over are able to sample the spirits on offer throughout the exhibits.

Participants must make their own way to The Sazerac House and should plan to arrive by 4:15 pm for a tour start time of 4:30 pm.

The Sazerac House is located at: 101 Magazine St, New Orleans, LA 70130, a 25-minute walk or 10 minute car ride away.

8592 Presidential Address with Awards Recognition

Start Date: 11/22/2025 04:15 PM **through** 11/22/2025 06:15 PM

Venue: Sheraton **Room:** Grand Ballroom A-C (5th fl)

Type: Special Event

8778 A Sensory Experiment: How Militarization and War Bring Ecologies Into Relation. A Rivers Institute and Ecologies of War Collaboration.- offsite

Start Date: 11/22/2025 05:00 PM **through** 11/22/2025 07:00 PM

Venue: Offsite **Room:** Skip

Type: Special Event

This multimodal salon opens an inquiry into how planetary ecologies have been cultivated through inextricable, militarized, petropolitical intervention. This curated sensory experiment brings together scholars and artists whose work focuses disaster capitalism, maroon ecologies, war and militarization, and resource control to probe the interrelations of planetary ecologies beginning with an inquiry into the relationship of Iraq's marshes to the NOLA watershed, which were brought into relation through scientific management technologies of the US Army Corps of Engineers in the early aughts. What histories do watersheds hold and how do we know them? How do military and extractive industries recruit bodies-human, wetlands, resources-to violence? Conversely, how can one's embodied, sensory, and affective experiences of these lands probe, surface, and expose the shared histories of geological existence in the age of the Anthropocene? What tangible, material relationships exist between and across geologic space? What are the necessary grammars to render these pasts visible? Through a curated multimodal performance during the first hour scholars and artists grapple with these and other questions. We will then open the salon to questions and discussion in the remaining 30 minutes. This event will be held at the Marigny Opera House on Saturday, November 22nd from 5-7 pm.

2621 Death and Hauntings in Central Pennsylvania

Start Date: 11/22/2025 06:00 PM **through** 11/22/2025 07:30 PM

Venue: Marriott **Room:** St. Charles (41st Fl)

Type: Oral Presentation Session

Central Pennsylvania is a region of small towns, liberal arts colleges, farms, and forests. Although within 3-4 hours drive of major metropolitan areas, it is seen as unambiguously "rural." It is a region where young people are leaving for work in more urban spaces, leading to local population decline and older communities. The region is also haunted by the ghosts of previous economic booms in furniture making and mining, while new employment opens up in correctional facilities, hospitals, and colleges. It is also a space of rural imaginaries, from idyllic family farms to the zombies of George Romero's "Night of the Living Dead."

The papers on this panel, all written by undergraduate researchers, explore this diverse landscape through original ethnographic research. These investigations reveal how local residents think about life, death, wellbeing, and work within changing rural landscapes and their imaginaries. The topics span the life cycles of rural residents, from critically ill infants in hospital NICUs, to retired pickleball players who reject the idea of being senior citizens, to funeral home workers who assist families with their loved ones' end-of-life rituals. The rural imaginaries of the "family farm" are discussed in relation to the realities of the Farm Bill that creates cycles of dependency and debt. And finally, the last paper considers how video game post-apocalyptic fantasies of rural U.S. spaces are adapted to other cultural contexts. Throughout, these papers return to the intersections of lived realities and the ideas that haunt them.

Discussant: Clare Sammells, Bucknell University, Department of Sociology & Anthropology

Presentation(s): Beyond the Incubator: Intersecting Environments of the Neonatal Intensive Care Unit

The Neonatal Intensive Care Unit (NICU) is situated at the intersection of spatial, social, and distant environments that shape cooperative care for infants in critical condition. This study was conducted in a regional hospital for much of northeastern and central Pennsylvania, and location of one of four level-IV NICUs in the state. I examined how the social environment, centered around medical staff, parent, and patient interactions, is impacted by the spatial layout and external resources. Findings highlight that mentorship, interdisciplinary communication, parental involvement, and care routines are shaped by these intersecting environments. Understanding the social interactions through a lens of intersecting environments offers insights regarding communication and care engagement within intensive care settings.

“Not Dead Yet”: How Pickleball Unites Communities, One Game at a Time

Pickleball is a game that has fostered connections since its creation in the 1960s, attracting individuals of various ages and backgrounds. The game requires a small paddle, ball (similar to a wiffle ball), net, pickleball court (same as badminton court) and up to four players. Pickleball has evolved from a neighborly competitive game to an addictive form of exercise that is played professionally and casually. During the spring semester of 2025, an ethnographic study was conducted in central Pennsylvania on pickleball at an exercise facility. This space combines the efforts of local organizations, including two local hospitals, to form a community focused on health and wellness. Pickleball is played by members and non-members alike daily on three pickleball courts across three basketball courts. The nine courts are filled with a mostly retired population that meet mornings and play games to eleven points. Throughout the duration of the study, the researcher found a clear and known divide between advanced and intermediate players that did not stop individuals from enjoying their time while playing pickleball. The findings of the research are that pickleball, specifically the competitive nature of the game, allows players to make meaningful connections through small talk and shared desire to play well.

Presenter(s): Catherine Dineen

“My Other Ride is a Hearse”: An Ethnographic Study of Funeral Directors, Death, and Grief

This ethnographic research explores the perspectives of funeral services practitioners, death rituals and grief inside a family-owned funeral business in Union County of Pennsylvania. This study focuses on how funeral directors make sense of the anticipated and unanticipated death and bereavement happening daily in their work. The findings discuss how funeral directors move in and out of different subject positions according to the tasks they have to deal with, such as meeting clients, doing paperwork, embalming bodies, organizing funeral services, maintaining interpersonal relationships, and discussing hard topics like pricing and grief. These funeral directors have families, hobbies, and deal with challenging issues, while maintaining their professionalism to help others get through some of the most tragic and complicated times in their lives.

Possessed by Policy: How Farm Bill legislation fuels corporate control of farmers

The Farm Bill is a USD 400 billion investment that haunts the U.S. every five years, controlling our food production processes and dominating the distribution of money and subsidies throughout U.S. farming and livestock systems. This bill's content is influenced by millions of dollars of corporate agricultural lobbying efforts and multiple pieces of political legislation. Every five years, these policies continue to hyper-industrialize food processes and haunt small farmers to enter into predatory relationships with companies that mass-produce patented GMO seeds. My analysis of the Farm Bill, coupled with working on several small-scale farms in Pennsylvania, reveals how this legislation elevates corporate agribusiness and locks small farmers into cycles of dependency and

inequality. Farm bill policies subsidizing soybeans and maize, almost all grown from GMO seeds purchased from private agricultural companies, push money directly into the hands of large corporations while not assisting smaller farms (defined as those with an income under USD 250K). In combination with legislation that disproportionately funnels funds to large-scale farms, this deepens the gap in wealth in the farming industry. Small-scale farms are drawn into loan cycles to keep their business solvent through loans from the Farm Service Agency (itself authorized mostly via the Farm Bill).

Fallout London: Sounding Out British Identity, Post-Apocalypse

Released in July 2024, Fallout: London is a free, full-sized, fan-made game in the Fallout franchise, built over five years by a team of volunteers through a process known as "modding" (modifying, adjusting, or generating new content in computer games with external tools, and usually released for free online). The Fallout franchise is known for its rural and small-city Americana environments in a post-nuclear wasteland, leaning heavily into Cold War-era language, purposefully leaving the state of the rest of the world a mystery. This U.S.-centricity extends to the soundtracks of the games and television show, featuring a 1950s U.S. aesthetic mixed with bleak ambient undertones, and creating a rural imaginary divorced from actual geographies. The British team of Fallout: London faced a unique question: What does British identity sound like after a nuclear war? This paper looks at the project of Fallout: London and how its creative team (particularly the composers and sound designers) adapted a U.S. rural post-apocalyptic locale into a British sonic identity for the year 2237. It examines how British Fallout modders conceive of and critique British identity through what I call "acousto-mutation"- the process through which the "acoustemological" meaning of sound (Feld 2024) changes -or mutates- through some combination of environmental and/or sonic factors.

Presenter(s): Reid Orphan

3808 Ghosts of the Past: Sediments of fossil violence in Trump 2.0 "Drill Baby Drill"

Start Date: 11/22/2025 06:00 PM **through** 11/22/2025 07:30 PM

Venue: Sheraton **Room:** Napoleon BR B1 (3rd fl)

Type: Roundtable/Town Hall

Toxic sediments of the past haunt the present. The toxic layering from decades of petrochemical industry manifests in the form of environmental illnesses that struggle for biomedical legibility. Communities built around past fossil fuels appear locked in a haunted eternal return to new forms of extraction, violence, and destruction. Some old coal towns in PA and West Virginia abandoned one industry for another, fracking for natural gas. Fracked areas are already beginning to see ever

more destructive ecological and human health harms through new energy frontiers such as data centers and a quest for carbon capture like blue and green hydrogen.

This roundtable will look at the extraction of fossil fuels in the Appalachian and Mid-Atlantic region of United States in a Trump 2.0 moment: what are the sediments of violence from zones of extraction to export? What are the stories we tell (in anthropology about fossil fuel extraction and frontline communities), and how might the work we do contribute to a public good or to a broader commitment to building solidarity across entire supply chains (oil, gas, coal)? How can we move beyond our own extractive research models, simply "extracting" stories of human struggle, of health consequences, labor exploitation tied to fossil fuels? How might we think beyond institutional affiliations to building "interdisciplinary teams" or "inter-institutional" allegiances to address fossil fuel extraction and the climate crisis? How can our classrooms connect with and support organizers in their efforts to end the extraction and burning of fossil fuels?

Engaged and activist anthropologists have a responsibility to intervene politically as extraction of fossil fuels intensifies and is paired with attempts to shut off conversations about environmental justice. Trump signed in January 2025 an executive order declaring an Energy Emergency; "We will drill, baby, drill," Trump said in his inauguration speech. Around the same time, he rescinded several decades worth of EJ orders. Trump 2.0's "energy emergency" set the stage for hyper militarism, displacements, further ecological/climactic crisis. Our planetary and human health crisis depends upon us to reinvent how we teach, rethink how we politicize and motivate undergraduates/graduate students to engage in struggle, and how we use our tools to advance movement politics.

4390 Haunted by the Market: New Risks and New Gambles Amid Financial Uncertainty, Part 2

Start Date: 11/22/2025 06:00 PM **through** 11/22/2025 07:30 PM

Venue: Marriott **Room:** Studio 6

Type: Oral Presentation Session

The current climate of global financial uncertainty, manifested through market instabilities, currency devaluations, and shifting regulatory regimes, poses a new and intersecting set of financial challenges. Many have turned to risky behaviors, from buying lottery tickets and online gambling platforms to investing in cryptocurrencies and stocks, as a way to make money and

sustain their livelihoods. The lines between risky activities such as gambling and investments have increasingly blurred. Gambling has spilled out of the casino and into transnational digital spheres, operating in legal gray zones and suspended in regulatory ambiguity. Therefore, this panel interrogates the production and reproduction of these political economies of risk while centering the lived experiences of those navigating volatile markets.

As betting platforms, crypto exchanges, and investment apps operate across jurisdictions, national regulators struggle to enforce policies designed for a world where gambling, speculating, and investing are more clearly demarcated. While policies governing gambling often claim to balance public health concerns, economic priorities, and consumer protection, they frequently produce contradictions that expose the tensions in how risk is framed and managed. For instance, the regulation of gambling is not just about preventing harm or ensuring fair play because it is also about defining what forms of gambling are deemed legitimate and which are considered reckless or illicit. The rise of online gambling and speculative markets further complicates these distinctions. Additionally, corporate actors, from financial institutions to multinational gambling firms, shape these regulatory landscapes through self-regulation, corporate social responsibility initiatives, and lobbying efforts that redefine speculation and gambling as either a public good or a social risk (Cassidy 2020). At the same time, state interests in generating revenue from both gambling and financial speculation often lead to policies that are fragmented, contradictory, or selectively enforced (Hassan 2025).

Our panel asks: What roles do states and corporations play in creating the conditions of possibility for these gambles or investment practices through regulations? Importantly, this panel dissects the dynamics of risk-taking, class-making, and moral economies of popular investment practices through ethnographic research from diverse locations and perspectives, including Nigeria, South Africa, China, the UK, India, and the US. We open emotional, ethical, and spatio-temporal dimensions, asking: How do elements of hope, anticipation, and aspiration structure financial decision-making, and how are these acts embedded in histories of economic precarity or opportunity?

Presentation(s): Stability Over Speculation: Mobilizing Cryptocurrency for Economic Sovereignty against State Cannibalism of the Nigerian Middle-Class

Beyond libertarian ideals for cryptocurrency to evade state oversight or capitalist fantasies of speculative gain, young, middle-class Nigerians also operationalize cryptocurrency to preserve their political potency and connection with the state. Nigeria hosts the highest volume of cryptocurrency activity in Africa, with cryptocurrency increasingly used to support everyday financial activities—payments, savings, and income generation. Moreover, in Nigeria, stablecoin volume is double that of Bitcoin and altcoins, suggesting that cryptocurrency's ability to secure stability overshadows its part in facilitating speculation. These activities maintain middle-class status against state cannibalism; the latter exercised through impetuous interventions in monetary policies and insidious indifference to citizen cost-of-living expenses. According to Nigerians, the overall effect marginalizes the middle class and impoverishes them into accepting clientelist relationships. This dynamic complicates the theorized relationship between the state and the middle class, wherein the state supposedly fortifies the middle class as a buffer, and the middle class legitimizes the state in return. Instead, the Nigerian state appears to induce, rather than prevent, middle-class precarity and attrition, abandoning middle-class citizens to promote their own preservation. These changing relationships animate how Global South citizens adapt digital technologies to local economic and political conditions.

Presenter(s): Jing Jing Liu

Presentation(s): Playing the Numbers: The Shifting Logic of Gambling in Johannesburg, South Africa

The presentation examines the historical and contemporary logic of gambling and relations to the state in South Africa. Since the early 2020s, electronic gambling has made significant inroads across the region. Tied to a void in regulatory policies, unemployment, and the aftermath of the COVID-19 pandemic, the rise of these gambling technologies has transformed social lives of low-income gamblers by creating new opportunities for sustaining livelihoods as well as new opportunities for risk. In Johannesburg, these new gambling technologies have begun to usurp older, street-based lotteries like *fafi*. Most popular during the apartheid era, *fafi* thrived beyond the gaze of white society, and state regulation, since the early 1900s. Throughout the post-apartheid transition, *fafi* persisted, but the rise of these new gambling technologies and the legalization of electronic gambling halls has diminished its popularity, the rituals that accompany the game, and the social infrastructures that it relies on. The paper explores how a closer examination of the decline of *fafi* sheds light on shifting relations to the state, the racialization of gambling, and the transformation of traditional rituals of divination and risk assessment.

Presentation(s): Heat and Sentiment: Affective Alignments in Chinese NFT WeChat groups

In Chinese court cases and news outlets, non-fungible tokens (NFTs) are portrayed as financial schemes where a few profit from an irrational crowd. This paper investigates why NFTs resonate among mainland Chinese players (*wanjia*) in WeChat groups. As crypto intersects with local

practices of investment, gambling, and scams, "sentiment" (qingxu) and "heat" (redu) emerge as key fetishizations. Players believe prominent actors (dahu) manipulate crowd sentiment, and certain visual and haptic signs signal a surging market. These productive misrecognitions are part of affectively charged rituals that players (co)construct in WeChat. Through multimodal communication—metricalized texts, GIFs, videos—players enregister NFTs to (co)produce alignment around footings, values, and temporality. Signs like memes (biaoqingbao) gain affective force through circulation and citation. Drawing on models of underground lottery gambling, stock trading, and communist revolution, players frame NFT speculation as a war charge against the passivity of contemporary working-class life. Signs also scale the moment of collective action as both effective and retro-performative. Genred texts referencing feel-good net novels invite players to adopt the stance of a successful elite male looking back on his original risk-taking moment, imagining a certainty from the near future.

Presenter(s): Qicheng Yao

Gambling in the Supermarket: Re-imagining Shopping with the Food Pantry

In our current economic climate of Casino Capitalism, where "Trump goes full gameshow host to push his tariff plan – and nobody's a winner" (Smith 2025), I ask how these macro games of risk and chance are embodied in everyday dispositions toward uncertainty (Malaby 2009). Using shopping as a cultural access point, I explore how a language and, in turn, embodiment of gambling is performed beyond the casino or betting shop, instead, in the supermarket. Here, I make a distinction between provisioning as a minimisation of risk and, conversely, bargain hunting as an engagement with chance. Drawing on 4 months of fieldwork in 2022 in Northern England in a food pantry – a food bank that simulates a shop – I argue that while the emergence of a food pantry suggests a normalization of food banks and, in turn, enduring crisis, I propose that from this emergent space unfolded an affective atmosphere of the play. Through a carnivalesque reversal of wealth, the pantry playfully and materially inverts exchange value and use value. Ultimately, I put forward the argument that the pantry does not just challenge what a food bank is, but it perhaps provokes a reimagination of what shopping could be.

Presenter(s): Natalie Wood

Institutionalizing Web3.0: Ethics of Risk, Mutuality and Consensus among India's Crypto Merchants

In this paper, I undertake an ethnography of the knowledge products and professionals affiliated with India's Crypto industry association, Bharat Web3.0. I will be approaching policy documents and proposals produced by the consortium as 'boundary objects' to analyze how these rework differences between speculation and investment through different imaginaries and applications of Blockchain within India's startup ecosystem. Thus, I will critically analyze the professionalized temporality, sociative 'infrastructuring', and key branding strategy - emphasizing Web3.0 instead of Cryptocurrency - that constitutes the core value proposition for scaling blockchain-based innovation, in alignment with the Indian government's aims of seeding a globally dominant digital economy. This strategy emphasizes creative production, protocol thinking, and open innovation

rather than speculative investment, becoming the key 'Maussian gamble' through which major Indian Crypto players organize themselves to present a collective voice when interfacing with government regulators and chambers of commerce. My paper approaches this speculative labor of class-making and coalition building through the concept of 'Guild Dataism', ethnographically describing how the industry performs peer-institutionality, voluntary compliance, and ethical self-regulation, while demarcating different modes of decentralization and disruption through which Crypto imagineers distinct non-sovereign claims upon the future.

Presenter(s): Vinay Brandon

Sensorium, Risk, and Ritual: Gendered Gambling as Affective Survival in Off-Strip Las Vegas

Drawing on sensory ethnography of everyday situations in off-strip Las Vegas casinos, this paper explores how structurally marginalized women engage in gambling as a strategy for emotional regulation, risk negotiation, and survival. Giddens and Luhmann conceptualize risk and uncertainty as fundamental conditions of late modern life. Gambling, in this context, becomes an exemplary site for examining how individuals navigate manufactured uncertainty through routinized risk-taking. Through a collaborative project involving an anthropologist, sociologist, and clinical psychologist, we ask how gambling becomes a site where women perform agency in the face of structural precarity. Rather than seeking dramatic wins, many female patrons engage in affectively charged, habitual interactions with slot machines, manifested in gestures of breath control, stillness, repetition, and chase, all signaling what we call, following Hochschild, "self-directed embodied emotional labor." Gambling, in this context, is not only an economic behavior but an affective infrastructure shaped by social determinants and the politics of uncertainty. These practices unfold in ambiguous social spaces that are not quite communities yet offer temporary alignment and emotional containment. Ultimately, the casino emerges as a space where neoliberal logics of responsibility and fantasy converge: risk is individualized and hope is enacted through embodied rituals of anticipation.

3775 Time of Monsters 2

Start Date: 11/22/2025 06:00 PM **through** 11/22/2025 07:30 PM

Venue: Marriott **Room:** Studio 7

Type: Roundtable/Town Hall

This roundtable is a sequel of sorts to a panel of the same name staged at the 2017 AAA meetings, inspired by Andrea Muehlebach's characterization of our political era as a "Time of Monsters." This roundtable continues the work of that panel to generate a "Bestiary for this Time of Monsters" (later published in Cultural Anthropology's online Fieldsights section:

<https://culanth.org/fieldsights/series/time-of-monsters>). If anything, 2025 seems like an even more

monstrous moment than 2017, as neofascist overtures become policy, as oligarchs preside over new magnitudes of plunder and planetary ruin. These are some of the monsters we will discuss. But in addition to creatures we rightly dread and abominate, we wish to surface the complex latent meanings of the concept of monstrosity, including nuances of "portent," "sign" and "wild creature." Some monsters are xenobiotics with respect to the dominant racist, patriarchal, colonial and extractivist institutions. We wish to explore the idea that these wild creatures may represent powerful allies in efforts to build a better world from contemporary ruins. As with the 2017 panel we will recruit a local artist-in-residence to visualize our monster-making in real time.

4086 Why Work? Doing the Anthropology of Work (Part Two)

Start Date: 11/22/2025 06:00 PM **through** 11/22/2025 07:30 PM

Venue: Marriott **Room:** Galerie 3

Type: Roundtable/Town Hall

From flint knapping to child tending, rocket science to hamburger flipping, few questions are more central to anthropology than what constitutes work and who can be said to do it. As the energetic fulcrum of economic production and social reproduction, human and more-than-human labor animates and destabilizes narratives of class, race, gender, and citizenship that rely on demographic measures of income and inequality. In cataclysmic times such as now, when across myriad walks of life intergenerational worlds of work and social mobility confront sudden or slow ends, structural metrics rather than storied accounts appear as kaleidoscopic images of technological change and historical inevitability. Yet as ethnographers of work can attest, models of sector-dependent labor rarely map neatly onto our interlocutors' experience of work-paid and unpaid; past, present, and aspirational-let alone determine their assessment of its rewards. Not only are institutionalized paradigms of work "not working" for many today, they raise personal and professional questions for those of us doing the work of anthropology.

In honor of the work of Kathryn M. Dudley, recipient of the Society for the Anthropology of Work's 2025 Arensberg Award, this roundtable brings together an intergenerational group of ethnographers whose doctoral studies of various kinds of work were supervised by Prof. Dudley. Panelists will reflect on how Dudley's incisive questions as a mentor shaped their diverse fieldwork experiences

and career trajectories, putting a spotlight on the work of mentorship itself, and how such generative mentorship has shaped research of the precarious worlds of work that we navigate alongside our interlocutors. As researchers, policy analysts, writers, and educators, we reflect on what our collective labors tell us about how current and nascent cultures of work are affectively transmitted and materialized in practice. Amidst the uncertainties of this late liberal age, we take stock of the analytics of labor that best speak to the challenges of making a living and making a life, and what, at the end of the day, may constitute the why of our life's work.

This roundtable will conclude with overarching reflections on the anthropology of work by Kathryn M. Dudley.

Venue: Offsite **Room:** Skip

Type: Special Event

The Anthropology and Environment Society will hold its annual Business Meeting and Awards Reception at the AAA meetings in conjunction with the Climate Change Interest Group. This event will summarize the actions taken at the A&E Board Meeting, the COP badge process, and announce A&E award winners for the Rappaport Student Prize, the Julian Steward Book Award, the Bonnie J. McCay Junior Scholar Award, the Barbara Rose Johnston Next Generation Award, and other major A&E business. The meeting will be followed by the annual party in the same venue, location TBD.

8760 Speaking Justice to Power 2025: APLA/ASAP Roundtable on Academic Freedom, Immigration, and Carceral Regimes- offsite

Start Date: 11/22/2025 06:30 PM **through** 11/22/2025 09:30 PM

Venue: Offsite **Room:** Skip

Type: Special Event

In January 2025, The Association for Political and Legal Anthropology (APLA) instituted a task force on academic freedom. The taskforce emerged from discussions held during the APLA business meeting at the American Anthropological Association (AAA) Annual Meetings in 2024, and a special event on how to respond to right-wing backlash against higher education and freedom of speech, featuring a representative of the American Association of University Professors (AAUP). As the section of the AAA devoted to the critical study of politics and law, APLA has the responsibility, expertise, and resources to help prepare for and address the ongoing attacks on the academy, on society at large, and the encroaching climate of fear that we all now have to face.

The upcoming AAA meeting in November, which will be held in the state of Louisiana, provides an important opportunity to engage in critical conversation about the rise of fascism, escalating attacks on academic freedoms and higher education, as well as carceral regimes targeting immigrant and minority communities. In engagement with grassroots organizers and community workers, we intend to shine light on local responses to federal attacks and brainstorm the role of Anthropology/Anthropologists in this political moment.

The state of Louisiana is an important place to talk about the right-wing war upon universities and the utter brutality of crackdowns on immigrant communities. The 4,000-resident town of Jena, is home to the Immigration and Customs Enforcement detention center where Columbia University student Mahmoud Khalil has been detained for his pro-Palestine activism since April of 2025. In this very same sight are undocumented workers who have been detained as "criminals" and "aliens" or marked as "threats to national security interests."

At this critical moment and in this critical place, APLA, in collaboration with ASAP (Association for the Anthropology of Policy), intends to bring together legal experts, immigrant rights defenders, community organizers, scholars and educators to discuss how we can collaborate and strategize together to effectively resist the ongoing attacks on human rights, rule of law, and due process. We call upon Anthropology and Anthropologists to seek ways of moving beyond the ivory towers and envision how their pedagogy, research, and service can advance struggles on the ground.

Tia Fields (Louisiana Organization for Refugees and Immigrants)

Martha Alguera (Southeast Dignity not Detention Coalition)

Matt Olson (New Orleans Workers' Center for Racial Justice)

Mary Yanik (Clinical Associate Professor of Law and Co-Director of the Immigrant Rights Clinic at Tulane University)

8596 [b]CUAA Distinguished Speaker: Desiree Fields, Geography, UC Berkeley -- "California Forever? Speculating on 'New Cities in the Wild Frontier'"[/b]

Start Date: 11/22/2025 07:30 PM **through** 11/22/2025 09:00 PM

Venue: Marriott **Room:** Galerie 2

Type: Special Event

In the period between the Great Recession and the coronavirus pandemic, the ideology of technology as an engine for economic growth and rational instrument for addressing urban problems profoundly influenced approaches to urban governance. Tech leaders also became social and political elites whose status gives them an outsize voice in conversations about urban problems-and fuels their frustration with the norms and pace of the democratic process.

Today the tech sector is deeply implicated in projects of territorial control that give off "secessionist energy" (Slobodian, 2023). These projects far exceed what we might associate with smart urbanism or platform urbanism, mobilizing the logic of the zone to place their speculative political economic and development agendas beyond the reach of conventional governance and prevailing regulatory frameworks. While many new tech-led cities have failed or fizzled out, the underlying desire for a new urban frontier abides.

The urban utopias desired by tech elites are ideologically aligned with much of the second Trump administration's governing agenda. Could their experiments in city-building be edging closer to realization than previous failures might suggest? In this lecture, I draw on California Forever, one such effort in the San Francisco Bay Area, to speculate about the futures of tech-led cities in an era of immigration sweeps, the criminalization of unhoused people, and an unprecedented expansion of federal surveillance. What urban forms might be concretized by these forces? How does the impossibility of living under these conditions help us search for the possible within the real?

[b]Bio:[/b]Desiree Fields is Associate Professor and Chair of the Department of Geography at University of California, Berkeley. She is an economic geographer and critical urban scholar. Her research program addresses how Wall Street and Silicon Valley are jointly transforming property

relations, urbanization, and economic subjectivity. Fields is a trustee of the Urban Studies Foundation and an editor at *Environment and Planning A: Economy and Space and Housing, Theory, and Society*.

Reception with light refreshments. Come to meet other anthropologists, catch up with old friends, and celebrate the Foundation's ongoing support of anthropology.

8698 Reception -- Critical Urban Anthropology Reception - For CUAA Distinguished Speaker, CUAA Award Honorees, and Members

Start Date: 11/22/2025 09:00 PM **through** 11/22/2025 11:00 PM

Venue: Offsite

Type: Special Event

CUAA Reception in Honor of CUAA Distinguished Speaker Desiree Fields (Geography, UC Berkeley), CUAA 2025 Anthony Leeds Award Winner(s) for Best Book in Urban Anthropology, and Winners of Best Graduate Student Paper and Best Graduate Student Session prizes. Location to be announced at CUAA Annual Business Meeting, Friday, November 21.

Sunday November 23rd, 2025

8836 Society for Visual Anthropology Film & Media Festival- Day 5

Start Date: 11/23/2025 08:00 AM **through** 11/23/2025 11:00 AM

Venue: Sheraton **Room:** Skip

Type: Special Event

The Society for Visual Anthropology screens the best of ethnographic film at the annual SVA Film & Media Festival. The Festival is held as part of the American Anthropological Association (AAA) Annual Meeting, giving filmmakers and distributors broad access to an audience of thousands of anthropologists, educators, and other attendees.

Ethnographic film and media can be defined broadly as works that emerge through ethnographic fieldwork or that use, are informed by, illustrate, or evoke concepts and principles of anthropological theory, methods, or practice.

2025 SVA Film & Media Festival Directors:

Dr. Anna Neumann

7830 "The Intimacy of Difference: Transformations and Continuities"

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Studio 10

Type: Oral Presentation Session

In superdiverse contexts, new forms of intimacy are emerging that challenge traditional notions of homogeneity and intermixing. Urban environments and rural experiences of marginalization, often shaped by social media, generate unfamiliar encounters and transform social relations the world over. These interactions open new possibilities for boundary-making, appreciation, resentment, envy, projection, and negotiation among groups. They also raise questions about the creation of new norms regarding inappropriate desires and behaviors when experiencing loneliness or isolation. We invite contributions that examine friendship, love and sexual relationships, marriage arrangements and experiences of isolation. The goal is to reflect on transformations and continuities of intimacy, social connection, and erotic life in superdiverse societies globally. How are intimacies socially organized in current contexts, both online and offline?

Presentation(s): Transgressive Intimacies: Love and Law in North India

In North India, many couples face adverse consequences when choosing their romantic partners. The consequences include being disowned by the family, false accusations of rape and abduction against men in consensual relations or, albeit rare, even honor killings. With the ascendance of Hindu nationalism, inter-faith relationships are further scrutinized by religious communities and vigilante groups. Moreover, conspiracy theories such as "love-jihad", fueled by social media, routinely target Hindu-Muslim relationships, turning them into criminal acts. Yet, young couples

from diverse caste, religious, and ethnic backgrounds transgress these societal and familial impositions in myriad ways. Based on fieldwork in Uttar Pradesh, India, this paper explores how young men and women experience transgressive romantic relationships outside the expected norm of endogamy. Specifically, it examines how romantic relationships are both shaping and are shaped by the unintended use of law.

Presenter(s): Reecha Das

Complexities, Doublebinds, Subjection, and Endogenous Resistances in the Cultural Construction of Male Identifications and Friendships

This paper draws upon on somewhat "auto-ethnographic" work on topics including surfing, SEAL training, the cross-over appeal of African-American music, and crew/rowing. Connecting these inquiries is an argument to the effect that desire shapes cultures in ways largely overlooked in more conventional notions regarding "cultural construction." I focus in particular here on SEAL training and complexities revolving around how what I term a desire for self-possession, autonomy, and agency interacts with a need for recognition from others in the dynamics through which such activities become loci for the cultural construction of identities. Among complexities are how competition, self-assertion, (sometimes devolving toward narcissism), on the one hand, and solidarity, comradery, identification with a group, and mutually constitutive recognition (on the other) interact. I invoked Butler's ideas regarding "subjection" to help unpack how double-binds manifest in these processes and how endogenous resistances to subjection almost inevitably emerge and are assimilated to the constructive process.

Presenter(s): P. Steven Sangren

Intimacy and Loneliness in Japan and Abroad: Empathy and Nakama in anime and manga as tools for addressing social isolation

For Japan's 1.5 million shut-ins (hikikomori) and for shut-ins elsewhere in the world, achieving friendship and intimacy can be a very high bar. This paper explores the potential of "nakama" or "comradeship," based around shared identity and goals, as a means for understanding and addressing social isolation, using ethnographic research from the fandom of Japanese anime and manga.

Presenter(s): Chikako Ozawa-de Silva

Science / Art / Politics: Empathy and the Bridging of a Divided World

The realms of science, art, and social change are institutionally divided in our current world and in academia, but these divisions rest on the division between personal intimacy and generalizable knowledge, and emotion and reason, that blur or break down upon critical inquiry. This paper provides a theoretical approach to engaged work that seeks to bridge these divides, drawing from ethnographic examples of scientific art projects, socially engaged art research, and museum installations across the US and Japan.

Presenter(s): Brendan Ozawa-de Silva

Zakir, Bharat, and the Collapse of Distance

What happens, when a subject encounters what suggests animosity but fails to be sufficiently other or different? Through an analysis of two encounter, this paper deals with overwhelming experience in the context of intimacy and violence in India.

Presenter(s): Parvis Ghassem-Fachandi

Diversity in Intimacy in turbulent times: Relationships in the context of (forced) migration

With the arrival of large numbers of refugees since 2015, urban diversity in Germany has increased. The question of sexuality and romantic relationships of refugees has barely been addressed in academic research. In the case of refugees from Arab speaking or African countries, refugees' alleged sexuality has been discussed in the context of sexual assaults, not seldom bearing orientalist and racist stereotyping. My study of intimacies between refugees and permanent residents looks at the lived experience and negotiation of difference, diversity and boundaries in terms of status, race, class and gender, religion and the negotiation of power and hierarchies in Love relationships. Taking the biographies of couples, this paper demonstrates how differences are negotiated among mixed couples. While often focusing on 'cultural differences' as the obstacle for 'Love' to work, I rather suggest, that the migration regime and structural inequality significantly affect intimacies. In my paper, I will show how the concept changes in the course of migration trajectories and the experience of intimacy in diverse relationships and migrants and migration influence existing societal ideas of relationships and intimacy. Focusing on the individual biographical experiences of refugees and permanent residents and their negotiation of differences, I will discuss the nexus of power, Love and desire in the practice of relationships in the context of their socio-political realities.

Presenter(s): Vanessa Rau

1174 Affective Technologies of Spectrality: The Making of Flickering Attachments

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** MGB Salon D

Type: Executive Oral Presentation Session

To live with ghosts is to live in flickering environments - worlds shaped by loss, rupture, and technological mediation. War and exile, ecological collapse, pandemics, neoliberal productivism, and the limits of scientific inquiry fracture bonds between beings, places, and histories. Yet these detachments do not erase presences entirely - they generate traces, spectral and incomplete. This panel explores how contemporary technologies conjure, stabilize, or negotiate these chasms, not by restoring what is lost but by making detachment itself an object of experience and negotiation.

Here we examine how infrastructures of spectrality operate as affective and material apparatuses for sustaining fragile connections, managing uncertainty, and confronting disappearance. We focus on socio-technical dispositifs capturing the flickering - ephemeral presences slipping between visibility and erasure, attachment and detachment.

Our panel explores a range of cases to map how people turn to technology to mend the rifts of disjointed forms of life. Biospheric simulations manifest miniature ecosystems, making environmental loss and ghost species (McCorristine & Adams, 2019; Searle, 2022) tangible. Neuroscientific tools transform fleeting mental dream images into data, echoing older spirit and thought photography (Geurts, 2018). AI-generated conversations with the dead, anticipated in digital horror cinema, now extend beyond the screen as networked spectral technologies (Chabot, 2024). Meanwhile, encrypted channels in wartime Ukraine allow exiled men to flicker in and out of communal life, living as *êtres à éclipses* (Callard, Esquerre & Delaplace, 2023). Other spectral assemblages include digital spaces mediating COVID19-related grief, medical technologies crafting relationships with phantom limbs, and virtual houses bought online becoming safety nets for Chinese youths struggling with precarity.

Across these cases, we ask:

- What types of intermittent collectives and identities do technologies of spectrality shape?
- What regimes of visibility and temporalities do such uncanny technologies sustain as they invoke spectral beings - whether exiled persons, extinct species, digital memorials, virtual houses, phantom limbs or neural traces of dreams?
- What anxieties and desires emerge around these technological mediations, and what forms of sociality or exclusion do they enable?
- How are such flickering attachments valued across different contexts?
- To what extent does scientific inquiry, through new modes of mediation, 'return' to the realm of the spiritual? (James, 1904; Piron, 2022)

Tangentially, with a group composed of several French scholars, we would find ourselves curiously situated in New Orleans. Louisiana, haunted by French colonial traces, offers a fitting site to reflect on anthropology's own ghosts - particularly those of its French lineage. What does it mean to engage with them today in a transatlantic dialogue?

Presentation(s): Spectral infrapolitics: digital resistance among conscription-aged men in wartime Ukraine

For many conscript-age Ukrainian men of Romanian descent, war violence lies in the suppression of their right to mobility and subsequent spectralization, as they are forced into a precarious life with grim prospects—either desertion or death on the front. Feeling discriminated against as an ethnic minority, they reject the war as not their own. This paper explores how these men regain agency by leveraging spectralization through digital tools, manipulating regimes of (in)visibility to remain visible to the village community while avoiding military detection.

Smartphones become a crucial lifeline, enabling men who have fled—reduced to revenants and digital traces—to participate in communal events via video calls. Their online presence highlights the tension between the desire for community and enforced exile, creating a new social fabric of flesh and screens, yet conjuring loneliness and dispersal. Meanwhile, anti-military groups on encrypted channels help men who have stayed disappear from public space and avoid military recruiters. Voluntarily adopting a ghostlike existence becomes a survival strategy in a landscape of constant risk.

I term this oscillation between regimes of (in)visibility spectral "infrapolitics" (Scott 2008). This refers to modes of existence that emerge in the shadows, where apparent absence and intermittent digital presence challenge oppressive forces of war, as these men resist systems that seek to control their identity, mobility and belonging.

Presenter(s): Sophie Gleizes

Flickering Signals: Neuroscientific Technologies and the Spectral Mediation of Dreams

In a French sleep lab, neuroscientists explore new communication channels with sleepers. They ask lucid dreamers with narcolepsy, described as "dream experts", to signal emotions in real time through facial codes. This paper follows spectral, fragmentary traces of dreams as they circulate from the body to screens and are reassembled with memory reports upon waking. These attempts to decode dream activity echo historical efforts to contact invisible worlds through technologies of the imagination.

Like 19th-century thought photography, which aimed to materialize mental processes as visible imprints, neuroscientific tools conjure dreams in new forms (Geurts 2018). Here, neuroimaging (EEG) and infrared video act as dreamcatchers, conveying an aesthetic ideal of transparency (Klein 2011) - yet their power flickers as dream signals emerge, distort, or vanish, exposing the opacity of the sleeping body.

A "techno-intimacy" (Vorhölter 2023) unfolds between sleepers and scientists, sometimes moved by the signs they receive. How do these dispositifs reconfigure attachment to dreamed images, places, entities - rendering them at once graspable and forever out of reach? I argue that they operate as "technologies of hope" (Leibing 2010), sustaining aspirations to "unlock" the mind's

mysteries and explore the "terra incognita" of dreams, regarded by neuroscientists as a "last frontier" in understanding the extent of human consciousness and expanding the limits of the self.

Presenter(s): Amelie Barbier

Miniature Biospheres and Spectral Attachments: Experimental Ecologies and the Techniciation of Loss

Experimental ecological infrastructures such as Ecotrons and Biosphere 2 reconstruct miniature ecosystems in laboratory settings, aiming to model the conditions of life. Yet, far from producing fully controlled environments, these infrastructures materialise forms of ecological loss and spectrality. Species disappear and reappear, environmental variables fluctuate, and the boundaries of what constitutes an ecosystem remain uncertain. Through ethnographic research in these experimental sites, I explore how scientists and engineers negotiate the instability of their models, engaging in constant adjustments that reveal ecosystems as both technical and spectral objects. These biospheric simulations do not merely enclose life but stage a spectacle of its flickering presence — an aestheticised vision of threatened worlds, all the more elusive as they verge on extinction. Like the fragile forest domes of *Silent Running* (Trumbull, 1972), where contemplation is shadowed by impending disappearance, these miniature biospheres invoke a longing for an environment that is already vanishing. The more one seeks to apprehend a biosphere as a totality, the more it dissolves into contingent assemblages and ephemeral patterns. In this talk, I argue that ecological experimentation operates as a technology of spectral attachment, shaping new forms of relating to a world increasingly mediated by loss and simulation.

Presenter(s): Elie Danziger

Home at the end of the world: Phantasmatic futures via virtual housing at China's rust belt

This paper explores the flickering connections of Chinese youths with the housing they purchased virtually in Hegang, China's city with the cheapest housing price in the northeast rustbelt. Based on a 14-month ethnographic fieldwork conducted offline in Hegang's real estate agencies, and online as a Hegang realtor on TikTok, I examine how the virtual homes became a ghost-like apparatus that mediated reality and not-yet-reality, while dictating temporal frames of precarious present and fantastical futures.

Although a rustbelt city experiencing post-industrial decline since the 1990s, Hegang witnessed an unexpected "revival" in both online and offline worlds since 2018, when young people struggling amidst precarity in urban China started purchasing its cheap apartments. Among this apartment-buying population, as much as 70% never came to the city before or after the purchase, and completed their transactions entirely on social media, where Hegang realtors posted "room tour" videos.

While existing discussion on unoccupied real estate often focus on aspects of housing as financial instruments, the Hegang homebuyers yet perceived the home-at-distance as the "safety net" to fall on in scenarios of personal failures and global (political and ecological) disasters. I thus consider

how, for Chinese youths at the economic bottom, housing became not just a material end but a spectral apparatus animating messianic imaginations of future on personal and global scales.

Presenter(s): Siyu Tang

Revealing the entanglements of sensory, perceptual, and affective spectres in phantom limb experiences

According to scientific literature, most amputees experience phantom limb sensations, at least temporarily after surgery. These sensations can be painful remnants of nerve trauma (Ramachandran & Hirstein, 1998 ; Anderson, 2018) or sources of pleasure (Raffin et al., 2012; Crawford 2014 ; De Graaf et al., 2016 ; Touillet et al., 2018). While these experiences vary widely, the feeling of the amputated limb's presence differs from its memory and is inherently unstable in both time and space (in relation to the residual limb).

Ethnographic research on medical and neuroscientific infrastructures used to capture painless phantom sensations shows that, although individuals often struggle to recognize them, diagnostic and mapping tools and methods (such as questionnaires, interview methods, specific vocabulary and visual representations) all act as technologies to "conjure, stabilize, or negotiate" different levels of consciousness and sensory nuances of the phantom experience.

This paper focuses on how these techniques reveal multiple representations and perceptions of the absent limb, showing ephemeral presences that flicker between the ghost of the amputated limb, the memory of its touch, the awareness of its former location, and the current sensory experience. These "regimes of visibility" also mediate spectres of past and present affective relationships to both the lost limb and the new body.

8252 Anthropology and the Specters of Science 1

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Balcony I

Type: Oral Presentation Session

Anthropologists across many areas of inquiry have struggled to account for multiple forms of scientific knowledge, in particular, when working in interdisciplinary spaces or when negotiating data with findings from other sciences. Many have educated themselves to become competent in scientific worlds other than their own. Others have treated the sciences as phenomena to be studied, questioning scientific systems of knowledge as they have emerged from specific histories and ideologies, such as the Enlightenment, capitalism, or Cartesian dualism, exposing the discrimination, assumptions, and biases that saturate scientific discourses. Scholars of indigenous knowledge have juxtaposed cultural systems to show how vastly different knowledges emerge from unique histories and lifeways. In some cases, they have not only unsettled scientific truth but also

leveraged anthropological awareness to contribute to scientific practice. Much of this work involves reflection on the limits of scientific findings, but also a deep engagement with it.

This panel seeks to explore tensions produced among the different sciences when in deep multi-disciplinary engagement. We start from the awareness that scientific knowledge permeates late modern life, but cannot address many aspects of human experience, such as aesthetics and ethics.

We invite reflection on the nature of interdisciplinarity, the sharing of methods and data, the making of some knowledges commensurable or protecting that which is incommensurable. We are particularly interested in phenomena that cannot easily be examined, isolated, or quantified, especially phenomena that haunt the sciences, teasing the boundaries of what can be known.

We are also interested in what remains when scientific institutions are faced with public and policy challenges to their epistemologies and practices. Scientific knowledges and expertise are criticized, among other reasons,

Will current challenges encourage us to reconsider our differences and strengthen our commonalities or will attempts to create mutual understandings disappear in a scramble to preserve the status quo?

Presentation(s): The Art of Feel: Knowing Bodies in Equestrian Worlds

Harmony between horse and rider is one of the highest aims of dressage, the equestrian discipline dedicated to doing precise figures. Over more than two centuries of development, classical dressage has become an applied science of equine movement. The stated goal of dressage's ruling body, the Fédération Equestre Internationale, is for the horse to be a "happy athlete," who is able and willing to do what the rider asks. With long-term training, riders develop visual and sensory skills that enable them to assess and alter equine movement, ideally to improve the animal's long-term health as a riding horse. They often describe the development of "feel" for the horse and his movement. In recent years, riders increasingly rely on the science of biomechanics to understand subtle and not-so-subtle movement issues that plague their animals. But biomechanics cannot adjudicate the horse's happiness or the harmony of horse and rider. Further, biomechanics may displace the highly trained and subtle art of discerning equine movement that trainers develop over years. This paper examines the movement of biomechanics into equestrian sports in the United

States, showing how recognized scientific knowledges mesh with, change and may displace applied sciences. Building on the phenomenology of movement, this paper examines how equestrians learn to see, hear and feel equine movement and how the science of biomechanics meshes with more traditional approaches.

Presenter(s): Rachel Prentice

Collecting Knowledge: The Role of Hobbyist Collectors in Botanical Research

Botany has been an imperial science since its inception. Explorers and colonizers hunted plants across the globe, transporting them to botanical gardens to extract commercial value—often leaving behind plunder and ecological destruction. Indigenous knowledge was frequently erased. As a result, scientific research on such species often relied on the affective engagement of their new European growers. This paper analyzes the central role—both past and present—played by hobbyist aroid collectors in the production of scientific knowledge about the Araceae family, which includes many of today's popular houseplants. What role do plant enthusiasts play in scientific knowledge production about tropical plants? How instrumental is their affective and embodied engagement with vegetal beings in creating new scientific insights? Based on ethnographic fieldwork conducted in Europe and the USA between 2023 and 2024, I argue that lay enthusiasts are vital to supporting the taxonomic work of botanists. I demonstrate the deep entanglement of scientists and amateurs. I seek to understand hobbyist collectors through the lens of botanists' views and relationships with them. This approach reveals similarities and differences between the groups and shows how their engagements with plants are mutually dependent. This paper shows that scientific knowledge about plants is deeply rooted in practices of care and emotional connection. Affect haunts botany.

Presenter(s): Rachel Prentice

Kinning Data: Residual Life and Relational Logics in Bioscientific Practice

In a Japanese biomedical laboratory focused on mouse genetics and human disease, making data is a practice of selective clarity—one that renders some relations visible while bracketing others. Drawing on two years of fieldwork, this paper explores how scientists transform animal bodies into digital traces, structuring spreadsheets, experimental readouts, and breeding records. These practices hinge on logics of recognition and exclusion that distill and produce epistemic order: shaping what counts as data and structuring how relations between organisms, researchers, and technologies are recognized, positioned, or excluded.

I draw on Signe Howell's concept of kinning as a way of tracing how biomedical data is organized through active, often hierarchical, logics of relatedness. From genotyped animal "family trees" to institutional lineages of researchers and the circulation of materials and experimental practices, kinning shapes connection and belonging across multiple scales. These practices also generate residues—question marks, blank spaces, and informal know-how—that persist beyond formal

representation. These spectral elements mark the limits of what bioscientific systems can stabilize, contain, or render meaningful. Grounded in the internal logics of scientific practice, this paper calls for interdisciplinary attention to what exceeds its conceptual and operational boundaries: to trace the ghosts, gaps, and entanglements that remain after data is made.

Presenter(s): Rebecca Carlson

Listening to the River's Others: An Anthropological Exploration of Hippos, Science, and Coexistence in Colombia

Forty years ago, drug trafficker Pablo Escobar introduced four young hippos to Colombia as part of his private zoo in the Magdalena River basin. Following his death and the abandonment of the ranch, the descendants of these hippos migrated downstream. Today, at least 169 hippos inhabit the river. These unusual creatures, considered by some as living relics of drug trafficking, have spurred significant concern among scientists and policymakers regarding the current and future risks posed by hippo interactions with humans, native fauna, and the river's ecosystems. Scientists have projected a potential population of 1,500 hippos in the Magdalena River within the coming decades. They predict potentially devastating changes to the river and its environs and fear the possibility of hippo attacks on river-dependent communities. In 2022, the Colombian government declared hippos an invasive species, enabling reproductive control measures, including controlled hunting.

This paper explores the scientific practices rooted in models and algorithms that shape public policy and management strategies. This collaborative work includes contributions from a visual artist, a sound artist, and a biologist specializing in aquatic ecosystems. We aimed to explore alternatives to projected catastrophes. Utilizing ecoacoustics, hydroacoustic, and artistic tools, we crafted narratives about hippos and other beings, exploring risk, the limits of risk-based approaches and possibilities for coexistence.

Presenter(s): Alejandra Osejo

Mapping Ecologies in the Wake of Hydrological Disaster

What happens when scientific representations of nature collide with the lived experiences of disaster-affected communities? This paper explores the epistemological tensions and political stakes involved in mapping the ecologies of the dry Copiapó River in Chile, where the absence of water disrupts both physical and conceptual infrastructures. I examine Geographic Information Systems (GIS) as sites where dominant scientific paradigms encounter alternative, often marginalized ways of knowing. I explore the political and ethical implications of open mapping and counter-mapping practices in the Global South, based on a collaborative experience with the dry Copiapó River communities (agricultural unions, Indigenous communities, and scientists). This mapping process challenges static hydrological representations and foregrounds rivers' mobility, uncertainty, and affective dimensions. These practices contest dominant scientific narratives and open possibilities for interdisciplinary engagement between anthropology, geography, and environmental science. At stake are technical representations and planetary power dynamics

embedded in whose knowledge counts and how space is governed. This paper contributes to conversations on the limits of scientific knowledge, especially when confronting the experiences of disaster that resist quantification. It asks: What becomes visible when different knowledge systems are layered through mapping? What remains incommensurable?

Presenter(s): Aline Bravo

4282 Cosmographies of Comparison and Commensuration II: Thresholds, Tipping Points, Politics

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Grand Ballroom E (5th fl)

Type: Oral Presentation Session

Are "commensuration" and "comparison" the same, but different? How do practices of equivalence-making show up in our fieldsites and theories, and what do they accomplish? This panel centers on the "tensional" (Dewey, 1938; see Savransky, 2021) relation between rubrics of commensuration and comparison used both by social scientists and the people we work with and learn from. We pursue a wide range of questions about equivalence-making from a reflexively "cosmographic" angle. Franz Boas (1887, 140) defined "cosmography" as the science which attends to individuality, on its own terms, in order to recognize "totality in the individuality" of social life (1887, 140). Quasi-naturalistic "comparative" methods, he argued, enable the opposite, locating "individuality in the totality" (ibid). By working towards a "cosmography of comparison," members of this panel seek to extend Boas's critique by revisiting longstanding but underdetermined roles that "commensuration" and "comparison" play in ethnographic theory and practice.

"Commensuration" has long been commonly deployed as a rubric across the social sciences to characterize social (and nominally "economic") processes that bring two or more entities into enumerative (and thus evaluative) relation through reference to a common "metric," where the metric in question may range from decibels to dollars. Building on the sociological work of Espeland and Stevens (1998), social scientists have more recently moved beyond scientific framings of "commensuration," approaching it instead as part of humans' everyday equipment for living.

Linguists have also conventionally framed "comparison's" grammatical categoriality with reference to paradigmatic relations between entities that share different degrees of the same gradable property (e.g., height). Comparison in these accounts is categorially and co-textually emergent, a discursive-semiotic phenomenon that inflects humans' aspirations or "navigational capacities" (Appadurai, 2004), and so helps configure the rhythms of everyday life. Anthropologists, while not fully engaging insights from formal linguistics, have nevertheless moved beyond a linguistic focus on sentence-level denotation, attending to comparison's co-textual dynamics or "social life," shedding light on how tacitly presupposed thresholds or context-sensitive "points of departure"

(Sapir, 1944; see Kennedy, 2008) are ethnographically revealable through careful attention to the patterned, chain-like dynamics of everyday talk.

This panel moves beyond questions of "comparison" and "commensuration" as "impossible" (but indispensable) scientific "method[s]" (Evans-Pritchard; Candea, 2018), to examine how people reflexively explore, evaluate, or otherwise enumerate and so reckon the tropological "more-or-lessnesses" of life.

In this, the second part of a two-part panel, we explore issues ranging from wokeness, to violence, to homelessness, to domestic work, to the semiotics of play.

Presentation(s): Too Woke

In the early 2020s, rightwing pundits and politicians in the US started calling asset managers like BlackRock and multinational corporations like Costco "too woke" because they feigned concern for the social and environmental impacts of their investments and operations. When viewed through the lens of an emergent "anthropology of intensity," such an accusation raises interesting questions about the threshold of acceptable wokeness and what happens when that threshold is crossed. In addressing these questions, this essay shows how critiques of wokeness are inseparable from more widespread fascist and ecocidal discourses, all of which turn on the regimentation of specific and related modes of commensuration, comparison, and causation. Paying attention to intensity helps us see how speakers and writers make their discourses coherent in the context of other, potentially contradictory, discourses.

Presenter(s): Matthew Archer

Quantifying Homelessness?: Enumeration and Ethnographic Methods in U.S. Efforts to Count Every Homeless Person

This paper traces a history of U.S. efforts to count the number of people experiencing homelessness. Beginning with an historical overview of the Census Bureau's engagement of an anthropologist of the urban Romani, Matt T. Salo, the essay traces how racialized and gendered assumptions are foundational to homelessness counts, the tool we use to prioritize funding for aid initiatives. Blending archival research of this counting method with ethnography of low-income Black women volunteering for the federally mandated Point-in-Time (PiT) count, the article

considers how this history shapes policies which undercount the prevalence of women, children, and queer and trans people experiencing homelessness by privileging chronic and street-based homelessness, contexts that overwhelmingly skew male and cisgendered. I recount the lives of women who lived out of their cars, in "abandominiums," with abusive partners, or out of motels they paid for with survival sex work, all of whom were unable to receive aid, despite meeting legal standards for homelessness, because of these policy oversights. I argue for grounding these erasures in the historical development of enumeration standards that has shaped housing policy which assumes homelessness is an urban male labor issue, an assumption that has reinforced the validity of these faulty counting methodologies in ways that entrench Black women's marginalization.

Presenter(s): Benjamin Slightom

The Value of Play

Cosmography is a way to elaborate peoples, things, and exchange as a mapping of culture – drawing on a dialectic of commensuration and comparison. Based on fieldnotes from Vietnam, this paper explores what happens when a cosmographic imagination (or social universe) shifts in an encounter of abrupt and unexpected mutual (re)valuation between agents. In an underground club, three novice players discover a new playground with different rules, etiquettes, and metrics. The frame of interaction between the constitutive players and their methods of play transform value (a sort of measure of worth) and values (a sort of ethics of the game), thereby revealing an alternative cosmography of political society. Value creates universes (Graeber 2013), and universes collide in the reshaping of values– a cultural terrain travelers must navigate without yet having a map of that world (Kockelman 2010).

Type: Oral Presentation Session

Academia is under increasing political scrutiny in the US for its alleged role as an elitist harborage of radical ideas that indoctrinates students to views in contradiction with American values. This derision inaccurately portrays students as passive receptacles devoid of agency. Moreover, such assaults not only dismiss the value of university research to American civil society and the global community but publicly cast doubt on the veracity of scientific knowledge in general. Rebuke of science and the academy is not new, but while few in academia predicted the resurrection of these

malevolent ghosts, this haunting point in time instigates critical reflection of our value to students. Most university students do not pursue academic careers, so it behooves academic scholars to consider how well we equip undergraduates with the skills, knowledge, and experiences to prosper in their careers. This is especially pressing for the anthropological discipline, as most anthropology graduates who seek careers beyond academia will find positions that are not specifically labeled "anthropologist." Anthropology is at its core a toolkit for perceiving the world and understanding people in any context; one need not possess the job title of anthropologist to do anthropology. In this sense, anthropology has much practical knowledge and skills to prepare students for manifold industries. However, prioritization of research as the central focus of anthropology obscures its pragmatic value for many students, especially those at flagship universities with R1 status and a vast research endowment. This is less the case at regional public universities in which scholarly resources are limited and 75 percent of the faculty workload is "instructional." Such is true of Florida Gulf Coast University (FGCU), a regional public teaching institution in Florida that primarily serves the local citizens of Southwest Florida. The challenge for FGCU "Eagles" faculty is maintaining their scholarly pursuits while also delivering a practical education for students that reinforces the broad value of anthropology to all careers. One solution is using research as an instructional tool: not simply recruiting students as research assistants but creating opportunities for them to realize their own research interests, an endeavor otherwise inaccessible to students before graduate school. Whether students ultimately pursue academic careers or directly enter the workforce, this early bird approach to research allows students to deploy broad skills through experiential learning and builds confidence both in their individual abilities and value to diverse career fields. This session features three examples of such research studies conceived, designed, and carried out by anthropology majors at FGCU. In a broad sense, these three projects offer evidence to counter critics' claims that anthropology is a useless degree with no job prospects. On the contrary, anthropology is for everyone.

Presentation(s): From Pique to Maví: Exploring Cultural Resilience through the Ponce Fermentation Festival amid Gentrification in Puerto Rico

Contemporary migration literature emphasizes the role of homecoming festivals in Latin America and elsewhere as a gateway that connects first- and second-generation descendants of immigrants to their home culture. In Puerto Rico, the US-mainland-based grassroots organization "LA Menu" hosts an annual Fermentation Festival in Ponce, PR focused on reviving traditional foodways to encourage food sovereignty as a means of cultural resilience against the effects of gentrification. Organizers established the festival in 2023 to assist local island communities such as Ponce and Mayagüez to reclaim agency in their available food choices and rediscover traditional recipes displaced by the influx of imported canned goods following World War II. Drawing on the range of

ethnographic methods, including participant-observation and interviews with local and non-local attendees, this paper highlights how mainland Americans with family ties to Puerto Rico have resurrected folk dietary knowledge passed down from older generations to connect with their heritage and counter gentrification through food sovereignty, cultural preservation, and community education.

Behold Man the Non-Hunter!: Do Western Ideas about Social Dominance over Humans and Animals Shape Meat Consumption?

While current consensus among biological anthropologists has reconceptualized the notion of prehistoric man from "the hunter" to "the hunted," the former remains influential in Western constructions of maleness; specifically, the trope of men as rugged meat-eaters whose destiny is characterized by social and ecological dominance over other cultures and species. This research explored how traditional Western (binary) gender roles influence the association of social dominance in human-to-human and human-to-animal relationships to understand how they collectively shape meat consumption. Specifically, does gendered prejudice toward humans and animal exploitation also shape meat-eating attitudes? We hypothesized positive correlations among social dominance, speciesism, and meat-eating using the Social Dominance Orientation (SDO), Social Dominance Human-Animal Relations (SD-HARM), and Meat Consumption and Intention Scale (MCIS). Results showed strong positive correlations among social dominance and speciesism, with independent associations of each to meat-eating that were intensified by traditional constructions of maleness. Findings suggest that the human inclination toward hierarchical systems reflect a tendency toward environmental compartmentalization that also influence and regulate dietary preferences and behavior.

Constructing a Singular National Identity through Propaganda in Multiethnic Bosnia and Herzegovina

The Balkan Peninsula has historically been a cultural and geographic crossroads of religious, ethnic, and political identity, strategically connecting European, Middle Eastern, and Asian cultural spheres across millennia. Despite the region's storied diversity, current constructions of national heritage within the Balkan states are modern creations that may conflict among neighboring countries and disregard elements of historicity that do not fit with contemporary political motivations. In Bosnia and Herzegovina, predominantly Muslim Bosniaks, Eastern Orthodox Serbs, and Roman Catholic Croats vie for claim over the country's national identity, each reinforcing their own legitimacy through propaganda such as national monument construction. Propaganda as a means to assert national identity is a relatively peaceful alternative in a region that 30 years prior

was mired in warfare and ethnic cleansing that further widened ethnic and religious divisions. Twentieth-century political upheaval in the Balkans has nonetheless left Bosnia and Herzegovina with a legacy of religious strife over which of the major religions are the foremost or founding faith. This paper presents the results of exploratory ethnographic research in Banja Luka--the second most populous city in Bosnia and Herzegovina--evaluating how each ethno-religious group deploys propaganda in diverse forms to elevate their identity and history as the nation's singular heritage.

1935 Ecological work and ecological labor: Value, repair, and accumulation in the green transition

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR C1 (3rd fl)

Type: Oral Presentation Session

As global economies are more and more driven by environmental fixes, a growing body of research examines how earthcare practices are incorporated into and transformed by circuits of capitalist accumulation. This panel explores the analytical distinction but also the often-empirical fusion and ambiguity between ecological work-activities that sustain human and non-human life outside of capitalist valorization-and ecological labor, where these activities are horizontally and/or vertically subsumed into market logics.

Taking inspiration in the foundational work of authors such as Neil Smith, Maria Mies and Maurice Godelier, this panel asks what kind of natures are actively produced through particular labor regimes and what kind of labouring people are constituted through the commodification of such natures. Conservation projects, for instance, often capture earthcare work and increasingly – and precariously – employ local communities in ecological restoration, embedding them in circuits of commodification through carbon offset markets or eco-tourism (what Huff and Brock have recently termed "accumulation by restoration"). Agroecology, often framed as a site of resistance to industrial agriculture, can also generate markedly uneven labor regimes mediated by organic certification schemes and fair-trade markets, operating within global supply chains. Likewise, the so-called "green jobs" sector-ranging from "renewable" energy to decommissioning and "green" mining-raises questions about whether such industries fundamentally alter extractive dynamics or merely relocate them within a sustainability discourse. Last but not least, subsistence and domestic work including energy economizing, housing construction, or waste sorting function as unpaid, devalued ecological labor, disproportionally carried out by women and racialized populations.

Drawing on insights from feminist political ecology, economic anthropology, and queer ecologies we seek to understand how activities of sustainable provisioning for human and nonhuman life,

what Stefania Barca calls the forces of reproduction, enter into capitalist valorization; how commodified ecological labor gets embedded and acquires meaning within cultural, socioecological relations of mutuality and obligation; how social actors navigate tensions within new sites of socioecological struggle, constructing hierarchies, legitimacies and contestations, creating continuities and change. The panel engages with case studies that analytically and theoretically question the dichotomy between production and reproduction, and where the boundaries of ecological work and labor blur.

Presentation(s): The elusive reproductive subject: the Doñana groundwater crisis and the subsumption of ecological work

This paper explores the tensions between and convergence of ecological work and ecological labor by analyzing the confluence of three labor regimes brought together by the groundwater crisis in Doñana, Andalusia. Known as one of the most important wetlands in Europe, Doñana is a region that has received international attention due to groundwater depletion. In recent years, a long-standing conflict between the distribution of water for ecological reproduction and its role as a key input in export-oriented agro-industrial berry production has resurfaced. I approach this conflict by trying to identify and compare the labor regimes that support the different development visions that have been part of it: agricultural modernization, sustainable development, and restorative conservation. The labor regimes encoded by these different development visions, I argue, are characterized by the tension between their concrete unfolding and their abstract representation. This tension is expressed as the contradictory unity of situated labor processes and performative representations of productive and reproductive labor. While there are meaningful differences between these different labor regimes, I argue that they are ultimately characterized by a subsumption of ecological work under ecological labor, a major impediment to a lasting solution to the groundwater crisis.

Ecological Labor: Environmental Care and Exploitation in Coastal Alaska

What it means to make a living in coastal Alaska has shifted. As climate change, global competition, and geopolitical instability reshape extractive industries, many tout their approach to the natural world as care rather than conquest. This rhetorical shift has salient effects for those charged with cultivating, rather than capturing, ecological value. In this paper, we draw on ethnographic research across two different coastal Alaskan regions to examine the rise of emergent modalities of environmental care work, which we theorize as ecological labor. Constituted by

everyday enactments of attentiveness, attunement, and stewardship, ecological labor enlists historically feminized and racialized qualities of work for new projects of environmental recuperation. Through an engagement with Marxist feminist scholarship, recent debates over value theory, and analyses of extractivism, we explore how these changing relations alter residents' engagement with one another and nonhuman species. Our research suggests that rather than reversing the longstanding devaluation of gendered and racialized labor, the ascendancy of environmental care in creating economic value introduces fresh angles for exploitation, as the costs of preventing, repairing, and mitigating ecological degradation are foisted onto workers themselves. At the same time, the reciprocal exchanges that sustain life in coastal Alaska continue to provide a picture of what life beyond capitalist labor relati

Between Ecological Labor and Green Jobs : Capital and the Cost of Sustainability

In response to anthropogenic climate change, "green transitions" promise to reconcile environmental care with economic growth. Yet dominant approaches to greening the economy often ignore how capitalist accumulation—and the labor regimes and struggles it entails—fundamentally shape what counts as "nature" and sustainability. This paper compares two contrasting cases. In rural France, the ecological work involved in sustainable housing construction struggles to gain recognition as waged ecological labor, remaining unpaid and undervalued as a form of reproductive work within households and communities. Because it cannot be commodified or scaled, it is often dismissed as a lifestyle choice or futile activism, slowing thus its broader adoption. In Greece, "green jobs" in solar park construction are celebrated as sustainable employment, yet they remain detached from ecological care. These projects depend on precarious labour and cheapened land, while raising deeper questions about extractive supply chains and energy justice. In both cases, capitalism refuses to pay for the conditions of its own reproduction—whether through unpaid/undervalued labor or the appropriation of land—while simultaneously capitalizing them. Together, these cases reveal how capital shapes not only ecological degradation but also the limits of ecological solutions.

Between green cooperatives and heavy industries. Diverse regimes of labor and value in a Bulgarian industrial town

Steel workers and miners in Pernik, a Bulgarian post-socialist industrial town, often keep ties with systematic small-scale agricultural work. This paper analyzes industrial workers' parallel activities in rural places and their struggles to deal with diverse regimes of labor, including ecological labor, and legal regulations that often jeopardize the continuation of their agricultural work and communal animal breeding. By taking into account a variety of practices, ranging from family food

production to village green cooperatives, I ethnographically look at how formal and informal work relations in both industrial and agricultural sectors intertwine with relations of social reproduction: tensions and divisions at the industrial shop floor cannot be understood without taking into account workers' activity in the land and vice versa. The ethnography will look at workers' struggles and claims for green economies and ecological forms of labor and it will explore how sustainably working with the land takes forms of resistance to ongoing and deepening precarization.

4666 Empire's Ghost: hauntings of labor, mobility, and postcolonial aspirations

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR B2 (3rd fl)

Type: Roundtable/Town Hall

This roundtable proposes to explore the hauntings of empires and the ways in which their labor and land regimes continue to dictate (im)mobility, aspiration, embodied interaction, and postcolonial navigation. We examine how the afterlives of empires and colonial histories persist in material infrastructures, regimes of labor migration, affective attachments to eliteness, and structures of local economy. These colonial inheritances contour the ways people live, move, and imagine their futures. In attending to the modes by which individuals and communities navigate, contest, and are constrained by these imperial formations, we ask how decolonial, postcolonial, and anticolonial aspirations are shaped-and at times enclosed-by the very histories they seek to transcend.

We examine how the various ghosts of empires crystalize/materialize in local contexts: how "elite" becomes an increasingly aspirational class positionality in Cairo, Egypt, where reproducing postcolonial elite subjectivities through gated community securitization increasingly demands entrenchment in new and precarious regimes of consumer debt; how the military sex industry, formed through Japanese colonialism and US military imperialism in South Korea, continues to persist despite the post-Cold War downsizing of US military forces and how it shapes the contemporary (im)mobility and gendered labor of migrant sex workers; how, amidst the post-COVID surge in remote work, European "expats" in Tangier, Morocco pursue upward class mobility and lifestyles inaccessible in their countries of origin, even as their presences and everyday practices echo and reproduce the spatial and social hierarchies of earlier French and Spanish colonial labor and mobility regimes; how the embodied labor of demining-the removal of landmines planted during Yugoslav colonial rule in Kosova, the sanitization of violence from the border, and the paranoid navigation of mined land-informs political horizons and shapes emancipatory imaginaries of the future as well as the reframing of the past.

This roundtable invites participants to think with the ghostly: how do the specters of former colonizers, cosmopolitans, and infrastructures of empire persist in the shaping of contemporary aspirations, routes of movement, and embodied encounters with space and economy? What

happens when efforts to carve out new futures, through relocation, infrastructural rearrangement, and political reimagining, collide with the residual architectures of colonial power, revealing the uneven terrains upon which postcolonial life unfolds? How can anthropology study affective attachments, shadowed movements and labor, and informal economies through the cultivation of ethnographic sensibilities attuned to the invisible? Can the ghost of empire be exorcised-is it a residual remain that weakens and disappears, or does the rotting flesh of empire have the possibility to bring forth terrifying rather than liberatory futures?

Venue: Marriott **Room:** Balcony J

Type: Oral Presentation Session

Our work (re)turns to the question of experience. Experience has generated a contested terrain in social science. Scott (1991) observed how "What counts as experience is neither self-evident nor straightforward; it is always contested, and always therefore political" (797). How should we conceptualize evidence in our work as anthropologists? In our research and practice, we prioritize the primacy of lived experience as essential. The immediacy of experience in our research and writing is a decided decolonial and feminist approach to both. Drawing on our work across adolescent mental health, bioethics, hidden labor, and contested processes of recovery, we make explicit the value of lived experience and prioritize it as a feminist method in our shared knowledge production and advocacy work.

This panel invites us to sit in the scholarly discomfort with the unfinishedness of experience (Biehl and Locke 2017). We push each other and ourselves to consider: In what ways is experience made equitably and ethically explicit and when is it rendered invisible? Whose experience is (de)centered and when? What can individual experience tell us about what is shared? And how can we or must we find value in experience when it cannot? In colonial contexts that haunt, is there such a thing as a finished experience? How do structures interplay with lived experience in ways that they become more than structure, fundamentally orienting and organizing our engagement with the world (Jenkins 1991, 2015)?

By centering experience, we highlight the moral commitment to understand structures, institutions, ideologies, and wider dynamics of power as they are lived.

Presentation(s): (Re)Considering Recovery: Temporality, Healing, and Real Life after Addiction Treatment in the United States and México.

Cultural understandings of addiction, proper treatment, and what recovery should look like vary dramatically between persons, institutions, and nation-states. These differences can radically alter the life and experience of those who encounter them, as these models and experiences through them are tied to broader state constructions of affect (e.g. Jenkins 1991). For example, community-based, residential addiction treatment centers in Tijuana, MX all have distinct formulations of what recovery looks like within their particular therapeutic model. However, this does not always match inpatient conceptions of recovery, either while in treatment or when they leave. This paper asks: what is (successful) recovery? Who has the authority to decide? How does the lived experience of residential treatment influence this? After reviewing the institutional model for recovery at one 12 Step center, I discuss the everyday experience of time for three women. I focus on how their individual experiences within the same treatment model translate into differential recovery trajectories. By exploring how hopes, dreams, and setbacks (e.g. lapses) factor into their experience of time, conceptions of self, and ideas of future possibility, I examine the healing process as moral laboratory in which inpatients struggle to enact morally valued personhood (Mattingly 2014). In doing so, I present an argument for a more individualized understanding of what counts as recovery, in Tijuana and beyond.

Presenter(s): Ellen Kozelka

In the Absence of Expectation: The Gendered Labor of Waiting and the Category of Complaint

In this paper, I consider the gendered labor of waiting among kin in Valadares, Brazil's emigrant capital. Focusing on mothers who wait for departed children and partners, I argue that waiting often occurs without expectation of return. It could happen, but is also understood and navigated as part of a political ethos (Jenkins 1991, 2015) shaped by departure, loss, and unrealized returns—an ethos characterized by this precise sense of uncertainty and contradiction.

I explore complaint as a gendered social practice that, as Callard (2021) notes, is intimately political. Weaving the personal and collective—yet stripped of any qualifier, resolution, or antidote of suggested action—the complaint is a category of speech and practice that guides the gendered

labor of waiting. Even if not for someone, something, or some object—even in the absence of expectation—the complaint holds together the ambiguities and contradictions that characterize this ethos and invites engagement with a politics shaped by haunting. These politics, as Rahimi frames, are animated by a "yearning for fairness [...] and moral coherence" that defies legal or institutional solutions (2025,1). The complaint is intimately political and yet allows politics to remain necessarily unresolved. It evokes un-lived but real experience—transmitted, anticipated, and embodied—that, within this political ethos, grapples with the possibility of return: felt, labored for, and awaited, yet ultimately left open.

Presenter(s): Angela Leocata

Coraje and Resentment: Adolescent Lived Experience, Evil Spirits, and the Impress of Political Grief

In the United States, the prevalence of adolescent depression and anxiety has increased in the past several years mirroring larger global trends (Daly, 2021; GBD, 2022). However, the lived experiences of Latinx adolescents living within social environments marked by several forms of structural violence (racial, gender, economic) remains largely limited. In this paper, I draw upon four years of team-based, ethnographic research on Latinx adolescent mental health in the U.S./Mexico border. I explore the ways in which feelings of depression, anxiety, and anger emerge as emotional traces left behind by familial, social, and political forms of abandonment and betrayal. For adolescents in this study, seen and unseen forces, evil spirits, and noxious energies bear the capacity to influence everyday interpersonal relationships and emotional health. In this way, adolescents express mental health conditions not simply as a matter of illness and distress, but rather as intimately connected to the groundswell of spiritual, emotional, and affective life. By attending to the points of view of early adolescents (10–13-year-olds), this research contributes to our understanding of the ways adolescents make sense of the struggles they face in their everyday lives, the feelings associated with the navigation of insecure environments, and the intersections between developmental processes and moral experience.

Presenter(s): Giselle Sanchez

Lived experience, ethical frameworks and public engagement in clinical research

Lived experience is challenging to include in ethical frameworks for biomedical research because, unlike clinical measures of safety and efficacy, lived experience cannot be quantified. Nonetheless, a clinical approach to benefit-to-risk calculus does not account for research subjects' decision-making processes and values, which are always contingent upon relational and political experience beyond the research setting. A further challenge is engaging a wider public to consider how biomedical research and ethical frameworks represent, or fail to represent, shared values. This paper first considers the perspectives of individuals participating in or overseeing prenatal genetic research, including the seeking of prenatal genetic information and the seeking of experimental in utero treatments. It then considers how these perspectives can be most constructively shared with the public, to improve communication of experiences and values and overcome the abstract nature of ethical frameworks and clinical measures.

3783 Ethnography of the University: Student Life

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Balcony M

Type: Oral Presentation Session

What is a University? This may seem like a simple question, but answers may be surprisingly divergent. Indeed, if we reflect deeply on the word "university", we may find it difficult to define-it has many diverse connotations: higher education institutions, students, academia, etc. The Ethnography of the University project was founded by Professor Nancy Ablemann at the University of Illinois, and Professor Tania Li initiated a parallel project at the University of Toronto in 2012. The Ethnography of the University involves analyzing the University itself: as an institution and as a system. To conduct such an ethnography, a theme is assigned every year. The theme for 2024 is "Student Life".

"Student Life" is a normalized concept within the contemporary university system. As a concept, it indicates an institutional-wide attention on students' academic as well as non-academic life - "well-being" - within the university. At the University of Toronto, as in many other higher education institutions, this concept is realized institutionally as a student services department. As a department, it indicates a new form of "management", or potentially "governance", towards the students: their extracurricular activities become "called up", visible, and categorized as a newly formed "category" that is managed by so-called "higher-education" experts and professionals (Li 2024). It aims to facilitate learning, enhance well-being, minimize stress, and promote a healthy and productive university experience (Li 2024). Student Life's website (<https://studentlife.utoronto.ca/>) advertises the department's diverse programs and wide-ranging services, making it appear to be a dedicated service sector just for students. Yet, most University of Toronto students are either unclear about this department or have no idea about it.

So, what is Student Life and what does it do? Is it just a new form of student governing apparatus, or is it actually "for" students? How did this department develop these student programs and what "problems" are they intending to address? Furthermore, who are the staff working within, and what and how do they work? In our presentation panel, we use ethnographic methods to examine three sectors of the Student Life Department at the University of Toronto: 1) the Central and Administration Sector, 2) the Learning Strategy Support Sector, and 3) the Student Club and Leadership Development Sector. We collect and analyze the stories and experiences of staff and students involved in the operations of Student Life to understand what Student Life means to them. And, in doing so, we propose potential rethinking towards the University as such. This project can be both thought-provoking for other peers/scholars to reflect on the current education system and be pedagogically inspiring for other Anthropology professionals to know and teach about undergraduate-level ethnography.

Presentation(s): The Undocile mind: 'coping' with neoliberal education?

This is an ethnographic research about the staffs in Student Life's Center of Learning Strategy Support (CLSS). There is a 'gap' inside the neoliberal education system: it constructs an idealized 'successful student' image but does not provide any clues on how to become 'successful'. Helping students achieve academic success is the work of these Learning Strategists. Examining their counter-hegemonic stories in the workplace, this paper suggests that their way of navigating the contradictions is a strategic use of the 'gap' in 'rebelling' against the neoliberal education system. Since neoliberal education does not regulate the way to become 'successful', Learning Strategists 'sneak' their resistance forces into the regime by: 1) suggesting a collaborative relationship with the student rather than leading them, 2) providing alternative ways of thinking about the student subjects, and 3) affectively passing the concept of 'help' and inviting students to iterate the practices. Besides, this research also denaturalize individuals' 'docile body': no one is naturally born with a docile body/mind and 'willing' to be disciplined.

Broadly speaking, this research is about navigating contradictions. No matter how hard we critique neoliberalism, we are unavoidably neoliberal subjects. Through my research, I wish to offer everyone an alternative lens to reflect on ourselves inside the neoliberal regime: as neoliberal subjects, how should we live inside the paradox?

Presenter(s): Lukey Lu

Student Engagement: Concretized Student Leadership

This research explored the function of Student Engagement (SE), a section under the University of Toronto's Student Life Department, in concretizing student club leadership development. Under the historical background of newly-emerged formal leadership training, by employing ethnographic interviews, document analysis, and limited participant observation, the author explored the necessity and the operation mechanism of this program. The research found that the practice of Student Engagement includes three core dimensions: 1) individualized leadership, which emphasizes autonomous exploration and experiential learning; 2) concretized leadership, which turns abstract concepts into applicable skills; and 3) connective leadership, which enhances inter-student group cooperation by shared spaces and general events. The project design of SE integrates student feedback, theoretical frameworks, and professional expertise, reflecting the increasing complexity trend in higher education institutions. The findings emphasize the role of student engagement as a bridge between university policies and student needs, constructing leadership development as a process that is both supporting and empowering. The

professionalization of leadership training reflects the university's emphasis on students' holistic growth and highlights the increasing necessity of structured leadership training in modern universities.

Presenter(s): Yunshan Li

The "Identity Crisis" in the Work of Learning Strategy: An Ethnographic Glance at UofT's Fragmented Support Landscape

What does it mean to say "learning how to learn" at one of the world's most academically demanding universities—and what tensions arise when this mandate is both pastoral and institutionally constrained? Drawing on four months of ethnographic fieldwork at the University of Toronto's Centre for Learning Strategy Support (CLSS), this paper examines how learning strategists negotiate their identities within a fragmented and neoliberal higher education system.

Tracing CLSS's evolution from holistic academic-psychological support to its current focus on metacognitive strategies, this shift reflects broader institutional trends: the "rendering technical" of complex student struggles and the fragmentation of care in the context of a diversifying student population. While learning strategists remain committed to providing individualized, affective support, students are ultimately responsible for navigating a fragmented system that extends beyond their professional boundaries. The resulting identity crisis for those professionals is symptomatic of a broader transformation: the systemic imperative to shape all actors as self-managing agents within an increasingly distributed infrastructure.

Presenter(s): Yihang Xu

Power through Professionalization: Power Dynamics in Student Peer Mentorship

At the University of Toronto, Mentorship and Peer Programs is an institutional division that, among its other responsibilities, designs, organizes, and implements textual resources as well as interactive workshops for training students to become quasi-professionalized peer mentors. Based on ethnographic research using interviews, immersed observation, and document analysis, I argue that professionalization is the general process whereby student mentoring relations are incorporated into U of T's regime of governance. More specifically, I argue that, from a subjective perspective and at the discursive level, "peer mentorship" tends to be experienced by its practitioners as an exercise of a professional negotiation between the exercise of what Michel Foucault calls pastoral and governmental powers. However, from an objective perspective and at the practical level, "peer mentorship" is in effect a technical management of student social relations: Student peer mentorship is rendered a technical object used as a solution to a host of problems perceived by various administrative units in the university. Theoretically, viewed as a case study on how power operates, this work may contribute to an elaboration of a particular configuration in which different modes of power interact in what Foucault calls the "witches' brew".

Presenter(s): Richard Wu

Understanding the Experience of Neurodivergent Students in Higher Education

This study proposes an investigation into the experiences of neurodivergent students in higher education, with a focus on how institutional accommodations are accessed, interpreted, and navigated. Drawing on the principles of Universal Design for Learning and inclusive pedagogy, the research challenges deficit-based models of neurodivergence by foregrounding students' lived realities. Using a mixed-methods survey distributed among undergraduate students — including both neurodivergent and neurotypical participants — the study aims to explore how factors such as stigma, diagnosis, administrative barriers, and cultural background shape access to academic support. It also includes insights from interviews with a neurological team lead at the university's Accessibility Services, offering a complementary institutional perspective. Special attention is given to the experiences of international students and those without formal diagnoses, whose needs often fall outside standardized support systems. By incorporating both student and institutional viewpoints, the study seeks to identify systemic gaps, highlight underrepresented voices, and promote more culturally responsive and flexible approaches to accessibility. Ultimately, this research aims to contribute to ongoing conversations on educational equity and to support a shift toward inclusive structures that recognize neurodiversity as a form of human variation rather than a condition to be accommodated.

Presenter(s): Duofei Liu

Student Life's Strategic Plan: an Ethnography of Organizational Culture in Higher Education

Social institutions, such as universities, both engage with and continuously construct values and practices, creating a symbolic identity and subjectivities, from student subjects to professional employee subjects. My ethnographic research at Student Life (i.e. the division of Strategic Planning and Annual Reports) examines the practices in the production of mission statements and reports and the rationality/mode of reasoning applied to making the abstract goals enunciated in SL's Strategic Plan actionable, legible, and measurable. I examines three modes of reasoning of particular importance. The first concerned fungibility: the large scope of services offered and the complex needs of students should and could be firmly categorized to meet the criteria required by government/stakeholder economic policies. The second mode foregrounded a link between substance and form: curated language and imagery could successfully reflect SL's intrinsic values. The third mode hinged on professional training: the skills required to write a strategic plan or conduct assessments of organizational changes could be attained through formal academic and professional training. By categorizing diverse services to align with funding policies, crafting narratives and visuals to convey coherence and inclusivity, and cultivating expertise through professional training, SL exemplifies how institutions navigate the pressures of accountability to students and stakeholders while maintaining its legitimacy.

6684 Four Field Anthropology after the Flood: Responding to Climate Catastrophe in Western North Carolina

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR D2 (3rd fl)

Type: Conversation/Debate

On September 27, 2024, Hurricane Helene ravaged western North Carolina. Normally tranquil rivers and creeks swelled to unprecedented levels, flooding low lying places and ripping bridges, cars, and homes into the current. Landslides carried mountainsides downhill, along with buildings or roads once perched there. Winds snapped electric poles and trees, leading to short-term power outages and long-term devastation to forests of Southern Appalachia. The people of western North Carolina lost over 100,000 homes to Helene and suffered nearly \$60 billion in damages. Over 100 people died, and others are still missing.

Months later, the landscapes and lives affected by Helene remain transformed. Bureaucratic red tape and lack of funding continues to slow recovery, as residents wait for financial support to repair and rebuild their homes, communities, and lives— all in a region with more people living in poverty than the national average. As anthropologists who live and work here, we ask, what is the role of anthropology in communities impacted by a "once-in-one-thousand-year" storm? What does it mean to take part in the experience of and the recovery from a historic flooding event? How can anthropologists use the methods of the discipline and resources from our institutions to support communities?

Floods are part of the fabric of Southern and Central Appalachia. The memories of past floods endure in family stories, the bends of waterways, networks of care, and decades-old spectres of interrupted infrastructure. The people of Appalachia are no strangers to environmental disasters. In 1972, the Buffalo Creek Flood in West Virginia killed 125 people. In 2022, severe thunderstorms in Kentucky caused deadly flooding made worse by unreclaimed surface coal mine sites. In March 2025, wildfires spread through areas of western North Carolina that were already devastated by Helene, compounding the very real consequences of global climate change.

In this context, a community-based, applied anthropology can transcend disciplinary divides. This calls for conversations across temporal frames that consider how fractured ecologies are embodied, how community priorities have and will continue to shift, and how to describe this particular event within a new understanding of storm presence and strength. We bring together anthropologists from the four fields to discuss the possibilities for rethinking what anthropology is and what it can do when "historic" storms and climate disasters escalate in scale and frequency. From archaeological monitoring along rivers where floodwaters commingled centuries-old and contemporary material culture, to working with farmers navigating a new growing season within a changed ecology, to assisting and documenting the efforts of mutual aid networks, this session navigates the emergent, ever-changing meshworks of community care that connect resources to needs in surprising, creative, and hard-to-follow ways.

7432 Ghostly transformations: Embodied Manifestations in Landscapes of a Lingering Present

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Nottoway (4th fl)

Type: Oral Presentation Session

Our panel is inspired by the idea of "constant transformation". It explores ghostly embodiments manifesting themselves in landscapes experiencing armed violence, dispossession, and extraction as traces of struggles that linger between past, present, and future across geographies. A city shaped by war and reconciliation, an unfulfilled mining frontier heavy with the echoes of extraction, a river flowing through constant and evolving dispossession, ancestral conversations on agency across volcanoes and islands, the contested sacredness of "destroyed" temples, and remnants of old Chinatowns that act as evidence of indispensability of migrant communities.

We visit lithium landscapes in Bolivia resisting their colonial mining history, yet depending on extractivism to obtain "progress". We then center on collective memories that are being made and kept in the Orontes River in Antioch which simultaneously meanders through and embodies organic and chemical materials. Such remnants of the past are also present within the agentic (and ghostly) capacities of material entanglements as they unsettle commonsense and disrupt the existing social relations in Indonesian archipelagos where volcanoes and islands struggle to find agency through ancestral knowledge and storytelling. Thus, we question how, in landscapes of racial and settler-colonial violence on the foothills of D.C. and California, the ghosts left behind help—or not—balance Asian American activists' claims to justice. Lastly, we look at how demobilized female combatants in Medellín, Colombia try to merge into "mainstream" society, while being haunted by their "warrior" past. In other words, we explore human and other-than-human aspects of these transformations, their possibilities, and limitations. What happens when ghosts manifest in and transform the very grounds on which they inscribe the past and traverse the present?

Presentation(s): From the Jungle to the City: A Story of Reincorporation of Female Demobilized Combatants in Medellín

This paper takes place in Medellín, Colombia, a city haunted by its violent past, which transformed through "innovation" (voted most innovative city in 2013). The city is facilitating the reincorporation of demobilized combatants from the Fuerzas Armadas Revolucionarias de Colombia (FARC), who, after waging war in the Colombian jungle for over 60 years, surrendered their weapons in 2016. Their resettlement in an urban setting has put them in a liminal phase. Not fully city dwellers nor "jungle people", they try to discover and reinvent themselves in a place not made for "leftist insurgents." As they merge with the city, they are forced to put their past aside, feeling pressure to hide their identities as former guerrillas to fit into a politically conservative city. Yet, their past continues to haunt them in unexpected ways such as economic precarity, stigma, and fear of exposure. This leads them to re-invent the meaning of social reincorporation.

Presenter(s): Anamaria Trujillo

The Emergence of a Desert Landscape: Lithium Dreams in Uyuni

The Salar de Uyuni, in the southwest of the Bolivian altiplano is a vast and flat expanse of salt, filled with 20 million tons of lithium which remain mostly "unexploited". Unlike other mining sites on the Bolivian altiplano which are currently being exploited and/or have been depleted leaving ghost towns behind (the silver mines of Potosi, Pulacayo, etc.), lithium extraction has not been able to fully materialize. Lithium, in the Bolivian political discourse, represents a rupture in the continuous plundering of resources by foreign companies since colonial times and is supposed to be the key to open a path for industrialization with the national production of batteries. Progress has been hindered due to technical, political, and geographical reasons. Echoes from the past, which are being instrumentalized in political agendas, are heavily resonating in Uyuni and in all conversations around lithium. In this paper, I am focusing on the (ghost) histories embedded in this space/place. By following Uyuni through the explorers and natural scientists who described it, in the accounts and maps produced since the 1825 Bolivian independence, I try to unearth a localized and situated genealogy of extraction in order to understand what could set this specific region apart from other histories of extraction in the Bolivian altiplano. Can lithium in Uyuni break with a Bolivian history of resource extraction and open a new space for alternative temporalities?

Presenter(s): Caroline Risacher

The River Remembers: Loss, Infrastructure, and Politics of Flow in Lower Orontes Basin

Orontes River rises in Lebanon's Beqaa Valley, flows through Syria, and meets the Mediterranean in Antioch, Turkey. Defying coded understandings of rivers by flowing northward and crossing mountains inspired its local name, Asi ("rebel" in Arabic)—long before its division into three nation-states following the dissolvment of French mandate in the Levant. This fragmentation, alongside

modern extraction, militarization, and infrastructure projects, mirrors the struggles of local communities, particularly Arabs and Armenians who have been subjected to genocide, dispossession, and assimilation. Once strong enough to host commercial ships, Orontes has become a debilitated and polluted nuisance for Antioch's locals, and recent 2023 earthquakes deepened this melancholia by turning the river into a massive flowing graveyard of human bodies, rubble, and hazardous chemicals. This study explores Orontes not merely as a vehicle or site of oppression but rather as an active holder and maker of material and collective memory of its cohabitants.

Presenter(s): Irem Aydemir

The (un) told stories of the earth in the (un) making of silence

This paper centres around the stories of one of the most famous volcanoes in the world: Merapi (Indonesia), as told by entities beyond the human; ancestral conversations that are often silenced by the hegemony of scientific knowledge and the state, but are key to understanding how extractivism in the mining industry is perceived, experienced and resisted in Indonesia. This paper centres around ghosts ('pasar malam') at the Merapi Volcano in Java, and their agency in re-negotiating power relations around the mining industry. Through storytelling, this piece will critically engage with ancestral knowledge systems that have been muted by industry and science, and will zoom in to what animates mountains perceived as gigantic and somehow inaccessible, becoming spaces of chaos for the nation-state. This talk is divided into two parts: fire and air. Fire (Merah Api) will centre the agency of volcanoes as epicentres of epistemic disobedience involving more-than-human power, and a second part: Air (the sounds of the 'pasar malam') will connect all the spaces of everyday resistance offering a picture which invites the reader to continue the conversation beyond essentialist narratives and approaches to environmental extractivism and those who resist it. Ultimately, this talk concludes that silence does not exist and that to become muted is also a form of resistance where entities beyond the human engage in disobedience in regimes of knowledge that discriminate against them.

Debt, justice, and all their ghosts: On philanthropy and Asian American activism in the settler colony

In 2022, a small nonprofit based in Chinatown, Washington, D.C., dedicated a memorial at Congressional Cemetery to the first Chinese residents of the city. They were buried there, alongside members of Congress, other prominent Americans, and Native leaders, during the years of Chinese exclusion from the United States, though their bones were later disinterred and shipped back to China. Also in 2022, the same organization began a survey of the remnants of old Chinatowns in the valleys and foothills of California, preparing for the nomination of Summit Camp, above Lake Tahoe, as a National Historic Landmark. The camp contains artifacts of Chinese laborers who dug through the Sierra Nevada to build America's first transcontinental railroad, but its rocks are also the site of Native glyphs and art. Drawing from research on the relationship between philanthropy, nonprofits,

and Asian American activism, I show that these traces of nineteenth-century Chinese have become integral to narratives of Asian American contributions to American nation-building, which in turn galvanize the demand for philanthropic investment in contemporary Asian America. These accountings for debt necessarily elide the theft of Native land and life while also conjuring their presence in performances of solidarity. On these palimpsestic landscapes of racial and settler-colonial violence, how does Asian American activism balance its claims to justice with – or in spite of – all the ghosts left behind?

5487 Haunted Pedagogy: Confronting our Ghostly Moments, Students, and Histories

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Galerie 6

Type: Oral Presentation Session

All academic fields possess their own positive and negative legacies, which scholars must inevitably reckon with as they transmit disciplinary knowledge to new generations of students. In anthropology, important engagement of this kind includes calls for decolonizing pedagogical practices surrounding everything from course materials to classroom management styles. However, while such calls are very important, there are also subtler hauntings that afflict anthropologists as they take up the art and practice of teaching. This session hopes to bring attention to the less obvious ghosts that bedevil anthropological pedagogy. Participants represent various career levels, institutions, and (sub)disciplines, and perspectives range from the deeply theoretical to the ethnographically rich and profoundly self-reflexive. Taken together, our papers highlight the many ways in which pedagogical engagements necessarily evoke troubling pasts to explore a series of questions: how do institutional and disciplinary histories influence our coursework? What kinds of pedagogical failures are unique to anthropology and how do these offer important lessons for the future? How do memories of specific students haunt us throughout our careers? When can haunting-in its various forms-act as a helpful teaching tool? By engaging a range of pedagogical contexts, this session adds to current conversations surrounding the role of anthropology during these turbulent times in higher education.

Presentation(s): The Specter of Gun Violence in the Anthropology Classroom

Anthropologists are familiar with hauntings.

We grapple with the specters of scholars like Morton and Haeckel, striving to distance ourselves from the racist origins of our field. While our content is clearly haunted, so is the increasingly fraught context in which we teach—one haunted by spirits of students and colleagues facing deportation, racial and gender discrimination, income inequality, and the possibility of gun violence. I specifically address gun violence threats, which have sometimes undermined my effectiveness as an educator. Drawing on my experiences during lockdowns in anthropology classes—one at Washington University in St. Louis and one at Southern Utah University—I explore the impacts of such events on instructors and students. I build upon anthropologist Adam Johnson's reflections after surviving a mass shooting. Johnson invoked Durkheim to examine systemic issues underlying such violence. These issues, including inequality and discrimination, are embedded in complex systems. Even as threats of violence complicate teaching, they highlight the urgency of our work to understand and transform harmful structures. The American Anthropological Association is "dedicated to advancing human understanding and applying this understanding to the world's most pressing problems." I argue campus gun violence is one such problem—demanding we use anthropological tools to examine its effects on students and educators, and to advocate boldly for systemic change.

Presenter(s): Crystal Koenig

Probing Our Shared Past in Haunted Dwellings and Beyond in one Southern Town

Since my arrival at the University of Alabama in 2012, I have used Tuscaloosa, the college town where I teach, as a "lab" to help my students and the broader community learn more about our shared past and present. My efforts, which were chronicled in a recently published textbook, involve my inviting students to leave the classroom and learn about often challenging histories that animate the spaces on and off campus. The students are often eager because they have heard such dwellings, among them the newly renovated old Bryce hospital, are haunted. Ghosts are one thing, but storytelling is increasingly also haunted by what all gets said and what must be intuited as my students and I, and others, grapple with historical actors who, not unlike people still living today, were quite complicated. Whether talking about monied planters, an enslaved man turned freed architect, a mouthy governor's wife displeased with being unable to control her own property, a captured Union officer, and the unknown names of people who walked, slept, worked and inhabited our town, we push ourselves to know how the vibrations of stories linger, challenging us to insert our own selves into the narrative as revealed in an experimental video shared with an international audience. Ultimately, we are left with questions concerning how our own movements push the possibilities of what had once been and what can still be.

Presenter(s): Sharony Green

The Ghost of the Whiteman

White masculinity, clothed in the glittering apparel of Reason, refuses to give up the lingering ghost of its presence in anthropological knowledge. Its haunting hold on the production of Truth deploys a firm grip on the supremacy of human thought over that of felt experience in explanations of the world. The "final vocabulary" must be His discourse with the defeat of hysterical and inferior discourses of irrationality. When the anthropological Other speaks, the work of interpretation invariably necessitates a coded translation from their natal sensibility to our modernist algorithms of phallogocentric authority. Ethnographers, trained to be loyal to the patriarchal natality of the discipline, usually end up privileging loyalty to universalist notions of Reason, leaving the relative reality of the Other in its obscure home vocabulary. In such paradigms, the ghost of the Whiteman lingers long after the flesh of his presence has departed.

Presenter(s): George Mentore

A Feminist Anthropologist Caught in a Feminist Hell: A Haunting Year of Teaching

As a feminist anthropologist I am committed to dismantling the hetero, cis, white, male able-bodied legacy of our field. Nevertheless, I must teach alongside the hauntings of anthropological offences of both long-ago and not-so-long-ago, which tends to precipitate an anxious self-reflexivity and incessant self-critique. It is an ongoing striving for a pedagogical project grounded in asking how can I do my best to cultivate a new inclusive and justice-oriented anthropological enterprise. So, what happens when our feminist projects are voided through dark encounters with a student, THE student. The one who haunts us. The one whose words, behaviors, and allegations mobilized a project of persecution borne from our own disciplinary reconciliation with past atrocities, and the ongoing crucifixion, of other discipline's continued imparting of the anthropologist-as-colonist. In this paper, I confront the haunting presence of a lone student who, in their condemnation of our discipline and me as the "problem embodied", contributed not only to the killing of historically marginalized voices in the classroom, (those whom they believe to be "saving"), but also bedeviled my own pedagogical project, leaving me to wonder, much like Vincent Lloyd (2023), what are the boundaries between an anti-racist, feminist agenda and Luciferian cruelty? And what might we learn from such tales of infamous student hauntings?

Presenter(s): Eva Melstrom

Cultivating "Big Mind" and "Big Heart": Pedagogical Practices of Collaboration and Care

Most doctoral programs in anthropology don't require courses in pedagogy, but anthropologists who enter the academy are expected to teach. Couple that with the fact that many faculty report negative experiences with their teachers/mentors during their graduate studies. Why does anthropology, rooted in care and concern for human beings, not include pedagogy courses in our graduate programs, while we are expected to submit statements of teaching philosophy for academic positions? Will new anthropologists reproduce the hauntings, good and bad, of their pedagogical pasts?

In this paper, I will reflect on a week-long yoga teacher training course I took titled, "The Art of Teaching," which has profoundly affected how I teach anthropology. Indeed, yoga and anthropology share many philosophical and methodological similarities: they require patience, listening skills, attention to language, curiosity and reflexivity, and cultivating knowledge and awareness beyond the provincial. At the yoga temple where I study, the roots of teaching are guided by the following principles: kindness, inquiry, non-clinging, seeing oneself as relative to the whole, having energy and courage, and trusting the way. In this paper, I reflect on two negative experiences I had as a student of yoga and of anthropology and how, through "The Art of Teaching" I learned to craft nurturing and collaborative learning environments in my anthropology classes.

Presenter(s): Natalie Bourdon

Confronting Postcolonial Ghosts While Leading an Ethnographic Field School

As many postcolonial ethnographers have shown, long and tragic historical cycles of resource extraction complicate the processes of fieldwork. In contexts where colonial regimes have benefitted from forcibly plucking Indigenous people, minerals, artwork, and knowledge from their communities, how do we conduct ethnography without repeating these cycles? One of several possible answers includes the age-old concept of reciprocity, suggesting that ethnographers seriously consider the contributions they can make to their research communities. This is easily taught in the classroom, but what about the field? In this presentation, I draw on my experience leading a nascent study abroad program to a rural Kekchi Maya village in Southern Belize to ask: how do we confront postcolonial realities without making our ambitious and wide-eyed students complicit with their ghosts? In exchange for novice ethnographic training, our group bolsters the village's increasingly vital cash economy and provides other material and educational support that directly and indirectly benefits many people. But this is not true for all villagers. Our group also contributes to burgeoning inequalities and other social conflict, prompting difficult emotional and ethical questions among students and professor alike. I reflect on some of these questions and the early lessons I have learned while working to craft a more just and principled student experience.

Presenter(s): Matt Newsom

5512 Hidden Figures: "Political" That Hide in Space in Time

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR B3 (3rd fl)

Type: Oral Presentation Session

Anthropologists have long critiqued the gatekeeping of realms associated with "the political." While our social science counterparts have been drawn to the more well-guarded political sites of elections, political parties, and well-defined social movements, anthropologists have studied political movements from the margins, showing how ethnographic analyses of power reveal a much

more capacious arena of what should be considered "political." In recent decades, anthropologists have studied political movements through the lens of everyday forms of resistance (Scott 1985), social nonmovements (Bayat 2007), unmovement (Howe 2016), crowd politics (Chowdhury 2019) and other explorations of motion implicit in movements.

This panel asks: how can we study contemporary movements and practices that are not predicated on momentum, and rather occupy liminal spaces that are not visible or spectacular in public spheres? How do we see and represent political actions that hide in space and time and what are the stakes of doing so? What types of methods, lenses, and questions should anthropologists use to study political spaces that are hidden, concealed, and effuse?

By exploring the hidden, concealed, or invisible elements of political organizing, this panel brings together papers exploring less visible forms of social and political practices undertaken by ordinary individuals or those who may not be associated with organized, political movements. In the context of growing media surveillance, punitive state politics, and threats of violence, attending to hidden figures and practices offers alternative ways of reimagining political decision-making, leadership, and organization in neoliberal and autocratic landscapes. This panel particularly seeks discussions of hidden figures and movements that include gender, ethnic, or other minority groups across various axes of differentiation.

Presentation(s): Space of Assembly: Black Youth Storying, Space, and the Politics of Becoming in Cartagena, Colombia

What happens when we take seriously the self-storying practices of Black youth as method and political labor? This paper centers practices of assembly as both a method of self-construction and a political practice that emerges from the spatial and affective labor of Afro-Colombian youth struggling against gendered-racialized criminalization and state violence. In Cartagena, Colombia, the Black youth association Benkos Ku Suto has organized and trained Afro-Cartagenero youth as political subjects through radical political education and grassroots organizing since 2002. Drawing from over six years of participatory ethnographic and archival research in Cartagena, I explore how practices of *parchar* (to hang out) emerge and are narrated as spaces of political formation and community reconstitution. In *el parche*, youth narrate how they come into relation through forms of invitation that operate as a structuring force for building political worlds in the wake of accumulating violence. Drawing on Aimee Cox's (2015) attention to Black girls' storying, Saidiya Hartman's (2018) theorization of wayward assembly, and Rubén Hernández Cassiani's (2014) writing on Afro-Colombian micropolitics, I argue that rather than conform to coherent forms of resistance that fit dominant registers of political impact, Afro-Colombian youth offer a grammar of

political becoming grounded in improvisation, intimacy, and the feeling of presence central to the affective dimensions of Black political life.

Presenter(s): Jameelah Morris

Populism and the Suspension of the 'Political' in Contemporary Poland

Populism has surged back into use in anthropological debates with the consolidation of increasingly populist regimes and rhetoric in Europe and the Americas. Yet underlying populism is a paradox: while at the level of discourse populist movements' leaders draw a clear-cut distinction between 'the common people' and the 'enemies', many of these also claim to stand outside of the 'political'. Drawing upon ethnographic information collected in Poland, the paper discusses practices undertaken by individuals organizing walking tours, who set out to present accounts of historical events from the perspective of the 'common people'. Despite the populist character of these initiatives, its organizers refuse to be associated with organized political movements, and seek instead to promote a vision of Polish history as something 'made' by the 'common people'. The narratives and aesthetics developed by these individuals center on the suspension of the 'political,' suggesting that there are symbolic spaces irreducible to formal politics despite their association with Polish political history. Paradoxically, although the cultural logic of these activities centers the suspension of the 'political', they continue to produce significant political effects. This paper argues that anthropologists are well situated to contribute to understanding populism's 'non-political' nature by focusing on the sites where populism itself happens, which are not reducible to spaces of institutional governance.

Presenter(s): Jaro Stacul

Fiction as Cover: Technologies of Disguise in Kampala's New Political Frontiers

In 2019, Bobi Wine – a famous Afrobeats singer – announced his candidacy for president of Uganda, representing the most formidable opponent in recent history to the thirty-five year incumbent, Yoweri Museveni. In what was deemed a far from fair and free election, Wine lost in the midst of some of the most acute political violence since Museveni's rise to power in 1986. The scars of the election marked my fieldwork in Kampala from 2022-2023, as the public spaces for political organizing of any kind became narrower in a city with heightened state surveillance and frequent reports of politically-motivated disappearances. This paper explores the "political" deemed possible when political organizing itself could be a prison sentence. Using a book club as my ethnographic starting point, I chart the different technologies used to disguise and shield collective political spaces. Using fiction or entrepreneurial branding, Kampala's new political frontiers often hide in plain sight. I argue that to see these new "political" requires both an ability to hold them in tension with neoliberal and illiberal formations as well as an understanding of the form of time within which they operate. Unlike progressive linear time where the political is measured by the outcomes of planned actions, the collective political spaces this paper charts operate within what I call the "time of somehow" – a sense of time that relies on the premise of crisis-proof futures that somehow work out.

Presenter(s): Katharine Lindquist

(Invisible) Leadership in Women's Activist Spaces in Urban Pakistan

The politics of leadership has been a central concern for scholars of social movement studies and anthropologists studying political movements of the 21st century. This literature has increasingly emphasized a shift from movements led by leaders to "leaderless movements" where decision making and strategizing are carried out by the multitude – quite literally the many. Utilizing 12 months of ethnographic fieldwork with women's rights activists and politically engaged women in urban Pakistan, this paper explores the politics of leadership within the women's movement through the lens of liminal actors who are alienated from leadership positions. While the women's movement in urban Pakistan is not leaderless, this paper attends to figures who do not occupy leadership positions within the movement, yet perform behind-the-scenes, critical labor and knowledge production in activist spaces. I argue that these actors provide "invisible" leadership to the women's movement, often becoming "more than leaders." In doing so, they are able to carve out opportunities for themselves that exceed the domains of the women's movement in Pakistan, and gain access to other gendered, transnational, public spheres.

Presenter(s): Sana Malik

1980 Home-Work: Rethinking Collaborative Methods in and with Community

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** MGB - Salon C

Type: Oral Presentation Session

While anthropologists have a long history of "going" to the field-as a site that is new or unfamiliar-fieldwork in an ethnographer's home community, however home may be defined for them, can pose barriers but also open up possibilities. We maintain that such "home-work" offers particular opportunities for decolonizing methodologies, collaboration, research designed and directed by interlocutors, and multiple forms of autoethnography that blur the lines of researcher-research participant. This session focuses on current graduate student research being carried out "at home" and with our own communities. We consider the potential for collaborative and autoethnographic research to disrupt the power imbalances that have harmed communities through unjust ethnographic practices. From the power of Indigenous hip hop artistry, to debates about water use among Lake Tahoe residents, to the place of Israel in the lives of American Jews, to intimate views of the daily lives of women immigrants and asylees, our projects center innovative methodologies as a way to coproduce knowledge, follow the leadership of community members, shift power dynamics, and inform just policies. We also understand our home-work to be directly tied to our graduate studies-indeed, anthropologists in training may be uniquely positioned to innovate ethnography moving forward.

Presentation(s): “Dear Abba”: Letter Writing as Interlocutor-Centered Research Method in US based Israel Discourse

Israel centered research is situated at the intersection of politics, religion, and identity particularly in American Jewish communities. The nature of this intersection, specifically post October 7, 2023, is highly personal and fraught with tension. As an ethnographer it can be difficult to understand how to relocate the locus of power in research design around topics that are not only sensitive, but may make interlocutors vulnerable in myriad ways. This project explores letter writing as a method to place storytelling squarely in the hands of interlocutors. In this project, research participants were asked to write a letter to someone in their lives reflecting on what Israel means to them. The instructions were limited, allowing the author to drive the narrative and subject matter. Through analysis of the letters interlocutors wrote, I demonstrate how this and other collaborative methods can enhance research design and guide ethnographic inquiry in novel ways, especially through the co-creation of new questions and directions for the project.

Presenter(s): Sierra Meszaros

Labor Hands: Facilitating Autoethnography among Migrant Women

While anthropological research about gendered experiences of migration has fruitfully focused on the narratives of people who cross borders, these experiences are always mediated and curated by ethnographers. To further push the possibilities for collaborative work, I propose using what I consider to be a form of guided autoethnography that draws on videography conducted by interlocutors in spaces of work and home without the researcher present. In the project, I invited Latin American migrant women with a range of immigration statuses to film themselves working and also spending time doing activities they enjoy outside of work as a way reflect on their experiences of migration to the United States. Because I provided open-ended guidance, and was not present as women videotaped their experiences, research participants had certain autonomy over what to film—or not film—and to what extent they took part in different aspects of the research more generally. The primary contributions of this work is continuing the conversation on decolonizing ethnographic methods through exercises of individual agency.

Presenter(s): Itzel Perez

Rhythms of Resurgence: Indigenous Hip-Hop as Resistance and Reclamation

Indigenous hip-hop is a powerful cultural force, blending contemporary music with experiential knowledge to challenge settler colonialism. Central to this movement is the concept of resurgence, which emphasizes resisting the constraints of settler colonial systems and reclaiming Indigenous identities. My research examines how Indigenous hip-hop enacts and engages with resurgence, asking how artists use music to confront historical injustices and express cultural autonomy. Building on an ethnographic approach, the project centered the words and musical performance of a prominent Indigenous artist and activist Nataanii Means. Through participant observation of a musical performance and an in-depth interview with the artist, the research captured resurgence in action, revealing Indigenous hip-hop as artistic expression, but above all as a form of lived resistance grounded in ancestral traditions and contemporary struggles. By documenting these practices, the project contributes to broader discussions pertaining to Anishinaabe cultural theorist Gerald Vizenor's concept of "survivance," offering possibilities for collaboration in the study of both artistic expression and Indigenous resurgence in a range of contexts.

Presenter(s): Patrick Burt

Shifting Waters: Rethinking Policy Design Through Collaboration and Activism

In growing local communities, including those in the Lake Tahoe Basin, the development of public policy can be a contentious process infused with power and unequal access to resources. Collaboration and activism can provide a way to address injustice, identify what is important to community members, and create policies that respond to a community's diverse needs. Through collaborative methods and decolonizing ethnographic research in the Lake Tahoe Basin and surrounding watersheds, this project aims to bridge the gap between anthropological studies, public policy, and environmental protection. This will be accomplished by engaging different perspectives through methods like margin writing, question design, and photography that will be integrated into the research, and evaluated for use in policy design processes. As the demand for the fresh waters of Lake Tahoe increases, my research shows how decolonizing and decapitalizing water policy design can promote equal access to the fundamental human right to clean water and a healthy environment.

Presenter(s): Kylie Papson

8978 Lives Lived, Lives (Un)Forgotten: the Marriage of Archaeology & Ethnography to Center African American (Oral) Histories and Foil Archival Silence

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Gallier AB(4th fl)

Type: Late-Breaking Oral Presentation Session

In today's sociopolitical climate, it has become imperative to preserve cultural artifacts and oral

histories. When so much is being re-written or even intentionally erased, Anthropology is primed to respond with public scholarship, practice that could yield the strengths of two disciplines that rarely collaborate: Linguistic Anthropology and Historical Archaeology. In fact, these subfields provide the "source material" needed to either give context and validity (i.e., for the purpose of archeological interpretation) or physical and tangible evidence (i.e., artifacts that substantiate oral histories) that when operating alone, these disciplines' findings can seem incomplete. Essentially, oral histories provide the necessary details for accurate interpretation, the archeological record and other numerical or tangible data can corroborate narrated histories. This is important in the work of collecting and documenting artifacts and oral histories for enslaved Africans and their descendants in the U.S.

Part of white supremacy's attempt to dehumanize and displace African Americans from the historical record of the U.S. has been to continuously destroy or deny their inclusions in archival spaces. This intentional erasure not only dispossesses descendants of both the physical and empirical evidence that legitimize their ancestor's struggles, but it also denies them the status of belonging afforded to their oppressors – whose lives are fully accounted for in repositories and preservation projects. Because of archival silencing, many scholars (i.e., archaeologists, folklorists, ethnographers and / or archivists) are struggling to capture the full spectrum of what it meant to be an African in America as well as to be their surviving descendants. Yet, all hope is not lost.

This panel of researchers will present timely data that illuminate the possibilities of disrupting archival silence when archaeologists and linguistics anthropologists partner to collectively restore and re-story the lives, language, and cultural practices of African descendants of the enslaved. These projects will also show how narrative data may complement archaeological findings, connecting material culture to once living or living beings so that "things," or artifacts, are no longer disconnected from people and vice versa.

Overall, this panel promotes these disciplines, along with other interdisciplinary partnerships, as a force of activism that is strengthened when paired together. Our presentations will also elucidate the urgent need to make these histories more visible, accessible, and comprehensive for public consumption and utility – particularly as elders age and transition, taking their histories with them. While this work may not completely foil current political strategies and racist agendas to remove the African American experience from American history, these preservation projects offer restorative justice that will impact current generations and those to come.

Presentation(s): Archives (Un)Silenced & Oral Histories

This presentation not only reveals the urgency and practicality of ethnographic research as a means for documenting the narratives of my ancestors that are preserved by elder 80+ descendants but

also why such work must be publicized and treated as a national crisis – one that can be revoked with urgent responses by anthropological applied, public scholarship and community engagement projects. The Oxford, GA research highlighted in this presentation is put forth to rouse support and urgency amongst scholars who are primed to do this work.

Presenter(s): Tiffany Jones

Studying Tragedy from an Africana Epistemology

The precarity of Black being is fraught by an emergent erasure that facilitates and is facilitated by the archive—between (1) Black people and their genealogy and (2) Black scholarship and the canon determining what scholarship is. I work with the archive in a literal and interpretive sense.

This research explores how alternative kinship formations are embodied, self-determined, and disseminated by Black matriarchs in the U.S. who make and keep life as a liberatory practice within the enduring legacies of antebellum racial formation—what Black social theorists have termed the "afterlives of slavery." In this paper I ask, what sort of imperative should exist in the work to close the chasm between academic and quotidian archival practices? I will explore how experimental methodological practices deploy material culture and oral histories to amplify, and therefore preserve, Black life—to re-write marginalized people back into existence.

Presenter(s): Brianna Doe

Marks that Bind: Forging New Links in ARCH Data

By tracing the linkages between iron and pottery production, this work highlights how materiality and symbolism intersect, reframing these marks as vital cultural expressions rather than incidental decoration. Beyond documenting their presence, this paper argues that such symbols point to a broader African diasporic epistemology. Drawing on oral histories and ethnographic accounts from both Africa and the Americas, I situate these symbols within a transatlantic context. These sources reveal their widespread use across the Atlantic World and suggest deep cultural meanings that transcend specific ethnic affiliations, reflecting a deeper shared worldview that linked participating African-descended peoples across vast distances. Ultimately, this research challenges long-standing disciplinary silences and repositions these marks as significant to understanding the intellectual and cultural life of enslaved Africans in the Americas.

Presenter(s): Nicole Isenbarger

By Silencing Archaeology, You Silence Ancestors

Throughout my nearly 30 year career as an historical archaeologist I have faced countless demands to change, alter, and completely omit my interpretations of sites once occupied by enslaved Africans. I have watched numerous colleagues, including my mentors, leave some artifacts unprocessed, thus they go unreported and ignored, while other well known and identifiable artifacts were improperly and purposefully misidentified and labeled as something else. As archaeologists we are ethically bound to report on all of our findings and as professionals we are

obligated to tell everyone, especially our peers, what it is we have found. Why, then, are things ignored, data changed or lost, and important interpretations silenced and censored? Why have I been told to discount the historical narrative of the African American past when I apply it to my archaeology This paper discusses how I actively combat recent censorship of my work on a nineteenth century plantation.

6938 Negotiating Masculinities: The Rationality-Religiosity Dichotomy in Turkish TV Series

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR A3 (3rd fl)

Type: Conversation/Debate

As a rarely discussed topic, the representation of masculinities in Turkish TV series, particularly through the lens of religious and secular discourses, plays a pivotal role in both perpetuating and challenging traditional gender roles. This study focuses on two popular series, *Kızılıcak Şerbeti* and *Kızıl Goncalar*, exploring how religious male representations are constructed and their impact on viewers, while also deconstructing the complex intersection of masculinity, rationality as a reflection of secularism and religion. Based on Turkey's political and ideological memory, the representation of the religious and the religious body have been an ongoing debate in depicting and legitimizing the public. As a context where 'modern secularity' and 'traditional religiosity' have long been in tension, TV series have emerged as key sites for articulating identity politics and moral debates in Turkey. In this respect, both series offer narratives that foreground male protagonists whose personal journeys are imbued with the dual imperatives of rationality and religious sentiment. Theoretically, this study draws on Connell's notion of 'hegemonic masculinity' and its critique by other scholars. Based on discourse analysis of the content and focus groups with the audience, this research discovers how male identities are constructed as hybrid embodiments of both 'religious' and 'secular' virtues and how this ultimately challenges perceived simplistic binaries in contemporary Turkey's context, through 'hegemonic masculinity' that is understood here as a culturally dominant ideal that is both historically contingent and subject to continuous reinvention. The 'rational versus religious' discourse creates a framework in which male characters are situated within a context of patriarchal authority and religious duty. The depiction of these characters in these series offers a multifaceted analysis of masculinity, presenting not only hegemonic forms of it but also those that resist epistemic violence by challenging dominant patriarchal norms. In particular, the characters navigate the intricate boundaries between religious authority and rationality, often embodying an ambiguous position where they simultaneously consent to being objects of control and claim subjectivity by asserting autonomy over their actions. In conclusion, the representation of masculinities in these series offers a nuanced examination of how gender, religion, and rationality are intertwined in constructing male identity. Through the depiction of male figures, both series expose the contradictions within religious and rational

discourses and highlight the complex ways in which masculinity is constructed, challenged, and resisted in Turkey's context. The multifaceted representation of male identities challenges the conventional dichotomy between rationality and religion and reflects the broader cultural dynamics of Turkey's society in transition.

3660 Not Quite Land: Troubling Enclosure within Ambiguous Ecologies

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Studio 8

Type: Oral Presentation Session

Techniques of making property such as land titles, leases, maps, surveys, and permitting laws

often attempt to fix ecologies into mutually exclusive categories: land or water, private or public, industrial or residential, wild or domesticated, empty or inhabited. Icecaps, wetlands, seascapes, airdscapes, and other ambiguous ecologies defy these binaries, yet continue to be governed through socio-legal regimes that have been developed in relation to fixed, dry land. Such socio-legal regimes animate infrastructure projects that transform hard-to-define and hard-to-enclose ecologies into places that can be governed in ways that align with terrestrial land; in ways that can be claimed, propertied, and cultivated. Embankments and channels make swamps less wet and more dry in service of making something that can be recognized as "land." The bodies, movements, and migrations of nonhumans become imbued with a sense of property and national identity. Boundaries and borders fragment governance across connected places, seasons, and species. Despite these efforts, ambiguous, shifting, and porous ecologies- along with the humans and nonhumans within them- continue to challenge the land-based logics that maintain techniques of property, possession, and enclosure. In this panel, we ask: How do concepts of "land" and "property" become applied to places, processes, and species that defy these categorizations? How do land-based logics "haunt" fluid, shifting, and porous ecologies? Finally, how do materialities of ambiguous ecologies, and experiences of humans and nonhumans within them, reveal limitations, inconsistencies, and contradictions in the land-based logics that govern them?

Presentation(s): Topology of Disturbance: Large Carnivores and Scalar Enclosure in the Slovak Carpathians

This paper examines how brown bears & wolves disrupt property regimes, scalar governance, & territorial affiliations in the Poľana Reserve, Central Slovakia. Based on fieldwork with hunters, conservationists, & rural residents, I argue that these animals unsettle territorial logics through which states, NGOs, & local actors attempt to govern ecologies. Conservation zoning, EU biodiversity policies, & post-socialist land reforms rely on fixed notions of land and use—but carnivore mobilities defy such fixity. Their seasonal, unpredictable movements across forests, pastures, & villages challenge efforts to enclose or label land as "wild," "private," or "pastoral." These encounters expose the porous materialities of the Carpathian landscape and shift scalar affiliations: local vs national, EU vs village, human vs nonhuman. A bear in a village or a wolf among livestock becomes a catalyst for rethinking belonging and the appropriate scale of governance. I propose a topology of disturbance to theorize how mobile, more-than-human ecologies destabilize territorial categories and compel scalar shifts. These movements trigger recursive reconfigurations—up- and downscaling, fracturing—in patterns reminiscent of fractal dynamics, revealing the limits of rendering ecologies legible through property, law, or map. Large carnivores thus make visible the contested, overlapping, & shifting scales of governance and land-based belonging in post-socialist Central Europe.

Presenter(s): Martin Nestepny

Governance at the Edge: Wetlands, Wind Energy, and the Contest over Ambiguous

Ecologies

Ambiguous ecologies such as wetlands, estuaries, and tidal landscapes resist Eurocentric categorizations of land and water, yet contemporary infrastructure projects continue to govern these spaces through land-based logics of property, enclosure, and development. Through a feminist political ecology (FPE) approach, this paper examines the contested siting of a proposed offshore wind port at Sears Island, Maine—a coastal island long entangled in land-based struggles for conservation, development, and access. Employing an interdisciplinary analysis of species surveys, environmental law interpretations, meeting transcripts, and interviews with community members, scientists, and policymakers, I explore how regulatory techniques attempt to render ambiguous ecologies "land-like" for infrastructural transformation. At the same time, the material vitality of wetlands—migratory bird movements, seasonal flooding, multispecies habitat entanglements—continually disrupts efforts to fix and settle these spaces as land. Aligned with FPE arguments and insights, I argue that efforts to govern Sears Island reinscribe the hauntings of colonial property regimes while simultaneously exposing their limits. Ambiguous ecologies and their more-than-human communities both reveal and resist the contradictions at the heart of enclosure-driven governance. This case offers insight into broader tensions in contemporary environmental decision-making where land, law, and life do not easily align.

Presenter(s): Holland Haverkamp

Land Flows: Contesting Land-Based Logics in a Waterscape

In this paper, I examine the messy, everyday practices through which fishworkers and industrial salt manufacturers make contesting claims to the Little Rann of Kutch, India, a region that shifts between a shallow estuarine lake for a third of the year, and saline desert for the rest of the year. I examine a legal case contesting leases obtained by industrial salt manufacturers for thousands of acres in the region, who then built embankments that block creeks and destroyed mangrove forests, turning it permanently into 'land'. Using the figure of the Desert from Elizabeth Povinelli's *Geontologies*, I ask how the legal and ecological category of banjar or barren land is produced and enacted in this region. I argue that land-based logics of tenure, mapping, survey and classification are applied to this place that is shifting, porous and ambiguous, by creating a slippage between affectively-charged, legal and ecological categories of "wasteland" and "barren" land, invisibilizing and dispossessing fishworkers from this marshy ecosystem. Fishworkers, though, make claims to flows of water arguing that "they can say the land is theirs, but the water is ours," questioning the separation of land from water in this region.

Presenter(s): Sita Mamidipudi

Seabed Empires: Making Land and Property at Sea

In marine waters worldwide, parcels of the seabed are being leased and developed by aquaculture, mining, offshore energy, and other ocean-based industries, in part facilitated by a legal categorization of seabeds as "submerged lands." This paper draws on conflicts over industrial aquaculture in the coastal waters of British Columbia to trace how the political-economic turn to the submerged lands of the sea is part of long histories and imagined futures of state and economy-building in Canada. I first detail the legal calculus through which seabeds became reclassified as submerged lands, expanding the types of territory the state could lay claim to. I then describe how state-industry partnerships transform the seabed into a form of property in accordance with certain biophysical characteristics. However, as fish, people, and industrial waste traverse the boundaries of aquaculture facilities, the effort to make and maintain property boundaries is troubled by the same ecological materialities and political conditions that the aquaculture industry comes to depend on. In considering how concepts of "land" and "property" emerge and are contested at sea, this paper questions how aquaculture infrastructures transform spatial relations within coastal waterscapes as part of a broader reconfiguration of marine space in the blue economy.

Presenter(s): Darcey Evans

From Protection to Enclosure: Bans and Zones in the Bay of Bengal

Over the last four decades, the Indian state has accelerated efforts to create a marine resource frontier in its territorial waters and Exclusive Economic Zone. These attempts, recently framed as a move towards a "Blue Economy" have aimed at increasing fisheries production in order to improve export earnings. As a consequence, small-scale fishers (SSF) have found themselves occupying a world that has been fenced and flattened, serrated by a fluctuating system of zones and bans that have carved up waters long managed through common property regimes.

However, the material realities of the fluid waterscape, plunging fish numbers and the heightened impoverishment of SSF have led to increasing questions around the legal regime for marine regulation. How did zones and bans come to be the dominant frame for the regulation of marine space? How, in spite of emerging from SSF efforts, did they result in their dispossession? In this paper, I draw on historical and ethnographic research with SSF in coastal Bengal to examine how SSF are negotiating the legal system and articulating their understandings of place and belonging in order to (re)claim their rights and boundaries in the Bay of Bengal. Moreover, I study the long histories and imaginaries undergirding the current legal framework for marine fisheries in order to understand how their operation has resulted in enclosing marine commons.

3749 Nurturing Change: Time of Rapid Social Transformation in South Korea

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Rhythms I (2nd fl)

Type: Oral Presentation Session

This panel explores the dramatic transformation under what Kyung-Sup Chang has termed "compressed modernity" (Chang 2011) as it is realized in socialization and Confucian ideology. As Chang notes, compressed modernity is not merely a timeline of accelerated growth, but a "civilizational condition" where "mutually disparate historical and social elements" coexist and collide, often mediated by a strong familial order. In just a few decades, South Korea has undergone intense economic, political, and social change. As an example of this, South Korea's inflation adjusted per capita GDP surged from \$158 in 1960 to over \$35,000 in 2021 (Worldbank.org). Over a similar period of time, South Korea's birthrate dropped from 6.0 to 0.72 (Worldbank.org). These rapid shifts have restructured the way individuals interact across generations, institutions, and everyday life.

This panel examines five distinct yet interrelated social dynamics: classroom relationships between teachers and students, maternal networks of support, intergenerational expectations around eldercare, the role of gesture in cross-cultural communication, and media's influence across age groups. Together, these studies offer a multi-layered view of socialization and the interplay of Confucian/cultural understanding in a society navigating the rapid changes in accepted beliefs and practices. Ultimately this panel seeks to illuminate how South Korea's "multiplex theatre society" (Chai 2022) becomes a site for understanding the complexities of modern transformation, continuity of cultural values, and the lived experience of compressed modernity.

Presentation(s): Teachers' Role in Socialization: How Teachers in a South Korean Preschool Classroom Utilize Discipline and Praise to Teach Children "Good Behavior"

This study examines how South Korean preschool teachers use discipline and praise in their teaching and how these practices are indicative of cultural values. Son (2021), Lee and Lee (2021), and Ahn (2015, 2021) show that teachers' talk about socialization in South Korean schools often follows a more individualistic ethos directed at creativity and independence (dokribseong - 독립성) while the actual practices that teachers engage in follow a more collectivist ethos directed at relationality (gwangyeseong - 관계성). This research builds on theirs by exploring these potential contradictions in the context of discipline and praise. Through a better understanding of how "good" and "bad" behavior are defined, the underlying values of the teacher and institution are revealed, leading to a better understanding of the educational landscape in South Korea.

Presenter(s): Kenya Dennert

Individual Accommodations and "Bean Sprouts" in the South Korean Preschool Classroom

The bean sprout metaphor of education is often cited to point to the importance of students growing and learning together. Just like bean sprouts packed tightly in a pot help each other to grow straight and upright, a community of students supports each other's growth and development. In this context, the teacher nurtures her students, who in turn nurture each other to create a strong class community (Jung, 2021). Yet, in a different context, one might ask: How should a teacher react if one bean sprout happens to need more water than others? This seems particularly relevant in an educational setting. Children usually do not enter school with the same level of intelligence or curiosity. I intend to examine how a South Korean teacher navigates inequalities among her/his students, and whether s/he relies on group dynamics to address individual inequalities or accommodates individual differences directly with students. The purpose of examining these interactions was to investigate how, when, why, and if individual accommodations exist in that classroom. Through participant observation and subsequent ethnographic fieldnotes, I investigate the ways in which one teacher in South Korea nurtures her bean sprouts, whether that be on an individual or collective level.

Presenter(s): Paige Walsman

More Than Words: A Cross-Cultural Study of Gesture in Meaning Making and Multimodal Communication

This research investigates how gestures are utilized in communication and adapted to cross language barriers by examining Korean and English speakers' storytelling methods to both Korean and American listeners. Using the Merrie Melodies Canary Row cartoon as a prompt, participants retell the story of events to a fellow Korean/American, and then to their counterpart participant who

has limited to no Korean/English proficiency. By comparing these two contexts, the study seeks to understand how gestures compensate for verbal limitations and create meaning and connection across cultural and linguistic divides. The project analyzes gesture dynamics and shifts that occur when speakers attempt interlinguistic communication and explores gesture as critically language adjacent through cultural nuances, such as universal contextualization cues that are universal and those that are meaningfully ethno-specific despite nonverbality. In addition to these structured sessions of data collection, I conducted ethnographic observation of real-world interactions where gesture was vital in crossing language barriers while myself and my peers were temporarily living in Korea. By combining controlled elicitation with naturalistic observation, this study examines how people use embodied communication to convey meaning when verbal language falls short, contributing to the broader critique of gesture as much more than supplemental to language.

Presenter(s): Alisa Funke

South Korea's Filial Piety Law and Intergenerational Relationships.

This study examines how the South Korean government, society, and youth support the elderly, how the elderly perceive their society, and how they expect to be treated by others. At 0.72 in 2023, South Korea has the world's lowest birth rate (Lee & Kim, 2024). This low birth rate has led to an increasing proportion of Korea's population being elderly, thus creating a crisis in care and support for the elderly as there are relatively fewer young people to support them. In 2007 South Korean legislature passed the Filial Piety Law to ensure Koreans would care for senior citizens, and to promote traditional values of respect for the elderly (Walker 2019). Yet, some studies have shown that younger people have begun to be critical of elderly people's reliance on the labor of younger people (Kim 2017). Using the primary methods of participant observation and interviews, I explore how the South Korean government, society, and youth support the elderly, and how these forces shape the elderly's perceptions of society and their expectations for care. By contributing to the broader discourse on aging and care, this research aims to understand how a country like South Korea grapples with the challenges of a rapidly aging population. This research aims to aid efforts in identifying meaningful strategies to improve the well-being of elderly populations worldwide.

Presenter(s): Jacob Gilbert

Fostering Connections: Maternal Communities and Social Life in Seoul, South Korea

This paper explores how motherhood is lived, supported, and understood within the everyday lives of mothers in Seoul, South Korea. As the country faces a persistently low birth rate- a record low of 0.72 in 2023 – which has led the Korean public making arguments that the decline in births have been attributed to a transformative shift in the roles of Korean women (Lee 2023). Over the course of many decades, there has been a gradual shift of women primarily working within the home to the modern challenge of balancing both domestic labor and workplace duties. Another aspect illustrated in this study is the display of support available to mothers and how it potentially changes parenting behaviors. As Jung illustrated, the interactions among mothers can become competitive which has caused many mothers to reconsider having children, but in other cases has led to many

mother fostering support systems found within a variety of socioeconomic circumstances (Jung 2024). Through participant observation in mother support centers and interviews with women from diverse backgrounds, this research investigates how mothers access and create support systems found in formal institutions as well as informal networking. By gathering different perspectives and observations of everyday practices, this paper offers insight into the cultural, emotional, and political dimensions of being a mother in South Korea today.

Presenter(s): Camilla Lathrop

The Mediatized Self: Generational Belonging and Media Practices in South Korea

This paper examines how individuals across different age groups in Seoul engage with and make meaning of media in their everyday lives. Building on existing scholarship that highlights generational divides in media literacy, platform preferences, and psychosocial outcomes (Jeon, Choi, & Jang, 2020; Ahn & Seo, 2014; Park & You, 2015; Lee, 2023), this study seeks to uncover the lived experiences and cultural meanings behind these patterns. Through participant observation, in-depth interviews, and digital ethnography, the research investigates how youth, middle-aged adults, and older populations navigate increasingly hybrid media environments. Findings reveal that while younger participants fluidly integrate multiple media platforms into their daily routines—favoring immediacy, interactivity, and personalization—older adults often engage with media more cautiously, shaped by past habits, technological barriers, and intergenerational influences. Media is both a tool for information or entertainment, and a symbolic resource used to maintain identity, express values, and foster community. These practices reveal how age-based experiences intersect with social norms, access, and digital competence. By bringing ethnographic depth to existing findings, this study contributes to broader conversations on mediatization, digital inequality, and generational identity in South Korea's evolving media landscape.

6430 Persistent Health Disparities Across Vulnerable Communities in Low- and Middle-Income Countries: Research from Ghana, Nigeria, and Zambia

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Regent

Type: Oral Presentation Session

The intersectionality of social vulnerability and sociocultural determinants of health require integrated approaches to research, practice, and policies to address persistent health disparities such as malnutrition and food insecurity among diverse communities in low- and middle-income countries (LMIC). In this session, we use a critical medical anthropology framework to examine how individual, community, sociocultural, environmental, and structural factors shape community

health across vulnerable populations in Ghana, Nigeria, and Zambia. We explore issues surrounding topics related to health disparities in these countries, including gender and power dynamics, education, household food security, access to healthy and affordable foods, and other factors that shape health outcomes among individuals and communities. We discuss health priorities emerging from our research that are grounded in community perspectives and explore how to address social determinants of health and wellbeing associated with, for example, gender, race/ethnicity, economic inequities, as well as evidence-based interventions and policy initiatives likely to aid local communities in sustainable efforts to reduce persistent health disparities. We explore strategies to improve health through public-private partnerships and approaches to community-based research and consider comprehensive solutions to persistent health disparities that can inform health research and practice and help support thriving communities.

Presentation(s): Adapting the Household Hunger Scale to Collect Individual- and Household-Level Food Insecurity Data: Results from Lake Kariba Fishing Communities.

Introduction: The Global Hunger Index categorizes hunger severity in Zambia as "serious," particularly for vulnerable rural populations, such as small-scale fishery communities at Lake Kariba.

Approach: We implemented the Household Hunger Scale II among household (HH) heads (N=485) to collect both individual (IND)-level and HH-level experience of 6 Hunger Events (HE) in the past 4 weeks: HE1) How often did [you][other HH members] miss a meal because of lack of food or resources to get food?; HE2) How often did [you][other HH members] go to sleep at night hungry because there was not enough food?; HE3) How often did [you][other HH members] go a whole day and night without eating because there was not enough food? A HE that occur 1-2 times over 4 weeks were categorized as occasional food insecurity (OFI), 3-10 times as moderate food insecurity (MFI), and >10 times as severe food insecurity (SFI).

IND-Level Results: For HE1-HE2, women reported more OFI and MFI, while men reported more SFI. For HE3, women reported more OFI, women and men reported similar MFI, and men reported more SFI. HH-Level Results: For HE1-HE2, women reported more OFI and MFI, while men reported more SFI. For HE3, women reported more OFI, while men reported more MFI and SFI.

Discussion: Results suggest the need to identify drivers of moderate and severe food insecurity in this population of Lake Kariba fishing communities.

Validation results from a nutritional and food safety training for low-literate traditional fish processors in Delta State, Nigeria

Introduction: In Nigeria's Delta State, fish is a cheap and accessible animal-source food (ASF) and vital source of income for poor and marginalized women who are traditional fish processors (TFP). But TFP methods (salting, sun drying, smoking) exposes fish to nutrient-loss and contaminates such as flying insects, grit, microorganisms, and spoilage that pose health risks.

Methods: We implemented and evaluated a 3-day participatory training among 122 women TFP in Delta State that included a 7-module nutrition and food safety flipbook for low-literacy learners. Knowledge-change was assessed using pre-/post-tests and a survey. The flipbook was validated using the content validity index (CVI) and modified kappa index (k^*). Comprehensibility was determined using the cloze procedure. Minimum dietary diversity (MDDW) was used to determine trainees' dietary diversity at baseline and 12 weeks later.

Results: The flipbook was validated at CVI of 0.983, k^* of ≥ 0.67 , and cloze score of 72.1%. Women's knowledge significantly increased ($p \leq .05$) for all 7 modules, and wristbands were rated as useful. While there was no significant difference in dietary diversity at baseline; $5.8 \pm .22$ and end-line; $6.4 \pm .20$ at 95% CI, the number of women who consumed ≥ 6 of 10 food groups (including ASF) increased by 9.8% at endline.

Conclusion: While the flipbook was evaluated as culturally appropriate for these learners, there is a need for additional training to address food safety and dietary diversity.

Presenter(s): Terezia Tolar-Peterson

Exploring Food Insecurity Congruence among Husband-Wife Dyads in Ghana's Northern Region Using the Household Hunger Scale

Introduction: Ghana's Northern Region experiences high rates of poverty, food insecurity, and childhood malnutrition and ~73.5% of adults are smallholder farmers.

Methods: As part of a larger survey, we administered the Household Hunger Scale to 675 men and women farmers (of whom 93.7% were husband-wife dyads) to assess dyad congruence for reported household-level hunger (HLH). The scale categorizes HLH in the past 4 weeks as occasional (1-2 times), moderate (3-10 times), or severe (≥ 11 times) for 3 Hunger Events: HE1) No food to eat of any kind in the household due to lack of resources to get food; HE2) Household member(s) went to sleep at night hungry because there was not enough food; HE3) Household member(s) went a whole day and night without eating anything because there was not enough food.

Results: Over 30% reported Hunger Event 1 in the past 4 weeks 1-2 times (19.1%), 3-10 times (11.6%), or >10 times (2.1%). Nearly 29% reported Hunger Event 2 in the past 4 weeks 1-2 times (16.8%), 3-10 times (11.4%), or >10 times (2.8%). Nearly 23% reported Hunger Event 3 in the past 4 weeks 1-2 times (11.6%), 3-10 times (10.3%), or >10 times (2.9%). For all three Hunger Events, women were more likely to report occasional HLH and men and women were equally likely to report moderate and severe HLH.

Discussion: Results suggest the Household Hunger Scale is an appropriate measure for cross-cultural use to assess HLH in food-insecure regions.

Evaluating Acceptability of Four Dried Fish Powder-Fortified Complementary Porridges to Address Stunting Among Vulnerable Children in Zambia

Introduction: At a rate of 35% among infants and young children (IYC) under the age of 5 years, stunting in Zambia remains high, particularly in rural areas. To address malnutrition gaps among vulnerable IYC, we developed and evaluated four flavors of Complementary Food for Africa+Dried Fish Powder (ComFA+Fish) Instant Porridge fortified with locally sourced dried fish powder (DFP).

Methods: 33 mother/infant pairs participated in 4 sensory panels to assess IYC's global liking of: 1) Plain, 2) Vanilla, 3) Vanilla+Extra DFP, 4) Strawberry porridge. Mothers fed each porridge to their infant during three tasting intervals (Time 1-3; T1-T3) and assessed global liking of each porridge at T1-T3 using 5 descriptors of behaviors exhibited by their infant that correlated with a 5-point scale where 1=Extremely Disliked and 5=Extremely Liked. We collapsed the results into 3 categories: Disliked/Extremely Disliked (D/ED), Neutral, Liked/Extremely Liked (L/EL).

Results: L/EL Scores (T1-T3): Strawberry: 96.5%, 96.5%, 96.2%; Vanilla: 84.9%, 87.9%, 90.3%; Plain: 81.8%, 81.8%, 71.9%; Vanilla+Extra DFP: 70%, 65.5%, 62.1%. Averaged L/EL Scores (T1+T2+T3): Strawberry: 96.4%; Vanilla: 87.7%; Plain: 78.5%; Vanilla+Extra DFP: 65.9%.

Discussion: We will analyze and adjust the porridge formulation as needed to ensure dietary reference intake (DRI) values are met and then complete a shelf-life study of the reformulated product.

Locally Produced Dried Small Fish Provide Nutrient Densities Important for the First 1,000 Days

Introduction: Nutrient deficiencies are prevalent among many populations in sub-Saharan Africa and increasing fish consumption among pregnant/lactating women (PLW) and infants/young children (IYC; 6-24 months) is one strategy to address this.

Methods: We investigated the: 1) nutrient content of two fish-based recipes—fish powder and fish chutney—that contained dried small fish available in local markets in Zambia; 2) nutrient density (nutrients per kilocalorie) of fish powder as compared to SQ-LNS-plus—a small quantity lipid-based nutrient supplement to enhance IYC's diets by providing micronutrients and docosahexaenoic acid (DHA) that is often imported into beneficiary countries. The contribution of a serving of each recipe to recommended intakes of iron, zinc, calcium, and DHA for PLW and IYC was calculated.

Results: One 10g serving of fish powder provides $\geq 20\%$ of the daily calcium recommendation and $\geq 37\%$ of the daily DHA recommendation for both PLW and IYC. A 30g serving of fish chutney provides $>40\%$ of the daily calcium recommendation for pregnant women and $>50\%$ for lactating women. Fish powder is similar to SQ-LNS-plus in iron and zinc density and even higher in calcium and DHA density.

Discussion: Consuming locally available dried small fish as part of daily meals is a viable strategy for combatting nutrient deficiencies in PLW and IYC. Fish powder's nutrient concentration makes it an appropriate complementary supplement and a good substitute for imported products.

3704 Phantom Relatives: Biogenetic Considerations of Relatedness in Donors and Children Born through ARTs and Surrogacy

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** MGB - Salon B

Type: Oral Presentation Session

Biogenetic links loom large in western concepts of relatedness and kinship (Edwards & Salazar, 2009). With the widespread use of technologically assisted reproduction-including the use of frozen embryos, donated gametes, and surrogacy in family formation-there are often biogenetic unknowns and unknowables and in-betweens. Children born by means of these technologies and practices may have anonymous donors, or donors or surrogates who are distant and not present in their lives; donors often do not know the destinations or results of their donation, depending on the laws and customs in different cultural contexts (Tober, 2025), and, depending upon where surrogacy occurs, the very women who carry and birth other people's children, may be discouraged or prevented from interacting with the families formed through their help (Smietana, Rudrappa, Weis, 2021). People who have embryos frozen in cryogenic tanks may have complicated sentiments about what those embryos are as potential future children. While there seems to be a general consensus that children have a basic human right to know their origins, and these origins are often framed biogenetically; there is no corresponding right for reproductive donors to receive any information about the people born through their donations. How do people go about pursuing these phantom relatives? How do people think about eggs, sperm, embryos as potential relatives? Why do some consider it important (or not) to know about or meet the people--reproductive donors, receivers of donation, donor siblings-to whom they are biogenetically linked in some way? Why do these phantom relations, product of disrupted reproductive processes (Becker, 1997), haunt people, sometimes for years to come?

Presentation(s): Cold Custody: Thermal Politics and the Afterlives of Abandoned IVF Embryos

Abstract: This paper draws on ethnographic fieldwork in a U.S. IVF laboratory (in 2022-2023) to explore how cryopreservation technologies mediate not only biological life, but social and moral imaginaries of embryo kinship, care, and abandonment. Focusing on the mundane labor of embryologists and the material practices of freezing and storage, I trace how cold becomes more than a technical medium: it emerges as a register of temporal suspension and ethical uncertainty. Through the lens of "abandoned" embryos—those left in cryogenic storage for years or decades without instruction for disposal—it considers how thermal regimes shape institutional responsibility and emotional dis/engagement. While embryologists routinely freeze embryos to fulfill patients' hopes of reproductive futures, many are never reclaimed, and so remain in storage tanks indefinitely. The absence of patient contact, combined with legal requirements for notarized consent, forces laboratories into indefinite custodianship. Cold, in this context, ceases to signify care or preservation; instead, it indexes estrangement. By examining the entanglements of labor, bureaucracy, and affect, the paper offers a thermal ethnography of reproductive time, abandonment, and the bureaucratic afterlives of assisted conception.

Personhood, Power, and Reproductive Governance in Alabama

The granting of legal personhood to embryos in Alabama resurrects historical ghosts of reproductive control while creating new spectral entities in reproductive healthcare. Drawing on preliminary findings from my first phase of dissertation research investigating fertility providers, intended parents, and egg donors, I analyze how embryos have become powerful phantom relatives—granted rights that often supersede those of living women. The February 2024 Alabama Supreme Court ruling that applied the Wrongful Death of a Child Act to frozen embryos disrupted fertility care statewide, transforming microscopic cell clusters into what the court termed "extrauterine children"—entities with legal standing but no physical presence. Egg donors, too, navigate the embodied experience of contributing to these potential phantom relatives, even as their own bodies become invisible once their genetic material enters the fertility bioeconomy. From state legislation to clinic protocols to individual bodies, this paper

investigates how power operates across multiple, intermingling scales, creating new forms of reproductive governance. Data were collected via semi-structured in-depth interviews with fertility professionals, intended parents, and egg donors as well as observation in clinical settings. The creation of embryonic phantoms reanimates historical patterns of control over reproductive bodies, as arguments that granted personhood to embryos extend the same logic that restricted abortion

Presenter(s): Arianna Injeian

“Intentions make parents” as well as surrogates

Surrogates I studied repeatedly deny having maternal feelings for their surrogate babies and it's often received with skepticism. Such skepticism illuminates assumptions about the centrality of gestation for motherhood. Critics argue that gestation, a nurturing relationship, is constitutive of motherhood (Rothman, Radin). My findings show that surrogates are trying to articulate an emerging new social understanding and social meanings, albeit not out of thin air. Nurturing and intentionality have been part of our Western/American understanding of relatedness and kinship (Schneider); social behavior, not simply biogenetic facts, constitute kinship in practice.

Surrogates focused on the intentional and planned creation of a child for the intended parents (IPs), whether genetically related to the baby or not. Intention makes parents, surrogates explained. Surrogates called attention to gestational experiences that they considered to be "proof" of the IPs' parenthood in cases when it was the IPs' genetic embryo, and underlined differences between the surrogate pregnancy and their own past pregnancies in all cases. Thus, surrogates were intentionally connecting the baby-to-be to its parents-to-be, supporting and helping their bonding. They were instrumental in building a new reproductive reality, focused on intentional planning, that both highlighted and understated genetic relatedness. When IPs cut ties after birth, it's seen as a denial of friendship rather than relatedness.

Presenter(s): Zsuzsa Berend

From Close Relative to Phantom Relative. US Surrogates' Experiences of Surro-family and Surro-baby Relationships

Women who gestate babies for others often have an idea of the kind of relationship they wish to have (or to avoid) with the intending parents and the child or children born with their help. Different influences may help mold these ideas: the narratives of women with experience in surrogacy (Teman, 2010; Berend, 2016), the conceptions promoted by psychologists who evaluate and assist them, or the ways surrogacy is framed by the agencies they may use and which may depend, at least in part, on the framing of surrogacy in different national legal contexts (Smietana et al., 2021). Based on interviews with 9 surrogates, some with multiple surrogacies for different parents, this paper will discuss the range of relationships these women have experienced with these families. These relationships vary from lifelong kin-type or strong friendship relationships, through cordial but distant kin or non-kin relationships, to a more tapering or abrupt termination of the relationship, with a feeling of loss, of phantom family and babies with whom one had a close connection and whom one remembers but cannot contact. Exploring how women who have borne babies for others understand and explain the differing intensity, closeness, duration and quality of these relationships with both the families they have helped and the babies they have gestated and given birth to will provide clues about how expectations, which can be exceeded, fulfilled, or incompletely fulfilled, are managed in this process.

Presenter(s): Nancy Anne Konvalinka

Phantom “Egg Babies”: From Imaginary to Real Relationships Between Egg Donors and Their Donor Conceived Offspring

Egg donors donate with the understanding that they will be anonymous, have little information about recipients, and never meet children born from their eggs. Ancestry testing in the US disrupts the promise of anonymity, as people sharing genetic ties can now find one another. While most egg donations in the US are anonymous, there is flexibility to this standard. Some donors undergo known donations, providing eggs to a friend, family member or stranger they met online. Some do open-identity donations, so a child born from their eggs can meet them once they turn 18. Others undergo anonymous donation but may later connect with a person born from their eggs. This paper examines how anonymous, open identity and known egg donors think about the children born from their eggs and how their thinking may change over time or with contact. Anonymous donors may hope to connect with their genetic child, imagining a potential relationship. Known donors navigate complex relationships with recipient parents and their children to maintain contact that could be disrupted if the donor does not honor the parents' demands. While donors understand they provide genetic material for someone else's child, the reality of being a donor—not a mother—may not align with their feelings. By examining the real and imagined relationships among donors, recipient parents, and donor conceived offspring, this work illuminates the complexities of biological and social kinship, with roles transformed via technology.

7297 Presence: A/effectuating almost existing/ence (part two)

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Oral Presentation Session

This panel draws on the rich interpretative and political affordances of "presence" (Ferguson 2021) to negotiate and realize agents' participation in communities they cannot be members of. It sees presence – the condition of being here, among us – as obligating acknowledgement and, consequently, (potentially grudging and hostile) responses from members of these communities. However, presence is never self-evident; "being here" requires work, materially and semiotically rendered as such and, thus, constitutes loci of everyday politics. Presence is – like specters and shadows – ephemeral, inconclusive, liminal, and unsettling.

The second session of our two-part panel explores the cultural politics of constituting and reckoning with the presence of spiritual and "other" entities and how it disrupts categories and relations of property, law, ontology, and belonging. Drawing on studies of graves and temples as communal landmarks in rural China, the constitutional absence of the enduring socio-legal presence of ancestors in post-apartheid South Africa, the spatialized cognition and relational worlding among Maya communities in Mexico, and maternal bodies performing artillery shows in

frontline Kinmen, Taiwan, our panelists portray insistent and insidious practices that constitute contested obligations and relationalities. Together, we seek to expand the cultural theory of the eerie processes of "being together," the ever-shifting and mutating grounds for ethical futuring (Keane 2025).

Presentation(s): Demarcating and Negotiating Community Boundaries: Ancestors, Spirits, and Landmarks in the Rural Landscape of Southwest China

Rights over land, the most salient form of property, are at the heart of controversies concerning the transformation of rural China. Since the 1950s, land traditionally held by village communities has been subject to the impacts of tumultuous socio-political processes. Drawing on ethnographic and historical data from Southwest China, this paper explores an overlooked modality of politics in the configuration of rural land ownership — how villages employ the existence/presence of ancestors and spirits to demarcate and negotiate their community boundaries and assert land rights in China's rapidly changing socio-economic context. As an integral part of village life, ancestors, deities, and ghosts bring forth widely shared social imaginations in rural areas. The presence of these spiritual beings was effectuated through graves and temples, which often have the status of quasi-private property despite China's rural land being legally collectively owned. My research shows that the quasi-private ownership, along with the sacredness and efficaciousness associated with the graves and temples, gives villagers a sense of entitlement to the land where graves and temples are located. These dwellings of spiritual beings have become landmarks demarcating village territory and a key focus of the contestation between villages and local governments. The coalescence of living and spiritual beings constitutes one form of rural agency to cope with land grabs and call for an equitable society.

Presenter(s): Yi Wu

Ukuvusa Abalele (Waking the Sleeping): Politico-legal Contestation over Transformative Constitutionalism and 'Ubuntu' in Post-1994 South Africa

Methodologically grounded in constitutional ethnography and historical linguistics, this paper explores the constitutional absence of the enduring sociolegal presence of 'abalele' (the ancestors) in post-apartheid South Africa. It therefore examines the profound dissonance between the normative convictions of the majority of the Black African population (82%) of South Africa, 'aba-

Ntu', as 'residues' from their indigenous ancestors, on one hand, and the 'common' law that should rightly be called the uncommon law, on the other hand. It thus considers the invisible (vernacular) law that is grounded in the invisible existence of 'abalele' as a way of better understanding and thus otherwise conveying the sheer urgency of undoing the colonial afterlives of *lex nullius* in South Africa most profoundly expressed in and through the ordinary South African's still fractured relationship to the land 'underneath' (*de facto terra nullius*). Many anticolonial scholars argue that the Constitutional Court of South Africa's concept of 'Ubuntu' (which reduces the concept to the right to 'dignity') is deeply impoverished because it disregards the richer and more fulsome indigenous African notion of Ubu-Ntu as an entire world-sense centring on the very materiality of human(e)ness as relational ontology and mutual dependency for multigenerational survival, and thus expansively applicable throughout society and in relation to non-human *ntU (that is, 'things', 'be-ings', 'existence').

Other Perspectives and Individual Presence: Taking Place in Space

In this paper I present data from research among Maya children in southern Mexico. I use long-term ethnographic fieldwork in the area to explore findings from a well-known experimental task exploring spatial cognition. Looked from the perspective of ontology and worldmaking the task reveals the different perspectives and positionalities participants claim when locating themselves in space. One groups specifically seems to reject the idea that they themselves take up the central position in the space they inhabit. For these individuals the ways they solve the spatial task indicates that for them the world does NOT revolve around them. Rather they constitute one part in it. My argument is not one of age-old traditional Maya. Instead, ethnographic evidence suggests that the results are the outcome of complex interactions of a wide set of historical / political forces and influences that shape ongoing creations of worlds.

Presenter(s): Norbert Ross

Cannon Drills and Maternal Bodies: Negotiating Presence in Taiwan's Cold War Tourism

"After so many years here and having three Taiwanese children, why do you still doubt me?" asks Chengmei Shi, a PRC-born marriage migrant who performs daily artillery shows for tourists in Kinmen—a former Cold War frontline turned military tourism site just miles from China's coast. These women paradoxically load cannons once aimed at their homeland while navigating suspicion from both Taiwanese and Chinese publics. This paper examines how their performances render visible the contested embodiment of women situated at the threshold of Taiwanese belonging—officially recognized residents, yet shaped by lingering affiliations and structural ties to the PRC. Drawing on ethnographic observation, interviews, and archival research, I analyze how they move through Cold War spectralities and articulate complex positionalities in this liminal space. Building on Roger Caillois, Elin Diamond, and Michael Taussig's explorations of mimesis, I propose the concept of "dramaturgical camouflage" to analyze how they strategically modulate visibility. Often excluded from soldierly ideals and frontline narratives, these women reclaim their maternal

identities as protective affective claims: they perform for their children or would "shield the cannon with their bodies." This case reveals how presence in militarized borderlands becomes a form of embodied negotiation, where national and gender identities are unsettled and reconfigured through performance.

4676 Sorcery, Solidarity, Voicing, and Labors of Faith: Colonial Hauntings in the Dominican Republic and among the Dominican Diaspora

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Galerie 2

Type: Oral Presentation Session

How might we conceptualize the legacy of colonialism as an ongoing spiritual haunting of the state, landscape, language, and people? What are the everyday practices that marginalized subjects use to inform moments of solidarity and resistance while engaging with the sorcery of coloniality? What conceptual, methodological, and theoretical spaces emerge when metaphorical and literal instances of hauntings and possessions collide? And, what is our role as researchers studying secrets, spiritual embodiments, and marginality? This panel brings together scholars in socio-cultural anthropology, sociology, and linguistic anthropology who delve into archival, literary, and ethnographic moments in which spirits, ghosts, and hauntings have material consequences in boundary-making and social differentiation projects. Drawing on Black Feminist theory and decolonial methodologies, each panelist reflects upon the tensions, the possibilities, and the limits of colonial hauntings within contemporary Dominican life to explore not only the racialized divisions and state-sponsored violences that emerge, but also the narratives of joy, love, care, and kinship that are often overlooked and erased by dominant anti-Black and anti-Haitian gazes.

The panelists will discuss: (1) national narratives and biopolitical practices that occlude trauma and camouflage state sorcery; (2) instances of kinship between women at border markets that invoke the "ghosts" of historical solidarities; (3) Dominican women elders' performance and engagement with emotional and intimate labor (of faith) in La 21 División; and (4) ideologies of race and language that are intertwined with the voicings of misterios (spirits). By examining the hauntings of coloniality from these various perspectives, each of these talks contribute to anthropological and sociological discourses of memory, citizenship, place-making, siblingship, racialization projects, folk religions, and magic.

Presentation(s): Citizens in Question: Sorcery, Silencing, and Sorting in the Dominican Republic

In this paper, I argue that in the Dominican Republic the state's hold over its citizenry is dependent upon varying degrees of silencing, sorting, and sorcery. Specifically, I contend that the state promotes anti-Haitian propaganda to infiltrate the nation's collective subconscious and is especially reliant on this narrative at moments of perceived threat against the state. In this way, the Dominican state establishes a continuity, which Foucault (2003) proposes is a necessary task in maintaining law and order. The Dominican Republic's anti-Haitian ideology is sustained by selective amnesia, archival manipulation, and a dominant national narrative that fabricates, falsifies, and forgets events as a form of repressing trauma and camouflaging performances of state sorcery. Literary myths, arbitrary applications of the law, biased news coverage, lack of or substandard documentation, and forgetful minds are all complicit in creating and sustaining a divide between Dominicans and Haitians.

Presenter(s): Karina Beras

Haitian-Dominican Linguistic and Landscape Genealogies: Toward a Vision of Solidarity in Hispaniola

This paper explores how Haitian-Dominican historical, and contemporary, forms of solidarity and interconnectedness exist in the island of Hispaniola, as both populations coincided in efforts to prevent future colonial occupation, according to historian Anne Eller (2016), and through present forms of borderland and transnational networks, as elaborated by Milagros Ricourt (2016). These "ghosts" of past solidarities, political efforts, and distant genealogical connections are invisibilized through contemporary dominant realities and discourses of violence, anti-birthright citizenship, and anti-Haitianism. Drawing from preliminary ethnographic fieldwork and literature on themes of "siblingship," as conceptualized by Charlton Yingling (Yingling 2022), present-day border solidarities, and reconfigurations of the Dominican identity in a post-TC/0168/13 (or La Sentencia) Dominican state, this paper maintains that while present Haitian-Dominican relations remain contentious, there are instances of solidarity that invoke past histories of transnational collaborations, and which help challenge dominant narratives of hostility in Hispaniola today.

Presenter(s): LICELOT CARABALLO

The Intimate and Emotional Labor of Dominican Women Elders in La 21 División

In this paper, I draw on Nwokocha's (2023) ethnography of Haitian Vodou ceremonies and her engagement with Casselberry's conceptual framework (2017) on Black women's labor to explore two forms of labor of faith—intimate and emotional—performed by Dominican women elders in La 21 División. Intimate labor refers to embodied personal interactions involving acts of care and support, whereas emotional labor encompasses the public and private interpersonal interactions navigated in both religious and social settings (Casselberry 2017; Nwokocha 2023). Over the course

of several months of ethnographic observations and interviews, I examine the ways in which elders spiritually, emotionally, and physically engage with devotees, caballos de misterios (horse of mysteries), members of their communities, and los misterios (the mysteries), forms of labor that are often underappreciated and invisible. Through my engagement in meaningful participant observation with elders, I center their voices, lived experiences, and unwavering labor of faith to the practice and the communities they serve.

Presenter(s): Virginia Martinez

Voice, Morality, and El Misterio in the Dominican Republic

What do spirits have to say? To whom do they say it and how do they say it? What do discourses about various linguistic features of the spirits' voices tell us about the connections between coloniality and materiality in the present day? This talk centers on moments where the voices of spirits are quoted, discussed, criticized, celebrated, and embodied. Drawing on 25 months of ethnographic fieldwork in the Dominican Republic, I consider how ideologies of race, language, and national belonging are intertwined with the voicings (Agha 2007, Bakhtin 1981, Keane 2001, Hill 1995) of spirits. At the same time, I consider the ways in which spirits- and their language- become racialized as part of a broader discussion on boundary-making projects within the Dominican Republic. This talk then reflects on the colonial hauntings within el misterio (folk Catholicism) that connect notions of morality and responsibility to senses of (racial) belonging. In doing so, I engage with ethnographic refusal (Simpson 2007) as a decolonizing methodology (Harrison 2011; Smith 2012) to recenter the voices of marginalized peoples who challenge hierarchies of knowledge and of knowledge production.

Presenter(s): Noelia Santana

7705 Sovereignty, Populism, Post-Truth: Navigating Media and Power in Contemporary Turkey

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Galerie 3

Type: Roundtable/Town Hall

This roundtable examines how media in contemporary Turkey has become a key battleground for the making and unmaking of political authority. Since the early 2000s, the Justice and Development Party (AKP) has reshaped the media landscape by enabling pro-government business takeovers of major outlets and criminalizing dissenting journalism. What was once considered "mainstream media" has largely collapsed, giving way to a highly polarized environment where trust is fractured and narratives are tightly controlled. The COVID-19 pandemic unfolded within this polarized setting, amplifying public distrust and enabling the rapid spread of misinformation. This roundtable examines how individuals navigate these conditions-cross-checking sources, relying on affective cues, and interpreting media not just for information, but for orientation in a contested reality.

Media users respond to the current media landscape with everyday tactics: searching across platforms, interpreting conflicting cues, and developing new, affectively grounded forms of trust.

What is often described as "post-truth" in Turkey does not signal a collapse of truth, but rather the consolidation of a new mode of governance, one in which legal exceptions are expanded or strategically bent, and where media, beyond merely reporting on the law, assumes a central role in the performance of populist rule. In this context, the enactment of populist sovereignty is emotionally and aesthetically structured through various media narratives and genres such as dizis (TV shows). Sovereignty is not only codified. It increasingly depends on channeling the public's affective, habitual, and performative responses, desires, and engagements into the very framework that governs them. A key question, then, is how the public--both as media users and as producers--becomes implicated in this formation. The roundtable focuses ethnographically on the media practices the public embraces to disrupt, embody, or modify such frameworks of governance.

Questions guiding this roundtable are:

- 1) How do historical patterns of media control shape contemporary strategies employed by both authorities and media users?
- 2) How do individuals combine and critically evaluate diverse information sources--from social media platforms to television--as they navigate the polarized media environment shaped by AKP policies?
- 3) How do dizis and other media genres structure the emotional and aesthetic dimensions of populist sovereignty through their narratives, and how do audiences engage with, interpret, or resist these mediated forms of political power?

The current dynamics explored in this roundtable are deeply rooted in Turkey's historical trajectory of media-state relations. These histories do not remain inert; they persist as ghosts, haunting contemporary practices. By connecting past patterns of media governance to present-day realities, the roundtable traces the spectral logics through which sovereignty is mediated.

2567 Specters of Policy: Interdisciplinary Tales of Warning from Canada, Ireland, and the United States

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** MGB - Salon A

Type: Oral Presentation Session

This session considers how ghosts manifest in various cultures around the world as a result of unjust and devastating policies. Through a series of six presentations from interdisciplinary approaches, we tell the stories of ghosts which manifest from deleterious policies. Presentations will cover diverse case studies and/or theoretical frameworks, demonstrating the ways policies leave ghosts in their wake as reminders to not repeat the past. Several of the case studies also explain how these ghosts reveal the past in productive ways for present and future policy formation, including through public memorial work. Particularly in these times of political unrest, we explore what values these ghosts reveal and are at the core of the human experience. Specters of policy bring those reflections upon social and cultural values. The topics covered will be diverse, including how Trump's immigration policies leave specters of once vibrant communities in their wake, ways in which public memorials of violence and policy inadequacies haunt Vancouver, B.C.'s Downtown Eastside, particular to missing and murdered Indigenous women, an exploration of the houseless crisis in the United States and the ghosts brought on from policies that attempt to uphold the farce of the American dream and prize property ownership over lives, a close examination of a self-published memoir from a family in Belfast whom experienced a violent haunting during the political violence in Northern Ireland commonly known as "The Troubles," the ways in which the enduring policies and memories wrought in Candyman (2021) and the National Memorial of Peace and Justice or "the lynching museum" in Montgomery, Alabama demonstrate how the ghosts of black racial terror violence remind us that the present is doomed by a violent past because of unjust policy that allows for repetition of black racial terror violence, and an assertion that ghosts are real to understand the specter as representing a genuine material presence/potential—a kind of reality that never fully takes form in the hauntological reinterpretation. Finally, a philosophical exploration of the thread that binds each of these spectral manifestations in order to remind us all how we ought to recognize, witness, and respond to these ghosts in an ethical and humane manner.

Presentation(s): Haunted Migrations: Specters of U.S. Border and Immigration Policies

This paper explores how U.S. immigration, refugee, and border policies actively produce spectral figures, analyzed through the interdisciplinary lenses of hauntology and cultural anthropology. Drawing on Jacques Derrida's concept of hauntology—where specters embody the presence of absence and unresolved histories—this analysis considers how enforcement practices such as detention, deportation, and border militarization materially and symbolically generate ghostly presences. Anthropological methods illuminate how these specters manifest culturally and socially through migrant narratives, collective memory, ritual practices, and embodied experiences of loss and absence among border communities. The study reveals that spectral figures—such as

disappeared migrants, separated families, and the unsettled spirits invoked by state violence—circulate powerfully within transnational imaginations, profoundly influencing community identities and mobilizations against systemic injustice. This "spectral ethnography" argues for a deeper, culturally nuanced recognition of how hauntings shape lived realities, inform political action, and critique dominant policy discourses surrounding migration and border security.

Presenter(s): dustin ellis

Spectres of Colonial Violence: Haunting and Memorial in Vancouver's Downtown Eastside

The spectre of violence against Indigenous women is always present in Vancouver's Downtown Eastside. From the development of a memorial to missing and murdered Indigenous women, girls and 2Spirit People, to missing person signs on street corners, loss defines the fear-laden space. How does this presence of colonial violence and its subsequent memorialization shape the Downtown Eastside? How does memorialization of these violences haunt this place? This paper explores how fear is embodied within the physical memorials of missing and murdered Indigenous women who disappeared from this impoverished and frightening space. This paper will complete a content analysis of a monument within Vancouver's Downtown Eastside that memorializes missing and murdered Indigenous women and will tease out the relationship between fear and memorialization.

Presenter(s): Katherine Richards

Unhoused Ghosts: Unintended Consequences and Unseen Actors in U.S. Housing Policy

The United States is in the midst of an ongoing housing crisis. Housing costs, including rent prices, continue to rise, far outpacing inflation. Mortgage rates have, likewise, risen to highs we have not seen for decades (Callaci and Vaheesan 2024). Rejection of recent plans to intervene in this situation promises the propagation of continued "trust-the-market" policies that will likely perpetuate the precarity of a significant proportion of U.S. population in the name of profit. This presentation will employ an interpretive policy analysis approach (Shore, Wright, and Però 2011, 6) to explore historical and current housing policies to explore the causes of and possible solutions to this continuing crisis. What are the unacknowledged cultural understandings (ghosts) that are reflected in these policies? What unseen actors benefit from their continued enforcement? And, what might be done to effectively respond to the continued implementation and enforcement of these marginalizing policies? These are questions that will be explored.

The (Social) Politics of a Haunted House: Ghostly Encounters, Stigma, and Housing Policy During the Northern Irish Troubles

This paper examines a self-published memoir that tells of a Belfast family experiencing a violent haunting during the most recent episode of political violence in Northern Ireland, commonly referred to as "the Troubles." The Skillen family had lived in the council housing for roughly four years before the ghostly visit began. Once the haunting started, the family turned to the local council for a new place to raise their five growing children, but were denied. The Skillens endured stigma from neighbors as they tried to make their claims of supernatural experience public. This paper investigates the intimate politics of supernatural experience, looking at family dynamics as presented in the memoir *Number 91: A Belfast Ghost Story*, community politics of access to housing during the Troubles, local housing reassignment policy, and lastly, the social memory and forgetting at this time and as it continues to play out in digital spaces online. The experiences chronicled in the memoir have become a legend (understood in the anthropological definition of the term) unto itself as the Skillen family has sought to restrict further publications of the book and has legally challenged the digital reproduction and distribution of the book. The row house has since been demolished, but the local interest in the story remains. *Number 91* is at once a narrative about haunting and an insight into the political dimensions of the remaining presence of the Troubles in contemporary Northern Ireland.

Demanding a Witness: Candyman and the National Memorial for Peace and Justice

In this paper presentation I will analyze two memorials to violence against black communities in the United States that demand witnesses in unique ways. I demonstrate how Nia DaCosta's 2021 film *Candyman* and the National Memorial for Peace and Justice contribute to commonplace witnessing. Furthermore, my analysis demonstrates how they rhetorically demand witnesses to the horrific past and continued violence against communities of color. They also, importantly, constitute a collective for change. By putting them side by side, we see how *Candyman* and the National Memorial for Peace and Justice demand witnessing, refuse the White logics of closure of racism in the United States, insist on an open space to productively give voice to, and recognition of this legacy of ongoing trauma and violence. Finally, how they demand change through a rhetoric of reckoning. I demonstrate how the vengeful entity *Candyman*—effectively a ghost violently haunts on the big screen—and the ghosts of black racial terror violence in the physical location of the NMPJ memorial and in the soil from the locations of the lynchings across the south.

A Haunting in Progress

Ghosts, and most particularly their characteristic penchant for haunting the living, have been a pervasive metaphor used by an array of socially and politically oriented thinkers across an array of theoretical and disciplinary perspectives across the social sciences and humanities. The focus here is on how the concept of haunting by a spectral entity might best be deployed to understand

the idea of progress, broadly conceived—to shed light on how positive social and political change can take place in the unfolding of human history.

Hauntology, a central concept first deployed in 1993 by Jaques Derrida in "Specters of Marx," has been an influential take on haunting with a broad and lasting influence on thinkers within many disciplines. Hauntology represents a reinterpretation of Marx's "specter of communism," which is foundational for the modern use of ghost metaphors in social and political theory.

I begin by unpacking the hauntological and Marxian conceptions of the specter and highlighting their relevant differences. I suggest that Marx's own conception remains more useful, particularly for any contemporary form of socialism or critical theory that understands itself as progressive. Ultimately, I argue that ghosts are real. That is to say, if it is going to be capable of playing a role in progress, we must understand the specter as representing a genuine material presence/potential—a kind of reality that never fully takes form in the hauntological reinterpretation.

2667 Spreading It Around?: New Perspectives on Redistribution

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Galerie 5

Type: Oral Presentation Session

Economic redistribution formally addresses economic inequities by redirecting wealth from beneficiaries of economic systems toward those whose livelihoods fall short. Although standard approaches measure outcomes—especially income increases for the least well off—anthropologists are focusing on the processes of redistribution. These often obscure both social and political entanglements that catalyze hidden financial flows and produce unanticipated effects. This is especially true when redistribution takes financial form, by channeling wealth building to housing supports, or by tying wages, austerity-reduced welfare payments, and even modest cash transfers to debt. Contributions, tributes, and tithes also form redistribution channels which can reinforce or reshape social and political power. This panel will consider these concealed forms and examine unexpected outcomes to advance a more fully anthropological perspective of active efforts to spread wealth around.

Presentation(s): Private Health Insurance in Brazil: Redistribution and the Market in a Divided Society

Private insurance is at the centre of global capitalist markets but it is at the same time also a form of redistribution. Anthropological theory has typically examined redistribution as a political system that ideally reduces the inequalities caused by the market. What makes private insurance theoretically challenging and therefore interesting is that it is this ogre that does not fit in anthropological theory. Insurance is market and solidarity and redistribution and anonymous institutions and abstract calculations and care and kinship. Based on my fieldwork on private health insurance in Brazil I explore what this awkward form of solidarity in the market means and does to health insurance clients and their families; actuaries and other professionals working in the insurance sector; and legal professionals who take insurers to court. I show how situatedness of the expectations of health insurance and try to understand the legitimacy and morality of private health insurance in a divided society.

Payment Matrices in Practices of Redistribution: Taxes, Cuotas, and Fees in Highland Bolivia

This paper pays attention to the relationship between different types of payments involved in short- and long-term practices of redistribution and 'getting by' in highland Bolivia. Drawing on data from peri-urban areas in the city of Cochabamba, and the array of payments happening there e.g. property taxes to municipalities, commercial fees, and union dues, I theorise the 'payment matrix' to understand what payments are and can do in this setting. For instance, receipts for commercial license taxes and property taxes paid provide people with the right to make other kinds of payments, such as fees to local neighbourhood associations and unions. Taxes paid thus afford new and increased political and economic choices, and access to shared resources. In turn, the relationship between the taxes and these other fees fundamentally effects the character of each, the taxes gain particular meaning as enablers of other payments, and the fees gain legitimacy due to their link to taxes. Redistribution is then partly a factor of how people manage this matrix of payments, and a payment does not mainly mark the end, or a moment of release, of/from an economic relationship, instead it offers new possibilities to pay, the re-signification of payments made, and access to other spaces of redistributive opportunities.

Presenter(s): Miranda Sheild Johansson

Clawing Back: Redistribution in Precarious Times

Redistribution is said to be a tool to counter inequalities: to curb the worst effects of capitalist exploitation and free trade. It can also aim at redress, compensation for a loss, access to some kind of commons. When work becomes ever more precarious, and when social protection regimes are increasingly squeezed under austerity regimes (in the global north) or expanded through the drip-feeding of miniscule cash transfers (in the global south), people make use of wages, welfare and debt to constitute relations and futures, to engage with the state, and to convert between commodified and non-commodified relationships. This paper, with cases from the UK and South

Africa, shows how people rely on activist-intermediaries to 'claw back' resources that look likely to be withdrawn, and to negotiate their relationships to three sets of actors: the private or state institutions to which (or individuals to whom) they owe money; those in market or state settings who employ them and pay their remuneration; and the government agencies, nongovernmental organisations or charitable institutions through which they seek, and sometimes find, social protection.

From “Patrimony” to “Homes Like Drugs”: How Redistribution Became Rentierism in Mexico

Through an examination of the institution of homeownership, this paper traces the takeover of the post-revolutionary Mexican state's redistributive infrastructure and the rise of a post-liberal rentierism. Mexican welfare and upward mobility have hinged on national housing agencies designed to redistribute national wealth by creating "patrimony," following post-revolutionary mandates that forced the federal government and the employer class to match the savings of the working class towards homeownership. At the height of neoliberalism, as the interests and logics of venture capital and financial banking took over Mexico's housing agencies, the country's post-revolutionary infrastructure and the funds stewarded by these housing agencies were used to turn a fifth of Mexicans into mortgage-based homeowners, mirroring the boom of vulnerable, low-income homeowners and risky, predatory finance that was simultaneously transforming the United States. Today, these homeowners have not been evicted but liken their homes to "drugs," as a formally redistributive strategy to spread patrimonial wealth has entangled them into webs of extractive debt that fundamentally disempower them, consume them, and endanger their capacities to socially reproduce. Far from subsidized contributions towards the progressive acquisition of an inheritable asset, or "patrimony," these mortgage payments have become fixes or panacea, just as they are experienced as "shakedown" or "another rent" needed to stay a

The Credit Compromise: How Redistributing Opportunity Beat the Culture Wars

Can personal finance redistribute opportunity by helping young people out of debt and poverty? Unlikely allies answer yes. In this era of hyper-polarized politics, personal finance has been mandated in high schools across U.S. states that regularly repudiate each other, like Texas and California. Culture warriors frequently battle over what public school should teach. Not so with personal finance. As of 2025, 27 U.S. states have instituted mandates to teach budgeting, managing credit cards, making consumer choices, and paying for college, with the years following the pandemic showing the most rapid increase. Since then, 16 states have passed mandates. Why is this requirement so uniquely uncontroversial? I'll argue that personal finance fuses two opposing positions that have defined US higher education for more than a century—one that seeks to educate students to change the current industrial order and the other that teaches students to manage their place within it. Each views teaching personal finance as a means to prepare students for greater autonomy, redistributing not funds but future possibilities.

2684 Tackling the Everyday: Race and Nation in Big-Time College Football

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Bonaparte

Type: Roundtable/Town Hall

This roundtable will celebrate and introduce readers to one of the first ethnographies about college football, *Tackling the Everyday: Race and Family in Big-Time College Football* (University of California Press, 2025). Author and Black feminist anthropologist Tracie Canada presents on the research that led to her richly detailed and theoretically accessible ethnography about the extraordinary, but also ordinary, lives of Black college football. This book shows how college football programs particularly harm the young Black men who are overrepresented on gridirons across the country. Although coaches and universities constantly invoke the misleading "football family" narrative, this book describes how a brotherhood among Black players operates alongside their caring mothers, who support them on and off the field. Canada introduces the theoretical concepts of corporeal concern and kindred care to orient readers to the contradictory logics that shape American college football and continue to entice the families and players that participate in it. By centering Black athletes, *Tackling the Everyday* discusses a niche population that often receives heightened public attention yet is hardly understood from an ethnographic, person-centered perspective. This roundtable brings together cultural and Black feminist anthropologists to situate this text within urgent anthropological discourse around race and racism, care and kin, order and power, and violence and injury. With over four million participants in football and over five million viewers of collegiate football every year in the United States, Canada invites readers to be critical of the sport and challenge the American obsession with such a dangerous and exploitative sport. In relation to this year's theme, *Tackling the Everyday*, exemplifies that the enduring legacy of anti-Black racism rooted in slavery's afterlife is not long gone. This timely text reveals how systemic exploitation and plantation logics continue to harm Black bodies in modern sports institutions in visible and invisible ways.

2467 The Anti-Refugee Machine: Interpreting Global Migration Control

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Balcony N

Type: Oral Presentation Session

This panel presents a subset of papers published in a special issue of *Migration & Society* (vol 8, 2025) and currently under contract as a book with Berghahn Books (2026). The Anti-Refugee Machine: Interpreting Global Migration Control addresses how interventions that purport to address the root causes of migration and regulate mobility worsen the conditions of displacement and further undermine the political and legal basis for recognition and rights. Informed by ethnographic case studies that span Somalia, Libya, Eritrea and Italy; Syria, Jordan, and Lebanon; Central America and the US-Mexico borderlands, we offer a novel interpretive frame to think with in relationship to current analytical and explanatory approaches. The title of the panel (and journal and book) riffs on the late James Ferguson's *The Anti-Politics Machine* (1994), which examined how development interventions aggravated poverty by depoliticizing its causes and producing various "side effects." Our panel and project illustrates how global migration control regimes exacerbate migration while eliding its political, economic, and historical foundations in accumulation-by-dispossession, further criminalizing mobility, empowering governments to detain and deport, encouraging trafficking and smuggling, inflaming xenophobia, entrenching dispossession and exploitation, and pre-empting political belonging, legal rights, and recognition. The ARM may also be manipulated by actors with conflicting and varied agendas, from persecuting governments engaging in migration control partnerships, petty bureaucrats, and police and security forces, to exploitative labor and containment development schemes, to migrating people themselves, who are systematically converted from possible refugees to putative economic migrants (i.e., not-refugees) by the binary coding processes of the ARM. That is, the machine is "anti-refugee" because its complex operations and side effects undermine the exceptional category established in the Refugee Convention that, for better or worse, remains essential to the "right to have rights" for tens of millions of displaced people. Our approach illustrates the many complex intersections – both past and present – of Global North interventions, policies, and priorities that aim to minimize Global South mobility and maintain northern hegemony. However, trajectories of power do not correspond easily to geographical and even geopolitical restrictions, and the ARM framework allows us to see how asymmetrically empowered actors, including in countries of origin, which are largely in the Global South (but not exclusively) leverage the machine for their own interests. The Anti-Refugee Machine (ARM) is an invitation to analyze migration today through a wide range of empirical, ethnographic cases that share patterned histories, similarities, and relationships, and to address ways that migrants and non-migrants alike disrupt its operations.

Presentation(s): Introducing the Anti-Refugee Machine

In this paper, we develop the Anti-Refugee Machine (ARM) framework and metaphor to illustrate how interventions intended to address forced migration often reinforce existing power structures. Beginning with an ethnographic case study on Eritrea, we draw on Ferguson's Anti-Politics Machine (1994) to argue that rather than alleviating poverty or addressing the root causes of migration, Global North interventions empower elites and bureaucratic institutions, thereby perpetuating the conditions that drive migration. The ARM operates as a complex apparatus rooted in the historical trajectory of capitalist modernity that entangles various actors and interests across the globe while deepening inequalities and undermining the political and legal frameworks designed to protect refugees. Situating the panel's case studies, the introductory paper is also a call to action, urging readers to recognize the systemic injustices embedded in the migration control apparatus and to consider strategies for resistance and reform.

The Reflexive Subaltern History of Central America–US Informal Migration

Contemporary discourse on the part of the US State Department and immigration authorities represents informal migration from Central America as a transgression of dubious and potentially criminal subjects who assail the United States. Such a representation relies on a memory that draws a purposeful blind eye to the history of colonial extraction and post-colonial "development" that has marginalized and brutalized Central America's indigenous populations and working poor, as well as US involvement in sustaining and enhancing the root causes of informal migration. This paper asks how we can narrate the history of informal migration's root causes in Central America, and how such a narrative illuminates the operations of the Anti-Refugee Machine in this part of the world.

Deadly Seascapes: Navigating the Anti-Refugee Machine in the Central Mediterranean

In this paper, I bring together the Autonomy of Migration (AOM) approach with the Anti-Refugee Machine (ARM) framework to examine the lived experience of migrants rescued in the Central Mediterranean and disembarked in Lampedusa, an Italian island between Tunisia and Sicily. I contend that the Mediterranean Sea is transformed into a deadly weapon through restrictive immigration policies, militarized policing, and enforcement measures to manage migrant mobilities. However, in this context—where migrants risk death to continue life—I also argue that migrant journeys cannot simply be read through a politics of death. Migrants navigate and

challenge their exclusion by activating and utilizing the complex rescue and reception apparatus managed by Italy and the EU, and sometimes effectively steer the ARM for their own benefit.

“Integration is a Gift from God”: Blackness, Externalization, and the Figure of the Refugee

Focusing on the case of Italy and border externalization mechanisms in the Horn of Africa, this paper argues that refugeehood has become interpellated with Blackness in the Mediterranean world and beyond. Departing from integration discourse and bringing together the Black Mediterranean and Anti-Refugee Machine frameworks, I demonstrate how the move to elide the refugee category with Blackness has attenuated violence, disenfranchisement, and mechanisms of preemptive detention against Black Africans and other racially marked groups. Moreover, externalization policies have fundamentally altered broader institutional policies, making meaningful integration almost impossible to achieve in either the Global North or South. Refugee integration is a "gift from God" insofar as it maintains the categorical exceptionalism that constitutes the category.

Presenter(s): Fiori Berhane

Incubating Futures: Temporal Violence, Durable Solutions, and the Anti-Refugee Machine

Incarnations of humanitarian-development policies linking refugee productivity and self-reliance in the Global South have circulated in the international aid sector for decades but have reemerged in response to concerns about the refugee "crisis" in the Global North. Proponents have referred to these approaches as "incubation." Focusing on Jordan, Lebanon, Ethiopia, and Djibouti, we juxtapose the success story told about incubation with the failure of these programs to secure rights and protections. We utilize a temporal analysis to raise questions about whose ends are ultimately achieved through these policies and argue that incubation fails at its stated objectives but succeeds as part of the Anti-Refugee Machine.

“That Machine Does Not Want Us”: CBP One™ and Migrant Im/mobility at the Extended Mexico-US Borderlands

This chapter examines how restrictive U.S. asylum policies and digital technologies at Mexico's extended border shape migrant experiences. Focusing on the CBP One™ app and humanitarian parole programs, it explores how these tools exacerbate violence and waiting. The chapter theorizes CBP One™ as part of the Anti-Refugee Machine, producing automated inspections and digital deterrence. While migrant bodies are immobilized, their data circulates freely through exclusionary infrastructures. Ethnographic fieldwork reveals acts of techno-disobedience, as migrants resist and critique the digital technologies imposed upon them. These dynamics expose the dehumanizing consequences of tech-driven migration control.

3399 The Doctor: Contemporary perspectives

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Galvez

Type: Oral Presentation Session

Since the advent of contemporary biomedicine, doctors have been a central category for cultural inquiry. Anthropologists have analysed how doctors are often seen as sources of authority, actors of care and violence, symbols of hope and national modernity, and even (demi)gods in some cultural contexts. At the same time, the standardization of disease screenings and treatment protocols, the routinization of the use of medical diagnostics, and the everydayness of 'eating drugs' produces contexts where 'everyone is a doctor.' In contexts of rising medical scarcity, people seeking medical attention find themselves in situations where there are no practicing doctors and yet draw upon the widespread availability of medical advice, loose medicines, and even doctors' prescriptions without actually visiting a doctor. This allows for new actors to arise, such as the well documented prevalence of informal practitioners who dabble in biomedicine, but also the auxiliary actors through state policies that attempt to fill the widening gap between patients and health systems. This pushes us to think about the changing biosocial orders that get made and remade through biomedicine, as well as the evolving pedagogical practices of public health and biomedicine.

Therefore, in this panel, we ask: 'what is a doctor?' Building upon longstanding discussions of what happens 'when there is no doctor' and the responsabilization of medical risk for biosocial citizens, we are interested in how patients and medical doctors ascribe meanings to the symbol of 'the doctor.' Further, we are interested in how the phenomena of the clinical encounter is reframed through auxiliary actors like health officers, multi-purpose nurses, health volunteers and digital technologies like telemedicine that now mediate doctor-patient relationships. As more and more somatic and interactive clinical-work becomes mediated through actors and technologies other than the doctor, we traverse the space between a doctor and patient to rethink the clinical encounter and its actors. The papers in this panel unpack the idea of 'the doctor' and how the contemporary moment of stratified care generates new ideas about what constitutes 'a doctor.' This includes: how doctor-patient interactions are mediated through technologies that replace the somatic work of the doctor, reshaping the clinical encounter; how patients increasingly turn to informal practitioners that define cure by the alleviation of symptoms rather than disease; how public health models intensify standardized treatment protocols and control strategies with the help of semi-professionals; how doctors themselves must mobilize cultural forms to establish relationships of trust with patients, drawing upon religion, nationalism, political ideologies, and more, in order to maintain patients' supplication to their biomedical authority; and, how structures of inequality restrict and enable patient-biomedicine-doctor relationships.

Presentation(s): 'Doctor-like': Transferred Legitimacy and Reproducing Hierarchies

This paper studies how power hierarchies manifest between Feeding Distributors (FDs) who serve as nutritionists and patients in Nutrition Rehabilitation Centers (NRCs) where malnourished children receive dietary rehabilitation in Madhya Pradesh, India. Drawing on 14 months of ethnographic fieldwork, I analyse how FDs reproduce doctor-patient power dynamics despite their distinct institutional position from medical doctors. Through participant observation and daily interactions with FDs and mothers at the NRC, I demonstrate how medical authority is constructed through specialized knowledge, clinical expertise, and caste status, collectively enhancing their socio-medical authority. I introduce the concept of 'transferred legitimacy' which describes how expert knowledge of medical doctors, applied through standard procedures, legitimizes the profession of FDs. This concept helps theorize how institutional arrangements confer FDs with 'doctor-like' authority beyond their formal training. Transferred legitimacy reveals that medical authority is embedded not merely in technical knowledge but in socially constructed privilege of caste operationalized through the FD role. By tracing how these power relations are enacted through anthropometric examinations and patient diagnosis, I show how this reproduces existing social inequalities. This analysis contributes to understanding how authority is shaped in rural healthcare settings where professional boundaries are not clearly defined.

Presenter(s): Harshal Sonekar

Legible Futures: How trainee counsellors mobilize the figure of the doctor in India

This paper asks: how do trainee counsellors in India craft their future professional identities amid uncertain infrastructures of care? Drawing on ethnographic fieldwork at a postgraduate counselling psychology programme in a private university run by an indigenous congregation in Bengaluru, I consider training as a speculative, futures-making practice. In the absence of state regulation, trainees mobilize the culturally authoritative figure of the doctor to render their occupation socially legible. Many had once aspired to become doctors and now position themselves in relation to biomedicine to claim legitimacy and articulate their work to family and peers. Through a person-centred ethnography of one trainee, I examine how therapeutic sensibilities are cultivated alongside aspirations, anxieties, and moral imaginaries shaped by India's privatized healthcare landscape. Trainees fear their profession may follow the medical path toward exclusionary, commodified care, even as they invoke its authority. By reframing treatment difference as a treatment gap, they promote awareness and help produce an emergent ontology of mental health. I argue that the ambiguity of their professional status opens a space for ethical world-making—where counselling is not yet fixed, and its meanings are shaped by those training to embody it.

Presenter(s): Meghna Roy

The Evasive Doctor: Reshaping the Subjectivity of the General Practitioner through Telemedicine Communication in the COVID-19 Pandemic in Italy.

Infodemic, as too much information including false or misleading information, has been widely documented by journalists and commentators. Its long-term effects over health care organizations, however, remain understudied. In places like Italy, the COVID-19 infodemic prospered over the massive introduction of telemedicine, that expanded exponentially in the face of lockdowns and other drastic measures of social distancing.

During my fieldwork in 2021-2022, many General Practitioners (GPs) told me they bought new phones for work. They opened new WhatsApp, Face-Book and Instagram profiles. Social platforms have become a primary source of contact with patients and discussion with colleagues. GPs created new emails accounts and hired communication professionals to filter phone calls. But the ever-increasing number of requests for care still created an overburden of calls, emails and text messages. Such a tempest of information, whose management is widely improvised, ended up creating a backlash of mistrust. GPs are accused by multiple parties of having failed their gatekeeping role while practicing care by distance during the first and second wave of the COVID-19, with disastrous repercussion for patients' health and hospital overcrowding rates.

The paper explores the infodemic in the Italian primary care, asking: how does telemedicine have a long-term impact on clinicians' subjectivity, judgment and their role within the primary healthcare system?

Presenter(s): Mirko Pasquini

Medicine in search of people: Doorstep programs and diabetes prevention in Tamil Nadu

In this paper I explore the politics of 'Makkalai Thedi Maruthuvam' or medicine in search of people, a diabetes outreach and prevention program in Tamil Nadu. The increasing burden of non-communicable conditions in India has manifested a policy rhetoric of control and management, foregrounding proceduralism and continuity of care for chronic disease. These new programs recruit diverse actors with varying professional medical expertise into the fold of state medicine. Health volunteers home deliver diagnostic services, diabetes medication and peritoneal kits for dialysis patients, and the domestic space becomes a threshold for life improving services provided by the state. It invokes an intensified politics of state tactility, and 'doorstep governance' as a cultural and political strategy mobilized by ruling political parties. It also reconfigures the clinical encounter as cascade of care across multiple actors such as NCD nurses, community health officers, digital technologies, and spaces like the outpatient desks, field surveys, doorsteps, leading to a frequently hailed question, "where is the doctor?" This paper explores how these programs govern therapeutic journeys and experiences of chronic living, the content of standardized prevention and care projects across home and clinic, the figure of the community doctor as bureaucratic agent of state medicine, and what it means to 'prevent' diabetes.

Presenter(s): Sreya Dutta Chowdhury

“GPs with Panache”? An emergent medical specialisation within a profusion of specialisations

In this paper, building on 14 months of ethnography with Infectious Diseases (ID) specialists in a corporate tertiary care facility in India, I demonstrate how an emergent medical speciality attempts to carve out a space for itself within the morally vexing world of corporatised care. Within discourses of the imminent global health crisis of Antimicrobial Resistance, corporate hospitals in India have emerged as particular loci of consternation and ID physicians have emerged as the primary "stewards" of antimicrobials. ID physicians tread a territory in which they attempt to both disburse a specialised form of care—by invoking the category of "hospital infections" and "bedside" medicine to distinguish themselves from GPs and clinical microbiologists respectively with whom their abilities converge and concerns overlap—and retain a "generalist" investment in the patient and his/her disease. This paper illuminates the moral and social labour involved in the articulation of a medical specialisation, which paradoxically wants to retain its "generality", within the highly specialised medical space of tertiary care.

Presenter(s): Purbasha Mazumdar

Revisiting professional boundaries and hierarchies: Cooperation and Gender in Doctor-Nurse Interactions

The figure of the 'doctor,' a cultural icon for authority and prestige, draws not just from medical knowledge and training, but is also enmeshed within other hierarchies particular to the South Asian context. While these hierarchies are rigid, doctors' everyday activities vary and they heavily depend on other professionals in the hospital to complete their tasks, particularly, nurses. Drawing on fieldwork with male nurses in a corporate hospital in Kolkata, I argue that the role of doctors is not fixed but gets crafted amidst the socio-technical settings of the hospital. In general wards and partly in ICUs, doctors' work is limited to specific tasks, primarily related to decision-making based on the assessment of documentation provided and updated by nurses. Here, collaboration with nurses is heavily mediated by paperwork and relatively distanced. In other departments, such as the emergency or OT, doctors collaborate closely with nurses in providing direct care to patients. This opens the possibility for close and collegial relationships between them. In these male dominated medical domains, social identities, first of all gender, but also age, caste and language, play an important role in the crafting of such relationships and the playing out of its hierarchies. Looking at doctor-nurse relations from the perspective of young male nurses, this paper explores the contingencies and interdependencies in the construction of doctors' roles and boundaries to other professions.

4494 The Enduring Lives of Museum Collections: Approaches to Care at the University of Illinois Urbana- Champaign

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Galerie 1

Type: Roundtable/Town Hall

The University of Illinois Urbana-Champaign has a long history of collecting people, objects, art, animals, plants, organisms, earth, and documents, and capturing people, places, and events through images, sound recordings, and written descriptions. These collections are housed in units across campus and during their tenure at the university have been used, modified, dispersed, moved, neglected, misplaced, forgotten, found again, rehoused, and displayed. Such collections have historically been treated as though dead or extinct, or otherwise deprived of their agency. More recent frameworks for collections emphasize practices of care, highlighting the continued relationships and interactions between the people, beings, and objects in collections and those professionals who care for them. Collections professionals at the University of Illinois prioritize such care-based approaches to the people, beings, objects, and archives with which we work. Today, there are multiple units on campus working to address these harmful histories and to reimage the lives of the people, beings, objects, and records that make up the collections that are in the university's care. In this roundtable, faculty and staff in the University of Illinois Archives, Department of Anthropology, NAGPRA Office, and Spurlock Museum of World Cultures discuss approaches to responsible stewardship and the future we are working towards for the collections within our units.

Historically, museums are places where objects and art go to die. They are locked up away from communities for the sake of preservation, to save them for future generations. When they are always kept for "the future" no one in the present can connect to them, learn from them, or be inspired by them. They have no power, no life. Access is limited to scholars, museum professionals, and only those deemed worthy and appropriate by museum staff. The works are thought of only in the past tense, as artifacts of their past lives, with little relevance in the present, only kept to remind us of how people lived, thought, loved, and died in the past. Alternative approaches are applied by University of Illinois professionals and campus units in order to identify and enact respectful, collaborative, and ethical collections care in the form of community consultation, co-curation, repatriation, and other avenues. Ideally, museums and collections spaces should function much like community archives, to serve the descendants and communities tied to the people, collections, and works housed within them. These frameworks emphasize campus partnerships with internal and external parties in order to determine appropriate standards of care for the wide variety of collections types housed at the University. We provide examples for other practitioners of how these partnerships can help us move toward our shared goal of consultation, collaboration, and care for museum collections in their post-acquisition lives.

7596 The Planetary Milieu: Equipping Life for a Transformed Environment

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR C3 (3rd fl)

Type: Oral Presentation Session

As philosopher of science Georges Canguilhem described it, the milieu was the place between things where living occurs, as experienced by particular beings through their needs. In a classic 1952 essay, he wrote: "the notion of milieu is becoming a universal and obligatory mode of apprehending the experiences and existence of living beings." But today, we might say, the notion of milieu needs to be amended for an age of planetary-scale transformation. Processes such as zoonotic disease emergence and anthropogenic climate change challenge us to equip living beings to manage new threats. Indeed, as Peter Redfield has noted, "the politics of life may now exceed the inherited institutions and forms of expertise developed for its governance." The papers in this panel explore the invention of equipment to help living beings-human and nonhuman-as they struggle to adapt to an altered planetary milieu. The panel will explore a range of cases of technologies for adjusting to ecological crisis, including air-conditioned trains in India, viral banks in Hong Kong, a refrigerated salmon hatchery, and research into sun-protection products.

Presentation(s): Relating Metabolism with Milieu through Technologies of Comfort

This paper explores the relation between Marx's concept of "metabolism" and Canguilhem's notion of "milieu" through technologies of comfort like air conditioners in India. In October 1937, a decade before the end of the British rule in the country, a newspaper article titled "Air Conditioned Train-- Demonstration Run" explained a test run from Delhi to Agra and back: "The four coaches which were used for the occasion were remarkable for the harmonious and restful blend of comfort and utility in the internal fillings but the real difference between the old and the new became evident as the train left Delhi's environs behind and gathered speed." Throughout the 20th and the 21st

centuries, words like "comfort" and "comfort cooling" have been discursively used to tie space with bodies---to demarcate a protected inside from the harmful outside or mark difference between laboring and non-laboring bodies. For Marx, metabolism simultaneously signifies transformation of one form to another as well as the constant capacity of capitalism to resolve contradictions that it creates and keep sustaining itself. In *The Living and its Milieu*, Canguilhem traces the relation and evolution between that which is singular (like an organism) and the whole (like the milieu) historically. In this paper, I want to ask, how do postcolonial relations between space and the body carved out through technologies like air conditioners complicate or conjoin metabolism and milieu?

The Cryopolitics of Planetary Health: From Viral Banks in Hong Kong to Bacterial Repositories in Dakar

In this talk I want to develop the concept of cryopolitics, defined by Emma Kowal and Joanna Radin as the technologies of power to let live and defer death (or not let die), by comparing the two sites in which I have done ethnographic research over the last twenty years. In Hong Kong, viral banks are conserved in fridges and online to compare emerging viruses to known viruses and launch alert in case they appear as pandemic. In Dakar, human remains in laboratories and museums are preserved as testimonies of the role of the Senegalese people in the history of the human species, and in some of them, bacteria are sequenced in their calcified dental pulp to find « pre-modern microbiome ». In these two sites, living beings are equipped to detect early warning signals of biological threats caused by human modes of life, such as an avian influenza pandemic or a reduction of the human microbiome. How can these sites work as sentinels for planetary health and produce solidarity between species at the local level?

Presenter(s): Frederic Keck

The Refrigerated River: Vital Needs and Infrastructural Norms on a Warming Planet

This talk will focus on the relation between vital needs and infrastructural norms on a warming planet. It looks at recent controversies in the management of a critical node in California's system of water supply, the dams and pumping plants that convey water from the Bay Delta in the north of the state to the farms and cities in the South. Water resource managers must balance between the demands of human water users, on the one hand, and the needs of endangered species of fish on the other. One of the most vulnerable endangered species is the winter-run chinook salmon, which hatches its eggs after returning to spawn in the early summer. As climate change leads to warmer water temperatures on the river, the rate of survival of the eggs has plummeted. In turn, fish biologists, tribal leaders and water system operators have sought means to keep the eggs cool enough to ensure the species' future survival. These means include a massive temperature control device embedded in a dam, a refrigeration system near a hatchery, and, as a last resort, trucking salmon eggs to higher ground.

Presenter(s): Andrew Lakoff

The Ultraviolet Milieu

This paper reflects some preliminary ethnographic and historical research on the science and market for sun-protection products, specifically commercial sunscreen lotions. Sunscreen, a chemical-mineral amalgam, has been used for nearly a century to regulate human bodies' absorption of ultraviolet radiation. Health authorities in the USA regulate sunscreen as an over-the-counter drug, but its benefits are touted as simultaneously medical and aesthetic. Defense from UV radiation not only prevents cancer; it can stem the visible signs of aging. In this paper, I consider the milieu as a space for thinking the intersection between health and appearance. I discuss some of the ways in which chemists, government regulators, and cosmetic industry representatives navigate this milieu. As it turns out, sun protection for middle class leisure travelers and health and beauty conscious individuals provides an early picture of what planetary health looks like when rolled out as an ethical and practical posture to bodies and environments. If skin care is a form of planetary health, then it should come as no surprise that NASA scientists speak of the ozone layer as "Earth's sunscreen."

3289 The Real Crisis of Anthropology: A reflection on the limits of various disciplinary exorcisms to date, and the problem with anthropology on the moon

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Beuregard

Type: Roundtable/Town Hall

It's no secret that anthropology fancies itself in constant crisis. More to the point, these crises are serial, parallel across the various subfields, and often involve some manner of exorcism. After all, at root, most of these crises involve a sober reckoning with what disfavoured disciplinary ancestors did, and a struggle to free ourselves from their demonic legacies. We, as a discipline, are in a state of perpetual and vexatious haunting that we don't quite know what to do with.

This panel convenes the contributors from a forthcoming edited volume from the School for Advanced Research Press called, *The Real Crisis of Anthropology*. The contributors come from all subfields of anthropology and will briefly explain the crisis in their subfield, offer notes on how and why these crises are often parallel, and then offer a vision of an unpossessed discipline, one that has finally shaken its crisis doom loop. This vision offers a roadmap for cross-field collaboration, and a vision of a professional association with a clearer and more active mandate to advocate for the professional wellbeing of anthropologists.

6720 The Spectral Terrain of Gendered Crip Ecologies and Environmental Racism

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** MGB Salon E

Type: Roundtable/Town Hall

Some terrain is meant to maim, others, to heal. Some terrain is slated for natural resource extraction – logging, mining, highways, dams, and human dwellings – others qualify for "ecological restoration," but rarely, if ever, with land-back justice as an organizing concern. Whether it's tactical infrastructure (de Leon 2015; Jusionyte 2018; Kim 2017) emblematic of occupation (Weizman 2007; 2024) or "disabled ecologies" (Taylor 2024), the nonhuman landscape can be deployed to inflict injury on humans and more-than-humans. In the burgeoning scholarship that weaves eco-crip theory, feminist, queer and trans perspectives (Alaimo 2010; Kafer 2017; Ray and Sibara 2017) with Indigenous knowledge and critiques (Clare 2017; Schmidt 2024; Tallbear and Willey 2019; Wölfle Hazard 2022) the eco-social politics of contamination, pollution, and toxicity manifest unevenly for different people, especially in a settler-colonial context (Liboiron 2021). Claims that certain land is "barren" often justify land-grabs in the name of making it "productively fertile" once again (Goldstein forthcoming). Different kinds of environments affect human reproduction and such

environments may also reproduce and re-instantiate trauma (Theidon 2022). Here, already marginalized populations are further maligned as "unable" to care for the land, and perhaps even for themselves.

This roundtable takes eco-crip approaches to environmental harm, examining the political repercussions of "conditions of debility" (Schmidt 2024) as they are racialized, classed, ageist, gendered and sexualized. How might one cite environmental damage to support an "environmentalism of the injured" (Taylor 2024), tracing human-ecological wounding without (further) pathologizing human and more-than-human disability? That is, how does taking an approach of the "environmentalism of the injured" act as a powerful method for disentangling the appropriation of disability and environmental justice rhetoric? Land-body woundings can be strikingly visible at times. At other times, they appear a ghostly, almost imperceptible, haunting presence. When making claims about historical harms, how might the landscape itself serve as environmental archive (Galvis-Rubiano et al 2023) – from lake or ice sediment cores to tree bark and leaves, fossilized beings to rocks formations? This roundtable will focus on (un)earthing moments of environmental injury that both challenge harm-inducing ableist structures while also inspiring resistance and care for humans as well as more-than-humans who experience pollution.

4517 The Value of Loss: How Absence and Rupture Are Valorized

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Studio 4

Type: Oral Presentation Session

In an increasingly perilous world, loss is almost an inevitability. Sometimes loss is acute, something -- a job, a friend, a limb, a life -- here one second and gone the next. Sometimes loss is chronic -- health, relationships, places, hope -- eroded over time until all that is left is its memory. Other times, it is hard to tell the difference between the two. Acute losses can spiral out into chronic ones; the slow grind of decay can give rise to a critical rupture. Gone does not mean forgotten, however. Anthropologists have long been sensitive to the ways in which losses take on lives of their own, animated through their remembering -- voluntary or otherwise -- towards particular social, political, and economic ends. But not all losses are remembered equally, nor are they remembered for the same amount of time. Not every ghost is able to haunt those who remain. This panel, therefore, is interested in the question of how and when particular losses become worth remembering. In doing so, it seeks to examine how intersections of identity, class, and historical moments give rise to the need to remember and its dark twin, the ability to forget. Drawing on

research about the role of gender in determining whose wounds are worth representing in the aftermath of the Bangladeshi protest movement, how people are pressured to forget tragedies such as hurricane Katrina, the place of queer ghosts in the envisioning of queer futures, how changes in food provide insight into "home" as something always already partially lost, the possibilities for new familial relationships to emerge out of the loss of health caused by long-term illnesses like chronic liver disease, and how trans and queer losses take on value as signifiers of both social progress and urban development in South Texas, this panel meditates on the following questions: Who or what gets remembered, and why? Who gets to do the remembering, and to what end are such remembrances mobilized? What future opportunities are created and foreclosed through loss and its marking, and who do these processes benefit?

Presentation(s): The Politics of Wound: Visible Bodies, Invisible Lives

On August 5, 2024, following a month-long insurgency, the Sheikh Hasina regime was ousted in Bangladesh, leaving thousands dead or permanently wounded (Reuters 2024). While scholarship on politically wounded bodies has emphasized trauma, heroism, and masculine sacrifice (Açıksöz 2019; Barbosa 2022), this study foregrounds everyday meaning-making among both male and female survivors groups often unevenly represented in dominant narratives (Addlakha 2013; Wendell 1996). Using ethnographic methods, it explores how gender, class, and political identity shape reintegration after injury. Trauma is approached not solely as individual rupture, but as a socially embedded, politically mediated experience negotiated through kinship, memory, and institutional encounters (Das 2007; Han 2012). While wounded men may be valorized as heroes, women's injured bodies evoke complex questions of shame, visibility, and exclusion (Jayawardena & de Alwis 1996; Ong & Peletz 1995). Engaging gendered disability and body politics (Goodley 2014; Towghi & Vora 2014), this research examines how survivors navigate social belonging and political subjectivities (Goffman 1963; Wool 2015). Ultimately, this study contributes to anthropological debates on disability embodiment, trauma, and political violence by analyzing how the wounded body reconfigures subjectivity in post-movement Bangladesh

Ghosts of Hurricane Past: An Autoethnographic Exploration of the Effects of Hurricane Katrina

Twenty years ago, Hurricane Katrina devastated New Orleans and the surrounding areas and would change the direction of countless lives including my own. Taking inspiration from the theme and location of this conference, in this paper, I employ an autoethnographic approach to explore the specter of the hurricane. I came of age in the wake of Hurricane Katrina, abruptly displaced and

disconnected from a home I would never really return to. However, while most of the region was dealing with unimaginable pain and devastating loss, in the ensuing weeks, my material positionality was revealed to be increased. The resulting guilt and shame I felt led me to deny the sense of loss and powerlessness I was experiencing. I was haunted by these feelings, shutting down and refusing to acknowledge them or downplaying and attempting to forget the pain and loss of becoming uprooted. Utilizing ideas of displacement and survivors' guilt, I will investigate the pressure to forget and the consequences of this forgetting. I believed that losing a sense of belonging and community was insignificant, not worthy of attention. The ghost of Hurricane Katrina followed me silently, stealthily until a misguided visit to the Presbytère Museum twelve years later that forced me to remember and acknowledge the trauma of this disastrous event. I hope to add to the discourse of loss in displacement by considering how individuals are haunted by the denial of their own distress.

Presenter(s): Katharine Serio

The Future of Queer Death: Loss and Memory in a Berlin Queer Cemetery

In a cemetery (Kirchhof) in central Berlin known for its many queer tenants, one sprawling burial plot houses the remains of almost one hundred people who lived with HIV. Another serves as the final resting place of a famous gay author and AIDS activist; known for camp and gallows humor, the plot's headstones subtly resemble male anatomy. Another plot tells the stories of the women interred there in an effort to resist lesbian erasure. These plots, along with others in the cemetery, reveal a particularly queer connection between loss, memory, and the future. Drawing on an earlier debate over queer time and relationality (Dinshaw et al. 2007, Muñoz 2009), recent scholarship has characterized the work of queer memory making as something that produces and is the product of diffuse queer relations (Sutton 2020) or, more concretely, kinship (Evans 2023). Using ethnographic work I conducted in and around the Alte Sankt Matthäus Kirchhof in Berlin, I argue queer memories of death reorient the experience of loss towards the future. Understanding the temporality of loss, in this case, is vital because it underscores how memory not only facilitates relationality in death but presses feelings of loss beyond the individual into the construction of a collective with a politics and a future. The ghosts of the Alte Sankt Matthäus Kirchhof are haunting precisely because they remind queer visitors they are not alone and must carry with them not-yet-realized visions for queer life ahead.

Presenter(s): Scott Olson

"Home" as Loss: Non-human Belonging and the Memory of Food in Laos

In many ways, "home" emerges as a value of collective belonging when it is already lost, or on the brink of disappearance. "Home", for many people, denotes a complex entity composed of experience and imagination, identity construction and sensory access. However, this seeming "whole" sometimes only gains its contours in the aftermath of its (partial) disappearance. This will be argued for food as a main indicator of the experience of "home". In Laos, a country with high biodiversity and a large rural population, many people rely on the food they grow, raise, hunt or

collect in their immediate environment. Each meal thus brings a network of beings to the table, some domesticated and some wild, some local and some bought on the market. Local food is charged with affect – certain species represent memories and places of earlier belonging, but also serve as expression of affection. This comes into strong relief when the environment changes, through resettlement, hydroelectric dams or monocropping. Thereby, the contours of human-non-human belonging, realized through the lens of food, become visible as an image of a whole that is always incomplete. This talk presents work in progress in the Cooperative Research Center "Home(s)" at Heidelberg University.

Presenter(s): Guido Sprenger

Losing a Liver, Gaining a Family: Cirrhosis, Family Values, and Experimental Intimacies in the Urban U.S.

How does bodily loss become re-valORIZED as a gateway to familial integration? Both medicine and anthropology often treat chronic illness as loss of normal functioning (Canguilhem 1991). Yet medical anthropology shows that illness is also productive, forging new forms of belonging (Nguyen 2010, Petryna 2022), kinship (Franklin 2013, Rapp 1999), and moral personhood (Kleinman 2009, Shohet 2021) through medicalization or assumption of caregiving roles. Drawing on ethnography among low-income people with cirrhosis and their families in the urban U.S., we highlight a different path by which deterioration fosters generativity. Loss of liver function, we argue, may itself create the conditions for novel ways of being together. Starting from the statement, "He lost his health, but I got my family back," we trace how post-diagnosis shifts in needs, desires, and behaviors permitted one family to experiment with alternative domestic intimacies. While cirrhosis should hardly be romanticized, lived experiences of it suggest illness may be a matter of not better and worse, but otherwise.

Missing But (Now) Not Forgotten: Urban Development and Trans Disappearances

Kimberly's sister dropped her off downtown around 2:30 am in 2017. She never caught up with the friends she was there to meet, disappearing on the dark streets of downtown Brownsville. Black and brown trans women face an increased risk of violence, especially when they are participating or are perceived to be participating in sex work. Trans scholars have drawn attention to how violence against trans women of color often comes to stand for violence against all trans people, effacing racial and labor causes. Such narratives are used to fundraise or promote the passing of anti-hate crime legislation, bolstering a carceral state that already disproportionately harms trans women of color. Kimberly's story has been used to generate a different kind of value. Today, downtown Brownsville has been transformed. The streets shine with lights, business is booming, and Kimberly's family has been invited three times to host a display in the city's June Pride exhibit downtown. Drawing on 9 months of research and an analysis of documentaries made on her disappearance, I argue that the Kimberly's loss has become worth the city's attention because it

can be folded into the narrative of Brownsville's development into a modern, cosmopolitan city, valued for its ability to demonstrate how things have changed even as factors that contributed to her loss continue. In so doing, I ask what the limitations of remembrance are here at the looming end of the very long twilight of equality.

Presenter(s): Sara Becker

2642 Towards a Critical Anthropology of Impunity Pt. 1

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** Balcony K

Type: Oral Presentation Session

Hauntings and ghosts evoke unresolved past events that are often violent in nature. These unresolved or unacknowledged events can be described through the language of law and the absence of law or "impunity."

Since the war between Israel and Hamas began in 2023, "impunity" has circulated in global political and legal discourses in a wide variety of contexts from protests to the International Criminal Court. More recently, "impunity" has entered into popular discourse in the United States as the Trump administration continues to pursue a political agenda that functions outside of or beyond "the law."

Historically, impunity has been taken to mean the absence of legal or punitive redress for violence in the global south, however there is an urgent need to think about impunity theoretically and ethnographically in diverse contexts. Building on the recent work in establishing an anthropology of "justice" (Brunner 2019; Clarke 2019; Cooper 2018; Greenberg 2018), this two-part panel brings together anthropologists working on the question of impunity in diverse contexts and geographies.

Presentation(s): The Intimate force of Feminicidal Impunity: Towards a Sociality of Seeking Justice

Impunity is widely recognized as the defining trait of femicide in Latin America. Yet, less is known about what impunity means to those who are most affected. In this paper I offer an ethnographic account of the ways in which impunity impacts lives on an interpersonal level. I present "the intimate force of impunity" to demonstrate how the absence of redress can destroy interpersonal relationships long after a femicide has taken place. I then show the ways in which family activists against femicide have worked to circumvent this impunity by fostering new forms of kinship with one another. Family activism has been critiqued for its apolitical optics, and reification of

traditional gender and familial roles, yet, in this paper I show the how family activists against femicide in Argentina are far more dynamic as they generate new forms of sociality based upon a shared experience of suffering and militancy.

Configurations of Power, Impunity, and Muslim Life in Modi's India

What does impunity mean in a context where god is constructed as the ultimate sovereign? While conducting fieldwork with diverse groups of Muslims in Old Delhi, I often heard people say, "Allah is the Sovereign of Sovereigns" in conversations about the difficulties facing Muslims in contemporary India. In a country where Hindu supremacy is ascendent, where Muslims live with the constant specter of violence from Hindu vigilantes who seem to act with impunity, and where they are increasingly dislocated and disenfranchised by a Hindu majoritarian state, my interlocutors insisted that everything in their lives was a manifestation of Allah's will and that, ultimately, justice would be done. I analyze what such statements tell us about understandings of impunity, and configurations of sovereign power and agency amongst Old Delhi's Muslims. I suggest that these narratives not only undermine the current regime by refusing to recognize its ability to determine their lives, they also indicate an alternative temporality for justice and redressal. These narratives position Muslims in a divine landscape where Allah is the sovereign agent whose power can be channeled to change their circumstances, make place for themselves and their communities, and hope for a more just future.

Friends Who Disappear: Memory, Justice and Moral Reparation After the Guatemalan Genocide

Guatemala has the dubious distinction of inventing the political condition of "disappearance" in late 20th century Latin America. In Guatemala's long history of repressing its own citizenry, forced disappearance is rooted in the 1954 US-backed overthrow of democratically elected President Jacobo Arbenz and was used throughout the military dictatorships that followed. This paper traces state deployment of forced disappearance on opposition leaders in Guatemala from the 1966 mass disappearance of members of the Guatemalan Workers Party to the 1980 mass disappearance of union leaders in order to understand the systematic use of forced disappearance by a state so fragile that it disappeared children in the 1980s. Specifically, I consider the case of Dr. Marvyn Perez who was forcibly disappeared and tortured by Guatemalan security forces when he was 14. More than 30 years later, he continues to seek justice for himself and others who did not survive.

Presenter(s): Victoria Sanford

Polluting Industries and the Production of De Facto Impunity

Using the contamination of the Cape Fear River basin in eastern North Carolina by Dupont/Chemours as an ethnographic case study, this paper reflects on the production of corporate shields of de facto impunity in community struggles for environmental justice. In the relationship between time and redress, corporations notoriously employ delay tactics in lawsuits.

Timelines of accountability and remediation are also distorted by changes in corporate structures and spinoff operations. With regards to impunity as it relates to bodies of evidence, there is robust anthropological research on the ways in which environmental and health impact data can be manipulated and how it can be challenged. While local communities embroiled in the fight for environmental justice are forging alliances near and far to counter the power of corporate impunity, the global, national, and state-level sociopolitical dimensions of the problem are complex and shifting. In November 2023, the United Nations declared contamination of the Cape Fear a human rights violation. A little more than a year later, the proposed US EPA rule that would have set national limits on the discharge of PFAS "forever chemicals" in waterways was rescinded and now leaves it up to states to regulate industrial pollution.

3367 Uncanny Ecologies and Spectral Politics in India

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR D1 (3rd fl)

Type: Oral Presentation Session

This panel brings together five projects from different ethnographic sites and historical concerns in India. On one hand, our papers address the intensification of climate change, agricultural and medicinal production, infrastructural development, and caste and religious divides. While on the other hand, they trace the decline or fleeting quality of human life, crops, language, water, and temporality itself. Lodged at an anxious juncture of past and present, we've come to experience and have been taught how our ethnographic sites are haunted. In Rajasthan, the specter of caste opens insights into ways exclusivist Hindu-right politics and religious identity is inscribed across and challenged through nonhuman bodies and consumptive practices. From apple-growers' negotiation of the changing climatic conditions in Himachal Pradesh, the entanglement of the agricultural industry, capital, and consequently adaptive social practices becomes salient in the specter of heat. The specter of the snakebite in Tamil Nadu complicates how to understand ways in which indigenous place-based economic and spiritual practices intersect the relationality between humans, snakes, and deities. Spanning North India, the specter of Urdu poetry disrupts otherwise intractable religious and linguistic divides between Hindu and Muslim identities. The specter of an earthquake is captured by memories of disaster resurfaced as fear and animated for political activism against a dam in Assam. Collectively, we take Mayanthi Fernando's (2022) concept of an "uncanny ecology" as a uniting, generative provocation to think about what haunts our field sites and interlocutors. Fernando argues that in the "multiplicity of nonhuman presences in South Asian social life – cows, dogs, monkeys, [i]devis[/i] and [i]devatas[/i], [i]jinns[/i] and [i]bhuts[/i], [i]raksas[/i] and [i]yakas[/i] – the region has become a particularly rich site from which to theorize multispecies worlds, although scholars have tended to consider [i]either[/i] animals [i]or[/i] gods and spirits." Rather than natureculture, Fernando argues that, in undoing the nature/culture binary, we need to attend to supernatureculture and take seriously the agency of gods, spirits, and otherwise forces (not rendering them to just belief), to think more capaciously, and less secularly,

about what constitutes the nonhuman. As in Fernando's own work, this panel dwells with the ways uncanny ecologies disrupt anthropological theorization of not only intersubjective (human) and interspecies relations but supernatural and spectral worlds, as well. To this effect, we suggest that concentrating on the "more-than-human" in our empirical research ultimately renews consideration of the uncanny within dominating forms of order in India and broader anthropological analysis.

Presentation(s): "This is not a time for poetry:" The Specters of Urdu Poetry in North India

In North India, Urdu poetry circulates through literary festivals, bookshops, classrooms, formal performances, and celebrations at Sufi dargahs. It also maintains another type of presence that pervades non-literary spaces of daily conversation, the market, protests, and occasionally, parliament. Anchoring this pervading presence, Urdu poetry is often characterized by scholars and aficionados alike through a discourse of nostalgia, both about its content and a past glory of its production. Drawing from ethnographic and documentary fieldwork in Delhi and Mumbai, this paper complicates that discourse of nostalgia. Bracketing the literary and affective framing of Urdu poetry in or as nostalgia, what if, instead, one first attends to the poetry's presence itself, to consider Urdu poetry's uncanny emergences? To unravel the question, this paper walks with the ghost of 19th century poet, Mirza Ghalib, traces the shadow of Ghalib in discourses about Urdu poetry, and examines the specter of Urdu poetry in language ideologies of Urdu. The uncanniness of such happenings curiously reveals particular temporalities and socialities of Urdu in North India that disrupt typical communal laminations of Muslim-ness onto the language. By extension, this paper shows how the uncanny productively accommodates a wide array of frameworks — spectrality (Derrida 1994), mimesis (Benjamin 2019), chronotope (Bakhtin 1981), interdiscursivity (Silverstein 2005), and commensurability (Hankins and Yeh 2016).

When Disasters Repeat Themselves: The Uncanny Similarities between an Earthquake and a Dam in Northeast India

In October 2023, people living along the Subansiri—the largest tributary of the Brahmaputra—in Assam, were able to catch fish in the river with bare hands. Throughout fieldwork, my interlocutors often shared how their parents or grandparents had done the same more than seven decades ago

in August 1950. This shared, strange phenomenon was caused by two disasters. The 1950 Great Assam Earthquake, measuring 8.5 Richter Scale and its subsequent earthquake-induced landslides blocked the river in the hills and dried it up for three days. In 2023, again, landslides blocked the diversion tunnel of the Subansiri Lower Hydroelectric Project (SLHEP), causing the river to dry downstream. The specter of the 1950 Assam Earthquake has haunted SLHEP since its inception in 2005. The memory of 1950 and fear of dam failure led to anti-dam protests in the downstream that suspended SLHEP's construction in 2011. After reevaluation of its seismic resistance capacity and a lengthy legal battle, construction resumed in 2020. Disaster, however, repeated itself before the dam's completion. Thinking with these uncanny similarities of disasters, this paper bridges Fernando's scholarship on uncanny ecologies (2022) with anthropological scholarship on infrastructure. This paper argues that the temporality of infrastructure makes disasters part of the new experiences produced by infrastructure (Larkin 2015), even though neither the infrastructure nor the disaster is experienced similarly by all.

To Walk, Untouched, through a Cremation Ground: Tawiz, Meat Consumption, and the Spectral Politics of Caste in Rajasthan

The Valmiki community is a Scheduled Caste or formerly "untouchable" community, whose members are primarily relegated to sanitation labor across North India. Often considered untouchable even by other Dalit communities, Valmiki did not extensively participate in the anti-caste mobilizations of the twentieth century, and Valmiki commitment to Hindu-right wing movements has haunted anti-caste activism and critical caste studies scholarship (Lee 2021). Drawing on fieldwork in Deshnok, Rajasthan, this paper follows conversations with Valmiki interlocutors on the consumption of meat, the wearing of tawiz made by Muslims, and protection from [i]bhuts[/i] and [i]prets[/i], or ghosts and spirits. The politics of meat consumption in India is deeply embedded in caste, gender, and Hindu nationalism, and if and what types of meat an individual consumes are primary indicators of social identity. This paper explores how caste and religious identity become articulated across nonhuman bodies, but also how the (non)consumption of certain nonhumans becomes grounds for shared affinities between Muslims and Dalits. Following calls to think more expansively, and less secularly, about the nonhuman (Fernando 2022), this paper considers the possibilities and the issues of taking seriously the agency of nonhumans, including animals, ghosts, spirits, and goddesses in the context of caste untouchability and Hindu-right politics in India.

Calling upon [i]Vettai Sattan[/i]: Interspecies Risk and the Supernatural among Irula Snake-Catchers

In India, snakes and snakebites evoke terror across material and supernatural registers, yet snakes also manifest as revered, divine beings in Hindu folk traditions. Ethnographic fieldwork among the Irulas, a community of Adivasi (indigenous) snake-catchers in the southern state of Tamil Nadu,

however, reveals a different kind of relationality between humans, snakes, and supernatural entities. Irulas capture venomous snakes and extract their venom for sale in pharmaceutical supply chains. Doing so, they draw upon histories and knowledges rooted in ancestral hunting-gathering practices. Irulas ritually call upon a hunting spirit known as [i]vettai sattan[/i], an unseen, uncontained, and liminal entity that grants the snake-catchers permission to capture snakes and guides their search. At the same time, [i]vettai sattan[/i] does not control the actions of snakes, who may bite or escape from the Irula snake-catchers. This paper explores how the presence of [i]vettai sattan[/i] conditions the unruly relations between the Irulas and snakes, such that the deadly risks of snakebite are normalized within everyday work. Recognizing the uncanny across more-than-human ecologies, following Fernando (2022), I argue that Irula people reframe the specter of snakebite from a calamitous event with supernatural implications, to a feature of shared, yet unpredictable multispecies spaces.

Presenter(s): Rabindra Willford

Troubled Apples: Spectral Politics of Heat in India's Western Himalayas

Over the last couple of decades, apple growers in Himachal Pradesh, "the apple state of India", have faced numerous challenges in their production due to rising mean temperatures and the emergence of unprecedented heat. As the snowline in this mountain-state recedes, and the treeline moves upwards, apple growers lament the conditions of cultivation amidst a rising specter of heat. The cast of actors negotiating this specter of heat includes laborers, scientists, [i]Devta[/i]s, rats, insects, state officials, chemical companies, and, of course, apple growers. Drawing on fieldwork in Kotgarh, Himachal Pradesh, this paper first explores how this specter of heat is being exploited in the interests of industrial agriculture and, in turn, the intensification and expansion of capitalism. This paper, then, draws connections to how changing environmental conditions are also playing a role in changes to social reproduction practices associated with particular seasons. By posing questions about what varied accounts surrounding this specter of heat might reveal about work and life in "troubled ecologies", this paper bridges Fernando's (2022) work on the uncanny with scholarship in the anthropology of work that calls for intersectional engagements with labor and environmental politics in a contemporary moment riddled with planetary uncertainty (Blanchette and Besky, 2019).

3246 Writing for not just about ethnographic participants: Reflections on medium, genre, voice and other aspects of rhetorical strategy

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Oral Presentation Session

For most of anthropology's history, anthropologists have dedicated themselves to writing about their ethnographic subjects, and only on occasion, on the side, in the background, or perhaps indirectly, have produced text for the people who participated in their research. With renewed emphasis on decolonization both in and outside of anthropology in recent years, greater ease of long-distance communication via social media, and the digitization of knowledge production, anthropologists now face new expectations and opportunities to communicate their research findings to not just the public but the people who so graciously opened their lives, experiences and communities to them. Whether drawing inspiration from alternative framings of anthropology such as collaborative anthropology, dialogic anthropology, activist anthropology or others, there are many ends to and media in which writing for one's interlocutors can be developed. Writing for might be one stage in the process of writing with one's research participants, or it might be a task that a researcher engages in on the side of or embedded in their academic publications to make their findings accessible, of use and ultimately up for the evaluation of their participants.

This panel brings together scholars engaged in writing, producing or creating in some shape or form for their research participants or communities to reflect on their creative processes and share strategies and learnings with regards to medium, genre, voice and other aspects of rhetorical strategy. Panelists reflect on their experiences creating for and with their interlocutors bilingual books, in-person and digital presentations, interactive workshops, resources shared on social media, informational handbooks, and collaborative artwork. Together, the papers consider how shifting from writing about to writing for one's interlocutors at various scales and stages of an ethnographic project can be fraught with epistemic ghosts that seem to patrol the confines of a scholar's voice and creativity. While alternative framings of anthropology and ethnographic methods are helpfully orienting, "ghosts" of previous anthropological paradigms such as the detached observer, the hierarchy of academic above vernacular theory, or the privileging of etic over emic perspective, can haunt, inhabit or perhaps thwart efforts to shift from writing about to writing for one's interlocutors. Additional specters spotlighted by these papers include: standards of tenure and promotion, structures for disconnection between anthropologists and subjects, the dichotomy of insider and outsider positionality, restrictive definitions of what counts as knowledge, and an ethnographer's discomfort with disagreement. This panel illuminates needed shifts in praxis and alternative structures for knowledge production that contribute to an anthropology beholden to ongoing dialogue with communities outside of the academy, especially our subjects of research.

Presentation(s): Empowerment Through Co-Creation: The Egg Donor Handbook

Reproductive anthropologists navigate complex politics and landscapes, requiring creative methods to capture a dynamic field and amplify affected voices. My research investigates egg donors' experiences with anonymity and digital privacy in a setting where technology outpaces policy, leaving donors vulnerable to identification and surveillance. As a former egg donor, I position myself alongside my interlocutors, identifying with their experiences and fears. Through autoethnography, I build connections with fellow donors and open avenues for co-creation. As part of my commitment to the egg donor community, I am facilitating the co-creation of The Egg Donor Handbook, a collaborative guide for egg donors that offers advice and tools to empower donors during the donation process. Through the co-production and sharing of knowledge, my work seeks to break down the walls that have historically separated anthropologists and subjects, instead celebrating the creativity that emerges from connection. I will speak to the rewards and challenges that come with prioritizing writing with and for our interlocutors, with a focus on the early stages of collaboration. I will elaborate on handbooks as a genre and creative method which works to bridge the divide between academic and public writing. Finally, I will consider my own positionality as a former egg donor and egg donor recruiter as categories which simultaneously enable and complicate my work.

Presenter(s): Ashley Fitzpatrick

What If You Disagree?: Bridging the Gap Between Emic and Etic Perspectives in Writing for Ethnographic Participants

The crux of decolonizing ethnography may be involving participants at the stage of not just data collection and but also analytic writing, but what if the anthropologist and participants disagree in the end? In this paper I reflect critically on how I am working through this question in my dissertation project on Wolof-French bilingualism in elementary education in Senegal, as I begin the process of sharing off-shoots of the main dissertation text with my research participants in writing, digital presentation and in-person meetings. I argue that while disagreement might seem to threaten the basis of collaboration, it might be an essential part of the process in which a researcher strives to offer alternative, counter-hegemonic perspectives on daily life. Further, in research on linguistic practices in education, disagreement is likely, as linguistic anthropological theory often centers mixed and non-standard language practices that are devalued by monolingualistic ideologies naturalized for most educators. Drawing on formulations of dialogic anthropology (Dwyer 1977) and accompaniment (Bucholtz, Casillas and Lee 2017), I consider how writing for my participants requires shifting my positionality from listener and learner to "teacher-student" (Freire 1970, 80), as I strive to explain the theoretical perspectives that inform my analyses but also invite disagreement.

Presenter(s): Gaya Morris

Writing in the Shadows of Ghosts: A Case for Changing Tenure and Promotion Standards to Support Writing with and for Anthropological Collaborators

Writing for the Kaqchikel Maya women I work with has always been a motivating goal of mine because it is central for engaging in respectful relationships with Indigenous peoples, particularly given my positionality as a settler scholar (Smith 2012). Yet, examining my career and written products reveals how today's modes of knowledge production remain tied to colonial structures, particularly those related to tenure and promotion (Bejarano et al. 2019). Upon earning tenure in 2022, I began explicitly writing for the women I work with, producing public opinion pieces in US newspapers that women asked me to write; a bilingual book in English and Kaqchikel (in press) that will be open access via the Amherst College Press; and a series of reports to the grassroots organization of women I collaborate with, the Asociación Femenil del Desarrollo de Sacatepeques. Even with an inaugural Wenner-Gren Engaged Research Grant (2022) to support collaboration, the privileging of peer-reviewed, solo-authored work is a presence in my career planning. The specter of anthropologists more senior and the shadow of higher education's normative practices continue to influence what I write. In this paper, I argue that without aligning our structures to support writing for the communities we work with, anthropologists will continue to be discouraged from doing this work, even when we simultaneously understand it as a fundamental component of a more just anthropology (Bucholtz, Casillas and Lee 2017).

Presenter(s): Joyce Bennett

Voicing from Within: A Creative Exercise in Ethical Engagement and Collaborations in Manitoba

This paper reflects on the work I have undertaken with a collective of Indigenous and non-Indigenous artists to develop an interactive artistic curriculum for participants to creatively explore the ways hydroelectric damming impacts Indigenous people and communities across Manitoba. Through this journey, we have endeavored to creatively enact ethical forms of research, community work, and activism in a "good way" (Ball & Janyst 2008). In this paper, I seek to articulate the theoretical underpinnings of the development of our creative praxis and the ways in which we navigate our own questions of identity, power and ethics in the process. This paper also draws upon our own creative reflections derived from some of the curricular exercises we developed. Through this approach, I hope to model the ways in which creative methodologies can serve as a powerful vehicle for ethical research and respond to the charge that: "[w]e need to listen to and elevate all stories: all knowledge presents us with knowledge and stories that are valuable to understanding our world" (Kimmerer 2013, 46). In doing so, I advocate for the increased acceptance of arts-based inquiries and praxis within the growing movement towards the ethical engagement with communities, people, and knowledge.

5918 "Selling In, Selling Up, Selling Out and Shutting Up:" Examining these Myths via the Lived Experience of Business Anthropologists

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 10:00 AM

Venue: Marriott **Room:** MGB Salon F/G

Type: Roundtable/Town Hall

In academic communities of anthropology, business anthropologists are often questioned (often implicitly, sometimes even explicitly) about the ethics of their applied work. The myth of "selling out" to Corporate America is a frequent assumption of their practice. Addressing these "ghosts" of professional credibility is important now given the reduction in federally funded anthropology research and the relative stability of practicing business anthropologists based in business schools and corporate America. This panel of business anthropologists will address the common myths and critiques of their ethics, methods and theories directly and honestly based on their years of research experience in business. The diverse panel of practicing anthropologists includes scholars of consumer anthropology based in marketing, advertising and anthropology academic units, as well as applied anthropologists working in corporate consumer research. The focus of this panel will be on the practice of anthropology as it supports the investigation of producers, consumers, users, branding, consumption and the innovation of products and services. The goal of the roundtable is to create space for active dialogue among the panel and audience allowing for a discussion which illuminates the nuance and complexity of what it means to create anthropological knowledge within the context of capitalism, and to what ends.

8674 Ghosts in the Frame: Tracing a Great-Grandfather Through Family Archives

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 12:00 PM

Venue: Marriott **Room:** Jackson

Type: Installations

This installation presents a poetic 4-minute video essay composed from over 20 hours of found VHS footage from my parents' wedding in Kazakhstan. The film centers on a quiet reflection about

my great-grandfather-someone I briefly knew in childhood, yet whose presence continues to linger in family stories, gestures, and inherited silences. Engaging with this footage has allowed me to process personal questions about him. Through the textures of tape, objects, and memory, I've begun to sense a kind of presence that is both affective and embodied: haunting not as absence, but as a quiet, enduring intimacy. Through layered footage, narration, and stillness, the work explores how personal and familial memory haunts the spaces we inherit.

Framed as a methodological engagement with autoethnography, affective archives, and multimodal anthropology, the project treats the family archive as both material and medium. The process of rewatching, sorting, and reassembling found VHS footage becomes an ethnographic act-one that enacts memory work, kinship, and inheritance through tactile and sensory engagement.

The piece also reflects on how familial memory is transmitted through gesture, atmosphere, and inherited media. Drawing on Avery Gordon's concept of haunting, the work approaches haunting not as spectral absence, but as intimate presence-mediating domesticity, attachment, and the lingering force of the nearly forgotten.

The video will be projected onto a textured fabric surface using my own portable projector. It is composed in a split-screen format: the main narrative with audio appears at the center, while smaller embedded windows-or "tabs"-loop unedited clips from the original wedding footage. This layered composition is fully integrated into a single video file and projected as one unified piece.

The physical space will be gently expanded with material traces of memory: pieces of fabric resembling wedding garments or household cloth, small Soviet-era objects like a matchbox, a teacup, or a children's book, and printed photographs from both my parents' wedding and my great-grandfather's life. The installation includes several paper boats-simple, familiar shapes my great-grandfather once taught me to fold. These items function as quiet anchors, offering tangible touchpoints for viewers and deepening the affective resonance of what is emotionally and visually evoked on screen.

This installation closely aligns with the Ghosts theme, treating haunting not as horror, but as intimacy: the enduring presence of those nearly forgotten, remembered through gesture, image, and the spaces they once inhabited.

8853 Living Ghosts of Junkyard Play: A Reconfigurable Installation of Projection, Scrap, and Marked-Up Memory

Start Date: 11/23/2025 08:30 AM **through** 11/23/2025 12:00 PM

Venue: Marriott **Room:** Studio 5

Type: Installations

Living Ghosts of Junkyard Play is an interactive exhibit, based on multi-sited ethnographic research in adventure playgrounds across New York, Tokyo, Chiba, Berkeley, and Sacramento.

At the center of the installation is a looping video projection of drone footage documenting the evolving constructions children created from scrap materials in these playscapes ([link to video https://drive.google.com/file/d/1m0IKR88vZFkAcg87jcmmcfQL3EMzqBcc/view?usp=sharing](https://drive.google.com/file/d/1m0IKR88vZFkAcg87jcmmcfQL3EMzqBcc/view?usp=sharing)) . The projection will be cast directly onto the floor or a blank wall, depending on available space. A loose border of small wooden pieces-resembling the materials children used in the field-will surround the projection. Visitors are invited to shift and rearrange these wooden elements, engaging physically with the installation and reconfiguring the frame through which they view the footage.

Alongside the projection area, large reproductions of annotated posters made by children will be displayed. These posters combine photographs taken by the children, with peers' drawings and handwritten notes layered on top. Visitors will be invited to respond to these posters using provided pens and tape. Over the course of the event, the posters will gather new layers of marks and reflections, forming a collaborative and evolving response to the original artwork.

All materials will be provided by me, except for projector if possible:

- One projector (tabletop or floor-based)
- Lightweight scrap wood pieces (provided by curator) These pieces could be limited or changed if needed
- Reproduced annotated posters (provided by curator)
- Annotation supplies (provided by curator)
- Optional matting or cloth to define the projection area if needed (provided by curator)

The installation is self-contained, requires no sound or furniture, and can adapt to a blank room, hallway, or transitional space (ideal with light control or paired with a bright projector). The exhibit can be quiet (with no sound in the video if needed), portable, and designed to evolve throughout the conference as visitors engage with it (ideally open from beginning to end of the conference where people can explore the exhibit at their leisure).

As a professional curator and educator, I am flexible and experienced in adapting installations to different spaces and communities. I welcome a planning call with the AAA Meeting Team to discuss the Living Ghosts of Junkyard Play installation.

4120 "Aftermaths and Afterlives: Infrastructural Disjunctures and Uncertain Futures in Southeast Asia"

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Balcony N

Type: Oral Presentation Session

This panel explores how communities in Southeast Asia live with the shifting temporalities, uncertainties, and political consequences of infrastructure. From urban transportation in Phnom

Penh to flood management in Kuala Lumpur's peripheries, from proposed hydropower development in the Philippine uplands to volcanic risk zones in Bicol, the papers trace how infrastructures-planned, proposed, or abandoned-shape everyday life. While infrastructural development often promises stability, efficiency, or preparedness, our ethnographic cases reveal how such projects generate complex "afterlives" and "aftermaths" that persist well beyond their immediate implementation or failure. We consider how state-led planning and scientific rationalities intersect, and often clash, with Indigenous and local ways of knowing, anticipating, and responding to environmental transformation. Rather than focusing on the materialities of urban and rural planning, we also foreground its temporal and affective dimensions-how it structures time, shapes expectations, and produces new forms of vulnerability or agency. Our panel also interrogates the scalar disjunctures between national development agendas and localized experiences of risk and resilience. Drawing from grounded fieldwork across Cambodia, Malaysia, and the Philippines, we highlight how communities as well as institutions negotiate infrastructural uncertainties: how they adapt, resist, or reimagine future possibilities. In doing so, this panel contributes to ongoing anthropological conversations on infrastructure, temporality, environmental precarity, disaster management, and the politics of planning in the Global South.

Organizer: Yi-Yu Lai , Ci Yan Sara Loh

Chair: Yi-Yu Lai , Ci Yan Sara Loh

Presenter(s): Zhiyi Wang, University of California, Riverside, Yi-Yu Lai, Ci Yan Sara Loh, Katrina Jacinto

Discussant: Yi-Yu Lai , Ci Yan Sara Loh

Presentation(s): “ចូលស្ទឹងតាមបត់(enter the river, follow the turns)”: Planning in Uncertainties

This paper examines a test road reconfiguration project and its aftermath in Phnom Penh, Cambodia, especially how it affected the Phnom Penh City Bus (PPCB), as responsive planning was needed instantly. In June 2024, a sudden road reconfiguration project in central Phnom Penh panicked the road users and the city's nascent public bus system. The government-led test project aimed to lessen traffic pressure by converting an existing two-way road to one-way. While this effort was halted before long due to public pressure, the roadblock installed on one side entrance to the bus terminal remained and was made permanent, urging the bus system to swiftly re-route and re-schedule the affected lines. Focusing on the uncertainties produced by and during the implementation of this project, the paper explores how planning as a practice can be constrained and challenged by ongoing processes and forces. Based on ethnographic fieldwork, interviews, and media analysis, I argue that planning should not simply be envisioned as a blueprint for the future but, in many cases, a reactive project in response to the immediate present instead. In the midst of uncontrollable/ungraspable factors in urban Phnom Penh, as in other urban areas, especially in the global South, it is necessary to revisit the concept of planning and its ultimate goal as we continue envisioning and moving towards a promising future.

Presenter(s): Zhiyi Wang

The Dam That Wasn't: Unbuilt Infrastructure and the Politics of Anticipation in Ifugao, Philippines

This paper explores the political afterlives of proposed—but unbuilt—hydropower projects in the Cordillera of the Philippines, with a focus on Kalanguya Indigenous communities in west Ifugao. While recent proposals such as the Tinoc and Alimit Hydropower Complexes remain on hold, these projects nonetheless generate profound effects, from heightened surveillance and environmental regulation to intensified counterinsurgency operations in the name of watershed protection and electricity generation. Drawing on long-term ethnographic research, this study traces how the legacies of past development schemes continue to shape local resistance, memory, and modes of political engagement today. The paper bridges historical and contemporary hydropower politics, analyzing how Indigenous communities positioned at the headwaters of the Agno, Chico, and Magat River Basins navigate the contradictions of national development, environmental governance, and militarization. In addressing these tensions, the paper foregrounds the role of "unbuilt infrastructure" in producing zones of anticipation, contestation, and deferred transformation. By situating west Ifugao within a wider network of past and present energy infrastructures—including downstream projects like Ambuklao, Binga, San Roque, and Magat—the paper offers a nuanced understanding of how Indigenous actors negotiate futures shaped by the ghosts of both memory and planning.

Presenter(s): Yi-Yu Lai

Disciplined Diversions, Unruly Floodwaters: The Temuan Orang Asli and the Fluid Aftermaths of Kuala Lumpur's Urban Sprawl

Kuala Lumpur's urban sprawl has radiated out to its peripheries as part of Malaysia's endless march towards economic growth. In 2021, major floods in Peninsular Malaysia exposed how the lives and livelihoods of per-urban communities are entangled with the externalities of this development. This paper is situated in a peat swamp on the outskirts of Kuala Lumpur that the Temuan Orang Asli (a subgroup of Malaysia's original peoples) have called home for many generations. Their ancestral forests are being cleared to accommodate new industrial, commercial and housing developments; their rivers are being engineered to manage potential disaster risks; amidst a backdrop of pressure to assimilate into the perfect Malaysian urban citizens. Through ethnographic research, policy and social media analysis, I examine floods and their management as sites for understanding hydrosocial relations that are shaped by this urban sprawl. I trace land use plans and the creation of manmade pathways for water diversion; and water's resistance to these disciplinary mechanisms, by insisting on being unruly. I conclude by examining how the Temuan community is adapting to water's disciplining and unruliness, and also how they are confronting the unsettling entanglements between rapid development and the increased threats of disasters - through everyday resistance and resilience.

Presenter(s): Ci Yan Sara Loh

Risky Business in the 6-KM: The Making and Managing of Mayon Volcano's Permanent Danger Zone

Known as both the most active and most beautiful volcano of the Philippines, Mayon Volcano is a major geotourism attraction and cultural figure in the province of Albay. However, entry to the mountain is heavily regulated by the state. This paper studies the 6-kilometer radius around Mayon's crater known as the Permanent Danger Zone (PDZ), an area drawn by the Philippine Institute of Volcanology and Seismology. Due to the risk of unforeseen volcanic unrest, the 6-KM PDZ is intended to be "permanently pre-evacuated." Yet, in reality, the PDZ is bustling with social and economic activity, from ATV tours and agriculture to quarrying and highway construction. This stark disjuncture illuminates the PDZ as a contested site. Drawing on ethnographic fieldwork, I explore the mutually constitutive relationship between abstract ideas of risk and preparedness, on one hand, and tangible qualities of Mayon's geology, on the other. This relationship, mediated by politics of disaster governance, leads to unequal encounters between labourers, scientists and civil servants who work on Mayon. Through the lens of political geology, this paper maps their coexisting and at times contradictory methods of sensing and managing risk. Plural geological lifeworlds thus abound within the PDZ, creating uncertainty despite infrastructural attempts to eliminate it. This paper advances efforts to situate disaster studies within the lived experience and spatio-temporal reality of communities on the ground.

Presenter(s): Katrina Jacinto

5515 Agrarian Transitions: Socio-Spatial Transformation, Social Movements and the Geographies of Populism

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Galerie 5

Type: Oral Presentation Session

Bringing together insights from Marxism, eco-socialism, urban theory, and critical agrarian studies, this session investigates how 'rural' spaces and actors actively contest, reshape, and negotiate the trajectories of capitalist development. Challenging the assumptions of various modernization theories, the session emphasizes that the experiences and actions of farmers, peasants, and agricultural workers are not peripheral but central to the socio-spatial transformations unfolding across scales.

Building on longstanding anthropological traditions-while pushing beyond tired teleologies and essentialisms-the papers in this panel foreground the agrarian as a critical site through which to rethink both historical and contemporary processes of capitalist development. Each contribution seeks to center agrarian questions in accounts of socio-spatial change, revealing the complex, contested, and often surprising ways in which rural actors engage with and transform capitalist dynamics.

One paper, for example, reconsiders the role of 'settler peasants' in the expansion of capitalism in a South Indian region. By tracing the region's agrarian history, it reveals how uneven access to land

and credit today reflects enduring structures of domination-reshaped by colonization, settlement, and racialized spatial imaginaries that continue to inform narratives of progress.

Another paper examines the formation of U.S. and Mexican nationalisms in relationship to the attempted imposition of slavery over Mexican territories as determined by violence over competing agrarian-labor regimes.

Another paper disrupts the rural–urban binary by examining processes of urbanization that unfold well beyond metropolitan centers. In these contexts, agrarian transformation and urban expansion are deeply entangled, making it difficult-if not impossible-to analytically separate the two. The paper argues that in countries like India, 'the urban' is inseparable from 'the rural,' and that agrarian life is not a fading remnant of the past, but a constitutive force in shaping urban presents and futures.

The final two papers extend these analyses by exploring movements and practices that challenge dominant paradigms. One engages with the 2020–2021 Indian farmers' protests to consider how agrarian struggles articulate demands for justice in the context of a global populist moment. The other examines practices of commoning as a transformative alternative to enclosure and privatization-reimagining land governance and reconnecting labor and nature in the wake of capitalist alienation.

Together, these papers offer a critical reappraisal of agrarian spaces, not as static or residual, but as dynamic sites of resistance, innovation, and possibility in the making of the contemporary world.

Presentation(s): Commoning, the Metabolic Rift, and Futurity

Private property is a foundational logic of capitalism and a core ideology of the United States. Yet, it is abundantly clear that the interlinking forces of privatization and profit accumulation are driving dual crises of socioeconomic inequality and ecological devastation. My work grounds this dynamic in the U.S. agrarian system, and asks, what happens when we see land as commons instead of private property? In the face of the challenge of land access today (responding to both contemporary financialization and histories of racialized dispossession) many young and beginning farmers and especially the marginalized are increasingly embracing commoning as a solution. Using community land trust (CLT) models among other creative legal innovations, they contest the private property regime in order to collectively access, work on, and care for land. Based on

collaborative research with some of these farmers engaged in commoning praxis, I will extend Marx's theory of the metabolic rift to explore how commoning offers an alternative to the dominant agro-extractivist system, how collective relationships alter political subjectivities, and how commoning contributes to an argument for reparations by addressing primary accumulation and dispossession by enclosure. I argue that commoning creates the conditions of possibility, the infrastructures, for a socio-ecological future.

Presenter(s): Cassandra Cronin

Urbanization Beyond the Metropolis: A Study of Urban-Agrarian Change in Provincial Towns in India

Increasingly, post-colonial urban theorists have called for 'new geographies of theory' that displace dominant Euro-American epistemologies of urban theory. To overcome the limitations posed by dominant theories, these theorists have advocated a shift in focus from 'metropolises' to 'megacities' of the global South. This essay argues that we need to go further to locate new geographies of urbanization beyond 'the city', and its teleology culminating in the 'metropolis'/'megacity', to understand socio-spatial processes in their totality in countries like India where agrarian questions remain at the center of urban transformations. This essay seeks to contest dominant discourses of the 'urban' by foregrounding the experience of socio-spatial transformations in Armur, a 'provincial town' in the Indian state of Telangana, where urbanization unfolds through the recomposition of agrarian social formations, caste-segmented labor and land markets, kinship networks, and informal economies, as a crucial site for theorizing the urban condition in India. In particular, I will explore how the 'state', 'market', and 'household' are constituted as apparently distinct 'levels' in Armur through circuits of production and social reproduction in which petty commodity production plays a central role. By foregrounding these dynamics, this dissertation proposes that regions like Armur are not urban anomalies or residual zones awaiting development; they are constitutive of India's urban present.

From 'New Farmers' Movements' to Anti-Farm Laws Movements in India: Towards a 'Left-Populism'?

Two aspects of the 2020–2021 anti-farm laws struggle have received much attention: (1) its broad social base cutting across socio-economic differences; (2) its success in opposing Modi's authoritarian populism. This essay examines how these unusual aspects came to be by comparing them with the 'new farmers' movements' (NFM) of the 1980s which, despite sharing many demands and bases, were characterized as: (1) conservative populist mobilizations; (2) supportive of right-wing populism. The comparison raises pressing questions in our 'populist era': how can 'left-wing' or 'class-conscious' populisms be advanced? How can right-wing populisms be opposed? I argue that it is misleading to see the 2020-2021 struggle as a confrontation between agrarian and authoritarian populisms. It is better understood as a defensive 'popular-democratic' mobilization that undermined authoritarian efforts to 'win the people' by enlisting key constituencies from their base into an oppositional front. Crucially, unlike the NFM, the 2020-2021

struggle did not reflect a coherent project founded on a 'people'. Rather, the struggle's broad social base emerged from the defensive mobilization of various classes of capital and labor amid a class-specific agrarian crisis. Farmers had to reach beyond their identity as 'peasants' to lead the struggle. Finally, this conjunctural unity was made possible by the independent initiative of strong movements centering differentiated classes of labor prior to 2020.

Settler Peasants: Migration, Modernization and the Agrarian Frontier in South India

The peasant is a key figure in revolutionary politics and resistance in agrarian societies. In other contexts peasants are also on the front lines of settler colonial projects shaped by racializing imaginaries of social and spatial difference. How do conceptualizations of the peasant shift when considering their role as settlers? And how does settler colonization shape the peasantry as a social formation? Focusing on the social relations of land and agriculture in the Wayanad district of Kerala, south India, this paper seeks to address these questions in the context of two major developments in the twentieth century - the in migration and settlement of Christian farmers, and state-led land reform and agrarian modernization. Settlers in Wayanad formed a new constituency within the wider peasantry of which Adivasis (indigenous communities) had historically formed a major part. Their success in securing land rights came as a consequence of mobilization as pioneering peasants. This paper looks at how uneven access to land and credit today reveal structures of domination that have been re-shaped by colonization, settlement and racializing imaginaries of space and narratives of progress. Looking at land as a focal point of contests over its multiple affordances I argue that the concealment of difference in the peasantry must be understood in relation to extant patterns of land use, histories of unfree labour, and projects of developmental modernity and modernization.

Fugitivity as a Motor of History: Nationalism, Citizenship, and Warfare in Antebellum Texas and Mexico

Fugitives of U.S. slavery engaged in direct action and formed a frontline of abolitionism, forcing the hand of Mexican statecraft toward armed defense against enslavers and defining citizenship against slavery. Driven by depleted soils of the old agrarian economy of the U.S. South and the prospects of newly available lands in The West, enslavers sought to expand slavery through the dispossession of Native and Mexican people. This paper brings into conversation critical agrarian studies and transnational social movements through a study of fugitivity as a front of warfare during Antebellum Texas. The terms of engagement between subjects and the state projects of Texas and Mexico during the 1850s were rooted in different land-tenure projects, upon which were fought battles to construct competing labor and racial regimes. Agricultural-ecological transformations were dictated by the emerging global political economy exemplified by the rise of cotton as an essential agrarian commodity necessary for the industrial manufacturing of textiles. Anglo enslavers battled with Mexican peasants and military forces, which many fugitives joined to pick up

arms against the state actors enforcing human bondage. I examine the legal codes produced in the service of enslaving and abolitionist forces as enshrined cultural artifacts; history objectified in law. I argue that, in this context, nationalisms were born out of competing land-tenure systems.

2504 An ICC Perspective on 'Houyi 2023': Exploring U.S. and Chinese Civilizations through Concepts of Home, Heroism, and Power”

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR B2 (3rd fl)

Type: Roundtable/Town Hall

In 2021, the scene play Houyi 2023 appeared on the stage of the 4th SFLEP Cup National College Students Intercultural Competence Contest in China. It demonstrated the conflicts between US and China in artworks triggered by the different concepts of homes, heroism and powers in two civilizations. The conflicts in the scene play were the epitome of the more profound ones in the current international arena. To mitigate them, the intercultural communication (ICC) theories were put into the broader landscape of myths, history and civilizations. The paper tries to analyze what do the concepts of homes and heroism in the artworks of both civilizations signify and what conflicts can be caused even with the communication attempt and cross-cultural awareness. It is ultimately found out that the difference does not necessitate the conflict, and the world is wide enough for both individualism and collectivism.

8261 Anthropology and the specters of science 2

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Balcony I

Type: Oral Presentation Session

Anthropology and the specters of science Anthropologists across many areas of inquiry have struggled to account for multiple forms of scientific knowledge, in particular, when working in interdisciplinary spaces or when negotiating data with findings from other sciences. Many have educated themselves to become competent in scientific worlds other than their own. Others have treated the sciences as phenomena to be studied, questioning scientific systems of knowledge as they have emerged from specific histories and ideologies, such as the Enlightenment, capitalism, or Cartesian dualism, exposing the discrimination, assumptions, and biases that saturate scientific

discourses. Scholars of indigenous knowledge have juxtaposed cultural systems to show how vastly different knowledges emerge from unique histories and lifeways. In some cases, they have not only unsettled scientific truth but also leveraged anthropological awareness to contribute to scientific practice. Much of this work involves reflection on the limits of scientific findings, but also a deep engagement with it. This panel seeks to explore tensions produced among the different sciences when in deep multi-disciplinary engagement. We start from the awareness that scientific knowledge permeates late modern life, but cannot address many aspects of human experience, such as aesthetics and ethics. We invite reflection on the nature of interdisciplinarity, the sharing of methods and data, the making of some knowledges commensurable or protecting that which is incommensurable. We are particularly interested in phenomena that cannot easily be examined, isolated, or quantified, especially phenomena that haunt the sciences, teasing the boundaries of what can be known. We are also interested in what remains when scientific institutions are faced with public and policy challenges to their epistemologies and practices. Scientific knowledges and expertise are criticized, among other reasons,

Will current challenges encourage us to reconsider our differences and strengthen our commonalities or will attempts to create mutual understandings disappear in a scramble to preserve the status quo?

Presentation(s): A Hurricane Hits Science: Ethnographic Research in the Storm Surge

According to the National Oceanic and Atmospheric Administration "storm surge is an abnormal rise of water generated by a storm, over and above the predicted astronomical tides... storm surge is often the greatest threat to life and property from a hurricane." This paper suggests that science, specifically climate and community-engaged science, is caught in the storm surge of uncertainty after a hurricane of executive orders, threats and cuts to funding, and political debates about the role of science and institutions of higher education. This hurricane hit after tides were already rising beyond predicted tides and the storm surge is causing further damage. Our emergent research is coinciding with this storm: we share autoethnographic and ethnographic analysis of scientists and institutions of science scrambling – for safety, for cover, for resources, and for ways forward. We specifically address how efforts to diversify and democratize science through community partnership are especially vulnerable in this storm and also all the more vital. As science faces an external existential threat, we examine how internal academic and community critiques of conventional science practices have been initiating an ethical and relational turn toward

collaborative and community-engaged science. Our initial assessment is that research and community collaborations founded on relationality will survive this storm and the storm surge of uncertainty and anxiety, perhaps against the odds.

Indigenous Relationality and Relationships

How do scientists form relationships with each other in team collaborations and with the land and communities where they work? How do their relational, ethical, and epistemological practices and commitments shape science? This paper explores the culture(s) of science collaboration through the critical lens of Indigenous ways of knowing, concepts of political relationality, and decolonizing methodologies. We share autoethnographic and ethnographic analysis of emergent partnerships and relationality in practice in a multi-year, multi-disciplinary, and multi-institutional project that aims to support and enhance community-engaged research in the geosciences. As the social science team on this project, we are engaging with decolonizing and Indigenous methodologies to study the team's inner workings and navigations of broader cultural expectations in higher education institutions and in community and their support for fellow scientists to engage in community-grounded work. Primarily authored by a member of the Upper Skagit Indian Tribe, the paper analyzes Eurocentric ideas of relationships that play out in science collaborations, including individualism, conceptions of time, and workflow priorities, and emphasizes that relationality must be engaged for ethical, epistemological, and practical reasons across all stages of research.

Poison politics: Evidentiary contestations and the limits of expertise in New Zealand conservation

In Aotearoa New Zealand a broad body of research examines the toxicological, ecological, and welfare aspects of 1080, a poison widely used to kill introduced pest species that pressure native flora and fauna. Researchers generally agree that the case for 1080 is settled. The evidence collected to date indicates that it disperses swiftly in water, carries a middling welfare profile, and is relatively safe to handle and spread according to existing regulation. However, researchers and conservationists are frustrated that these assurances are unheeded by those opposed to 1080. This latter group pickets poisoning operations, objects through official bureaucratic channels, and maintains a lively social media presence. They frequently voice their objections in scientific terms, contesting specific pieces of research or broader claims that the scientific community regard as settled. 1080 use continues despite this pushback, but few people are happy about it: those using the poison feel vulnerable and have at times been targeted by opponents, while opponents feel they are dismissed and derided, and have also at times been targeted by police. This talk will explore the contours of this impasse, which raises scalar questions about how evidence travels and

adheres in place (or fails to), and how theories of agonistic pluralism might be brought to bear on epistemic questions.

Presenter(s): Courtney Addison

Untouchability and the proof of risk: Thinking at the limits of race and its critique for genetic sciences in India

The haunting presence of race and racialisation in genetic science and technology has been a point of generative critique for anthropologists of science. That genetic testing and its incorporation as a public health good remains inflected by contentious histories of racial and biological difference that includes under-represented groups by marking them as different is a powerful critique relevant in many parts of the world. In my presentation, I pose the haunting presence of racialisation in genetic health services in India today to ask what happens when genetic risk gets scripted onto low caste and previously untouchable communities in India who mobilise it towards diagnostic and therapeutic ends. Drawing from the literary traditions, intellectual discourses around caste and interviews with sickle cell patients, I speculate the possibilities of thinking differently about the relationship between untouchability to genetic risk as how Dalit (low caste) sickle cell health politics in Nagpur, Maharashtra- a region known for its anticaste social movement- mobilises genetic risk and thus biological difference to overcome the social codification of untouchability and caste-based health exclusions. I argue that thinking about the relationship between untouchability and risk can offer a different orientation and thus critique of the scientific in social life.

Opening the toolbox – formats and tools for interdisciplinary facilitation

Much has been written about interdisciplinarity, about its logics, its translation problems, its (epistemological) frictions. Anyone who has or has worked or tried to work interdisciplinarily knows about the many challenges involved. Nevertheless, one of today's commonplaces is that existing problems and crises do not care about disciplinary boundaries; inter- and even transdisciplinarity is called for. Research and research institutions are often valued, justified and funded (or not) according to how publics and policy perceives their "impact". With this in mind, it is not surprising that the number of formats and toolboxes aimed at facilitating interdisciplinary work is growing.

This paper looks at formats and tools that aim to facilitating interdisciplinary work, and explores practices and proposed practices to enable interdisciplinarity. Interests lie in how disciplines and interdisciplinarity are enacted and problematised in these formats and tools including promises, opportunities and challenges. What kinds of knowledges are targeted, included or excluded? What roles do different kinds of frictions play (or not)? And how are power dynamics dealt with and addressed (or not)? The thematic focus is on sustainability research.

Presenter(s): Britta Acksel

The interdisciplinarity of water and its (in)consequentiality

Modern debates about water are fertile ground for rigidly incommensurable forms of expertise - could they also be catalysts for some form of mediation between them? In North Bihar, India, water is saturated with and carries multiple social and physical toxicities, which I explored through long-term ethnographic fieldwork informed by socio-cultural anthropology, science and technology studies, and development studies, as well as hydrogeology, river morphology, and the biochemistry of water. Several years after the fieldwork, I am interested in reflecting on the possibilities of interdisciplinary fieldwork and the research identity that emerged from it. In an era of hyper-specialization, what does it mean to reject the either/or? What choices are imposed by deliberately muddying the epistemological and methodological waters, even in the absence of their accepted convergence? Breaking the mold of finding the inadequacies of the hard sciences, I am interested in looking for a rapprochement (or at least its potential) between conceiving water as a natural resource and focusing on its socio-cultural status.

3020 Asian and Asian/American Hauntings: Ghosts in/as Multispecies Theory

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Galerie 1

Type: Roundtable/Town Hall

This roundtable reflects on whiteness as a structuring force in multispecies theorizing and knowledge-production in anthropology. While multispecies anthropology has received critique for the ways it champions abstract human and nonhuman relations at the expense of asymmetrical power dynamics, the material realities of knowledge production, and other political responsibilities of research, in recent years a decolonial movement in multispecies ethnography has attempted to produce theories and narratives of multispecies life grounded in critical local traditions from the Global South, unsettling Euro-American citational politics, extractive research practices, and ways of relating to the nonhuman.

What would it mean to assert that Asian/America haunts multispecies theory? Reflecting on Sylvia Wynter and Frantz Fanon's sociogeny, this roundtable will reflect on the racialized discourses of 'Asianness' that exist as ghosts, perpetuated or challenged through Euro-American multispecies work in Asia and beyond. This panel will also feature a range of Asian/American ethnographers-graduate students and faculty members across continents-whose work share spans from India and Taiwan to Malaysia and Zimbabwe, who trace landscapes and diverse nonhuman encounters as active zones of livelihood, historical hauntings, and contemporary realities, critically highlighting the asymmetrical power dynamics between often marginalized human communities, ecological resources, and encounters with various agential nonhuman beings.

In what ways do Asian/American scholars write multispecies life through and against inherited forms of real and epistemic violence? How do we grapple with the haunting of colonial ways of

engaging the nonhuman in multispecies theory? How do Asian/American ethnographers bear witness to landscapes and ecological processes as political sites of relation-making, historical haunting, and future possibility?

3946 Confronting 'Fantasmas': Resilience in Urban Brazil

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Bacchus

Type: Oral Presentation Session

'Fantasmas' (ghosts) linger in Brazilian society from centuries long ago. Colonization and oppression have left a stain darker than the red dye of the Brazil tree, from which the space is given its current name, as it was the first resource stolen from the natives. Soon after, it is estimated that 5.5 million Africans were enslaved and brought to this area. Fast-forward 525 years to urban areas haunted by systemic violence, drug-trafficking, racism, misogyny, and lack of resources, which are all a result of this exploitation. How are communities confronting these ghosts of the past in forms of resilience?

*In the social periphery of the Mata Atlântica in Rio de Janeiro, communities are uniting to map community-based resources, environmental threats, and provide local solutions to sustain long-term monitoring of climate threats as these communities have a noted history as sites of drug trafficking, forced displacement, gender-based violence, coastal erosion, deforestation, and landslides.

*In Rio de Janeiro, the role of cultural protective factors (such as family and community support, storytelling, and cultural pride and resistance), raising critical consciousness, and community organizing in healing from collective wounds in spaces of poverty, social exclusion, multi-level violence, and discrimination. This trauma is passed down through generations and impacts identity, mental health, family relationships, and community conduct and resilience.

*Up the coast in Salvador, progress and shortcomings of Black resistance versus Afro-Brazilian exoticism is highlighted, as manipulation of 'blocos afro' and Black Bahian culture and music for purposes of promoting the city as an Afro-diasporic capital of the Americas while these communities continue to suffer from severe racial inequities, police violence, and lack of basic education and health care needs.

*In another capital in Belo Horizonte, sounded protest in the form of whistling provides direction and empowerment for a group of all-women drummers and a sense of solidarity to women in the area while echoing past acts of gendered violence.

*And further south in São Paulo, the Afro-Brazilian martial art of capoeira created by enslaved peoples offers a form of social inclusion and community to people who are victims of structural violence alongside drug-trafficking, violence, crime, murder, and the "hidden slavery" of the system. However, the community is not without its own shadows. In 2021, it was publicly reported that the leaders of the capoeira group in my research community were accused of violent crimes against children and adolescents.

When confronted, some ghosts disappear, while others will continue to haunt for generations to come....

Presentation(s): Resilient Roots: Creating a Hub for the Mata Atlântica's Periphery

This paper examines possibilities for a sustainable collaborative resilience network composed of four marginalized communities along Brazil's Mata Atlântica. I discuss a hypothetical program that unites civil society members from Rio de Janeiro's favelas (informal communities or shantytowns), Afro-Brazilian quilombos (communities descendant from enslaved peoples), indigenous aldeias (villages), LGBTQIA2S+ and feminist organizations, and eroding coastal communities in the states of Rio de Janeiro and Bahia. These communities have a noted history as sites of drug trafficking, forced displacement, gender-based violence, coastal erosion, deforestation, and landslides. We propose a three-year training of 20 youth activists from Rio's favelas to map community-based resources, environmental threats, and local solutions through the use of augmented reality, 360-degree virtual reality imagery, as well as heat, air, and water sensors. By the end of the project, the team will produce empirically validated reports for each community that assess the potential for artificial intelligence/machine learning to sustain long-term monitoring of climate threats on the social periphery of the Mata Atlântica. Research will be presented at a 2027 coastal resilience summit as well as in smaller community-based meetings.

Presenter(s): Jason Scott

Living Memory: How the Past Haunts the Present in Brazilian Favelas

This paper explores and analyzes the dynamics of generational and collective trauma among residents of Brazilian favelas, marginalized urban communities that are still haunted by the legacy of centuries of colonization and slavery. Based on ethnographic fieldwork spanning more than a decade and drawing on interdisciplinary scholarship including anthropology, psychology, public

health, and history, this study examines how persistent exposure to poverty, social exclusion, multi-level violence, and discrimination creates a shared experience of trauma that compounds individual suffering. This trauma is passed down through generations and impacts identity, mental health, family relationships, and community conduct and resilience. This research highlights the role of cultural protective factors (such as family and community support, storytelling, and cultural pride and resistance), raising critical consciousness, and community organizing in healing from collective wounds.

Presenter(s): Jessica Glass

Salvador Capital Afro: Fifty Years of Blocos Afro in Bahia, Brazil

The 2024 Carnival in Salvador was a monumental year for blocos afro. A bloco afro is a Carnival organization consisting of percussionists, dancers, singers, musicians, neighborhood residents and fans who celebrate an Afrocentric theme during Carnival and organize events and community services throughout the year in Salvador, Brazil. This paper examines the city of Salvador's manipulation of blocos afro and Black Bahian culture and music for purposes of promoting the city as an Afro-diasporic capital of the Americas. All the while, these very Black communities continue to suffer from severe racial inequities, police violence, and lack of basic education and health care needs (Pinho 2021). Christin Smith (2016) notes this paradox in describing the exoticism of Salvador as an "Afro-Paradise," and the city government's role in promoting this reputation. However, ethnomusicologist Larry Crook (1993) first noted this dilemma among blocos afro in questioning whether the commercial globalization of blocos afro in the 1990s—especially after Olodum's collaborations with Paul Simon and Michael Jackson—partially eclipsed the initial intentions of Afro-Brazilian consciousness and Black resistance. Many developments have occurred since then. In 2024, the city finally gave deserved credit and financial investment to blocos afro, officially recognizing their critical role in Salvador's Carnival popular music—generally known as axé music. Through original audiovisual footage and analysis of m

Echoes of Violence and Whistling in Solidarity: Listening to Women's Sounded Resistance in a Brazilian City

How do our listening practices as ethnographers change our understanding of events? Which sounds get prioritized or ignored? Which sounds echo in our ears long after we've left the field? How do our interpretations of these sounds deepen as we situate ourselves among our informants? Based on my participant-observation fieldwork during the International Women's Day March in Belo Horizonte, MG, Brazil, I will examine how sounded protest in the form of whistling provides direction and empowerment for a group of all-women drummers and a sense of solidarity to women in the area while echoing past acts of gendered violence. This ethnomusicological case study will explore these questions and generate more.

Presenter(s): Abby Rehard

A Dance of Shadows: Capoeira Beyond the Game

The Afro-Brazilian martial art of capoeira creates a form of social inclusion and community to people who are victims of structural violence. But this essay isn't about that. Many discussed drug-trafficking, violence, crime, murder, and the "hidden slavery" of the system. In 2021, it was publicly reported that the leaders of the capoeira group in my research community were accused of sex crimes against children and adolescents. Aside from those in this report, there are other cases of sexual abuse in the capoeira community at large, with other capoeira mestres imprisoned for such crimes. During this process, I did not know how to process any of it and stayed up at night questioning if I was being the good anthropologist. I continued to remind myself that in anthropology we do no harm to the communities where we work. But what if the individuals in the community state they are being harmed? I started to consider that in not doing harm to some I was doing harm to others- those women and children whose voices are silenced by the structural violence that the system allows. Regardless, it was overwhelming, and I am not sure I had the tools or support. But perhaps that's reflective of the lives of so many humans on this planet attempting to survive in the vulnerable systems of structural violence that impacts us all on different levels.

Presenter(s): Jaclyn Donelle McWhorter

Atafona and the waves of affliction: liminality and communitas on the Brazilian coast

Atafona is a beach on the northern coast of the state of Rio de Janeiro, Brazil, where, in the early 20th century, a regional elite built their summer homes. About 60 years ago, the sea began to advance over the built-up area, putting at risk the houses that, for generations, had been the scene of summer sociability. In this paper, I present the process of erosion of the houses and discuss the summer sociability experienced in Atafona, in contrast to the sociability experienced during the rest of the year in the city of Campos dos Goytacazes. From this, I recover the concepts of liminality, by Victor Turner, and of communitas, as discussed by Victor and Edith Turner, to think of Atafona as a resort of affliction in a landscape of ruins, where the joy of summer communions was crossed by the uncertainties of the advancing sea.

3845 Conjuring Alternative Worlds: Cooperatives, Social Movements, and the Future of Food & Climate

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Studio 8

Type: Oral Presentation Session

Anthropology is concerned about a world haunted by capitalism-a simultaneously material and non-material, omnipresent and totalizing force that orders everyday life. Against this seemingly inescapable predicament, anthropologists have also sought to document oases of community organizing to understand the radically hopeful subjectivities these foster and chart the contours for

an alternative world. In the years since JK Gibson-Graham first made the call to de-center capital from theory and popular discourse, several scholars have answered by ethnographically studying a wide diversity of collective formations like producer cooperatives, food sovereignty movements, activist networks, community-managed commons, and more. This panel hopes to follow in this tradition, bringing together ethnographic findings from diverse contexts. Our presentations draw attention to how the work of collective organizing and communities' socio-environmental innovations enable them to renegotiate their predicament under capitalism. This panel thus ethnographically attends to how these alternatives are conjured-through creative labor, people-centered institutions, and our interlocutors' own theorizations of their place in the world. Our presentations are woven together by questions such as: What unites diverse grassroots activisms reaching for postcapitalist and posthumanist futures? How do these experiments foster radically empowered subjectivities? How are concrete practices and networks of care taking shape in the present? What kinds of resistance do these initiatives face, and how might these be overcome? This panel draws on three key trends in relevant anthropological literature. The first is the immediate question of the economic "viability" of alternative formations (Collins 2017). The scholarship on alternative economies illustrates the diverse motivations under which workers, farmers, and service providers come together to engage with mainstream markets; yet their experiences also warn of how the boundaries between cooperative organizations and state and corporate-entities may be dangerously porous and vulnerable to cooptation (Kasmir 1996; Vargas-Cetina 2011). Second, literature from critical environmental anthropology (Fabricant 2023, Wylie 2018) highlights the collusion of colonial and national states in enabling the extractive movement of capital across contemporary history. These scholars illuminate the complex ways in which state and corporate entities contribute to processes of land dispossession and environmental damage, while simultaneously creating the terrain of resistance to these processes. Third are feminist approaches (Puig de la Bellacasa 2017) that center care in the imagination of a postcapitalist and postanthropocentric future. Feminist literature about care problematizes the undervaluation and appropriation of care but also addresses how postcapitalist futures should be imagined as part of broader entanglements and communities of care.

Presentation(s): Material Spirits: Cultivating Spiritual Forces in Material Goods with Biodynamic Farmers

This presentation examines one group of farmers in the United States who approach their agricultural work as a type of spiritual practice. Biodynamic farmers conceptualize agriculture as a

type of "spiritual science," and understand their role as a farmer to be channeling spiritual forces into the crops that they grow. Learning to read and interpret these spiritual forces is one of the central tasks of the biodynamic farmer.

Building on participant observation and interviews with biodynamic farmers in and around Viroqua, Wisconsin, this paper argues that in bringing forth these spirits, and by learning to see the manifestations of spiritual forces in the material products of agriculture, these biodynamic farmers position care for both earthly and spiritual forces as the primary function of agriculture, rather than efficiently producing the maximum possible harvest. Drawing from Anna Tsing's notion of patchy capitalism and applying it to the interior lives of farmers, this paper argues that the framework of spiritual science provides an alternative mental framework through which biodynamic farmers assess the meaning and value of their agricultural practices. Even though the material products of this labor are often sold in competitive markets, the conditions of production for this biodynamic produce create non-monetary meaning and value for both the farmers and their spiritual being.

Cooperative Countercultures and Markets of Possibility: Insights from Southern India

Cooperatives serve as sites of creative engagements with mainstream markets. Particularly in the Global South, rural producer cooperatives are held up as a panacea for economic, agrarian, and environmental crises as members come together to share both resources and risks. However, the viability of cooperatives on the basis of their "ability to compete" in the market continues to be debated. Based on my fieldwork at a prominent collective of cooperatives in southern India, this paper revisits JK Gibson-Graham's concept of "intentional community economies"—initiatives that treat the market as a register for ethical decision-making. Specifically, I draw on their suggestion that alternative organizations like cooperatives exercise their "freedom to act" against and simultaneously resist co-option by its mainstream other. Building on this framework, I analyze how this collective's organic farmers' cooperative and other enterprises insist on "engaging with the market on their own terms"—such as through the use of alternative peer-review organic certification systems, and by intentionally limiting their business operations to a local, sustainable scale.

The paper ethnographically draws out how members pursue their broader self-emancipatory goals—despite recurring challenges like price fluctuations, consumer apathy, changing regulations, and internal organizational disagreements,—in ways that ch

Presenter(s): Riya Sharma

Anthropocene Humanism and the Autonomous Social Imaginary in Southern Illinois

The Carbondale Spring was an organization in Southern Illinois (active between 2019 and 2021) which sought to defund the police and to reallocate these funds to create a variety of ecological and social programs. Specifically, they sought to create a food autonomy program, a renewable energy fund, a team of care workers to replace functions currently performed by the police, and to

create workers cooperatives. While ultimately unsuccessful, this organization was able to use their program to collectively think through the problems facing their town and to pose solutions to these problems. In the process, members rethought basic assumptions of their lives and the possibilities for how society could function – and how human society should respond to climate change. I call this process of (re)subjectivation "Anthropocene humanism." I contrast Anthropocene humanism to ontological approaches toward climate change which, in various ways, argues that altering the ontological categories underpinning modern thought is the essential political task for responding to anthropogenic climate change. Anthropocene humanism, in contrast, thinks about climate change and the subject of climate change through the dialectic of action. Recalling the 'ghost' of Marx's Theses on Feuerbach, I argue that ontological approaches to climate change offer an idealist program for climate action, which I contrast with the Carbon

Chicago's Household Gardens & Yards in the Black Freedom Tradition

In *Silencing the Past* Trouillot (1995) notes there was a moment when the Haitian revolution hinged on slaves' demands, one of which was for an additional day to garden. That realization dramatically shifted the lens of this research project, a decade-long study of the social justice movement fighting food apartheid and health disparities in Chicago's Black inner-city, utilizing participant-observation and interviews with school and community gardeners, coordinators of farmers markets and urban agriculture programs. Questions persisted on household resources most conducive for gardening, meal planning, cooking from scratch, as well as why gardening common in the South and in the first half of the 20th century in Chicago disappeared from most Black household practices. This research situates household care and mutual aid practices within the wider Black Freedom Tradition, in conversation with racial capitalism and wider social reproduction theorizing, and feminist visions within Hayden's *Grand Domestic Revolution* (1982). This project is also in dialogue with scholars theorizing and documenting Black geographies and foodways (Benjamin 2022, Garth & Reece 2020, White 2018). The multi-generational household and its function in the invisible economy of the community, prior to urban renewal in the late 20th century, had served many purposes, but looks to have been critical in the reproduction of collective Black family life grounded in cooperative activities.

Into the fields: migrant labor, everyday pesticide entanglements, and Midwest plantation regimes

This research reflects on Migrant Farmworkers who are exposed to pesticides in farms and monocrops in the state of Illinois from a critical environmental perspective, which confronts the homogenizing assumption of flat landscapes and resistance in the Midwest. Here migrant farmworkers survive and create networks within chemical geographies and beyond the economic poisoning associated with monocrops and industrial farming. This work was done moving between sites. On the way to doing that, the work uses an approach that reflects on farmworkers' voices and makes visual ethnographic insights to describe forms of violence and state practices while

depicting the migrant farmworkers inside the agricultural complex of Illinois. This research describes what it means to work in the fields from the perspective of migrant farmworkers, focusing on the relations between pesticides, agricultural exceptionalism, land concentration, and farmworkers' everyday agricultural practices of resistance.

Ac(Countability): Scale and Quantification in Bolivia's Activist Climate Accounting

As international governance processes have repeatedly failed to confront climate change, activists increasingly seek to challenge systems of accounting for greenhouse gas emissions upheld by institutions like the United Nations. Some of these interventions seek to disrupt greenhouse gas accounting practices that center the scale of the nation state by highlighting the climate impact of wealthy individuals and corporations. Others challenge how accountability for emissions is allocated within the inter-state system.

This paper examines one set of alternative accounting practices undertaken by a network of Bolivian climate justice activists. As part of a pressure campaign to extract stronger environmental commitments from the Bolivian government in the run-up to the 25th annual U.N. Conference of Participants (COP 25) meeting, activists labored to produce their own inventory of the country's greenhouse gas emissions. By enumerating harms they believed would be obfuscated by official government reports, participants in this effort engaged knowledge production towards a goal of contabilidad – encompassing both countability in the sense of quantification, and accountability in the sense of political responsibility. Drawing on participant observation, I examine (ac)countability as a conflicted practice. Even as efforts at counter-knowledge proliferate, they are haunted by dominant scales (i.e. the nation-state) that precondition both knowledge production and political action.

2890 Connecting the Dots in Climate and Energy Justice Research

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Balcony J

Type: Oral Presentation Session

Ethnographic and community-based participatory research require long-term engagement and partnership with specific communities. Yet climate justice issues are planetary in scope and require "connecting the dots" between the global and the local, between different ways of thinking and being, between multiple stakeholders/actors (e.g., researchers, CBOs, and government officials, etc.), and between anthropology and other fields. In our effort to "connect the dots" between disciplines, affected communities, and policy realms, we are inspired by calls for "participatory convergence" (Roque, et al. 2021, Castro-Diaz et al. 2024). How do we scale up

community-based projects and bring climate justice communities into conversation and solidarity with one another? Panelists will briefly present their climate justice research projects, which include residential energy issues in western Massachusetts (Caverly, Rhiney, and Harper), Nature-Based Approaches to coastal zone and water resource management in Boston, Massachusetts (Castro-Díaz and Kirshen), environmental health and water security in Vieques, Puerto Rico (Negrón, Melendez-Mateo, Estrada-Martinez), utility-scale solar siting conflicts in Sardegna, Italy (Cao), and contentious local politics around renewable energy in Portugal and the northeastern United States (Afonso).

Presentation(s): Militarized Pasts and Climate Futures: Localizing Environmental Justice in Vieques, PR

In this paper we examine the complex landscape of community organizing and climate and environmental justice in Vieques, Puerto Rico, where a history of military occupation, colonial neglect, and environmental contamination converges with climate change to produce what we conceptualize as cascading disasters. Drawing on ongoing community-based participatory research with the Vieques, Ambiente, Salud y Acción Comunitaria (VASAC) initiative, and efforts to organize for climate resilience through water security, we explore the socioecological aftermath of U.S. Navy bombing exercises and their enduring effects on health, land access, and trust in institutional actors. Informed by ethnographic sensibilities and a critical public health lens, this project engages with grassroots leaders, scientists, and long-time residents to analyze intersecting threats to community well-being, including toxic exposures, inadequate healthcare infrastructure, and vulnerabilities to climate-related events. We highlight how ideological diversity - among progressive activists, moderate stakeholders, and religious conservatives - shapes engagement in community organizing. At the same time, a pervasive distrust rooted in the legacy of U.S. militarism and Puerto Rican governmental neglect complicates research collaboration and calls into question the role of outside actors, including researchers. We examine how insider-outsider dynamics are mediated through long-standing attachments to place and conteste

Energy justice is a housing problem: Some evidence from the Holyoke Community Energy Project

This presentation contributes to bridging knowledge on housing and energy justice. It does so by way of ongoing, community-driven research in Holyoke, Massachusetts. This research, the Holyoke Community Energy Project, entails collaboration among anthropologists, urban planners, community organizers, a housing agency, engineers, city residents, and other actors. Through

interviews, focus groups, and participant observation, our team of university and community-based researchers are identifying barriers and opportunities for household energy systems that advance the desires of low-to-moderate income people in Holyoke. Across our work, we have routinely grappled with the ways energy injustice and housing injustice are deeply entwined, as people who contend with increasingly unaffordable rents and poorly maintained buildings also contend with spiking energy costs. At the same time, recent state and federal policies intended to drive household-scale renewable energy transitions disproportionately benefit people who own their homes and exclude people who rent. Moreover, when landlords receive public subsidies for energy efficiency and electrification upgrades to rental housing, existing residents can lose their homes, raising legitimate fears of green gentrification. This presentation builds from the insights of Holyoke residents to connect the dots between energy and housing justice. It does so by way of bills, drafty apartments, aging boilers, landlord-tenant disputes, and other

Advancing Justice and Resilience: Implementing Coastal Nature-Based Approaches through Participatory Convergence

Nature-based approaches (NBA) hold significant promise for advancing grand challenges such as sustainable food production, enhancing coastal zone and water resource management, and mitigating floods, droughts, and other natural disasters. However, the benefits and trade-offs of these approaches are often distributed unevenly across different social groups, raising important questions about equity and inclusivity. The implementation of equitable and just NBA demands innovative systemic approaches that actively engage local communities, such as the Participatory Convergence Approach. This approach breaks down traditional disciplinary silos by prioritizing systems thinking, solution-focused strategies, and meaningful community engagement. By fostering collaboration among residents, stakeholders, and researchers from diverse fields, Participatory Convergence has demonstrated its effectiveness in addressing pressing grand challenges, including water insecurity, energy justice, and disaster resilience, through tailored and equitable solutions. For instance, it has allowed local communities in the Amazon to co-design off-the-grid energy systems. It has been used to co-develop along the U.S-Mexico border adaptive and decentralized water systems. Using Boston Harbor as a case study, this presentation investigates how implementing NBA for flood risk reduction through Participatory Convergence can optimize benefits while mitigating potential drawbacks. We will emphasize how utilizing th

Landscapes of Energy Transitions: Who Owns the Wind and the Sun?

Renewable energy transitions are not merely technical shifts but contested renegotiations of who controls nature's infrastructure. Comparing ethnographic work in Portugal (wind/solar) and Massachusetts (Falmouth's publicly owned turbines), I examine how governance legitimacy—not just ownership—determines success or failure. In Portugal, rural communities facing agricultural

decline often accept renewables when projects are mediated by traditional institutions, the Assembleia de Compartes, who manage the commons (baldios), enabling direct negotiation with developers. Here, wind and sun become collective assets, revitalizing both economies and participatory governance. By contrast, Falmouth's municipally owned turbines—installed at a wastewater facility without meaningful community input—were dismantled after courts ruled their health and nuisance impacts intolerable. This paradox—public projects failing where community-led ones thrive—reveals a core tension: even well-intentioned climate solutions collapse when they sideline local knowledge and justice. I argue that energy transitions must treat wind and sun as embedded in social and moral landscapes, where legitimacy flows from procedural equity, not just technical or governmental authority. Linking Portuguese and North American cases, I propose ethnography as a tool to "connect the dots" between planetary urgency and place-based sovereignty, scaling climate action through—not over—the communities who inhabit energy landscape

The “green energy invasion” of Sardinia: Between technoscientific promises, economic speculations and social resistances

The supposedly inescapable nature of energy transitions and the rhetoric of urgency with which they are usually framed in the public arena limit and/or inhibit our capacities as researchers 'to engage with and address them' (High and Smith 2019: 11), drastically reducing the realm of possibilities. Indeed, the planning and prediction of energy scenarios tends to rank and limit the range of possible futures (Strengers, Pink, and Nicholls 2019). Yet the effects of changes in resource extraction and energy use stimulate social imagination and reconfigure political systems (Szolucha 2018). The European Renewable Energy Financing Mechanism ('RENEWFM') launched to accelerate the decarbonation of member countries (European Union 2023), makes this sector particularly attractive to private investors. In recent years, Sardinia has received thousands of requests for authorisation of renewable energy production plants (Lupo and Fadda 2024), mainly wind but also solar, both onshore and offshore, of various sizes. As a result, large-scale protests broke out in Sardinian society against what was termed the green energy invasion, leading to numerous civil resistance initiatives, a citizens' initiative bill and the promotion of a popular referendum (Cossu 2024). This presentation addresses the implementation of energy policies and the social, political and cultural arguments behind the Sardinian "invasion."

3728 Ecological Politics in the Age of Green Transitions

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Studio 7

Type: Roundtable/Town Hall

This panel brings together authors of recently published monographs that critically engage with the

theme of ecological transitions at the intersection of environmental anthropology and science and technology studies (STS). In the early decades of the 21st century, attempts to reconcile economic growth with environmental concerns have frequently manifested as investments in green infrastructure projects, technological innovation, and new forms of ecological governance. This group of monographs examines a wide range of projects ranging from the rise of green capitalism in REDD projects in Brazil (Greenleaf 2024), racial justice and solar transitions in New York City (Lennon 2025), the creation of new data storage facilities and its impact on sovereignty and emerging spatial politics in Iceland (Johnson 2023), environmental justice, toxicity and place-making in late-industrial Baltimore (Ahmann 2024), and grassroots waste politics and ecological city-building in authoritarian China (Zhang 2024). Together, these books show how emerging green technocratic regimes both reinforce and mask longstanding patterns of inequality, including racial, colonial, and rural–urban divides. At the same time, they highlight how ecological and environmental projects are taken up in diverse and complex ways through local engagements with technocratic forms of ecological governance.

This roundtable will explore shared conceptual ground for understanding the ecological regimes emerging in the early 21st century—regimes often described through terms like green capitalism, late capitalism, and technocracy. Together, we ask: how can we think across diverse geopolitical contexts to identify common points of mobilization, resistance, and action? Each author will serve as a discussant for another's work, drawing out core themes, arguments, and questions that connect across their respective studies.

4495 Engaged Anthropology in the Contemporary Context: Grappling with Ghosts of Anthropological Theory, Practice, and Legacy

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Balcony L

Type: Conversation/Debate

Participatory methods of anthropological research emphasize horizontal models of collaboration, positioning interlocutors as theorists, and producing meaningful knowledge to be leveraged for social transformation. However, Sophie Chao (2023) reminds us that ethnography is historically entangled with ethical dilemmas of extraction, representation, and sweeping generalization. A hesitant anthropology, she argues, requires transparency about the debates and disagreements that shape ethnographic knowledge to contest the singular narratives of traditional fieldwork. How

do engaged anthropologists grapple with the legacies of power, coloniality, extraction, or racialization of the communities with whom we work? How does community-based research push anthropologists to confront harmful relationships that preceded their presence in the community? This panel discussion addresses experimental methodologies, collaborative pedagogies, and community-based partnerships to explore ghosts of research past. Discussants will draw upon community-based research experience to narrate the practicalities of conducting research in the shadow of imperialism, systemic neglect, and racialization. The contemporary moment of the discipline demands a reckoning with extractive research-participatory and community-driven research addresses the call for bottom-up knowledge production through mutually reciprocal relationships.

1898 Ethics and Aesthetics of Good Enough Care: Qualities of Scarce Health

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Regent

Type: Oral Presentation Session

Anthropological critique of public and global health centers on the fields' tendency to privilege standardization and scale over collective or personal well-being and care. Yet as both fields begin to use quality of care and patient-centered-interventions as orienting themes, new ethnographic opportunities emerge. We seek to understand the work these terms do by questioning what "quality" care might look like for patients, caregivers, professionals, states, and international organizations. By examining everyday practices of care for an ethics of good enough and an aesthetics of quality, we develop a new ethnographic language for the critical analysis of medical interventions.

The enactment of medical care in contexts of discursive and actual scarcity is a challenging endeavor. In a policy brief on universal health coverage financing, the WHO urges governments to prioritize only some areas of health care for free in order to meet budgetary demands. Recent biomedical research, in the field of genetics, cardiology, and endocrinology, portrays disease as something to be managed, not cured, in a lifelong process of dependence on the medical industry. In the world's megacities, living conditions facilitate the spread of infectious diseases, among the same people targeted by vertical programs seeking to eradicate them. Physicians find themselves squeezed by budgets and antibiotic resistance. A growing number of people, some organized in religious congregations or social groups, such as anti-vaxxers, reject standard biometric treatments

for what are considered curable diseases. Today as the grand promises of developmental narratives for ever-increasing prosperity and well-being sit uncomfortably with the receding horizons of quality and austerity, new ethics and analytics of care emerge.

As an anthropological endeavor, we focus on the practical ethics that emerge from situated contexts of coping with chronic illness, making difficult treatment decisions under conditions of scarce resources, the struggle for life in toxic environments, and attempts at healing exposure to harmful substances. What visions of a good life and death underlie the negotiations of precarious care in these situations of limited agency? How are new relationships between individual and population unfolding? How do healthcare decisions reflect an emerging body aesthetics and kinship relations, and how are they related to arguments about individual sacrifice for the greater social good? What are good and quality anyway?

Presentation(s): For the Good of the Patient and the Good of the Company? Ethics and Profits of Care in German Insomnia Treatments

According to statistics, millions of people around the world suffer from insomnia. While a diversity of therapeutic interventions exists in the form of pills, psychotherapy, apps, and sleep-supporting accessories, experts have proclaimed a 'treatment gap.' Existing therapies are either ineffective, inaccessible, or have undesirable side-effects. Sufferers, doctors, and the medical industry all long for better insomnia interventions, but their interests in, and understandings of, 'good quality care' diverge quite substantially. Patients want treatments to be effective and convenient; doctors and researchers must ensure that therapies comply with medico-ethical principles; insurance companies want care to be affordable and limited to those who absolutely need it; and pharmaceutical and tech companies want therapeutic products to be profitable. New treatments – not just for insomnia – rarely meet all these requirements. Given that miracle cures don't exist, what is 'good enough' treatment and – importantly – 'good enough' for whom?

I approach this question through the case of a new drug that has been celebrated as a potential 'game-changer' in German insomnia treatments. Based on ethnographic observations at sleep medicine conferences, I argue that the drug's promotional success depends less on its effectiveness as a substance, than important stakeholders' agreement that the drug is 'good enough' to be helpful (and not 'bad enough' to be harmful).

Particularly Good Enough: The Ethics and Economics "Low Quality" Medical Practices in Mumbai

Private-sector general physicians working among the poor in Mumbai's unplanned neighborhoods often address illness with only meager tools. During 18 months of ethnographic fieldwork in their clinics, these physicians describe the tensions created by needs to care for patients' bodies and budgets as well as their own professional and moral reputations as generating a practice of "good enough medicine." This good enough medicine must care for individual, families, neighborhoods and populations to achieve twinned but contradictory goals of fiscal and physical wellbeing. Caught between economic, epistemic, and ethical concerns, good enough medicine relies on inexpensive pharmaceuticals, clinical expertise, and minimal diagnostic testing. For patients and physicians, such tactics often buy cheap relief or time to interpret clinical signs. They are good enough because they care for bodies and budgets. For public and global health, they diverge from biomedical standards and are low quality.

Eschewing frames representing practitioners of good enough medicine as mimics or charlatans, this paper traces how physicians reshape universal biomedicine, bodies, and standards of care by mobilizing particular ethical and epistemological models to that craft a situated medicine. Mumbai's good enough medicine reopens questions about universal bioethics, minimalist biopolitics, and biomedical power through the lens of contestations around quality and object of care.

Presenter(s): Andrew McDowell

Frugal Medicine: Treating the Symptom in/of Delhi's Healthcare System

In 2015, Delhi's Aam Aadmi Party established Mohalla (neighborhood) Clinics: primary healthcare clinics that claimed to provide the poor with universal healthcare. While the Mohalla Clinics increased access to minimal biomedicine, super-specialty cures remain largely out of reach for Delhi's poor. Based on 2 years of ethnographic work with bureaucrats, doctors, and patients in Delhi's Mohalla Clinics between 2021-2025, we examine how Delhi's healthcare system enacts a frugal form of medicine. Neither austere nor improvised, frugal medicine is a type of 'good enough' medicine that allocates scant resources to alleviate rather than eradicate afflictions.

This paper traces patients who begin in Mohalla Clinics and travel through Delhi's healthcare system to show how patients are prescribed frugal medicines — such as paracetamol — for 'big diseases' — such as non-healing ulcers — that risk becoming septic and life threatening. These trajectories reveal that, in a frugal medical system, health becomes an outcome of patient journeys to accumulate frugal medicines from different healthcare institutions. While doing so, patients must battle with the reluctant benevolence of a frugal-medical governmentality that momentarily strengthens the body by treating the symptom rather than the disease, neither 'making live' nor 'letting die.' Frugal medicine is both a state strategy and a necessary ethic of care that is caught between a sovereign panic and a biopolitical modernity.

Centering Social Networks of Care and Support To Complement Patchy State Health Care in Kenya

For many Kenyans, social networks of care and support, notably kin, prove essential connecting dots for accessing to care in patchy healthcare landscapes. To reverse this trend, in 2018, the Kenyan government declared an ambitious push for Universal Health Coverage. It made some healthcare services free and reformed the national health insurance. UHC implementation combined strategies such as removing of user fees, strengthening health systems, ensuring supply of essential medicines, integrating community health services and strengthening primary health care. Despite these new initiatives, access remains patchy.

This paper studies how people settle for "good enough care" in a situation of precarity and impoverishment associated with health crises. Along with state recourses, that are never sufficient citizens' rely on ethnicized and communal social practices, harnessing local knowledges and resources as essential networks to provide pathways for treatment. Drawing on ethnographic fieldwork on Kenya's experiments with UHC 2019-2020, the paper speaks to how citizens make calculated and difficult choices reworking cultural practices of kinship formation, as they pull onto culture-specific communal institutions of kinning in what I call 'cultural surrogacy', as form of care and support. By paying attention to cultural surrogacy I offer insights on forms of intimate care futures in citizens' everyday negotiations of precarious living in a resource-constrained context.

Presenter(s): Edwin Ambani Ameso

Appropriateness: Partial Ethics of Health Care Decisions in Situations of Financial Hardship

Set in the marginalized neighbourhoods of Delhi, the talk reflects on contentious negotiations between family members and care providers over appropriate health care. Serious illness is a major concern for resource-poor people, not only because of the emotional distress it causes, but also because it is likely to disrupt the family's fragile financial situation. To cure a patient, people sometimes migrate to distant places, usually borrow money to pay huge medical bills, and constantly negotiate hard with providers to get treatment at a budget. In this situation, how do families agree on what is appropriate? The paper unpacks attempts to come to terms with the situation of serious or chronic illness, analysing the back and forth between expressions of a sense of attachment and duty to care, practical matters of family survival, and careful financial assessment, as well as attempts to overcome structural barriers to access medical institutions.

The fine-grained analysis of the emotional and financial burdens that families bear in making difficult health care decisions unpacks a practical ethic of finding pathways to what is "good enough" for patients, families, and relatives. The argument pushes back against notions of improvisation or ad hocness to acknowledge a complex universe of care concerns that include ethical, emotional, and economic calculations that must be carefully balanced when dealing with the never quite sufficient offerings of the low-cost health care market.

Presenter(s): Ursula Rao

Decolonizing “People-Centered Care”: Kin Work, Wake Work, and a Feminist Aesthetics of Care in Tanzania

Decades of neoliberal deregulation and privatization have left the Tanzanian healthcare system under-resourced, compounding epidemiological devastation wrought by colonialism and its concomitant efforts to dismantle local healing practices. Postcolonial scholars elaborate on these legacies of empire as the ongoing operationalization of gendered racial capitalism (Bhattacharyya 2018), entailing entwined political, economic, epistemological, and psychic violence (Mbembe 2017). In response to these conditions, many women in Tanzania engage in embodied forms of kin work and wake work (di Leonardo 1987, Sharpe 2016) by literally tying their bodies with cloth as a way to hold themselves and others. The ethics and aesthetics of this care lies in its ability to suture fractured selves and enable an intergenerational, intercorporeal unity of being. In this talk, I consider such practices in relation to the World Health Organization and World Bank's (2018: 34) claim that attention to "people-centered care is not as prevalent in low- and middle-income countries." Bringing together the work of Sylvia Wynter and Sylvia Tamale, I argue that vernacular feminist forms of healing in Tanzania challenge neoliberal, secular, and biologized definitions of "people-centered," revealing that such global health discourses are, in fact, Man-centered (Wynter 2003).

7514 Everyday Adjustments: Remaking Relationships through Inconveniencing and Accommodating Others

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR C3 (3rd fl)

Type: Oral Presentation Session

Sartre famously wrote that "Hell is other people," an acknowledgement that living socially is an experience marked by complications, tensions, and even unpleasantness. Yet as Lauren Berlant has argued, living socially can be an acknowledgment of, and desire for, the messiness and inconveniences of those relationships. Our research subjects regularly engage with others who have different needs, interests, demands, and behaviors: adult children who move back home to live with their parents, relatives who retell embarrassing family stories at family gatherings, coworkers whose approach to shared work activities and spaces reflects philosophical and ethical differences, family members whose behaviors change due to illness or injury, business partners who disagree over financial matters, or even family pets that inhabit and disrupt personal living spaces in non-human ways. These encounters are rarely singular events but are ongoing, such that past inconveniences become hauntings that intrude in and inform present encounters. These encounters of inconvenience and the social adjustments they prompt are such an ordinary, taken-for-granted part of the ongoing flows and rhythms of everyday life that they rarely prompt more than a fleeting moment of exasperation or amusement by our research subjects or even

acknowledgment by anthropologists. Yet they are profoundly consequential aspects of people's daily lives because they invite people to remake their relationships and social worlds, frequently reemerging as the irritating or amusing precedents that haunt and shape future encounters and relationships.

This panel explores the inconveniences of everyday life in the company of others and how individuals acknowledge, negotiate, and accommodate the needs, interests, and demands of those with whom they share their homes, workplaces, and communities. Panelists are specifically interested in the types of adjustments that individuals make in their own behaviors and perspectives in order to share their lives, spaces, and worlds with inconvenient others, and, in turn, how these adjustments create possibilities for new forms of relationality and sociality.

Panelists will consider these issues through papers on the financially and socially generative dimensions of disagreement and conflict among women members of a Kenyan mutual finance group, how increasingly limited access to housing in Tanzania prompts new relationships of familial interdependency and adjustment, the ways in which American animal rescuers sacrifice their personal comfort, finances, and living spaces in order to care for sick, injured, and unsocialized animals, and how Detroit's Black technology entrepreneurs navigate the contradictory social benefits and tensions that emerge in coworking spaces.

Presentation(s): Home Economics: Accommodating Inequalities in Tanzania

This paper explores how relationships shape access to accommodation in Tanzania in the context of rising costs and escalating inequality. Longstanding expectations about building life which centre on constructing a home for ones growing family are becoming unattainable. Ideas about building a life informed by post-independence discourses valorising self-reliance are increasingly detached from economic realities which enforce ongoing relations of interdependency between differently situated persons. Most such interdependencies involve accommodation within the houses of other family members. People build on entitlements enmeshed in relationships with others to gain accommodation in new locations as a first step on the path to building their life in the longer term. Those unable to move on through expected steps from renting, finding a partner and building can find themselves precariously situated as junior resident in someone else's household, inhabiting lower status service roles which they would have expected to have long since socially outgrown.

Living with other people, Lauren Berlant suggests, demands ongoing adjustments. Accommodation implies accommodations, inhabiting roles and, in situations of unequal power relations, taking on domestic occupations.

#NoWomanLeftBehind: Voice, Conflict, and an Informal Financial Group of Kenyan Women Living in the US

In this paper, I consider the important role of conflict, annoyance, and disagreement in the formation and endurance of a novel women's financial group formed by Kenyan women living in the US and Canada in 2016. Its members own shares and take out loans, mostly for the purpose of saving and investing in Kenya. In a financial mutual, members are joint owners of the fund and the group, and they can set and negotiate financial terms for purchasing shares and taking out loans – including interest rates and penalties. In 2017 the Savings and Credit Cooperative (SACCO) was registered with the Kenyan Government although its novel form, a hybrid of formal and informal financial relations, fits uncomfortably in this category. Its (female-only) members buy shares and take out loans, sometimes as individuals, and sometimes as small groups of up to 25 women. Other members of the group have purchased property in Kenya together. In financial mutuals, members have a sense of ownership and agency which Susan Johnson calls voice. In this paper, I recount how the mutual was established and grew among diverse Kenyan women, showing how ground-up relationship building and networking practices used digital media to create an emergent and novel financial institution. I also explore the paradoxically important role that conflict, disagreements, and even accusations of fraud have played to the successful building and exercising of financial voice and to the endurance of the mutual over time.

Belonging and Inconvenience: Coworking Spaces in Detroit's Tech Entrepreneurship Ecosystem

Coworking spaces became popularized in the 2000s with the growth of the tech sector, and developed into an integral part of entrepreneurship ecosystems across the world. They provide physical spaces (work desk, lab space for prototype, conference room) and practical benefits (mailing address, minimal office expense). Additionally, "offering a community" is often mentioned as an important element of coworking spaces. But what community means in this context, and how it manifests in the entrepreneur's work routine is not sufficiently examined. Many Black founders hustle to normalize tech in Detroit's emerging tech ecosystem. Part of the hustling process involves making connections and contributing to building a community defined by growing together rather than individually. Coworking spaces can offer visibility and potential for collaboration which is important, but they can also pose challenges and inconveniences for underrepresented tech founders. This paper discusses coworking spaces in Detroit's tech ecosystem to examine the underexplored dimensions and implications of the inconvenience of life in the company of others. What are some needs, interests, and demands that entrepreneurs sharing these coworking spaces have, in order to acknowledge, accommodate, and negotiate some inconveniences? Exploring this

question can reveal how different aspects of sociality emerge in coworking spaces, and how tech founders relate to community through their work spaces.

When Fur and Slobber Are Interior Design Aesthetics: Being Grateful for the Disruption of Home Life with American Rescue Pets

American animal rescue organizations often rely on volunteers to provide in-home "foster" care for cats, dogs, and other companion animals who are waiting for permanent homes or are unadoptable due to serious illness or age. The goal of foster care is to provide a homelike setting where animals feel safe and loved and learn how to be good companions for their new families. Yet the care required to turn a rescue animal into someone else's "perfect" family member often entails significant, and even expensive, disruption to animal rescuers' home lives: furnishings and structures damaged by pets; purchase of pet-friendly furniture, flooring, and vehicles; and the reorganization of homes to accommodate crates, feeding stations, training areas, relief areas, and medical equipment. Even as animal rescuers would prefer to minimize damage and disruption to their homes, they express acceptance and gratitude that their sacrifices will contribute to the greater good of the animals in their care and their future families. This paper examines how American animal rescuers adjust their homes and finances to anticipate and prioritize the needs of both the animals in their care and the imagined future families of these animals. In particular, this paper considers how rescuers justify the reorganization of their home lives as a necessary and rewarding commitment to their goal of helping other people create the perfect family.

2556 From Field to Cooking Pot to Feminist Anthropological Futures: Engagements with Florence Babb's Research and Scholarly Practice

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Galerie 6

Type: Oral Presentation Session

This panel features diverse engagements with the work and contributions of Florence Babb. An Andeanist and Latin Americanist anthropologist whose career has included fieldwork in Peru, Nicaragua, Cuba, and Mexico, Babb has consistently offered nuanced and sophisticated ethnographic analysis of gender and ethnoracial inequality, cultural politics, and women's work and day-to-day lives. What's more, Babb's support for students and younger colleagues within and beyond appointments at Colgate University, the University of Iowa, the University of Florida, and the University of North Carolina at Chapel Hill can be understood in relation to enduring commitments to world anthropologies, decolonization, and feminist scholarly practice. Babb's mentoring has

impacted multiple generations of anthropologists who can be found working today in academic, activist, and policy settings throughout the Americas.

The session brings together a group of Babb's former students who draw inspiration from different facets of her work as a teacher, mentor, and scholar. The thematic diversity of the papers reflects the breadth of topics and anthropological debates with which Babb has engaged, along with her enduring impact on anthropologists of varied interests, backgrounds, and professional trajectories. Eric Thomas and Achsah Dorsey take up Babb's interventions in economic anthropological discussions about female producers to understand the realities of small-scale entrepreneurs in Chile who receive support from state initiatives aimed at advancing gender inequality and economic development. Maja Jeranko employs Babb's more recent ethnographic perspectives on gendered, racialized, and class inequalities to investigate how women in rural coastal Ecuador use informal and collective labor to navigate changes associated with climate-related disasters and the consequences of the COVID-19 pandemic. Babb's decolonial feminist perspective on the notion of gender complementarity informs Lucía Isabel Stavig's examination of efforts to promote healing among forcibly sterilized Quechua women in Cusco.

Amy Cox Hall's and Joseph Feldman's papers reflect on Babb's legacy as a mentor. Cox Hall highlights the way Babb's mentoring style's centering of care and relationality provides a model for confronting the continued marginalization of women scholars and others who do not neatly align within masculine spaces of the traditional academy. Feldman's paper considers the practices, lessons, and sensibilities that anthropologists absorb as graduate students, illustrating the enduring influence of graduate mentoring at different life and career stages.

Presentation(s): “Se mantienen, no más”: Rural Women and the Distributive State in Chile

In Chile's remote Aysén Region, government initiatives to advance gender equity, economic development, food security, and household nutrition have created a range of public distributive programs. Among other benefits and entitlements, state agencies have recently introduced new grants, low-interest loans, and modern market infrastructure for female producers who grow and market agricultural products in the region. Our paper examines the role of one such agency, INDAP (Instituto de Desarrollo Agropecuario). Drawing on visits to rural homesteads and interviews at newly constructed farmers' markets, we argue that—like the Peruvian market women of Huaraz that Babb profiled nearly fifty years ago—female producers are unlikely to resemble capitalist entrepreneurs seeking to formalize or expand their economic activities. Instead, these heads-of-household are successfully "maintaining themselves" in the face of rapid political, economic, and

ecological change. This suggests that rather than providing temporary support so low-income citizens can realize their entrepreneurial ambitions, public distributive programs established under neoliberal regimes serve as permanent "safety nets," protecting rural people from market failures that could otherwise lead to political-economic instability.

Care as Resistance: The Women's Circle and the Making of Other Worlds in Coastal Ecuador

This paper draws on long-term ethnographic fieldwork to examine how women in rural coastal Ecuador mobilize radical care as a form of resistance amidst overlapping crises—including climate-related disasters, the COVID-19 pandemic, and intensifying socioeconomic precarity. Building on Florence Babb's decolonial critique of gender, class, and informal economies in Latin America, I examine how shifting conditions—such as the pandemic, the decline of small-scale fisheries, and the rise of precarious labor—have created openings for women to mobilize care work and mutual aid. These practices not only challenge entrenched heteropatriarchal structures but also resonate with and extend Babb's insights into how women navigate and resist structural inequalities through informal and collective labor.

These structural shifts have not only exposed deep inequalities but have also catalyzed new forms of grassroots organizing. In response, women have come together to form a "Women's Circle," cultivating spaces of collective power and solidarity through workshops and the creation of a communal kitchen. In this context, radical care has emerged not only as a survival strategy, but as a political-affective force that unsettles power, fosters inclusion, and reimagines community futures beyond the state.

Presenter(s): Maja Jeranko

Healing and Gender Complementarity in Ayllu: Dispatches From the Field

In her critical reassessment of feminist debates regarding gender in the Andes, Babb asks a provocative question: "Could a decolonial feminist view of complementarity bring greater recognition to the significant place of women in household economies based on an ethics of interdependence and reciprocity, as well as address gendered violence and exclusion where it occurs?" (2018,12). Based on 18 months of ethnographic work with forcibly sterilized Runa (Quechua) women, I argue that healing practices at the Mosoq Pakari Sumaq Kawsay healing center in Cusco revalorize Runa women's roles as makers of relation, community, and culture, linking their healing to broader decolonial struggles. It is quite the case that a revalorization of the ideals of gender complementarity do not automatically translate into harmonious relations between men and women—or respect for non-heteronormative genders and sexualities that were once part of Runa life (Horswell 2005; W. Stavig 1996). However, at MPSK, gender complementarity emerges as a tool for contesting coloniality, which has de-valorized Indigenous women and commodified pachamama—a living entity—as mere land, a feminized resource to be owned and exploited. Thus,

in seeking to remember and re-member the ayllu, including the tenets of gender complementarity, affected women contest the de-valorization of Runa peoples, Runa women, and the earth, by creating a space of survivance that is working to revalorize the feminine and heal ayllu.

Presenter(s): Lucía Stavig

Mentoring Toward Collaboration: Supporting Ideas and People in Academia and Beyond

Drawing on my nearly 20-year relationship with Florence Babb I reflect on mentorship in the academy. Specifically, I explore different styles of mentorship and ask what it means to have a mentor that centers relationality and care with intellectual curiosity and rigor. I explore the kinds of support she offered to me, support that vastly differed from other advisors, and how that support helped to nurture specific outcomes professionally. I suggest that a specific type of relational care is needed in the academy to sustain female scholars and others who have not aligned neatly within the traditional academy. Further, without this type of mentorship, alternative ways of thinking and writing, different methodological approaches, and underrated subjects of interest will continue to be ignored and dismissed. The academy remains a highly masculine space with persistent hierarchies for scholars and their scholarship which translates into specific kinds of relationships that remain pervasive and detrimental to inclusive scholarship. A supportive, care-centered network can nurture scholars to expand approaches and thinking.

Presenter(s): Amy Cox Hall

After (My Sexual) Revolution: Reflections on Anthropological Training and Life and Career Transitions

Drawing inspiration from Florence Babb's research on societies in transition, along with her personal narrative of "arriving late for the revolution," this paper reflects on the value of arriving late to lessons and sensibilities we are exposed to in anthropological training. As a graduate student, I pursued research on topics that corresponded with several of Babb's areas of specialization: tourism, Peru, cultural politics, and the making of national representations, among others. Yet my dissertation project and first book did not engage with the anthropology of gender and sexuality or queer and feminist ethnographic traditions in a meaningful way, despite these areas forming part of my graduate training. Now, as a professor at a teaching-focused university and someone who is more comfortable being "out" in the field, in the classroom, and on the proverbial balcony (Babb 2009), I find myself connecting with Babb's work and influence in new ways. I illustrate these links through observations from recent fieldwork centered on the history and politics of sexuality in a Colorado town as well as reflections on my changing relationship with Peru and anthropology.

5510 Gender on the Border: New Research from New Scholars

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Nottoway (4th fl)

Type: Roundtable/Town Hall

This round table is designed to highlight the interests and methodologies of student scholars at the cross-sections of gender and border studies. Participants will share their innovative approaches to their subject areas in the field and have an opportunity to make recommendations to their academic peers as they engage new practices. Finally, the roundtable will address approaches (and cautions) to working with a vulnerable population.

This roundtable is also designed to welcome audience participation and will reflect a "socratic seminar." Participants' interests are diverse and their approaches to research are equally diverse.

3725 Goodness and Its Ghosts: Contemporary Specters of Goodness, Niceness, and Purity in Everyday Infrastructures and Technologies

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Oral Presentation Session

This panel explores how our contemporary era is haunted by "good" ghosts which are embedded in the infrastructures and technologies that shape our world. These "good ghosts" are specters of human morals, values, and desires which are themselves haunted by mundane and profane flaws. Beyond easy strawmen for cyborgian infrastructures and technologies—infrastructural creep, bodies electric, and digital architectures—anthropologists must also acknowledge the complexities hidden by the specters of humanity that are inherent in the technologies we create. Far from separate, the tools we use to facilitate our anti-modern lives are germinated by human beliefs, rituals, and social imaginaries that are at once good and flawed.

Focusing on Anthropology of the Good through the lens of our changing relationships to technologies exhumes the often deliberately buried invisibilized erasures of striving for the good life. Prying apart the "Good" in our tools, we argue, is not a return to Ortner's dark anthropology

(2016) nor Robbins's moral witnessing (2013). Instead, the papers in this panel argue that it is through the parallax of encountering invisibilized human specters that we discover what it means to live humanely together to make good, clean, moral, and happy lives.

Presentation(s): Policy Oasis: Alliances, Labor, and Value of Digital Development Policy Implementation for SMEs in Chile

My paper examines a digital development policy for Small and Medium Sized Enterprises (SMEs) in Chile. It focuses on how the policy's stakeholders organize their differential interests around specific forms of value. I analyze the tensions, alliances, and maneuvers of four primary stakeholders who labor to realize their principles and values through SME digital adoption: the prominent individuals, institutions, and government actors of a public-private partnership implementing the policy; SME owners, administrators, and workers; digital technology companies; and the independent contractors hired to lay the groundwork for SME digitalization. The backbone of my research is a rigorous, multimodal methodological approach that integrates 22-months of ethnographic observation, 90+ interviews, 11 focus groups, survey data (n = 176) and analysis of multimedia talk and text, including internal and external facing policy documents, reports and data. I will reveal how digital development policy implementation activates a kind of "oasis": a rich and contested terrain of relationships, labor, values, strategic moves, and durable infrastructures. These are the often unseen but critical mechanisms through which the digital technologies that will form the bedrock of socioeconomic life are taking shape on the ground.

Good and Clean: Working sanitation museums in Paris, Brussels, Delhi and Singapore

Beneath the world's most highly developed cities a network of engineered grime meanders, gushes, and stagnates through countless channels, sluices, and pipes. In homes and communities throughout the world, families manage sewage on the surface when and where underground infrastructures fall short. This paper examines confrontations of purity and pollution through museums' intentionally engineered encounters between the public and infrastructures of sewage in their mundane and profane senses. By documenting the symbolic and interpretive values of water in working sanitation museums in Paris, Brussels, Delhi and Singapore, it demonstrates both the cross-cultural and transcendental ways humans understand sanitation infrastructure as crucial to "The Good Life." It confronts local histories of those on the outskirts of techno-citizenship, moral arguments about human-technological relations, and the phenomenological embodiment of

entering the working machinery of human waste. Here, the Good Life is not a realm, rather a process. This research points to new dimensions of moral witnessing and dark anthropology as part of the tourist experience of these fundamental technologies—at once materially and morally purifying visitors.

"You Must Sleep On the Roof:" Comfort and Heat Adaptation Practices in Jodhpur, India

The desert city of Jodhpur in the state of Rajasthan in northwestern India regularly deals with extreme temperatures during the hot season of April through June. In the nearly six centuries since the city's founding, local residents have adapted to this heat using a wide range of holistic methods, such as vernacular architecture and patterns of activity that make use of the cooler nights. Traditional conceptions of "the good life" draw upon these adaptations, preferring them to air conditioning (AC). While many households who have the means to do so use AC for cooling, there is also a deep-rooted skepticism of this seemingly unparalleled cooling technology. Some Jodhpuris, especially among older generations, cite AC as disrupting the body's internal balance and diminishing people's tolerance for heat over the long term. Other hallmarks of industrial modernity, such as air pollution from vehicles and the removal of urban greenery, can be framed as both making the city more physically vulnerable to heat and signifying a spiritual departure from a more harmonious past. Religion also intersects with this idea: Rajasthan's three major faiths, Hinduism, Jainism, and Islam, all emphasize reverence toward the natural world. In this sense, "the good life" is not defined as living in thermal comfort, but living in harmony with one's surroundings, as well as remaining grounded in age-old adaptation practices.

The Hauntological Analysis of Improvement Doctrines to Native American-Serving Non-Tribal Institutions (NASNTIs)

Higher education institutions have underserved the needs of Native students, even when active efforts are made to the improvement of services and support. Sense of belonging is a particularly ephemeral point of student's engagement with a campus community, and studies about Native students don't always account for the vast cultural differences between the different tribes and villages, which result in highly variable needs with regard to culturally-specific support. My aim with this study is to present the isolating effects of culturally-nonspecific services and groups on Native students at the University of Minnesota, Morris, a Native American-Serving Non-Tribal Institution (NASNTI). Employing ethnographic interview methods and discursive and hauntological analysis, I have demonstrated that Native students from non-Plains backgrounds are particularly affected by feelings of isolation due to lack of culturally responsive programming, even within programs designed to support Native students. This is reflective of a hauntological moment, which limits what we consider Native, or in service of Native-ness, to that which lies within the bounds of the imagined Indian.

The Dark Side of Nice: Privilege, Belonging, and Place-based Desirability

This paper unpacks place-based notions of niceness in the rural Midwest and in Scottish social media, exploring how ideals of conviviality and acceptance can also function as affective, aesthetic, and material forms of boundary-making. The specters of niceness include racialized and gendered myths about safety and authenticity, which circulate through narratives of tradition, respectability, and social cohesion. Drawing on ethnographic fieldwork and social media content analysis, this project interrogates how "niceness" can legitimize and naturalize exclusion and desirability.

In both rural and digital spaces, "nice" becomes a socially acceptable tool for maintaining homogeneity and privilege. Gated communities (Low 2009), militarization of border spaces (Díaz-Barriga and Dorsey 2016), hostile architecture, and educational inequalities (Castagno 2019, Fine & Ruglis 2009) all obfuscate marginalization by foregrounding benefits or solutions offered to privileged groups. In contrast, place-based desirability is produced through layered performances of whiteness, respectability, and safety that often rely on the symbolic and material exclusion of Others. Rendering the dark side of "nice" ethnographically visible, helps trace how violence is reproduced not only through overt acts, but also through the affective, material, and symbolic cues that mediate spatial belonging and exclusion.

Presenter(s): Cristina Ortiz

Fault/lines: Ghosts in the Machine of the Criminal Justice Infrastructure

Anthropologists have always been on the forefront of studies in criminal justice. From Laura Nader's cross-cultural work on the criminal justice system to Foucault's analysis of the very structures of the carceral system, anthropological methods and insights on the nature of crime and justice have proven valuable perspectives to explore the "good" and the bad in the pursuit of justice. This paper conceptualizes the infrastructure of the criminal justice system not only as courthouses, jails, and prisons, nor as the complex system of laws that undergird both tangible and intangible structures, but the infrastructure of human actors who navigate that system. Just as case studies are key components in the fields of law and anthropology, this paper will use a case study from the 19th century that haunts us up to the current day. The 1898 lynching of U.S. postmaster Frazier B. Baker and his family in Lake City, South Carolina and the subsequent attempt to find justice exposed faults in the legal system that were not redressed for over a century later, and then only imperfectly. The ghosts of the Baker case continue to haunt the United States and its search for the good despite a system that is fragmented along cultural and legal faultlines.

8398 Haunted Classrooms: Pedagogy, Curriculum and the Presence of Ghosts

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Beuregard

Type: Roundtable/Town Hall

This roundtable provokes the haunted dimensions of pedagogy and curriculum. Drawing on Derrida's hauntology alongside Black feminist, decolonial, and Indigenous critiques of epistemic violence, we ask: What ghosts linger in our classrooms, syllabi, and curricular frameworks? How do historical absences and silences shape what can be taught, known, or imagined? This roundtable contributes to anthropological conversations on temporality, affect, and power, positioning pedagogy as a vital site of spectral inquiry.

Rather than viewing pedagogy and curriculum as linear transmissions of knowledge, we approach it as a haunted practice-shaped by what is no longer present yet continues to act. Engaging curriculum as a spectral archive of presence and absence, we investigate the ghosts of colonial logics, racialized histories, and deferred futures that haunt our institutions. Papers trace how curriculum is haunted by unacknowledged harms, unresolved injustices, and unrealized possibilities. Themes include intergenerational memory, pedagogies of absence, teaching in ruins, and the ethics of navigating haunted institutions. Participants attend to how teaching practices-methodologically, affectively, and institutionally-are shaped by what is felt but not always named.

Hande Ozkan explores how the ghostly emerges in reflexive pedagogies, examining the tensions between vulnerability, care, and authority in the classroom. Drawing on long-standing work on intersubjectivity and reflexivity, she explores how the personal and structural ghosts of slavery, coloniality, and neoliberalism disrupt and inform our practices as educators.

Kimberly Powell reflects on moments from her classroom where haunting reveals itself through method and method-making. She explores spatial, place-based research practices-such as mapping and walking-as ways students confront loss, memory, and migration. She also highlights arts-based approaches that foreground the sensory and vernacular, creating openings for new meanings and disrupting normative knowledge structures. Finally, she reconceptualizes curriculum as *curre*-a lived, temporal experience connecting personal and public histories across past, present, and future.

Brian Thomas brings a hauntological lens to teaching statistics in anthropology. Moving beyond computation, he focuses on the ethics and politics of data. This approach confronts the ghostly legacies of positivism and challenges how statistical practices may dehumanize or erase. By emphasizing data ethics and inclusive research, the classroom becomes a site to engage with what data shows-and what it fails or refuses to capture.

Harisur Rahman examines Generative AI (GenAI) as a spectral force transforming academic communication in Bangladeshi universities. Drawing on Actor-Network Theory and postcolonial

tech studies, he reveals how GenAI both enhances efficiency and erodes critical thought, intel

3352 How do we care for what remains? Tending the ghosts of transformation through mobility, aging, urbanization, and disaster

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR C1 (3rd fl)

Type: Roundtable/Town Hall

How do humans maintain and expand practices of care for what is-in bodies, homes, landscapes, communities-amidst radical transformation? Our roundtable addresses this question across contexts between Asia and North America where people are living within rapidly changing embodied, ambient, infrastructural, environmental, and social structures – lives and afterlives often interpreted through tropes of loss, grief, destruction, and being "left behind" or excluded from the spoils of progress. Yet those who remain, along with material and affective components of their lives, endure and adapt. This roundtable considers: how "aging in place" can be reconfigured through mobility and how impermanence surfaces as an embodied practice and a philosophical concept in Buddhist lifeworlds; how furnishings salvaged in the wake of war can be reconceived as sites of memory and rootedness; how people can develop new sensemaking practices following disaster to (re)shape relations with the material world; how refugees are encouraged to take on psychologized, biomedicalized stories in order to heal their "trauma" as defined by medical professionals; how empire's traces drift and linger through space, gesture, and everyday forms of care; and how houses rebuilt after an earthquake can anchor households while members are far away. Through these contexts, we explore human capacities to reimagine practices of care as lifeworlds merge with imagined futures that do not explicitly include space for human and non-human traces of a recently dislodged past. How does tending to these ghosts of transformation enable individuals and collectivities to challenge narratives of complete rupture by integrating parts of themselves across temporalities and scales?

Roundtable participants will reflect upon specific ethnographic contexts as grounding for a broader collaborative conversation. Sienna Craig will consider aging and migration between Mustang, Nepal and Himalayan New York City; Uyen Dang will contemplate vernacular memory in Da Lat, Vietnam; Maya Daurio will discuss human processes of recalibration with the environment in response to fire and flood in the Poudre Canyon, Colorado; Adrie Kusserow will investigate the socializing process of refugee resettlement in Burlington, Vermont; Aika Sato will probe how Japanese empire's traces

drift and linger in multi-imperial port cities of Shanghai and Singapore; and Sara Shneiderman will explore post-earthquake reconstruction in Dolakha, Nepal while offering discussant reflections. In each case, we push against an essentialist 'crisis' (or 'polycrisis') and 'resilience' framing, which can normalize neoliberal relations of power which enable states to frame adaptation as citizens' "personal responsibility." Our conversation cuts across anthropological subfields (aging, mobility, infrastructure, disaster, urbanization, affect) and scholarly generations to expand these debates through a focus on human creativity to tend what remains.

7072 Inscription, Sedimentation, and Counter-Memorialization: Contemporary Artistic Engagements with Endurance and Fracture

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** MGB Salon F/G

Type: Oral Presentation Session

This collection of critical experimental engagements with sonic, spatial, and atmospheric registers, foregrounds timely political/ontological questions about historical and temporal endurance and fracturing.

We pick up on a recent symposium at Yes We Cannibal in Baton Rouge which was part of the programming for a gallery show and performance by artist Jeremy Toussaint-Baptiste whose work engages with decommissioned police sound technologies and sculptural configurations to prompt questions about the efficacy and limits of contemporary and historic systems of value and speculation as they relate to bodies, objects, and sites.

Jeremy Toussaint-Baptiste's ongoing project *There, Eyes Were Watching...* investigates a Louisiana plantation-turned-bed-and-breakfast where his ancestors were enslaved. The current site is promoted as "heritage tourism," while the artist presents his plan for a "monument by subtraction" against the site's current status as a memorial that masks the plantation's afterlives beneath layers of aesthetic and economic rebranding.

Ryan C. Clarke's *Carbon Capture* draws from Caribbean and Black southern thought to theorize CO₂ as both ecological crisis and ontological residue - a "kindred vapor" through which genocide

and ecocide coalesce, tracing violence through levees, dredging, oil spills, and the aftershocks of racial capitalism.

Chris Taylor's sound-based and cartographic work across the Rio Grande and Salton Sea reimagines mapping as temporal portraiture, where sound and sediment archive not meaning but movement, memory, and decay.

Dr. Thomas Stanley presents Jeremy Toussaint-Baptiste 2025 performance at Baton Rouge's Brave Cave as the prototype for ritualized, collaborative art practices that confront and symbolically inter the lingering power of colonial empire. Drawing on the Garifuna *beluria* funerary rite and situated within a broader analysis of necropolitics, the project proposes that ritual-when fused with site-specific, globally coordinated artistic intervention-can function as a distributed form of resistance and real counter-power, to sever the hold of imperial structures on contemporary social life.

Discussant Mat Keel draws from his dissertation on dissociation and the post-plantation in the Gulf South. Engaging psychoanalytic thought and affect theory, he theorizes dissociation as an indexical but non-coherent mode of social inscription that is neither metaphoric nor necessarily related to memory.

These presentations have been curated in relation to Toussaint-Baptiste's work. Each offers a resonant engagement with the possibility of temporal intervention and doing history otherwise. All are positioned against dominant modes of memory that enclose, symbolize, or monumentalize history, and instead directly face the persistence of racialized and ecological violence by non-linear, indexical, and dissociated forms of relation by working with sound, gesture, vibration, criticality, and refusal.

Presentation(s): Art as Ritual, Ritual as Resistance: Burying Power with Art

A global assessment of necropolitics in the post-colonial contemporary reveals a tragic logjam of power frozen largely in familiar metropolises (recent structural developments like BRICS notwithstanding). Violence, brutally demonstrative where necessary, but more often muted and institutionally metered out in doses and on terms calculated to sidestep outrage, remains the means by which former colonial powers maintain and extend hegemony. This presentation explores the Brave Cave Intervention as a model for art as ritual and posits that ritual is – rather than merely an expressive or cathartic practice – a real form of practical (even military) power.

The *beluria* is a funerary rite of the Afro-Indigenous Garifuna people. Held on the ninth night following the death of a community member, and featuring extended feasting, storytelling, and

especially drumming and dancing, the ninth night ritual is a necessary part of severing the dead from the living and resuming the continuity of social life. Colonial Power, while an antagonist, is still a familiar with respect to those under its domination. This presentation builds on the Baton Rouge experience to diagram a massive, site-specific, collaborative artwork, incorporating performative acts of synchronic resistance in locations intended to (literally) circle the globe. These performative acts integrate multiple fronts of opposition into a ceremonial interment of Empire.

Presenter(s): Thomas Stanley

Terminal Sound Pictures and Maps That Tell Time

From frameworks and strategies developing through Land Arts of the American West at Texas Tech University, this presentation will dive into murky terminal waters of the Salton Sea to reveal sound pictures from a solar powered research platform, and then discuss the ambitions and operations involved in the deep multi-lingual / multi-cultural research necessary to collectively create a meander map of the Rio Bravo / Rio Grande from Ciudad Juarez / El Paso to the Gulf of Mexico that describes the undulating and shifting course and character of the river over time. Drawing a living portrait of a living river with maps that tell time.

Chris Taylor was born in West Germany, raised in waters of Southwest Florida, lives in arid American Southwest. An architect, educator, and director of Land Arts of the American West at Texas Tech University, Taylor is deeply committed to the intersection of human construction and the evolving nature of the planet. The Terminal Lake Exploration Platform, created with support from the Graham Foundation for Advanced Studies in the Fine Arts, continues to facilitate visual and performative research within under-examined basins and internal aquatic fringes. Taylor studied architecture at the University of Florida and the Graduate School of Design at Harvard.

Presenter(s): Chris Taylor

Where, Eyes Were Watching...

This presentation asserts my ongoing work as a "monument by subtraction" and centers on a property in Louisiana: a former plantation where my ancestors were enslaved, which now houses a bed-and-breakfast pitching an experience of the "bygone days" of the South with "modern amenities," addressing the distortion of history in service of white supremacy but also hospitality, tourism, preservation, etc. via "heritage marketing." While the most conspicuous monuments to colonial-era and Confederate figures have been removed, replaced, or, at least, challenged—along with the corresponding regime of memorialization—sites like the B&B are rarely considered as monuments, however innumerable (and transparent as legacy rebranding).

Monuments tend to glorify historical figures and episodes, objectifying the past for the sake of narratives meant to endure into the future. Counter-narratives often rely on the assertion of alternative figures while engaging in similar forms of memorialization and symbolism. I reject the packaging of history as the representation of an objectifiable static experience, much less the assertion of the legibility or power of such a representation in the future. Instead, this presentation

and work look towards an artist undertaking research into their own family history, which has been shaped by environments and forces enmeshed in the transatlantic slave trade, in an effort to offer a more complicated and capacious reading of history and its vestiges.

Presenter(s): Jeremy Toussaint-Baptiste

Carbon Capture

This multimedia presentation superimposes similarities between the disruptive potential of rising CO2 emissions and the ontological insistence of the black or non-western subject. Through this framework of socializing organic and non-organic subjugation of the extractive violences of capitalism, I offer a geological (terra, aqua, flora, and fauna) network of social death.

The fungibility of Black life is reflected in/to the land of the American South and witnessed here through levee bombings, canal dredging, oil spills, Louisiana Slavery laws, 20th century governmental neglect, sea level rise, "disenfranchisement, debt peonage, Jim Crow, and legally sanctioned official and private terrorism. (Woods, 1996)", and the evident continuity of western colonialism upon the land via petrochemical externalizations of harm to its surrounding communities. The coal mine is also the canary.

This epistemological shift to the earth and its what it can do for us begets an embodiment of something Tao Leigh Geoff considers a "Maroon Science." Through tracing the history and provenance of global Carbon Dioxide emissions through the caribbean decolonial studies canon like the Cesairés, Wynter, Glissant, Wilcott, Rodney, Fanon, Braitewaith and New Orleanian black thought from Tom Dent, Marcus Christian, and Kalamu ya Salaam, a kindred vapor to our cries of change becomes an echolocation of objection.

Presenter(s): Ryan Clarke

Dissociation and the Refusal of Metaphor: Experiments with Non-Representational Ethnography

In this paper, I present trauma and dissociation not only as the foci of ethnographic inquiry but also as ontological conditions, drawing on my doctoral fieldwork in the urban Gulf Coast and within geographies shaped by the afterlives of the plantation.

Informed by Pierre Janet's early theory of trauma as psychic disintegration, I frame dissociation not as the obliteration of interiority but as a condition of social life that is both ambient and patterned. In this framing, dissociation and other sequela of trauma become indexical and real, but resistant to legibility, signification, or symbolic integration.

I ask how trauma operates through atmosphere and fractured relation rather than memory or narrative and explore the possibility of attending to this dissociative socius composed of partial, floating, and transient assimilations.

I turn to Guattari's asignifying semiotics and Glissant's opacity, to develop a non-representational ethnography that resists relying on metaphor, confession, or coherence. Instead, I foreground illegibility itself as a mode of presence, and dissociation as a socially distributed condition of

prohibited relation in the wake of racial/capitalist world-making. This proposal is juxtaposed against contemporary discourses (academic, popular, institutional) in which trauma is rendered as always already assimilated and resolved into narrative.

5247 Is Sustainability Sustainable? Corporate Value(s) Now, Part 2

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR A1 & A2 (3rd fl)

Type: Oral Presentation Session

We live in a time of monsters. Fires, floods, and other disasters (natural and unnatural) abound. Fantasies of disembedded markets -- which anthropologists have long loved to hate -- sound quaint when life seems swamped, swarmed, and stuck in an increasingly disorderly socio-ecological world. At such a time, we ask: what can anthropologists learn from capitalist pursuits of sustainability?

Corporate sustainability may be an unlikely sphere to seek new insights, often critiqued as a "green" fig leaf covering up business-as-usual depredations, and now condemned from different angles as a "woke" assault on capitalism's values. The prevailing anthropological disposition has treated capitalist enterprise as unsustainable (in descriptive and normative terms) and capitalist "sustainability" as a ruse for profit. We might pause here and attend ethnographically to whether, or which, capitalist sustainability actors are keeping on in the first instance, let alone profitably. Advocates for sustainability now seem fewer and farther between in many markets, beset by rollbacks, cutbacks, and backlashes. Existing practitioners grapple not only with external arguments but also doubts and uncertainties within their projects and workplaces. Where are those holding onto corporate sustainability, amid a diversifying mob of ghosts, zombies, and other returns of sustainability's repressed?

This panel assembles papers that take capitalist sustainability projects, pursuits, and people seriously even at a moment of apparent defeat and disorder in much of the corporate world. Is there more than meets the headlines? We offer anthropological interventions in the political ecology of capitalism, engaged with practices and practitioners of corporate sustainability, SDGs, sustainable finance, etc., as geo-historically situated phenomena and as arenas for ongoing and uneven negotiations of capitalist value(s). What are the contradictions, contingencies, and unexpected convergences involved in making capitalist enterprises sustainable, or trying and failing to? What are the relations, practices, and epistemologies through which profit and other values are sustained, lost, or transformed? How does all this vary in space and time?

We will avoid the analytical traps of capitalocentrism while also holding at bay reflex temptations to imagine otherwise. Instead, scholars will present papers that stay ethnographically with corporate

forms, markets, supply chains, ecosystems, and their troubles.

Presentation(s): Pragmatic idealism, and the fight for climate change through corporate reporting

This paper offers an account of moral work in the everyday lives of professionals obtaining assurance and ensuring trust in sustainability-related corporate reporting. I draw from in-depth participant observation (2021-2025) in an audit firm in Denmark during the European Union's adoption of a new regulatory framework for sustainability information. I explain how this framework requires collaboration between sustainability professionals and financial auditors, which has led to different understandings of "materiality thresholds" and what they consider important. I focus on everyday moral dilemmas and how sustainability professionals' vacillation between experiences of hope and resentment led them to doubt the frames of which they were a part—i.e., those of a powerful audit firm—without leaving these frames. Their doubts, instead, settled as a newfound hope in what the future has in store: that with the implementation of EU sustainability regulations, companies would change their practices to become more sustainable. I suggest that this premise, that regulatory frameworks and audit standards would lead companies towards more sustainable behavior, creates a particular kind of morality that shaped the shared context navigated by the sustainability professionals, financial auditors, and companies. This new understanding of sustainability within finance, created through moral tensions, has shaped the business landscape of companies' work with sustainability and beyond.

Is the Elephant in the Room with Us Right Now? Political Anxieties in Sustainable Finance

The 2024 US presidential re-election marked the midpoint of my fieldwork on sustainable finance [hereafter SusFi] in the UK. Reaction at professional convenings and on LinkedIn varied: general dismay; resolute calls for redoubling efforts; pointed questioning of the sustainability "bubble" and its assumptions; rarer proposals to appeal to MAGA world; one interlocutor explained to me in Jungian terms that the President is SusFi's "shadow and projection." In this paper, I interpret that election less as rupture than re-instantiation of SusFi politics, detailing a psycho-affective discourse that was already a principal means for voicing both doubt and due diligence regarding the uncertain effectiveness and disputed ends of SusFi efforts. I treat sustainability professionals'

vernacular theories of mind as openings in/on a latent politics of Value(s), beyond obvious problematics of Government and Party. Unpacking the favored cliché of "the elephant [not] in the room," I elaborate often explicit invocations of "the elephant" – sustainability's manifold Others, not only the Big One across the pond – and emic suggestions for understanding or overcoming such entities. I then situate these anxious figures against often tacit theories of "the room," mapping the problem spaces in which SusFi materializes but also the constitutive outsides where professionalized sustainability efforts confront institutional inertia, increasingly vengeful opposition, and potential undoing.

Presenter(s): Matt Schneider

Greenwashing, A Requiem: Financial Narratives, Speculation, and Capitalist Realism in Trump's New World

The contradiction of value(s) in sustainable finance, the financial sector that aims to "do good while doing well," has been litigated in public fora from the Financial Times opinion pages to the HBO/BBC hit drama "Industry." The real-life industry's claim that environmental/social values can be made commensurate with financial "value" (singular) has been increasingly called into question by commentators, regulators, and finally investors. Environmental, social and governance (ESG) funds saw outflows in 2024 amid increased scrutiny and apparently declining faith even before the reelection of U.S. President Donald Trump. The term "greenwashing" once criticized the disjuncture between normative and speculative functions of ESG investing, implying that businesses profited by misrepresenting themselves as providing a positive environmental/social benefit. But with an authoritarian, protectionist, and climate change-denialist at the helm of the world's largest economy, how are financial institutions rethinking their value(s) where liberal consumers, global suppliers, and climate pragmatists still exert a considerable market force? What new forms of "narrative" washing are emerging, and what do they belie? This paper draws on early evidence from fieldwork with sustainable and conventional finance professionals in New York and London to speculate on the relationship between profit and politics in what institutional investors are calling "a new world."

Presenter(s): Asprey Liu

"Being Realistic": The Affective Ambivalence of Money in Corporate Sustainability

Companies' sustainable sourcing strategies aim to manage raw materials' socioenvironmental impact and secure procurement. Yet, critics consider that sustainable sourcing seeks to maintain corporate power over the supply chain. During my fieldwork (2022-2025) in the palm oil sector in Mexico, sustainability workers were also skeptical of corporate interest in sustainable sourcing. Common sense in the industry is that companies prioritize money over sustainability. Yet, workers considered that the way money circulates in the supply chain is a more "realistic" way to "do something." In this presentation, I analyze money as an ethnographic object that shapes sustainability workers' imaginaries about their jobs, and corporate sustainability (CS) more broadly. I focus on agricultural pilot projects and the experience of field technicians and managers working

amidst conflicting relationships between clients, buyers, and suppliers. How money affects trust, competition, and reciprocity in the "conventional" form of trading can contradict or reinforce CS as a realistic approach. By following money as affective and material semiotic device, I argue that workers' experiences of corporate profit-seeking as both a driver of and constraint on their work inform their perceptions of CS as the most "realistic" way to address socioecological problems. Attention to the ambivalence of money opens possibilities for rethinking alienation and the affective potential of critique.

3785 Locating "American" Waters: Forms, Forces, and Flows of Empire

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR C2 (3rd fl)

Type: Oral Presentation Session

In this panel, we take a critical "Americanist" approach to water (Cattellino 2010), asking what forms specifically "American" water takes. Here we're thinking about water as located both within the so-called United States, and as an object and conduit of U.S. empire. How is water formed by "American" cultural and political ideologies, legal frameworks, property relations, modes of governance, economic structures, urban-rural geographies, techno-managerial strategies, gender and racial categories? How does the U.S., as a settler society and imperial power, determine water's forms 'at home,' abroad, and at a planetary scale, and with what effects? Following Stewart (2014), we're thinking about water as a "registering form" - a material-symbolic composite charged with "meaning, energy, and potentiality" - through which to analyze the forces immanent to ordinary ways of living. We infuse this notion of "water as register" with Ballestero's (2019) insight that water is not a singular "thing" that can be easily differentiated from its material-semiotic context; instead, water is multiple, heterogenous, and always in motion, manifesting from the specific intersection of other elemental, epistemic, ontological and affective forces. If water (or waters, c.f. Walsh 2021) can be conceptualized as "movement among forces" (Ballestero), what does paying attention to "American" waters' courses and choreographies reveal about U.S. empire's forces and formations? How does following water's constructions and movements allow us to map the specificity of the present, as an intellectual and political practice oriented towards transformation? This panel combines political ecology with cultural poetics approaches to illuminate and analyze the historically-specific, material-semiotic forces. Our panelists draw on a wide variety of methods and modalities--dance, poetry, film, ethnography--to yank together encounters with particularly "American" forms of what we call, broadly, water(s).

Presentation(s): American Waters: The Tombs by the Collect

Collect Pond is an American horror story. Today the ghost of this water haunts Lower Manhattan's flood maps. The nomenclature of Collect Pond Park serves an environmental reminder at the concrete site – but most New Yorkers pass unaware of the 70-foot-deep waters it once held, of its sacred significance for the Lenape, or the long history of abolitionist organizing there. The earliest colonial treatment of Collect Pond was a boundary that marked the Black side of town and the limit for Indigenous free movement. My research analyzes the events surrounding the polluting of the pond under Dutch and British settlement, its draining and filling, and the displacement of racialized life from the area. I study two tomb sites at the Pond's edges: the city's African Burial Grounds (only rediscovered in 1991, during excavations for the planned construction of a prisoner tunnel to a federal courthouse) and the jail system nicknamed "The Tombs," from the Eighteenth Century to today, where prisoners are disproportionately racialized, Black and Brown people. Taking on Avery Gordon's formulation of ghosts as dense sites, this paper excavates the smothered socio-ecologies of Collect Pond to attend to the violences that continue to pulse at its center. Through a reading of entangled social and environmental site-histories over four centuries, I explore how historical land uses and inhumane treatments continue to haunt this site today, as activists push back against the MCC jail expansion.

Between Past and Future Waters: Restoring Relationships with Water in New York City

The waters that surround and flow through New York City often run against gray, impervious shorelines. Where it can sink and infiltrate, water breathes life into salt marshes, coastal dunes, parks and forests. Even so, these waters carry ghosts and monsters from the city's industrial and infrastructural history: toxic compounds from legacy industrial pollution, sewage overflows and fecal pathogens, plastic pollution, threats and realities of flooding. In response, numerous actors and collectives in the city mobilize to create a healthier relationship with troubled waters. This paper examines how some key actors – particularly nongovernmental and civil society groups – respond to this challenge. They do this by: (1) adopting strategic and adaptable roles in contested water governance processes, formal and informal; (2) developing their own interventions and multi-species collaborations to restore ecological functions; and (3) engaging actively and critically with practices of knowledge production that render legible certain qualities of water, contesting established metrological approaches and developing alternatives. Collectively, these repertoires of action and advocacy allow concerned groups to navigate longstanding and ongoing struggles over the city's waters, often in ways that reframe or resignify as much as they rematerialize lives and

relationships. In doing so, they articulate possibilities transforming the city's past and present waters for more hopeful futures.

Water Hazard: The Techno-Politics of Sewage Treatment in Rural Northern Arizona

Golf courses in the Southwest can use up to a million gallons of water each day, exemplifying the wasteful practices that push desert communities to the brink of climate catastrophe. But for the reservation border town of Page, AZ, golf course irrigation is a paradoxical means of municipal growth. Page's course adjoins its wastewater treatment plant; when the grass is watered with treated effluent, state law considers this water "non-consumptively used", and provides Page equivalent "return flow credits" against its total diversion. This loophole allows the City to pump those gallons again, effectively doubling its share of the Colorado River. Utility managers in Page doubt that reclaimed water ever truly rejoins the basin, but exploit frameworks of consumption and use nonetheless. Meanwhile, decades of upgrades to the treatment plant have been funded by taxes on non-residents, many of whom commute to Page from the nearby Navajo Nation. Page also charges tribal governments a fee to accept wastewater, which become return flow credits and thus expanded water rights. This paper argues that water recycling in the arid Southwest constitutes an emerging theater of resource governance and a contemporary modality of settler colonialism. Throughout, I attend to the production and flow of effluent as a hydrological imaginary, colonial geography, and municipal growth strategy in the rural Southwest.

Presenter(s): Hunter Kennedy

Seaweed at a Standstill

What currency does seaweed hold today? Why are reevaluations of this seemingly minor form of life organizing claims upon the future of the US "marine estate"? How does seaweed mediate water? This paper examines a resurgent American interest in seaweed as a means of accessing different waters—from industrial runoff in coastal estuaries to warming ocean currents in the North Atlantic and Pacific. I discuss a fascination with seaweed's potential to "transition" the global order away from modernity's destructiveness. This transition redescribes the problem of climate derangement, often viewed as an unintended consequence of industrialization, as an opportunity to develop new frontiers of industrialized "seagriculture." Drawing on fieldwork among US marine scientists, energy policy makers, and fishing communities, I consider seaweed as a shared medium through which to channel different political, scientific, financial, and affective energies. Here, "weediness" is less a nuisance than a virtue: the expression of a hitherto underappreciated "industriousness" to be harnessed in the name of storing carbon dioxide, revitalizing fishing communities, or defending national security. Crucial to such reevaluations, I argue, is productive ambivalence over the nature of seaweed and water themselves. Such ambivalence sustains potentially antagonistic concrete political and ethical projects through the abstraction of seaweed as general equivalent for remediating human-ocean relations at scale.

Presenter(s): Damien Bright

Overallocated: Colonial Pasts and Commodity Futures in the Upper Colorado Basin

Water allocation is the lynchpin of settler colonization. In the Grand Valley of Western Colorado, the violent removal of Ute peoples in the late 19th century occurred simultaneously with the construction of Colorado River diversion projects to fuel settler agricultural development. Today over 90% of diversions in Western Colorado support food and livestock crops as well as a sizeable wine industry. However, with heated Colorado River negotiations underway among the seven basin states, the terms and definitions of so-called "wet rights" and "paper rights" are at forefront of interstate and intertribal political debates. In an era of increasing water scarcity fueled by anthropogenic climate change, these imaginaries reflect vastly different realities. Meanwhile, since the early 2000s, private investment firms have been quietly purchasing farmlands in the Grand Valley for its potential in water markets and futures trading. In this paper, I explore to what extent moves towards water financialization converge with state water compact negotiations. I consider how contemporary water proceedings replicate settler imaginaries about land and property as an object to be tamed, controlled, and yes, allocated. Attending to settler characterizations of "wild" water, I argue, helps us to interrogate how such historical tropes emerge in debates today over water management and speculation.

Presenter(s): Teresa Montoya

Water (In)justice: Filter as Tool & Metaphor in Borikén

This presentation takes an experimental multimodal approach to the many scales in which water can meander between control and liberation. My ongoing practice consolidates local clay research and a lived experience of water (in)justice to develop recipes and equipment for locally producing a ceramic water filter; Tierrafiltro as a project emerges from chaos and vulnerability in the wake of hurricanes Irma and Maria in 2017.

Through the process of introducing open source filtration technology to the archipiélago of Borikén, questions regarding the provenance of drinking water and the authorities that manage them become even more relevant: from water filtration technology standardized by Potters for Peace to dams constructed by the US Army Corps of Engineers. Through photography and spoken word, this presentation engages these questions, thinking with the filter as both tool and metaphor.

7819 Mediations Between Water and Land: Encounter, Transformation, and Collaboration

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Studio 9

Type: Roundtable/Town Hall

What is a shore for you? Since Marshall Sahlins' provocative essays, the shore has stood in

anthropology as a symbolic site of first contact-of cultural encounter, misunderstanding, and transformation. It is the liminal space where colonizers and the colonized first meet. Meanwhile, with Malinowski's standards of the fieldwork, the shore has also come to signify both arrival and departure: the moment the anthropologist steps into the field, and when they leave to become a ghost until the moment of future return. Yet, from the moment of the singular encounter, the shore can also be seen as a shared and collaborative taskscape (Ingold), where anthropologists and communities work together.

In this roundtable, we keep the spatial and temporal framing of the shore open to initiate a discussion on conceptual, methodological, and ethical dimensions of the shore. We also understand that shorelines are never fixed materially and ideologically; they are always in flux, contentious, and reimagined. In taking seriously the materiality of the shoreline, we are met with the ambiguous space where land meets water, where tides ebb and flow, where different species meet, and where various forces continuously alter the shape of the shoreline. On the other hand, shorelines are made seemingly stable in and through relations that constitute spatial and temporal meaning-making. While some relations work to abstract and foreclose, others operate on the very ambiguity of the coastal space as an operation of exclusion, bringing even the taskspace into contention that the ethnographer must reckon with. Given the shoreline's tensions-its role in encounters, boundary-making, and competing temporalities-how might the ethnographer approach its ambiguous movements analytically, methodologically, and ethically?

Bringing together ethnographic experiences from different shores of the world ocean-from Fiji to Puerto Rico, from Svalbard to the rivers of India-participants of the roundtable reflect on the shoreline both metaphorically and materially. They discuss transgressions, transformations, and entanglements; and imagine the shoreline as a political space, a site of climate change and interspecies contact, a moment of encounter, a route for engaged anthropology, and more.

6332 Moral Economies in Practice: Leveraging an Old Theory to Address Contemporary Resource Challenges

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Galvez

Type: Roundtable/Town Hall

This round table interrogates how anthropologists can leverage moral economy theory to advance

resource security for households and communities. While moral economies scholarship has historically focused on theoretical explanation, we seek to advance conversations around the potential uses and broader impacts of moral economy research. A moral economy is a system of social norms in which cultural understandings of justice instigate normative practices that regulate the distribution and exchange of vital resources (Beresford et al. 2023). Historically, scholars used the concept of a moral economy to theorize the drivers of riots and rebellions, showing how communities leverage collective values to resist economic structures they perceive to be unjust (Scott 1977; Thompson 1971). Newer strains of moral economy research show that communities rely on moral economies to cope with environmental uncertainty (Bollig 1998; Schweiger et al. 2022; Trawick 2001; Wutich 2011), counteract economic and environmental injustice (Drew 2021; Fantini 2014; Orlove 1997; Simmons 2016; Tilt 2014), and enhance self-reliance in the face of weak or failed state resource governance (Zug and Graefe 2014). Together, this body of scholarship suggests that moral economies are a key form of social infrastructure that can advance resource security for households and communities. But how can we leverage this knowledge to practically address the resource challenges communities face today? We bring together anthropologists and environmental social scientists to discuss how our knowledge of moral economies can address real-world problems or inform actionable interventions, advocacy, policy innovations, or community-based solutions. We will also discuss what new directions must be taken in moral economy scholarship to better address contemporary resource challenges and needs.

2617 Phantoms of the Penetrative State: Violence, Resistance, and Survival

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Studio 4

Type: Oral Presentation Session

This panel brings together a diverse group of scholars researching in Columbia, El Salvador, Jordan, Italy, and the United States to engage with anthropological theories on the state and the affects and potentialities of state violence. Recent scholarship on the state in and around anthropology has analyzed state violence not through its individual manifestations but as an affective and structural haunting (Aijazi 2024) that particularly targets the (sex)ualities of state subjects (Mikdash 2022; Puri 2016). Despite its atmospheric-like qualities, however, violence is not necessarily nor inherently destructive, as it can produce new forms of subjectivity, sociality, and ways of belonging

(Zengin 2024). Nevertheless, this scholarship understands violence to be ever-present, "there is no escape, no outside or place to hide" (Stanley 2021, 16). Yet, much work has been done to destabilize the façade of the structural coherence of the state. Indeed, others have shown how the nation-state manufactures "the state-effect," or the illusion or fantasy of hegemony (Abrams 1988; Mitchell 2018; Navaro-Yashin 2002; Puri 2016) and that the state must continuously rely on reworking a manufactured fantasy of intentionality, systemization, expertise, and control as a way to maintain and further legitimize itself. As such, this panel asks, in what ways are recent anthropological theories on state violence haunted by the phantom state? In other words, how can we conceptually hold in tandem theories of the state that emphasize its phantastic coherency with the affective and structuring phantasmal "atmospheres" created by state violence? And what are the ambivalences and potentialities that arise when people both suffer [i] and benefit [i] from state-sanctioned violence? By centering the experiences of abortion-seekers, women and Indigenous environmental activists, gay Arab men, "gender critical" women's groups, and community-based birth workers, this panel further nuances the complex (and complicated) relationships often marginalized groups have with state violence (Reddy 2011) and, in doing so, not only contributes to contemporaneous debates on the state and state-sanctioned violence but also extends these insights to theories on human subjectivity, affect, semiotics, and morality.

Presentation(s): Embodied land rights: the limits and expansions of environmental activism under El Salvador's permanent state of exception

Since March 2022, Salvadoran President Nayib Bukele's administration has installed a permanent state of exception, detaining 85,000+ people and expanding "development" projects. This paper explores the state of exception's impact on women and Indigenous environmental activists' strategies to defend land, water, and bodies from state-supported extractivist operations. This paper draws from Indigenous women and ecofeminist scholars who reimagine the connection between land and bodies and draw distinct parallels between violence committed against women and the colonial, state, and capitalist violence perpetrated against land (Cabnal 2015; Tzul Tzul 2020; Schild 2019; Velásquez Nimatuj 2016). The Salvadoran state's role in development projects—extracting raw material, displacing people, contaminating water, and shielding companies from legal intervention—expands environmental violence, directly targets environmental defenders, and limits activist strategy. However, the state of exception also eliminated the constant, brutal gang violence that characterized the areas where these development projects are being implemented. Although facilitated by authoritarian militarization, the state of exception has provided an opening for activism, allowing organizations and media to enter communities where gangs previously restricted access. This paper examines the complexities hidden in an authoritarian state structure that has infamously increased the scope of state violence.

Presenter(s): Annalise Gardella

Doulas, Midwives, and Pacientes Perdidas: Resisting State Violence Through Homebirth Care

This paper examines institutionalized obstetric violence in Medellín, Colombia, as a manifestation of the penetrative state, exploring how it operates as a biopolitical technique to regulate the bodies and sexualities of pregnant and birthing people. Drawing on ethnographic research and interviews with families, doulas, midwives, and biomedical health providers, I analyze how this form of state-sanctioned medical violence has unintentionally fueled the resurgence of a homebirth model of care that resists institutional logics of medical authority and biomedical control. Situating obstetric violence within the broader context of Colombia's "post-conflict era," I argue that urban midwives and doulas—who operate outside the health system—challenge the "state-effect" by providing what they consider "humanized care" to patients who have intentionally gotten lost (*perderse*) in the cracks of Medellín's "dehumanized" health system. This study asks how doulas and midwives navigate the "atmospheric constant" of violence (Stanley 2021) while simultaneously challenging the state's biopolitical control over reproductive bodies. It focuses on the affective experiences of birth workers who move beyond fear, pain, and risk to offer homebirth care as an alternative model of healing and resistance. By examining how the homebirth model of care in Medellín, Colombia, haunts biomedicine, this paper contributes to an anthropological understanding of the strategies used to resist the penetrative

Presenter(s): Andres Restrepo Sanchez

Phallus Phantoms: How anti-trans actors invoke the penetrative state to justify transmisogyny

This paper considers how anti-trans groups exploit the idea of the penetrative state to position trans people (particularly trans women) as "deep state" avatars who carry out state violence against women, ignoring the fact that trans people are overwhelmingly the victims of such violence. Linguistic anthropologists have recently turned to the discursive alliances between "anti-gender" Christian far right and "gender critical" women's groups (Borba 2022; Kosse and Hall 2025; Tudisco 2023; Webster 2024). Semiotic analysis of the rhetoric common to both reveals how anti-trans actors leverage narratives about violence against women to construct "phallus phantoms," a controlling image (Hill Collins 1991) depicting transgender people as extensions of a patriarchal state. By subverting signs associated with the harms of the penetrative state, such narratives promote a social order that mystifies a binary model of sex essentialism, justifying everyday violence against gender nonconforming people to "protect" cisgender women from the phallic menace. This paranoid imagining of transgender predation encourages violently intrusive behaviors ranging from "tranvestigations" of cis female bodies to raids on women's bathrooms to remove butch lesbians. The paper argues that as a semiotic frame, phallus phantoms of the penetrative state represent a sinister refashioning of a putatively liberatory feminist politics to haunt the very same populations that anti-trans movements claim to "protect."

Queering Safety in a State of Penetration: Masculine (In)Visibility in Ghāy Amman

Centering the erratic targeting and harassing of the LGBTQ community in Jordan, this chapter demonstrates how gay Arab men (al-ghāyāt) in Amman employ a local politics of invisibility to maintain community in the face of state violence. Often glossed under the framework of "safety" (āmān) by my interlocutors, I argue that a desire for political and social invisibility incorporates broader social discourses, including respectability (ihtrām) and masculinity (rajūlī/a). Taken together, these discursive structures inform a constellation of acceptable behaviors that provide the ghāyāt with varying degrees of invisibility in everyday life as they blend in, go unseen, and remain de-politicized. To make this argument, I begin by outlining what I understand to be the ramifications of intermittent state violence by weaving together an analysis of Jordan's Penal Code and the New Cybercrimes Law, ethnographic accounts of state violence, and the literature on the sexual state (Mikdashi 2022; Puri 2016; Rubin 1984; Zengin 2024). I argue that although the Jordanian state creates an affect of fear through their reliance on intermittent violence, the ghāyāt persistently maintain community by appealing to and coopting a degree of normalcy. Through performing an approximation of quotidian masculinity, they maintain individual safety and the ability to form community. However, I also show how as embodied subjects, the ghāyāt are not always consistent in adhering to these invisibility politics.

Intimate Violence: Abortion, Affective Control, and Reproductive Resistance in Italy

Amid growing concern over Italy's declining birthrate, public policies have taken a markedly pronatalist turn. While motherhood is framed as civic duty, anti-abortion agendas advance under the guise of supporting life and families. These shifts unfold within broader dynamics of reproductive governance (Morgan & Roberts 2012), where state and non-state actors deploy phantasmagrasms of population (Murphy 2017) to reassert control over reproductive life in the name of national survival. Rather than viewing abortion governance solely as restriction, I highlight how its mechanisms operate affectively, shaping decisions through moral persuasion and the modulation of affect. I ask, What feelings are sanctioned or disqualified when violence is enacted through the language of care? Based on ethnographic fieldwork in a northern Italian region where local authorities promote pro-life policies offering economic support to deter abortion, this paper examines how abortion seekers navigate, embody, or resist the intimacy of governance. Interviews and participant observation reveal dissonant affects that defy hegemonic framings of abortion as trauma. By attending to these lived and affective experiences, I reflect on how emotional life becomes both a tool of governance and a terrain of resistance, unsettling the state's atmospheric grip over reproductive bodies.

2994 Presence: A/effectuating almost existing/ence (part one)

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Oral Presentation Session

This panel draws on the rich interpretative and political affordances of "presence" (Ferguson 2021) to negotiate and realize agents' participation in communities they cannot be members of. It sees presence – the condition of being here, among us – as obligating acknowledgement and, consequently, (potentially grudging and hostile) responses from members of these communities. However, presence is never self-evident; "being here" requires work, materially and semiotically rendered as such and, thus, constitutes loci of everyday politics. Presence is – like specters and shadows – ephemeral, inconclusive, liminal, and unsettling.

The first session of our two-part panel explores the contentious politics of constituting and reckoning with the presence of non-human elements of the environment and how it affords emergent political claims and strategies. Drawing on studies of mudflats as life-giving bodies in West Timor, Indonesia, waste-ridden backwaters of monsoonal Kochi, India, invisible microbes in the over-extracted Owens Lake, California, to deceased and divine entities inhabiting migrant-settler water frontiers in Pengerang, Malaysia, our panelists trace novel articulations and practices of more-than-human communion and solidarity. Together, we seek to expand the anthropological understanding of the uncanny process of "being together," the always coalescing and never-quite-realized grounds for experimenting with ethical futures (Keane 2025) amidst historical and colonial ruins.

Presentation(s): Life-giving bodies, livelihood routines, and presence in Kupang Bay

In 1989, customary lands of people in Kupang Bay, West Timor were folded into a corporate land concession that aimed to convert coastal mudflats, deemed by the Indonesian national government as wasteland, into industrial salt farms. These farms, however, never materialized, and in 2018 the mudflats were once again legally determined as wasteland, then returned to the coastal

residents who had stayed put despite the concession. Coast dwellers never agreed with the categorization of their kampung as wasteland, a juridical category inherited from the colonial Dutch. Rather for them, the mudflat is a life-giving body. Extending from this emic conception of the mudflat, this paper brings close attention to more-than-human political economic practices by exploring the mud body's life-giving capacities as well as how the body is itself an assemblage constituted by a profusion of actors. I follow foragers into the mud to show—against imaginations of place as fixed or existing a priori—that it is through routines, that is, repeated movement through space and through time, that a collection of sites held together by actors in motion come to form a shared place.

Saving the Backwaters: Narratives of responsibility and the opacity of infrastructure

Early in my ethnographic fieldwork in Kochi, a city on the southwest coast of India, I had a conversation with the director for the Center for Heritage, Environment, and Development. He lamented that "Kochi is a big house without a toilet." He was referring to the fact that despite Kochi's trajectory as a modern 'smart' city, there was no sewage infrastructure; much of the city's sewage flowed directly into the many canals, rivers, and lakes that Kochi sits within. These waters, collectively referred to as the backwaters, were once the lifelines of this city, enabling transportation of goods and the identity of the city as a quaint tropical paradise which draws thousands of domestic and international tourists every year. Today the backwaters have become the collective sink of the city, leading to many 'save the backwaters' initiatives aimed at protecting these waters from the city's errant wastes. But this narrative of the decline of the backwaters due to informal and illegal dumping obscures a much deeper and insidious reason for the ongoing deterioration of the backwaters, the constant dredging of the harbor to enable large container vessels to dock at the Cochin Port and the International Transshipment Container Terminal. Drawing connections between the amphibious infrastructures of this monsoonal city, this paper aims to build toward an anthropology of opacity where what is physically absent is politically present, and what is physically present is politically absent.

Salty People, Pasts, and Possibilities: Articulating kinship with and the politics of halophiles in Owens Valley

This paper traces the articulation of the presence of halophiles and other vulnerable elements of the ecology of Owens Valley. Their presence is critical to a broader articulation of care and 'kinship' with non-humans in the valley that forms the basis for a 'stake' in the valley's future. The possibilities of this future itself result from a longstanding political and legal campaign intended to return water to Owens Lake. The Lake was desiccated by the construction of the Los Angeles Aqueduct, the purchase of over 95% of the land in the valley by LA, and the subsequent extraction of water from the valley resulting in it becoming the largest source of particulate air pollution in the US at one time, and being designated a 'dust bowl.' Rewatering the valley was a public health,

human rights, and quality of life campaign at its inception. The campaign is now expanding to protect other vulnerable elements of the Owens Valley ecosystem, including halophiles (micro-organisms that thrive in brine and form the lowest trophic level of an ecosystem that supports migratory avian populations). The ethnographic research presented in this paper traces the renderings of the presence of these non-human elements of the ecosystem and their 'right' to be spoken and cared for. The necessary condition of this care, paradoxically, is LA's absentee landlordship – it prevents 'development' (assumed to entail ecological harm) in the valley; a controversial position in the valley.

Futuring in the Ruins of Development: Or How to Care for Wild Ghosts and Displaced Gods

This paper examines how the supernatural became political in the old migrant-settler water frontiers of Pengerang, Malaysia. Once a rural area dotted with small fishing villages scattered along the coast, Pengerang is now internationally known for hosting Malaysia's largest and most ambitious national downstream oil development project. However, this green-field project displaced more than 3,000 residents during its construction in the 2010s. Drawing on ethnographic fieldwork since 2014, this paper traces place-based spiritual and religious innovations that emerged from diaspora-turned-minority Chinese Malaysians' encounters with state-led relocation and resettlement programs. It shows how caring for and politically representing wandering souls and wild ghosts disturbed by the development afforded the unexpected ascendance of non-elite village leadership during the anti-development movement. It also shows how incorporating material remains of an abandoned 19th-century temple, rediscovered through compensatory agricultural land grants related to the development, allowed the dispossessed multi-generational Chinese Malaysian communities to rearticulate and reassert their long-standing presence in the landscape as undeniable. This paper argues that these spiritual and religious practices are creative and dynamic futuring technologies through which minority groups' belonging is negotiated and socio-moral obligation is experimented with in an increasingly communalized Malaysia.

Type: Conversation/Debate

Standing deep in the midst of large scale knowledge production systems and sites affords a close look at their operating structures and cultures. But being inside also means contributing to these knowledge production processes in ways that pose conceptual, methodological, and ethical challenges for the ethnographer. This conversation seeks to make visible some of the difficult

questions and tradeoffs of working in big science. Mirmalek has decades of experience working in aerospace, planetary and lunar science exploration with robots. Nyssa has decades of experience working in environmental big data projects including climate and environmental modeling and monitoring.

This conversation will cover a number of questions such as: i) what does it mean to gain entry to large-scale infrastructures and to establish trust; ii) how may we understand ethnographic agency as participant observers in these systems; iii) what does it mean to contribute to the development of spaces for ethnographers and ethnographic knowledge in socio-technical systems; iv) why it matters to define reciprocity, exchange, or collaboration; v) when it is time to leave a system, what traces—ghostly or otherwise—are left behind when one does.

Despite conducting applied research in different types of knowledge production projects, with different aims, work practices, organizational structures, and funders, we each found ourselves going through the same archive of materials related to early American space exploration. This conversation will be illustrated with archival material related to the first human mission to the Moon. Primary source material from the Armstrong archives illustrate some of the tensions of ethnographically working within work cultures in complex systems.

6950 Questioning Everyday Consumerism of Popular Series and Their Reflections on Socio-Cultural Values in Turkey

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR A3 (3rd fl)

Type: Roundtable/Town Hall

The relationship between the worldly and nationally represented Turkish television series and the public culture in Turkey has been a long-standing subject of debate. While there are the arguments that Turkey is predominantly a Muslim society, much of the content produced in television series and digital platform shows is often perceived as being inconsistent with the assumed religious and cultural values of the society. Nevertheless, these series frequently break rating records and run for multiple seasons not only in Turkey but also in different countries. This raises the controversial question, if these media productions do not align with their assumed cultural and religious values, why do people continue to consume and reproduce content that is not compatible with their own cultural and religious values? And how do these media contents affect their daily lives?

This paper seeks to present and discuss the findings of a research that examines with a focus on violence against women in the seven of the most popular Turkish television series from the 2023–2024 season and seven digital platform series using critical discourse analysis. Additionally, the study incorporates data from focus group meetings with the audience of these series. Our findings reveal that the majority of the series features content characterized by especially deep and implicit psychological violence (particularly against women), dysfunctional relationships, mafia involvement, torture, repetitive swearing dialogues and obscure physical violence embedded in different performance all of which are perceived as being inconsistent with the general values, attitudes and practices of "Turkish" society. The most remarkable finding of the focus groups has been the ignorance and unawareness about the existence of deep and constant psychological and emotional violence against women in those series. In this sense, do individuals freely consent to "the art of governing" by the state and global capitalist powers? Foucault's concept of governmentality offers us to explain this process by which individuals are both self-disciplined and directed to certain norms of behavior through the state and other institutions, including media (Foucault, 1991). This situation therefore creates a space of conflict over how to discipline individuals' self-monitoring behaviors.

In conclusion, by exploring the complex interplay between ethical/religious values and the consumption of "problematic" media content, this study contributes to a deeper understanding of how media functions within a globalized consumer society, particularly in a culturally and religiously conservative context like Turkey especially through the understanding of violence against women.

3479 Recurating Historical Presence: Tinkering with Time, Tradition, and Trauma

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR D1 (3rd fl)

Type: Oral Presentation Session

This panel explores how minoritarian communities forge material relationships with history, memory, and place through embodied practices. Bringing together ethnographic research from four sites—a Kurdish refugee garden in Nashville, contemporary Egyptian artists' studios, a gunsmithing apprenticeship program in the American South, and a Chinese patrol team in Flushing, Queens—we examine how communities navigate and reurate relationships to traumatic histories. Each site focuses on a different set of embodied techniques and material practices that serve as a mode of reckoning with the past while simultaneously carving possibilities for the future in the present.

A Kurdish garden transforms the condition of 'dar-ba-dari' (wandering from threshold to threshold) through cultivating plants, chickens, and bees, transforming rupture into new relationships with land and time. These spaces become healing sites where displacement's ghosts continue to haunt and nurture new forms of belonging. In Egypt, contemporary artists rework 'antiquity' not as static but as an intimate presence in everyday life. By recombining materials and iconography from different historical periods, these artists challenge institutional monopolies over history, fragmenting 'pristine' artifacts and reattuning us to the ghosts of colonial empires. The sites show how communities carve spaces for collective healing and belonging.

In the dusty interiors of an American gunsmithing workshop, apprentices transform military weapons with violent histories into custom hunting rifles, highlighting how artisans reconfigure politico-historical narratives in the spaces between preservation and ruination. In Flushing, a Chinese patrol team mobilizes walking as a political act that disrupts and reproduces the US's racial-capitalist structures. In walking, participants negotiate various historical narratives and create knowledge that resists and challenges simplified understandings of immigration, governance, and community-making in New York. These two sites expose ambivalent tensions, contradictions, and connections to violence that complicate our understanding of craft and embodied knowledge as sites of resistance.

Across these sites, the panelists interrogate how preservation is not static but fluid, involving repetitive cycles of growth and decay. These communities tinker with inherited practices as modes of intimate engagement. The papers collectively contribute to anthropological debates on materiality, temporality, and memory by highlighting how marginalized communities toy with different techniques for survival and unsettling rationalist understandings of history. Drawing on Walter Benjamin and Tim Ingold, we suggest that material practices are active narrations of pasts that carve alternative futures beyond and within displacement and loss. The panel's central question explores how narrations of historical experiences re-emerge through embodied practices.

Presentation(s): Walking on the margin: the redoing of conservativism through Chinese immigrants' patrol in Flushing, Queens

Walking on the busiest streets in Flushing, a Chinese patrol team advertises itself as "the police's eyes and ears" since 2021. This paper ethnographically examines how the mundane, embodied act of walking destabilizes the assumed political connotation of patrolling, and reconfigures the historical relations between immigration and nation-building. It situates the act of patrolling as one of the patrol team's strategies of making itself legible as a "mainstream NGO" that caters to the changing state and federal funding interest. During this process, the grassroots organization

depoliticizes its message, decenters patrol, incorporates it into a range of "community service programs" instead. The moralized daily practice of patrolling faces risks of losing its historically political context - whether it be the traditions of American grassroot vigilantism, or the immigrant community's resort into conservative self-defense. This process of self-preservation reproduces the racial-capitalistic desires of the American empire; but it also exposes the ruptures within the hegemonic meaning-making technologies in urban governance. It reckons with the ambiguities of what actually gives meaning to a political act: economic venues through which liberal governance transforms racial trauma into revenue-driven, apolitical ecosystem of non-profits, or the moralization of walking as a labor that unites the diasporic experiences across histories?

Presenter(s): Yuyi Chen

Rifling Through the Dustbin of History: Gunsmiths as Curators of American Militarism

Sites of gun manufacture sit uneasily within anthropological approaches to artisanal labor. Far from presenting a site of resistance, the professional gunsmith is indisputably engaged in the reproduction of masculinity, whiteness, and empire. And yet, the gunsmith's trade—creating replicas, restoring heirlooms, and re-fashioning military surplus—places their artisanship into discordant dialogue with the military-industrial origins of firearms technology. Drawing on long-term fieldwork in an American gunsmithing apprenticeship program, I argue that gunsmiths both reproduce and confound hegemonic historical narratives.

Representative of the duality, the capstone project of the program involves the production of a custom hunting rifle, using parts stripped from an aged Mauser 98, a standard-issue 20th century German infantry rifle. That these rifles are emblems of the most iconic catastrophes of modernity—the bloodshed of two consecutive World Wars—only deepens the meanings that they crystalize as embodied touchstones in the dustbin of history. As bench-mates within the uniquely intergenerational workshop share historical fragments and minutia in the midst of manual work, unexpected dialectical images emerge: stories that subtly mark an awareness of a conspiracy of transnational global capital in the arms trade, the ruined myth of American technological superiority, and genocidal horrors of Western expansion.

Presenter(s): Jonas Johnson

The Garden of Azadî (Freedom): Kurdish Refugee Perceptions of Earth in Nashville

How do those uprooted from their homelands attune themselves to the earth through gardening? Drawing on fourteen months of ethnographic research among Kurdish refugees in Nashville, this paper examines how displaced lives reconfigure relationships to land and temporality through a genocide survivor family's garden. As their lives unfold in motion, gardening and becoming, I conceptualize the Kurdish adjective *dar-ba-dar*, which resonates with the historical vulnerability of Kurdish life—marked by movement and wandering from one threshold to another. Simultaneously, this aims to offer a critical lens on anthropological refugee studies in the U.S. and serves as an urgent call against current anti-Muslim and anti-refugee politics. Working in Ahmed's garden, who calls it *jennet* (جنة) or paradise, I show how present and past unfold in various activities from

planting to growing chickens to beekeeping and keeping colorful birds that embody both freedom and their imagination of earth as a platform for peace and healing. I argue that the Kurdish experience of dar-ba-dari unsettles dominant narratives by framing migration not as rupture or loss, but as a persistent condition of modern life. When such experiences are lived as both psychological and embodied states, we must ask: how does the ghost of displacement continue to haunt the garden—spaces imagined as stable, rooted, or whole?

Presenter(s): Sina Mirzaei

The Weight of Millenia: Reimagining Histories through Artistic Practice in Egypt

In Egypt, images and objects from antiquity are not only central to national narratives but encountered in everyday life, woven into collective memory. What does it mean to live with history—not as a burden, but as an intimate presence? This paper explores this question ethnographically by following contemporary Egyptian artists who reshape and recontextualize the historical record. For them, history is an open book with frayed edges. Engaging the past isn't about preservation but making its haunting presence felt. By recombining materials and iconography from different eras, they show how fragments of history live alongside the present. Through fieldwork and studio visits, I examine how these artists challenge institutional monopolies of history—museums and state archives—by reimagining memory and care. Their use of worn textiles and repurposed materials draws attention to what objects recall, resist, and the weight they carry. Their work embraces history's contradictions and messiness—a collage of unfinished stories. Techniques like glitching and fragmenting 'pristine' artifacts reattune audiences to ghosts of empire and displacement. Preservation, detached from context, severs history's ties to the present. Building on these practices, I argue that history, rather than something to be resolved, is a question to pose—again and again—in liminal spaces between preservation and ruination, growth and decay. If history is unfinished, what futures might emerge from its ruins?

3822 Rhetorical Demons and Community Spirits

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** MGB - Salon C

Type: Oral Presentation Session

How does political rhetoric in diverse mediums and forms enact violence? We engage ethnographic explorations in the United States to understand how and why political rhetoric engages power flows and structures for un/intended consequences on a range of vulnerable communities in Texas, including cancer patients; first generation Latine college students; parents of trans children; intersectional families or families with neurodivergent children in alternative educational settings; US-Mexico borderlanders; and future healthcare professionals in undergraduate second language classrooms.

Our collaboration is predicated on shared commitments as anthropologists to surface everyday violence in the United States stoked by dominant narratives, pretheoretical assumptions, and common political rhetorical strategies that become enshrined in public discourse, legislative action, and policy-making intended to limit bodily, parental, educational, and academic freedoms.

Where possible, we also highlight creative interventions by these communities to reappropriate, redirect, or outright challenge such rhetorical violence during a time with increasingly dangerous repercussions for dissent. We attend to the paradoxical effect of rhetorical violence as a powerful organizing force for countermovements and actions, such as everyday acts of care, fugitive pedagogies and practices, social movement knowledge and language, and creative reappropriation of rhetoric.

Presentation(s): We Will Not Be Haunted: Mutual Care and Future-Making in the Fugitive Commons, Part I

Our work investigates how marginalized communities create and sustain fugitive commons—contextual, relational spaces that emerge in marginalized communities in response to capitalist enclosure and privatization that is mediated and exacerbated by mutually reinforcing systems of oppression. These spaces are enacted through networks of care that refuse the normative structures imposed by state-sanctioned systems of education, medicine, and social reproduction. Drawing from our respective field sites—an educational cooperative centering marginalized identities and a support group for transgender children and their caregivers—we explore how these community spaces challenge inherited systems of oppression (i.e., Ghosts) and attempt to remake relational life around practices of mutual care. We examine how rhetorical violence—particularly racist and transphobic narratives and policy discourse—reinscribes racialized and gendered ideas of childhood that haunt the everyday lives of marginalized families. We explore how our research sites, these fugitive commons, are shaped by and actively resist those hauntings. We pursue three shared lines of inquiry: 1) how refusal and fugitivity are enacted within these community networks, 2) how affective care labor circulates within and sustains them, and 3) what futures become imaginable through participation in them. This work contributes to conversations of the commons, the affective labor of care, and alternative childhoods beyond the state.

Presenter(s): Amanda Camarillo

We Will Not Be Haunted: Mutual Care and Future-Making in the Fugitive Commons, Part II

Our work investigates how marginalized communities create and sustain fugitive commons—contextual, relational spaces that emerge in marginalized communities in response to capitalist enclosure and privatization that is mediated and exacerbated by mutually reinforcing systems of

oppression. These spaces are enacted through networks of care that refuse the normative structures imposed by state-sanctioned systems of education, medicine, and social reproduction. Drawing from our respective field sites—an educational cooperative centering marginalized identities and a support group for transgender children and their caregivers—we explore how these community spaces challenge inherited systems of oppression (i.e., Ghosts) and attempt to remake relational life around practices of mutual care. We examine how rhetorical violence—particularly racist and transphobic narratives and policy discourse—reinscribes racialized and gendered ideas of childhood that haunt the everyday lives of marginalized families. We explore how our research sites, these fugitive commons, are shaped by and actively resist those hauntings. We pursue three shared lines of inquiry: 1) how refusal and fugitivity are enacted within these community networks, 2) how affective care labor circulates within and sustains them, and 3) what futures become imaginable through participation in them. This work contributes to conversations of the commons, the affective labor of care, and alternative childhoods beyond the state.

Fugitive Care: Political Disarray and Adaptations in Texas Higher Education

When higher education institutions are targets of state discipline on ideological grounds, can acts of care become fugitive practice? I examine two years of ethnographic study at a South Texas university, exploring how diversity, equity, and inclusion (DEI) as concepts and praxis persist in an environment increasingly hostile to such work. The southernmost region of the United States is a leading zone for the increasingly aggressive dismantling of legislative, civic, and educational infrastructures and activities that traditionally challenge, criticize, and circumvent structures of colonial and neoliberal governance. Through participant observation, policy frame analysis, and pláticas (conversations), I consider how care practices for students, colleagues, and specific marginalized populations—such as Latine first-generation college students—adapt and evolve under institutional constraints. To do so, I bridge anthropological analyses of political economy and DEI in higher education, cultural values as political tools and products, theories of institutional and fragmented care, and Jarvis Given's concept of fugitive pedagogy.

Presenter(s): Daisy Paredes

Far-Right Political Rhetoric and its Impacts on Vulnerable Communities in Texas

Political rhetoric, particularly under the Trump and Abbott administrations, enacts violence against and perpetuates inequities for vulnerable communities in Texas. Through media analysis and ethnographic accounts, we examine the impacts of the demonization of Latines, the declaration of English as the official language, and attacks on free speech and universities. These policies have profound implications for access to medical care for Spanish-speakers and undocumented residents and the future of Hispanic Serving Institutions.

I will speak to how current far-right rhetoric reinforces power structures that further marginalize patients with non-English language preferences, college students at HSIs, and the current and future medical professionals charged with caring for these and other vulnerable communities. By

analyzing legislative actions, policy-making, and political discourse, I will shed light on the everyday violence stoked by false narratives and pretheoretical assumptions.

I foreground creative interventions by these communities to reappropriate, redirect, or challenge rhetorical violence. These include everyday acts of care, fugitive pedagogies, social movement knowledge, and creative reappropriation of rhetoric. This crucial research champions the countermovements and actions of racialized and marginalized communities, demonstrating their resilience and agency in the face of increasingly dangerous repercussions for dissent.

Presenter(s): Michael Menzies

Rhetorical Placemaking in Trump Times: The U.S.-Mexico Borderlands

National narratives about the U.S.-Mexico border during Donald Trump's first term and runup to second term rhetorically leverage U.S.-Mexico borderlands for voter appeal and presidential action. We use thematic analysis of political and media narratives about U.S.-Mexico borderlands to examine how rhetoric enacted symbolic, infrastructural, and personal violence in the borderlands and, by rhetorical extension, immigrant communities. Rhetorical strategies included: emotional appeals through victim narratives; fear mongering through imagery and militarized language; and linguistic positioning of a borderlands in profound crisis and as an existential threat to an American imaginary. The common rhetorical cycle was emotional manipulation, dehumanization, reordering of geopolitical logics, and a great savior solution. Trump's rhetorical strategies, often reproduced in a wide range of news media, produce paradoxes and impossibilities: 1) placemaking of a geopolitical space as geographically distant and an immediate threat to all U.S. communities; 2) immigrants as "the border;" and 3) American citizens and legal permanent residents denied American civil liberties and legal protections. Borderlands become a place only acted upon. Effectively silenced are humanitarian and economic strength narratives. We conclude with emerging data about rhetorical strategies deployed by borderland leaders in south Texas to reintroduce agency, complexity, and breadth to national border narratives.

7879 Sonic Specters: Cross-Cultural Hauntings, Collective Grief, and Musicking Trauma

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Studio 10

Type: Oral Presentation Session

HBCU students singing spirituals over the graves of the enslaved, a Spanish superstar performing Mexican grief born of colonial violence, the Tét Offensive staged in a campy theater production in California, child sexual abuse mediated through Vaporwave music, and undocumented Mexican

migrants dedicating corridos to a ghost who helps smuggle them across the border. While trauma studies in music typically centers psychoanalytic frameworks or offers theoretical perspectives on close musical readings, this panel proposes a focus on hauntings within music, the resurfacing of pastness and lost futures (Derrida 1993). Trauma, when viewed through hauntings, reveals how musical ghosts "reach and affect living human subjects who are moved to acknowledge, mourn, regret, and possibly take action" (Lincoln; Lincoln 2015). Our papers ask how specific cultures re-perform/reinscribe historical ghosts through musical practices that mediate traumatic memory.

Through ethnography, "Oh Freedom" observes how musical performances of spirituals by HBCU students at a plantation act as a means for contending with the ghosts of slavery, and as a catalyst for reimagining Black identity. "Rocío Dúrcal: la Llorona española" examines how Spanish pop star Dúrcal voices the ghosts within traumatic memories of mestizo and migrant pasts, mediated through the lens of practice-based research and Mexican colonial history. "South Vietnamese Specters" auto/ethnographically draws upon the intergenerational musicking of Little Saigon, identifying singer Khánh Ly as a medium who musically escorts ghosts across the Pacific by centering the material consequences of the Vietnam War. "A Hauntology of Childhood Sexual Abuse Aesthetics" explores how trauma aesthetics from the 1980s–90s, centered on child sexual abuse, continue to haunt the music of contemporary online subcultures. Lastly, "Songs for the Ghost of Toribio" explores corridos (ballads) dedicated to the ghost of a 1920s Mexican priest who undocumented migrants testify smuggles them across the border. This paper analyzes how the corridos, haunted by transgenerational trauma and cultural memory, transcend borders and time as songs of contemporary migrant resistance.

These collective performances of trauma reveal that marginalized communities must often process their pain through ambivalent-at times, abject-performances of specters and grief. Our positionality as researcher-practitioners and the cultural intimacy we share with interlocutors force us to reconsider the call for a discourse of healing, instead embracing an approach that refuses closure. Hauntings shift trauma analysis into lived collectives who re-perform trauma to sustain counter-memory and resist institutional history. Ultimately, we propose that musicking trauma exceeds the bounds of reparative music studies (Cusick 2023), resurrecting the very ghosts we seek to overcome.

Presentation(s): "Oh Freedom": Rememory and the Afterlives of Slavery through Collective Singing at Mt. Vernon

On October 7, 2023, choir students from Virginia State University (VSU), a Historically Black College and University, performed at the Slave Memorial Commemoration at George Washington's plantation. In a space marked by racial violence, their re-enactments of music created by enslaved people summoned what students described as ghosts. The ceremony opened with descendants offering oral histories, interwoven with the choir's performance of spirituals. As the students processed to the burial ground singing "Oh Freedom," some were overwhelmed, while others embodied the specters—pantomiming enslavement or re-enacting the extraction of teeth to be used in Washington's dentures. This paper centers the experience of VSU choir students to consider musical practice as a conduit for haunting and a way of engaging slavery's cultural memory. Through student testimonials and fieldwork, ghosts emerge as lived, sensory experiences. In addition, singing spirituals deepened students' ties to ancestors and revealed the continuities of racial violence. Their performances unsettled white audiences and provoked strong emotional responses both from students and the attendees. These hauntings echo Black feminist theories (Hartman 1997; Saleh-Hanna 2015; Morrison 2019), which frame ghosts as calls to confront structural racism. They also align with Stoller's (1995) work on spiritual possession, showing how reenactments of historical traumas renegotiate power and articulate collective Black identity.

Rocío Dúrcal: la Llorona española

Invariably on holiday visits to see my father, I hear the chug-chug-chug of acoustic guitars from his computer speakers. These guitars form the backbone of his favorite ranchera-pop disc *Canta a Juan Gabriel Volumen 6* (1984) by Spanish diva Rocío Dúrcal, with songs written by Mexican singer-songwriter Juan Gabriel. My father's favorite is "Amor Eterno," a heart-wrenching lament Gabriel wrote at only 16. Initially thought to chronicle the loss of a beloved, its true inspiration—Gabriel's mother—was revealed during a 1990 live performance when he ad-libbed the word *mamá*. Since then, "Amor Eterno" has become an archetypal funeral lament within Mexican diasporic culture.

Recently, my father insisted I learn the song, a weighty request given his own mother's early death. Like Gabriel, he was born to a rancher family in west-central México, and his mother too migrated to the borderlands. Yet, he never knew the song's original meaning. For him, "Amor Eterno" was not about mourning, but an unconscious act of remembrance. This paper explores how, through Dúrcal's voice, "Amor Eterno" became a universal song of grief. Using my father's ears, I argue Dúrcal, under Gabriel's tutelage, voices the ghosts of wounded mestizo and migrant lives (Alemán 2013; Lozano 2024), embodying la Llorona as a professional mourner (Anzaldúa 1987) who navigates the specters of Mexican colonial history.

South Vietnamese Specters & More "Significant Ghosts":

The Voice of Khánh Ly Between Saigons

In 2008, *Paris by Night*, a Vietnamese variety show based in Orange County, California, released their 91st episode. Titled "Huế, Sài Gòn, Hà Nội," the program features a reenactment of the Hue Massacre. Quang Lê's warm rendition of "Những Con Đường Trắng" ("The White Roads") is followed by Khánh Ly's sobering performance of "Bài Ca Dành Cho Những Xác Người" ("Song for the Corpses"), where she enters the stage as the only person dressed in black among corpses in white. Khánh Ly is known for her raspy alto voice, described as "seductive" and "smoky" by listeners in conversations that are often accompanied by memories of a lost past, loved one, or homeland. Her discography is characterized by complicated nostalgias, transnational movement, and hauntings of home. Khánh Ly's career is steeped in controversy, as she was reprimanded by the Vietnamese government in 2022 for performing a song that criticized historical cycles of slavery, colonialism, and violence. Drawing upon studies of voice, trauma, hauntology (Derrida 1993; Cho 2008; Lincoln and Lincoln 2015), and memory, this paper explores the afterlife of Khánh Ly's music by focusing on its transnational presence in the ghostly space between Saigon, Vietnam and Little Saigon, California. I argue that Khánh Ly, through community-based performances, serves as a medium between the ghosts of the Vietnam War and the diasporic communities that are haunted by them.

Minotaurs in the McMartin Tunnels:

A Hauntology of Childhood Sexual Abuse Aesthetics on 1980s TV and the 2000s Internet

The end of the 20th century in the U.S. was marked by a series of moral panics around child sexual abuse (CSA). These panics are traceable in the TV shows, movies, and pop songs of the time, whose aesthetics often present CSA as rooted in demonological forces rather than a human technique of subjugation and control. Satanism, ritual abuse, and violations of white patriarchal norms are frequently invoked as the reasons why adults molest children. These labyrinthine narratives reroute the responsibility for sexual violation from human perpetrators to an unknowable evil, in the form of a literal demon or dangerous other. I trace how these 1980s-90s "trauma aesthetics" now comprise "a hauntology of childhood sexual abuse," one that is sensible through contemporary internet cultures such as Vaporwave music, Liminal Spaces, and the Backrooms. I read these cultures through the heuristic of the McMartin tunnels, a physical location beneath the McMartin Preschool where, in 1983, the owners were alleged to have raped hundreds of children in the name of Satan. The labyrinthine walls of these "secret tunnels" provide a metaphor for the specter of CSA as taking place within evil lairs containing demons, rather than in quotidian spaces with trusted guardians. I evoke the Minotaur in the labyrinth to decipher the connections between the demonological aesthetics of CSA in the 1980s-90s and the uncanny ways in which online artists have digested this culture, and remain haunted by it.

Presenter(s): Jenny Olivia Johnson

Songs for the Ghost of Toribio, Santo Coyote: Corridos as Haunted Archives of Survival and Specters of Trauma of the Undocumented Migrant Experience

Based on musical testimonies on social media, undocumented migrants are sharing a collective ghost story of an apparition who helps migrants cross the U.S.-Mexico border. Since 2007, these corridos (ballads), which I define as ghost smuggling ballads, narrate near-death experiences and encounters with the ghost of Saint Toribio Romo, adopted by migrants as the Santo Coyote (Holy Smuggler) and Patron of Immigrants. Toribio was a priest killed in Jalisco during La Cristiada, the 1926–1929-armed religious revolt of Cristeros against the Mexican government. The Catholic Church canonized Toribio in 2000 but has never recognized him as the patron saint of immigrants. Those unable to risk the pilgrimage back to his shrine utilize corridos as musical votives that they upload and share on YouTube, defying geopolitical borders. Inspired by Derrida's conceptualization of "hauntology" (1993) and contributing to theoretical discourse on immigration politics within migrant religious expression (Calvo-Quirós 2023) and transgenerational trauma encoded in music (Cizmic 2012), I analyze how these corridos transcend multiple borders and hauntings beyond Saint Toribio's ghostly intercessions. I also explore how these corridos—a tradition emblematic of the Mexican Revolution—embody cultural memory of trauma and injustices that extends to the current struggles of undocumented migrants, particularly amidst the current U.S. presidential administration's efforts to execute mass deportations.

3005 Specters of Consciousness: Bardos and Liminality in Buddhist Perspectives on the Between

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Studio 6

Type: Oral Presentation Session

From the so-called Tibetan Book of the Dead to the institution of reincarnated spiritual leaders, among the most historically and culturally significant ways in which Indo-Tibetan Buddhism has captured the "Western" imagination is in the matter of death, the afterlife, and what lies in between. This ranges from the fascination with peri- and post-mortem states such as tukdam or the bardo (which consciousness is said to persist and be in peril of becoming a ghost) to the cultural histories that both haunt and give meaning to contemporary

conflicts and achievements. These are further troubled by the tension between experience and certainty, of where to locate the subject or subjectivity, the uncanniness of the felt presence in this intermediate zone between past and future, populated by material markers of the spectral: relics, skulls, media. These domains converge in the multiplication of liminal spaces, the uncanny domains in which death and life, like the eponymous character of Poe's "Monsieur Valdemar," seem to speak to us in some way.

Each of these panelists are themselves living in between: lay and religious, exile and home, East and West. "Specters of Consciousness: Bardos and Liminality in Buddhist Perspectives on the Between" brings together scholars and practitioners from Tibet, India, Nepal, and Taiwan to speak

of the ways in which the specters of East and West engage in matters of soteriological import and contemporary significance. They interrogate both the apparitions and the experiences, haunted by emic questions that will help nuance our epistemological

frameworks for understanding media, memory, and the evocation of possible futures.

Presentation(s): Shadows of the Real: A Discourse on Death and Liberation

According to Kunkhyen Longchenpa's The Treasury of the Supreme Vehicle (Thekchhog Dzo), all manifestations apart from the inner expanse of primordial purity constitute states of bardos. Thus, this present world is the spectral manifestation of the ground of being; the world is essentially haunted, and we the shadow forms of reality. This paper presents the topic of bardos (intermediate states) within the context of Tibetan culture, focusing on three aspects: the perceptions of bardos in relation to sentient beings, how one remains in samaya commitment, and what specific signs manifest during a yogi's death process

Presenter(s): Jurme Dorjee

(G)host song: Mantra Recitation at the Time of Death

For many cultures, the moment of death is fought with potential and consequence. And many cultures have devised rituals to help guide or control the mind or spirit of the deceased in this potent moment, either to secure propitious rebirth or everlasting peace or, at the very least, to appease the spirit of the dead (and the living) to move on. Drawing on sources from Chinese Buddhist sutras, this presentation explores the practice of mantra recitation at the time of death. Following a review of the history of this practice in Chinese Buddhism and its connection to the sutras, two case studies exploring the practice as it unfolds today in Taiwanese hospital and hospice settings will be presented, alongside historical and contemporary media portrayals of the practice

Presenter(s): Chun-Chun Wang

Beacons of the Afterlife: Clear Light and the Bardo of the Moment of Death

While Indo-Tibetan Buddhism posits a panoply of ghosts, oracles, and spectral presences, none of these liminal states of being have so captured the Western imagination - and mobilized its scientific apparatus and imagination - as tukdam (Tib. thugs dam) the "dead, but not yet died" state of consciousness of the tantric adept at the moment of death. Combining both first-person reflection and ethnographic interviews, the author will draw on his experience as monastic advisor to Western

scientists conducting psychophysiological research on death meditation to highlight the range of emically significant phenomena excluded from the frame of "objective" investigation. The author will also explore how a re-engagement with the stages of death as presented in key textual sources provide a new frame for investigation these an other phenomena in ways consonant with the Tibetan Buddhist worldview.

Presenter(s): Geshe Jamyang Palden

Beyond the Final Breath: Examining Death, Consciousness, and Miraculous Signs in Tibetan Buddhist Tradition

This paper examines the complex interplay between traditional Tibetan Buddhist approaches to death and contemporary perspectives on mortality. Through analysis of religious texts, personal observations, and sociological research, we explore how Tibetan Buddhism conceptualizes death not as an endpoint but as a transitional state of consciousness. Central to this understanding is the concept of the intermediate state (bardo), where consciousness continues after death in a form determined by karmic influences and future rebirth. Drawing from classical texts like the Abhidharmasamuccaya and Abhidharmakosa, the research

explains how beings in this state manifest with complete sensory faculties and typically remain for seven days before transitioning to rebirth. The study investigates multiple aspects of this paradigm, including the various types of bardos, death rituals, mystical phenomena during cremation, and the unique integration of death discourse in child-rearing practices. Drawing on comparative analysis with Western approaches, particularly the work of Ariès and Elias on the institutionalization of death, this study highlights how Tibetan Buddhist communities maintain a more integrated relationship with mortality. The paper documents specific practices

such as pre-death practices, post-death rituals, and the systematic preparation for death through meditation and spiritual practice. This research contributes to our understanding of alternative approaches to death.

Presenter(s): Tenzin Norgyal

The Ani and the Aghori: History as Haunting among Buddhist nuns and Hindu charnel dwellers in contemporary Nepal

Aghost is commonly defined as the spirit or soul of a deceased person that is believed to linger in the physical world, often manifesting as an apparition, sound, or unexplained presence stirring at edge of reality and illusion, drifting like echoes of the past. This paper will consider these registers through the practices of Buddhist and Hindu communities in Kathmandu, Nepal. Among the Buddhist community in Nepal, ghosts are seen as real but impermanent beings trapped in the cycle of rebirth due to unresolved karma, attachment, or improper funeral rites. This belief mobilizes rituals following death in order to free these souls and let them

pass to next life peacefully, reinforcing the religious perspective that ghosts are real but tied to karmic cycles rather than eternal entities. In Hinduism, particularly among Aghori sadhus, ghosts

and spirits are believed to exist in cremation grounds, where they linger due to unresolved karma and attachments to the material world. The Aghoris cultivate these presences in their own spiritual development and meditate in cremation sites to transcend fear, communicate with spirits, and break societal taboos. The author brings her personal experience and ethnographic interviews with members of each community to reflect on the cultural stakes involved in such practices in Kathmandu following the aftermath of the 2015 earthquake in Nepal.

Presenter(s): Tenzing Chhodol

From Hungry Ghosts to Haunted Houses: Tibetan Buddhism and Contemporary Youth Media in India

What do Tibetan Buddhist teachings on hungry ghosts share with modern youth's fascination with haunted houses, ghost stories, and the paranormal? Tibetan Buddhism views ghosts as manifestations of unresolved karma and attachment, existing within the cycle of rebirth rather than as mere spirits of the dead. Unlike Western perspectives, ghosts in Tibetan belief are beings reborn into a specific existence due to karmic accumulation, inhabiting a realm that overlaps with the human world. Today's youth engage with spirits through horror films, social media, and ghost-hunting trends, shaping a modern supernatural culture that resonates-or clashes-with Buddhist notions of the bardo and restless spirits. Using ethnographic and archival data, this presentation explores how ancient wisdom and contemporary ghost beliefs intersect, revealing deeper connections between fear, desire, and the search for meaning across cultures and generations.

4027 The Ghosts of Coloniality in Latin America: Old and New Specters Haunting the Continent

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Galerie 3

Type: Roundtable/Town Hall

This roundtable explores haunting as a methodological lens to examine Latin America's evolving political and social landscapes. Building upon anthropological engagements with the spectral and decolonial thought (Segato 2022), we ask: What does haunting reveal about the region's enduring colonial structures and their contemporary transformations? Beyond analyzing Latin America, can we think with it also in terms of coloniality aspects that keep haunting us all? And how do spectral traces reveal coloniality's chronic nature and its affective, embodied reverberations?

We examine key ethnographic dispatches from the region to trace how current formations are animated by lingering regimes: plantation logics, migration trajectories, extractive violence, and generational inequality. In Brazil, the expansion of agribusiness and mining under recent administrations has intensified environmental degradation and displaced indigenous communities, echoing colonial exploitation patterns observed in other Cone Sur countries. In Colombia, despite

the 2016 peace accords, new extractivist ventures have exacerbated land dispossession and reignited conflicts, particularly impacting Afro-Colombian and indigenous populations. Similar neo-extractive processes have been seen throughout the region. At the same time, the region faces complex migration and crime dynamics. Economic hardships, political instability, and environmental crises have driven significant outflows, as highlighted by the Venezuelan refugee situation, where over seven million have fled since 2015 (UNHCR 2024). Conversely, countries like Mexico are becoming destinations for those seeking refuge, navigating their roles as both transit and host nations.

Drawing on examples from these and other countries, we present and explore ethnographic works on topics such as rural elites, precarious labor, migration, intimate archives, and the medical and affective challenges faced by adolescents and families. We will offer grounded insights into what lies beneath the surface of contemporary ethnographic work in, on, and with Latin America—both conscious and unconscious, silenced and hyper-visible—proposing a methodology attuned to the felt, the concealed, and the unresolved. Following Good, Chioyenda, and Rahimi, we ask how haunting elicits "a sense that the past is never settled" (2022, 443) and thus pries open history, the contemporary, and their chronic entanglements to what is unknown, 'unspeakable and unspoken' (Good et al., 443) but nevertheless endured.

Ultimately, we approach haunting as not metaphor but mode and method, tracing how race, gender, class, labor, and value are entangled in the temporal afterlives of a continent shaped by coloniality. These ghosts are not inert residues but active presences—unsettling official narratives of development, democracy, and peace. Together, we question what it means to live with, speak to, and learn from ghosts in a region where the past refuses to remain buried.

1857 The Ghosts of Futures Past: Predictions that Haunt

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Rhythms I (2nd fl)

Type: Oral Presentation Session

Across the globe there is an crescendoing interest among both national governments and publics in various techniques and technologies that allow for the forecasting of the futures in arenas as varied as relationships, energy markets, and disaster preparation (Broeker 2023; Özden-Schilling 2021; Vaughn 2017). While this desire to foreknow in the face of such seeming uncertainty is far from novel (Evans-Pritchard 1932), what happens to predictions after they are considered resolved

remains underexplored. When are such techniques and technologies retrospectively considered to possess efficacy or to have been failures? What happens to predictions that are correct yet come to be regarded as based on faulty reasoning? How do people reflect on predictions of the future that resulted in their mobilization? And what consequences of such predictions must people continue to live with?

Despite a disciplinary self-image that has often presented its temporal focus as the past and the present socio-cultural anthropology has in fact long been interested in both futures and predictions (Collins 2008). Consider early 20th century anthropologists' concern with salvage anthropology, and with divination (Hurstun 1931; Parsons 1942; Reichard 1950). The interest continues through the 1960s and 70s as a new generation followed in Margaret Mead's footsteps, exploring their interlocutors' apprehensions of possible futures and in innovating various methods and techniques to engage in futurology (Camra 1978; Jacobs 1978; Mead 1978; Riner 1987). In the present century anthropologists have extended their interests in both the future and predictions to areas as varied as bio-security simulations, financial planning, and climate modelling (Lahsen 2005; Samimian-Darash 2009; Weiss 2019).

In this panel we build upon this long-standing disciplinary interest in futures and predictions by attending to the remnants of past predictions and their consequences for our interlocutors. Contributors explore the legacies of both anthropological predictions and their interlocutors'. We revive spectral speculations from beyond the grave and ask, how are we haunted by the traces of desires to predict the future and act upon it?

Presentation(s): A Specter is Haunting Predictions - the Specter of Probability: On Probability, Prediction, and the Prosaic Promotional Competition

Many predictions that talk about in our daily life, from the weather to the amount of money we require in retirement, are calculated using probability. As Ian Hacking discussed (1975), the emergence of probability in the 17th century was not only a mathematical advancement, but an epistemological leap - from which a new way of understanding the future, and our capacity to influence it, was born. While some mathematicians (e.g. de Finetti 2017 [1970]) have called for an exposure of probability theory as an "illusory attempt to exteriorize or materialize our true probabilistic beliefs" (ibid, xv), the fantasy that probability is an 'objective' science for mapping the future lingers, cloaking many predictions with an air of certainty. In this paper I trace this specter of probability via the predictions of people who enter promotional competitions, self-described as "compers". Promotional competitions are a ubiquitous form of advertising in Australia, found in supermarkets, fuel stations and pharmacies. With prizes such as cars, holidays and cash, winning

promotional competitions can be lucrative, and understanding 'one's chances' often gives rise to prediction. Through a discussion of the "gambler's fallacy" – the 'irrational' notion that a series of past losses will lead to a future win – I explore how some compers conceptualize winning as a "number's game", i.e. contingent upon the number of times one has entered and the number of other entrants. I then contr

Predictability as the Paradigm Shifts: Growing A Public Earthquake Safety Industry on the US West Coast

New sensory, analytic, and communication technologies are emerging as part of public earthquake safety efforts. These efforts are also experiencing what insiders describe as a "paradigm shift" away from purely state-sponsored models. For technologists, educators, scientists, and engineers participating in the new public earthquake safety industry on the West Coast of the United States, past predictions and their efficacy are key elements of staging this shift. In this paper, I draw on Tess Lea's 2024 invitation to think through policy ecologies in my efforts to theorize the growth of a public earthquake safety industry. I explore how the ghosts of futures past emerge in participants' simultaneous engagements with earthquakes, infrastructures, industries and financial flows. Doing so, I highlight the conditions of possibility for the paradigm shift that in public earthquake safety that participants herald, as well as the contradictions that their efforts entail.

Presenter(s): Elizabeth Reddy

Political Gambling and The Polymarket Whale: The Bewitching Incentive of Bad Predictions That Come Good

Political gamblers turn predictions into profits and losses by observing perceived likelihoods as prices that they then compare to their own estimations. In October 2024, in the shadow of the US Presidential election, surging interest in the 'prediction market' crypto gambling site Polymarket.com kicked up another notch with news that four accounts had collectively bet tens of millions of dollars-worth of crypto currency on Donald Trump to win. Who was behind it? Were they a partisan group trying to tilt US expectations? Or were they manipulating the market to profit from a pump-and-dump scheme? What did they know? Interest in gambling on politics surged further, with established members of the political gambling scene turning detective to root out the interlopers. One, eventually, spoke to the man behind the money, a lone French financier who had commissioned private polling that indicated a comfortable Trump victory. Polling experts in political gambling circles then argued his 'who will your neighbour vote for?' methodology was worthlessly flawed and amateurish. Yet, of course, the Whale won, and made \$85M. The consensus became that he made a good bet for bad reasons. This concrete example of the financial afterlife of predictions reveals that, during a cultural moment that exalts the entrepreneurial self, ambiguous victory becomes a powerful incentivising narrative drawing others towards their own risky predictions.

Presenter(s): Anthony Pickles

Beyond Mia Mottley: Predictions and Problems in a SIDS' Grid Transition

After Fidel Castro's demise, Barbados's Mia Mottley emerged as the Caribbean's most internationally visible leader. An effective orator and social media user her efforts on reparations drew attention to both her and Barbados. So too did her very public and repeated commitment to the island nation attaining Net Zero by 2030.

Climate change is an existential issue for small island developing states. It brings rising sea levels, fluctuating fish stocks, evermore erratic weather, and, in the Caribbean, sargassum. Central to the Mottley government's decarbonisation strategy is transitioning Barbados's electrical grid to renewable energy sources.

Since its 1911 establishment forecasts of the island's future have meant this large technical system has undergone numerous changes. For example, post-independence, to ensure financial and political freedom, it was projected the grid would need to expand to fuel the growth of the tourism and light industry sectors. Similarly, after the 1970s oil crisis it was predicted that reconfiguring the nation's generators to use bunker oil would limit the impact of rising energy costs. Most recently policies calculated to encourage homeowners to install solar panels have resulted in grid instability.

In this presentation I examine how these past predictions are evaluated, how they haunt current efforts to change what fuels the current flowing through the Barbadian grid, and their continued consequences for Barbadian lives.

Presenter(s): Chima Michael Anyadike-Danes

Building Towers: The Material Cultures of Private Insurance, Accounting, and Financial Speculation

This paper considers the practice and aesthetics of "towers," an accounting mechanism central to private insurance. Attending to the inherent reflexivity of risk management, towers allow practitioners to document the redistribution of risk for the excess losses attributed to multiple perils. First popularized after the 1906 San Francisco earthquake, towers made financial speculation between varied (re)insurers possible. Given the contemporary industry's apprehensions about climate/weather exposed property markets, towers have resurfaced to shape debates about the economic objectification of natures. In short, towers gesture to the material cultures of markets and the aesthetics undergirding the diversification of business across space-time.

Presenter(s): Sarah Vaughn

1214 The spirit of evidence: ethnographies of testimony, truth, and memorability

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** MGB Salon E

Type: Executive Oral Presentation Session

This panel explores the place of 'evidence' in social life. What, exactly, counts as 'evidence' in different cultural and institutional contexts? How is evidence produced or procured to render intangible claims tangible in the present? How do people produce evidence to prove the existence of religious, miraculous, ghostly, and supernatural phenomena that might otherwise be met with ridicule and scepticism by contemporary society? The notion of the 'witness' – whether as an implicated observer, or the anthropological positionality more generally – has received considerable attention (Rosen 1977; Chua and Grinberg 2021; Laban Hinton 2022). But anthropologists have been less outspoken on 'the concept of evidence' (Engelke 2008), an issue which is closely related and socially fraught. This panel explores how both powerful and socially marginalised groups marshal different modes of evidence to support truth claims about past, present, and future. Whilst the terms 'evidence' and 'testimony' typically connote the legalistic domain, we understand these categories in their broadest anthropological sense and theorise across archaeological, medical, policy-oriented, curatorial, ghostly, and spiritual contexts. With diverse ethnographic insights from India, the UK, the US, and Chile, the panel raises questions such as:

- What visual, performative, material, or textual forms of evidence are needed for different types of knowledge claims?
- What social and historical imaginaries do public testimonies create? What political and state-building projects does evidence afford? How do evidence and testimony support – or undermine – ideas about the past, belonging, or justice?
- What evidence do bodies create and how is witnessing experienced by and through differently socially situated bodies?
- What makes a testimony memorable and what causes it to resonate within – or even haunt – particular systems of truth?
- How and when is evidence produced responsively, in reaction to counterclaims and a socio-political context that might be seen as threatening?
- What spaces of harm or possibility are created when a particular testimony fails to meet the formal markers of credibility established by different truth regimes? What new inequalities can it engender?
- What constitutes – and motivates – the 'destruction' of evidence, and what are the exclusionary consequences of such acts?

Presentation(s): The Haunted Court? Mythical Legal Pasts and Contested Judicial Memories in India

How do legal professionals imagine their role as historical actors in times of violent political transformation? This paper draws on extensive ethnographic fieldwork at the Indian Supreme Court in Delhi to analyse how the evocation of a mythical judicial past guided by secular principles allows advocates to imagine and enact the possibility of a democratic future during a time of authoritarian threat. Since the Hindu nationalist Bhartiya Janata Party came to power 2014, legal professionals have expressed concern that the Supreme Court "is no longer a bastion of justice" because court judgements are now "guided by faith rather than proper legal evidence". While some have argued that the tale of a once perfect secular court is a treacherous haunting that keeps legal professionals from responding to Hindu nationalist pressures (Mehta 2022), this paper proposes that the legal spirits of the past serve as an animating force for advocates to formulate and perform new visions of democratic legal resistance.

Presenter(s): Sandhya Fuchs

With and beyond evidence: truth-telling at the interstice of institutional reparation and collaborative historiography in Indigenous Chile

Through a comparative analysis of historical knowledge production in Indigenous land claims, and a case of collaborative historiography involving a rural Mapuche community from Chile, I show how the past articulated through institutional means of evidence recollection is not merely imposed upon local memory but rather contributes to the articulation of truth claims about the past subject to multiple and often controversial interpretations of Indigenous continuity and colonial disruption. While institutional colonial reparation establishes locally produced official histories, grassroots projects of memory restoration provide multiple and often controversial new ways of arranging the relationship between past and present often at odds with institutional premises of cultural continuity and in line with decolonial focus on critical self-reflection. The relationship between institutional and grassroots production of evidence is hauntologically productive, as they prompt the re-imagination of specters from the colonial past and their legacy in today's ordinary life.

Presenter(s): Piergiorgio Di Giminiani

Local waters for local people: Producing spiritual evidence about Cambridge's rivers and the risks they face

Across Cambridge (UK), neo-pagan and spiritual water activists are building cases for extractivist orientations as drivers of water degradation, recognition of water's spiritual dimensions, and the need for alternative human-water relations. This involves a complex of evidences rooted in diverse modes of knowledge production, including stats on water quality, performances of grief over loss of intimacy with local waters, eclectic rituals around water bodies and framing certain characteristics of those bodies as mystical, and excavating pre-Christian Iron Age sites near contemporary waters. Their work aims to instigate water conservation but simultaneously produces evidence that bolsters existing inequities: that "local waters [are] for local people" and that some people – migrants – pose threats to those waters. Cached in cultures of environmental action and human-nature connection, such evidence appears more digestible and is being taken up in unexpected and unsettling ways in some corners of sustainability work. Drawing on ongoing fieldwork with spiritual water activists in Cambridge, this paper examines how evidence is produced to demonstrate the spiritual nature of water and move people to new actions, including protecting water from a growing range of perceived dangers, and the harms this rhetoric engenders. I argue the same evidence used to support truth claims about expanded relationalities and care inadvertently supports claims about national borders and belongings.

Presenter(s): Anastasia Badder

Evidence, doubt and the infrastructures of legitimacy among Gettysburg's ghost hunters

The dead of the American Civil War (1861–65) are evoked, honored and animated through a wide range of commemorative media. The conflict, its symbols and remnants have become key elements of the raging American 'culture war' and its new battlegrounds. At Gettysburg, Pennsylvania, the most famous field of the conflict, authorized and unauthorized modes of remembrance proliferate, each resting on different truth claims and infrastructures of legitimacy. This paper explores one alternative branch of historical truth-seeking – the popular 'paranormal' investigations of the spirits and ghosts alleged to linger here following their violent deaths during the battle. Ghost hunters are part of a local tourism economy where commercialism and performance are hard to separate from the practices of 'serious' hobby groups and spiritualists of various kinds. Some locals view their activities with skepticism, scorn, or as a desecration of the fallen at this emblematic American 'hallowed ground'. Based on fieldwork amongst paranormal practitioners, I explore the technologies, techniques and bodily practices through which certain certainties are established and discuss the fraught, interrelated relationship between 'normal' and 'paranormal' kinds of knowing and testimony creation. I argue that the ghost hunters' production of alternative evidence are ongoing, socio-material computations of inescapable existential doubts that also, paradoxically, energize existing doubts and assert new ones.

Presenter(s): Mads Daugbjerg

Contested Claims: Bureaucracy, Land Rights, and the Materiality of Evidence

Using land rights contestations as a point of entry, this presentation explores how adivasis in Telangana, India, negotiate their land claims within socio-juridic spaces such as bureaucracies and courts. Focusing on select documents— titles, land records, & court files— I show how competing land claims are evaluated and examine the material practices through which bureaucratic documents are rendered trustworthy, permitting them to operate as evidence and proof (Hull 2012; Weichselbraun 2020). Specifically, this presentation asks: What qualifies as 'sound' evidence when competing land claims usher in similar kinds of textual and material artefacts? Whose claim survives? Grounded in ethnography, I show how bureaucrats and government functionaries partake in forms of interpretative work that rely on the materiality of paper, annotations in the margins, the colour of ink, and other markers to assess if the artefacts qualify as 'credible' evidence of 'good quality'. This, in turn, reveals the complex power relations of caste and class, as bureaucratic documents become sites of both credibility and manipulation, making some claims more 'valid' than others. At the same time, adivasis too labour to substantiate their land claims, piecing together textual and material artefacts to proactively and responsively engage with counterclaims, seeking to meet the presumed threshold of evidence in socio-juridic spaces— both in terms of quality and quantity.

7009 To the zoomiverse, and beyond! Adventures in policy transformation through meeting ethnography in the pluriverse

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** MGB - Salon A

Type: Oral Presentation Session

For cultural anthropologists, the meeting is arguably the most important and most undertheorized ritual within which contemporary fieldwork is conducted. Whether in policy organizations or NGOs, labor halls or religious institutions, schools or corporations, ethnographers so often find that formal and associated informal meetings are often where the action is. Meetings are sites where power is produced and enacted, dynamics of identity and hierarchy are negotiated, organization is determined and challenged, policies are produced, and the status of policy actors is negotiated and performed. Meetings are, in many ways, one of the core contemporary rituals of governance, underpinning policy processes in crucial ways. Meetings are part of the doxa of everyday life; we take them for granted to the point that, although we all may encounter them in fieldwork, there has been no concerted effort to theorize the relationship between meetings and policy or to strategize fieldwork around them. Of course, this is precisely the province of anthropology: to make the familiar strange.

The pandemic lockdowns shifted the taken-for-granted architecture of meetings across many contexts around the world, from the presumptive in-person meeting with bodies in a single space to the presumed virtual meeting with many faces, on many screens, in many physical spaces and time zones. What did this "zoomiverse" shift mean for our ways of making organization, making relationships, and making change? This panel explores the significance of meeting architecture, with a focus on what socio-political possibilities are made and foreclosed by distinct circulations of bodies and faces. What do meetings in the zoomiverse make? What is the significance of the zoomiverse? And what happens now, in what we call the meeting pluriverse, where organizers, workers, and activists must choose, perpetually, from among a seemingly infinite set of virtual, hybrid, and in-person architectures? Here is where meeting ethnography can be helpful. The purpose of this panel is to explore meetings as both ethnographic objects and as sites of ethnographic inquiry..

The session will provide space for participants to share strategies, challenges, and insights on and from "meeting ethnography" in various spaces where policies are imagined, made, implemented, negotiated, and contested. The panel involves a diverse set of papers that interrogate how we conduct ethnographic research in – and on – these near-ubiquitous sites of fieldwork. In addition, the papers in this panel present various understandings of how digital meeting architectures have opened and closed spaces for particular forms of relationships among meeting planners, participants, and the various policy worlds that they navigate and attempt to transform.

Presentation(s): Meeting to end solitary confinement in Massachusetts: exploring the ease and comfort of “zooming in”

This paper explores the significance of meeting architecture, inviting us to consider what socio-political possibilities are made and foreclosed by the ways distinct meeting forms circulate bodies and faces. The goal of the grassroots organization Massachusetts Against Solitary Confinement (MASC) is to end solitary confinement – a form of carceral torture – in prisons and jails throughout the state. Long-term political and pedagogical engagement with MASC staff and the survivors of solitary confinement who comprise MASC's base reveals that the zoomiverse shift of 2020-2021 had several divergent effects on the organization's work. The zoomiverse facilitated expansion of MASC's relational solidarities, enabling MASC to engage meaningfully with national and international networks engaged in similar struggles for policy change. It also enabled new strategies for elevating survivors' voices in policy and elite-run advocacy meetings. But the zoomiverse also

undermined the power and efficacy of this strategy. For potential allies outside of the survivor community, hearing the stories of survivors of state torture entails profound bodily discomfort, which we suggest is itself psychically transformative. The accordion architecture of zoomiverse meetings enables participants to easily dissociate from discomfort, to evade what we call "affective disconcertment." Such evasion seems to inhibit the transformation of consciousness of potential allies that is necessary to change policy.

Power, Policies and Spiritual Principles; What the BIPOC movement in 12 step programs can teach us about collective liberation

Alcoholics Anonymous is a worldwide fellowship of mutual support, centered around meetings—both in-person and, increasingly, virtual. This paper explores how the confluence of the COVID-19 pandemic and the George Floyd uprisings in 2020 contributed to a rapid growth of black, indigenous and people of colour (BIPOC) meetings, and the effects that this demographic shift has had on the overall Fellowship of AA. Based on publicly available meeting minutes and ethnographic engagement with members of this community beginning in 2020, I consider how AA's organizational structure allows for individual and collective agency over the interpretation of AA's governing principles: the twelve traditions and twelve concepts for world service. While these "policies" for collective governance are closely followed, embodied and enacted throughout the AA ecosystem, there exists no enforcement mechanism, nor codified process for interpreting or implementing them. The BIPOC movement emerged out of a contest between dispersed yet patterned interpretations of AA's 10th tradition, which states that "AA has no opinion on outside issues" and has often been used to silence the racial dynamics of BIPOC alcoholics' navigation of recovery and recovery spaces. In responding to this silencing, the BIPOC movement in AA has created a space which is differently politicized, refusing to erase questions of power, identity and relationship to structural violence in the path to recovery from alcoholism.

Community organizing for school-based ethnic studies in a post-Covid world: Collective power in a virtual public meeting

This paper draws from a long-term ethnography of a multi-generational grassroots organizing campaign to save a public-school ethnic studies program in the northeastern United States. The year-long campaign was led by a coalition of high school teachers and students, former-students, parents, community members and university partners. Meetings—virtual, hybrid, and in-person—were a constant feature. Applying Sandler & Thedvall's (2017) framework of meeting ethnography, we conduct a close reading of one pivotal School Board meeting in which the coalition advocated for the ethnic studies program and against administrative cuts that would weaken it. The presentation was both an attempt to persuade district leadership to support the program by meeting the coalition's demands, as well as a public display of power to put pressure on them to do

so. But, since it was conducted over Zoom, their collective power was effectively neutralized. In this paper, we explore the power dynamics that were revealed and enacted through this meeting, while focusing on the significance of the zoomiverse as both a setting and object of inquiry. We show how the zoomiverse shifted the embodied experience and impact of the meeting by obscuring the coalition's large community turnout, eliminating possibilities for co-regulation, and centralizing control of the meeting in the hands of district leadership.

3894 Towards a Critical Anthropology of Impunity (Pt. 2)

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Marriott **Room:** Balcony K

Type: Oral Presentation Session

Hauntings and ghosts evoke unresolved past events that are often violent in nature. These unresolved or unacknowledged events can be described through the language of law and the absence of law or "impunity."

Since the war between Israel and Hamas began in 2023, "impunity" has circulated in global political and legal discourses in a wide variety of contexts from protests to the International Criminal Court. More recently, "impunity" has entered into popular discourse in the United States as the Trump administration continues to pursue a political agenda that functions outside of or beyond "the law."

Historically, impunity has been taken to mean the absence of legal or punitive redress for violence in the global south, however there is an urgent need to think about impunity theoretically and ethnographically in diverse contexts. Building on the recent work in establishing an anthropology of "justice" (Brunnegger 2019; Clarke 2019; Cooper 2018; Greenberg 2018), this two-part panel brings together anthropologists working on the question of impunity in diverse contexts and geographies.

Presentation(s): Archives of Solidarity: Ethnography of the transnational dimension of the struggle for justice

This paper is based on an anthropological interpretation of international advocacy work in solidarity with Mexico and Central America during the Cold War through historical archives. The entry point of analysis is the political construction of (in)justice in the perceptions, notions and actions of

activists and scholars in Canada who set about the task of forging different types of transnational solidarity networks. International cooperation played a key role in building an ethic of solidarity with resistance struggles in Latin American countries experiencing dictatorial regimes, civil wars, and the brutality of police repression (North, 2023; Jelin, 2002, 2017; Sieder, 1996). The solidarity work not only involved gathering information, writing specialized documentation, contextual analysis and on-site reports, but they were also repositories of resistance archives of peasant, workers' and indigenous organizations (North, 2023). The legacy of these transnational political communities and their ability to reverse the state's cover-up of human rights violations will be explored.

Legal Recognition as Political Violence in Necropolitical Ecuador

Under what conditions does legal recognition function as a form of political violence? Some scholarship has approached refuge as a structure of legal recognition that mediates the decision between who will live and who must die (for example, Rosas 2023). In contrast, this paper contends that the state's provisioning of refugee status does not necessarily constitute a letting live, but may also constitute a letting die. I approach Colombian refugees' experiences of legal recognition in Ecuador in tandem with forms of life-threatening violence they navigate and contest in a space of purported refuge: political persecution, labor exploitation and policing, and anti-Black and anti-Colombian racism. In this context, the state reproduces necropolitical conditions—"the subjugation of life to the power of death" (Mbembe 2003, 39)—not primarily through the construction of a detainable, deportable, or excludable migrant population, but through the provisioning of a documented status that obscures state-based and extralegal violence, and that allows the state to evade further accountability or international critique. I argue that legal recognition must be ordained in conjunction with other forms of support, resources, and accountability, based on what refugees themselves desire and demand.

Presenter(s): Alana Ackerman

Lawfare as Impunity: Criminalization of Social Media in Turkey

This paper examines how Turkish authorities have used lawfare—the weaponization of law—to restrict the circulation of documentation of state-committed human rights violations in social media. In doing so, the authorities not only suppress visual and audiovisual records of abuses, such as videos or photographs, but also seek to discredit the legitimacy of rights violation claims more broadly. The paper focuses on criminal prosecutions of social media users who shared such materials or criticized state authorities for these violations. These users are typically charged with disseminating "terrorist propaganda," or "insulting public officials/the President." In some cases, dissident citizens also face additional charges based on earlier social media posts, extending the logic of lawfare as a strategy of deterrence and intimidation aimed at discouraging future circulation of records of state violence. In these trials, defendants and their lawyers seek to contest the charges and redirect the prosecutorial gaze toward state authorities and the judiciary. By repurposing court documents and legal arguments, they expose acts of violence and highlight the

judicial impunity work, the biased or deliberately incomplete evidence collection practices. These efforts aim to re-inscribe state violence into the legal record as well as undermine the authorities' use of lawfare as a technique of impunity.

“Living the Impunity: The Social Dimensions of a Spectral Configuration of Power”

Widespread, entrenched impunity stands as a perennial contextual feature in discussions of political violence in Colombia, but impunity itself less frequently takes center stage as an object of analysis. When centered, it is most often figured as an issue of juridical debility or institutional corruption. The experiences of surviving kin of victims of State-perpetrated crimes against humanity in Colombia, however, show impunity to be not an abstraction, institutional anomaly, or legal status, but rather a lived social process—both a productive social force and a structuring condition that saturates and shapes daily life. Drawing on fieldwork with surviving kin of victims of state violence, this paper presents the analytic living the impunity to study impunity empirically as it emerges, alongside law, in the social world. The paper first traces the development of the analytic in partnership with a mother of a victim of extrajudicial execution and then describes one aspect of living the impunity: a situation of what I call semiotic upheaval in which conflicting modes of symbolic communication subvert sensemaking. These colliding semiotic registers show the damage caused by widespread impunity as sited in and actively impairing broad systems of meaning-making—rather than acting and manifesting solely in the persons harmed. Impunity, I argue, is a mode of power apprehensible by tracing its palpable, haunting presence in daily life.

Presenter(s): Sarah Richardson

Affective Impunity: Holocaust Restitution as Judeo-Christian Alliance

Sublime feelings, and especially those inspired by Holocaust remembrance, supply neoliberal rationality with an affective supplement. I develop this argument by revisiting second wave Holocaust restitution claims. Infamously, Norman Finkelstein (2015) contends that financial gains largely bypassed survivors, benefitting technocrats and Zionist organizations instead. However, rather than interpreting this as mere profiteering, I propose that figures such as Stuart Eizenstat—Jimmy Carter's Chief Domestic Policy Adviser (1977-1981) and U.S. Ambassador to the European Union (1993-1996)—were primarily motivated by the broader goal of embedding American Jews within the neoliberal socio-political order. Through an anthropological reading of archival documents, and Eizenstat's memoir and political writings, I argue that his involvement in second-wave restitution reflects a commitment to American neoliberalism—a framework Eizenstat sees as inherently aligned with Jewish values, particularly after the impact of the 1961 Eichmann trials and the 1967 Six-Day War. For Eizenstat, restitution became a vehicle for uniting Jewish and Christian values under the auspices of neoliberalism. This sometimes-unconscious instrumentalization of Holocaust memory manifests today in ongoing memorial practices (beyond Holocaust remembrance) that cover over neoliberalism's contradictions subsuming them in sublime feeling.

3334 When the Void Speaks: Ghostlining and Historical Justice

Start Date: 11/23/2025 10:15 AM **through** 11/23/2025 11:45 AM

Venue: Sheraton **Room:** Maurepas (3rd fl)

Type: Oral Presentation Session

Manjapra (2022) writes that the "ghost line" separates the history of Man from the history of the voids, a conceptual boundary that distinguishes what is preserved in archives and public memory from what is deliberately forgotten, silenced, or otherwise lost. This panel explores how these ghostlines are produced and maintained through both spectacular and subtle forms of historic and ongoing violence. Drawing from ethnographic, archaeological, and historical approaches, we demonstrate how forgetting functions not as the passive counterpart to remembrance but as an active, deliberate process encoded in bureaucratic systems, institutional practices, public memorials, and transformed landscapes.

Our presentations trace the creation of and resistance to institutional forms of forgetting across diverse geographies and temporalities: the coalfields of Central Appalachia, where memories of labor uprisings lie buried beneath literal and symbolic sediment; settler historical markers in New York that overwrite Indigenous histories with myths of disappearance; post-conflict Northern Ireland, where narratives of forgiveness mask deeper entanglements of state violence; and pandemic-era Ecuador, where bureaucratic failures to account for the dead transformed grief into a suspended, unresolvable process. Throughout these examples, we examine how material culture, land, and bodily absence are mobilized and obscured within memory politics. Simultaneously, we explore the ways communities reclaim histories across the ghostline by challenging dominant narratives, confronting temporal and ecological violence, and insisting on histories that acknowledge dispossession.

Together, these case studies reveal that the ghostline is not a fixed or impermeable boundary, but a site of tension, contestation, and potential rupture. By attending to the mechanisms through which forgetting is enacted and to the agents who resist this erasure, we expose the intimate ties between memory, power, and place. Our collective inquiry underscores that confronting historical silences requires more than recovery; it demands a reconfiguration of how histories are told, by whom, and for what ends. In traversing the ghostline, we not only illuminate the shadows it casts but also affirm the enduring presence of those it seeks to obscure. Reparatory justice, as Manjapra argues, demands ways of retelling the past that listen to those voices consigned to the void (2022).

Presentation(s): Historical Markers and Material Collections: Constructing Imaginary Settler Landscapes in Upstate New York

The New York State historical marker at the Levanna archaeological site, placed in 1935, informs passersby of a theory (long since debunked) of a violent pre-Columbian replacement of one Indigenous group by another. This marker, and others like it, produce a false narrative of Indigenous history born from the settler removal and interpretation of Indigenous material culture. The collecting of this material by both avocational and professional archaeologists was often done under the guise of salvage or preservation, with Indigenous traces and materials removed to institutional collections and separated from the landscape and living communities. Removed in such a way, the absence of these materials and their inaccessibility institutionalizes and supports narratives of erasure and ideologies of dispossession, ghostlining (Manjapra 2023) and denying stolen Indigenous histories and memories. Similarly, the false or inaccurate historical markers that overwrite the Indigenous landscape have since become artifacts to be preserved themselves, with attention centered on their maintenance and restoration, rather than correction. Together, these practices and institutions construct and maintain an imaginary settler geography that enacts and reenacts dispossession, real and imagined, historical and contemporary, across a material and ideological landscape.

Where Ghosts Gather: Social Forgetting, Organized Labor, and the Politics of Remembrance in Central Appalachia

Folklorist Ruth Ann Musik observed that West Virginia's landscape seemed perfectly suited for ghosts. Hundreds or even thousands, she speculated, could gather nightly among the endless hills and valleys unnoticed. For nearly a century, the violent struggles of the Mine Wars were deliberately excluded from textbooks and national narratives. Unionist miners, threatened with loss of livelihood and freedom, suppressed their personal experiences. As they labored underground, accumulating coal dust in their lungs, miners simultaneously perpetuated environmental degradation and deepened dispossession. Their work reshaped the landscape, contributing to slow violence while diminishing the topographical features that had allowed these historical traumas to remain hidden.

Today, as the altered topography offers fewer hiding places for unacknowledged histories, the material remains of the Mine Wars have emerged as powerful testaments to what official narratives sought to erase. Contemporary union coal miners, now experiencing the consequences of the slow violence set in motion by their forebearers, find themselves uniquely positioned to recognize both past and present forms of exploitation. By reanimating these histories, miners are forging connections between acute violence and slow violence. This remembering serves not merely as

historical recovery but as collective action, transforming Musik's ghosts from silent presences into active witnesses.

“Because you Have Already Buried your Dead” : Elsa's Dual Loss and the politics of waiting in Ecuador's COVID-19 Pandemic

During the early months of the COVID-19 pandemic, Ecuador gained global notoriety as bodies lay abandoned in its streets—a crisis that laid bare the state's patterns of managing death. This paper centers on Elsa Maldonado's struggle to reclaim her mother's remains, revealing how state delays during Ecuador's pandemic response extended beyond Auyero's theorization of "waiting" as a governance. Confronted with ambiguous claims—a marble urn and a buried body both purportedly belonging to her mother—Elsa faced officials who dismissed her grief while demanding payment for DNA tests and mortuary services. Through her story, this ethnography investigates: (1) How do bureaucratic mechanisms for certifying death enable or obstruct mourning? (2) What happens when procedural rituals designed to exhaust poor citizens entangle officials in recursive cycles of verification? (3) How does the state's production of multiple bodies for a single death expose foundational failures in documenting mortality? Drawing on interviews and archival analysis, I argue that Ecuador's pandemic bureaucracy transformed administrative encounters into sites of violence, ensnaring both mourners and officials in an unending loop of evidentiary demands. Ultimately, the inability to conclusively "prove" Elsa's mother's death reflects a broader rupture in state legibility, underscoring how the pandemic magnified existing institutional weaknesses into crises of recognition and care.

Presenter(s): Maria Jose Pelaez

"It's about right and wrong, not Nationalist or Unionist, Protestant or Catholic"-complicated pasts and forgetting in post-conflict Northern Ireland

This paper will explore two acts of intentional forgetting in Post-Conflict Northern Ireland. The first is the forgotten connection between pro-British paramilitaries, the State, and local communities from the formation of the Northern Irish state in 1921 through the 1968-1998 Conflict. By excluding these connections from their history telling, unionists can maintain a narrative of innocence for past violence, excuse state violence as individual acts of "broken military code", and depoliticise conflict, characterising it as criminality rather than resistance. The second is the forgotten voices and stories which challenged the narrative of "forgiveness" that developed in the aftermath of the 1987 Enniskillen Bomb carried out by the IRA. The memorialisation of the 1987 Enniskillen Bomb built on the narrative that Enniskillen was "the town that forgave the IRA". This was a misrepresentation of Senator Gordon Wilson's statement that he bore "no ill will" towards those involved in the death of his daughter. Senator Wilson became central to the post-Bomb peacebuilding efforts and memorialisation process at a time when many other victims and survivors of the bomb were unable, or unwilling, to speak. Challenges to this narrative were characterised as bitter or disruptive to the Peace Process. Both acts of forgetting attempt to

sanitise the past, silence inconvenient truths, and erase or suppress narratives which complicate the past and contemporary political and social identities.
